A: The Chinese here use the word "di" to mean truth. The truth that refers to the nature of reality is called the Ultimate Truth (Paramattha-sacca), and the truth that refers to worldly phenomena originated according to the Paṭiccasamupāda is the Conventional Truth (Sammuti-sacca). According to the Conventional Truth, all things exist (bhava), and in terms of the Ultimate Truth, all dhammas are empty (suññatā). Thus the two kinds of truth, ultimate and conventional, are equated with that of existence and non-existence. Matter (Rūpa) is Emptiness (suññā) and Emptiness is Matter. They are identical. Seeing the two truths as one is the Middle Path or the reality of all dhammas. This is the core of the theory of this school. According to the ultimate emptiness of reality, this school lays stress on revealing that all dhammas, worldly or transcendental, defiled or pure, have no self-nature because of Dependent Origination, that the Five Aggregates (Pañca-khandha), the Twelve Spheres or bases (āyatana) etc., are nothing but illusions. Accordingly, one can thoroughly break with confusion, build up the view of the Middle Path on the base of nothing obtainable, and finally reach the goal of deliverance without obstacle. This school is in fact the direct succession of the

Mādhyaṃika doctrine advocated by Nāgārjuna and Deva in India.

²⁴Q: Why is the Yogācāra School so called? What are the main doctrines of this school?

A: The Yogācāra School was founded by Maitreya, Asaṅga and Vasubandhu of India. The main bases of this school are the *Samdhinirmocana-sūtra*, the *Yogācārya-bhūmi-śāstra* and the *Vijñāpitmātratā-siddhi-śāstra*, it is so called on account of its basic text of *Yogācārya-bhūmi-śāstra* dictated by Maitreya and recorded and compiled by Asaṅga. The Chinese Dharmācārya Xuanzang translated and propagated its doctrine and made an abstract of the theories of ten masters and compiled it as one book, the *Vijñāptimātratā-siddhi-śāstra*. It is also called the Dharma Lakṣaṇa Vijñānavāda School or Ci En Zong. The general program of its doctrine is of Five Categories of Dhammas, Three Natures (Tri-svabhāva), Eight Kinds of Consciousness and Two-fold Egolessness, and the purpose is to convert consciousness into wisdom (āśraya-parivṛtti).

²⁵Q: What are the Five Categories of Dhammas, Triple-nature Doctrine, Eight Kinds of Consciousness and Two-fold Egolessness?

A: The Five Categories of Dhammas (Pañca-dhammā) are: (1) Name (Nāma) (2) Form (lakṣhaṇa) (3) Discrimination (vikalpa) (4) Right Wisdom (sammā-ñāna) (5) Ultimate Reality or Suchness (Tathā). The Triple-nature (tri-svabhāvatā) consists of: the illusory (parikalpita), the dependent (paratantra) and the perfected (pariṇiṣpanna) aspect. The eight consciousnesses consist of visual, auditory, olfactory, gustatory, tactile, mental, manas, and ālaya forms (or eye vijñāna, ear vijñāna, nose vijñāna, tongue vijñāna, body vijñāna, mind vijñāna, the 7th manas and the 8th ālaya). The two-fold egolessness is the non-existence of self (pudgalanairātmya) and the non-existence of dhammas (dharmanairātmya). The Pañca-dhamma includes all dhammas, both of this world and other worlds. Name and form refer to the fact that all worldly conditioned dhammas (Saṅkhata-dhamma) have their names and forms, and are thus called "dhammas bearing names

and forms". Discrimination explains how people as subjects can differentiate and recognize objects. Right Wisdom refers to the pure (anāsava) and genuine wisdom of the saints. Suchness implies the intuitive wisdom towards the true reality. Therefore, the Pañcadhamma is the general catalogue of all dhammas, pure or impure (āsava), subjective or objective.

The Three Self-natures (Tri-svabhāva) are the following:

The first one indicates the two kinds of grasp (abhinivesa) of subjective and objective things (grāhaka and grāhya), the false attribution of existence to the non-existent and the fact that illusion produces kamma. So this is called Illusory Obsession (parikalpita).

The second refers to the dhammas of three spheres (kāma-loka, rūpa-loka and arūpa-loka), which originate from causes and conditions. So this is named the Dependence upon Others.

The third is the perfect wisdom corresponding to reality which is achieved by getting rid of the two kinds of grasp and by understanding of the emptiness of ultimate reality with the view of Dependence upon Others.

The nature of all things falls into the above three categories. Therefore, they are called the Three Self-natures.

The eight forms of consciousness:

Consciousness (viññāna) means conception and recognition, and is also called mind (mano or citta). Every sentient being possesses a perceptive mind or consciousness, displaying eight kinds of consciousness as mentioned above.

The two-fold egolessness (anattā) means that neither individual sentient beings, nor the whole mass has any unchangeable or eternal entity (commonly known as ego or soul). This is called non-existence of self. Nor do objective things have perpetual entity as self-nature or absolute reality. This is called non-existence of dhamma. The two-fold egolessness is also known as emptiness of

both human beings and things. The theories of this school analyze the inherent nature and form of all dhammas in depth to expound the cooperation of mind, consciousness and causality. This school practices meditation on Consciousness (Viññāna-vipassanā) in order to convert consciousness into wisdom and attain the fruits of liberation and enlightenment (bodhi). This school was founded by Dhammācārya Xuanzang with his translation and transmission, and is the direct successor of the doctrines of Asaṅga and Vasubandhu of India.

²⁶Q: What are the main doctrines of the Tiantai School?

A: The basis of this school is the *Saddharmapundarika-sūtra* (Lotus Sūtra), the *Mahāprajñāpāramitā-śāstra* and the *Mādhyamika-śāstra* translated by Kumārajīva. Its doctrines were formed through the assimilation of the ideas of various schools introduced from India and developed in China by systematic reorganization. Since the founder of the school, Zhi Yi, lived in the Tiantai Mountains, Zhejiang Province, it was called Tiantai School. It takes the theory of Five Periods and Eight Teachings as its main creeds, and the Three-fold Contemplation with one's mind and the Perfect Harmony of Three Truths as its central idea.

²⁷Q: What are the Five Periods?

A: This school divides the preaching time of Sākyamuni Tathāgata into five different periods, and speaks of the "Teachings of Five Periods": the Avataṃsaka Period, the Āgama Period, the Vaipulya Period, the Prajñā Period, the Saddharmapuṇḍrika and Nirvāna Period. The name of each period corresponds to a Buddhist text. They assert that all sermons preached by the Buddha fall within the categories of these five periods. Hence the term "Five Periods".

²⁸Q: What are the Eight Teachings?

A: This school divides the Buddha's Teachings into four different grades according to the profundity or simplicity of the contents: the Tripiṭaka Teaching, the Intermediate Teaching, the Differentiated Teaching and the Highest Perfect Teaching. These

four are collectively known as the "Fourfold Converting Teaching". The Tripiṭaka Teaching is the Hīnayāna teaching for sāvakas; the Intermediate Teaching is the medium interconnecting the earlier Hīnayāna with later Mahāyāna, and contains doctrines of Hīnayāna, Mahāyāna or the elementary Mahāyāna, hence the name; the Differentiated Teaching is the pure Mahāyāna doctrine with different approaches to various dhammas as its name shows; and the Highest Perfect Teaching is the Mahāyāna doctrine, tactful without impediment, consummated without imperfection. These four grades of teaching are arranged in order from simple to profound. Then, on the basis of the Buddha's techniques of instruction, it differentiates between four modes of instruction: Direct Teaching, Gradual Teaching, Esoteric Teaching and Indeterminate Teaching. These are called the "Four Modes of Instruction".

²⁹Q: What are the Three-fold Contemplation with One Mind and the Perfect Harmony of Three Truths?

A: The Threefold Contemplation (Ti-vipassanā) is a system of meditation practice, consisting of the contemplation of Emptiness, Illusion and the Middle Path. These three contemplation can be attained within one mind. Hence the term "Three-fold Contemplation within One Mind". The three Truths are the truths of Paramattha, Sammuti and Majjhima-paṭipadā (ultimate, conventional and middle path), which are in perfect harmony. Though they are three, they are three in one, so, saying three or saying one means the same, Thus they are regarded as the Perfectly Harmonious Threefold Truth. The Three-fold Contemplation within One Mind and the Perfect Harmony of Threefold Truth are the tenets of the Highest Perfect Teaching, which holds the view that all dhammas are basically the same, and the truths are consummated without impediment. The Tiantai School identifies its own doctrine with the Highest Perfect Teaching and regards other schools' as affiliations to the former three teachings. This School sums up the theories of all previous

schools, makes an elaborate arrangement of Buddhist doctrines, and creates the Mahāyāna theory of Highest Perfect Teaching, which exemplifies the indigenous development of the Mahāyāna doctrine in China.

³⁰Q: What is the main doctrine of the Xian Shou Sect (Avataṃsaka School)? Why is it so called?

A: This School takes the *Avataṃsaka Sūtra* as its foundation and makes a comprehensive study and a penetrating elaboration of it. Its ideological system is formed on the basis of the development of the theories of previous scholars and schools (such as the Three Śāstras School's, the Tiantai's, the Viññānavāda's, the Masters of Daśabhūmika-śāstra School and Masters of Mahāyāna-saṃparigraha School, etc.). Its founder was the Imperial Preceptor, Xian Shou (Fazang) in the late 7th century, so it was named Xian Shou School, or Hua Yan (Avataṃsaka) School. This school asserts that the whole of Buddhism has Five Components of Teachings, the gist of which is the Six Features, Ten Metaphysical Entrances (doors) of thought and Three Contemplations.

³¹Q: What are the Five Components of Teachings?

A: The first is the Small Teachings, i.e. the Hīnayāna Teachings for Sāvakas.

The second is the Initial Teachings, i.e. the Teachings of the initial stage of Mahāyāna.

The third, the Terminal Teachings, i.e. the Teachings of the Terminal Stage of Mahāyāna.

The fourth is the Teachings for Immediate Comprehension, applied in Mahāyāna as the key to sudden enlightenment.

The fifth is the All-round Teachings, which means the Perfect Teachings, harmony without impediment, consummated without imperfection.

This School classifies the Buddhist doctrine into five parts from simple to profound with one more level than Tiantai School, i.e.

the Teaching for Immediate Comprehension. Hence the term "Five Components of Teachings".

³²Q: What are the Six Features?

A: The Six Features are: whole and part, unity and diversity, entirety and individuality (individuation). These six are manifest in all things simultaneously, as well as in each single thing simultaneously. Whether in all things or in a single one, they always oppose each other and also complement each other, are present at the same time, with harmony and mutual penetration without mutual disruption. In this way, the principle of Dependent Origination of the dhamma world is revealed.

³³Q: What are the Ten Metaphysical Entrances of thought?

A: The Ten Entrances are:

(1) All phenomena are present simultaneously and correlate with each other.

(2) The relationship between them is like the endless Indra Net.

(3) The visible and the invisible phenomena exist within one unit.

(4) Even the smallest particles retain their own nature while mutually penetrating.

(5) Dhammas in ten epochs are manifest without separation.

(6) Dhammas in all traditions have virtues, whether pure or impure.

(7) Each thing and all other things inter-penetrate, but do not lose their own character.

(8) Various Dhammas exhibit phenomenal identity, free from resistance.

(9) All Dhammas exist as the reflection of the Tathāgata's mind.

(10) Profound theory can be illustrated and perceived with things.

The general significance of the Ten Metaphysical Entrances is to

demonstrate Hua Yan's theory, demonstrated by all phenomena, that all things are present simultaneously, with endless mutual interaction, regardless of whether things are pure or impure, one or many, of the past, present, or future.

³⁴Q: What are the Three meditations?

A: The first is the meditation on the ultimate reality of voidness. The second is the meditation on the unity of forms and substance without separation and hindrances. The third is the meditation on the universal harmony in which all dhammas abide. The establishment of the theories of the Six Features, Ten Metaphysical Entrances, and Three Meditations expounds the gist of the *Avatamsaka-sūtra* such as the Dependent Origination of the dhamma world, the unity of phenomena and truth without hindrance, no separation and hindrances among things or forms, all in infinite harmony. The Six Features and the Ten Metaphysical Entrances are used in meditation on the basis of dhamma world, while the Three All-round Meditations are used in the insight gained through wisdom. This view that the dhamma world is endlessly multi-meshed and in infinite harmony is in fact a unique creation of China despite its source from the *Avatamsaka-sūtra*. Its doctrine of the Dependent Origination of the dhamma world without hindrances is an enormous development on the Mahāyāna doctrines introduced from India.

³⁵Q: What are the doctrines of the Chan (or Zen) School? What is the meaning of "Chan"?

A: "Chan" is short for "Channa", the Chinese transliteration of Jhāna (S. Dhyāna), meaning meditation or contemplation in tranquillity, also known as Chanding (Samādhi practice). This practice is to make the mind concentrate on one point of an object, and keep contemplating in order to become aware of the true nature of one's own mind. It is known as "Can Chan" in Chinese, so this school is called the Chan School, or Jhāna School. There are a number of types of "Chan", including Sāvaka Jhāna, Bodhisatta Jhāna, Step by Step Jhāna and Jhāna of Immediate Enlightenment. In Jhāna

studies, there is a special Chinese subsect different from others, that is the Chan Sect, which claim "transmission of Dhamma without recourse to the scriptures". It is not the traditional gradual Jhāna, but the Jhāna of the Patriarch, which emphasizes "Direct pointing at the mind of the man, and the attainment of immediate enlightenment".

³⁶Q: Does this school have some specific suttas as its theoretical basis?

A: It is believed that the meditation practice of this school was introduced into China by Bodhidharma from India in the early 6th century. It used to be said that the Chan School (Dhyāna School) was passed on through mind to mind and transmission one by one, without recourse of language, speech and writing. Thus it was known as "a special transmission without use of the scriptures". However, the first Patriarch of the School, Bodhidharma, handed down the 4-volume *Lankāvatāra-sūtra* to the second Patriarch Hui Ke as the criterion of its seal or essential idea. Besides, Hong Ren and Hui Neng taught their followers to uphold and preach the *Vajracchedika-prajñāpāramitā-sūtra*. Thus the *Vajracchedika* and the *Lankāvatāra* sūtras became the canonical basis of the School, and subsequent to this, appeared the *Platform Sūtra* of the 6th Patriarch and many other recorded quotations. So it is impossible to say that the Chan School is without canonical basis.

³⁷Q: I have seen quite a few temples named such and such Chan monastery. Does it indicate that the Chan School has been flourishing in China?

A: Yes, it does. In the 8th century the School was divided into two subsects, named the Northern Sect and the Southern Sect. The Northern Sect headed by Shen Xiu (c. 606-706), which advocated gradual cultivation, was in fashion for a time, but declined before long. While the Southern Sect headed by Hui Neng (638-713), who advocated Immediate Enlightenment and was venerated as the 6th Patriarch by later generations, became prosperous and carried on. From the Tang Dynasty to the Song Dynasty, masters in the lineage of the Southern Sect succeeded one after another. Over the course

of 3-4 centuries, it further branched into 5 subsects and 7 subgroups, which gives some indication of how the school flourished. This school, like the Pure Land (Sukhāvati) School, has flourished long and wide in China.

³⁸Q: What were the later five subsects and seven subgroups of the Southern School?

A: Among the disciples of Hui Neng, the 6th Patriarch of the Southern School, were the two branches led respectively by Huai Rang (667-744) in Nan Yue, and Xing Si (?-740) in Qing Yuan, which gave rise to the five subsects and the seven subgroups. From the Nan Yue Branch first emerged the Wei Yang Subsect and then the Lin Ji Subsect. From the lineage of Qing Yuan, three subsects evolved: Cao Dong, Yun Men and Fa Yan. These are the five subsects from the two branches. Later on, the Huang Long and Yang Qi subgroups emerged from Lin Ji. These two together with the previous five subsects formed the seven subgroups. All of them thrived for a time but some waned and became extinct after a period. Only the Lin Ji and Cao Dong subsects have survived, with the former more flourishing. All descendants of the Chan School in modern times are the offspring of Lin Ji and Cao Dong.

³⁹Q: Some believe that Dhyāna practice (Can Chan or Da Zuo in Chinese) has the effect of helping people keep in good health, avert illness and attain longevity. Is it true?

A: In Buddhist meditation, there are certain ways to adjust posture and breath, to rest the mind and sit down in tranquillity which have the positive effect of promoting good health, averting illness and attaining longevity. However, this is not the purpose of Buddhist Dhyāna practice. Buddhist meditation (including contemplation of various schools) is aimed at concentration of the mind on one point, thoroughly understanding the truth, and finally manifesting wisdom (paññā) and perceiving the nature of Dhammas. This is known as illuminating the mind (citta), revealing the true nature and obtaining freedom. As to sitting in quiet and Qigong, these are merely the form or base for practicing

meditation, while keeping from illness and attaining longevity are merely the byproduct of dhyāna practice. Buddhism does not particularly encourage these effects or set them as its goal. Nevertheless, it is necessary for the beginners of meditation to know these basic methods of adjusting postures and breath in order to keep the body and mind in a proper state and to avoid ailments arising from meditation practice. Only then can the smooth approach of the dhyāna-contemplation be safeguarded.

⁴⁰Q: Could you please summarize the theories of the Pure Land (Sukhāvatīvūha) School?

A: This school was formed on the basis of the *Sukhāvatī-vyūha (Amitāyus-sūtra)* and other texts, with the aim of advocating a practice of meditating and intoning Amita Buddha so as to gain rebirth in the Western Pure Land where Amita Buddha resides. Hence the name Pure Land School. This school divides the Buddha's methods into two courses, the difficult course and the easy course. They point out that those schools who observe the Six Perfections (cha-pāramitā) and practise numerous exercises requiring discipline (sīla), concentration (samādhi) and wisdom (paññā) over three long periods of time (asaṅkha), belong to the difficult course; that the Pure Land School practice, on the other hand, is to devote one's heart and soul to recitation of the Buddha's name, and in this way one can go to the peaceful Pure Land at the moment of death by the power of Amita Buddha's vow, so it falls under the category of easy course. Therefore, this school advises people to recite Amita Buddha's name in order to attain rebirth in the Western Pure Land.

⁴¹Q: What are the characteristics of this school?

A: This school is characterized by its simplicity in practice and its strong appeal to the broad masses. According to this school it is necessary neither to master the Buddhist scriptures and study the doctrines extensively, nor to adopt meditation and special cultivation, but to keep reciting "Namo Amita Buddha" while walking, standing, sitting or lying down. With sufficient faith and

devotion to recite the Buddha's name whole-heartedly and unremittingly, one can be reborn in the Pure Land shortly after death. Of course one should, too, observe the precepts, chant the suttas, and widely do good in daily life, so as to assist one in reaching the goal. Since the manipulation is so simple and thus easy to popularize, even scholars of other schools practice this method, thereby enabling the Pure Land School to command particular popularity in China.

⁴²Q: Judging by its name, one would say the Vinaya School is a school placing emphasis on learning and research of the Vinaya Piṭaka. Is that right?

A: Yes, the Vinaya School mainly pays attention to Vinaya studies. Due to the popularity of this School, Chinese monks, in the course of their learning and practice of Mahāyāna's Three Categories of Studies (tisso sikkhā)—discipline, contemplation, and wisdom (adhisīla, adhicitta and adhipaññā), also attach importance to the Vinaya Piṭaka of Sāvakayāna.

⁴³Q: What are the contents of the Vinaya rules?

A: In brief, Vinaya rules consist of Sāvaka-vinaya and Bodhisattva-vinaya. The Vinaya School mentioned here refers to the lineage founded by Vinayācārya Dao Xuan of the Zhongnan Mountains on the basis of Dharmagupta Vinaya of Sāvakayāna. In terms of the precepts and features of discipline, there are respectively the Five Precepts, the Ten Precepts and the Full Commandments (upasaṃpadā). The Five Precepts are observed by both monastic and lay Buddhists, while the Ten and the Full Commandments are observed by monastic disciples. These have been mentioned before and need not be repeated. The Vinaya Piṭaka of each sect does not merely include the precepts and the reasons for their being laid down, (or enacted), but also, in greater portion, the regulations (kamma, or the procedures of meeting) for the Saṅgha Order, such as the institution of renunciation, ordination, rainy retreat (Vassa), fortnightly assembly (Upasatha), robes and alms begging as well as other daily routines, each in detail. With the lapse of time and the

change of circumstances, many rules of the Vinaya have long fallen into laxity. The Bodhisatta Vinaya consists of precepts for lay followers and for monks and nuns respectively. The monastic Bodhisatta Vinaya stipulates, as in *Brahmajāla-sīla-sutta*, 10 major and 48 minor precepts, while that for lay followers stipulates 6 major and 28 minor rules as contained in the *Upāsaka-sīla-sutta*. Again, the Bodhisatta-vinaya is generally summed up into Three Aggregates or three categories of purifying sīla. They are: first, Saṃvara-sīla which refers to the moral precepts, meaning "the Avoidance of all evils"; second, Kusala-dhamma-saṃgrāhaka-sīla, meaning "the acquisition of all good"; and third, Sattvārtha-kriyā-sīla, meaning "benefiting all sentient beings". Since China essentially belongs to Mahāyāna Buddhism, the Bodhisatta Vinaya has to be briefly referred to here. The aforesaid are the contents of the Vinayas of both Mahāyāna and Hīnayāna.

⁴⁴Q: Since the Dharmagupta Vinaya belongs to Sāvakayāna, why is this Hīnayāna School listed among the eight major schools of China?

A: Though it belongs to Sāvakayāna, the essence of Dharmagupta Vinaya is in common with Mahāyāna; as the old saying goes, "There is something applicable also to Mahāyāna". With the prevalence of Mahāyāna in China, the Vinaya-piṭaka can be explained in terms of Mahāyāna and the "small vehicle" can be included as a constituent part of "great vehicle", so the Dharmagupta Vinaya forms part of Mahāyāna Vinaya. It is on the basis of Sāvaka Vinaya that the Restraint of Senses (Saṃvara-sīla) in the three aggregates of purifying sīla of monastic Bodhisatta Vinaya was established. As to the four most fundamental precepts (Pārājika), abstaining from killing, stealing, improper sex, and lying about one's spiritual achievements, these are followed by both Mahāyāna and Hīnayāna. The most important thing in the study of Vinaya rules is to distinguish the purview of flexibility and constancy, abidance or deviation. Flexibility means that certain Vinaya precepts, being inviolable in normal times, may be

breached under certain circumstances, while constancy refers to those that can not be violated at any time. In certain circumstances, one may not be certain oneself whether a rule has been violated, so it is necessary to consult the Vinaya rules. Then the Vinaya masters can determine the demarcation line between flexibility and constancy, abidance or violation. Of the sāvaka precepts, the four fundamental rules (to abstain from taking life of people, stealing, sexual misconduct and lying about one's spiritual achievements), plus the thirteen rules of saṅghādisesa (Bhikkhuni pātimokkha includes 8 fundamentals and 17 Saṅghādisesa rules), must be strictly followed without infringement, while most of the rest are permitted to be relaxed under special and necessary circumstances. Take the precept of "abstaining from eating at an inappropriate time" for example, it is observed in normal times. Yet eating after physical labor is permissible. However, the flexibility is determined according to the Vinaya. It can be seen that Buddhist Vinaya precepts are not rigid, but are flexible except for the fundamentals.

⁴⁵Q: What is the doctrine of the Esoteric School (the Tantra School)?

A: In the 8th century, Esoteric Buddhism of India was introduced into China by Śubhakarasiṃha, Vajrabodhi, and Amoghavajra, among others. After that it gradually grew into the Esoteric School in China along with practice and dissemination. Based on the *Mahāvairocana-sūtra* and the *Vajraśikhara-sūtra*, this school established the Three Secret Yoga, performing contemplation to culminate in the four peaks of view and cultivation in order to achieve integration with a specific Buddha or master (guru-yoga). This school, in order to preserve its secret nature, does not permit those who have not undergone the ceremony of pouring water on the head (abhiṣeka) from freely displaying and passing down to others the instruction. Hence the name Esoteric School.

⁴⁶Q: What are the Three Secret Yoga? What does Guru-yoga mean?

A: A Guru, or Satyadevatā, is a most venerable and honored Buddha or Bodhisatta or wise spirit (vijjā-rāja) chosen by a practitioner as

an object or a model to learn from to enable his own attainment. In order to integrate himself with the merits, virtues and wisdom of the Honored One, the practitioner has to study and practice the Three Secret Yoga which means the union of the three karmas. The "Three Secret" are physical, oral and mental karmas, and "yoga" means connected and identical in each of the three. Connected and identical with whom? That is to say the practitioner's actions of body, speech and mind should connect and identify with the Honored One's. To practice this method, the practitioner should embrace the Guru's postures, hand signs (mudra) and recite the Honored One's spell (mantra), keep contemplating on his own Guru or bija (seed) words, ensure that his own three karmas correspond to that of the Guru. That is called yoga practice. If this practice proves a success, the practitioner's own body would become one with the body of the Guru. There are many methods of practice in Esoteric Buddhism. This is but one example. The ultimate principle of this school is still based on the theory of the emptiness (Suññatā) of nature and formlessness of Dhamma; just as this school claims, "There is no origination of 'A' at all" (akāra-ādyanutpādaḥ), no origination is the same as emptiness.

⁴⁷Q: From your discussion I've got a preliminary understanding of the eight schools of Chinese Buddhism. Are there any other schools besides these eight? Since they are called eight major schools, are there any minor schools?

A: Besides the eight, there are the Abhidharma-kośa School, mainly upholding the *Abhidharma-kośa-śāstra*, and the Satyasiddhi School, specifically dealing with the *Satyasiddhi-śāstra*. Both of them belonged to Hinayāna Buddhism and waned after the Tang Dynasty. With the addition of these two schools, there are a total of ten schools. In addition, there are masters, called Nibbāna Teachers, who propagated the *Mahāpari-nibbāna-sutta*, masters who taught the *Mahāyāna-samparigraha-śāstra*, and Masters of the *Daśabhūmika-sūtra-śāstra*. These schools flourished for a time and

soon lost followers or merged into other schools.

⁴⁸Q: Were there any twists and turns or evolution among the schools in the course of their spread after inception?

A: The developments of different schools were uneven, as were their variations. Some schools waxed upon their inception and waned afterwards. This was the case with the Three Śāstras School. This school, through energetic propagation by Fa Lang of Xinghuang Temple and Ji Zang of Jia Xiang Temple in the Chen and Sui Dynasties respectively, spread widely over nearly the entire nation until the early Tang Dynasty, but gradually declined afterwards. Some schools, such as the Tiantai School, were not initially popular, but thrived later. This School was founded by Zhi Zhe and Zhang An in the Tiantai mountains and was just confined to southeastern Zhejiang province, lingering on like a thread from teacher to disciple. But 100 years later, at the time of Zhan Ran of Jing Xi, it blossomed. And some schools kept on flourishing and disseminating without decline. This was the case with the Chan School. Many masters of this school who made great achievements were recluses residing in forests or mountains and subsisting alone without much reliance on the outside world. Nor did they need many canonical books. That is why this School could survive the Hui Chang Extermination of Buddhism and carry on with significant developments. Some other schools seemed to die out and then revive. Prior to the attempted Extermination of Buddhism during the Hui Chang era, various schools had successively arisen and flourished, though attaining different levels in prosperity. During the Hui Chang years (845 AD), the Emperor Wuzong of the Tang Dynasty attempted to exterminate Buddhism. Nearly all Buddhist scriptures and statues were demolished and most of the canonical works of each school were lost. By the 10th century, the works of the Tiantai School were regained from Korea, as were parts of the works of the Xianshou Sect (or Avataṃsaka School). This was considered the revival of the two schools after the Five Dynasties. Many works of the remaining schools, like

Mādhyamika, Yogācāra and Esoteric Schools, were scattered abroad. Not until the end of the Qing Dynasty, were certain texts of the Dhammapakati and Dhammalakkhaṇa Schools brought back to China from Japan. In the last half century, all the eight schools have been revived with their doctrines being studied and preached. To sum up the history of Buddhist schools in China, the Sui and Tang Dynasties saw the heyday of all schools, following the Hui Chang Persecution came the period of their decline and extinction, with the exception of the Chan School. Not long afterwards, the revival of the Tiantai and Xianshou Schools and the momentous development of Chan School brought about a period of Buddhist revival, but still it never regained its grandeur of the early and middle Tang Dynasty. After the Yuan Dynasty, Tibetan Buddhism spread over central China, and was favorably accepted by the imperial court, but was not popular among the people there. The original Buddhism in the Han-inhabited area was not as prevalent as in the Song Dynasty. During the Qing Dynasty, Buddhism in the Han region showed no sign of increase, but was able to maintain itself.

⁴⁹Q: From the end of the Tang Dynasty till the Qing Dynasty, Buddhism declined gradually. After the Qing Dynasty, Buddhism appeared to revive with the emergence of many Buddhist talents. Could you name a few distinguished personalities in recent times?

A: One of the most distinguished advocates of Buddhism in modern times was Yang Renshan (1837-1911), who, in order to nurture Buddhist scholars and facilitate the circulation and study of Buddhist texts, dedicated decades of his time to lecturing on and printing Buddhist scriptures. He was the founding father of the Jinling Scripture Publishing House which published many important works of the Dhammapakati and Dhammalakkhaṇa Schools which had long been missing in China and were brought back from Japan. This enabled the revival of these two schools. At the same time, the Jinling Scripture Publishing House was also an educational center where Tan Sitong, Zhang Taiyan and others

used to go to hear Yang Renshan's lectures. Among the Buddhist scholars he nurtured, the most outstanding personality was Ouyang Jingwu, a lay Buddhist, who devoted his life to the study of Dhamma-lakkhaṇa or Viññānavāda and established the China Buddhist College in Nanjing which became an important research center of Viññānavāda studies at that time. Another promoter of the study of Dhamma-lakkhaṇa was the lay Buddhist Han Qingjing of the San Shi Society in Beijing who enjoyed a reputation equal with that of Ouyang Jingwu.

⁵⁰Q: From your description, I understand why these highly-acclaimed lay Buddhists who have made very significant contributions to modern Buddhism deserve eulogy and emulation by succeeding generations. Besides this, were there famous monks who have contributed to the spread of Buddhism? Could you please give a few examples?

A: Famous monks in contemporary times include Ven. Yuexia, Dixian, Yinguang, Hongyi, Xuyun, etc. who propagated the doctrines of the Xianshou (Avataṃsaka), Tiantai, Pure Land (Sukhāvātī), Vinaya and Chan schools respectively. Then, there were the powerful propagators, Masters Yuanying and Taixu, who energetically set about consolidating the Sangha Order, promoting Saṅgha education, demonstrating the Mahāyāna tenets and uplifting Buddhist culture. Ven. Yuanying was a paragon with profound learning in the *Śūramgama-mahā-sūtra* and the practice of both the Chan and Pure Land schools, who, throughout his life, did his utmost to preach Dhamma, build monasteries, start all kinds of welfare services and encourage and promote the coming generations with his deep love for his country and Buddhism. Ven. Taixu was an erudite Buddhist scholar with vast knowledge comparable to abysses and oceans and a noted activist in propagating Buddhism. Under his advocacy and guidance emerged a large number of Saṅgha talents for the promulgation of Buddhism who made indelible contributions to the development of contemporary Buddhist cause in China. In the past 10-odd

centuries since the Emperor Wuzong's attempted Extermination of Buddhism in the Tang Dynasty (844 AD), Buddhist learning has been at low ebb. So it is a matter for rejoicing that there have been some signs of restoration owing to the efforts of both lay and monastic Buddhists in the past 100 years. However, compared with the vigorous growth of Buddhist academic research outside China at present, much work awaits our prompt action. How can we restore the magnificence and glorious position occupied by Chinese Buddhism in the Tang Dynasty and keep the pace of Buddhism with the great contemporary development of our country? It invites the far-sighted aspirants in Buddhist circles to carry on the unfinished work of the pioneers and to exert their utmost endeavors with zeal.

So much for a brief summary of the origin, dissemination, and vicissitudes of various Buddhist Schools of the Han nationality in China.

(III) Buddhism in Minority-inhabited Regions of China

⁵¹Q: After your explanation, I have got a rough outline of Buddhism in the Han regions. Could you tell me when Buddhism was introduced into Tibet and who were the propagators?

A: The Tibetan Buddhist tradition dates back to the mid-7th century. The Tibetan ruler at that time, Sroñ-btsan-sgam-po, was converted to Buddhism under the influence of his two wives, Princess Wencheng of Tang and Princess Bhṛkuṭi (or Khri-btsun in Tibetan) of Nepal. He dispatched his Minister Thonmi sambhoṭa to lead a 16-person envoy to India to learn Sanskrit and Buddhist scriptures. On their return they created the Tibetan writing system and began to translate Buddhist texts. In the mid-8th century, the Tibetan Ruler Khri-sroñ Ide-btsan invited Padmasaṃbhava to come to Tibet from India. The indigenous religion—Bon was subdued and Buddhism, thereupon, spread in Tibet.

⁵²Q: What about subsequent developments?

A: After his arrival in Tibet, Padmasaṃbhava first built the Bsam-yas Temple, ordained monks and then established the Saṅgha Order there. He also invited masters to translate many Buddhist scriptures from Sanskrit, as well as some from Chinese. According to the existing catalogue of translated Buddhist works called *Ldan-dkar-ma* in Tibet (compiled in the royal house of Khri-sroṅ Ide-btsan, according to Bu-ston), works of all kinds—Mahāyāna, Hīnayāna, Esoteric and Exoteric—translated at that time totaled 738, (including 32 translated from Chinese). Such was the prevalence of Buddhism at the time. However, in the mid-9th century, Tibetan Buddhism suffered a setback, which was known as *Glaṅdar-ma* Persecution of Buddhism. Thus for a while (828-978 AD), Buddhism subsided. Later on, with the reintroduction of Buddhism from Xikang region Tibetan Buddhism revived. In the 11th century (1042 AD), a Bengali Buddhist, Mahānāyaka Atīśa, came to Tibet and energetically promulgated the Buddha Dhamma. Meanwhile, the Tibetan Bhikkhu Rin-chen Bzaṅ-po (Bao Xian) and others translated numerous sūtras and śāstras. Students of Tibetan history take the *Glaṅdar-ma* Persecution as the dividing line, referring to the period before as the Early Spreading Period, and the period after the restoration of Buddhism as the Later Spreading Period.

Afterwards, Indian Buddhist scholars, especially those of Nālandā, Vikramaśīla and other great monasteries came to Tibet in large numbers, especially at the time of turbulence (all great Buddhist temples in Bihar Pradesh in India were completely demolished by the invading troops in 1203). The translation work grew rapidly as a consequence. Most of the 6,000 volumes of the Tibetan Tripiṭaka were directly translated from Sanskrit and a small portion were translated from Chinese. Therefore, a very rich collection of later works of Indian Buddhism are preserved in the Tibetan Tripiṭaka, particularly those of Logic (*Hetu-vidyā*), Linguistics (*Śabda-vidyā*), Medicine (*Cikitsā-vidyā*) are great both in number and importance.

It is well-known that the most popular and salient feature of Tibetan Buddhism is Esoteric Buddhism. As for Exoteric Buddhism, all large monasteries of the Dge-lugs-pa School (Yellow Hat) in Tibet adopted an educational system centered on the 5 subjects of Buddhist studies: Hetu-vidyā, Abhidhammakosa, Vinaya, Mādhyamika and Yoga, which, to judge by the accounts of Xuanzang and Yijing, may be the academic standards and style handed down from Nālandā.

⁵³Q: As you have mentioned before, there exists in China, too, a Pāli tradition of Buddhism. What about its development?

A: The Pāli tradition of Buddhism (Theravāda Buddhism) prevails in the areas inhabited by the Dai and Bulang nationalities in Yunnan Province, where the traditional Buddhist belief among the people is similar to that in the Southern Buddhist countries. All of them belong to the Pāli system of Buddhism. As they can directly read the scriptures in Pāli, there is no necessity to labor on translation. It is worthy of delight and praise that the good tradition of primordial Buddhism—practice with effort according to Dhamma and Vinaya—has been preserved in this area for centuries.

⁵⁴Q: Are there different schools of Tibetan Buddhism as there are different schools of Buddhism in the Han-inhabited areas?

A: Within Tibetan Buddhism, too, there emerged different schools at different times. Due to the diversity in evolution, translation, and sūtras preached or favored, there gradually appeared a number of schools, large or small, such as the Rñiñ-ma-pa Sect, which survived from the Early Spreading Period; the Bkaḥ-gdam-pa Sect, which was passed down from Atiśa to Ston-pa; the Bkaḥ-brgyud-pa Sect, handed down from the translator Mar-pa to Mi-la ras-pa; the Sa-skyapa Sect passed down from Master Ḥbrog-mi to Dkon-mchog rgyal-po; and the Dge-lugs-pa Sect established by Tsoñ-kha-pa (1357—1419) during his religious reform. In addition, there were minor sects that were not widespread and had limited influence, such as Jo-nañ-pa, Shi-byed-pa, Good-yul-pa, and Sa-ru-pa. Each of them upheld its own peculiar doctrine and method of

cultivation. A particularly note-worthy sect, the Dge-lugs-pa, was founded by Master Tsoṅ-kha-pa in the late 14th century on the basis of an earlier tradition, along with his further elucidation of doctrine, and congregational reform in the Saṅgha system. This School is known as the Yellow Sect, and is widespread among Mongolians and Tibetans.

⁵⁵Q: Are there different sects, too, within the Pāli system of Buddhism in China?

A: There are different sects within the Pāli Buddhist system in China, but the differences are only in the requirements of discipline and rituals, rather than differences in theories and doctrines.

(IV) The Impact of Buddhism on Chinese Thought and Culture

⁵⁶Q: Buddhism has had a presence in China of nearly twenty centuries, developed 10-odd schools and has made significant, even splendid academic achievements. How has it influenced and affected Chinese thought and culture?

A: The theories of various Buddhist schools, through long-term research and widespread propagation, have had lasting influence on Chinese thinking. For instance, it is commonly acknowledged in philosophical circles that the Neo-Confucianism of the Song and Ming Dynasties was obviously generated, to a great extent, by the impetus and impact of the doctrines of Avataṃsaka, Chan, as well as other Buddhist schools. In the late Qing Dynasty, the study of Buddhism became fashionable among Chinese intellectuals. A number of leading scholars and pioneers of democratic movements, such as Tan Sitong, Kang Youwei, Liang Qichao, and Zhang Taiyan made good use of some Buddhist ideas. Buddhist theories of love and compassion (Mettā-Karuṇā), equanimity (Upekkhā or samānatta), impermanence (Anicca) and egolessness

(Anattā) inspired and encouraged the intellectuals at that time.

⁵⁷Q: What is the impact of Buddhism on culture and the arts? In particular, what role has it played in Chinese literature?

A: Thousands of volumes of Buddhist scriptures translated from Sanskrit are themselves magnificent literary works. Among them, such works as *Vimalakīrti-nirdeśa*, *Saddharma pundarīka-sūtra* and *Śūramgama-mahā-sūtra* have been particularly attractive to literature lovers through the dynasties. They read and study them specifically out of literary interest. Lu Xun, the great writer of modern China, donated funds to the Jinling Scripture Publishing House for carving and publishing *Sata-upamā-sutta*, the admonitory stories which are still often translated into modern Chinese, published and enjoyed as literary works today. Buddhism has brought to Chinese literature numerous entirely new things unknown before—new spheres of meaning, new writing styles and new rhetorical methods. Aśvaghoṣa's *Buddha carita* set a model for long narrative poetry. The *Saddharmapundarīka-sūtra*, the *Vimalakīrti-nirdeśa* and the *Sata-upamā-sutta* inspired the writing of novels in the Jin and Tang Dynasties. The thought of the *Prajñā-pāramitā-sūtra* and of the Chan School influenced the poetry writing of Tao Yuanming, Wang Wei, Bai Juyi and Su Shi.

⁵⁸Q: While Buddhism has exerted influence on the development of Chinese literature as mentioned above, what effects has it had on the development of Chinese literary styles?

A: To meet the need to extensively spread Buddhism, a peculiar style of literature, "Bianwen", evolved. It actually springs from a style of songs and odes popular in ancient times. Bianwen is the expression of Buddhist scriptures in common words for easily narrating and singing. Various Bianwen discovered inside the Dunhuang Caves are popular literary works whose ease, verve and richness of imagination contributed to the subsequent popular forms of Chinese literature such as Pinghua, novels and plays. Besides, another special style named Recorded Utterance, arose out of the records of conversations and inculcations of the Chan masters. This

simple and lively oral style was later followed by the Neo-Confucianist scholars in the Song and Ming Dynasties and many such works were produced. In addition, in the field of Chinese Phonology, a system of phonetic letters known as "Fanqie" developed under the influence of the Sanskrit alphabet. This was popularly used in the old Chinese dictionaries. Generally speaking, the Buddhist manifestations in Chinese literary sphere are varied and colorful.

⁵⁹Q: As is well known, the construction of pagodas and statues in China mostly originated from Buddhism. The achievements of Buddhist arts in this respect are world famous. Could you give a brief account?

A: With the introduction of Buddhism into China, the arts of pagoda construction and statue-making rapidly spread over every part of China. Early in the Three Kingdoms Period (2nd century AD) the pagodas standing in the Longhua Temple in Shanghai and in the Baoen Temple in Suzhou were erected and rebuilt later. From the 4th to the 6th century, magnificent pagodas and temples appeared all over the country. The world-famous Buddhist grottos of Dunhuang, Yungang, Longmen and others that are equally important, are a treasure trove of ancient sculpture and murals. Ranging from Xinjiang in the west to Liaoning in the east, to the south beyond the Yangtze, these grottos were also begun during this period and the work lasted for centuries. In China, there are numerous forms of pagodas, but they largely fall into two categories: one is the Indian style with many variations, and the other is the Chinese style, adapted from the traditional style of pavilion. The study of temples and pagodas is a major part of the study of Chinese architecture. As for Buddhist images, they are made from many types of materials and with many techniques, including carved and engraved images of wood, stone, jade and ivory, statues cast in gold, silver, bronze and iron, clay sculptures, beaten metal plate statues, ramie tapestries, brick statues, ceramic statues, as well as embroidered and painted images. With the

assimilation of Gandhāra and other Indian styles, the Buddhist art of sculpture has become a great cultural legacy that is distinctly Chinese.

⁶⁰Q: Buddhist painting is world-famous. How many types are there?

A: Buddhist paintings are mainly murals. The mural paintings preserved in the Dunhuang Grottos furnish us with a wealth of information about the arts and their history. It is worth noting that the paintings of the Buddha's Jātaka story prevailing at the initial period gradually gave rise to the "Jingbian" paintings of the Tang Dynasty. Like *Bianwen*, its counterpart in literature, "Jingbian", was a representation of Buddhist stories and metaphors in paintings. the "Vimalakīrti-nirdeśa Jingbian" and the "Sukhāvati-sūtra Jingbian", in the Dunhuang Caves for examples, are splendid and vivid works. "Jingbian" paintings greatly enriched the contents of murals and mural art reached a climax in the Tang Dynasty (618—906 AD). Famous painters came forth in large numbers. Among the dozens whose names have come down to us, Yan Liben, Wu Daozi and others, were mostly engaged in Buddhist paintings, which shows the role Buddhism played with painting at the time. The development of Chinese paintings from scholar-painters' works represented by Wang Wei's group to freehand brush works prevailing from the Song and Yuan Dynasties is closely associated with the thought of the Paññā and Chan schools. Buddhist etchings also came into existence very early, along with the printing of Buddhist texts. The oldest etchings existing today in China are illustrations seen in Tripiṭaka texts. Buddhist images engraved in stone, dating from the Tang Dynasty, can be seen in the stone-carved scriptures in Fangshan county today. Besides, since the Song and Yuan Dynasties, paintings of Avalokiteśvara, Arahats as well as landscape paintings have also been very popular.

⁶¹Q: Does Buddhism also have its own tradition in such areas as music, astronomy, medicine, etc.?

A: Yes. Along with Buddhism there came a tradition of astronomy,

music and medicine. Ven. Yixing, an ancient astronomer who was commemorated in 1955 with the special issue of stamps in his honor, was a Buddhist monk in the early 8th century. He was a disciple of Śubhakarasiṃha, who came to China from India to propagate Esoteric Buddhism. Yixing made remarkable contributions to astronomy by writing the famous Astronomic book *Da Yan Calendar*, and determining the meridian, etc. While in the field of medicine, according to the records of the Sui and Tang Dynasties, more than ten Indian works on medicine and pharmacology were translated. The Tibetan Buddhist canon includes Cikitsā-vidyā (science of medicine). With respect to music, Buddhist singing—Bhāṣā—was already current in China as early as the 2nd century. At the beginning of the 7th century, the Piao Kingdom (located in the present-day Myanmar) presented to China 10 pieces of Buddhist bhāṣās, together with a troupe of 32 players. Chinese music in the Tang Dynasty absorbed elements from Buddhist countries including India, Kucīna (today's Kucha), Kasmīra, Samarkand, Piao and Champa. Some Tang music is still preserved in Buddhist temples today.

⁶²Q: Buddhism advocates the benefit of all sentient beings, What kinds of social welfare are Buddhists engaged in? And what achievements have been made?

A: Buddhists are engaged in a wide range of social welfare work. Some monks took up the medical profession and distributed medicine; some built bridges and roads, some dug wells voluntarily and established free schools; some planted trees—all these are frequently mentioned in records made by the ancients. Planting of trees, especially, was a remarkable success. Take a look at places throughout our country where Buddhist pagodas and temples stand. Always there are green trees and grassy meadows presenting a tranquil and exquisite environment and attractive scenery. Red walls and green tiles, magnificent monasteries and pavilions against the luxuriant-green background add to the beauty of our splendid land. The natural beauty of many tourist

resorts in China is enhanced by the exquisite architecture and verdure of these monasteries.

These facts show that Buddhism has not only come, itself, to blossom in China, but has contributed bountifully to all spheres of our culture. We Buddhists should all feel proud of the glorious achievements and contributions made by our predecessors. They advanced not only the cause of Buddhism, but also the cause of human culture, as well as friendship among mankind. They not only translated thousands of volumes of sūtras and śāstras, and wrote numerous immortal works, preserving the very precious common cultural legacy of China, India and other peoples, but also enthusiastically spread and exchanged the fruits of the labor and wisdom of different nations, thereby enriching the culture of their respective nations. Today, particularly with the ever-increasing development of friendly cooperation among the Asian nations, the historic achievements resulting from the arduous endeavors of the Buddhist predecessors, not only have revived their splendor, but are constantly playing new positive roles.

(V) Carrying Forward the Advantage of Popular Buddhism

⁶³Q: Buddhist theory is broad and profound, and its metaphysical philosophy is difficult for those who have an average education and comprehension to learn and understand. So how can we combine the Buddha Dhamma with the realities of people's daily life and benefit the construction of social morals and spiritual civilization?

A: Though the Buddha Dhamma is too extensive and profound to be fully understood and accepted by ordinary people, it can be comprehended on different levels. Just as the early Buddhist scriptures proclaimed: the Mahāyāna doctrines were not to convince and be mastered by average people. The Buddha

Dhamma has different levels of approach and numerous modes of practice which can be adapted to suit different gifts. Thus it is reasonable and practical for various yānas, schools and sects to have their own ways of teaching to meet the needs of the ordinary people.

⁶⁴Q: What is the Five-vehicle (Pañca-yāna) Buddha Dhamma? What are the Worldly Conditions or things (Loka-dhamma) and the Super-mundane Conditions or things (Lokuttara-dhamma)?

A: The Five Vehicles (Pañca-yāna) consist of Human Vehicle, Heavenly Vehicle, Sāvaka Vehicle, Pacceka-buddha Vehicle and Bodhisatta Vehicle. The last three are referred to as the Super-mundane conditions or Lokuttara-dhamma, its doctrines are comparatively profound and difficult to learn; the former two, Human and Heavenly Vehicles, are the Worldly conditions or Loka-dhamma. The Worldly Conditions or theories are easy to study and should be followed by the common people. So it was named Popular Buddhism by the predecessors. The main contents of the Popular Buddhism are the Five Precepts (Pañca-sīlā) and Ten Good Acts or Ten Virtuous Deeds (Dasa-Kusalāni). The former involves abstaining from killing, stealing, sexual misconduct, lying and drinking intoxicants. Buddhism holds that these immoral conducts must be strictly prohibited. Hence the term Five Precepts. The Ten Good Acts, based on the Five Precepts, regulate the Three Kammās (body, speech and mind) in a total of ten ways. Pertaining to the body kamma, there are three items: avoidance of killing, stealing, sexual misconduct; pertaining to the verbal kamma are four items: avoidance of lying, slandering, rude speech and foolish babble; and to the mental kamma are three items: avoidance of covetousness, hatred and ignorance. These are Ten Good Acts, and the opposite is known as the Ten Bad Acts or Ten Unwholesome Deeds.

⁶⁵Q: The precept of abstaining from killing sentient beings should be understood to mean that one should not kill good people. If there are felons who have committed atrocious crimes such as murder

and arson, by law these are capital offenses. Should they be exempted from the punishment?

A: Felons who commit murder or other atrocious crimes should be brought to justice for sure, because anyone who violates the law of the state must be punished according to law. This is nothing to do with any personal will. While the judge holds the power to pronounce sentences, he merely acts according to law, it is nothing personal. When Sākyamuni decreed that his followers abstain from taking life of beings he did it in terms of individuals. It was also intended to keep them from breaking the laws of the state. The Buddha never argued that the state should not punish criminals, but always admonished his disciples to abide by laws of the state. Here are two things of different nature, which must not be confused. When referring to the law of causality (hetu-phala), Buddhism often claims that good yields good returns while evil yields bad returns and that any debt of murder should be paid off. This shows that Buddhism does not run counter to temporal laws, but recognizes them. Such a spiritual principle applies to abstention not only from killing sentient beings, but also from covetousness and hatred. As to making wealth for the whole country and do good for the people, it is a great merit for the interest of mankind. However, it would be against the precepts for one to thirst for personal gain or do harm to others to revenge personal grudge. In brief, if everybody conducts himself according to the codes of the Five Precepts and the Ten Good Acts, people would live in peace and health, society would be stable and united, and the nation would prosper and thrive, leading to a world of peace and happiness with high spiritual civilization. This is the goal pursued by popular Buddhism.

⁶⁶Q: It is said that according to the Mahāyāna doctrine, every sentient being is able to attain Buddhahood. Is there any connection between Popular Buddhism and the attainment of Buddhahood?

A: Mahāyāna Buddhism, indeed, believes that every sentient being is able to attain Buddhahood, but first, one must be a good and pure

person. Only on the basis of being a good person, can one learn from Buddhas and attain Buddhahood. Just as Sākyamuni puts it,

Do no evil,

Do all that is good,

Purify your own mind,

This is all Buddhas' teaching.

What is meant by learning from Buddhas? It means to follow the Bodhisatta code of conduct. This is how preceding Buddhas attained their Buddhahood. For us too, to learn from Buddhas is just to follow the Bodhisatta code of conduct.

⁶⁷Q: What is the Bodhisatta code of conduct?

A: The Bodhisatta code of conduct is to take the deliverance of all living beings as one's own responsibility, so, generally speaking, it is to learn the way of the Buddha above, and to convert all beings below. The practitioners of the Bodhisatta Code are required not only to vow their willingness to save all living beings, but also to see through and realize the impermanence and egolessness of everything in the world, to see that the whole world, particularly the history of human society, is an ever-flowing, changing and developing current without end. Nobody can stop or control this swift current in its torrential advance. Bodhisattas are aware that nothing can be done while drifting along this torrential tide of impermanent changes, but to do no evils, uphold all good, glorify the land and benefit sentient beings. Only thus can one take one's own destiny in hand, liberating oneself as well as others without being drowned in the ever-changing current of life and death, and finally leave the ocean of boundless suffering by the boat of Bodhisatta's Six Perfections (cha pāramitā). The *Avatamsaka-sūtra* reads that the Bodhisattas "compare all living beings to the root of a tree, all Buddhas and Bodhisattas to its flowers and fruits, they benefit all beings with the water of compassion (Karunā), and thus they attain the flowers and fruits of wisdom as Buddhas and

Bodhisattas". It adds, "therefore, Bodhisattas belong among living beings, and without the latter all Bodhisattas would be unable to attain perfect Enlightenment (anuttara sammā-sambodhi)." So, only through benefit to others can one benefit oneself. This is the Bodhisatta's goal, in a dialectical point of view, of delivering all living beings for the sake of self-deliverance. This is also the concrete practice of the Buddhist world outlook of impermanence (anicca) and life outlook of the Bodhisatta code. This is the theoretical basis for Popular Buddhism.

⁶⁸Q: What are the Six Perfections (cha pāramitā)?

A: Charity (Dāna), Morality, or Abiding by discipline (sīla), Forbearance (Khanti), Effort, or energy (virīya), Contemplation (bhāvanā) and Wisdom (paññā) are known as the Six Perfections or the Six Ferries. They form the guidelines for the entire Bodhisatta code of conduct.

⁶⁹Q: Please explain briefly the contents and significance of the Six Pāramitās.

A: Following the Buddha's teachings, the Buddhist disciples practising Bodhisatta Conduct not only have no desire for extra property, but give their own wealth to others—this is called Charity; all immoral behavior detrimental to others is strictly prohibited—this is Morality, or Abiding by the Precepts; bearing no malice to others, yet enduring malice or hatred directed against oneself with patience or necessary explanations—this is called Forbearance; work with energy on what should be done—this is called Effort; to banish all wrong views, to train one's mind to the state of wholeheartedly benefiting living beings is Contemplation; broadly learning and studying all knowledge and technology within or beyond the world is called Wisdom. These Six gate-ways are also known as the Six Ferries. When all these six are perfectly accomplished, it is called Pāramitā, meaning ultimate perfection, or reaching the other shore. Hence the ancient translation Ferry. The Buddha admonished his disciples to act according to the codes of the Six Perfections so as to benefit others as well as oneself, i.e.

Bodhisatta Conduct. Bodhisattas take the Six Perfections as a ferryboat to deliver themselves and others across the ever-changing ocean of sufferings of birth and death, to reach the other shore of nibbāna with meritorious service. This is known as attaining Buddhahood, or the attainment of great salvation, great freedom, and eternally unchangeable enlightenment, happiness, ease and purification. This is the final outcome of the Bodhisatta Conduct of Mahāyāna Buddhism. Prior to attainment of Buddhahood, Bodhisattas learn from the Buddha to liberate living beings, which is the cardinal practice for the attainment of Buddhahood. After attaining Buddhahood one's task is to continue to deliver living beings. This is the focal point of Mahāyāna Buddhism. The significance of Bodhisatta Conduct of Mahāyāna Buddhism lies in that, if everybody learns from the Bodhisatta code of conduct and walks along the Bodhisatta's way, no matter whether or not it will result in Buddhahood later, it certainly will be good for the nation and human society as it enables the people to consciously build up lofty moral virtues and actively build a spiritual civilization in which to serve the people is a pleasure. Let it serve to purify the human world, and build the Pure Land in it.

⁷⁰Q: How do you see the prospects of Buddhism in the future?

A: Chinese Buddhism, with its history of nearly 2,000 years is a rich and splendid cultural heritage. In terms of its canonical culture, its achievements and experience and its international influence, Chinese Buddhism occupies a position that can hardly be ignored in the history of cultural development and progress of the civilization of mankind as a whole, whether in the religious or academic field. However, on the other hand, it has quite a few shortcomings and limitations due to the prolonged period of decline in the past. To overcome the contamination and difficulties it has inherited from history and actively develop its own fine traditions requires mainly the endeavors of Chinese Buddhists themselves. Training up successors, taking good care of key temples, promoting academic research and international exchange,

all these are areas where urgent work needs to be done. Ours is a socialist country led by the Communist Party where the policy of freedom of religious belief, pursued by both the Party and government, is unchangeable, steadfast and unambiguous. After liberation, Chinese Buddhism has revived and developed from the verge of extinction to the present, with its mirror of the Dhamma shining once again, its torch rekindled, the image of Buddhas repainted, presenting all its majesty. Especially after the fall of the "Gang of Four", all work of restoration and consolidation is running smoothly, achieving great success within a short span of time. All this is inseparable from the correct implementation of the Party's policy of religious freedom, from the deep concern and strong support of the Party and the government.

Reflecting on the past in the light of present, I rejoice for Chinese Buddhism as well as Chinese Buddhists. I am firmly convinced that, as a beautiful flower of the classical Chinese culture and as a magnificent monument to the time-honored spiritual civilization of the Orient, Chinese Buddhism will certainly keep pace with the reconstruction of our motherland, and will contribute a great deal to glorifying the land, benefiting the people, and peace on earth, progress and happiness for all mankind. Looking ahead, I see a splendid future with millions of flowers contending in beauty in the warmth of spring. The future of Buddhism is infinitely bright.

伍 佛教在中国的传播、发展和演变

（一）佛教的传入和经典的翻译

¹问：佛教是什么时候传入中国的？

答：佛教传入中国的具体时间和年代，现在很难考定。最初传入时，不过在少数人中奉行，未必为上层官府和史官之流所注意。公元前2年，大月氏国（原居我国甘肃的一个强盛的少数民族西迁中亚后建立的国家）国王的使者伊存到了当时中国的首都长安（即今西安），他口授佛经给一个名叫景卢的博士弟子，这是中国史书上关于佛教传入中国的最早的记录。我们可推断，由于在此一百二十年前汉武帝开辟西域交通的结果，当时由印度传布到中亚细亚的佛教很可能早已通过行旅往来而向东方渐进。也有传说：在与印度阿育王（约公元前272—公元前226在位 ^[1]）同时的秦始皇（公元前246—公元前210在位）时代，已有印度的沙门室利房等十八人来到我国咸阳。阿育王时举行第三次结集约在公元前250年，会后派大德赴各国传教，前来中国很有可能。另外，也有认为宋玉《高唐赋》和《史记·始皇本纪》 ^[2] 中的“羨门”即沙门的，但因无译述学说传世，无从确考。

²问：佛教最初传入的年代既是传说纷纭，很难考定，为什么一般公认是开始于汉明帝的求法呢？

答：史籍记载，汉明帝永平七年（公元64）派遣使者十二人前往西域访求佛法。公元67年他们同了两位印度的僧人迦叶摩腾和竺法兰回到洛阳，带回经书和佛像，开始翻译了一部分佛经，相传就是现存的《四十二章经》，是《阿含经》的节要译本。同时在首都建造了中国第一个佛教寺院，就是今天还存在的白马寺。这个寺据说也是以当时驮载经书佛像的白马而得名。根据这个传说来看，佛教的传入中国虽不始于汉明帝，而佛教作为一个宗教，得到了政府的承认崇信，在中国初步建立了它的基础和规模，可以说是始于汉明帝年代。公元73年班超使西域，以后三十六国内属，西

域道路畅通，当时著名科学家和文学家张衡（78—139）写的《西京赋》就提到“桑门”（即沙门），可见那时佛教僧徒的存在已开始成为引起文人学士注意的社会现象了。

3问：佛教传入中国的途径除了最初由陆路从西域而到关中之外，有无经由海路到达吴楚的可能？根据汉明帝的弟弟楚王刘英信奉佛教的情况来看，可以证明这一点。

答：我同意这个看法。据史籍的记载看来，当时楚地佛教的传播比起中原，似乎更盛一些。

4问：中国佛教什么时候开始有自己的出家佛教徒的？

答：中国很早就有了本国出家佛教徒，汉明帝听许阳成侯刘峻出家是最早的记载。但最初那些僧人仅是从师出家，剃除须发，照戒律生活，还没有受戒的制度；到公元250年来自中印度的昙柯迦罗在洛阳白马寺正式建立戒坛传戒，中国才开始有了如法的比丘。由于没有外国比丘尼到来，最初女人出家为尼的也只是剃发罢了；稍后从大僧受戒，还不具备完全的受戒制度。到公元429年，由斯里兰卡先后来了以铁萨罗为首的十九位比丘尼，才使她们的受戒具备完全的条件；从此，中国才有了如法如律的比丘尼。

5问：佛经的翻译始于何时？

答：佛教在中国的弘传是和佛经的翻译事业分不开的。最早的翻译，前面已经提到，摩腾、竺法兰在汉明帝时开始翻译过《四十二章经》，据说还有一些别的经。这就是最早的翻译。

6问：以后，汉代还有哪些著名的翻译家？

答：在初期（公元二、三世纪）的译师中，我们不能不提到安息国（在今伊朗一带地方）的安世高，月氏国的支娄迦谶，康居国（在今苏联吉尔吉斯地区）的康僧铠、康僧会，和一位有月氏人血统的最早西行求法者之一的中国僧人竺法护，同时还有朱士行于公元260年西行求法。由于他们的努力，不少声闻乘的和大乘的经藉被翻译为汉文。

7问：这些译师所传译的经典有什么不同？

答：他们中间主要有两个系统：一是小乘学派，以《阿含经》和“禅数”之学为主，可以安世高为代表；二是大乘学派，以《般若经》

和净土信仰为主，可以支娄迦谶为代表。两派同时并行。

8问：那时的翻译对后来的佛教有什么影响或作用？

答：当时翻译事业还在初创时期，限于各种条件，还未能进行有计划有系统的翻译，所译的经书很少是全译本，而翻译文体也还没有能够确立，但是他们已经出色地做到了开辟园地的的工作，为佛教在中国思想界树立了地位，并且扩大了影响。

9问：佛教传入后有不少人研习弘传，中国僧界出现过什么样的重要人物曾促进佛教的发展？

答：佛教在中国的广大流行，开始于四世纪，当时中国僧界道安法师是一位重要人物，是起了很大积极作用的佛教领袖。他是我国最早的热心传教者，曾经派遣徒众到各地大弘佛教。他又是我国第一个僧伽制度建立者。他努力寻求戒律，以补当时律藏不齐全的缺陷，并制定了当时全国风从的僧尼轨范（中国僧人出家后，废除原有姓氏，一律以“释”为姓，是由道安提倡并从他开始的）。他整理了已译出的经典，撰成了中国第一部“经录”；他极力奖励翻译事业，并第一次总结了翻译的经验。在他的主持下，翻出了许多重要经论，集中和培养了许多学者和翻译人才，为后来鸠摩罗什的大规模翻译事业准备了有利条件。

10问：佛教的确立，首先在于戒律，经过道安的努力，以后还有哪些律部的传译？

答：道安和他的弟子们寻求戒律的热心，对于律藏的充实起了很大的推动作用。道安在世时，已经得到大量的戒本，并且翻译了其中的一部分，可惜那些书已经失传了。之后不久，来自克什米尔的弗若多罗和昙摩流支，先后帮助鸠摩罗什译出了萨婆多部《十诵律》，这部律得到鸠摩罗什的老师卑摩罗叉在江西大为弘扬；佛陀耶舍（也是克什米尔人）在公元410年又译出了昙无德部《四分律》；奉佛音尊者之命，由斯里兰卡来到中国的僧伽跋陀罗译出了《善见律毗婆沙》。五世纪初法显法师游历天竺，主要也是为寻求戒律而去的。法显法师是大家都知道的中国古代伟大的求法者和旅行家，他的不朽的“游记”和其它方面的成就，可能容易令人忽视他最初求律的动机和这方面的成就。他除带回许多书籍外，并且带回了《摩诃僧祇律》和弥沙塞部《五分律》，前者已由他自己和迦毗罗卫国（今尼泊尔）的佛驮跋陀罗译为汉文，后者则

在他逝世后由佛陀什（克什米尔人）翻译了出来。另一位伟大的求法者，七世纪的义净，也是抱着学律的志愿而远游的。他带回了而且译出了一切有部的十一种著作，从而使律藏大为完备。因此汉文译出的律藏有《四分律》六十一卷，《一切有部律》一百五十七卷，《十诵律》六十一卷，连同各部的羯磨文和戒本及解释律文的诸论，先后译出而现存的约五百卷。后世中国高僧们关于律部的著作，现存的也有五百卷以上。至于中国比丘戒的传承，在南北朝时代，北方传《四分律》，南朝是《十诵律》，及隋朝统一中国，政治上以北统南，佛教戒律也是这样，从隋代起，一直只传北方昙无德部的《四分律》。藏语系佛教地区向来是传一切有部律，傣族地区则流传着与斯里兰卡、缅甸等国相同的上座部律，与《四分律》（法藏部律）同一源流。

11问：关于律藏翻译流传的历史和情况，听到上面所谈，已经知道大概了，请再谈一谈经藏和论藏大规模有系统的翻译是从什么时代什么人开始的？

答：佛教经论大规模有系统的翻译，应该说是开始于五世纪初的鸠摩罗什。

12问：鸠摩罗什的翻译事业比以前有哪些特点？对后来的佛教和中国思想文化起了什么样的作用？

答：鸠摩罗什的翻译事业，有着前人所未有的优越条件，那就是当时政府（姚秦）的大力支持和有在道安影响下产生的具有高度文化修养的一大批义学僧人的辅助。但是他的伟大成就是由于他有丰富的学识和持久的努力。这一位有印度血统在今天中国西北（新疆库车）出生的智慧卓越的大师，是中印两大民族共同的光荣。他和后来的玄奘法师是翻译事业中两大巨匠，他所译出的三百多卷典籍，不仅是佛教的宝藏，而且也是文学的重要遗产，它对中国的哲学思想和文学上的影响非常巨大。在他的讲授和指导下，造就了成千的人才，使当时的佛教得到大大的提高和发展。

13问：前面说过，罗什的翻译是有系统的，不知是属于哪一个系统？

答：就佛学方面来说，鸠摩罗什最重要的贡献是在于对由龙树创立的中观系统典籍的介绍。由于他的努力，这一系的经论著作，如《中论》、《百论》、《十二门论》、《维摩经》、《法华经》、《大品般若经》、《小品般若经》、《金刚经》等，以及《大品

般若经》的解释——《大智度论》，都传到中国来，为中国法性宗开辟了广大的基地。其次，鸠摩罗什还译有声闻乘中的一部重要论著——《成实论》，起初与中观三论（或“四论”，加《大智度论》）相辅流行，之后逐渐形成了独立学派，在南北朝期间盛极一时，后人称为成实师。这一学派在声闻乘中是比较接近大乘的一系。

14问：鸠摩罗什之后还有哪些著名的翻译大家，又是属于什么系统？

答：鸠摩罗什的译业进行于公元401—413年间，主要是全面系统地介绍了大乘空宗龙树、提婆的学说。罗什之后，重要译师来者相继，主要经论不断译出。如觉贤于公元418—421年译出《华严经》，昙无讖于421年译出《大般涅槃经》，求那跋陀罗于443年译出《楞伽经》等。这些经典的译出对中国佛教义学的发展产生了重大的影响。公元六世纪初菩提流支来华（508）创译大乘有宗无著、世亲一系的论典，其中《十地经论》影响尤大，传习者形成地论师一派（分南北两道）。以后真谛三藏（498—569）于公元546年来华，563年译出无著的《摄大乘论》和世亲的《释论》，564年译出世亲的《俱舍论》，566年到567年又重译《俱舍论》。真谛不仅是翻译大家，而且也是一位义学大师，来华日久，擅长中国语言，所译经论，随翻随讲，弟子记述成为义疏，传习之者称为摄论师及俱舍师。真谛到中国后二十余年遭逢兵乱，于颠沛流离中仍能译出一百数十卷重要经论，形成中国佛教的重要义学派别，是罗什以后玄奘以前二百余年中贡献最大的译师。

15问：唐代玄奘是传译瑜伽学派的，真谛也是传译瑜伽学派的，对比之下，他们译传瑜伽学有什么不同？

答：据玄奘所传，戒贤生于公元528年，可以推定护法约生于530年。而真谛生于498年，故真谛长于护法三十余岁。又真谛译有陈那著的《无相思尘论》（即玄奘译的《观所缘缘论》）和《解拳论》（即义净译的《掌中论》）。陈那是世亲的弟子而为护法之师，可见真谛是介于陈那、护法之间的佛教有宗大师。玄奘所传以护法的学说为正义，其门下传述以真谛之学及地论师之说为旧说或旧译，而称玄奘所传为新译，古人（唐灵润）归纳有十四义不同。如旧译认为一切众生悉有佛性，新译则认为有一分无性（佛性）有情；旧译认为佛果理智不二，新译则认为理智各别（即分

断、智二果）；旧译于三性中遍计所执及依他起二性俱遮，新译唯遮遍计所执；旧译以缘起之本唯在第八识，新译则八个识及相应心所皆为缘起之本。又真谛译之《转识论》以阿陀那为第七识，新译则以为第八识。真谛所传之摄论宗更立第九识，新译则无此说。

总之，新旧两译同属有宗，宗旨相同，因时代先后，各成一家之言，义解稍有差异，也很自然。但真谛所译传之学在隋唐之际的中国佛教界曾激起很大波澜，因而引起了后来玄奘法师到印度去深入研究的动机。真谛来华后至玄奘赴印前的八十余年中（546—627），印度佛学也经历了剧烈的变化。最初护法和清辨兴起了空有之争，接着月称和清辨又同室操戈而使空宗分成为自续、应成两派，月称又和月官进行了长期的论战。护法的弟子法称也对祖师陈那的因明进行新的改革。学说总归是辨析日精后胜于前的，玄奘所承之学大体说来是较旧译更为精审的。

16问：你说到印度去深入研究法相瑜伽学的玄奘法师，是不是为大家所知道的那位到西天取经的“唐僧”或“唐三藏”？

答：是的。但“唐僧”、“唐三藏”用在一个人身上却是错误的。唐是当时我国的国号，这两个名词现代语来说就是中国僧人，中国的三藏法师。对佛教中人，这本来是常识问题，但社会上误解的人太多了，不能不解释一下。

17问：那么他的大概事迹请介绍一下好吗？

答：对于人人都知道的玄奘法师，是用不着详细介绍的了。这一位孤征十七载、独行五万里、足迹遍于西域、印度百三十国而且留下一部不朽的游记——《大唐西域记》的伟大旅行家，这一位通达中印文字、洞晓三藏教理、由留学僧而最后主持当时印度最高学府——那烂陀寺的讲席，受到了印度及西域各国国王和僧俗人民欢迎敬重的伟大的佛教学者，他以毕生精力致力于中印文化交流事业，译出经论一千三百三十五卷（约五十万颂），他的系统的翻译规模、严谨的翻译作风和巨大的翻译成果，在中国翻译史上留下了超前绝后的光辉典范。他的成就和贡献不仅在佛教方面，而且在学术方面，都是非常重大的。他不仅比较全面地系统地译传了大乘瑜伽有宗一系的经论，而且把空宗的根本大经——《大般若经》二十万颂也完全翻译过来；又把小乘说一切有部的重要论

典几乎全译过来。另外，他又独得印度一位罕有的佛教天才大师护法菩萨的秘传之作，如和会空有两宗的《广百论释》和编入《成唯识论》的护法正义，印度都无传本。由此可见，他实际上已成为印度佛学发展到最高峰的首屈一指的集大成者。故在戒日王为他举行的十八日无遮大会上，他高踞狮座，陈义立宗，无人敢出而与他当场争锋。因此，大乘学者共尊他为“大乘天”（Mahāyānadeva，即“大乘的神”），为祖国赢得了当时两大文明古国间学术上最高的荣誉。

百余年后，日本僧人金刚三昧（公元818年前后在华）游印时看见中印的僧寺中都画有玄奘所着的麻履（即麻鞋）及所用的匙、筋，以彩云烘托，“每至斋日辄膜拜焉”（见段成式《酉阳杂俎·前集》卷三及《续集》卷二）。可知印度当时佛教界已把玄奘的麻鞋当作佛的足迹一样敬重、供养了。一个学者在外国享到这样高的尊敬，除了各大宗教的教主，历史上尚无第二人。直到现在日本佛教学者仍然认为玄奘法师这样的人才，只有中国这个伟大民族才能产生出来，玄奘法师确实是我们民族的光荣和骄傲。

18问：历史上像玄奘法师这类人物，可否再介绍一、二？

答：再举法显和义净法师。前面提到，法显法师于公元399年，以六十五岁高龄发迹长安，涉流沙、逾葱岭，徒步数万里，遍游北印，广参圣迹，学习梵文，抄录经典，历时多年，复泛海至师子国（今斯里兰卡），经耶婆提（今印度尼西亚）而后返国。时年已八十岁，仍从事佛经翻译。他著有《佛国记》，成为重要的历史文献。义净法师稍晚于玄奘，取道南海去印度求法，经时二十五载，凡历三十余国，寻求律藏，遍礼圣迹。回国后翻译经律五十多部二百多卷，撰有《南海寄归传》及《大唐西域求法高僧传》。法显、义净和玄奘法师一样，都是以大无畏的精神，为法忘身，冒九死一生的艰险，为求真理而百折不挠，鲁迅称赞他们为中华民族的脊梁确非过誉。他们为我们伟大民族争得了荣誉，为灿烂的东方文化增添了异彩，为佛教的发扬光大建立了不世出的奇勋。他们是不朽的翻译家、思想家和旅行家，他们对祖国文化的发展和提高都有不可磨灭的贡献。

19问：除前面所讲的几点之外，历史上曾有许多人从事佛典的翻译弘传，还有哪些著名的代表人物？

答：中国汉语系佛教翻译事业持续了十个世纪（二至十一世纪），翻译过来的经律论三藏共有一千六百九十余部，六千四百二十余卷，著名的本国和外国来的译师不下二百人。除前面提到的诸人之外，如印度的昙无讖、佛驮跋陀罗、菩提流支，巴基斯坦的阇那崛多和施护，阿富汗的般若，柬埔寨的曼陀罗仙和僧伽婆罗，以及斯里兰卡的弘传密教的不空三藏等都是大家所熟悉的。通过这样多的人持久不懈的辛勤努力，把佛教的声闻乘、性、相、显、密各系统的学说都介绍到中国来，从而形成了中国佛教的巨大宝藏。1954年中国全国文学翻译工作会议上，作家协会主席茅盾在他的报告中说：“我国的翻译事业，是有悠久历史和光荣传统的。我们的先辈在翻译佛经方面所树立严谨的科学翻译方法，及其所达到的卓越成就，值得我们引以为骄傲，并且奉以为典范。”毫无疑问，中国古代的翻译事业，给灿烂的汉民族文化创造了巨大的精神财富，在世界上是无可匹敌的。它是我们足以自豪的优秀文化传统之一。

但是，我们还必须指出常常容易忽略然而非常重要的另外一面。我国自古以来就是一个多民族的大家庭，各个兄弟民族在创造全民族的文化中都做出了重大的贡献和出色的成绩，在佛教方面尤其如此。西藏在吐蕃王朝时期，由于文成和金城两公主的下嫁，引进了盛唐文化和佛教的信仰，并创制了通用至今的文字。到持松德赞时期，迎请了印度当时最著名的显教学者寂护、莲花戒和密宗大师莲华生等建寺立僧，从事系统的翻译；同时又由沙州和向唐朝请去汉僧传授禅宗，讲经说法；到赤热巴中（即巴黎可足或彝泰赞普，815—836在位）时，又迎请印度大德多人和西藏学者一起厘定译名，校正旧有译文，补译大量经论。公元十世纪以后西藏开始了佛教后弘期。直到1203年印度超戒寺及各大寺被入侵军破坏，三四百年间印度和西藏两地传法求法的大德往来不断。

举其最著名者，如出生于孟加拉的阿底峡尊者（982—1053），是印度当时学德最高的大师，于1042年应请至藏，创立迦当派。其学说为后来宗喀巴大师（1357—1419）所继承，创立了格鲁派（即黄教），遍传藏、汉、蒙广大地区。又西藏的玛尔巴曾三度赴印学法，创立了迦举派（即白教），此派在明代曾长期掌握西藏地方政权。世界知名的西藏圣人弥拉日巴即此派的第二代祖师。其余译经传法的大德难以备举。自公元八世纪中叶至十三世

纪中叶五百年间，西藏译出的三藏经籍就已收入甘珠、丹珠两藏经计算，部数五千九百余种，分量约合三百万颂，约当汉译一万卷。在藏译藏经中重译甚少，故实际内容大大超过汉译藏经。其中尤以空有两宗的论典以及因明、医方、声明的著作和印度晚期流行的密教经论，数量庞大，为汉译所未有。由于藏文翻译照顾到梵语语法的词尾变化和句法结构，因而极易还原为梵语原文，所以受到现代佛学研究者的高度重视。

另外，在清代曾进行满文大藏经的翻译。近代还发现西夏文大藏经以及回鹘文佛经的残卷。还有，我国的傣族文化一向不为人所知，解放后才发现傣族有非常丰富的傣文著作，其中即包含有南传巴利三藏的傣文译本。由此可见，我国各族文字的大藏经是人类文化史上极为罕有的巍峨丰碑，其中凝聚了多少世代人的聪明智慧和辛勤劳动，体现了我们民族的坚韧精神和伟大气魄，这是我们可引以自豪的无价的精神宝藏。现在我国决定校勘出版《大藏经》作为整理古籍的重要项目之一。这是我们佛教界值得引以为庆的大喜事，也是国际文化学术界所衷心仰望、企盼已久的大喜事。

（二）佛教各宗派的兴起

20问：佛教传入中国，经过长期的弘扬和传播，有哪些发展变化，又有哪些学术成就？

答：随着大量经论的传来，印度佛教各部派思想与我国民族文化相接触，经过长时期的吸收和消化，获得了创造性的发展。公元六世纪末至九世纪中叶的隋唐时期，是中国佛教极盛时期，在这时期，思想理论有着新的发展，各个宗派先后兴起，呈现百花争艳的景象。

21问：中国佛教有哪些宗派，可否请简单介绍一下？

答：过去中国佛教出现过许多派别，现在流行的主要有八宗：

一是三论宗又名法性宗，

二是瑜伽宗又名法相宗，

三是天台宗，

四是贤首宗又名华严宗，

五是禅宗，

六是净土宗，

七是律宗，

八是密宗又名真言宗。

这就是通常所说的性、相、台、贤、禅、净、律、密八大宗派。

22问：这八宗各有哪些不同的主要宗义，想请您简略地分别介绍一下。

首先请问，三论宗为什么要叫“三论”宗，它的主要教义是什么？

答：此宗主要依据鸠摩罗什译的《中观论》、《百论》、《十二门论》研究传习而形成的宗派，因为是依据中观派三《论》立的宗，所以叫做三论宗。它的教义以真俗二谛为总纲，以彻悟中道实相为究竟。

23问：什么是真俗二谛？什么叫中道实相？

答：二谛的“谛”字是真实的意思，从法性理体边说的叫真谛，从缘起现象边说的叫世俗谛。从俗谛说事物是有，就真谛说诸法是空，所以真俗二谛也叫空有二谛。色即是空，空即是色，色空不二，真俗不二就是中道，也叫诸法实相，这就是此宗的中心思想。此宗着重从真空理体方面揭破一切世出世间染净诸法缘起无自性，五阴十二处等虚妄不实，彻底破除迷惑，从而建立起无所得的中道观，以求实现其无碍解脱的宗旨。这一宗，实际就是印度龙树、提婆中观学说的直接继承者。

24问：瑜伽宗为什么叫瑜伽宗，它的主要教义是什么？

答：瑜伽宗是由印度弥勒、无著、世亲创立的宗派。此宗主要依据有《解深密经》、《瑜伽师地论》、《成唯识论》等，因为是依弥勒说、无著记录整理的《瑜伽师地论》为根本教典而立的宗，所以叫瑜伽宗。我国玄奘法师译传此宗并糅译十师之说为《成唯识论》，故此宗又称法相唯识宗，亦称慈恩宗。它的教义以五法三自性，八识二无我为总纲，以转识成智（转依）为宗旨。

25问：什么叫五法三自性、八识二无我？

答：五法是：一名、二相、三分别、四正智、五如如；三自性是：遍计所执性，依他起性，圆成实性；八识是：眼识、耳识、鼻识、舌识、身识、意识、第七末那识、第八阿赖耶识；二无我是人无我和法无我。“五法”是对世出世间一切法的概括，“名”和“相”指世间有为法皆有名有相，称为名相之法；“分别”指人们的主观能对事物分别认识；“正智”指圣人清净（无漏）实智；“如如”指如实智所对真如理境。“五法”不出染净和主客观，是以总括诸法。

三自性：

一是二取执着，无而谓有，起惑造业，名遍计所执；

二是三界心法，依他缘生，名依他起；

三是依他起上除遣二取所显二空真如为圆成实。

事物的性质不出此三种，所以叫三自性。

八识：

“识”是了别认识的意思，又叫心或意，每个有情都有这种心意识的认识作用，共有八种，就是前面列举的八种识。

二无我：每个有情或众生都没有永恒不变的实体（即一般所说的自我或灵魂）叫人无我；客观事物也没有恒常不变的实体（即自性或绝对的真实）叫法无我。二无我也叫作我、法二空。此宗教义深入分析诸法性相，阐明心识因缘体用，修习唯识观行，以期转识成智，成就解脱、菩提二果。此宗由玄奘法师译传而成立，是印度无著、世亲学说的直接继承者。

26问：天台宗的主要教义是什么？

答：此宗是以罗什译的《法华经》、《大智度论》、《中论》等为依据，吸收了印度传来的和中国发展的各派思想，重新加以系统地组织而形成的思想体系，因为创始人智顗，住在浙江天台山，所以叫天台宗。它的宗义以五时八教为总纲，以一心三观、三谛圆融为中心思想。

27问：什么叫五时？

答：此宗把释迦如来所说的经教，划分为五个不同的时期，称为五时教，就是华严时、阿含时、方等时、般若时、法华涅槃时。五时

的名称都是佛经的名称，主张佛陀所说的经教不出这五个时期的范畴，所以叫五时。

28问：什么是八教？

答：此宗从教理的内容上把佛教分为浅深不同的四个级别，就是藏教、通教、别教、圆教，称为“化法四教”。藏教是声闻小乘教；通教，通前小乘，通后大乘，通大小乘的大乘初级名为通教；别教是纯大乘教，但分别诸法各别有碍名为别教；圆教是大乘圆融无碍、圆满无缺的法门称为圆教。藏、通、别、圆就是以从浅至深为次第的四教。此宗又从佛陀说法的机感不同，将佛的教法分为顿、渐、秘密、不定四种，称为“化仪四教”。

29问：什么叫一心三观和三谛圆融？

答：三观是修行的观法，即空观、假观、中道观。此三观可以于一心中获得，名为一心三观。三谛圆融：真谛、俗谛、中道谛叫做三谛。此三谛举一即三，虽三而常一，说三说一是圆融无碍的，所以叫圆融三谛。一心三观，三谛圆融是圆教的教义，说明诸法无碍，事理圆融。天台宗以自宗为圆教，别的宗属前三教。此宗总结了以前各派的思想，将佛教教义加以精密的调整，发展了大乘圆教理论，展示了中国独创的大乘思想。

30问：贤首宗的主要教义是什么，为什么名为贤首宗？

答：此宗以《华严经》为根据，对《华严经》有深入的研究和精辟的阐发，是在前人（三论、天台、慈恩、地论师，摄论师等）学说发展的基础上形成的一个思想体系。创始人是七世纪末的贤首国师（法藏），所以叫贤首宗，又名华严宗。此宗以五教来判摄整个佛教，以六相、十玄、三观为它的中心思想。

31问：五教是哪五教？

答：一是小教，即声闻小乘教；

二是始教，即大乘开始初级阶段的教义；

三是终教，即大乘终极阶段的教义；

四是顿教，即大乘中顿超顿悟的法门；

五是圆教，即圆满无缺，圆融无碍的理论。

此宗把佛教分作浅深不同的五种教义，比前天台宗多加一种顿教，所以称为五教。

³²问：什么是六相？

答：六相是：总相、别相、同相、异相、成相、坏相。这六相既同时表现在一切事物中，也同时表现在一个事物中；无论在一切事物中或在一个事物中，都是相反相成、同时具足、互融互涉、彼此无碍的，从此可以揭示出法界缘起的道理。

³³问：什么叫十玄门？

答：十玄门是：

- 一、同时具足相应门，
- 二、因陀罗网境界门，
- 三、秘密隐显俱成门，
- 四、微细相容安立门，
- 五、十世隔法异成门，
- 六、诸藏纯杂具德门，
- 七、一多相容不同门，
- 八、诸法相即自在门，
- 九、唯心回转善成门，
- 十、托事显法生解门。

这十玄门总的意义是显示华严大教关于一切事物纯杂（染净）无碍、一多无碍、三世无碍、同时具足、互涉互入、重重无尽的道理。

³⁴问：什么叫三观？

答：一是真空绝相观，二是事理无碍观，三是周遍含融观。六相、十玄、三观的建立，阐发了《华严经》的法界缘起、理事无碍、事事无碍、无尽圆融的教义。六相、十玄是就所观的法界之境说的，圆融三观是约能观之智说的。这种重重无尽、法界圆融的思想，虽说导源于《华严经》，而实际为中国所独创，它的法界缘

起、一切无碍的学说大大发展了印度传来的大乘思想。

35问：禅宗的教义是什么？禅是什么意思？

答：禅是禅那（Jhāna）的简称，汉译为静虑，是静中思虑的意思，一般叫做禅定。此法是将心专注在一法境上一心参究，以期证悟本自心性，这叫参禅，所以名为禅宗。禅的种类很多，有声闻禅、有菩萨禅、有次第禅、有顿超禅。禅学方面，在中国有一支异军特起，那就是所谓“教外别传”的禅宗。这个宗所传习的，不是古来传习的次第禅，而是直指心性的顿修顿悟的祖师禅。

36问：此宗是否也有典籍依据？

答：相传此宗的禅法是在六世纪初由印度的菩提达摩传来的。过去说：禅宗单传心印，不立文字，称为“教外别传”。但初祖达摩以四卷《楞伽经》传于二祖慧可作为印心的准绳，弘仁、慧能又教人诵持《金刚般若》，这样，《楞伽》、《般若》便是此宗的经典依据。以后更有《六祖坛经》和许多“语录”的出现，不能说禅宗没有经典依据。

37问：我曾见到过一些寺庙，都叫作某某禅寺，是不是禅宗在中国很兴盛？

答：是的，禅宗在中国是很兴盛的。在八世纪间，此派曾分为南北两宗，北宗神秀（约606—706）一派主张渐修，盛极一时，但不久便衰歇；南宗慧能（638—713）主张顿悟，后世尊为六祖，弘传甚盛。从唐到宋，南宗的禅师辈出，在此三、四百年中又分为五家七派，可想见其兴旺的景象。此宗和净土宗一样，一直是中国流传最广的宗派。

38问：南宗后来的五家七派是哪五家七派？

答：南宗六祖慧能弟子中，有南岳怀让（667—744）和青原行思（？—740）两大支系，由这两大支系又分成五宗七派。从南岳先分出一派外为仰宗，次又分临济宗。青原行思一系分出三派：曹洞宗、云门宗、法眼宗。由两系分为五宗，以后又从临济宗分出黄龙、杨岐两派，合前五宗名为七派，都曾兴盛一时，经过一段时期有的就衰绝不传了。后来的禅宗只有临济、曹洞两派流传不绝，临济宗更是兴旺。近代所有的禅宗子孙，都是临济、曹洞两家后代。

39问：听说参禅打坐可以健康身体，却病延年，是这样的吗？

答：佛教在修习禅定的过程中，有一些调身调气、息心静坐的方法，是有强健身体、却病延年的作用的，但这不是佛教参禅静坐的目的。佛教修习禅观（包括各宗的修观），是为的制心一处，参究真理，以期显发智慧，彻见法性，此即所谓明心见性，解脱自在。至于静坐气功，只是修禅的形式或基础，却病延寿，也不过是修习禅观实践中的副产品，佛教并不专门提倡这些并以之为目的。但初学静坐的人必须懂得这些调身调气的基本方法，使身心保持健康状态，避免禅病的发生，才能保证修习禅观的顺利进行。

40问：净土宗的宗旨教义是什么？

答：此宗是依《无量寿经》等提倡观佛、念佛以求生西方阿弥陀佛极乐净土为宗旨而形成的宗派，所以名为净土宗。此宗分佛陀说的法门为二道，即难行道和易行道，并说别的宗依戒定慧修六度万行，需经三大阿僧祇劫为难行道，说修净土法门一生至诚念佛，临命终时，仗承阿弥陀佛的愿力往生安养净土永不退转为易行道。因此，此宗主张劝人念佛求生西方净土极乐世界。

41问：此宗有哪些特点？

答：此宗的特点，简单易行，普能摄受广大群众。修学此宗不一定要通达佛经，广研教乘，也不一定要静坐专修，行住坐卧皆可称念“南无阿弥陀佛”，只要信愿具足，一心念佛，始终不怠，临命终时，就可往生净土。当然平时也要持戒诵经，广行众善以作助行。由于法门简便，所以最易普及。别宗的学者，也多兼修此法，因而使净土法门在中国得到特殊广泛的流行。

42问：律宗，顾名思义是着重学习和研究戒律的宗派吧？

答：是的，律宗主要是学习和研究戒律的。由于此一宗的盛行，中国僧人们在修学大乘的戒定慧三学中，仍然重视出家声闻乘的戒律。

43问：戒律都有哪些内容？

答：简单的说：戒律有声闻戒、有菩萨戒，这里所讲的律宗，是依声闻律部中的《四分律》，由终南山道宣律师一系所立的律宗。就戒条戒相说，有五戒、十戒、具足戒之分。五戒是出家，在家佛弟子共持的戒；十戒、具足戒是出家弟子的戒，这些在前面已经叙

述，这里不多重复。各部律藏不只是戒相和制戒因缘，更大的部分是僧团法规、各种羯磨法（会议办事）、出家法、授戒法、安居法、布萨法、衣食法，以及日常生活小事，都有详细规定。因为时代的关系，环境的不同，许多戒律的规定，早已废弛不行了。菩萨戒有在家菩萨戒，出家菩萨戒。出家菩萨戒如《梵网戒经》有十重四十八轻戒，在家菩萨戒如《优婆塞戒经》有六重二十八轻戒。又总摄菩萨戒为三聚，三聚是三类的意思，称为三聚净戒。一是摄律仪戒，是戒相，是“诸恶莫作”；二是摄善法戒，是“众善奉行”；三是饶益有情戒，是“利益一切众生”。中国主要是大乘佛教，所以这里也简单提一提菩萨戒律。以上是大小乘戒律的内容。

44问：《四分律》是声闻戒，八大宗里为什么有小乘宗？

答：《四分律》虽属小乘戒，但其文义通于大乘，自古就有“分通大乘”的说法。中国盛行大乘，以大乘教义解释律藏，摄小入大，就是大乘戒的组成部分，出家菩萨三聚净戒中的摄律仪戒就是以声闻戒为基础的。如杀、盗、淫、妄四根本戒，是大小乘共同遵守的。对于律学的研究，最重要的是善于分辨开、遮、持、犯，就是在出家戒条中，本来是不得触犯，但在某种情况下可以开许，这叫开；在通常情况下又不得违犯的，就叫遮。在某种情况下，本人也不知是持戒还是犯戒，这就需要研究律学。律师根据律藏分辨清楚确定开、遮、持、犯的界限。在声闻戒中除四根本戒（杀、盗、淫、妄），或者还加十三僧残（尼戒是八根本十七僧残）必须严格遵守，不得违犯外，其它绝大部分的戒条，在特殊情况和必要情况下是可以开许的。例如“非时食”这一条戒，即通常过午就不许吃东西，而在劳作以后就允许吃东西。但如何开许，要依戒律来判定。可见佛教戒律不是死板的，除根本性戒外，都是具有灵活性的。

45问：密宗的教义是什么？

答：八世纪时印度的密教，由善无畏、金刚智、不空等传入中国，从此修习传授形成密宗。此宗依《大日经》、《金刚顶经》建立三密瑜伽，事理观行，修本尊法。此宗以密法奥秘，不经灌顶，不经传授不得任意传习及显示别人，因此称为密宗。

46问：什么叫三密瑜伽？什么叫本尊法？

答：本尊（S. Satyadevatā, P. Saccidevatā）是学者选择自己最敬爱最尊崇的一尊佛、一位菩萨或者一位明王，作为学习成就的对象或榜样，就叫本尊。要成就本尊的所有功德智慧，就要修习三密瑜伽法。三密就是身、口、意三业，瑜伽（yoga）译为相应。三密瑜伽，就是三业相应。与谁相应？就是修行者自己的身口意与本尊的身口意三业相应。修法时，修行者要身作本尊的姿态，手结印契，口诵本尊真言，意作本尊观想或种子字，务使自己的三业与本尊的三密相应，名为瑜伽修法。此法如果修成，可以即身成就本尊之身。密教的修法很多，这只是举一个例证。此宗最高理论还是以性空无相的法性理体为基础，所谓阿字本不生，不生就是空义。

47问：听了您的介绍，我对佛教八宗有了一点简单的了解。八宗以外，还有哪些别的学派？这既称为八大宗派，是不是还有什么小宗派？

答：八宗以外还有以《俱舍论》为主的学派叫俱舍宗；专讲《成实论》的学派称成实宗。成实、俱舍都属小乘教，唐以后不甚流行。八宗之外若加这两派便成十宗。此外，还有弘扬《涅槃经》的涅槃师，专讲《摄大乘论》的摄论师，专讲《十地经论》的地论师。这些学派初兴都曾盛极一时，但为时不久便失去传承，或者汇入其它宗派。

48问：各宗派兴起后，在弘传的过程中有些什么样的曲折变化？

答：各宗的发展情况是不平衡的，发展变化也不一样。有的宗派初兴起时流传很盛，而后来渐衰，这就是三论宗。此宗经过陈隋兴皇法朗和嘉祥吉藏的大力弘扬，在隋、陈、初唐时，流传之广，几乎遍及全国，但以后便逐渐衰落。有的起初流传不广，后来却很盛行，如天台宗。此宗在天台智者和章安成宗之后，流传地区仅限于浙江东南一带，师资传承不绝如缕，一百多年后到荆溪湛然始号称中兴。有的宗派一直在发展流传，从未有衰歇过，这便是禅宗。此宗有大成就的人多住在山林中，自耕自食，对于社会的依赖性不大，也不需要太多的典籍，所以虽遭会昌之难，影响不大，一直传承下来，并有很大的发展。有的宗派绝而复苏，很多的宗派都是这样，在会昌灭法之前，各宗先后都已兴起，相比之下，虽各有兴衰的不同，但都同时流行于世。到九世纪后期唐武宗会昌（845）年间灭法，所有的经书佛像毁坏殆尽，各宗的章疏

典籍大都丢失无存。十世纪时天台宗的著作又从朝鲜传回来，贤首宗的典籍也恢复一部分。所以从五代以来，天台、贤首二家又算复兴。其余中观、瑜伽以及密宗的许多著作流传域外，到了清末，性相二宗的章疏才由日本重返故国。近半个多世纪以来，上述八宗都有人研究讲说，有复苏的趋势。总观诸宗历史，隋唐是各宗兴起和极盛时代，会昌法难后，除禅宗外，是诸宗衰亡时代。稍后有天台、贤首的复兴和禅宗的大发展，这可算是佛教复兴的时代，但也没有初唐中唐那样的盛况。自元代起西藏佛教传入内地，很受朝廷的崇奉，但未普及民间，而汉地原有佛教则不及宋时兴盛。有清一代，汉地佛教没有什么起色，仅可保持原有的余绪。

49问：唐末以来，佛教逐渐衰落，直到清代还是如此，但从清以来，佛教似乎有复兴之势，出了不少人才，不知近代佛教有哪些著名人物？

答：近代的佛学提倡者首推杨仁山（1837—1911）。为了培养人才和扩大佛典流通，便利佛学研究，他用了几十年的光阴，致力于讲学和刻经事业。他所创办的金陵刻经处曾经刊印了由日本取回的我国已经遗失的性、相诸宗的重要著作，因而使性、相两宗的教义得以复兴。金陵刻经处同时又是讲学场所，谭嗣同、章太炎等都在那里听过他的讲，在他的培育影响下产生了一些佛教学者，其中特出的是欧阳竟无居士，专治法相唯识之学，他在南京举办的支那内学院，成为当时法相学的重要研究场所。与欧阳齐名的法相研究的提倡者有北京三时学会的韩清净居士。

50问：听了上面的介绍，了解这几位德高望重的居家大士对于近代佛教的贡献确实巨大，是值得后学称赞学习的。但同时出家菩萨中有哪些著名高僧弘传佛教？请略为介绍。

答：近代高僧中著名人物有月霞、谛闲、印光、弘一、虚云等，他们分别弘扬贤首、天台、净土、律宗、禅宗。还有积极从事整理僧伽制度，提倡僧伽教育，宣扬大乘精义，发扬佛教文化事业最有力的圆瑛法师和太虚法师。圆瑛是一位宗说兼通、禅净双修、精研《楞严》的大德，他热爱祖国、热爱佛教，一生讲经、建寺、兴办各种福利事业，奖掖引导后学，不遗余力。太虚是一位教海渊深的佛学通家和弘扬佛教的积极活动家，在他的倡导带领下，涌现了一大批弘法的僧伽人才。他们对我国近代佛教事业的发展做

出了不可磨灭的贡献。我国佛教自唐武宗毁法（844）以来义学凋敝，达千余年，经过近百年中僧俗大德学者的努力而渐有起色，这是值得庆幸的。但是，和目前国外的佛教学术研究事业的兴旺情况相比，我们还有很多工作亟待进行。如何恢复我国佛教在盛唐时期波澜壮阔声华腾蔚的光荣地位，以与祖国当前的伟大时代相适应，还需要佛教界有识有志之士发大愿心，继承先德未竟之业，作出艰苦卓绝的努力。

以上就是中国汉族佛教各宗的兴起、弘传和盛衰变化的大概情况。

（三）少数民族地区的佛教

51问：听了您的介绍，知道了汉地佛教的大概轮廓，不知我国西藏佛教是什么时期传入的，是经什么人弘扬起来的？

答：我国藏语系佛教开始于七世纪中叶。当时的西藏松赞干布（Sroṅ-bstan sgam-po）藏王，在他的两个妻子，唐文成公主和尼泊尔毗俱胝（Bhṛkuṭi，藏名尺尊khri-btsun）公主共同的影响下皈依了佛教。他派遣大臣端美三菩提（Thonmi sambhoṭa）等十六人到印度学习梵文和佛经，回来后创造了藏语文字并开始翻译了一些佛经，到了八世纪中叶藏王持松德赞（Khri-sroṅ lde-btsan）迎请莲华生（Padmasaṃbhava）由印度入藏，折服了原来盛行的本教（Bon-po），佛教于是得到了弘扬。

52问：后来发展的情况怎样？

答：莲华生入藏之后，首先建立了桑耶寺，度僧出家，成立僧伽，并请译师从梵文翻译大批佛典，同时也从汉文翻译一些佛经。据现在的登嘎尔目录（布敦认为是持松德赞王府所编），当时译出的大小显密经律论有738种（内从汉文转译的32种），故当时佛教流传是很兴盛的。但在九世纪中叶，西藏佛教曾一度遭到破坏，即所谓朗达玛灭法，曾有一段时间（842—978）佛教沉寂了。后来由原西康地区再度传入，西藏佛教又得复苏。十一世纪时有孟加拉佛教大师阿底峡（Atiśa）入藏（1042），又大弘佛法，同时藏族比丘仁钦桑波（rin-chen bzan-po，宝贤）等翻译了很多的经论。

西藏史上称朗达玛灭法之前为前弘期，之后重兴的佛教为后弘期。

此后印度的佛教学者，特别是遭遇变乱时期（1203年印度比哈尔省的佛教各大寺庙被入侵军全部毁坏）的那烂陀寺、超戒寺等的学者，来到西藏的很多，传译事业因而很盛，藏文大藏经近六千部中绝大多数是直接由梵文翻译的，少数是从汉文转译的。因此，印度后期佛教的论著保存在藏文藏经里的，极为丰富。尤其是因明、声明、医方明等论著数量庞大，非常重要。西藏的佛法以密教最为普遍，最为突出，这是大家所熟知的。在显教方面，西藏格鲁派（黄教）各大寺都推行以因明、俱舍、戒律、中观、瑜伽（现观）五科佛学为中心的教学制度，从玄奘、义净的记载来看，可以说这是继承了当初印度那烂陀寺遗留的学风和规范。

53问：前面提到过，我国还有巴利语系佛教，其弘传情况怎样？

答：巴利语系佛教（上座部佛教）流传于我国云南省傣族、布朗族等地区，那里人民的佛教传统信仰与南方佛教国家（泰国、缅甸等）大致相同，属巴利语系佛教。因为他们直接读诵巴利语文经典，所以用不着有翻译之劳。那里，若干世纪来能保持如法如律精进修学的原始佛教的优良传统，还是值得欣喜赞叹的。

54问：汉语系佛教有许多宗派建立，藏语系佛教是否也有不同的宗派？

答：藏语系佛教先后也有不同的宗派产生。由于传承、传译、讲说和依据的不同，也逐渐形成了若干大小的教派。有从前弘期传承下来的宁玛派，有阿底峡传给敦巴一系的迦当派，有玛巴译师传给弥拉日巴一系的迦举派，有卓弥译师传给昆宝王一系的萨迦派，有由宗喀巴改革创建的格鲁派（又名噶登派）。此外还有些传布不广，影响不大的派别，如觉囊派、希结派、觉宇派、霞鲁派等。这些教派，各有他们自己特殊的学说和修持方法。尤其是格鲁派，是十四世纪末宗喀巴大师（1357—1419）继承上代的传承，在学说上加以整理和发扬，在僧伽制度上加以整顿和改革而创立的教派——黄教，在当前蒙藏族地区最为盛行。

55问：巴利语系佛教在我国是否也有派别的不同？

答：中国巴利语系的佛教也有几个不同的派别，但这些派别只是在持戒律仪方面要求有所不同，而不是学说教义上的派别。

（四）佛教对中国思想文化的影响

56问：佛教传来中国将近两千年，思想体系发展演变成十多个派别，可说是学术成果灿烂辉煌，这对中国的思想文化起过什么样的影响和作用？

答：佛教各宗派学说，经过长期的研究和广泛的弘扬，对中国思想界曾起了不可磨灭的影响。举宋明理学为例，很明显，它是在很大程度上受了华严、禅宗和另一部分佛教理论的刺激和影响而产生的，这是思想界公认的历史事实。在晚清时期，中国知识界研究佛学成为一时普遍的风气。一些民主思想启蒙运动者，如谭嗣同、康有为、梁启超、章太炎等学术名流，都采取了佛教中一部分教理来作他们的思想武器。佛教的慈悲、平等、无常、无我的思想，在当时的知识界中起了启发和鼓舞的作用。

57问：佛教对文化艺术有什么样的影响，比如说，对中国文学起过什么样的作用？

答：数千卷由梵文翻译过来的经典，本身就是伟大、富丽的文学作品。其中如《维摩诘经》、《法华经》、《楞严经》特别为历代文人们所喜爱，被纯粹地为着文学目的而研读着。我国近代文豪鲁迅曾捐款给金陵刻经处，刻印了一部《百喻经》。这部经所叙的譬喻故事，常常被译为语体文发表在今天的报刊上，作为文学作品来欣赏。佛教为中国的文学带来了许多从来未有的、完全新的东西——新的意境、新的文体、新的命意遣词方法。马鸣的《佛所行赞》带来了长篇叙事诗的典范，《法华》、《维摩》、《百喻》诸经鼓舞了晋唐小说的创作，《般若》和禅宗的思想影响了陶渊明、王维、白居易、苏轼的诗歌创作。

58问：佛教对我国文学的发展有所影响已如上说，但不知对中国文体的变化起了哪些作用？

答：为佛化普及的目的而盛行于古代的歌呗产生一种特殊的文学——变文，这就是把佛经内容演为便于讲唱的通俗文词。敦煌石窟发现的各种变文，都是文词酣畅想像力都非常丰富的大众化的文艺作品。从这些作品中，可以看出后来的平话、小说、戏曲等中国俗

文学的渊源所自。此外还有由禅师们的谈话和开示的记录而产生的一种特殊文体——语录体。这种朴素而活泼自由的口语文体，后来被宋明理学家仿效而产生了各种语录。此外还有音韵学，如过去中国字典上通行的反切，就是受梵文拼音的影响而发展起来的。总之，佛教在中国文学领域中的表现是丰富多彩的。

59问：建塔造像，大家知道，多数来源于佛教，佛教在这方面的艺术成就就是举世闻名的，可否请重点介绍一下？

答：随着佛教的传入，建塔造像的艺术很快地便风行于中国各地。现存的上海龙华寺塔和苏州报恩寺塔，都是在公元二世纪三国时代创建而经后人重修的。四世纪到六世纪，全国各地都有壮丽的塔寺建筑。世界闻名的佛教石窟寺，如敦煌、云冈、龙门以及其它同等重要的石窟寺——这些古代雕塑壁画艺术的宝库，西至新疆，东到辽宁，南到江南，都是在这一时期开始动工的，随后继续了数世纪之久。在中国，塔的形式很多，大致可归纳为两类：一类是印度式的，但也有许多变化；一类是中国式的，主要是采用中国原有的楼阁形式而建筑的。研究中国建筑艺术，寺塔是其中主要部分。至于佛教造像，在取材与造法上种类也很多，有石窟造像，有木、石、玉、牙的雕刻像，有金、银、铜、铁的铸像，有泥塑像，有锤鍱像，有夹紵像，有砖像，有瓷像，有绣像，有画像。它吸收了犍陀罗和印度的作风而发展成为具有中国民族风格的造像艺术，是我国伟大的文化遗产。

60问：佛画艺术也很著名，都有哪些类别？

答：佛教绘画主要是壁画。现存于敦煌石窟中的壁画，供给我们非常丰富的艺术和历史的资料。值得注意的是，最初盛行的佛陀本生故事画，发展到唐代，逐渐为“经变”画所代替。正如文学中有变文一样，佛画中的“经变”，也就是将佛经中的故事譬喻演绘成图，如敦煌石窟中的演绘《维摩经》的“维摩变”，演绘净土经的“净土变”等，都是十分精彩生动的伟大作品。经变画的兴起，使壁画内容大为丰富起来，因而唐代佛寺壁画之盛，达到极点。当时名画家辈出，在姓名有记载的数十人中，如阎立本、吴道子等，大多是从事于佛画的。由此可见佛教对当时绘画艺术所起的作用。中国画学中由王维一派的文人画而发展到宋元以后盛行的写意画，则与般若和禅宗的思想很有关系。佛教版画，随着佛经的刊印而很早就产生了，现在所看到的中国最早的版画是在大藏经上面的

佛画。房山石经中有唐代的石刻线条佛画。宋元以来的观音画、罗汉画以及水陆画等都是很流行的。

61问：佛教是否也有音乐、天文、医药等技艺的传习？

答：伴随佛教俱来的也有天文、音乐、医药等的传习。1955年我国发行邮票纪念的古代天文学家一行，就是八世纪初的一位高僧，是由印度来华弘传密教的善无畏的弟子。他在天文学方面著有《大衍历》和测定子午线等，对天文学有着卓越的贡献。至于医药，隋唐史书上记载由印度翻译过来的医书和药方就有十余种，藏语系佛教中并且有医方明之学。再说音乐，公元二世纪时，中国已有梵呗的流行。七世纪初，在今缅甸境内的骠国赠送给中国佛曲十种，并派来乐工三十二人。中国唐代的音乐中吸收了天竺乐、龟兹乐、安国乐、康国乐、骠国乐、林邑乐等来自佛教国家的音乐，唐代音乐至今还有少部分保存在某些佛教寺庙中。

62问：佛教主张利益众生，不知在公益事业中从事哪些种类？有过哪些成就？

答：佛教徒从事公益事业的面是很广泛的，也是多种多样的，如有的僧人行医施药，有的造桥修路，有的掘义井、设义学，有的植树造林，这在古人记载中是屡见不鲜的。特别是植树造林，成就卓越。试看我国各地，凡有佛教塔寺之处，无不翠枝如黛，碧草如茵，环境清幽，景色宜人。一片郁郁葱葱之中，掩映着红墙青瓦，宝殿琼阁，为万里锦绣江山平添了无限春色。我国许多旅游胜地，其风景自然之美与寺僧的精巧建筑和植树造林显然是分不开的。

这些事实说明佛教在中国不仅其本身发扬光大开出灿烂的花朵，而且延伸到民族文化的各个领域结出丰硕的果实。我们佛教徒应该为我们的先辈的卓越成就和贡献感到光荣和自豪。他们不仅在佛教事业上，而且在人类文化事业上，人类友好事业上都建立了不可磨灭的功绩。他们不仅翻译了几千卷的经论和写下了许多不朽的著作，为中国和印度及其他民族留下了宝贵的共同遗产，而且热心地相互传播了各自民族的劳动和智慧的花果，从而丰富了各自民族的文化宝藏。特别是在亚洲各国的友好合作日益恢复发展的今天，我们佛教先辈们辛勤努力所做出的许多历史业绩，不但重新显发了它的光辉，并且继续起着新的积极作用。

（五）发扬人间佛教的优越性

⁶³问：佛法教理，博大精深，义理幽玄，文化不高和悟解力差的人很难学习领会，怎样才能使佛法结合人们生活实际，有补于社会道德，精神文明的建设？

答：诚然，佛法博大渊深，不易为人们所了解接受，但也不能一概而论。佛经早已明言，大乘教理不是一般人都能信解的。佛法有浅深程度不同的各种法门，有适应各种根基的修持方法，各乘、各宗、各派都有引摄世间的教法适合一般人的需要，是合理契机的。

⁶⁴问：什么是五乘佛法？什么是世间法和出世间法？

答：人乘、天乘、声闻乘、缘觉乘、菩萨乘这叫五乘。其中后三种叫出世间法，教理深奥，比较难学；前二人天乘教是世间法。世间法是世人易学而能够做到的也是应该做到的，前人名之为人间佛教。人间佛教主要内容就是：五戒、十善。五戒是：不杀生、不偷盗、不邪淫、不妄语、不饮酒。佛教认为，这类不道德的行为应该严格禁止，所以称为五戒。十善是在五戒的基础上建立的，约身、口、意三业分为十种。身业有三种：不杀、不盗、不邪淫；口业有四种：不妄语欺骗，不非两舌，不恶口伤人，不说无益绮语；意业有三种：不贪、不嗔、不愚痴。这就叫十善，反之就叫十恶。

⁶⁵问：不杀生戒，应不许杀好人，假使有杀人放火，罪大恶极，负有命债的坏人，这种人依法应当抵命，难道这种恶人也不许杀他吗？

答：对罪大恶极，负有命债的杀人犯，应当绳之以法。这是因为触犯国家法律，应按法律制裁，而不是哪个人要杀他。法官虽有判决权，那是依法判决，不是法官个人的事。释迦牟尼为弟子制戒，不许弟子们杀生害命，这是就个人说的，同时也是为了避免触犯国家法律。佛陀从来没有说过国家法律对坏人的制裁有什么不对，总是教诫弟子遵守所在国的法律的。这是根本不同的两回事，不能混为一谈。佛教讲因果律时常说：善有善报，恶有恶报，杀人一定要偿命。这就说明了佛教是不会违反世间法律的，

而是承认世间法律的。不杀生是这样，不贪、不嗔也是这种精神，若是为国家生财，为人民谋利，这是利益众生的事，是大好事。若是为个人贪财，为私人泄忿而害人，那就为戒律所不许。总之，假使人人依照五戒十善的准则行事，那么，人民就会和平康乐，社会就会安定团结，国家就会繁荣昌盛，这样就会出现一种和平安乐的世界，一种具有高度精神文明的世界。这就是人间佛教所要达到的目的。

66问：据闻，大乘佛法说一切众生都能成佛，这种人间佛教，和成佛有什么关系？

答：大乘佛教是说一切众生都能成佛，但成佛必需先要做个好人，做个清白正直的人，要在做好人的基础上才能学佛成佛。这就是释迦佛说的，

“诸恶莫作，
众善奉行，
自净其意，
是诸佛教。”

怎样叫学佛？学佛就是要学菩萨行，过去诸佛是修菩萨行成佛的，我今学佛也要修学菩萨行。

67问：什么是菩萨行？

答：菩萨行总的来说是上求佛道，下化众生，是以救度众生为己任的。

修学菩萨行的人不仅要发愿救度一切众生，还要观察、认识世间一切都是无常无我的，要认识到整个世间，主要是人类社会的历史，是种不断发生发展、无常变化、无尽无休的洪流。这种迅猛前进的滚滚洪流谁也阻挡不了，谁也把握不住。菩萨觉悟到，在这种无常变化的汹涌波涛中顺流而下没有别的可做，只有诸恶莫作，众善奉行，庄严国土，利乐有情，这样才能把握自己，自度度人，不被无常变幻的生死洪流所淹没，依靠菩萨六波罗蜜的航船，出离这种无尽无边的苦海。《华严经》说，菩萨以“一切众生而为树根，诸佛菩萨而为花果，以大悲水饶益众生，则能成就诸佛菩萨智慧花果”。又说，“是故菩提属于众生，若无众生一切菩萨终不能成无上正觉。”所以，只有利他才能自利，这就是菩萨以救度众生为自救的辩证目的，这就是佛教无常观的世界观和菩萨行

的人生观的具体实践，这也是人间佛教的理论基础。

68问：什么是六波罗蜜？

答：布施、持戒、忍辱、精进、静虑、智慧六种就叫六波罗蜜，也叫六度。这六度是菩萨万行的纲领。

69问：请略解说六波罗蜜的内容和意义。

答：根据佛陀的教导，修学菩萨行的佛弟子，不但不贪求分外的财物，还要以自己的财法施给别人，这叫布施；一切损害别人不道德的行为严禁去作，这叫持戒；不对他人起嗔害心，有人前来嗔害恼我，应说明情况，要忍辱原谅，这叫忍辱；应该作的事情要精勤努力去作，这叫精进；排除杂念，锻炼意志，一心利益众生，就叫静虑；广泛研习世出世间一切学问和技术，就叫智慧。这六种法门通常也叫作六度。这六件事做到究竟圆满就叫波罗蜜，波罗蜜意为事究竟，也叫到彼岸，古译为度。佛陀叫弟子依这六波罗蜜为行动准则以自利利人，就叫菩萨行。菩萨以此六波罗蜜作为舟航，在无常变化的生死苦海中自度度人，功行圆满，直达涅槃彼岸，名为成佛。菩萨成佛即是得大解脱、得大自在，永远常乐我净。这就是大乘佛教菩萨行的最后结果。菩萨成佛之前，学佛度众生，以度众生为修行佛道的中心课题，成佛之后还是永远地在度众生，这就是大乘佛教的中心思想。菩萨行的人间佛教的意义在于：果真人人能够学菩萨行，行菩萨道，且不说今后成佛不成佛，就是在当前使人们能够自觉地建立起高尚的道德品行，积极地建设起助人为乐的精神文明，也是有益于国家社会的，何况以此净化世间，建设人间净土！

70问：你对今后佛教前途的发展是怎样看的？

答：存在了将近两千年的中国佛教，是拥有内容丰富绚丽多采的文化遗产的。论它的典籍文化，论它的成绩经验，论它的国际影响，无论作为宗教或学术来看待，中国佛教在全人类的文化发展和文明进步的历史中都有不容忽视的地位。但是另一方面，由于过去长期的衰落，中国佛教也存在着不少的缺点和局限。如何克服历史所给予的污染和困难，积极发扬自己的优良传统，主要在于当前中国佛教徒本身的努力。如培养传灯人才，管好重点寺庙，开展学术研究和国际交流等等都是要立即抓好的大事。我们是共产党领导的社会主义国家，党和政府保护宗教信仰自由政策是长期不

变的，坚定不移的，毫不含糊的。解放以后全国佛教从奄奄一息的状态中得到复苏和发展，宝镜重光，法炬复燃，像设严饰，气象万千。尤其是粉碎“四人帮”以来，一切恢复整顿工作顺利进行，短短数年之中取得了有目共睹的巨大成绩。所有这一切都是和党的宗教信仰自由政策的正确贯彻，党和政府的亲切关怀和大力支持分不开的。

抚今思昔，我深为中国佛教庆，深为中国佛教徒庆。我深信，作为灿烂的民族古典文化的绚丽花朵，作为悠久的东方精神文明的巍峨丰碑，中国佛教必将随祖国建设事业的发展而发展，并在这一伟大事业中，为庄严国土，为利乐有情，为世界人类的和平、进步和幸福作出应有的贡献。瞻望未来，前程似锦，春回大地，万卉争妍，佛教的前途是无限光明的。

[1] 阿育王（公元前272—公元前226 在位），根据目前通行的说法，阿育王在位时间为公元前272—公元前232 年。

[2] 《史记·始皇本纪》，应为《史记·秦始皇本纪》。

Appendix: Buddhist terms in Pāli, English and Chinese

附录：巴、英、汉佛教术语对照表

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早

在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

TRANSLATOR'S INTRODUCTION^[1]

Bing Xin (1900-1999) stands as a unique and important figure among the many Chinese women writers of the twentieth century. Her early involvement in the May Fourth Movement, which began in 1919, has placed her among the generation of writers that challenged tradition and advocated the reappraisal of Chinese culture. Like many May Fourth authors, Bing Xin assumed the task of "revealing the problems of society to the reader" in her literary works. Her so-called "issue stories" (*wenti xiaoshuo*), dealing with social injustice, family conflicts and feminism, caused considerable debate among the critics of her time. Her unique style, dubbed the "Bing Xin Style" (*Bing Xin ti*), combines poetic expression that is prominent in the classical Chinese lyric with narrative realism in a lucid and provocative synthesis.

Hu Shih's commentary on Bing Xin's works has been cited by Charlotte Boynton: "Most writers in *Baihua* were searching for a style suitable to the new form, and many of them were crude; some were vulgar. Miss Icy Heart (Bing Xin), he understood, had been given a good grounding in the great Chinese poets. She had brought to the new medium a delicacy and refinement which made her writing fresh and direct" (cited in Bing Xin 1989: 93). On the other hand, her treatment of protagonists in many short stories has sometimes been criticized for supporting a "pessimistic" and even "self-indulgent" outlook. This common assessment needs to be qualified in view of the writer's historical commitments.

As some critics have suggested, the element of "lyric" in modern Chinese literature has its origin in classical poetry. This quality contributed in important ways to the modern epoch in Chinese writing. And yet, modern Chinese literature is always more than an expression of the author's private feelings and sensitivities. Bing Xin's writing follows the dominant ethos of May Fourth literature when it exemplifies the progressive writer's interest in influencing, and in

some cases articulating, the attitudes of the engaged reader, rather than in expressing private attitudes. Her feminist commitments, which need to be presented to the Western reader as unique to this particular writer, as well as her political commitments to Chinese nationalism, especially during the period leading up to the War of Resistance against Japan, were crucial to the reception of her writings in her own time and placed an indelible stamp on the form and content of her fiction.

The first story in *About Women* initially appeared in *Weekly Review*, Volume 8, in Chongqing on January 5, 1941. From that moment until the end of the year, Bing Xin had published eight more pieces in this journal. Later on, Bing Xin wrote seven additional stories, and the entire collection of sixteen stories was published by the Tiandi Publishing House in September, 1943. The second edition was published by the Kaiming Bookstore in February 1945. In August 1980, the third edition was published by the Ningxia People's Press. The fourth edition was issued in December 1992 by the Kaiming Press in Beijing. The People's Literature Publishing House in 1993 published a new collection, *About Women and Men*, which includes all sixteen pieces as well as several new ones. A glance at the editorial history of *About Women* suggests the consistent popularity of this evolving work.

There are three compelling reasons for returning to Bing Xin's work today, particularly to her remarkable collection, *About Women*. First, Bing Xin was a talented writer whose use of narrative voice constitutes a subtle challenge to conventions of gender construction that have been important to most traditional and much modern literature. As a woman writer, Bing Xin contributes to the *modernist* tradition in her precise and ironic style, which enables her to challenge male authority. Second, Bing Xin enables the contemporary reader, but especially the woman reader, to envision a broader political struggle that lies beyond the horizon of gender disputes. Hence, without ceasing to be a feminist, Bing Xin offers us a view of Chinese *modernity* that reflects the social and political realities of twentieth-century China. Finally, Bing Xin is a Chinese writer who

offers her own interpretation of feminism that is neither a clear expression of her modernist style nor reducible to her historical commitments. Let us examine each of these reasons for reading Bing Xin today in more detail.

I

About Women demonstrates that Bing Xin's feminism can be considered in terms of her use of narrative voice as an ironic ploy. The sophisticated male narrator that disguises the gender of the author functions subtly to undermine male authority and its appearance of total mastery. In the preface to the second edition, written in 1945, Bing Xin expressed the opinion that "gentlemen" would be more likely to read her book than women. At the same time, she also maintained that the "inspiration" for this collection came from her female friends, who sometimes even provided suggestions for the characters themselves (1980: iv). Perhaps Bing Xin intended to reach her male readers by describing various women, and decided on the title "About Women" in order to create the impression that she had not assembled a purely literary work. The sixteen stories which form the collection as a whole offer different images of women. The first two stories are especially important in terms of the issues raised as well as the viewpoint on women in general.

The first essay raises the question of whether a man or a woman is more qualified to talk about the problems of modern women. In "Women Deserve My Utmost Respect and Consideration," the narrator reinforces Bing Xin's opening remarks by asserting his own male authority, just as he contends that the entire collection was inspired by female acquaintances (1980: 1). Since the only woman in his life is his mother, the narrator has never sustained a serious relationship with female schoolmates or colleagues. As a successful man who expresses an interest in marriage, however, he makes us wonder why he is still single at nearly forty years of age. The narrator argues that if a man wants to talk about the ideal qualities of a woman, he should first try to discover such qualities in himself. At the end of this story, Bing Xin alludes to the dilemma of the career woman who is caught

between her career and housework, her role in society and her role at home.

The second essay, "My Standards for Choosing a Wife," exhibits the standards that a man commonly imposes on the woman of his choice. The male narrator lists as many as twenty-six qualities that he believes are important when judging a woman (1982: 5-8). These qualities range from age, looks and clothes to hobbies and personal interests. It is obvious that the narrator is caught up in a conventional game that belies a stereotypical masculine point of view. The Chinese reader would not know for sure that the author of this essay is a woman, but ambiguity with respect to gender would create enough suspicion to cast a shadow on the male narrator's urbane attitudes. The ironic tone of this story reaches its climax when a friend challenges the narrator's better judgment. The narrator then states that it might be possible for him to bargain for what he wants, thus revealing the utterly contrived nature of his preferences:

"...instead of making presumptuous demands I am just bargaining on the capital I already own. Even though this doesn't mean 'casting jade to attract jade,' what I'm doing is at least 'casting a brick to attract another brick.' There is nothing wrong with setting any number of standards. However, while I do object to some details as far as tastes and habits are concerned, I generally prefer to accept things as they are rather than become excessively preoccupied with my wife's appearance, disposition and aptitude for earning a living."^[2] (Bing Xin, 1980: 8)

Instead of directly presenting images of women, the first two essays set the tone for the whole collection. Problems about women are introduced through what is considered to be the "ideal" type of wife by the male narrator. The problem of the woman's vocation is presented in terms of a conflict between the role of wife and that of a more completely social being. This conflict is dramatized when idealizations are carried to such an extreme that they lose credibility. The character who emerges in the stories on the basis of the narrative voice must ultimately confront the truth of women in various circumstances. Hence, while the voice of the male narrator plays an important role in traditional Chinese literature, Bing Xin's use of this

voice becomes particularly ironic when it suggests the speaker's limitations, and, in this way, questions received ideas about masculinity. Instead of reproducing the author's standpoint in a direct manner, this voice introduces irony into the representation of everyday life and encourages the reader to view male/female relationships in new ways.

Bing Xin's stories, therefore, cannot be interpreted from the standpoint of a purely omniscient narrator. The narrative voice that she most commonly employs is easier to interpret as symbolic and ambiguous than would have been the case if the role of the voice were restricted to the limitations that tradition might impose on it. Moreover, within the broader framework of *About Women*, Bing Xin's use of the male narrator combines objective narration with destabilization of gender in literary representation. The social world that emerges as a consequence of this special use is clearly depicted, but the kinds of voices that can be heard in this world are practically limitless. The convention of the sophisticated male narrator might seem to restrict the potential range of voices, or even to subordinate them to some hierarchical conception of an allegedly appropriate tone of authority. At the same time, Bing Xin prevents this restriction from occurring and therefore produces what Julia Kristeva, strongly influenced by Lacan and Bakhtin, has called *polyphony* in connection with the modern novel (1980: 159-200). Bing Xin's fiction is polyphonic in multiplying a variety of female voices in a manner that does not involve personal identification with a single female character.

II

Bing Xin's reputation as a Chinese writer is largely based on her ability to represent the condition of ordinary women in enduring narratives that are socially complex and emotionally convincing. As a May Fourth participant who came to write in an increasingly political atmosphere, however, she was often compelled to relate her own version of feminism to the pressing demands of Chinese nationalism. Bing Xin rejected the suggestion that she was producing a specifically

"women's literature," since this term in Chinese applies more readily to literary works that are intended for women alone. During the War of Resistance against Japan, she would not have been able to advocate a variety of feminism that ignored the concerns of men and women alike. The social situation for Chinese women during the 1940s was largely unfavorable to feminist modes of address. In her work as a writer, Bing Xin reveals that women faced numerous obstacles both in society and at home. Most women were compelled to place marriage and family before their careers and their work was rarely viewed as important or politically necessary. Bing Xin's response to this situation was not to abandon her feminist position but to integrate it into a nationalist stance that created a new role for women in solidarity with others.

About Women contains many characters whose nobility and pathos are directly related to the author's belief that national unity can be projected among men and women in diverse circumstances. The early stories in this collection employ the male persona ironically, whereas the latter stories depict the hardships of everyday life and greatly reduce the reader's aesthetic detachment. From this broad standpoint, Bing Xin's use of voice not only challenges male/female gender construction, but also immerses the reader in a process of decentering that occurs in the space of history. Like many of her Western counterparts, such as Joyce and Faulkner, Conrad and Woolf, Bing Xin ultimately employs her modernist breakthroughs to express a more comprehensive view of a specific moment in historical time. In a manner that evokes a literary pattern that would be familiar to Western readers, Bing Xin employs a sophisticated male narrator who functions in an aesthetic mode and thus destabilizes a text that cannot be fully understood apart from history. The conflict between gender and historical objectivity is what prevents the reader from accepting the narrator's point of view as unambiguous.

In destabilizing narrative and carrying the reader beyond the confusions inherent in the so-called point of view, *About Women* succeeds as fiction just as it bespeaks an underlying commitment to

social change. This means that the world of Bing Xin is only superficially the world of a male observer who adopts an ironic stance on women in general. The false standards of normativity that the narrator offers at the outset of this work are not simply degrading to women; they also parody formalistic approaches to literature. Thus, Bing Xin moves beyond formalism in creating a stereotypical male persona, and in showing the reader how actual men and women constitute the historical struggle of their time.

The patient reader of *About Women* is therefore drawn into a world in which the voice of the narrator becomes increasingly marginal to various actions that possess diverse meanings. Relations between women of unequal social standing emerge as crucially important once the defense of China becomes an urgent concern. Nonetheless, Bing Xin's espousal of nationalism only occasionally assumes propagandistic overtones. The movement beyond aesthetic formalism that occurs in her early works is a literary event, rather than a strictly political one. The ironic use of humor and the satiric deflation of vanity and pretense continue to provide her stories with a literary texture, even when the theme of national unity acquires decisive importance.

Hence, Bing Xin's inability to separate feminism from politics is ultimately an affair of literature, since it enables the reader to gain access to a turbulent period on the basis of written texts that challenge the conventions of gender as well as the tendency of many modern writers to oppose the autonomy of literature to the possibility of personal commitment. The lessons of Bing Xin will not be forgotten in a time when feminists the world over have become aware of the need to contribute their skills and capacities to the attainment of broader political goals that are central to the survival of the human community as a whole.

III

What lies at the core of Bing Xin's feminism? This question is not related in obvious ways to either the author's modernist style or to her

political commitments. Her literary modernism does not prepare us for the semiotic approach that she employs in her portrayal of Chinese women. By adopting the sophisticated male narrator as a foil that cannot fully conceal her own perspective on the world, Bing Xin demonstrates how the male/female opposition only possesses relative significance in an open economy of signs. In truth, Bing Xin's special form of feminism is inseparable from a pre-modernist concern for human qualities that are often misleadingly labeled as traditionalist. While occasionally demonstrating the "hard-edge" style that Western readers easily identify with High Modernism, her fiction can also be read as an exploration of gender that opens up many questions that cannot be resolved within the framework of contemporary feminism.

An enduring aspect of Bing Xin's feminism is elaborated in "My Mother," the third story in the collection. This story might be interpreted autobiographically as an account of the author's own mother, but it also can be read to argue that certain personal qualities, sometimes considered to be feminine, are consistent with a form of autonomy that may or may not be overtly political. In this story, the mother is not only "open-minded" but also a woman who believes in the social importance of the family. The male narrator is in this case the son who portrays his own mother in a convincing way:

"Open-minded, she was consistently and impartially accepting of everything proper to modern times. She loved the 'family' ardently in the belief that a perfect family is the source of all happiness and strength. She hoped that I would soon marry because she wanted to see me settle down as soon as possible, both physically and mentally, in the warmth and happiness of a family."^[3] (Bing Xin, 1980: 11)

This mother also took a keen interest in political affairs: "Mother became interested in the May Fourth Movement of 1919 soon after it began. She read books and newspapers, refusing to allow herself to be left behind the times" (1980: 13). Bing Xin's conception of independence has been questioned by feminists who believe that a woman should adopt overt strategies to obtain power and that the responsibilities of a wife and mother can only interfere with this political project.

Simone de Beauvoir has argued that a realistic conception of the woman, rather than an implicitly mythic one, lies at the heart of some of the best modern literature (1980: 253-263). The woman that Bing Xin evokes in the Epilogue to her collection of short stories is compounded of traits that are largely familiar: "She is neither the goddess as described by the poet, nor the devil in the eyes of the man disappointed in love." From this standpoint, a woman should possess "feeling and rationality" but would also be "more sensitive, quicker in response and livelier in action" (1982: 111). Bing Xin's work in fiction both confirms the author's deeply held convictions on what women can become and provides hope for a more humane tomorrow.

[1] I would like to thank Amsterdam University Press for allowing me to reuse material for this Introduction that first appeared as, "In and Out of Home: Bing Xin Recontextualized," in *Asian Literary Voices: From Marginal to Mainstream*, edited by Philip F. Williams (Amsterdam University Press, 2010), 63-70.

[2] This passage is a typical example of Bing Xin's ironic use of narrative voice. All translations from the text are my own.

[3] In my translation of this passage, I have tried to communicate the combination of emotional sensitivity and personal dignity that Bing Xin associated with her own mother.

Preface to the Third Edition

What I wrote in my epilogue to the first edition of *About Women* and in my preface to the second edition was all true, but it appeared as though written by a *gentleman*, in a tone suitable to the status of such an author. But now, I have no alternative but to "drop my veil and show who I am."

What happened is that the Ningxia People's Press had someone pass on to me a message asking for something to publish, a demand I found myself unable to meet other than to send them *About Women*, a book of mine long since out of print. By the way, in early September, 1966, all the books I had written were impounded by the Red Guards for "investigation," and up to now what happened to my books is still unknown! I now have at hand only this one copy of *About Women*, which, fortunately, Comrade Ba Jin happened to find in a second-hand bookstore in Shanghai. Since I have a special liking for this book, I often leaf through it in my leisure moments. I do this not only because I feel like meeting the characters I'm fond of in this book, but also because the reasons why I wrote the book are quite interesting. First, in that period of 1940-1943, I was really somewhat short of money and had need to sell some literary work (having just received the payment for the first one of the essays in *About Women*, which allowed us to afford our New Year's Eve supper of 1940 at the Three-Six-Nine Snack Bar in Chongqing). Second, being able to refrain from using my pen name Bing Xin in writing these essays, I could remain "free of any responsibility" and enjoy more freedom in joking.

The second edition of *About Women* was handed over to the Kaiming Bookstore in care of Comrade Ba Jin. Now, the text for its third edition is being handed over, care of Comrade Caichen, Ba Jin's younger brother. What I have done appears similar to the behavior of a child who, having done behind the backs of the grown-ups something mischievous to his own profit but at nobody's expense, feels

very happy and satisfied at his exploit, but can only whisper this story to his closest chums.

Bing Xin

三版自序

《关于女人》的初版后记和再版自序，说的都是实话，不过那都是用“男士”的口吻和身份写的，如今这“三版自序”，我就只好“打开天窗说亮话”了！

宁夏人民出版社托人来向我索稿，我无以应命，只好以久已绝版的《关于女人》送给他们——一九六六年九月初，我写的几本书都让红卫兵拿去“审查”，至今没有下落！我手里的这本《关于女人》还是巴金同志替我在上海的旧书摊上寻来的——我对这本书有点偏爱，没事就翻来看看，不但是要和书中的我所喜爱的人物晤面，而且因为我写这本书的来由，很有意思：一来我那时——1940—1943年——经济上的确有些困难，有卖稿的必要（我们就是拿《关于女人》的第一篇稿酬，在重庆市上“三六九”点心店吃的一九四〇年的年夜饭的）。二来，这几篇东西不是用“冰心”的笔名来写，我可以“不负责任”，开点玩笑时也可以自由一些。

《关于女人》的再版，是巴金同志拿去交给开明书店的。如今这本书的三版，又是交给巴金的弟弟采臣同志的。这就好像一个孩子，背着大人做了一件利己而不损人的淘气事儿，自己虽然很高兴，很痛快，但也只能对最知心的好朋友，悄悄地说说！

冰心

1980年8月31日

Preface to the Second Edition

On entrusting the second edition of my book *About Women* to the Kaiming Bookstore, I find it necessary to write an author's preface.

It was in September 1943, that the Tiandi Publishing House published the first edition of *About Women*. As soon as it came out, many friends asked me to send them copies as gifts. But the number of requests was so large that I found myself "in a fix." I had to make it clear to everyone that my male friends would receive no copies from me, because I supposed them to be so interested in such a book that they would buy a copy even if they received none as a present. As for my female friends, however, I had no excuse at all! First, because I had always respectfully cherished their friendship, and second, because it was only to them that I owed my "inspiration" in writing this book. Thus, I must, in all respects, send them respectfully my offerings as a token of my gratitude.

I found, however, that in no way could I decently send my friends copies of the first edition of *About Women*, since the misprints that flawed it were not only countless but also so outrageous that I didn't know whether to laugh or cry. For example, instead of "I have been fond of a lot of women," what was printed was "I have treated a lot of women in a filial way," and what should have been "Men are more likely to be idle...when living together," appeared as "Men feel more happy...when living together." Worse still, and too numerous to count, were misprints such as "you" instead of "I" and "he" instead of "you." The Tiandi Publishing House once told me that the book was selling so well that publishers were thinking about a second edition after hardly three months had passed since the first one came out. Then I made haste to correct the misprints and turned over the better version to my publishers. But after that I received no further news whatsoever! Although *About Women* is being sold in bookstores in Chongqing, Guilin, Kunming...and even in Qujiang, Xi'an..., up to now only its

"first edition" can be found. The "second edition," copies of which I promised to offer as gifts to my female friends, hasn't appeared yet, and I've even been bitterly called down by my brothers' wives!

I couldn't keep waiting. I wrote to the Tiandi Publishing House and asked for an explanation. In their reply, my publishers said that out of the five thousand copies of the first edition, one or two hundred remained unsold, in addition to those damaged by rainwater or gnawed by mice. They finally apologized for "not having made enough effort to promote the sale." I felt ashamed and could say nothing, although *About Women* was being played up in the "Literary News Columns" of various Chinese newspapers as "selling extremely well." Even quotations in American literary journals, which I received from some American women friends who asked me for copies of the book, also spoke highly of it and called it "the Best Seller in Chungking."

It is for this reason that I am delivering the already corrected version of this book to the Kaiming Bookstore for a second edition, in order to pay the debt I have long owed to my female friends. At the same time, I hope to add a few more stories of women to a possible second edition of this "second edition," for it is to women that I will always feel indebted for what is most superb and pure in my "inspiration."

One night in February 1945

The Lingyin Mountain Villa, Mt. Da Huang

再版自序

我把这本《关于女人》交给开明书店再版，我觉得有写篇自序的必要。

《关于女人》在天地出版社初版，是在三十二年九月。出版以后，就有许多朋友，向我索赠。我的朋友不少，真是有点“穷于应命”！我便向朋辈宣言，我这本书是不送给男朋友的，因为我估计男人对于这本书，一定会感很大的兴趣，我不送，他们也会自己去买了看的。而对于女朋友们，我却是无法推脱！一来因为我素来尊重她们的友情；二来因为这本书本是借着她们的“灵感”，才写得出来。无论从哪一方面说，我都得恭恭敬敬的奉赠，以表示我的谢意。

但第一版《关于女人》，我实在无法送人，错字太多了，而且错得使人啼笑皆非！例如“喜欢过许多女人”，变成“孝敬过许多女人”。“男人在共营生活上……是更偷懒”，变成“……是更愉快”，至于“我”变成“你”，“你”变成“他”，更是指不胜屈。天地社原说是这本书销路很好，出版后不到三个月，便准备再版，我就赶紧将改正本交给他们，此后却查无消息！虽然在重庆、桂林、昆明……甚至于曲江、西安……的坊间，都有《关于女人》出售，而却仍是“初版”。我答应送给那些女朋友的“再版”，至今不曾出现，连我那几个弟妇，都把我骂得不亦乐乎！

我等不得了，写信到天地社去问，回信说那“初版”五千册，除了雨渍鼠咬之外，还有一二百本没有售出，最后他们引咎自己的“推销不力”，向我道歉。我觉得很惭愧，没有话说。虽然国内各报的“文坛消息”上，都在鼓吹着“关于女人，销路极畅”，而在美国的女朋友，向我索书的时候，还摘录美国的文艺杂志，称誉《关于女人》为：“The Best Seller in Chungking”。

因此，我便把这本小书，改正了交给开明书店，准备把这再版书来偿还我对于女朋友的夙欠。同时我也希望这“再版”再版的时候，我还能再添上几个女人——女人永远是我的最高超圣洁的“灵感”！

一九四五年二月之夜，大荒山，灵音山馆。

A Quotation in Lieu of a Preface

"...In this busy, dusty world, having accomplished nothing, I suddenly recalled all the girls I had known, considering each in turn, and it dawned on me that all of them surpassed me in behavior and understanding; that I, shameful to say, for all my masculine dignity, fell short of the gentler sex. But since this could never be remedied, it was no use regretting it. There was really nothing to be done.

"I decided then to make known to all how I, although dressed in silks and delicately nurtured thanks to the Imperial favor and my ancestors' virtue, had nevertheless ignored the kindly guidance of my elders as well as the good advice of teachers and friends, with the result that I had wasted half my life and not acquired a single skill. But no matter how unforgivable my crimes, I must not let all the lovely girls I have known pass into oblivion through my wickedness or my desire to hide my shortcomings.

"Although my home is now a thatched cottage with matting windows, earthen stove and rope bed, this shall not stop me from laying bare my heart. Indeed, the morning breeze, the dew of night, the willows by my steps and the flowers in my courtyard inspire me to wield my brush. While I have little learning or literary talent, what does it matter if I tell a tale in rustic language to leave a record of those lovely girls? This should divert readers too and help distract them from their cares. That is why I use the other name, Jia Yucun...."

From *The Dream of the Red Chamber* by Cao Xueqin

抄书代序

“……风尘碌碌，一事无成。忽念及当日所有之女子，一一细考较去，觉其行止识见，皆出我之上。我堂堂须眉，诚不若彼裙钗，我愧则有余，悔又无益，大无可如何之日也！当此日欲将以往所赖天恩祖德，锦衣绣袴之时，饫甘餍肥之日，背父母教育之恩，负师友规训之德，以致今日一技无成，半生潦倒之罪，编述一集，以告天下。知我之负罪固多，然闺阁中历历有人，万不可因我之不肖，自护己短，一并使其泯灭也。故当此蓬牖茅椽，绳床瓦灶，未足妨我襟怀；况对着晨风夕月，阶柳庭花，更觉润人笔墨；我虽不学无文，又何妨用假语村言，敷衍出来，亦可使闺阁昭传，复可破一时之闷，醒同人之目，不亦宜乎？……”

1 Women Deserve My Utmost Respect and Consideration

It would seem, anyway, somewhat awkward for a gentleman to write something about women. People would wonder: "Isn't it a kind of satire?" or "Isn't it due to some disappointment in love?" as if only women were justified in talking about women. But I believe actually that women should be talked about by men, because the viewpoint of the latter may be more objective and their attitude more polite.

Of the two hundred million and one men in China^[1], I am certainly the one who looks on women with the utmost respect and consideration. Those who know me often speak favorably of my womanliness, for I am happily endowed with every virtue owned by women, such as tenderness, patience and thoughtfulness. At the same time, of the two hundred million and one men I am the least suitable one to talk about women, because, having no sisters and remaining unmarried, I am familiar with no other woman than my own mother.

The only women I know anyway are a few former schoolmates, colleagues and wives and sisters of my friends, none of whom I know well. However, it is just because I have no sisters and remain unmarried that very often I talk about women. For instance, a good many of my friends' wives usually ask me in a half serious, half jocular tone, "Now that you are almost forty and have a good job and fame, why haven't you, Mr. X, found yourself a wife?" Such a question always embarrasses me, and I can only reply reticently, "I haven't found the right woman yet...." Then these women will go on asking, "What are your standards? Let us know some of them, so we can look for someone to your liking."

It is at this point that I feel most embarrassed, for it is so difficult for me to say clearly what my standards are. In no way can you summarize the numerous standards and ideals you adhere to every

day, unless God creates a perfect woman for you. Ten years ago a friend of mine set twenty-six standards for choosing a wife. But ten years passed, and there was only one standard left: "Only that she be a woman." Still, he died without finding a wife. In his biography written by some friends, it was mentioned in a very sad tone that he died "unmarried." God bless his soul!

In my opinion, if a man wants to put forward standards for choosing a wife, the first thing he should do is to ask whether he himself meets such standards. For instance, when we demand that our wives-to-be should be "good-looking," we had better begin by looking at ourselves in the mirror to see whether or not we are handsome. When we demand that they should be "gentle and tender," we had better examine ourselves to see whether we are reasonable rather than short-tempered. Every day, when you come home from the office, you always expect to find your house neat and tidy, your supper delicious and tasty, your children quiet and obedient, and your wife greeting you with a big smile. But when, unexpectedly, you find nothing of the sort, you will angrily throw down your hat and stick, knit your brows, and keep your mouth glumly shut. And when, to make matters worse, your kids come and surround you asking for cakes and candies, and your wife brings up the soaring price of rice, the difficulties in food-shopping and in dealing with the maids, and so on and so forth, you are bound to feel mounting frustration, lose your temper, and release a stream of curses. Then you will stay away to ruminate over your sores, which become more bitter the more you think of them. You will recall how you have just been bullied in the office, how badly you slept last night because of the kids' crying, and how hard it is for you to earn a living for the entire family, but cannot understand why your wife is showing so little understanding for your feelings. You have, however, no idea that there is any problem but a naughty child, a troublesome maid, or the price of rice that soars daily.

And it is in such an eternal purgatory that your wife is striving day and night, worrying that you haven't had enough sleep to deal with your office work and to remain calm. You don't know that last

night, while you were still asleep, she had to get up as many as seven or eight times, lest the crying child should be scolded and lest you should be disturbed. He was crying because of a stomachache. He had been given unboiled water to drink^[2] by Liu, the maid, who has not received any training about modern hygiene and forgets everything she has been told. In today's hard times, it is not so easy to find a servant at all, and while you cannot do enough to honey up the one you have found and taken into your service, dare you mention the word "change"!...

Maybe your wife didn't sleep a wink all night while thinking about all these problems; still, she had to overtax her strength and get up early this morning, because who else but the housewife should take care of all these odds and ends in the household? So many chores make her tired, and fatigue makes her ill-tempered. Hopefully she expects to be able to talk with you about all these troubles, and then obtain a few words of comfort as soon as you come home at noon or in the evening. If you speak so on arriving home and notice her frown and the dark circles under her eyes, perhaps she will throw all her complaints, old and new, into the sea. Otherwise, she can do nothing more than shed a few helpless tears in your presence or behind your back. And you, for your part, will probably think: "What can a woman do but weep!..."

The problem may become even more serious if the man's standards for a wife include her aptitude for earning a living. I know many cases of career women who have to think it over thousands of times before deciding to marry. When they are too unlucky not to be conquered by love, but, at the same time, remain reluctant to give up their careers, then love and career become two ropes that tighten together to strangle them to death! A couple, both friends of mine, work in the same office (where the wife's position seems higher than her husband's). Each time that I pay them a visit, or I am invited to have dinner at their home, it happens that both husband and wife show great delight if everything goes off without a hitch. But if, instead, the meal turns out to be poorly cooked, or if the little ones get

into mischief, the husband often looks at his wife reproachingly, and she, in turn, stares at both of us apologetically.

For my part, I can do nothing other than gaze at the sky compassionately. I would have said readily to the husband, "Good Heavens! Doesn't she work eight hours in the office, no less than you?" I don't mean that the meal ought to be poorly cooked after eight hours of office work, but at least the couple should stare at each other apologetically, or both should stare at me in the same way. As to shifting all the blame onto the wife, such a pattern of behavior is something intolerable to a man as womanly as me.

Now that we are talking about career women, we see that in the Western world of industrial civilization, it is not so hard for them to be housewives concurrently. But in China, you cannot do without a servant. Human beings are far more difficult to deal with than machines, particularly in these years of the War of Resistance against Japan, when people have to wander about in a desperate plight. I know a good number of ladies, who used to live in ease and comfort in the seaports or in modern Chinese cities, but are now toiling and living diligently and frugally. They still manage to keep everything in order both at home and in the office. Such women I cannot but admire and respect from the bottom of my heart. If the War has helped raise the standing of China in the world and the prestige of our soldiers, drivers and even our common workers, I believe what has risen most is the status of our women, who have proved themselves strong enough to endure so many hardships and sufferings.

But I am now wandering from the point. I haven't said so much as one tenth of what I wanted to say about women. Having read what I have just written, a friend of mine even took me for a prospective model husband because I am so respectful and considerate of women, and he thought it would be easy for me to find myself an ideal woman for a wife. But on this point even I myself feel puzzled. How to explain? God knows!

[1] At the time when this article was written, China was supposed to have four hundred million inhabitants.

[2] In China, only boiled water is drinkable.

壹 我最尊敬体贴她们

以一个男士而写关于女人的题目，似乎总觉有些不大“那个”，人们会想“内容莫不是讥讽吧？”“莫不是单恋吧？”仿佛女人的问题，只应该由女人来谈似的。其实，我以为女人的问题，应该是由男人来谈，因为男人在立场上，可以比较客观，男人的态度，可以比较客气。

在二万万零一个男人之中，我相信我是一个最尊敬体贴女性的男子。认得我的人，且多称誉我是很女性的，因为我有女性种种的优点，如温柔、忍耐、细心等等，这些我都觉得很荣幸。同时我是二万万零一个人之中，最不配谈女人的，因为除了母亲以外，我既无姊妹，又未娶妻。我所认得的只是一些女同学，几个女同事，以及朋友们的妻女姊妹，没有什么深切的了解与认识。但是因为既无姊妹又未娶妻的缘故，谈到女人的时候就特别多。比如说有许多朋友的太太，总是半带好意半开玩笑的说：“×先生，你是将近四十岁的人，做着很好的事，又颇有点名气，为什么还不娶个太太？”这时我总觉得很惶恐，只得讷讷的说：“还没有碰到合适的人……”于是那些太太们说：“您的条件怎么样？请略说一二，我们好替您物色物色。”这时我最窘了，这条件真不容易说出，要归纳你平日的许多标准，许多理想，除非上帝特意为你创造这么一个十全十美的女人。我有一个朋友，年纪比我还轻，十年以前，就有二十六个择偶的条件。到了十年之末，他只剩了一个条件——“只要是一个女人就行”。结果是一个女人也没有得到。他死了，朋友替他写传记，中有很惨的四个字：“尚未娶妻”。上帝祝福他的灵魂！

我以为男子要谈条件，第一件事就得问问自己是否也具有那些条件。比如我们要求对方“容貌美丽”，就得先去照照镜子，看看自己是不是一个漂亮的男子。我们要求对方“性情温柔”，就得反躬自省，自己是否一个绝不暴躁而又讲理的人。我们从办公室里回来，总希望家里美观清洁，饭菜甘香可口，孩子们安静听话，太太笑脸相迎，嘘寒问暖。万一上面的条件没有具备，我们就会气腾腾的把帽子一摔，棍子一扔，皱起眉头，一语不发。倘若孩子再围上来要糖要饼，太太再来和你谈米又涨价，菜不好买，佣人闹脾气等等……你简直就会头痛，就会发狂，就会破口大骂。骂完，自己跑到一旁，越想越伤心起来——想到今天在办公室里所受的种种的气，想到昨夜因为孩子哭闹，没有睡好，这一家穿

的是谁，吃的是谁，你的太太竟不体恤你一点——可是你总根本没有想到孩子没有一个不淘气，佣人没有一个没有问题，米也没有一天不涨价的！你的温柔的太太，整天整夜的在这炼狱中间，怕你不得好睡，办事没有精神，脾气也会变坏，而她自己昨夜则于你蒙眬之中，起来了七八次之多，既怕孩子挨骂，又怕你受委屈。孩子哭是因为肚子痛，肚子痛是因为刘妈给他生水喝。而刘妈则是没有受过近代训练的佣人，跟她怎样说都不会记得。这年头，连个帮工都不容易请，奉承她还来不及，哪还敢说一个“换”字……她也许思前想后，一夜无眠，今早起来，她还得依旧支撑。家长里短的事，女人不管，谁来管呀？她一忙就累，一累就也有气，满心只想望你中午或晚上回来，凡事有你商量，有你安慰。倘若你回来了，看见她的愁眉，看见她的黑眼圈，你说一两句安慰的话，她也许就把旧恨新愁，全付汪洋大海，否则她只有在你的面前或背后，掉下一两滴可怜无告的眼泪。你也许还觉得“女人，除了哭，还会什么！……”

男子的条件中，有时还要对方具有经济生产的能力，这个问题就更大了。我知道有许多职业妇女，在结婚之前，总要百转千回的考虑。倘若她或不幸而被恋爱征服，同时又对事业不忍放弃，那这两股绳索就会把她绞死！我有一对朋友，是夫妇同在一个机关里面办事的（妻的地位似乎比丈夫还高）。每次我到他们家里去拜访，或是他们请我吃饭，假如一切顺利，做丈夫和做妻子的就都兴高采烈。假如饭生菜不熟，或小孩子喧哗吵闹，做丈夫的就会以责备的眼光看太太，太太却以抱歉的眼光来看我们两个，我只好以怜悯的眼光看天。我心里真想同那做丈夫的说：“天哪，她不是和你一样，一天坐八小时的办公室吗？”——我不是说一天坐了八小时的办公室，请客时就应当饭生菜不熟，不过至少他们应当以抱歉的眼光对看，或且同以抱歉的眼光看我。至于把这责任完全推给太太的办法，则连我这一个女性的男子，也看不过了。

谈到职业妇女，在西洋的机器文明世界，兼主妇还不感到十分困难。在中国则一切须靠佣人。人比机器难弄得，尤其是在散离流亡的抗战时代。我看见过多少从前在沿海口岸、摩登城市，养尊处优的妇女们，现在内地，都是荆钗布裙栉风沐雨的工作，不论家里或办公室里，都能弄得井井有条。对于这种女人，我只有五体投地。假如抗战提高了中国的地位，提高了军人、司机，乃至一般工人的地位，则我以为提得最高的，还是我们那些忍得住痛耐得住苦的妇女。

话又说得远了，我所要说的关于女人的话，还未说到十分之一。有

一个朋友看到了这一段，以为像我这样尊敬体贴女人的人，可以做个模范丈夫，必不难找个合式的太太。连我自己也纳闷，这是怎么说的呢？天晓得！

2 My Standards for Choosing a Wife

I recently moved my house, and, surprisingly enough, went from a single room shared by as many as five persons to a flat consisting of a bedroom and a chamber serving as both a study and a sitting room. Although I still have to share it with a housemate, my new lodging is something difficult to secure in Chongqing. After they were slightly furnished, the two rooms turned out to be rather tidy and elegant, all things considered. The bright windows and clean tables encouraged many friends to come and chat with me. All of my visitors maintained that anyone who had such a tidy and elegant house should have a wife as well. Soon the conversation turned to standards for choosing a wife. During our discussion, over twenty standards were composed and read as follows:

1. Since I am a Southerner brought up in the North, I would not want her to be a "Northerner with Southern looks"—this item is negotiable.

2. Since I am devoted to literature, I would like her at least to be able to appreciate art as well as literature.

3. Since I am nearly forty years old, I would not want her to be under twenty-five.

4. Since I am a thin man, I would not want her to be stout.

5. Since I don't use facial creams and cosmetics, I would not want her to use too much rouge, powder and lipstick.

6. Since I have never worn Western-style clothes, I would not want her to wear them—such clothes make oriental women look ugly in nine and a half out of ten cases!

7. Since I have a few foreign friends, I would like her to know something about foreign languages.

8. Since I am a hospitable man, I would not want her to be a

woman who always stands speechless in the presence of strangers.

9. Since I am discerning in my choice of guests, I would not want her to invite over many frivolous male and female friends, given to humming foreign ditties, chewing melon seeds and scattering orange peels all over the floor.

10. Since I am addicted to cleanliness, I would like her to be rather clean and tidy—at least not to mess up my books or soil my clothes and hats.

11. Since I loathe the smell of fragrant flowers, I would not want her to wear white magnolias or furnish the rooms with lilac, false spinae or anything of the sort.

12. Since I'm fond of quiet elegance, I would not want her to be dressed garishly or to use bad color combinations. I will never forget the two lines written by Mr. Huang Xintian^[1]: "Whatever fits her figure will be all right, / For dark and quiet colors will enhance her natural and tasteful style."

13. I have enjoyed the great comforts of daily life (in clothing, food, housing and travel), but, as long as the War of Resistance against Japan continues, I won't say a single word about what made my life easy in the past. I think that, since we are forced to wander about and suffer various hardships, we should willingly accept the need for sacrifice. I would not want her, therefore, to moan and groan all day long, talking about "the good days when we were in Beijing," asking "When will there be an end to the War?" or other nonsense of this sort.

14. Since I like to travel, I would not want traveling to be painful to her.

15. Since I like the sea, I would like her to be fond of swimming, too, and not to fear the winds from the sea.

16. Since I enjoy living in the mountains, I would not want her to dislike loneliness in the mountains.

17. Without going often to the theater, I like Beijing Opera; so I

would not want her to regard our traditional theater as good-for-nothing.

18. Since I like to stare at beautiful women, whether in the flesh or in paintings, I hope that she will understand me on that score. Surely I will be understanding as well if she likes to "observe" good-looking men.

19. Being a man who is "imperturbable in the face of major events" (except when I find or touch one or two bedbugs, but this is by no means a major event), I would not want her to scream in the manner of a film star when something provokes minor alarm or fright.

20. I am rather critical in choosing posters for room decoration, and would not want her to hang vulgar pictures such as nudes or portraits of film stars on the walls above tables or beds.

21. I love the faint light that glows in the fireplace or the candle. I feel extremely happy while chatting idly by a dim light. I hope that she will be able to appreciate this sentiment and at least will not prefer strong and direct floodlight.

22. I like the sensation of tipsiness, and I find even more pleasure in chatting or writing when tipsy. Therefore, I would not want her to oppose moderate drinking. But whenever I go beyond two cups of cider, apple cider for example, five cups of white spirits or ten cups of yellow rice wine, please stop me, darling!

23. Since I grew up in the North, I am used to the odors of garlic and green Chinese onion. For this reason, I would not want her to hate such odors, even though she might not share my tastes.

24. Since I love music, I would not want her either to talk and laugh loudly or to doze off in the concert hall.

25. Since I am fond of animals, I would not want her to oppose my keeping of dogs or pigeons.

26. ...

As I continued this narrative, a friend cut me short, saying, "You

once made fun of a late friend who set twenty-six standards for choosing a wife. But now you yourself are going to break his record." My reply is that my standards are in fact different from his, because instead of making presumptuous demands I am just bargaining on the capital I already own. Even though this doesn't mean "casting jade to attract jade," what I'm doing is at least "casting a brick to attract another brick."^[2] There is nothing wrong with setting any number of standards. However, while I do object to some details as far as tastes and habits are concerned, I generally prefer to accept things as they are rather than become excessively preoccupied with my wife's appearance, disposition and aptitude for earning a living.

Well now, another friend said, "Too much similarity in tastes and habits prevents men and women from attracting one another and from living a fascinating life together. Besides, you are haggling over details in such a hairsplitting way that the only possible solution is for you to be changed into a woman so that you can become your own wife." But good heavens! If I were a woman, I probably would have married long ago and would have two or three children already!

^[1] Huang Ren (1683-1768), also known as Huang Xintian, was a Chinese poet from Fujian province. Huang's works, reminiscent of late Tang poetry, were collected in a volume entitled *The Autumn River*.

^[2] This figure of speech parodies the Chinese expression, "casting a brick to attract jade," which is often used as a self-deprecating reference to one's own commonplace remarks, and means that these remarks are offered as an introduction so that those who hear them may come up with more valuable opinions.

贰 我的择偶条件

新近搬了一次“家”，居然能从五个人合住的一间屋子，搬到一间卧室，一间书房连客厅的房子里来，虽然仍有一个“屋伴”，在重庆算是不容易的了。这两间屋子，略加布置，尚属雅洁。窗明几净，常有不少的朋友来陪我闲谈；大家总觉得既有这么雅洁的屋子，更应当有个太太了，于是谈锋又转到了择偶的条件。随谈随写，居然也有二十几条，如下：

一 因为我自己是在北方长大的南方人，所以我希望对方不是“北人南相”——此条可以商量。

二 因为我是学文学的，所以希望对方至少能够欣赏文艺。

三 因为我是将近四十岁的人，所以希望对方不在二十五岁以下。

四 因为我自己是个瘦子，所以希望对方不是一个胖子。

五 因为我自己不搽润面油、司丹康，所以希望对方也不浓施脂粉，厚抹口红。

六 因为我自己从未穿过西装，所以希望对方也不穿着洋服——东方女子穿西服，十个有九个半难看！

七 因为我有几个外国朋友，所以希望对方懂得几句外国语言。

八 因为我自己好客，所以希望对方不是一个见了生人说不出话的女子。

九 因为我很择客，所以希望对方也不招致许多无聊的男女朋友，哼哼洋歌，嚼嚼瓜子，把橘子皮扔得满地。

十 因为我颇有洁癖，所以希望对方也相当的整齐清洁——至少不会翻乱我的书籍，弄脏我的衣冠。

十一 因为我怕香花，所以希望对方不戴白玉兰，不在屋子里插些丁香、真珠梅之类。

十二 因为我喜欢雅淡，所以希望对方不穿浓艳及颜色不调和的衣服，我总忘不了黄莘田先生的两句诗：“颜色上伊身便好，带些黯淡大家

风。”

十三 我自己曾经享受过很舒服的衣食住行，而在抗战期内，绝口不提从前的幸福！我觉得流离痛苦是该受的。因此，我希望对方不是整天的叹气着说“从前在北平的时候呀”，“这仗打到什么时候才完呀”一类的废话。

十四 因为我喜欢旅行，所以希望对方也不以旅行为苦。

十五 因为我喜欢海，所以我希望对方也爱泅水，不怕海风。

十六 因为我喜欢山居，所以希望对方不怕山居的寂寞。

十七 因为我喜听京戏——虽然并不常去，所以希望对方不把国剧看得一钱不值。

十八 我喜欢看美人，无论是真人或图画，希望对方能够谅解。我只是赞叹而已。倘若她也和我一样，也只爱“看”美男子，我决予以鼓励。

十九 因为我自觉是个“每逢大事有静气”的汉子，（看见或摸着个把臭虫时除外，但此不是大事），所以希望对方遇有小惊小怕时，不作电影明星式的捧心高叫。

二十 我对于屋内的挂幅，选择颇严，希望对方不在案侧或床头，挂些低级趣味的裸体画，或明星照片。

二十一 我很喜欢炉中的微火和烛火，以为在柔软的光影中清谈，是最惬心的事，希望对方也能欣赏，至少不至喜欢强烈直射的灯光。

二十二 我喜欢微醺的情境；在微醉后谈话作文，都更觉有兴致。因此，我希望对方不反对人喝“一点”酒。但若甜酒——如杂果酒，喝到两杯以上，白酒五杯以上，黄酒十杯以上，亲爱的，请你阻止我！

二十三 因为我在北方长大，能吃大葱大蒜，所以希望对方虽不与我同嗜，至少也不厌恶这种气味。

二十四 因为我喜听音乐，所以希望对方不在音乐会场内，高声谈笑或睡觉。

二十五 因为我喜欢生物，所以希望对方不反对我养狗或养鸽。

二十六 ……

一个朋友把我叫住了，说：“你曾笑你那位死去的朋友，提出了二十

六个择偶的条件，如今你竟快要打破他的纪录了。”我说我的条件实和他的不同，都是就我已有的本钱来讨代价，并不曾作过分的要求，纵不能抛玉引玉，也还是抛砖引砖，条件再多些谅也无妨。而且我注意的只是嗜好与习惯上的小节，至于她的容貌性情以及经济生产能力等等，我都可以随遇而安，不加苛求的。另一个朋友说，“嗜好习惯太相同了，反无互相吸引之力，生活在一起没有兴趣。而且像你这样的斤斤于小节，只有让你自己再变成为一个女人，来配你自己吧。”天哪，假如我真是个女人，恐怕早已结婚，而且是已有了两三个孩子了！

3 My Mother

Whenever I talk about women, the first image that emerges in my mind is that of my mother, because she was the first woman in my life to feel disappointed in me.

My two brothers born before me both died only a few days after birth. A fortune-teller told my mother, "My dear lady, you are fated to blossom before bearing fruit. It is best that you have a girl first, for she will serve as a shield to your sons coming later." For this reason, while carrying me, she always kept cherishing the hope that I would be a girl. She preferred her first baby to be a girl because a daughter would be more helpful to her in looking after the younger ones and would share her cares and worries tenderly and considerately. Contrary to her wishes, however, I was born a boy. Amidst the jubilation of the whole family, Mother kept lying glumly in bed. My grandfather said to one of my aunts, "There's something queer with your sister-in-law. Fancy her feeling unhappy after giving birth to a boy!"

After all, a mother can be nothing but a mother. She did love me without falling short in anything, except that she often murmured to me, "You are my son and also my daughter, and you should have what is good in a daughter." Three days after my birth, my grandfather asked a fortune-teller to predict my future according to Eight Characters^[1]. The fortune-teller affirmed categorically that my fate must be that of a girl and went on with a sign: "What a pity it's a girl. Otherwise the baby would certainly become a member of the Imperial Academy." Since then, Mother often made fun of me: "Now that you are a boy, you must really become a member of the Imperial Academy." Luckily I was born in a new era when the old Imperial Examination System had long been abolished; were it not so, could I have had any certainty of passing this examination with flying colors and thus bringing honor to my ancestors, given the poverty of my

talent?

After me, three younger brothers were born in succession, which brought Mother even greater disappointment. All three survived. Whenever she complained of the fortune-teller's failure, we used to say jokingly that we were "figs," that is, fruits borne in abundance without having blossomed.

The second thing that disappointed my mother in my case was my consistent refusal to marry. Up to her death, she had been satisfied with me in everything, except for the fact that I hadn't married a woman not only virtuous and talented but also beautiful enough to be her daughter-in-law. In this matter, I actually felt even more anxious than her, only I had no luck and could do nothing about it. This being the case, I had to boost with all my might how good it would be for my younger brothers to get married ahead of me, and I began to help them by introducing lady "friends" to them in order that they might have the chance. As a result, my second younger brother married at the age of twenty-one, upon graduating from the university. Thus Mother was able to enjoy the presence of a gentle and virtuous woman as her daughter-in-law, and before long she acquired a granddaughter. In this way, she departed quite satisfied from the world.

Now, all my three younger brothers are married and each one seems to enjoy a rather happy family life. Their wives all treat me, their oldest brother-in-law, with great respect and solicitude. Only my second younger brother's wife often says to me jokingly, "My dear brother-in-law, you know my husband and I are assuming the role of accepting your burden. You see, having as many as five daughters in these times of war, what else can we do with so much turmoil and chaos and so high a cost of living? You ought to take charge of one or two of them." While speaking in this way, she tenderly fondles the little heads of her daughters, whose hair is as black as crow's plumage. How would she really be willing to part with them for me to bring them up? At the moment when the five girls run to my knees and raise their little heads all at once, the dazzling splendor of their faces

gathering together reminds me of a cluster of red roses brilliant with early morning dew.

Ten whole years have passed since Mother died. Last year Father also passed away. Leading a wandering life here and there, I am still a single man. My younger brothers' homes are also mine. There I can find joyful smiles, tender feelings and someone to take care of my daily life, to sew clothes and darn socks for me. Whenever I go out and return, I usually bring back some candy purchased in shops, because I am sure to be awaited by a few little heads leaning out of the railing. Last year, just on my arrival in Chongqing, I had an attack of the unavoidable flu. As a consequence, my head ached so badly that I couldn't even open my eyes for seven or eight days. I forgot everything. One morning, I received an airmail parcel. It contained smaller parcels which, having been sent from different places by several children, had been put together in Hong Kong. On the parcel, there was a card written as follows: "Dear Uncle, we haven't received letters from you for some time. Maybe you forgot us at Christmas. But we didn't forget you!" At once, my headache went away, and in front of my bed, a Christmas tree seemed to rise in the dark, ablaze with candlelight!

Let me return to my mother. It is natural that at least seventy percent of all sons believe their own mother to be the best one in the world. For my part, I think that my own mother was the *very* best among the best mothers in the world. Not only do I think so, but also many of my friends say so. She was not only my mother, but also my bosom friend. I dared to say to her much of what I could not dare to say to my father or even to my friends. Open-minded, she was consistently and impartially accepting of everything proper to modern times. She loved the "family" ardently in the belief that a perfect family is the source of all happiness and strength. She hoped that I would soon marry because she wanted to see me settle down as soon as possible, both physically and mentally, in the warmth and happiness of a family. But, oh, my dearest mother, I have lost nothing proper to "family," except for the fact that up to now I still remain

"unmarried"!

Ours was really a quiet, warm and happy family. Father was fond of growing flowers and keeping dogs, whereas Mother used to read or sew whenever she wasn't busy managing household affairs, and she did all of these things in so quiet a way that no sound was heard at all. For this reason, our schoolmates would lower their own voices as soon as they came to our home. But my mother used to do everything she could to encourage us to play games and practice sports. In the yard outside our house, there was always sports equipment such as a swing set or bars.

We learned the martial arts and music (and, unlike me, all my brothers did very well in these areas). Mother always received Father's friends as well as our own with great pleasure. All of them had a good time playing and eating whenever they came, and always went home with great satisfaction. Someone, however, went away with tears, either because the memory of his late mother came to mind, or because his own mother did not have such affectionate ties with him.

My father was the third son born into a big family. He had several sisters and brothers, most of them far from brilliant, so that their children's education fell on my father's shoulders. In this respect, Mother did all she could to lend Father a hand. While Father bore the financial expenses for this purpose, Mother contributed all of her energies. Often seven or eight children lived together in our house, and the number would be even larger on holidays. Despite her poor health, Mother managed to cope with all this and make things go the proper way. No matter how busy she was and how jumbled things were, her smile never disappeared from the corners of her mouth. I will never forget how an elder cousin of mine, an armyman, fainted at the bedside of my mother on the night she died!

Mother had keen insight into the human personality. She needed no more than a glance to make out a person's character. This ability allowed her to be extremely helpful to my father and all of us in choosing friends. She had, moreover, excellent taste, and whatever she took in hand would become new, original and elegant, be it house

furnishings, garden and pavilion arrangements, or the choice of color and fashion in our clothing. I still remember one day when one of my cousins, before attending a tea party, came to our home dressed and made up gorgeously. My mother observed her carefully and smiled: "My dear Yuanyuan, you are dressed and made up in a way too much like that of the other girls. By using red lipstick and red enamel just as they do, are you doing anything more than working against your own desire by letting yourself be overlooked? Keep in mind that 'Among thousands of red lotus flowers the single white one is the best appreciated.'" All of us burst out into laughter and agreed with Mother. My cousin began at once to wash out her makeup at my mother's dressing table and change her clothes. Later on, we heard that she was appreciated as the most beautiful girl at the tea party.

Mother had also a very keen interest in politics. Thirty years ago, her three brothers were members of Tong Meng Hui^[2]. My mother was usually in charge of passing over information for them as well as sending and receiving their mail under her own name. I still remember that snowy night when I was only eight years old and helped Mother roll dozens of copies of the pamphlet, *Heaven's Condemnations*. I put them one by one in tube-shaped cardboard boxes for dried meat, and sealed them one by one with red paper, before sending them in the mail. In a short time, letters from different places told us, "The dried meat has been received. After all, nothing can be more delicious than homemade food." "They mean those pamphlets, don't they?..." I asked. Mother pinched me softly and said to me in a whisper, "Don't tell anybody."

We were staying in a hotel at the foreign Concessions in Shanghai when the 1911 Revolution broke out. It fell then to my lot to await the arrival of the newspapers at the door every early morning, and Mother would explain to us what she had read in them. She even sold the only jewelry still left for money, which was donated to the revolutionary army. I was at that time ten years old. I also contributed all the ten yuan I had saved from the money received from grown-ups as New Year gifts. I went to the office of the newspaper *Shen Bao*^[3] by

myself and handed in the money. I was careful and kept the two receipts given to me in return, but they were lost after the breakout of the War of Resistance against Japan.

Mother became interested in the May Fourth Movement of 1919 soon after it began. She read books and newspapers, refusing to allow herself to be left behind the times. She didn't oppose freedom in choosing one's spouse, but nonetheless highly valued constancy in love. When a girl schoolmate of mine eloped, her mother came to our home in tears and told us about what had happened. My father showed great indignation, but my mother remained silent. After the visitor was gone, she remarked, "Elopement isn't as serious as it seems. The wedding ceremony means very little. What counts is constancy in love."

And so on and so forth. Everything she said and did became a sort of compass for her sons. She never said anything directly about the way my brothers should choose their wives. All she said was: "I'll love whomever you love." But we already had been so definitely nurtured in our character and taste that it would have been impossible for us to love anybody or anything that Mother didn't love.

Ten years have passed since Mother's death. Were she still alive in these years of the War, I wonder what she would be doing, but I imagine that, in this situation, I would at least be able to catch sight of her everlasting smiling face, her graceful bearing and calm look. She still would roll the timid and weak heart of each of her sons with the same hands she had once used to roll the copies of *Heaven's Condemnations*!

She was a typical good wife and mother. She believed a good wife and mother should be the guardian of her husband and her children. Such was her opinion when she explained to us what this expression meant.

I agree with all the propositions of the Women's Movement, but the slogan, "Down with good wives and mothers!" sounds and looks somewhat harsh to my ears and eyes. Of course, "wife" and "mother"

mean different things in the minds of different people, and everyone understands this. But I hope that those who are wanted "no more" should only be those pathetic creatures resigned to being weak and dependent, rather than women like my mother.

[1] This refers to a kind of fortune telling in China based upon four pairs of characters indicating the year, month, day and hour of a person's birth, each pair consisting of one Heavenly Stem (*Tian Gan*) and one Earthly Branch (*Di Zhi*).

[2] Tong Meng Hui, the United League of China, was a revolutionary organization founded in 1905 in Tokyo by Dr. Sun Yat-sen, aimed at overthrowing the monarchy and establishing a republic of China. The Kuomintang later grew out of it.

[3]**Shen Bao** was an occasional supplement to the revolutionary Chinese Newspaper *Min Bao*, published in Tokyo in 1905.

叁 我的母亲

谈到女人，第一个涌上我的心头的，就是我的母亲，因在我的生命中，她是第一个对我失望的女人。

在我以前，我有两个哥哥，都是生下几天就夭折的，算命的对她说：“太太，你的命里是要先开花后结果的，最好能先生下一个姑娘，庇护以后的少爷。”因此，在她怀我的时候，她总希望是一个女儿。她喜欢头生的是一个姑娘，会帮妈妈看顾弟妹、温柔、体贴、分担忧愁。不料生下我来，又是一个儿子。在合家欢腾之中，母亲只是默然的躺在床上。祖父同我的姑母说：“三嫂真怪，生个儿子还不高兴！”

母亲究竟是母亲，她仍然是不折不扣的爱我，只是常常念道：“你是儿子兼女儿的，你应当有女儿的好处才行。”我生后三天，祖父拿着我的八字去算命。算命的还一口咬定这是女孩的命，叹息着说：“可惜是个女孩子，否则准作翰林。”母亲也常常拿我取笑说：“如今你是一个男子，就应当真作个翰林了。”幸而我是生在科举久废的新时代，否则，以我的才具而论，哪有三元及第荣宗耀祖的把握呢？

在我底下，一连串的又来了三个弟弟，这使母亲更加失望。然而这三个弟弟倒是个个留住了。当她抱怨那个算命的失灵的时候，我们总笑着说，我们是“无花果”，不必开花而即累累结实的。

母亲对于我的第二个失望，就是我总不想娶亲。直至去世时为止，她总认为我的一切，都能使她满意，所差的就是我竟没有替她娶回一位有德有才而又有貌的媳妇。其实，关于这点，我更比她着急，只是时运不济，没有法子。在此情形之下，我只有竭力鼓励我的弟弟们先我而娶，替他们介绍“朋友”，造就机会。结果，我的二弟，在二十一岁大学刚毕业时就结了婚。母亲跟前，居然有了一个温柔贤淑的媳妇，不久又看见了一个孙女的诞生，于是她才相当满足的离开了人世。

如今我的三个弟弟都已结过婚了，他们的小家庭生活，似乎都很快乐。我的三个弟妇，对于我这老兄，也都极其关切与恭敬。只有我的二弟妇常常笑着同我说：“大哥，我们做了你的替死鬼，你看在这一兵荒马乱米珠薪桂的年头，我们这五个女孩子怎么办？你要代替我们养一两个才行。”她怜惜的抚摩着那些黑如鸦羽的小头。她哪里舍得给我养呢！那五

个女孩子围在我的膝头，一齐抬首的时候，明艳得如同一束朝露下的红玫瑰花。

母亲死去整整十年了。去年父亲又已逝世。我在各地飘泊，依然是个孤身汉子。弟弟们的家，就是我的家，那里有欢笑，有温情，有人照应我的起居饮食，有人给我缝衣服补袜子。我出去的时候，回来总在店里买些糖果，因为我知道在那栏杆上，有几个小头伸着望我。去年我刚到重庆，就犯了那不可避免的伤风，头痛得七八天睁不开眼，把一切都忘了。一天早晨，航空公司给我送来一个包裹，是几个小孩子寄来的，其中的小包裹是从各地方送到，在香港集中的。上面有一个卡片，写着：“大伯伯，好些日子不见信了，圣诞节你也许忘了我们，但是我们没有忘了你！”我的头痛立刻好了，漆黑的床前，似乎竖起了一棵烛光辉煌的圣诞树！

回来再说我的母亲吧。自然，天下的儿子，至少有百分之七十，认为他的母亲乃是世界上最好的母亲。我则以为我的母亲，乃是世界上最好的母亲中最好的一个。不但我如此想，我的许多朋友也如此说。她不但是我的母亲，而且是我的知友。我有许多话不敢同父亲说的，敢同她说；不能对朋友提的，能对她提。她有现代的头脑，稳静公平的接受现代的一切。她热烈的爱着“家”，以为一个美好的家庭，乃是一切幸福和力量的根源。她希望我早点娶亲，目的就在愿意看见我把自己的身心，早点安置在一个温暖快乐的家庭里面。然而，我的至爱的母亲，我现在除了“尚未娶妻”之外，并没有失却了“家”之一切！

我们的家，确是一个安静温暖而又快乐的家。父亲喜欢栽花养狗；母亲则整天除了治家之外，不是看书，就是做活，静悄悄的没有一点声息。学伴们到了我们家里，自然而然的就会低下声来说话。然而她最鼓励我们运动游戏，外院里总有秋千、杠子等等设备。我们学武术，学音乐（除了我以外，弟弟们都有很好的成就）。母亲总是高高兴兴的，接待父亲和我们的朋友。朋友们来了，玩得好，吃得好，总是欢喜满足的回去。却也有人带着眼泪回家，因为他想起了自己死去的母亲，或是他的母亲，同他不曾发生什么情感的关系。

我的父亲是大家庭中的第三个儿子。他的兄弟姊妹很多，多半是不成材的，于是他们的子女的教养，就都堆在父亲的肩上。对于这些，母亲充分的帮了父亲的忙，父亲付与了一份的财力，母亲贴上了全副的精神。我们家里总有七八个孩子同住，放假的时候孩子就更多。母亲以孱弱的身体，来应付支持这一切，无论多忙多乱，微笑没有离开过她的嘴

角。我永远忘不了母亲逝世的那晚，她的床侧，昏倒了我的一个身为军人的堂哥哥！

母亲又有知人之明，看到了一个人，就能知道这人的性格。故对于父亲和我们的朋友的选择，她都有极大的帮助。她又有极高的鉴赏力，无论屋内的陈设，园亭的布置，或是衣饰的颜色和式样等，经她一调动，就显得新异不俗。我记得有一位表妹，在赴茶会之前，打扮得花枝招展的，到了我们的家里；母亲把她浑身上下看了一遍，笑说：“元元，你打扮得太和别人一样了。人家抹红嘴唇，你也抹红嘴唇，人家涂红指甲，你也涂红指甲，这岂非反不引起他人的注意？你要懂得‘万朵红莲礼白莲’的道理。”我们都笑了，赞同母亲的意见。表妹立刻在母亲妆台前洗净铅华，换了衣饰出去；后来听说她是那晚茶会中，被人称为最漂亮的一个。

母亲对于政治也极关心。三十年前，我的几个舅舅，都是同盟会的会员，平常传递消息，收发信件，都由母亲出名经手。我还记得在我八岁的时候，一个大雪夜里，帮着母亲把几十本《天讨》，一卷一卷的装在肉松筒里，又用红纸条将筒口封了起来，寄了出去。不久收到各地的来信说：“肉松收到了，到底是家制的，美味无穷。”我说：“那些不是书吗？……”母亲轻轻的捏了我一把，附在我的耳朵上说：“你不要说出去。”

辛亥革命时，我们正在上海，住在租界旅馆里。我的职务，就是天天清早在门口等报，母亲看完了报就给我们讲。她还将她所仅有的一点首饰，换成洋钱，捐款劳军。我那时才十岁，也将我所仅有的十块压岁钱捐了出去，是我自己走到申报馆去交付的。那两纸收条，我曾珍重的藏着，抗战起来以后不知丢在哪里了。

五四以后，她对新文化运动又感兴趣。她看书看报，不让时代把她丢下。她不反对自由恋爱，但也注重爱情的专一。我的一个女同学，同人“私奔”了，当她的母亲走到我们家里“垂涕而道”的时候，父亲还很气愤，母亲却不做声。客人去后，她说：“私奔也不要紧，本来仪式算不了什么，只要他们始终如一就行。”

诸如此类，她的一言一动，成了她的儿子们的南针。她对我的弟弟们的择偶，从不直接说什么话，总说：“只要你们喜爱的，妈妈也就喜爱。”但是我们的性格品味已经造成了，妈妈不喜爱的，我们也决不会喜爱。

她已死去十年了。抗战期间，母亲若还健在，我不知道她将做些什么事情，但我至少还能看见她那永远微笑的面容，她那沉静温柔的态度，她将以卷《天讨》的手，卷起她的每一个儿子的畏惧懦弱的心！

她是一个典型的贤妻良母，至少母亲对于我们解释贤妻良母的时候，她以为贤妻良母，应该是丈夫和子女的匡护者。

关于妇女运动的各种标语，我都同意，只有看到或听到“打倒贤妻良母”的口号时，我总觉得有点逆耳刺眼。当然，人们心目中“妻”与“母”是不同的，观念亦因之而异。我希望她们所要打倒的，是一些怯弱依赖的软体动物，而不是像我的母亲那样的女人。

4 My Teacher

The second woman I will never forget was Miss T, my teacher.

In my early childhood, I lived in a remote village. I had no chance of attending primary school, and, instead, had to study at home under the guidance of a private tutor. I learned a lot about the written Chinese language and literature and also somehow got by in history and geography. I recited poetry and wrote compositions, each one containing up to one or two thousand characters. Only in arithmetic did I lag behind. No matter how hard and persistently I studied, I could never learn anything beyond addition, subtraction, multiplication and division, because my tutor's knowledge of arithmetic didn't allow me to go any further.

I went to Beijing when I was twelve, and, unexpectedly, passed the entrance examination for a middle school and gained admission. I performed so well because the only examination paper set by the principal was a composition to be written under the title, "The More One Learns, the Less Knowledgeable One Finds Oneself," and I had already written a composition under the same title while studying at home. I was able to finish the composition at one stroke, writing thousands of words in a stream, with ease and grace. The principal, amazed at my performance, allowed me to attend class with the students of the first year in junior high.

During the first two weeks of study, I found myself quite at ease in coping with all the subjects other than mathematics, and I was even sent to a higher grade for literary composition. Only mathematics largely baffled me. In the middle school, mathematics began with algebra. Since I had a very poor grounding in arithmetic, I felt that I couldn't stand my ground. I often attended mathematics class in a daze, as if I were stepping on clouds and fogs.

It was amidst these clouds and fogs that Miss T floated into my life. She was our algebra and history teacher, in her twenties at that

time, I believe. The idioms "cicada-like beautiful face and moth-like delicate eyebrows"^[1] and "neatly lined teeth like pearl-white shells strung together"^[2] applied perfectly to her countenance. A native of the North, she had white, soft skin and a very slender figure. She was also prone to blush. Whenever embarrassed or angry, she would blush immediately and completely. In fact, as her student, what I was most afraid of was her blush.

Of course, I wasn't the only student who loved and respected her, for she was the most beautiful, mild and adept of all the teachers at our school. She was serious but amiable. She explained the lessons in very simple and clear terms. She was so good at using fascinating metaphors that we often found it easy to retain the most basic principles.

In the first monthly examination, I earned 99 marks in history, but in algebra I only earned 52 and thus failed! While I cried alone in a corner after class, I felt a warm hand patting me on the shoulder. I raised my head and saw Miss T standing by my side with the textbook under her arm. I hastened to wipe away my tears and stood up. "Why are you weeping?" she asked gently, "Is it because I gave you the wrong marks?" "Not at all," I replied, "I'm just angry with myself for my inadequate preparation in mathematics. Out of ten exam questions, I only understood one half." She sat down mildly and began to ask me about my past. When I told her I only had been educated at home without attending school, she said earnestly to me, "You aren't to be blamed. By missing school, you have skipped over a large part of your education. I find that you are rather intelligent, so that it won't be difficult for us to make up what you missed. From now on, go home a bit later every day, and I will give you supplementary arithmetic lessons."

Her offer was indeed a special favor to me, since I was in danger of being excluded from class due to having failed to learn arithmetic. Besides, in view of her busy life, she was particularly kind to set aside an hour for me every day. I accepted her offer at once and thanked her repeatedly. When I told Mother at home what had happened, she

felt all the more thankful to Miss T and asked me for more details about her. She had found Miss T a very good teacher.

From then on, I would go to her office every day after class to have a supplementary arithmetic lesson. In half a year, I succeeded in finishing the lessons in the arithmetic text that was used for the last three years of primary school. Whenever talking to anybody, Miss T spoke highly of my intelligence and rapid progress. What she didn't know was how hard I had to work every day, far into the night, and also how much I cried whenever I found myself desperate in the face of complicated and difficult questions. Under my lamplight, through the blur of my tears, I could dimly see Miss T's beautiful and sympathetic face. Then, as if I had received inspiration from what I observed, I wiped away my tears and continued studying.

During that period, I lived in my mother's inner room. In the winter, I sat cross-legged at the small table on the *kang*^[3], while reading and doing exercises in arithmetic. Late at night, Mother would order candied haws on a stick or radishes with a pear-like flavor to be sent to me as a midnight snack. Even now, whenever I see children doing arithmetic, I imagine myself looking at Miss T's smiling face, my feet warm on a brick bed, and my mouth full of the fresh and sweet flavor of radish!

Once the supplementary arithmetic lessons had been completed, all the difficult problems could easily be solved. Algebra and geometry scarcely required any effort. Much admired, I became the center of attention among my classmates. Whenever they had any difficult questions, they would come and ask me for help. Because of what Miss T had done for me, I really became absorbed in mathematics, so much so that I could solve a good many difficult problems in dreams after racking my brains at night.

After the lessons were over, it occurred to Mother that we ought to express our gratitude to Miss T. She went to the Fu Long Department Store, bought a piece of high-quality dress material and told me to take it to Miss T as a gift. But Miss T returned the gift and told my Mother, "I'm not used to giving my students extra lessons. I

cannot accept any reward. I helped your son because I found him strong in all subjects except mathematics. It would have been unjust to have had him go down to the lower grade. I feel very happy that he hasn't fallen ill while having to speed up his studies." Mother found it inconvenient to insist and had to give up.

One day, in the *Dong An Market*, I saw Miss T shopping. Attracted by a red hollowed-out radish with a fresh wheat sprout inside, she continually praised its wonderful and delicate workmanship as well as its gay colors. But she was already carrying too many things in her hands to be able to take the radish home, and had to give it up reluctantly. When she was gone, I hastened to buy it without bargaining, and took it home. On the next morning, with my heart thumping, I carried the radish to her office and knocked at the door. Although she was about to leave for class, she offered me a winsome smile when she opened the door and saw me holding my gift. She took it over immediately, hung it on her lamp and said to me, "Thank you for being so thoughtful." I came out blushing and went back to my classroom, hopping along and singing unwittingly. For the whole day, I felt rather complacent with self-satisfaction.

During the supplementary lessons for arithmetic, I used to sit opposite her, face to face. While I was solving my arithmetic problems, she was correcting homework papers, with her head bowed down. Whenever I raised my eyes with thoughts fixed on figures, I often noticed her cloud-like hair, her snow-white neck and long, lowered eyelashes. I also observed the gray cotton blouse and black skirt that she wore naturally and perfectly. Her lovely appearance aroused my deep admiration and affection. Sometimes, when my shy glances met her eyes, her smile revealed smooth white teeth. I blushed and bowed my head, feeling utterly confused for a while, unable to tell whether I was happy or sad.

Nobody, from the principal to all of us students, would like to hear about anybody proposing marriage to Miss T, because the principal was unwilling to lose a good colleague, and we, for our part, were unwilling to lose a good teacher. In addition, we could not

sincerely believe that any man in the world deserved to be Miss T's husband. Nevertheless, at any given time, more than ten men were proposing marriage to her. Among them were our teachers and a few men outside the school. We treated all the men who courted her with the same kind of sneer and disdain. We dared not do anything to offend our teachers, but we secretly gave them various nicknames, such as "toad" or "super-toad."^[4] Toward the outsiders, however, we behaved more boldly. Whenever we saw them sitting in the reception room or pacing up and down at the school gate, we would often cough loudly or throw behind them very tiny stones, and as soon as they turned around to see what was happening, we, in threes and fours, would burst into laughter and then pass by, upright and unafraid.

For her part, Miss T always behaved in a poised and dignified way to her wooers. Whenever courted by a man she quite disliked, she would put a red cross on his love letter and send it back to him. If she didn't dislike the man so much, her response was also far from positive and suggested a lack of interest in marriage. A very kind-hearted daughter, she lived with her father and took care of him, for she had no brothers. After school, she could often be seen taking the old man for a walk outside—her pretty young face and his white hair made a fine contrast.

Here I must relate a very funny incident, which was, however, by no means funny at the time. We were studying "The Song of Solomon" in our Bible class. I wrote on the reverse side of my English exercise book some verses imitating the style of the Song in praise of Miss T. I wrote page by page and then compiled what I had written, arriving at over ten pages of poetry. I dared not show my poetry to others, nor could I be hardhearted enough to destroy it. During that period, we used to have our books covered with thick kraft paper, and so I folded those dozen pages of verse and hid them between two book covers. But one day, they were discovered by a classmate of mine, who read them aloud in front of everybody. My classmates laughed at me, believing that I had fallen in love with a student at the girls' school next door. Unable to tell the truth, I could only blush, snatch the

sheets from his hands and tear them up at once. From then on, I dared write nothing like that any more. I was fifteen that year.

In the year I graduated from middle school, Miss T left, too, going elsewhere for another job. Still, we had chances to meet frequently. Whenever she saw me, she said something to encourage and comfort me, and sometimes asked me for help, such as in translating some short texts. I paid great attention to whatever she asked me to do, and did it without delay, even if such assistance might hold up my studies at the university.

Devoting herself to her very meaningful and magnificent career, she remained unmarried for her entire life. Six years ago, she died of dental disease in Shanghai. Tens of thousands of people were present to mourn her passing away. I received the grievous news while traveling by train from Boston to New York. Maple trees in a vast forest, with their once fresh red leaves, scuttled by and vanished outside the train window. All of a sudden, I began to cry for the first time since the death of my mother.

[1] This phrase comes from the "Wei Ballads" (*Wei Feng*) in the *Book of Songs (Shi Jing)*, the most ancient collection of Chinese poems dating from the Spring and Autumn Period (770-476 B.C.). These metaphors, which sound somewhat bizarre nowadays, were used in ancient China to describe the beauty of women.

[2] This expression is from the section "Biography of Dongfang Shuo" in the *Chronicles of the Han Dynasty (Han Shu)*.

[3]*Kang* is a kind of bed widely used in the Northern Chinese countryside. Hollow inside and often connected to the kitchen, it is heatable in winter by burning straw or coal.

[4] This phrase is from the Chinese idiomatic expression, "a toad lusting after a swan's flesh," which refers to those who long for something that they do not deserve.

肆 我的教师

第二个女人，我永远忘不掉的，是 T 女士，我的教师。

我从小住在偏僻的乡村里，没有机会进小学，所以只在家塾里读书，国文读得很多，历史地理也还将就过得，吟诗作文都学会了，且还能写一两千字的文章。只是算术很落后，翻来覆去，只做到加减乘除，因为塾师自己的算学程度，也只到此为止。

十二岁到了北平，我居然考上了一个中学，因为考试的时候，校长只出一个“学然后知不足”的论说题目。这题目是我在家塾里做过的，当时下笔千言，一挥而就，校长先生大为惊奇赞赏，一下子便让我和中学一年生同班上课。上课两星期以后，别的功课我都能应付裕如，作文还升了一班，只是算术把我难坏了。中学的算术是从代数做起的，我的算学底子太坏，脚跟站不牢，昏头眩脑，踏着云雾似的上课，T 女士便在这云雾之中，飘进了我的生命中来。

她是我们的代数和历史教员，那时也不过二十多岁吧。“螭首蛾眉，齿如编贝”这八个字，就恰恰的可以形容她。她是北方人，皮肤很白嫩，身材很窈窕，又很容易红脸，难为情或是生气，就立刻连耳带颈都红了起来，我最怕的是她红脸的时候。

同学中敬爱她的，当然不止我一人，因为她是我们的女教师中间最美丽、最和平、最善诱的一位。她的态度，严肃而又和蔼，讲述时简单而又清晰。她善用譬喻；我们每每因着譬喻的有趣，而连带的牢记了原理。

第一个月考，我的历史得九十九分，而代数却只得了五十二分，不及格！当我下堂自己躲在屋角流泪的时候，觉得有只温暖的手，抚着我的肩膀，抬头却见 T 女士挟着课本，站在我的身旁。我赶紧擦了眼泪，站了起来。她温和的问我道：“你为什么哭？难道是我的分数打错了？”我说：“不是的，我是气我自己的数学底子太差。你出的十道题目，我只明白一半。”她就软款温柔的坐下，仔细问我的过去。知道了我的家塾教育以后，她就恳切的对我说：“这不能怪你。你中间跳过了一大段！我看你还聪明：补习一定不难，以后你每天晚一点回家，我替你补习算术吧。”

这当然是她对我格外的爱护，因为算术不曾学过的，很有退班的可能；而且她很忙，每天匀出一个钟头给我，是额外的恩惠。我当时连忙答允，又再三的道谢。回家去同母亲一说，母亲尤其感激，又仔细的询问 T 女士的一切，她觉得 T 女士是一位很好的教师。

从此我每天下课后，就到她的办公室，补习一个钟头的算术，把高小三年的课本，在半年以内赶完了。T 女士逢人便称道我的神速聪明。但她不知道我每天回家以后，用功直到半夜，因着习题的烦难，我曾流过许多焦急的眼泪，在泪眼模糊之中，灯影下往往涌现着 T 女士美丽慈和的脸，我就仿佛得了灵感似的，擦去眼泪，又赶紧往下做。那时我住在母亲的套间里，冬天的夜里，烧热了砖炕，点起一盏煤油灯，盘着两腿坐在炕桌边上，读书习算。到了夜深，母亲往往叫人送冰糖葫芦，或是赛梨的萝卜，来给我消夜。直到现在，每逢看见孩子做算术，我就会看见 T 女士的笑脸，脚下觉得热烘烘的，嘴里也充满了萝卜的清甜气味！

算术补习完毕，一切难题，迎刃而解，代数同几何，我全是不费功夫的做着；我成了同学们崇拜的中心，有什么难题，他们都来请教我。因着 T 女士的关系，我对于算学真是心神贯注，竟有几个困难的习题，是在夜中苦想，梦里做出来的。我补完算术以后，母亲觉得对于 T 女士应有一点表示，她自己跑到福隆公司，买了一件很贵重的衣料，叫我送去。T 女士却把礼物退了回来，她对我母亲说：“我不是常替学生补习的，我不能要报酬。我因为觉得令郎别样功课都很好，只有算学差些，退一班未免太委屈他。他这样的赶，没有赶出毛病来，我已经是很高兴的了。”母亲不敢勉强她，只得作罢。有一天我在东安市场，碰见 T 女士也在那里买东西。看见摊上挂着的挖空的红萝卜里面种着新麦秧，她不住的夸赞那东西的巧雅，颜色的鲜明，可是因为手里东西太多，不能再拿，割爱了。等她走后，我不曾还价，赶紧买了一只萝卜，挑在手里回家。第二天一早又挑着那只红萝卜，按着狂跳的心，到她办公室去叩门。她正预备上课，开门看见了我，和我的礼物，不觉嫣然的笑了，立刻接了过去，挂在灯上，一面说：“谢谢你，你真是细心。”我红着脸出来，三步两跳跑到课室里，嘴里不自觉的唱着歌，那一整天我颇觉得有些飘飘然之感。

因着补习算术，我和她对面坐的时候很多，我做着算题，她也低头改卷子。在我抬头凝思的时候，往往注意到她的如云的头发，雪白的脖子，很长的低垂的睫毛，和穿在她身上稳称大方的灰布衫、青裙子，心

里渐渐生了说不出的敬慕和爱恋。在我偷看她的时候，有时她的眼光正和我的相值，出神的露着润白的牙齿向我一笑，我就要红起脸，低下头，心里乱半天，又喜欢，又难过，自己莫名其妙。

从校长到同学，没有一个愿意听到有人向 T 女士求婚的消息。校长固不愿意失去一位好同事，我们也不愿意失去一位好教师，同时我们还有一种私意，以为世界上根本就没有一个男子，配作 T 女士的丈夫，然而向 T 女士求婚的男子，那时总在十个以上，有的是我们的男教师，有的是校外的人士。我们对于 T 女士的追求者，一律的取一种讥笑鄙夷的态度。对于男教师们，我们不敢怎么样，只在背地里替他们起上种种的绰号，如“癞蛤蟆”、“双料癞蛤蟆”之类。对于校外的人士，我们的胆子就大一些，看见他们坐在会议室里或是在校门口徘徊，我们总是大声咳嗽，或是从他们背后投些很小的石子，他们回头看时，我们就三五成群的哄哄笑着，昂然走过。

T 女士自己对于追求者的态度，总是很庄重很大方。对于讨厌一点的人，就在他们的情书上，打红叉子退了回去。对于不大讨厌的，她也不取积极的态度，仿佛对于婚姻问题不感着兴趣。她很孝，因为没有弟兄，她便和她的父亲守在一起，下课后常常看见她扶着老人，出来散步，白发红颜，相映如画。

在这里，我要供招一件很可笑的事实，虽然在当时并不可笑。那时我们在圣经班里，正读着“所罗门雅歌”，我便模仿雅歌的格调，写了些赞美 T 女士的句子，在英文练习簿的后面，一页一页的写下叠起。积了有十几篇，既不敢给人看，又不忍毁去。那时我们都用很厚的牛皮纸包书面，我便把这十几篇尊贵的作品，折存在两层书皮之间。有一天被一位同学翻了出来，当众诵读，大家都以为我是对于隔壁女校的女生，发生了恋爱，大家哄笑。我又不便说出实话，只好涨红着脸，赶过去抢来撕掉。从此连雅歌也不敢写了，那年我是十五岁。

我从中学毕业的那一年，T 女士也离开了那学校，到别地方作事去了，但我们仍常有见面的机会。每次看见我，她总有勉励安慰的话，也常有些事要我帮忙，如翻译些短篇文字之类，我总是谨慎将事，宁可将大学里功课挪后，不肯耽误她的事情。

她做着很好的事业，很大的事业，至死未结婚。六年以前，以牙疾死于上海，追悼哀殓她的，有几万人。我是在从波士顿到纽约的火车上，得到了这个消息，车窗外飞掠过去的一大片的枫林秋叶，尽消失了

艳红的颜色，我忽然流下泪来，这是母亲死后第一次的流泪。

5 My Brother's Wife Who Calls Me "Old Man"

The third woman that I am writing about should have been my wet nurse. I was preparing to write when a letter from the distinguished editor arrived, asking me to discuss "my younger brother's wife." This was all right, of course. But as I have three younger brothers' wives, all of them worthy and fine, which one should I write about? So let me say a little about each one, lest they should suspect that I am partial!

More than once I said to my father, "If other families are lucky on account of the sons, ours is lucky on account of the daughters-in-law. How delighted one feels to have our three young ladies in view!" Smiling, my father asked me in reply, "And you? Why then haven't you, too, found me one more daughter-in-law who is equally delightful?" Then all of my brothers and their wives looked at me and smiled. "I don't follow," I said, "I am as good as my brothers in any way. But only God knows why I haven't been able to find myself a wife after living in this world for such a long time." And my brothers smiled, a bit self-conceited, and said, "Only a Chinese parasol tree can be good enough to attract a phoenix to come and dwell on it. You haven't been able to attract a phoenix just because you aren't a tree of this kind!" Since that might very well be true, I had to endure their mockery in silence.

One of these conversations occurred in June 1937. At that time, my second younger brother, newly-married, had just come to Beijing with his wife to visit my parents. On that occasion, since everybody was present, he suggested that a photo be taken of the whole family in happy reunion. However, I sternly rejected his proposal, for in no way could I bear so many complacent expressions, and still less could I bear to find myself in the photo unaccompanied by a wife. Thus the matter had to be dropped. Now, in retrospect, I deeply regret my

noncompliance, because, less than a month later, the Lugou Bridge Incident^[1] broke out and all of us scattered far and wide. Since then, Father passed away and my brothers and I have come to live far apart from one another. "Brethren scattered here and there by the storms; / Far apart and alone, I can only let my tears flow down."^[2] I don't even have a single copy of their group photo!

My first younger brother's wife is also my cousin, daughter of my mother's brother and the sixth child of our extended family,^[3] only one month younger than my brother. I have witnessed both of them grow up as innocent playmates. They must recall a great many sweet and innocent stories. If only they were willing to tell me some of these stories, I'm sure that I would be able to write a good novel. When I suggested that they do so, they replied jokingly, "We won't tell anything to you, of all people, for everything will come out altered by your pen. We don't want to form the basis for your literary productions!"

At their parents' insistence, they were engaged at the age of seven or eight. After their engagement, the fiancée's mother thought that as long as they remained unmarried, they ought to be able to get along with one another in a discreet way that would avoid arousing gossip, and thus they rarely met. Nevertheless, my home was located next door to the fiancée's, and members of both families saw one another every day when going out or coming home. Nor could meeting be avoided whenever family dinner parties were held to celebrate festivals. I noticed how the young lovers exchanged glances and smiled furtively. In private, however, I made fun of my brother and I didn't say a word about my observations in the presence of the grown-ups, lest the fiancée's mother should intervene and spoil the amusement.

During one of those years, my brother was studying in Tangshan while his fiancée was studying in Tianjin. On a spring morning, I received an unexpected letter, "To Mr. Gentleman, personally." It was from my brother. I opened it in haste and read: "My dear brother, I want to correspond with her...and I have sent her three letters without

receiving any reply. Please be so kind as to mediate between us. I cannot thank you enough." I smiled and realized that spring was coming to the hearts of these two fifteen-year-olds! The first thing that I did was to show the letter to my Mother. She smiled but said nothing.

I was aware that the key person was, after all, my aunt, the girl's mother. Then I went to pay her a visit. After the exchange of conventional greetings, I told her in a seemingly casual manner that my younger brother often suffered from loneliness in school, and that all of us wrote to him on many occasions, feeling sorry that he had to live so far away from home at such an early age, and that, hopefully, my aunt and her daughter would write to him frequently as well, giving him comfort and encouragement. She prepared to speak, after a moment's hesitation. I hastened to add, "My mother has already agreed. Our own time is quite unlike the past. If you hope to find these two young people as an affectionate couple in the future, they must be allowed to exchange ideas and feelings today as much as possible. They both know what ought to be done and have a good sense of propriety, and I can guarantee that everything will work out." She thought for a while and replied with a pleasant sigh, "Who would have thought it! All right! Anyway, you are the eldest brother and you have assumed responsibility." I myself didn't know what my responsibility was, but, after all, I had succeeded in completing my mission. I told Mother about the result of my talk with my aunt, and, at the same time, wrote letters to my brother and his fiancée, telling them: "Now please correspond. All obstacles have been removed. Don't bother me any more unless you have new troubles!"

When they were twenty-one, I returned from abroad. My brother, who already had graduated from the university, held a very good job and was an accomplished violinist. Having grown up to be tall and handsome, he contrasted sharply with me in appearance, and made me feel like an old man lacking in youthful vigor. His fiancée had also grown a great deal and was very much a young lady. At the family dinner party that was given to welcome me home, both of them were

present and spoke cheerfully. Guests did not begin to leave until late at night. I sat with my parents, and we began to chat warmly. They told me that the two youngsters were becoming more and more affectionate. Although they still maintained a certain distance instead of becoming inseparable like lovers in the West, they nonetheless showed consideration and support for each other. Whenever Mother was ill, the girl came to our home to help my brother take care of her. I learned that she even helped Mother with some household chores.

At this point in the conversation, Mother asked, "By the way, how about your marriage? Your father will be sixty this December. I have always hoped that you would come home with a wife so that she might host the party on my behalf. But I have heard nothing about this possibility. Your first younger brother is going abroad next summer, and the other two are still too young to marry. When can I become a mother-in-law?" After a moment's silence, I replied while smiling, "Impatience is inappropriate in such matters. However, it will be easy for you to become a mother-in-law. Your second son, my first younger brother, is likely to marry before going abroad. I noticed just now how his fiancée was conducting herself here in our home. She is in every way a capable little housewife, and she is already twenty-one, which is not too young. But I will have to convince her mother." As if this idea had never occurred to her before, Mother turned around and said to Father in a pleasant way, "That might be a solution as well."

The next day, I told my brother about this exchange. He just smiled without raising any objections. A few days later, I talked to my aunt. "For my part," she said, "I don't mind that at all. But my daughter needs one more year to finish her studies at the university. So you should ask her whether or not she agrees." I went to see the girl as a consequence. She was knitting in the corridor when I arrived. On seeing me, she drew up a stool and asked me to sit down. Then I began: "My dear cousin, there is something that I want to discuss with you, and I would like to ask you to do me a favor, please."

She gazed at me with wide eyes, and I went on, "On the occasion of my father's birthday this year, my mother would like to have

someone host the dinner party on her behalf, and so she wants me to marry. Tell me, should I obey or not?" She stood up joyfully. "You? Marry? In such a matter, you should obey, of course. When will the wedding ceremony be held? Who is the bride-to-be? What can I do to help you?" Then I burst into laughter: "Now the major premise has been established—'In such a matter, you should obey,' just as you said. But I don't know when I will be able to marry, because there is still nobody I can marry. So I have passed the responsibility onto my brother, and now I ask you to help him."

In a flash, she realized what I meant. She blushed, turned around and tried to go away, saying, "You are always joking!" I stopped her and said seriously, "I'm not joking with you. My idea, which has been agreed upon by my mother, your mother and my brother, depends on your opinion alone." She paused, and assuming a serious expression, remarked, "Isn't it true that your brother is going abroad next year?" "We have already discussed this matter as well," I replied, "Since he is going abroad and I won't always be at home, my mother will need a capable person to help her manage things. We expect you to accommodate yourself to such an inconvenient situation."

She lowered her head and thought for a while, and once again slowly smiled. I understood that I had succeeded this time, too, and said, "All right, I will make all the preparations for this wedding. You only have to prepare to be the bride!" She uttered a "Bah!" and went into the house. At that moment, her mother came out and said pleasantly, "Although you soon may be her brother-in-law, you are too fond of joking. There are only three or four months left. We can do very little at our age to prepare for the ceremony. We will rely on you for everything."

Snow fell heavily on the morning of Father's birthday. I returned home to the city in haste from the western suburbs. That day my brother and his fiancée were married in a hall of the Western Returned Scholars Association. At the ceremony, the bride dazzled everybody with her bright beauty, reminiscent of the full moon in mid-autumn! When the wedding banquet was over, our noisy crowd

made its way to our home where another banquet, the birthday dinner, was offered. When the felicitations were over, most of the elderly people went away. There remained only a group of the groom's friends, who insisted on staging horseplay in the bridal chamber.^[4] My parents seemed unable to stop them. My two other younger brothers even preferred to watch the fun. Everyone else rushed in all at once.

For my part, I felt rather tired and went back to my rooms on the east side of the house to relax and smoke for a while. I used to rest there for a quiet weekend in three rooms, which were fairly clean and tidy. All the articles of furniture, including the beds and chairs, were made of rattan or bamboo. The racks contained two pots of *Calycanthaceae* flowers,^[5] while the desk displayed some narcissus. A warm, sweet smell greeted me upon my arrival as I raised the curtain suspended from the door. After sitting idly for a short period, I picked up a book and began to read. After traveling in the mind through once-familiar but now extremely remote places, I suddenly raised my head and looked at the clock. It was half past twelve already, but the hubbub of voices could still be heard from the bridal chamber on the south side of the house.

I went over there and found that the horseplay had reached its climax. The bride had done everything she had been expected to do to enhance the scene, but her excited companions were not yet satisfied. They refused to leave the chamber unless the bride smiled, as a sign that everyone could depart. But the bride, either tired or annoyed, pulled a long face and refused to comply. In the ensuing deadlock, the bridegroom did not know what to say and could only glance about while adopting a cheerful expression.

I quickly took up a pencil, wrote a brief note and asked the bridesmaid to hand it over to the bride, without creating a stir. I wrote: "Dear sister-in-law, please look cheerful. This sign will offer these little bandits a way out, so that I can drive them into my lodgings." Amidst the pandemonium, she received the note and read it, nodded to me through the crowd and began to smile. Everybody burst into laughter and felt satisfied. I seized the opportunity and

made everybody enter my study. That night, the horde of "little bandits" stayed inside, drinking, singing, eating and playing cards until daybreak. As a consequence, my study became messier than it had ever been before.

In a few days, once the bride "usurped" all the household chores, great and small, my mother was in a position to fold her arms and "govern by doing nothing,"^[6] while displaying a broad grin typical of a mother-in-law. Every weekend, when I came back from the western suburbs, I was greeted by the young housewife with all the signs of hospitality, as if I were a guest. By now, her place in the family was so natural and appropriate that it seemed as if she had been with us ever since creation and the beginning of time. During the following summer, my newly-married younger brother went abroad. My other two younger brothers and I, all busy teaching or studying, were unable to remain with our parents on a regular basis. In this unstable time, she was my parents' only companion, a comfort to them from morning to night.

Ten years and more have passed, and now she is a mother of five. Nevertheless, she is still more than willing to joke with me. For example, in this new period, she calls me "old man" instead of "elder brother-in-law."

[1] This incident occurred near the Lugou Bridge to the south of Beijing on July 7, 1937, when the Japanese invaders were conducting their campaign of annexation, and marked an official outbreak of their war against China.

[2] These lines are from an ancient Chinese poem.

[3] Children in China are numbered according to the dates of their birth, usually in what Westerners call a nuclear family, but sometimes in an extended one when children of brothers and sisters are all taken into account, and cousins call one another brothers and sisters.

[4] This refers to a customary practice, very popular in China, where the guests invited to a wedding ceremony happily gather in the bridal chamber, chat excitedly and have fun with the newlyweds to enhance the joyful atmosphere of the occasion.

[5] This is a plant of the plum family, whose flowers have a wax-like appearance.

[6] This is one of the major principles of Laozi's (c. 571-c. 471 B.C.) political doctrine, which consists in avoiding government control in society, something similar to Western *laissez-faire* policy.

伍 叫我老头子的弟妇

第三个女人，我要写的，本是我的奶娘。刚要下笔，编辑先生忽然来了一封信，特烦我写“我的弟妇”。这当然可以，只是我有三个弟妇，个个都好，叫我写哪一个呢？把每个人都写一点吧，省得她们说我偏心！

我常对我的父亲说：“别人家走的都是儿子的运，我们家走的却是儿媳妇的运，您看您这三位少奶奶，看着叫人心里多么痛快！”父亲一面笑眯眯的看着她们，一面说：“你为什么也不替我找一位痛快的少奶奶来呢？”于是我的弟弟和弟妇们都笑着看我。我说：“我也看不出我是哪点儿不如他们，然而我混了这些年，竟混不着一位太太。”弟弟们就都得意的笑着说：“没有梧桐树，招不了凤凰来。只因你不是一棵梧桐树，所以你得不着一只凤凰！”这也许是事实，我只好忍气吞声的接受了他们的讥诮。那是廿六年六月，正值三弟新婚后到北平省亲，人口齐全，他提议照一张合家欢的相片，却被我严词拒绝了。我不能看他们得意忘形的样子，更不甘看相片上我自己旁边没有一个女人，这提议就此作罢。时至今日，我颇悔恨，因为不到一个月，芦沟桥事变起，我们都星散了。父亲死去，弟弟们天南地北，“海内风尘诸弟隔，天涯涕泪一身遥”是我常诵的句子，而他们的集合相片，我竟没有一张！

我的二弟妇，原是我的表妹，我的舅舅的女儿，大排行第六，只比我的二弟小一个月。我看着他们长大，真是青梅竹马，两小无猜。在他们的回忆里，有许多甜蜜天真的故事，倘若他们肯把一切事情都告诉我，一定可以写一本很好的小说。我曾向他们提议，他们笑说：“偏不告诉你，什么话到你嘴里，都改了样，我们不能让你编排！”

他们在七八岁上，便由父母之命定了婚；订婚以后，舅母以为未婚男女应当避嫌，他们的踪迹便疏远了。然而我们同舅家隔院而居，早晚出入，总看得见，岁时节序，家宴席上，也不能避免。他们那种忍笑相视的神情，我都看在眼里，我只背地里同二弟取笑，从来不在大人面前提过一句，恐怕舅母又来干涉，太煞风景。

有一年，正是二弟在唐山读书，六妹在天津上学，一个春天的早晨，我忽然接到“男士先生亲启”的一封信，是二弟发的，赶紧拆来一看，里面说：“大哥，我想和六妹通信，……已经去了三封信，但她未曾

复我，请你帮忙疏通一下，感谢不尽。”我笑了，这两个十五岁的孩子，春天来到他们的心里了！我拿着这封信，先去给母亲看，母亲只笑了一笑，没说什么。我知道最重要的关键还是舅母，于是我又去看舅母。寒暄以后，轻闲的提起，说二弟在校有时感到寂寞，难为他小小的年纪，孤身在外，我们都常给他写信，希望舅母和六妹也常和他通信，给他一点安慰和鼓励。舅母迟疑了一下，正要说话，我连忙说：“母亲已经同意了。这个年头，不比从前，您若是愿意他们小夫妻将来和好，现在应当让他们多多交换意见，联络感情。他俩都是很懂事有分寸的孩子，一切有我来写包票。”舅母思索了一会，笑着叹口气说：“这是哪儿来的事！也罢，横竖一切有你做哥哥的负责。”我也不知道我负的是什么责任，但这交涉总算办得成功，我便一面报告了母亲，一面分函他们两个，说：“通信吧，一切障碍都扫除了，没事别再来麻烦我！”

他们廿一岁的那年，我从国外回来，二弟已从大学里毕业，做着很好的事，拉得一手的好提琴，身材比我还高，翩翩年少，相形之下，我觉得自己真是老气横秋了。六妹也长大了许多，俨然是一个大姑娘了。在接风的家宴席上，她也和二弟同席，谈笑自如。夜阑人散，父母和我亲热的谈着，说到二弟和六妹的感情，日有进步，虽不像西洋情人之形影相随，在相当的矜持之下，他们是互相体贴，互相勉励；母亲有病的时候，六妹是常在我们家里，和弟弟们一同侍奉汤药，也能替母亲料理一点家事。谈到这里，母亲就说：“真的，你自己的终身大事怎样了？今年腊月是你父亲的六十大寿，我总希望你能带一个媳妇回来，替我做做主人。如今你一点动静都没有，二弟明夏又要出国，三弟四弟还小，我几时才做得上婆婆？”我默然一会，笑着说：“这种事情着急不来。您要做个婆婆却容易；二弟尽可于结婚之后再出国。刚才我看见六妹在这里的情形，俨然是个很能干的小主妇，照说廿一岁了也不算小了，这事还得我同舅母去说。”母亲仿佛没有想到似的，回头笑对父亲说：“这倒也是一个办法。”

第二天同二弟提起，他笑着没有异议。过几天同舅母提起，舅母说：“我倒无所谓，不过六妹还有一年才能毕业大学，你问她自己愿意不愿意。”我笑着去找六妹。她正在廊下织活，看见我走来，便拉一张凳子，让我坐下。我说：“六妹，有一件事和你商量，请你务必帮一下忙。”她睁着大眼看着我。我说：“今年父亲大寿的日子，母亲要一个人帮她作主人，她要我结婚，你说我应当不应当听话？”她高兴得站了起来，“你？结婚？这事当然应当听话。几时结婚？对方是谁？要我帮什么

忙？”我笑说：“大前提已经定了，你自己说的，这事当然应当听话。我不知道我在什么时候才可以结婚，因为我还没有对象，我已把这责任推在二弟身上了，我请你帮他的忙。”她猛然明白了过来，红着脸回头就走，嘴里说：“你总是爱开玩笑！”我拦住了她，正色说：“我不是同你开玩笑，这事母亲舅母和二弟都同意了，只等候你的意见。”她站住了，也严肃了起来，说：“二哥明年不是要出国吗？”我说：“这事我们也讨论过，正因为他要出国，我又不能常在家，而母亲身边又必须有一个得力的人，所以只好委屈你一下。”她低头思索了一会，脸上渐有笑容。我知道这个交涉又办成功了，便说：“好了，一切由我去备办，你只预备作新娘子吧！”她啐了一口，跑进屋去。舅母却走了出来，笑说：“你这大伯子老没正经——不过只有三四个月的工夫了，我们这些人老了，没有用，一切都拜托你了。”

父亲生日的那天，早晨下了一场大雪，我从西郊赶进城来。当天，他们在欧美同学会举行婚礼，新娘明艳得如同中秋的月！吃完喜酒，闹哄哄的回到家里来，摆上寿筵。拜完寿，前辈客人散了大半，只有二弟一班朋友，一定要闹新房，父母亲不好拦阻，三弟四弟乐得看热闹，大家一哄而进。我有点乏了，自己回东屋去吸烟休息。我那三间屋子是周末养静之所，收拾得相当整齐，一色的藤床竹椅，花架上供养着两盆腊梅，书案上还有水仙，掀起帘来，暖香扑面。我坐了一会，翻起书本来，正神往于万里外旧游之地，猛抬头看钟，已到十二时半，南屋新房里还是人声鼎沸。我走进去一看，原来新房正闹到最热烈的阶段，他们请新娘做的事情，新娘都一一遵从了，而他们还不满意，最后还要求新娘向大家一笑，表示逐客的意思，大家才肯散去。新娘大概是乏了，也许是生气了，只是绷着脸不肯笑，两下里僵着，二弟也不好说什么，只是没主意的笑着四顾。我赶紧找支铅笔，写了个纸条，叫伴娘偷偷的送了过去，上面是：“六妹，请你笑一笑，让这群小土匪下了台，我把他们赶到我屋里去！”忙乱中新娘看了纸条，在人丛中向我点头一笑，大家哄笑了起来，认为满意。我就趁势把他们都让到我的书室里。那夜，我的书室是空前的凌乱，这群“小土匪”在那里喝酒、唱歌、吃东西、打纸牌，直到天明。

不到几天，新娘子就喧宾夺主，事无巨细，都接收了过去，母亲高高在上，无为而治，脸上常充满着“做婆婆”的笑容。我每周末从西郊回来，做客似的，受尽了小主妇的招待。她生活在我们中间，仿佛是从开天辟地就在我们家里似的，那种自然，那种合适。第二年夏天，二弟出

国，我和三四弟教书的教书，读书的读书，都不能常在左右，只有她是父母亲朝夕的慰安。

十几年过去了，她如今已是五个孩子的母亲，不过对于“大哥”，她还喜欢开点玩笑，例如：她近来不叫我“大哥”，而叫我“老头子”了！

6 My Brother's Wife Who Tells Me to Work It Out for Myself

My second younger brother and I are somewhat alike, both in appearance and disposition. It is with him that I get along the best. While I was teaching at University X in the western outskirts of Beijing, he was there as a student. After class, we used to walk and have heart-to-heart talks in the open fields. His interest in women, like mine, was prudently limited, and he hardly made any specific plans in this respect. So, even later on, while he was studying abroad after his graduation from the university, or working in a factory upon his return, he never had a lover.

Six years ago, on my way abroad for the second time, I passed by Nanjing where I briefly stayed for a week. My brother would come over every day from his factory on the opposite side of the Yangtze River to accompany me in my sight-seeing. One Sunday, a foreign friend of mine drove us to visit a scenic spot, the Great Steles,^[1] for a picnic. We had planned to be back at four o'clock in the afternoon, but the car broke down on the way, so we didn't enter the city gate until six in the evening. My brother seemed very fretful, and as soon as we arrived at my residence, he took a bath hastily, changed clothes, put on a very nice Western-style suit, and then hurried off. At the time, I was too busy to ask him what he was up to.

It was not until spring of the next year while in Paris that I received a letter from him saying: "My dear brother, I must tell you that I am now engaged and that I will soon marry.... I suppose you still recall that day of our outing at the Great Steles last year. In the evening of that very day, I met her for the first time.... We are preparing to marry in mid-June; afterwards we will go to the North. If you come back at the end of June via Siberia, we'll be able to meet you at the Beijing railway station. How do things stand in Paris? Is there any good news? All right, see you in Beijing!" I fixed my eyes on

the photo enclosed in the letter where he appeared with his fiancée, and then wrote in haste on a card: "I envy your having found a final destination for your heart! I feel quite lonely here in Paris, just as in Beijing. I would like you to help me work out a solution." I quickly put on my overcoat, went to a big department store and bought a set of silverware. I put the card into the silverware box and mailed it to Nanjing.

At the Beijing railway station, I distinguished my second brother's wife from other members of my family. She shook hands with me very affectionately, as if we were old friends, and walked shoulder to shoulder with me. When I turned around, I saw everybody smiling. My second brother was especially happy. I clasped his hand and said to him in a whisper, "Good for you!"

After the dinner party held downtown, everyone came over to the western suburbs to take a rest. All the dwellers in our building were single male professors. Their very presence conveyed the set expression, "No Admittance for Ladies." For this reason, I took the couple to the house of my friend X, who had gone with his wife to the summer resort of Mt. Gu of the Lushan Mountains, and whose house, left vacant, was only a stone's throw from my lodging. My brother and his wife came over every day to take meals with me. After eating, I often sent them to the Western Mountains to enjoy themselves. She said, "Oh, my elder brother-in-law, join us and let's go together." I shook my head and replied, "I've been there too often and now those places bore me. Besides, I am no fool." My brother smiled and said to his wife, "Leave him alone. The older he gets, the more eccentric he becomes. Let's go ourselves!"

Having done enough sightseeing in the Western Mountains, he began to complain incessantly of abdominal pain and then refrained from social exchange. God knows whether he was really sick or just pretending—but anyway, I had to treat him as an invalid. For each of the three daily meals, I ordered the cook to toast bread and prepare rice porridge to be taken to his place. He would often recline on a sofa in the sitting room, listening to his wife play the piano. When I wasn't

busy, I would go and sit with them, but would watch the couple with the eyes of a bystander. I found them a perfect match, both so steady, quiet and pure. They were fond of talking about high ideals and religion. They believed in the actual existence of something absolutely true, good and beautiful. While showing the mutual tenderness and closeness typical of newlyweds, they usually spoke and acted in a proper and solemn way. I felt very well disposed towards them.

One day, while talking about how their new home should be furnished with as many China-made goods as possible, my brother's wife mentioned the carpets manufactured by the Beijing Ren Li Co. and remarked that they were made of very good material and had ornate designs. At the time, I had plenty of money, and told the couple that I would like to buy them one or two pieces. We agreed on a date to go together and buy the carpets. But they had to go downtown one or two days ahead of me to keep Father company.

I still remember that I went downtown early in the morning, just one day before the outbreak of the Lugou Bridge Incident. On arriving home, I found everything in a state of disarray. My first younger brother and his wife were busy helping the newlyweds pack their luggage. Their young children were pulling the new bride by the dress. Father, water pipe in hand, stood with a worried frown. What had happened was that a relative of ours, the station master of the Zhengyang Gate Station, had told them on the phone that morning that the situation outside was becoming tense. The Beijing-Pukou Railway^[2] was in danger of being cut off at any time. He advised them to leave Beijing as soon as possible and told them he had already booked a compartment for them in the departing train.

I was struck by the news and remained speechless for a while, and then remarked, "It would be better for you to go now while there is still a chance. You have your job and your home in Nanjing. It isn't proper for you to stay longer here in the North. Come again next year." I immediately sent for a taxi and went with them to the railway station. I put the banknotes that I had planned to use to pay for the carpets into my sister-in-law's purse. I saw them squeeze onto the train

before it squirmed out of the station. I felt as if I had been in a confusing dream.

After their arrival in Nanjing, they spent several months of their newly-married life in an air-raid shelter belonging to a factory. Before long, they left the city together with the retreating troops, going up the Yangtze River, carrying nothing but a small suitcase with them. The silverware set that I had given them as a present was lost with the downfall of the capital.^[3] Luckily we hadn't bought the carpets! In all the letters that I received from them, they invariably showed steadiness, contentment and optimism.

They always referred in a humorous way to the hardships of their uncertain livelihood. Some of my friends, describing in their letters to me how my brother and his wife were getting along in the interior province of our country, expressed surprise that so delicate a girl would be able to endure such hard work. They were living near a factory in a rented thatched cottage with only a single room, used for all purposes. In the intense heat of summer, my sister-in-law cooked and washed inside this small room, but still kept singing! When advised to stop singing and save energy, she replied with a smile, "More exhalation may save more perspiration!" Here it is, the great spirit of China's sons and daughters! I must raise my hat to her!

Recently a son was born to them. I sent them a letter of congratulation and told them: "Your baby should become my adopted son, for I'm the eldest!" They replied in their letter: "Give up your vain hope! If you want to have a son, work it out for yourself!" Well, they don't believe that I will work anything out whatsoever. All right, let's wait and see!

[1] This is a scenic spot near Nanjing.

[2] Pukou is situated on the north side of the Yangtze River, just opposite Nanjing.

[3] Nanjing was at that time the capital of the Republic of China.

陆 请我自己想法子的弟妇

三弟和我很有点相像，长的相像，性情也相像，我们最谈得来。我在北平西郊某大学教书的时候，他正在那里读书，课余，我们常常同到野外去散步谈心。他对于女人的兴趣，也像我似的，适可而止，很少作进一步的打算。所以直到他大学毕业，出了国，又回来在工厂里做事，还没有一个情人。

六年以前，我第二次出国，道经南京，小驻一星期，三弟天天从隔江工厂里过来陪我游玩。有一个星期日，一位外国朋友自驾汽车，带我们去看大石碑，并在那里野餐。原定是下午四点回来，汽车中途抛了锚，直到六点才进得城门。三弟在车上就非常烦躁不安，到了我的住处，他匆匆的洗了澡，换了一身很漂亮的西装，匆匆的又出去。我那时正忙，也不曾追问。直到第二年的春天，我在巴黎，忽然得他一封信，说：“大哥，告诉你一件事，我已经订了婚。不久要结婚了。……记得我们去年逛大石碑的一天吧，就在那夜，我和她初次会面。……我们准备六月中旬结婚，婚后就北上。你若是在六月底从西伯利亚回来，我们可在北平车站接你。……巴黎如何？有好消息否？好了，北平见！”我仔细的看了他信中附来的两人合照的相片，匆匆的写了一张卡片，说：“我妒羡慕你，居然也有了心灵的归宿！巴黎寂寞得很，和北平一样，还是你替我想想法子吧。”我又匆匆的披上大衣，直走到一家大百货商店，买了一套银器，将卡片放在匣里，寄回南京去。

在北平车站上，家人丛中，看见了我的三弟妇，极其亲热的和我握手，仿佛是很熟的朋友，她和我并肩走着。回头看见大家的笑容，三弟尤其高兴，我紧紧的捏着他的手，低声说：“有你的！”

他们先在城里请过了客，便到西郊来休息。我们那座楼上，住的都是单身的男教授，“女宾止步”；我便介绍他们到我的朋友×家里去住。×夫妇到牯岭避暑去了，那房子空着，和我们相隔只一箭之遥。他们天天走过来吃饭，饭后我便送他们到西山去玩。三弟妇常说：“大哥，你和我们一起去吧。”我摇头说：“这些都是我玩腻了的地方，怪热的，我不想去。而且我也不是一个傻子！”三弟就笑说：“别理他，他越老越怪。我们自己走吧！”

逛够了西山，三弟就常常说他肚子不好，拒绝一切的应酬，天晓得

他是真病假病——我只好以病人待他，每日三餐，叫厨子烤点面包，煮点稀饭，送了过去。他总是躺在客厅沙发上，听三弟妇弹琴。我没事时也过去坐坐，冷眼看他们两个，倒是合适得很，都很稳静，很纯洁，喜欢谈理想，谈宗教，以为世界上确有绝对的真、善、美。虽然也有新婚时代之爱娇与偎倚，而言谈举止之间，总是庄肃的时候居多，我觉得很喜欢他们。

有一次，三弟妇谈起他们的新家庭，一切的设备，都尽量用国货，因而谈到北平仁立公司的国货地毯，她认为材料很好，花样也颇精致，那时我有的是钱，便说要去买一两张送给他们。我们定好了日子，一同去挑选。他们先进城去陪父亲，我过一两天再去。我还记得，那是芦沟桥事变之前一天，我一早进城去，到了家里，看见一切乱哄哄的，二弟和二弟妇正帮忙这一对新夫妇收拾行李，小孩子们拉着新娘子的衣服，父亲捧着水烟袋，愁眉不展的。原来正阳门车站站长——是我们的亲戚——早上打电话来，说外面风声不稳，平浦路随时有切断的可能，劝他们两个赶紧走，并且已代定了房间。我愣了一会，便说：“有机会走还是先走好，你的事情在南京，不便长在北方逗留，明年再来玩吧。”我立刻叫了一部汽车，送他们到车站，我把预备买地毯的一卷钞票，塞在三弟妇的皮包里，看着他们挤上了火车，火车又蠕蠕的离开了车站，心里如同做了一场乱梦。

他们到了南京，在工厂的防空洞里，过了新婚后的几个月。此后又随军撤退，溯江而上，两个人只带一只小皮箱。我送给他们的一套银器，也随首都沦陷了，地毯幸亏未买！而每封他们给我的信，总是很稳定，很满足，很乐观，种种的辛苦和流离，都以诙谐的笔意出之。友人来信，提到三弟和他的太太在内地的生活，都说看不出三弟妇那么一个娇女儿，竟会那样的劳作。他们在工厂旁边租到一间草房，这一间草房包括了一切的居室。炎暑的天气中，三弟妇在斗室里煮饭洗衣服，汗流如雨，嘴里还能唱歌。大家劝她省点力气，不必唱了，她笑说：“多出一口气，可以少出一点汗。”这才是伟大的中华儿女的精神，我向她脱帽！

他们新近得了一个儿子，我写信去道贺，并且说：“你们这个孩子应当过继给我，我是长兄！”他们回信说：“别妄想了，你要儿子，自己去想法子吧！”他们以为我自己就没有法子了。“好，走着瞧吧！”

7 My Brother's Wife Who Captivates My Tenderness and Makes My Head Ache

At the mere mention of my third younger brother and his wife, I cannot but feel tenderness and headache at the same time. The two of them have brought me many troubles and also the greatest joy. My younger brother is the most nervous of the four of us, wistful, sensitive, impulsive and sprightly. Being the youngest, he was brought up as wayward and spoiled. But he always obeyed his parents and elder brothers. He had special confidence in me, telling me whatever he thought. I was already a teacher while he was still a high school student. He enjoyed keeping pets like goldfish, pigeons and crickets, assuring one hundred and eight for each kind and naming them after the one hundred and eight heroes of Liangshan.^[1] For example, two of his most ferocious crickets, each kept in an exquisite earthen jar, were called "Lin Chong, the Leopard Head" and "Wu Song, the Buddhist Monk." Whenever he supposed Father wouldn't give him enough money to buy the living creatures he wanted, he would ask me for some and wouldn't stop pestering me until I agreed.

He had a close friend named H, a young girl from a family of our distant relatives. She was born on the same day, one year later, as my brother. During that period, our home was in Shanghai. My second and third younger brothers and I used to go home during the summer and New Year holidays to visit our parents. H's home was also in Shanghai. At the request of her father, who believed that the middle schools in Beijing were better than those in Shanghai, I arranged her entrance into a Beijing girls' school, so we used to travel together during the summer and New Year holidays. We preferred traveling by sea, and none of us suffered seasickness, so we would walk on board and have a good time on the deck in the morning and the evening. My third younger brother got acquainted with her at that time. For my part, I perceived only that they treated each other very amiably, and I

did not consider that things could be otherwise.

Half a year later, my third younger brother suddenly became quiet and began to speak in a tone of sadness. He also became negligent in his studies. Most of his teachers were my former schoolmates. Some of them came and told me, "Your brother has recently become rather muddle-headed. Is he ill?" On hearing this, I visited his school and found him absent from class but lying in bed in his dormitory, humming poems from the volume, *Among Flowers*.^[2] When asked what the matter with him was, he said he had a headache. I found him emaciated, but he could not tell me what his illness was. Assuming that he suffered from malnutrition, I bought him cod-liver oil, condensed milk and other health products, and told him to take them regularly. Then I went back quite worried.

The spring holidays were soon upon us. I invited my second and third brothers as well as H to come with me on an excursion to the Jade Fountain Mountains. Now there seemed to be "something" special between my third younger brother and H, for they smiled bashfully and spoke with an unnatural intonation in their voices. For instance, when we went up the steps of a stoop, H would thank me or my second younger brother if either of us helped her along, but if my third younger brother helped out, she would blush and sometimes tried to break free from him. While drinking tea and chatting by the fountain, my second younger brother and I would ask my third younger brother about his health. He would gesture, making pessimistic remarks, and from time to time cast a furtive glance at H. Then H would blush and stare into the distance, as if she did not hear anything he was saying. This way of acting was quite different from her usual vivacious and polite manner and generally helped me understand what this was all about.

Back from the Jade Fountain Mountains, I interrogated my brother in detail after seeing H off. At first he hemmed and hawed, but went on to acknowledge frankly that he had fallen deeply in love with H, and then asked me for help. I told him seriously, "Love is not play. You are still too young to understand what love is. Besides, H is

an extremely lofty and aggressive girl. You'll get nowhere if—for the sake of your obsession—you neglect your education and stop making progress in your studies!" He fell silent. Soothed by the evening breeze, I accompanied him to school. We barely spoke to each other on the way.

Soon my brother began to move ahead in his studies, but his health worsened. It occurred to me by chance that it might be good for him to drop out of school for a year. That would make it possible for him to distance himself from H and to think over his preoccupation, while enjoying a restful stay with Mother. Thus I wrote a long letter to my parents, telling them only that my third younger brother was not in good health and that I would send him home for a year of rest. At the same time, I sent him back hurriedly.

When I went home during the next summer vacation, I found him healthier and stronger, just as I had expected. One day, Mother told me in private, "Your brother seems to be on very good terms with H. They have been corresponding with each other frequently in recent days." What she said surprised me somewhat, for I had supposed that he was suffering merely from one-sided lovesickness. So I told Mother all that had happened so far. She was very happy and said, "H is the nicest girl among all our relatives. Your brother is very lucky that she has taken a fancy to him." I responded, "But he should give a good account of himself, otherwise he will be unworthy of so nice a girl." Mother changed countenance and said, "I don't see anything unworthy in my little son!" I could only tacitly agree.

A navigation school in Liverpool, England, was meanwhile enrolling new students. My father, entitled to recommend a student for admission, discussed the matter at dinner. Hearing about the offer, my third younger brother felt quite excited and said that he wanted to go. Father said, "Nautical studies are very demanding, and working on board is very harsh. Two of the three students sent there last year have given up and come back. Surely I would allow you to leave us, but I'm afraid that, unable to endure the hardships, you will give up halfway and embarrass me." Mother remained silent.

After dinner, my third younger brother drew my second younger brother into my room and asked me to intercede for him so that Father would allow him to go to England. I replied, "Father has made it very clear that he is not reluctant to let you leave him. If I guarantee I will intercede for you, you on your part should guarantee that you will not abandon your studies halfway." He told me in a sad voice, "Only if all of you have confidence in me and H doesn't look upon me as a decadent, will I pluck up my courage. Since all of us were born by the same parents, I'm sure I won't lag too far behind provided I exert myself!" Finding him head-strong and pathetic, I talked things over with my second younger brother, and then tried to persuade Father.

Availing myself of the occasion, I talked to H, "My third younger brother is going abroad. He is still young and there's hard work ahead. He told me that it is just for your sake that he has steeled his heart once and for all. In case it is possible for you to love him, please encourage him, and in case this is impossible, please tell him clearly so that he may leave without illusions." H blushed, offering no reply. I found it improper to plead with her anymore and went no further. But my brother looked very happy and dauntless when he began his journey, and I was sure that already he had been encouraged.

Love is really incomprehensible. It is remarkable that, once on board, my brother became quite another man, hard-working, painstaking, active and courageous. Among his schoolmates, there were not only Englishmen, but also boys from Scandinavian countries such as Norway and Denmark, all burly and strong, tough and direct. He got along with these naughty boys for five years, traveling all over the seaports of the world and weathering the inclemency of the high seas. Five years later, he came home with a ruddy complexion, a grown body, a cheerful spirit and a certificate of graduation with honors.

Meanwhile, during his absence, H had entered the university and become one of my students, so we had more chances to meet. I often secretly admired my brother's good judgment, since he had chosen a girlfriend as lofty and exquisite as anything he chose for food,

clothing, dwelling and traveling. H was the nicest girl I had ever known, so natural, steady, tender and amiable that she had become the center of admiration both in the university and at home, to the complete satisfaction of my mother.

However, separated for five years, H and my brother quarreled on several occasions. Each time such an incident occurred, my brother would send a letter in haste asking me to save him from some misunderstanding. I found it improper to say too much in most cases, so I often adopted a neutral and impartial stand. Anyway, quarrels between lovers do not last long. Once the pretended vexation was over and the tears were shed, everything returned to normal as if nothing amiss had happened between them, while others were still worrying about their relationship. Successive incidents made me wiser, too. No matter how tense the situation could become, I always took it easy, except for one occasion when H left my brother's letters unanswered for more than half a year and, in spite of my inquiries, my brother did not explain why. Every week I received a very long letter from my brother. It was pasted with all kinds of postal stamps from various countries, each time from a different corner of the world. He always complained about life's meaninglessness and hinted that he would rather drown himself in the sea than go on. At that point, I was overcome with fear.

Back in Beijing, my brother stayed less than an hour at home before he came to see me in the western outskirts. Hardly had he stayed with me for an hour when he went to the girls' dormitory in pursuit of H. From then on, the two lovers would chat in my drawing room. The day before he left for Shanghai to begin his job, the three of us returned from downtown. But our car broke down just as we drove beyond the city gate. The driver got out, and while he was fixing the car, the two young people suddenly reached out and held my hands, telling me that they were already engaged. Although this had been taken for granted, I was still immensely delighted.

During the summer vacation of the following year, my brother traveled northward to congratulate H upon her graduation. Soon they

were married in Beijing. My second younger brother had just come back from the United States in time to be the groom's best man. The young couple stayed a few days with Father before they went back to Shanghai. Together with my second younger brother, I saw them off at the railway station. We still saw them waving good-bye to us from the train as it faded in the distance.

On leaving the station, we walked into the snack bar of the Zhongyuan Co. We took off our hats and sat down. The waiter came up and asked, "Would you gentlemen care for some ice cream?" Feeling quite cool, I replied, "Two bowls of hot noodles, please." After eating the noodles, we went to the building of the Western Returned Scholars Association to attend the dancing tea party held to celebrate the engagement of Yuanyuan, our cousin. While my second younger brother was dancing with quite a few pretty girls, I went into the reading room, found a piece of writing paper and composed a letter to the newlyweds: "Dear H and dear brother, with both of you gone, we feel terribly lonely. Since we have become more temperate, the weather no longer enflames us. As genuine Chinese, we ordered two bowls of hot noodles instead of ice cream at the snack bar of the Zhongyuan Co.!"

For five or six years, the small and exquisite home of my youngest brother and his wife served me as my "temporary dwelling palace." Whenever I traveled southward or northward or spent my summer vacation, I stayed in their home. During the daytime we busied ourselves with our respective activities, and in the evening we would sit together and listen to radio music by candlelight. Sometimes the two of them would quarrel or scuffle in the candlelight, and complained to me as their elder. Sometimes we gathered in the roof garden of a restaurant and they would introduce to me some young girls who were their friends. To me, such events were indeed very interesting and gently provided variations to my calm and stern life.

Last week I received another letter from them, saying, "Our ships have all been taken over for use by the British government. From now on, we can no longer pursue and attack the Japanese smuggling ships

with our small guns. What a pity! But, dear old man, we may possibly be transferred to work there in Chongqing. Would this make your head ache?"

I really have a headache. But it is not because I feel worried!

[1] This is a mountain chain in Shandong province which appears in Shi Nai'an's novel, *Outlaws of the Marsh*, written at the end of the Yuan Dynasty (1206-1368) and the beginning of the Ming Dynasty (1368-1644), as the hideout of a group of one hundred and eight rebels.

[2] *Among Flowers* is a collection of some five hundred poems, most of them based upon love themes, edited by Zhao Chongzuo during the Five Dynasties (907-960 A.D.).

柒 使我心疼头痛的弟妇

提到四弟和四弟妇，真使我又心疼，又头痛。这一对孩子给我不少的麻烦，也给我最大的快乐。四弟是我们四个兄弟中最神经质的一个，善怀、多感、急躁、好动。因为他最小，便养得很任性，很娇惯。虽然如此，他对于父母和哥哥的话总是听从的，对我更是无话不说。我教书的时候，他还是在中学。他喜欢养生物，如金鱼、鸽子、蟋蟀之类，每种必要养满一百零八只，给它们取上梁山泊好汉的绰号。例如他的两只最好勇斗狠的蟋蟀，养在最讲究的瓦罐里的，便是“豹子头林冲”和“行者武松”。他料到父亲不肯多给他钱买生物的时候，便来跟我要钱；定要磨到我答允了为止。

他的恋爱的对象是 H，我们远亲家里的一个小姑娘。他们是同日生的，她只小四弟一岁。那几年我们住在上海，我和三弟四弟，每逢年暑假必回家省亲。H 的家也在上海，她的父亲认为北平的中学比上海的好，就托我送她入北平的女子中学，年暑假必结伴同行。我们都喜欢海行，又都不晕船，在船上早晚都在舱面散步、游戏。四弟就在那时同她熟识了起来。我只觉得他们很和气，决不想到别的。

过了半年，四弟忽然沉默起来，说话总带一点忧郁，功课上也不用心。他的教师多半是我的同学，有的便来告诉我说：“你们老四近来糊涂得很，莫不是有病吧？”我得到这消息，便特地跑进城去，到他校里，发见他没有去上课，躺在宿舍床上，哼哼唧唧的念《花间集》。问他怎么了，他说是头痛。看他的确是瘦了，又说不出病源。我以为是营养不足，便给他买一点鱼肝油，和罐头牛奶之类，叫他按时服用，自己又很忧虑的回来。

不久就是春假了，我约三四弟和 H 同游玉泉山。我发现四弟和 H 中间仿佛有点“什么”，笑得那么羞涩，谈话也不自然。例如上台阶的时候，若是我或三弟搀 H，她就很客气的道谢；四弟搀她的时候，她必定脸红，有时竟摔开手。坐在泉边吃茶闲谈的时候，我和三弟问起四弟的身体，四弟叹息着说些悲观的话，而且常常偷眼看 H。H 却红着脸，望着别处，仿佛没有听见似的。这与她平常活泼客气的态度大不相同，我心里就明白了一大半。从玉泉山回来，送 H 走后，我便细细的盘问四弟，他始而吞吐支吾，继而坦白的承认他在热爱着 H，求我帮忙。我正

色的对他说：“恋爱不是一件游戏，你年纪太小，还不懂得什么叫做恋爱。再说，H 是个极高尚极要强的姑娘，你因着爱她，而致荒废学业，不图上进，这真是缘木求鱼，毫无用处！”四弟默然，晚风中我送他回校，路上我们都不大说话。

四弟功课略有进步，而身体却更坏了。我忽然想起叫他停学一年，一来叫他离 H 远点，可有时间思索；二来他在母亲身旁，可以休息得好。因此便写一封长信报告父母，只说老四身体不大好，送他回去休息一年，一面匆匆的把他送走。

暑假回家去，看他果然壮健了一些。有一天，母亲背地和我说：“老四和 H 仿佛很好，这些日子常常通信。”这却有点出我意外，我总以为他是在单恋着！于是我便把过去一切都对母亲说了，母亲很高兴，说：“H 是我们亲戚中最好的姑娘，她能看上老四，是老四的福气。”我说：“老四也得自己争气才行，否则岂不辱没了人家的姑娘！”母亲怫然说：“我们老四也没有什么太不好处！”我也只好笑了一笑。

那时英国利物浦一个海上学校，正招航海学生，父亲可以保送一名，回家来在饭桌上偶然谈起，四弟非常兴奋，便想要去。父亲说：“航海课程难得很，工作也极辛苦，去年送去三个学生，有两个跑了回来，我不是舍不得你去，是怕你吃不了苦，中途辍学，丢我的脸。”母亲也没有言语。饭后四弟拉着三弟到我屋里来，要我替他向父亲请求，准他到英国去。我说：“父亲说的很明白，不是舍不得你。我担保替你去说，你也得担保不中途辍学。”四弟很难过的说：“只要你们大家都信任我，同时 H 也不当我作一个颓废的人，我就有这一股勇气。我和你们本是同父一母生的，我相信我若努力，也决不会太落后！”我看他说得坚决可怜，便和三弟商量，一面在父亲面前替他说项，一面找个机会和 H 谈话，说：“四弟要出国去了，他年纪小，工作烦难，据说他憋下这一股横劲，为的是你。假如你能爱他，就请予以鼓励，假如你没有爱他的可能，请你明白告诉他，好让他死心离去。”H 红着脸没有回答，我也不便追问，只好算了。然而四弟是很高兴，很有勇气的走的，我相信他已得了鼓励了。

爱情真是一件奇怪的东西，四弟到了船上，竟变了一个人，刻苦、耐劳、活泼、勇敢。他的学伴，除了英国人之外，还有北欧的挪威、丹麦等国的孩子，个个都是魁梧慍悍，粗鲁爽直，他在这群玩童中间混了五年，走遍了世界上的海口，历尽了海上的风波。五年之末，他带着满面的风尘，满身的筋骨，满心的喜乐，和一张荣誉毕业证书回来。

这几年中，H 也入了大学，做了我的学生，见面的机会很多。我常常暗地夸奖四弟的眼光不错，他挑恋爱的对手，也和他平时挑衣食住行的对象一样，那么高贵精致。H 是我眼中所看到的最好的小姑娘，稳静大方，温柔活泼，在校里家中，都做了她周围人们爱慕的对象，这一点是母亲认为万分满意的。五年分别之中，她和四弟也有过几次吵架，几次误会，每次出了事故，四弟必立刻飞函给我，托我解围。我也不便十分劝说，常常只取中立严正的态度。情人的吵架是不会长久的，撒过了娇，流过了眼泪，旁人还在着急的时候，他们自己却早已是没事人了。经过了几次风波，我也学了乖，无论情势如何紧张，我总不放在心上。只有一次，H 有大半年不回四弟的信，我问他也问不出理由，同时每星期得到四弟的万言书，贴着种种不同的邮票，走遍天涯给我写些人生无味的话，似乎有投海的趋势，那时我倒有点恐慌！

四弟回国来，到北平家里不到一个钟头，就到西郊来找我，在我那里又不到一个钟头，就到女生宿舍去找 H，从此这一对小情人，常常在我客厅里谈话。在四弟到上海去就事的前一天，我们三个人从城里坐小汽车回来，刚到城外，汽车抛了锚，在司机下车修理机件之顷，他们忽然一个人拉着我的一只手，告诉我，他们已经订婚了。这似乎是必然的事，然而我当时也有无限的欢悦。

第二年暑假，H 毕业于研究院，四弟北上道贺，就在北平结婚。三弟刚从美国回来，正赶上做了伴郎。他们在父亲那里住了几天，就又回到上海去。我同三弟到车站送行，看火车开出多远，他们还在车窗里挥手。出了车站，我们信步行来，进入中原公司小吃部，脱帽坐下，茶房过来，笑问：“两位先生要冰淇淋吧？”我似乎觉得很凉快，就说：“来两碗热汤面吧。”吃完了面，我们又到欧美同学会，赴表妹元元订婚的跳舞茶会。在三弟同许多漂亮女郎跳舞的时候，我却走到图书室，拿起一张信纸来，给这一对新夫妇写了一封信，我说：“阿 H 同四弟，你们走后，老三和我感到无限的寂寞，心里一凉，天气也不热了。我们是道地中国人，在中原小吃部没吃冰淇淋，却吃了两碗热汤面！”

五六年来，他们小巧精致的家，做了我的行宫，南下北上，或是夏天避暑，总在他们那里小驻。白天各人做各人的事，晚上常是点起蜡烛来听无线电音乐。有时他们也在烛影中撒娇打架，向大哥诉苦，更有时在餐馆屋顶花园，介绍些年轻女友，来同大哥认识。这些事也很有趣，在我冷静严肃的生活之中，是个很温柔的变换。

上星期又得他们一封信说：“我们的船全被英国政府征用了，从此不

能开着小炮，追击日本的走私船只，如何可惜！但是，老头子，我们也许要调到重庆来，你头痛不头痛？”

我真的头痛了，但这头痛不是急出来的！

8 My Wet Nurse

My wet nurse is another woman who inspires deep feelings in me. Whenever I recall her, all my precious childhood trifles rise before my eyes.

She was a country woman from our native place. Her feet were never bound. She had a round face, a pair of smiling eyes which closed lightly like two threads when smiling, a swarthy complexion and a very snub nose. As an extremely fat baby, I was told that I was like her, and I found that was far from flattering. After giving birth to me, Mother fell sick and had no breast milk to nurse me. My grandfather, very worried, began to search all around for wet nurses. After a few were tried for this job without satisfactory results, she came to us and was accepted. It was said that she had left home after quarreling with her mother-in-law. Her three-month-old baby daughter had died not long before, and she had a lot of breast milk. According to Grandfather, as soon as I settled in her lap, I burst out laughing, and after sucking a bit, I quietly fell asleep. Grandfather told her with satisfaction, "Mrs. Hu, please stay. It must be fate that brought Rongguan and you together." And then she stayed with satisfactions, too.

There are only two people in the world who called me Rongguan: my Grandfather and my wet nurse. I still remember what she used to say to me, "Little Rongguan, study diligently and you will pass with honors the imperial examination, become a high-ranking official, make plenty of money, marry a good wife, and have a great number of sons and grandsons. But at that moment don't forget who nursed you to make you grow up!" I was playing each time when she said that to me, and I could feel her work-soiled hand touching me on the neck, itching where she scratched me. As her smiling eyes gazed at me, I readily promised her that I would do as she told me. But thinking back now, I find that I haven't kept my word except for the fact that I

haven't forgotten "who nursed me to make me grow up." I have failed to become a high-ranking official and make plenty of money. As to "marrying a good wife," I am afraid I will have to postpone that until the next life.

Everybody in our home, except the servants, liked her. Grandfather was especially fond of her because he was so fond of me. Wet nurses should be well nourished so that they have enough breast milk for the baby. They should be dressed in new clothes so that they can keep clean and tidy. Father seldom came home, but each time he did, he found me fat and pleasant and was thus favorably impressed with her. Mother, kind to everybody, was even kinder to her. My wet nurse often told me, "Your mother is as kind as the Buddha. Nobody who is kind will go unrewarded. She has been rewarded with a good husband and a good son. There's only one thing wrong. She has spoiled all these servants to such an extent that each one of them is perpetrating outrages to his or her own profit. The day will come when Heaven takes notice and gives them what they deserve!"

At that time it was my mother who was in charge of a large household of over thirty people, family members and servants all told. Because my wet nurse played the role of somebody like a mistress and because she was considerate of mother, she was hated by the maids and servants. She used to go to the kitchen, steelyard in hand, to check the weight of the meat and vegetables our cook had recently purchased. At night, after lulling me to sleep, she would make her rounds to make sure that all the lights were off and the doors were barred. Mother often told her tactfully, "You have only to take care of Rongguan and wash your hands of everything else. Why bring other people's hatred on yourself?" My wet nurse would smile in the way of a reply and become impatient as my mother went on speaking. I remember that once she burst into tears and said, "I do all this for your good, don't I? You, madam, are as kind as the Buddha, and you have never talked in a loud voice. Very soon you will find all the wealth of this household taken away by other people. But I can't bear to see such things happen, and that's why I've come to your aid, only

to earn your reproach." She wiped her tears while she spoke. Mother, however, smiled and said nothing. Suppressing his laughter, Father said seriously to my wet nurse, "We're aware that you have the best of intentions. But while talking to your mistress, you needn't be so impatient and argumentative!" I thought she was really arguing with my mother, and pounded her with all my might on the leg from behind. She turned around, lifted me up suddenly and, carrying me on her back, went away.

Strange to say, it was she who instilled in me the idea of opposing Japanese aggression. When I was eight or nine, a cousin of mine took me out to stroll the streets. Passing by a Japanese restaurant he invited me to go in with him to try the *sukiyaki* dish. I agreed with pleasure, and we took off our shoes and went in. The floor was so slippery that we could have lost our balance, so we walked hand in hand. I was very happy about it. While dining, the two of us were sitting in a kneeling position opposite each other over a low table. On their knees at the other two opposite sides of the table were two Japanese waitresses with oddly powdered faces and necks. They wore their hair in high buns giving off a redolent scent. Busy roasting and seasoning the chicken and persuading us solicitously to eat, they also continued talking and joking with us. Back home from the restaurant, I still remained deeply impressed by the dinner and told everything to my wet nurse. Usually she took a great interest in what I told her about my amusements. But this time she fixed her eyes on me, put on a grave expression and said, "Your cousin must be an unworthy man to have taken you to such a place! If you go there again I will tell your father and he will punish you!" I was so scared that I no longer had any courage to talk about it. Much later, when I told Mother accidentally what happened that day, she didn't find anything wrong in it, and tried to explain to my wet nurse, saying, "My nephew is no rake. He went with Rongguan to a Japanese restaurant, where it is a tradition for waitresses to sit together with the guests." My wet nurse turned her head aside and replied, "They are all shameless! Madam, you have never left the house, so how can you know what this is all about? I can tell you that none of the Japanese is decent. Of those

who run restaurants, run commercial firms and sell Jintan pills, none has good intentions.^[1] Even their consul is one of their gang. He is their chieftain. The waitresses in their restaurants are simply whores, and those who go there once have to go twice. The drugs for stomach troubles their firms are selling make one addicted to them. Those who sell Jintan pills are spies. They often went, to our village, once, twice, three times. The first time they went, they drew a map. The second time they went and examined the place. The third time, they erected their big Jintan advertising placards. While they were drawing their maps, someone peeped from behind and saw they were marking clearly where there was a tree and where a well.... Remember what I'm saying: I'll accept whatever forfeit you may imagine if the Japanese don't wreak havoc here in the future!" Listening to her speech, my father nodded again and again, saying, "She is right. We are bound to suffer even more in the future on account of the Japanese." Finding her supported by my father, my wet nurse got even more excited and said, "Yes, you see? Even Master knows this. Weren't the Japanese those who forcibly took over our small stretch of land and our small grocery? My husband went to law against them and the case was handled by the Japanese consul, so after losing the lawsuit, he died from anger. Before he died, he shouted a whole day, 'Kill the Japanese! Kill the Japanese devils!' You see, I would not have got into such a plight if..." Her face was red with excitement and her lips were shivering; she was all in tears. Mother's eyes were also red with sorrow. Father stood up and said to me, "Rongguan, go with your wet nurse to rest in your room." All I felt at that moment was indignation and shame. On hearing my father's request, I hurried to pull her out and we went back to my room. As I had never heard any of this from her before, I asked her to tell me more once she had calmed down. She heaved a sigh and, caressing me on the head, said, "You see how unfortunate I am. I gave birth only to a daughter and she didn't survive. I have no son, and my mother-in-law kept weeping all day long for her son's death. She cursed me, saying that we would never have anybody to avenge in a fit of rage for feeling wronged. So I left her and my home and came out to work as a wet nurse. I hope I can

nurse and bring up a young master of a well-off family so that, once grown up, he could fight his way eastward across the sea and defeat the enemy in the manner of Xue Rengui.^[2] Then my mother-in-law would be rendered speechless and my dead husband would be avenged. When you grow up..." I instinctively embraced her and replied, "You can rest assured that when I grow up I will fight my way eastward across the sea to struggle against the Japanese invaders!" She hugged me and swayed me gently as she cried, saying, "Only so can you be my precious child!"

It was from then on that I began to harbor animosity against the Japanese invaders. Each time she walked with me on the street, we would hold each other's hand tightly while running into Japanese or passing by Japanese stores. I no longer bought any Japanese toys or accepted any gifts made in Japan. On the pages of a picture book about the Russian-Japanese War given by a friend, I pierced with a knife all the Japanese flags. As I grew up a little more, I began to read carefully books on Japanese geography and maps of Japan, for I was aware that what my wet nurse was expecting earnestly from me included my future "expedition eastward across the sea," in addition to my "becoming a high-ranking official, making a good living and marrying a nice woman."

As she suffered from asthma and was not used to the climate in the North, she did not come with us when we moved to Beijing. Nevertheless, Grandfather often told us something about her in his letters, and she went frequently to visit him and help him with household chores. She had a few letters to us, written by others on behalf of her, and in all these letters she inquired how I was doing with my studies and whether I was engaged to get married. She also asked if our household helpers in the North did well for us and advised my mother to treat them with both kindness and strictness, instead of simply conniving at them. Mother would tell me in a very pleased tone, "Your wet nurse is still taking care of me, and even more in detail than your grandfather does."

Every month my mother mailed some money to her for incidental

expenses, and I took over this responsibility on myself after I became economically independent. At home we thought of her and talked about her often. Above all, at moments of national calamity, her expression of animosity against invaders as well as her image with tears remained in my mind. During the year when Japan imposed on China its Twenty-One Demands^[3] and the year of the May Fourth Movement, while my schoolmates were shouting "Down with Japanese Imperialism!" in the demonstrations, I was echoing in my heart: "Eliminate the Japanese invaders!" as if my wet nurse were holding my hand, walking side by side and shouting with me.

Two years before the outbreak of the War of Resistance against Japan, a student of mine made a trip to my hometown on a field work project, and I asked him to bring some funds to my wet nurse, to pay her a visit and take a picture of her for me. On his return, my student brought me a letter, a photograph and a 14-karat gold ring. In the photograph my wet nurse looked much more aged, though her eyes were still as before—narrowly open with a smile. In her letter she expressed her discontent with me, saying that while all my younger brothers were married, the fact that I remained single near the age of forty meant that I was unworthy as the eldest son. She sent me the ring as a gift to my future wife. This ring and a wrist watch from my mother were the only valuables that I had kept. I sometimes wore the ring so as to give myself a sensation of "getting married."

In the War, families were separated and many lost their lives; and there was no news about my wet nurse. Perhaps she is no longer living now. No matter how much I tried, I was unable to find her whereabouts. Our hometown fell into enemy's hands two months ago, and it is said that the invaders launched a massacre and burned down many buildings. I wonder if my kind-hearted wet nurse was among the numerous victims. I would rather wish she had left this world before the Japanese occupied our hometown. If she was alive, she would have had to witness the "war crime by Japanese invaders" instead of the "expedition eastward across the sea" by her beloved Rongguan. In such a case I cannot imagine the desperate and furious

look that would have appeared on her face....

May she rest in peace, so good a soul! The War has reached a triumphant phase. All the young people of the Chinese nation who are capable of fighting in the front are your sons. The day is not far away when they will set out on the "expedition eastward across the sea"!

[1] Jintan pills were a kind of Japanese medicine widely advertised and sold in China before and during the War of Resistance against Japan (1937-1945).

[2] Xue Rengui (614-683) was a military commander of the Tang Dynasty (618-907 A.D.), well known in a series of novels in which he was said to have been in charge of several victorious expeditions to the west and east of China.

[3] Twenty-One Demands was imposed on China by Japan in 1915 and was accepted by Yuan Shikai, the dictator and President of the Republic of China who was seeking Japanese support in order to proclaim himself Emperor of China and establish a new imperial dynasty. This event gave rise to a nationwide movement of protest which led to the final downfall of the dictator.

捌 我的奶娘

我的奶娘也是我常常怀念的一个女人，一想到她，我童年时代最亲切的琐事，都活跃到眼前来了。

奶娘是我们故乡的乡下人，大脚，圆脸，一对笑眼（一笑眼睛便闭成两道缝），皮肤微黑，鼻子很扁。记得我小的时候很胖，人家说我长的像奶娘，我已觉得那不是句恭维的话。母亲生我之后，病了一场，没有乳水，祖父很着急的四处寻找奶妈，试了几个，都不合式，最后她来了，据说是和她的婆婆呕气出来的，她新死了一个三个月的女儿，乳汁很好。祖父说我一到她的怀里就笑，吃了奶便安稳睡着。祖父很喜欢说：“胡嫂，你住下吧，荣官和你有缘。”她也就很高兴的住下了。

世上叫我“荣官”的只有两个人，一个是我的祖父，一个便是我的奶娘。我总记得她说：“荣官呀，你要好好读书，大了中举人，中进士，作大官，挣大钱，娶个好媳妇，儿孙满堂，那时你别忘了你是吃了谁的奶长大的！”她说这话的时候，我总是在玩着，觉得她粗糙的手，摸在我脖子上，怪解痒的，她一双笑眼看着我，我便满口答允了。如今回想，除了我还没有忘记“是吃了谁的奶长大的”之外，既未作大官，又未挣大钱，至于“娶个好媳妇”这一段，更恐怕是下辈子的事了！

我们一家人，除了佣人之外，都欢喜她，祖父因为宠我，更是宠她。奶娘一定要吃好的，为的是使乳水充足；要穿新的，为的是要干净。父亲不常回来，回来时看见我肥胖有趣，也觉得这奶妈不错。母亲对谁都好，对她更是格外的宽厚。奶娘常和我说：“你妈妈是个菩萨，做好人没有错处，修了个好丈夫，好儿子。就是一样，这班下人都让她惯坏了，个个作恶营私，这些没良心的人，老天爷总有一天睁开眼！”

那时我母亲主持一个大家庭，上下有三十多口，奶娘既以半主自居，又非常的爱护我母亲，便成了一般婢仆所憎畏的人。她常常拿着秤，到厨房里去称厨师父买的菜和肉，夜里拍我睡了以后，就出去巡视灯火，察看门户。母亲常常婉告她说：“你只管荣官好了，这些事用不着你操心，何苦来叫人家讨厌你。”她起先也只笑笑，说多了就发急。记得有一次，她哭了，说：“这些还不是都为你！你是一位菩萨，连高声说话都没说过，眼看这一场家私都让人搬空了，我看过，才来帮你一点忙，你还怪我。”她一边数落，一边擦眼泪。母亲反而笑了，不说什么。

父亲忍着笑，正色说：“我们知道你是好心，不过你和太太说话，不必这样发急，‘你’呀‘我’的，没了规矩！”我只以为她是同我母亲拌嘴，便在后面使劲的搥她的腿，她回头看看，一把拉起我来，背着就走。

说也奇怪，我的抗日思想，还是我的奶娘给培养起来的。大约是在八九岁的时候，有一位堂哥哥带我出去逛街，看见一家日本的御料理，他说要请我吃“鸡素烧”，我欣然答应。脱鞋进门，地板光滑，我们两人拉着手溜走，我已是很高兴。等到吃饭的时候，我和堂哥对跪在矮几的两边，上下首跪着两个日本侍女，搽着满脸满脖子的怪粉，梳着高高的髻，油香逼人。她们手忙脚乱，烧鸡调味，殷勤劝进，还不住的和我们说笑。吃完饭回来，我觉得印象很深，一进门便一五一十的告诉了我的奶娘。她素来是爱听我的游玩报告的，这次却睁大了眼睛，沉着脸，说：“你哥哥就不是好人，单拉你往那些地方跑！下次再去，我就告诉你的父亲打你！”我吓得不敢再说。过了许多日子，偶然同母亲提起，母亲倒不觉得这是一件坏事，还向奶娘解释，说：“侄少爷不是一个荒唐人，他带荣官去的地方是日本饭馆子；日本的规矩，是侍女和客人坐在一起的。”奶娘扭过头去说：“这班不要脸的东西！太太，您大门不出，二门不迈的，哪里知道这些事呀！告诉您听吧，东洋人就没有一个好的：开馆子的、开洋行的、卖仁丹的，没有一个安着好心，连他们的领事都是他们一伙，而且就是贼头。他们的饭馆侍女，就是窑姐，客人去吃一次，下次还要去。洋行里卖胃药，一吃就上瘾。卖仁丹的，就是眼线，往常到我们村里，一次、两次、三次，头一次画下了图，第二次再来察看，第三次就竖起了仁丹的大板牌子。他们画图的时候，有人在后面偷偷看过，那地方有树，那地方有井……都记得清清楚楚。您记着我的话，将来我们这里，要没有东洋人造反，您怎样罚我都行！”父亲在旁边听着，连连点头，说：“她这话有道理，我们将来一定还要吃日本人的亏。”奶娘因为父亲赞成她，更加高兴了，说：“是不是？老爷也知道，我们那几亩地，那一间杂货铺，还不是让日本人强占去的？到东洋领事那里打了一场官司，我们孩子的爸爸回来就气死了，临死还叫了一夜：‘打死日本人，打死东洋鬼。’您看，若不是……我还不至于……”她兴奋得脸也红了，嘴唇哆嗦着，眼里也充满了泪光。母亲眼眶也红了。父亲站了起来，说：“荣官，你带奶娘回屋歇一歇吧。”我那时只觉得又愤激又抱愧，听见父亲的话，连忙拉她回到屋里。这一段话，从来没听见她说过，等她安静下来，我又问她一番。她叹口气抚摩着我说：“你看我的命多苦，只生了一个女儿，还长不大。只因我没有儿子，我的婆婆整天哭她的儿子，还诅咒我，说她儿子的仇，一辈子没人报了。我一赌

气，便出来当奶娘。我想奶一个大人家的少爷，将来像薛仁贵似的跨海征东，堵了我婆婆的嘴，出了我那死鬼男人的气。你大了……”我赶紧搂着她的脖子说：“你放心，我大了一定去跨海征东，打死日本人，打死东洋鬼！”眼泪滚下了她的笑脸，她也紧紧的搂着我，轻轻的摇晃着，说：“这才是我的好宝贝！”

从此我恨了日本人，每次奶娘带我到街上去，遇见日本人，或经过日本人的铺子，我们互搀着的手，都不由的捏紧了起来。我从来不肯买日本玩具，也不肯接受日货的礼物。朋友们送给我的日俄战争图画，我把上面的日本旗帜，都用小刀刺穿。稍大以后，我很用心的读日本地理，看东洋地图，因为我知道奶娘所厚望于我的，除了“作大官，挣大钱，娶个好媳妇”以外，还有“跨海征东”这一件事。

我的奶娘，有气喘的病，不服北方的水土，所以我们搬到北平的时候，她没有跟去。不过从祖父的信里，常常听到她的消息，她常来看祖父，也有时在祖父那里做些短工。她自己也常常请人写信来，每信都问荣官功课如何，定婚了没有。也问北方的佣人勤谨否。又劝我母亲驭下要恩威并济，不要太容纵了他们。母亲常常对我笑说：“你奶娘到如今还管着我，比你祖父还仔细。”

母亲按月寄钱给她零用，到了我经济独立以后，便由我来供给她。我们在家里，常常要想到她，提到她，尤其是在国难期间，她的恨声和眼泪，总悬在我的眼前。在日本提出二十一条和五四那年，学生游行示威的时候，同学们在高呼“打倒日本帝国主义”，我却心里在喊“打死东洋鬼”。仿佛我的奶娘在牵着我的手，和我一同走，和我一同喊似的。

抗战的前两年，我有一个学生到故乡去做调查工作，我托他带一笔款子送给我的奶娘，并托他去访问，替她照一张相片。学生回来时，带来一封书信，一张相片，和一只九成金的戒指。相片上的奶娘是老得多了，那一双老眼却还是笑成两道缝。信上是些不满意于我的话，她觉得弟弟们都结婚了，而我将近四十岁还是单身，不是一个孝顺的长子。因此她寄来一只戒指，是预备送给我将来的太太的。这只戒指和一只母亲送给我的手表，是我仅有的贵重物品，我有时也带上它，希望可以做一个“娶媳妇”的灵感！

抗战后，死生流转，奶娘的消息便隔绝了。也许是已死去了吧，我辗转都得不到一点信息。我的故乡在两月以前沦陷了，听说焚杀得很惨，不知那许多牺牲者之中，有没有我那良善的奶娘？我倒希望她在故

乡沦陷以前死去。否则她没有看得见她的荣官“跨海征东”，却赶上了“东洋人造反”，我不能想象我的亲爱的奶娘那种深悲狂怒的神情……

安息吧，这良善的灵魂。抗战已进入了胜利阶段，能执干戈的中华民族的青年，都是你的儿子，跨海征东之期，不在远了！

9 My Classmate

Among all our classmates, male and female, Miss L was the most respected. Everyone called her "Elder Sister L." For us boys it was improper to inquire about the age of our girl classmates, but we supposed that she was only a little older than the rest of us. However, she never wore makeup and always kept her hair high. She dressed in quiet colors and her clothes were out of fashion. Whenever she spoke to us, she used both our family and given names in a way that sounded unceremonious, affectionate and elder-sister-like. So all of us, as if by a prior agreement, called her "elder sister" with heartfelt admiration.

A native of Fujian province in the south, Miss L had a swarthy complexion and big eyes. She was quick and concise both in speech and action. She used to mediate among classmates to quell their disputes and help them solve their troublesome problems. She only needed to step forward as a sponsor at any gathering or recreational activity to earn everyone's favorable response and support. She demonstrated frankness and impartiality in judgment, instead of timidity and reserve of most girl students. You might argue or even quarrel with her, but if your stance was reasonable, she was always willing to admit defeat. Furthermore, she showed no partiality to her fellow girl classmates, since she believed that favoritism of that sort would imply male supremacy. Why do women, who are also human beings, need special allowance? Once our principal spoke of her, saying that she "had the same train of thought as men," which we all believed to be the highest compliment for her. She was our class monitor for three years running. During those years, our class experienced neither fraction based on sex nor political parties. Everybody in our preparatory class for medical studies led a very busy and happy life under the banner of "Supporting the Leader."

One day in my last year in the pre-med class, I was called

unexpectedly by our tutor for a talk in his office. He asked me very politely to sit down and told me tactfully that I was unsuitable for this course of study because the school doctor had found something wrong with my lungs, and he advised me to pass to another department. That was really a bolt from the blue for me! I had chosen medicine as my specialty before the age of ten, because my sickly mother had taken herbal prescriptions to little effect and was reluctant to allow an auscultation of her heart and lungs by Western-style doctors. I made up my mind to study medicine, in order to treat my mother's illnesses myself. I did quite well during the first three years of pre-med studies. I was looking forward to the beginning of regular curriculum in the medical college, but had to give up my ambitions while moving toward the brink of success! I could hardly stand as I left the tutor's office.

The next class that afternoon was experimental physiology. Dumbstruck, I was sitting at the desk watching how Miss L, with her sleeves rolled up and her head bending low, was moving her scalpel with great swiftness and dexterity in dissecting a dead cat to examine its nervous system. The other classmates were also too busy to pay any attention to me. Miss L raised her head as I called her in a soft voice, "Elder Sister L, I can no longer stay with you. The tutor has advised me not to go on studying medicine, because the school doctor says there is something wrong with my lungs..." She laid down her scalpel, astounded, and asked, "Is it tuberculosis?" I shook my head, "No, it isn't. I have been told that it is a serious lung disease.... Anyway, I will have to transfer to another department. What a pity!" Elder Sister L was silent for a while and came up to comfort me: "It's really a pity. A young man as gentle and careful as you are would surely become an excellent doctor. But if you aren't in very good health yourself, medical studies will do harm to you, and even to other people. I am sure you will still be successful if you switch to another discipline. Life goes on a winding road. A loss is sometimes a gain."

After class, the news got around. All my classmates came up to

express how sorry they felt for me and tried to comfort me. However, Elder Sister L's response was rather realistic: she was thinking about which department would be the most suitable for me to transfer into now. She told me, "There's only one year left for you to enter the regular college courses, and you still haven't fulfilled enough credits to place in another field. I think that it would be easier for you to go into the Department of Literature." She hastened to add, "You've always shown great interest in literature. I often thought that it was a loss for you to study medicine."

Following Elder Sister's advice, I went into the Department of Literature. What I had been reading as a pastime now became the discipline of my academic endeavor. It was just like "hitting the mark by a fluke." Literature became more and more interesting to me. I not only read, but also wrote. After reading and writing I usually dropped in at dusk to chat with my former classmates in their laboratories, while Elder Sister L was giving orders to them and discussing their upcoming graduation.

She used to inquire earnestly as to how I was getting along in my studies and asked me to let her read my writings, which she always praised highly, advising me to read and write as much as possible. Guided and encouraged by Elder Sister, I was recovering more and more from the sadness caused by the forced change in disciplines and acquiring more and more courage in my writing. Recalling today what had happened at that time, I find that, but for the encouragement and advice she gave me at that juncture of change, I would have become a despondent man and given up my life as hopeless.

Elder Sister was already a well-known obstetrician when I began teaching. As the center of respect and admiration for most doctors and nurses, she kept her leadership intact in the hospital, just as she had done at college. Many of my former classmates worked in that big hospital, and each time I went downtown, I would drop in to see them dressed in white, carrying stethoscopes and walking hurriedly up and down the clean and tidy corridor. The fresh smell of medicine always gave rise to some indescribable feeling as if I were a wounded and

dismissed soldier, covered in bandages and sitting on the top of a hill where I watched with a mixed sensation of envy and sadness how my fellow soldiers were drilling on the ground, in spite of my developing interest in my new career.

My former classmates often invited me to dine in their hospital and chat while smoking with them in the lounge. They told me many things about some difficult and complicated diseases. One of them, specialized in mental diseases, told me a lot about such cases. Elder Sister L would say to me in laughter, "X, all of this is good source material for writing stories. Carefully take note of it!"

A little over a month before the beginning of the War of Resistance against Japan, I came back from Europe just in time for a gathering of alumni on the old campus. That evening we had a large meeting of former classmates, with a big and distinguished attendance! Over the last ten years or so, almost all of my one hundred odd classmates had achieved success in their careers and had given birth to a great many sons and daughters. (I was, of course, the only one who failed to accomplish these things.) Attending the gathering with their families, my classmates filled the large hall. Amidst the endless toasts among them and the joyful cheers of their children, Elder Sister was sitting at the right side of the chairman, glancing right and left with great satisfaction. She said that ninety-five percent of these children had been born under her care as an obstetrician. Warm with wine, we began to talk about the funny events of our college years, and the atmosphere became increasingly ardent. Suddenly the chairman stood up and, knocking at the table, made the following suggestion: "I now suggest that each one of us tell in turn what kind of a person he or she would like to become if reincarnation into another human being in the next life were possible." All of us burst into laughter. Then someone said he would like to be a general, and another a millionaire.... When it was my turn, Elder Sister giggled abruptly and said, "I'm sure you would like to be a woman in your next life." On hearing that, everyone rocked backwards and forwards with laughter. Feeling somewhat ill at ease in the

presence of so many ladies, I launched a smiling counter-attack, "Dear Dr. L, I'm sure you would like to be a man in your next life." She replied, "No, I wouldn't. I would like to remain a woman, but a beautiful woman, a social butterfly, admired by and attached to every man!" She said this laughing. The ladies stood up one after another and, roaring with laughter, said to her, "Elder Sister L, you are wrong in saying this. Look, which one of our classmates is not looking upon you with admiration and affection? Come on, you ought to drink a cup as a concession." We all applauded these words to liven things up. What Elder Sister L had said so audaciously in the knowledge of her seniority had turned out to be to her own disadvantage! And then the small children brought cups and the grown-ups poured her wine, which she tried to decline, but in vain. Everyone split his or her sides with laughter. And our well-known Dr. L, who had never before sipped a single drop of wine, ended up getting a bit drunk.

But happy gatherings are not held every day and happy hours rarely come again. It is still melancholy to recall that day's joyful reunion of former classmates, who came from different corners of the earth. After the Lugou Bridge Incident of July 7, 1937, while still staying in Beijing and feeling rather vexed, I would drop in to pay Elder Sister L a visit in her hospital whenever I passed by. I always found her knitting her brows and speaking thoughtfully, "I can't stay here any longer. Here we merely 'exist' rather than live a human life! Let's go, go to Free China^[1]. There people do everything they can. You could use your pen, and we our hands. I'm sure that people like us are needed there since we can do our part!" We all nodded in agreement. I said, "You doctors are the most needed these days. But what can people like me do with a mere pen? If it had not been for..." Elder Sister cut me short and said seriously, "X, I don't allow you to say nonsense any more. You yourself are well aware of what you can do. Fancy a man specialized in literature needing encouragement and enlightenment from people like us!"

Within a year, we all silently left the ancient capital^[2] occupied by the Japanese. Since then, I haven't seen our Elder Sister L. But this

respectable name was often mentioned by some people who said that she was in a city in Southwest China, wearing a military uniform and with her gray hair cut short. She was striving happily and unremittingly against the harsh conditions of those remote miasmic areas, delivering hundreds and thousands of Chinese children with her brisk and nimble hands. She not only ushered them into life, but also guided their parents to derive unlimited nourishment from a limited food supply. She was bringing up innumerable future fighters for our nation.

I hope that in the near future, when all of us meet in another gathering of former classmates, I may tell her: "Elder Sister L, I wish I could become a woman in my next life, but I must be a woman like you!"

[1] Those were the areas inside China unoccupied by Japan.

[2] This refers to Beijing.

玖 我的同班

L 女士是我们全班男女同学所最敬爱的一个人。大家都称呼她“L 大姐”。我们男同学不大好意思打听女同学的岁数，惟据推测，她不会比我们大到多少。但她从不打扮，梳着高高的头，穿着黯淡不入时的衣服，称呼我们的时候，总是连名带姓，以不客气的、亲热的、大姐姐的态度处之。我们也就不约而同，心诚悦服的叫她大姐了。

L 女士是闽南人，皮肤很黑，眼睛很大，说话做事，敏捷了当。在同学中间，疏通调停，排难解纷，无论是什么集会，什么娱乐，只要是 L 大姐登高一呼，大家都是拥护响应的。她的好处是态度坦白，判断公允，没有一般女同学的羞怯和隐藏。你可和她辩论，甚至吵架，只要你的理长，她是不会不认输的。同时她对女同学也并不偏袒，她认为偏袒女生，就是重男轻女；女子也是人，为什么要人家特别容让呢？我们的校长有一次说她“有和男人一样的思路”，我们都以为这是对她最高的奖辞。她一连做了三年的班长，在我们中间，没有男女之分，党派之别，大家都在“拥护领袖”的旗帜之下，过了三年医预科的忙碌而快乐的生活。

在医预科的末一年，有一天，我们的班导师忽然叫我去见他。在办公室里，他很客气的叫我坐下，婉转的对我说，校医发现我的肺部有些毛病，学医于我不宜，劝我转系。这真是一个晴天霹雳！我要学医，是十岁以前就决定的。因我的母亲多病，服中医的药不大见效，西医诊病的时候，总要听听心部肺部，母亲又不愿意，因此，我就立下志愿要学医，学成了好替我的母亲医病。在医预科三年，成绩还不算坏，眼看将要升入本科了，如今竟然功亏一篑！从班导师的办公室里走出来的时候，我几乎是连路都走不动了。

午后这一堂是生理学实验。我只呆坐在桌边，看着对面的 L 大姐卷着袖子，低着头，按着一只死猫，在解剖神经，那刀子下得又利又快！其余的同学也都忙着，没有人注意到我。我轻轻的叫了一声，L 大姐便抬起头来，我说：“L 大姐，我不能同你们在一起了，导师不让我继续学医，因为校医说我肺有毛病……”L 大姐愕然，刀也放下了，说：“不是肺病吧？”我摇头说：“不是，据说是肺气枝涨大……无论如何，我要转系了，你看！”L 大姐沉默了一会，便走过来安慰我说：“可惜的很，像你

这么一个温和细心的人，将来一定可以做个很好的医生，不过假如你自己身体不好，学医不但要耽误自己，也要耽误别人。同时我相信你若改学别科，也会有成就的。人生的路线，曲折得很，塞翁失马，安知非福？”

下了课，这消息便传遍了，同班们都来向我表示惋惜，也加以劝慰，L 大姐却很实际的替我决定要转哪一个系。她说：“你转大学本科，只剩一年了，学分都不大够，恐怕还是文学系容易些。”她赶紧又加上一句，“你素来对文学就极感兴趣，我常常觉得你学医是太可惜了。”

我听了大姐的话，转入了文学系。从前拿来消遣的东西，现在却当功课读了。正是“歪打正着”，我对于文学，起了更大的兴趣，不但读，而且写。读写之余，在傍晚的时候，我仍常常跑到他们的实验室里去闲谈，听 L 大姐发号施令，商量他们毕业的事情。

大姐常常殷勤的查问我的功课，又索读我的作品。她对我的作品，总是十分叹赏，鼓励我要多读多写。在她的指导鼓励之下，我渐渐的消灭了被逼改行的伤心，而增加了写作的勇气。至今回想，当时若没有大姐的勉励和劝导，恐怕在那转变的关键之中，我要做了一个颓废而不振作的人吧！

在我教书的时候，L 大姐已是一个很有名的产科医生了。在医院里，和在学校里一样，她仍是保持着领袖的地位，作一班大夫和护士们敬爱的中心。在那个大医院里，我的同学很多，我每次进城去，必到那里走走，看他们个个穿着白衣，挂着听诊器，在那整洁的甬道里，忙忙的走来走去。闻着一股清爽的药香，我心中常有一种说不出的感觉，如同一个受伤退伍的兵士，裹着绷带，坐在山头，看他的伙伴们在广场上操练一样，也许是羡慕，也许是伤心，虽然我对于我的职业，仍是抱着与时俱增的兴趣。

同学们常常留我在医院里吃饭，在他们的休息室里吸烟闲谈，也告诉我许多疑难的病症。一个研究精神病的同学，还告诉我许多关于精神病的故事。L 大姐常常笑说：“× × ×，这都是你写作的材料，快好好的记下吧！”

抗战前一个多月，我从欧洲回来，正赶上校友返校日。那天晚上，我们的同级有个联欢大会，真是济济多士！十余年中，我们一百多个同级，差不多个个名成业就，儿女成行（当然我是一个例外！），大家携眷莅临，很大的一个厅堂都坐满了。觥筹交错，童稚欢呼，大姐坐在主

席的右边，很高兴的左顾右盼，说这几十个孩子之中，有百分之九十五是她接引降生的。酒酣耳热，大家谈起做学生时代的笑话，情况愈加热烈了。主席忽然起立，敲着桌子提议：“现在请求大家轮流述说，假如下一辈子再托生，还能做一个人的时候，你愿意做一个什么样的人？”大家哄然大笑。于是有人说他愿意做一个大元帅，有人说愿做个百万富翁……轮到我的时候，大姐忽然大笑起来，说：“×××教授，我知道你下一辈子一定愿意做一个女人。”大家听了都笑得前仰后合；当着许多太太们，我觉得有点不好意思，我也笑着反攻说：“L大夫，我知道你下一辈子，一定愿意做一个男人。”L大姐说：“不，我仍愿意做一个女人，不过要做一个漂亮的女人，我做交际明星，做一切男人们恋慕的对象……”她一边说一边笑，那些太太们听了纷纷起立，哄笑着说：“L大姐，您这话就不对，您看您这一班同学，哪一个不恋慕您？来，来，我们要罚您一杯酒。”我们大家立刻鼓掌助兴。L大姐倚老卖老的话，害了她自己了！于是小孩们捧杯，太太们斟酒，L大姐固辞不获，大家笑成一团。结果是滴酒不入的L大医生，那晚上也有些醉意了。

盛会不常，佳时难再，那次欢乐的集会，同班们三三两两的天涯重聚，提起来都有些怅惘，事变后，我还在北平，心里烦闷得很，到医院里去的时候，L大姐常常深思的皱着眉对我们说：“我呆不下去了。在这里不是‘生’着，只是‘活’着！我们都走吧，走到自由中国去，大家各尽所能，你用你的一支笔，我们用我们的一双手，我相信大后方还用得着我们这样的人！”大家都点点头。我说：“你们医生是当今第一等人材，我这拿笔杆的人，做得了什么事？假若当初……”大姐正色拦住我说：“×××，我不许你再说这些无益的话。你自己知道你能做些什么事，学文学的人还要我们来替你打气，真是！”

一年内，我们都悄然的离开了沦陷的故都，我从那时起，便没有看见过我们的L大姐，不过这个可敬的名字，常常在人们口里传说着，说L大姐在西南的一个城市里，换上军装，灰白的头发也已经剪短了。她正在和她的环境，快乐的、不断的奋斗，在蛮烟瘴雨里，她的敏捷矫健的双手，又接下了成千累百的中华民族的孩童。她不但接引他们出世，还指导他们的父母，在有限的食物里，找出无限的滋养料。她正在造就无数的将来的民族斗士！

我希望在不久的将来，我们回到故都重开级会的时候，我能对她说：“L大姐，下一辈子我情愿做一个女人，不过我一定要做像你这样的女人！”

10 My Schoolmate

I wonder whether women usually like talking about men when they are together. As for us men, we often talk about women when we are together in college. We especially like to talk about the way women look.

What we can put forward as an excuse is that we don't talk about a particular woman, making critical remarks about her appearance. What we discuss are the abstract criteria of women's attractiveness or homeliness. For instance, we believe there are three kinds of women as far as attractiveness is concerned. Women of the first kind look pretty at first sight but become less so the more you look at them. Those of the second kind do not look pretty at first sight, but you will find them prettier the more you look at them. And those of the third kind are so pretty that they astound you from the very first glance and you find them prettier the more you look at them!

Of the first kind are mainly women of slender figure and soft white complexion. At first sight, a woman in this category seems quite attractive. But you need no more than exchange a few conventional greetings with her and sit down and chat with her for a while to find her eyebrows drawn too thin with the pencil, her lips too thick with lipstick, her voice too coarse and her manners too frivolous. After meeting her several times, you will even feel that she is dull and empty in speech and repulsive in appearance.

Of the second kind are often women decked out in a simple way and plain in features. At first sight, a woman in this category makes no particular impression on you. But after talking to her and doing business with her on a few occasions, you will find her natural and poised in manners, easy-going about affairs, noble and unsullied in her personal taste. She wears quietly elegant clothing, while her frequent smile appears gentle and mild on a face that is free of any cosmetics. Once you have made her acquaintance you can hardly forget her.

The third kind of woman reminds you of a divine crane standing out among a flock of fowls, emerging as a single red visage in the midst of thick green foliage. You can single out such a woman among the vast ocean of countless people without the slightest hesitation. Actually, what happens is that she suddenly deprives you of all hesitation and perplexity as soon as she emerges from the crowd to impress you visually. A woman of this kind has a body often "appropriately tallish, svelte in the right measure, ... needing no perfume whatsoever nor any kind of cosmetics,"^[1] enshrining a crystal-pure and delicate soul. In every word, smile and gesture, she radiates a glow and grace charming and dignified, possessing the elegance of a white lotus flower that looms in the water of a quiet pond.

If you have more chances to meet her, you will probably find her serene in style, eloquent and fluent in speech, and neither too cold nor too ardent while talking. Throughout your life, it will be possible for you to come across such a woman at most once or twice, or not even once!

As for me, I have met such a woman only once!

Miss C was a schoolmate of mine at college, two grades my senior. On the first day that I entered the university, one hour before the opening ceremony, I caught sight of her in the long corridor in front of the Auditorium.

All girl students at that time used to wear school uniforms: the same white linen blouse and the same black silk skirt. Over one hundred of them on that occasion formed a long queue. Such a blouse and skirt amidst the crowd seemed to set off the curve of Miss C's slender figure. She didn't speak loud, nor did she laugh. Once or twice I noticed her talking in whispers with her companions. When she bent her head or turned it to one side, I found her eyes big and extremely dark, dancing and lighting up the hair on her temples.

We took our seats in the Auditorium—each one had his or her seat fixed according to his or her grade—and I found her seated three

rows in front of me, at my right side, a little inclined leisurely to the right, showing me an extremely beautiful profile: thick and black hair on the temple, a shapely ear, a snow-white neck, and the lovely corner of an eye beneath the delicate tip of an eyebrow. Whenever the speaker on the rostrum said something humorous, I saw that she would bend her head slightly and raise her left hand gently to support her cheek with tender, white fingers, in what should have been an apparent or suppressed smile. This scene made an extremely clear and profound impression on me. During the next two years, until her graduation, I always kept the same seat whenever there was a meeting in the Auditorium. This enabled me to catch sight of her beautiful profile.

Although we were in different grades, we met on many occasions, such as during the activities of the college chorus, the editorial board of the college journal and the various societies. As a popular senior, she held very responsible posts in every organization she joined. Her presence was sufficient for any gathering to be fully attended and to be held in a harmonious and solemn atmosphere. To say nothing of the boy students, whose admiration and respect for her was beyond question, the girl students, too, admired and respected her very highly. I never heard a single remark expressing discontent with her on the part of any of my schoolmates.

A native of Guangdong province, Miss C had grown up, however, in the North, and spoke very pure Beijing Mandarin. Playing an unimportant role in these gatherings, I used to take my seat quietly in the last row, appreciating her calm and steady way of handling things and listening to her plain and simple words. Not only was she on intimate and amiable terms with her girl schoolmates, but she also treated the boy schoolmates with modesty and poise. Her gentle smiles would free us from the inexplicable discomfort and shyness that used to come over us in her presence. I don't believe that I was apt to blush, but I noticed that many of my male schoolmates with glib tongues also used to stand speechless in front of Miss C, for she was like the bright sun nobody dared observe squarely.

I was told that a good many college friends had sent her love letters. She never replied, but she didn't feel offended either. We didn't hear that she had any lover outside the campus. As for me? Younger in age and lower in grade, I never dared to think of writing her love letters. But during those years, she was always enshrined in my heart. Even now, whenever I recall my college years in my dreams, she emerges before my eyes, playing ball or delivering a speech, gleaming and dancing like a sparkle in the mist of my fascinating reveries. Maybe this is just the "poetic mood" referred to by Mr. Lao She^[2] in his novels! I know that I am worthy, after all, of my ideals, for these have been the only occasions in my whole life when some "poetic mood" has flashed in my mind.

During the year when Miss C was to graduate from college, I had a chance to perform with her in a play. We played the two leading roles in one act, an event that I will never forget! It was an act from Maeterlinck's *Blue Bird*. The performance was part of the university's program for raising funds that year to relieve the people of the drought-stricken areas of Northern China. I was chosen as the chief of the theatrical section of the program, responsible for choosing and translating the script and selecting actors and actresses. I assigned myself the role of the little hero and invited Miss C to play the part of the "Goddess of Light."

That evening, when the act of the "Temple of Light" began, I walked out of the dark shade and stopped in front of her. When I raised my head, I saw the dazzling spotlights shining upon Miss C, all wrapped in a fine gauze garment speckled with silvery flakes, and holding a silver wand in her hand. The makeup afforded her beautiful eyes still greater gleam and depth. Her cheeks were rosy and her fresh cherry-like lips glistened and reminded me of the falling dew. When we began our dialogue, her silvery voice at first seemed to quiver a bit, but soon became louder and clearer. And I, as if enlightened by a certain inspiration, found myself in very high spirits, and remained so until the end of the play. I think that if I had been a composer, I would have composed a symphony that evening, and had I been a

poet, I would have written a long poem. But what a pity I was neither the one nor the other, and all I could do was to dream half a night's confused, ethereal dreams!

After my own graduation from the university, I met her several times in the United States. Later on, while teaching in my Alma Mater after returning to China, I learned that she had married a certain Doctor L and was living in Tianjin. Exchanging information with former schoolmates at frequent get-togethers, I was told that her husband was a very good doctor and that her children were pretty and smart like her.

The last time I heard about her was ten days before the outbreak of the War of Resistance against Japan. Just after my return from Europe, I was dining in the home of an elderly American professor. He told me that he had given a lecture in Tianjin one week before. An extremely pretty lady came up and shook hands with him at the tea party held afterwards. Scratching his head, he asked me, "Who do you think it was? None other than our pretty Miss C! I hadn't seen her for eight or nine years, but, it's hard to believe—she looked as attractive and young as before.... Do you remember her?" I replied, "How can I forget her? I've been to Tokyo, New York, London, Paris, Rome, Berlin and Moscow..., but nowhere have I seen a more attractive woman!"

Another six years have passed without any news about her, but I am sure that her dignified personality and her beautiful features always turn everything around her into a paradise of light. May she enjoy all the good things that come from her radiance, may her husband be virtuous forever, and may her children be lovable forever, for blessed is her husband and so are her children.

[1] This is from "Goddess Luo Rhapsody" (*Luo Shen Fu*) by Cao Zhi (192-232).

[2] Lao She (1899-1966) was a well-known Chinese writer and playwright. He committed suicide at the beginning of the Cultural Revolution.

拾 我的同学

不知女人在一起的时间，是常谈到男人不是？我们一班朋友在一起的时候，的确常谈着女人，而且常常评论到女人的美丑。

我们所引以自恕的，是我们不是提起某个女人，来品头论足；我们是抽象的谈到女人美丑的标准。比如说，我们认为女人的美可分为三种：第一种是乍看是美，越看越不美；第二种是乍看不美，越看越觉出美来；第三种是一看就美，越看越美！

第一种多半是身段窈窕，皮肤洁白的女人，瞥见时似乎很动人，但寒暄过后，坐下一谈，就觉得她眉画得太细，唇涂得太红，声音太粗糙，态度太轻浮，见过几次之后，你简直觉得她言语无味，面目可憎。

第二种往往是装束素朴，面目平凡的女人，乍见时不给人以特别的印象。但在谈过几次话，同办过几次事以后，你会渐渐的觉得她态度大方，办事稳健，雅淡的衣饰，显出她高洁的品味；不施铅华的脸上，常常含着柔静的微笑，这种女人，认识了之后，很不易使人忘掉。

第三种女人，是鸡群中的仙鹤，万绿丛里的一点红光！在万人如海之中，你会毫不迟疑的把她拣拔了出来。事实上，是在不容你迟疑之顷，她自己从人丛中浮跃了出来，打击在你的眼帘上。这种女人，往往是在“修短合度，秣纤适中……芳泽无加，铅华弗御”的躯壳里，投进了一个玲珑高洁的灵魂。她的一言一笑，一举一动，都流露着一种神情，一种风韵，既流丽，又端庄，好像白莲出水，玉立亭亭。

假如有机会多认识她，你也许会发现她态度从容，辩才无碍，言谈之际，意暖神寒。这种女人，你一生至多遇见一两次，也许一次都遇不见！

我也就遇见过一次！

C 女士是我在大学时的同学，她比我高两班。我入大学的第一天，在举行开学典礼之前一小时，在大礼堂前的长廊上，瞥见了她。

那时的女同学，都还穿着制服，一色的月白布衫，黑绸裙儿，长蛇般的队伍，总有一二百个。在人群中，那竹布衫子，黑绸裙子，似乎特别的衬托出 C 女士那天矫的游龙般的身段。她并没有大声说话，也不曾

笑，偶然看见她和近旁的女伴耳语，一低头，一侧面，只觉得她眼睛很大，极黑，横波入鬓，转盼流光。

及至进入礼堂坐下——我们是按着班次坐的，每人有一定的座位——她正坐在我右方前三排的位子上，从从容容略向右倚。我正看一个极其美丽潇洒的侧影：浓黑的鬓发，一个润厚的耳廓，洁白的颈子，美丽的眼角和眉梢。台上讲话的人，偶然有引人发笑之处，总看见她微微的低下头，轻轻的举起左手，那润白的手指，托在腮边，似乎在微笑，又似乎在忍着笑。这印象我极其清楚，也很深。以后的两年中，直到她毕业时为止，在集会的时候，我总在同一座位上，看到这美丽的侧影。

我们虽不同班，而见面的时候很多，如同歌咏队，校刊编辑部，以及什么学会等等。她是大班的学生，人望又好，在每一团体，总是负着重要的责任。任何集会，只要有 C 女士在内，人数到的总是齐全，空气也十分融和静穆，男同学们对她固然敬慕，女同学们对她也是极其爱戴，我没有听见一个同学，对她有过不满的批评。

C 女士是广东人，却在北方生长，一口清脆的北平官话。在集会中，我总是下级干部，在末座静静的领略她稳静的风度，听取她简洁的谈话。她对女同学固然亲密和气，对男同学也很谦逊大方，她的温和的笑，解除了我们莫名其妙的局促和羞涩，我觉得我并不是常常红脸的人，对别的女同学，我从不觉得恼垢。但我看不只我一个人如此，许多口能舌辩的男同学，在 C 女士面前，也往往说不出话来，她是一轮明丽的太阳，没有人敢向她正视。

我知道有许多大班的男同学，给她写过情书，她不曾答复，也不存芥蒂，我们也不曾听说她在校外有什么爱人。我呢？年少班低，连写情书的思念也不敢有过，但那几年里，心目中总是供养着她。直至现在，梦中若重过学生生活，梦境中还常常有着 C 女士，她或在打球，或在讲演，一朵火花似的，在我迷离的梦雾中燃烧跳跃。这也许就是老舍先生小说中所谓之“诗意”吧！我算对得起自己的理想，我一辈子只有这么一次“诗意”！

在 C 女士将要毕业的一年，我同她演过一次戏，在某一幕中，我们两人是主角，这一幕剧我永远忘不了！那是梅德林克的《青鸟》中之一幕。那年是华北旱灾，学校里筹款赈济，其中有一项是演剧募捐，我被选为戏剧股主任。剧本是我选的，我译的，演员也是我请的。我自己担任了小主角，请了 C 女士担任“光明之神”。上演之夕，到了进入“光明

殿”之一幕，我从黑暗里走到她的脚前，抬头一望，在强烈的灯光照射之下，C女士散披着洒满银花的轻纱之衣，扶着银杖。经过一番化装，她那对秀眼，更显得光耀深大，双颊绯红，樱唇欲滴。及至我们开始对话，她那银铃似的声音，虽然起始有点颤动，以后却愈来愈清爽，愈嘹亮，我也如同得了灵感似的，精神焕发，直到终剧。我想，那夜如果我是个音乐家，一定会写出一部交响曲，我如果是一个诗人，一定会作出一首长诗。可怜我什么都不是，我只作了半夜光明的乱梦！

等到我自己毕业以后，在美国还遇见她几次，等到我回国在母校教书，听说她已和一位姓L的医生结婚，住在天津。同学们聚在一起，常常互相报告消息，说她的丈夫是个很好的医生，她的儿女也像她那样聪明美丽。

我最后听到她的消息，是在抗战前十天，我刚从欧洲归来，在一位美国老教授家里吃晚饭。他提起一星期以前，他到天津演讲，演讲后的茶会中，有位极漂亮的太太，过来和他握手，他搔着头说：“你猜是谁？就是我们美丽的C！我们有八九年没有见面了，真是使人难以相信，她还是和从前一样的好看，一样的年轻，……你记得C吧？”我说：“我哪能不记得？我游遍了东京、纽约、伦敦、巴黎、罗马、柏林、莫斯科……我还没有遇见过比她还美丽的女人！”

又六年没有消息了，我相信以她的人格和容貌的美丽，她的周围随处都可以变成光明的天国。愿她享受她自己光明中之一切，愿她的丈夫永远是个好丈夫，她的儿女永远是些好的儿女。因为她的丈夫是有福的，她的儿女也是有福的！

11 My Friend's Wife

There were three men living on the upper floor assigned to single professors only: L, T and myself. My colleagues were professors at the Faculty of Science and used to spend most of their time in the laboratories. Besides, they were already engaged. Returning after class, they sat down to write their love letters by the light of the desk lamp as soon as they finished their supper. Whenever their doors were shut, I would always abstain from bothering them. People immersed in the happiness of love are seldom aware of the loneliness of others. For this reason, I had to stay in my sitting room where, by the light of the lamp near the sofa, I read eighteenth-century sonnets that helped me indulge in amorous fantasies.

I felt closer to L than to T. He often invited me to chat with him in his room. The photo on his desk provided a glimpse of his fiancée, whose oval face smiled tenderly through her glasses. He told me that, while abroad, they had gotten to know one other and then became engaged. The scene of their romance was a biology laboratory at a university on the east coast of the United States. As schoolmates and colleagues in the same discipline, they became spiritual companions and, later on, after becoming intimate, ended up in what they believed to be a happy and lifelong relationship. It was so that... At this point L blushed and, stammering and timid as he was, stopped, wondering how to go on. I hastened to follow: "The two of you will become another Curie couple. Congratulations! When shall we be invited to your wedding?"

Later on, one summer, L went home to Shanghai and returned to Beijing with his new wife to settle down in a house recently built for the professors.

Just a week after they moved in, we were invited to dinner at their home. The four small rooms had been furnished very comfortably. The bedroom, light pink with its window curtains, table

clothes, bed sheets and carpets of the same color matched with its simple white furniture, looked warm and mild. In the reading room there were two large desks opposite each other, and a bright desk lamp between them. There was a bookshelf filled with books along the wall as well as still more bottles containing frogs, flies and all sorts of unknown insects. The furniture in this room was light gray. The window curtains and other things were green. The large room outside was blue and it consisted of two rooms: the sitting room and the dining room. In spite of the differences between the darker and lighter tones of the colors, everything was well matched and looked pleasant.

After looking around the flat, we sat down in the sitting room just as the new housewife came out from the kitchen. Dressed in light pink and in a quietly elegant style, she wore no jewelry. Other than the fact that she did not wear glasses, she appeared much as she did in the photo. Although it was hard to regard her as beautiful, she possessed a dignified and amiable manner. She showed natural poise and spoke fluently while shaking hands with us. Thus all of the light-hearted horseplay that we had prepared for the bridal chamber vanished like mist and smoke.

At dinner, she talked to each one of us, and nobody felt left out in the cold. Although far from being talkative, L looked at us with a very happy face. We all said to Mrs. L, "It seems that you had better give your husband a little home education by teaching him to talk more." She replied jokingly, "Perhaps I have talked too much to give him a chance to come forward." When dinner was over, some of us began to play *weiqi*^[1]; others preferred playing cards. Mrs. L promptly organized her guests into the right groups. I was not keen about playing any of these games, so I chose to enjoy the moonlight while talking with the newlyweds. I said, "Mrs. L, I believe you won't take offense if I say that to me you are a woman of letters and well-cultivated in aesthetics, judging from how your home is furnished." She made a few modest remarks and then smiled, "I have a few female friends majoring in the fine arts and literature. They do pretty well in their own careers. However, once you enter the doors of their houses,

you have the sensation, just as you suggested, Mr. X, of going into the home of a scientist." Feeling somewhat ill at ease, I was about to reply when she hastened to continue, "I understand what you mean. My opinion is that aesthetic taste is in my case something bordering on the congenital. This doesn't mean that I really have such good taste. What I mean is that one's specialty sometimes differs from what one makes use of in life." From this we changed the subject to literature, my own specialty, but I found Mrs. L had ample knowledge of this subject and was able to appreciate works of literature as well. Our conversation lasted until the cards and *weiqi* were over. We had some ice cream before we left.

Mrs. L used to go to the laboratory together with her husband every afternoon. The couple would often pass by our dormitory after class, and then they would invite me to have supper with them. Dishes cooked in the collective dining hall were of course not so good as those prepared at home, so I never declined their invitation, but at times I brought with me some dried meat, wine-steeped crabs, sweets and biscuits, although they often said that I was too generous in this regard.

In the winter evenings, they used to light the fireplace and we would have a fireside chat. I suggested that they should drink some quality wine and smoke some good cigarettes. They didn't say no, but showed little interest. Mrs. L even ascribed my drinking and smoking to the fact that I was still unmarried, and then urged me to tell her why I remained so. I replied, "You are too much of a puritan, Mrs. L. You haven't seen any genuine drinker or smoker. Men who only drink one glass of wine before the meal and smoke one cigarette after meal, just as I do, can be said to inadequately enjoy their rights. As for marriage, I must repeat what I have said often enough: he who writes worse than others should have a better wife than others. And it just so happens that each one of my friends' wives is as good as the other. Where can I find a better one than they? I staggered around in my day and wasted a lot of time, but I'm not to blame...." Mrs. L shook with laughter, almost out of breath, and her husband broke in, "Leave him

alone. He is so eccentric. How could he fail to find a wife should he be a bit more serious? I guess that what he really means is that his writings are too good to allow him to find an equally good wife."

Actually, Mrs. L is nothing less than a puritan. Not only with respect to drinking and smoking, but also, added to everything else, as the most human and feminine woman I had ever known, she held on to excessively unworldly and largely impractical ideals. She often praised men who never remarried after their wives' deaths on the assumption that their refusal represented the highest loyalty to conjugal love. More than once I heard her illustrate her opinion with examples. Once on New Year's Eve when everybody had gone home for the holiday, I stayed in the outskirts of Beijing, since my parents remained in Shanghai and I did not feel like going downtown. The L couple, aware that I was alone, called me by telephone and invited me to have a tasty dish at their home. Warm with wine, we sat down after dinner by the light of the lamps and by the fireside. Sighing with emotion, Mrs. L talked about an elderly gentleman. She said that he must feel very lonely on New Year's Eve as a widower for thirty years, having his late wife's photo day and night as his only company. How lovable and respectable this old man was!

I stood up, threw the cigarette stub into the fireplace and said, "I'm sorry, Mrs. L, but I can't agree with you on this point. If I were a woman and enjoyed a happy married life, I would like my husband to get married again after my death. I should add the following in my will: 'Darling, for the sake of the integrity of our home and the breeding and education of our children, and for the sake of everything else, I earnestly ask you to marry another kind and capable wife as soon as possible....'" At this moment, not only did she stare at me with raised eyebrows, but her husband laid down his book.

I lit another cigarette and sat down again. I said, "Women often regard remarriage after the death of a wife as a token of infidelity and insincerity. But I dare say, without fearing to offend such women, that this view reveals obvious vanity. What is more, as a matter of fact, a man who feels happy and satisfied with his married life usually

marries again after his wife's death sooner than men who are not so happy with their marriages. A man used to a happy family who loses his wife feels as miserable and distressed as a stray dog. Heartbroken all day long, he feels as if the sky has fallen down. Finding himself deprived of anything to fall back on, he looks at the crying children, the loafing servants and the neglected household duties. Particularly in the still of the night, when he sees his children's tear-stained, pale and emaciated faces, he feels as if a knife were piercing his heart and wished that he could regain his paradise which has been lost at once...." On hearing this, Mrs. L fell silent and blew her nose with a handkerchief.

I continued, "On the contrary, he who was unhappy in his married life will feel free as a bird, footloose and fancy-free once his wife is dead. At least for the time being, he will prefer to remain unbridled by marriage. Soon he will put the matter aside to enjoy a few years of liberty in carefree leisure. It follows that the early remarriage of a widower demonstrates his faith in married life and attachment to the warmth of home. In other words, it shows that he appraises his first wife very highly indeed. What is more, if you do love your husband, what role should vanity or jealousy play in life when you have turned into withered wood or cold ashes? Are you hard-hearted enough to inflict him with the boundless sorrow of loneliness in a miserable life that lacks all consolation? Moreover, if your husband loves you, he will by no means cast you into oblivion merely because he takes on a new wife. In *The Dream of the Red Chamber*, the actress Ou-guan^[2] understands this completely. When asked if she had forgotten her late lover after she had taken on a new one, she replied, 'No, but there's a very good reason for this. I'm like a widower who marries again. If he doesn't forget his first wife, he's still true to her.' Therefore, although feeling inseparable from Rui-guan once they began to act together, she also dared to defy the prohibitions of the Grand View Garden, and burned paper coins under the shade of an apricot tree to mourn her dead lover, with her face stained with tears. This story provides a very realistic example of what is quite normal in the human world. Believe me or not, all I can say is

that, if I were a woman, I would never underestimate a man's moral quality simply because he remarries after his wife's death. Furthermore, I would never contend that men who remarried are unworthy...."

Perhaps a little warm with wine, I talked on and on in a flow of eloquence. That was the first time I had argued bluntly with Mrs. L. Since then, she never brought up this topic again, and I am aware that for a long time she did not fully agree with me.

But she was finally persuaded by an event which occurred one year later.

Mr. T had dwelled with us in the same dormitory for singles and married in the same year as L. The couple lived very near to the L couple. Mrs. T, also a very mild and amiable woman, got along very well with Mrs. L. It goes without saying that the T couple was very devoted. One year later, Mrs. T died of dystocia in the hospital. Mr. T cried his heart out. Mrs. L, in tears, helped him with all the funeral services and even with his household chores. She had given birth not long before to her son Baodi and now, busy looking after the baby, she also had to take charge of Mr. T's household. She thus found herself in a state of utter exhaustion. Finally, acting as a go-between, she introduced Mrs. T's younger sister to Mr. T and pushed him to become engaged and remarry. As a bystander, I found all of this very amusing. After the wedding banquet of T's second marriage, I slowly returned with the L couple and spoke to Mrs. L jokingly, "You should not have bogged down T in conjugal unfaithfulness if you believe the supreme standard of a man's moral quality is to remain single after his wife's death." On the verge of tears, she replied, "Don't bring that up any more, please, Mr. X." Her tears were something unexpected to me, and from then on I never mentioned this topic again.

However, she still maintained her firm objection to my remaining single. Maybe it was out of revenge, but in no way could I change her mind in this respect. No sooner did their little son Baodi begin to babble than she taught him to call me "father-in-law." As late as the year when the War of Resistance against Japan erupted, when I was

leaving Beijing, Baodi, then nine years old, shook hands with me, saying good-bye, "Dear father-in-law, when you come back here, bring with you your daughter, my wife!"

He was asking me for a daughter. To say nothing of one daughter, it would be easy for me even to have two. But as for my wife, I cannot catch a single glimpse of her shadow, even now!

[1] *weiqi*: or Go game, which has been popular for many centuries in China, Japan and other East Asian countries. It is played with black and white pieces on a board of 361 crosses.

[2] Ou-guan: One of the twelve actresses of the private opera troupe of the aristocratic Jia family, who had the fantastic notion that, as she always played young gentlemen, while another actress, Di-guan, played young ladies, and as they were often cast as husband and wife, they should act this make-believe part every day as if they were really in love. They became so crazy about each other that, even offstage, they were always together. In the end, they were so devoted that when Di-guan died, Ou-guan nearly cried her heart out, just like a man who had lost his beloved wife. Later, when a third actress, Rui-guan, took Di-guan's place, Ou-guan was just as attached to her, without forgetting the dead one. Thus, on the day of the Clear and Bright Festival, Ou-guan, violating the prohibitions imposed by the Jia family, burned paper coins as offerings for Di-guan. See Cao Xueqin: *The Dream of the Red Chamber*, chapter 58.

拾壹 我的朋友太太

在单身教授的楼上，住着三个人，L，T，和我。他们二位都是理学院教授，在实验室的时候多，又都是订过婚的人，下课回来，吃过晚饭，就在灯下写起情书，只要是他们掩着屋门，我总不去打搅。沉浸在爱的幸福中的人们，是不会意识到旁人的寂寞的，我只好自己在客厅里，开起沙发旁的电灯，从十八世纪的十四行诗中，来寻找我自己“神光离合”的爱人。

L 和我又比较熟识一些，常常邀我到他屋里去坐。在他的书桌上，看到了他的未婚夫人的照片，长圆的脸，戴着眼镜，一副温柔的笑容。L 告诉我，他们是在国外认识而订婚的，这浪漫史的背景，是美国东部一个大学生物学的实验室里，他们因着同学，同行而同志，同情，最后认为终身同工，是友情的最美满的归宿，于是就…… L 说到这里，脸上一红，他是一个木讷腼腆的人，以下就不知说什么好。我赶紧接着说：“将来，你们又是一对居里夫妇，恭喜恭喜，何时请我们吃喜酒呢？”

于是在一年的夏天，L 回到上海去，回来的时候，就带着他的新妇，住在一所新盖好的教授住宅里。

我们被邀去吃晚饭的那一晚，不过是他们搬入的一星期之后，那小小的四间屋子，已经布置得十分美观妥贴了。卧室是浅红色的，浅红色的窗帘、台布、床单、地毯，配起简单的白色家具，显得柔静温暖。书房是两张大书桌子相对，中间一盏明亮的桌灯，墙上一排的书架，放着许多的书，以及更多的瓶子，里面是青蛙苍蝇，还有各色各种不知名的昆虫。这屋子里，家具是浅灰色的，窗帘等等是绿色的，外面是客厅和饭厅打通的一大间，一切都是蓝色的，色调虽然有深浅，而调和起来，觉得十分悦目。

客人参观完毕，在客厅坐下之后，新娘子才从厨房后面走出来，穿着一件浅红色的衣服，装束雅淡，也未戴任何首饰，面庞和相片上差不多，只是没有戴眼镜，说不上美丽，但自有一种凝重和蔼的风度。她和我们一一握手寒暄，态度自然，口齿流利，把我们一班单身汉，预先排练好的一套闹新房的话，都吓到爪哇国里去了。

席上新娘子 and 每一个人谈话，大家都不觉得空闲。L 本来话少，只看着我们笑。我们都说：“L 太太，您应当给 L 一点家庭教育，教他多说一点话。”她笑说：“恐怕是我说的话太多，他就没有机会出头了。”——席散大家有的下围棋，有的玩纸牌，L 太太很快的就把客人组织起来，我是不大会玩的，就和这一对新夫妇，在廊上看月闲谈。我说：“L 太太，不怕你恼，我看你的家庭布置，简直像个学文学的人，有过审美训练的。”她谦逊了几句，又笑说：“我有几个学美术、文学的女友，在本行上造诣都很好，但一进入她们的家门屋门，× 先生，真是如你所说的，像个学科学的人的家庭……”我觉得不好意思，才要说话，她赶紧笑说：“我知道你的意思，我是说，审美观念，有时近乎天生，这当然也不是说我真有审美的观念，我只是说所学的与所用的，有时也不一致。”从此又谈到文学，这是我的本行，但 L 太太所知道的真是不少，欣赏力也很高，我们直谈到牌局棋局散后，又吃了点冰淇淋才走。

L 太太每天下午，同 L 先生到实验室，下课后，他们二位常常路过我们的宿舍，就邀我去晚饭。大厨房里的菜，自然不及家庭里的烹调，我也就不推却，只有时送去点肉松、醉蟹、糖果饼干之类，他们还说我客气。

冬夜，他们常常生起壁炉，饭后就在炉边闲谈。我教给他们喝一点好酒，抽一点好烟，他们虽不拒绝，却都不发生兴趣。L 太太甚至于说我的吃酒抽烟，都是因为没有娶亲的原故，因而就追问我为什么不娶亲，我说：“L 太太，你真是太清教徒了，你真没有见过抽烟喝酒的人，像我这样饭前一杯酒，饭后一支烟，在男人里面，就算是不充分享受我们的权利的了。至于娶亲，我还是那一句老话，文章既比人坏，老婆就得比人家好，而我的朋友的老婆，一个赛似一个的好，叫我哪里去找更好的？一来二去，就耽误了下来，这不能怪我……”L 太太笑得喘不过气来，L 就说：“别理他，他是个怪人！只要他态度稍微严肃一些，还怕娶不到老婆？恐怕真正的理由，还是因为他文章太好的缘故。”

L 太太真是清教徒，不但对于烟酒，对于其他一切，也都有着太高而有时不近人情的理想，虽然她是我所见到的，最人性最女性的女人。比如说，她常常赞美那些太太死后绝不再娶的男人，认为那是爱情最贞坚的表现，我听她举例不止一次。有一次是除夕，大家都回去过年——我的家那时还在上海，也不想进城去玩——L 夫妇知道我独在，就打电话来请我吃火锅。饭后酒酣耳热，灯光柔软，在炉边她又感慨似的，提起某位老先生，在除夕不知多么寂寞，他鳏居了三十年，朝夕只

和太太的照片相伴，是多么可爱可敬的一个老头子啊！

我站了起来，把烟尾扔在壁炉里，说：“对不起，L 太太，这点我不和你同意！假如我是个女人，而且结婚生活美满，我死后，一定欢喜我的丈夫再娶。我在我的遗嘱上，一定加上几句，说：亲爱的，为着家庭的完整，为着儿女的教养，为着其他一切，我恳切的请你在最短期内，再娶一位既贤且能的夫人……”这时不但 L 太太睁着两只大眼看我，连 L 也把手里的书放下了。

我重新点起一支烟，一面坐下，说，“女人总觉得丈夫的再娶，是对自己不忠诚，不真挚的反映，我说一句不怕女人生气的话，这就是虚荣心充分的暴露；而且就事实上说，凡是对于结婚生活，觉得幸福美满的人，他的再婚，总比其他的人，来得早些。习惯于美满家庭的人，太太一死，就如同丧家之犬，出入伤心，天地异色，看着儿女啼哭，婢仆怠惰，家务荒弛，他就完全失了依据。夜深人静，看着儿女泪痕狼藉，苍白瘦弱的脸，他心里就针扎似的，恨不得一时能够追回那失去的乐园……”这时 L 太太不言语了，拿手绢擤了擤鼻子。

我说：“反过来，结婚生活不美满的人，太太死了，他就如同漏网之鱼，一溜千里，他就暂时不要再受结婚生活的束缚，先悠游自在的过几年自由光阴再说。所以，鳏夫的早日再婚，是对于结婚生活之信任，是对于温暖家庭的热恋，换句话说，也就是对于第一位夫人最高的颂赞。再一说，假如你真爱你的丈夫，在自己已成槁木死灰之时，还有什么虚荣，什么忌妒，你难道忍心使他受尽孤单悲苦，无人安慰的生活？而且，假如你的丈夫真爱你，也不会因为眼前有了一个新入，就把你完全忘掉。《红楼梦》里的藕官，就非常的透彻这道理，人家问她，为什么得了新的，就把旧的忘了。她说：‘不是忘了，比如人家男人，死了女人，也有再娶的，不过不把死的丢过不提，就是有情分了。’所以她虽然一和蕊官碰在一起，就谈得‘热刺刺的丢不下’，而一面还肯冒大观园之不韪，‘满面泪痕’的在杏子荫中，给死了的药官烧纸，这一段故事，实在表现了最正常的人情物理！听不听由你，我只能说，假如我是个女人，我对于一个男人的品评，决不因为他妻死再娶，就压低了他的人格。假如我是个女人，我决不在我生前，强调再婚男人之不足取……”

大概是有了点酒意，我滔滔不绝的说下去，这是我和 L 太太不客气的辩论之第一次。她虽然不再提起，但我知道她并不和我完全同意。

一年以后，有件事实，却把她说服了。

从前和我们同住的 T，也是和 L 同年结婚的，他们两家住的极近。T 太太也是一位极其温柔和蔼的女人，和 L 太太很合得来。T 夫妇的情好自不必说。一年以后，T 太太因着难产，死在医院里，T 是哭得死去活来。L 太太一边哭，一边帮他收拾，帮他装殓，帮他料理丧事，还帮他管家。那时 L 太太的儿子宝弟诞生不久，她也很忙，再兼管 T 的家事，弄得劳瘁不堪。最后她到底把 T 太太的妹妹介绍给 T 先生，促他订婚，促他成礼，我在旁边看着，觉得十分有趣，因此在 T 二次结婚的筵后，我同 L 夫妇缓步归来，我笑着同 L 太太说：“假如你觉得男人人格的最高标准，是妻死不娶，你就不应当陷 T 于不义。”她却眼圈红了，说：“X 先生，请你不要再说了吧！”她的下泪，很出我意外，我从此就不再提。

但对于我之不娶，她仍是坚决的反对，这也许是她的报复，因为我不能反驳她。他们的儿子宝弟刚会说话，她就教他叫我“老丈人”。直至抗战那年，我离开北平，九岁的宝弟，和我握别的时候，还说：“老丈人，你回来的时候，千万要把你的女儿，我的太太带了回来！”

他问我要女儿，别说一个，要两个也容易，但我的太太还没有影子呢。

12 My Student

S grew up in Australia. Since her father was a diplomat assigned to that country, she did not return to China until she was seventeen. Her grandfather, a schoolmate of my father, came with her to visit me the day after her admission to our university. He asked me to take care of her. She had performed very well on the entrance examination. After her enrollment, as an overseas student coming back to China, she needed further lessons in Chinese language and literature, as was stipulated for overseas students coming back to China.

They came on one early autumn afternoon. I invited S and her grandfather to have some refreshments in our home. While I was talking with her grandfather, she joined our chat, talking and laughing without inhibition. She was a European girl in her clothing and manners, but she still had black hair and dark eyes. She talked to me in fluent English about Chinese studies, "I've learned Chinese language and literature, but my teacher was a Cantonese, whose pronunciation was incorrect...." While making these comments, she winked and smiled in an extremely mischievous way. "For example, he would say, '*Xidi, xidi, satian changchang sayu.*' What do you suppose that he wanted to say? He wanted to say, '*Shidi, shidi, xiatian changchang xiayu*' (Yes, yes, it often rains in the summer). Now you see!" And so she burst into laughter, and her grandfather laughed as well.

I responded, "At college, Chinese literature is not the same as Chinese language, which is rather easy as long as you are not afraid to speak. As for Chinese literature, you should listen directly to your professor when he lectures on literature. It would be better if your professor could explain this subject to you in English. Put more efforts into the class on your own, and things will go well." Her grandfather broke in, "Among all the professors in the Department, you are perhaps the only one who can explain Chinese literature in English. So please assign her to your group and take good care of her!" I had no

alternative but to agree.

After attending one week's lessons, she came to see me. She told me that she found all the other courses very easy and that everyone in class was going along very well with her. Only she could not quite understand what I said in my Chinese literature lessons. Then I told her, "Of course, it is impossible for me to slow down my explanations in class for your sake alone. But after class, you might as well come to my office. I will explain the lessons to you once again and in more detail." She agreed. She then visited me four times a week for special instruction. I had never seen anybody so intelligent. She was making unbelievable progress at lightning speed. One month passed, and she only needed to visit twice a week; already she could talk to me in pure and fluent Mandarin. When the second term began, she was able to compose in Chinese. She wrote an "autobiography" in no less than nine thousand Chinese characters. Her writing was not only coherent and smooth, but her descriptions were vivid. She had become at that moment a popular person who was widely discussed among the teachers and students of our university.

Majoring in science in her second year, she took no more lessons from me. But she would often visit me due to the ties between the two families. Now she was dressed completely in the Chinese style and no longer spoke English. But she remained as lively and naughty as any girl from the West. She often imitated the Hunan accent of her chemistry professor or the Shandong accent of her physics professor, making everybody in the sitting room shake with laughter. Sometimes she would say to me unexpectedly, "Uncle X, my grandfather says that you must have a girlfriend in the United States; otherwise, why is there nobody here in Beijing who has ever seen you go out with a girl?" Sometimes she would say, "Attention, dear professors! Uncle X took a walk yesterday evening in the campus with a woman professor. Who do you suppose she was?" Her jokes were taken seriously at the beginning, but, later on, she was discovered to be playing monkey tricks, and then no one paid attention. Concurrently, she was making more and more friends. After class, she was always busy attending

meetings, taking part in ball games, riding her bicycle, strolling, skating, delivering speeches, rehearsing plays, and never had time to come to my home for refreshments.

During the following three years, she constantly moved like a lion playing with a ball made of silk strips, always exerting herself to the utmost. Work to her was play and play was work. Soon after you saw her on the way to class and with books under arms, wearing a blue cotton gown and a pair of plain-soled shoes, you would suddenly spot her in a white blouse and black shorts playing tennis with three boy schoolmates, her hair wrapped in a red silk scarf. Just a moment later, you would find her flying by on her bicycle, already wearing a short-sleeved, light-blue flannel shirt and blue cotton slacks. In the afternoon she appeared in the Chemistry Building wearing her white laboratory gown. In the evening, her style of dress would be even less predictable. Whenever the Auditorium was ablaze with lights, you might enter to find her on stage, singing or acting. On weekend evenings, she could be found downtown in the Beijing Hotel or the Grand Hotel des WagonLits,^[1] in her full-length suit and high-heeled shoes. You might observe her long earrings, darkened eyebrows and her nails painted with red enamel as she dined and danced with Chinese officials from government circles or foreign diplomats.

None of these activities, however, seemed to have interfered with her studies. She graduated with high honors, to the great satisfaction of her grandfather, who invited my father to attend the commencement, after which we had lunch in our building. Once she and her grandfather had gone, my father, very pleased, said, "Don't you think S is as restless as a kitty? She is also as witty as a kitty, bouncing and vivacious, but not in the least disagreeable. I believe that she is bound to marry a diplomat. Do you know if she has a lover at the college?" I replied, "She has plenty of boy friends, but none is really intimate with her. You are right: she won't choose a husband from among her schoolmates; she is bound to marry a diplomat instead. Anyway, she won't marry a bookworm!"

Unexpectedly, during the summer vacation, she declared her

engagement to a certain Mr. P, a classmate of hers, majoring in geology and soil science. I had never heard of the man! When I asked P's teachers about him, they said that he was an excellent student, quite hard-working and very peaceful in temperament, who did little but study. No one could see how he had become S's date and fiancé, and the whole relationship took everyone by surprise.

One year later, they were married and decided to reside next to her grandfather. Sometimes my father, brothers and I would visit them. The spirit of their house was completely Western. Everyone, even their servants and maids, understood English, and there was nothing Chinese about their food and clothing. S appeared as an accomplished, Western-style housewife, often managing to snatch a little leisure from her busy life to dress up. My father often said to her jokingly, "Whenever I am in your home, I feel as if I were in the Chinese legation in Australia."

Nevertheless, Mr. P, owner as he was of this "Chinese legation in Australia," reminded me of an old monk living deep in an ancient monastery, utterly indifferent to the noisy singing and dancing around him. As soon as he came home after work, he would hide himself in his study and wouldn't come out until dinner was ready. Then he exchanged greetings with the guests and, bending his head, picked up his chopsticks to begin eating. S often tried to induce him to join the conversation and help entertain the guests. After dinner, I sometimes went with him into his study, where he talked more than elsewhere. Although I was a closed book to his specialty, he very patiently informed me about the latest discoveries in geology and soil science, showing me a lot of pictures, photos and specimens. Sometimes my father walked in, tobacco pipe in hand, and joined our discussions. He had an excellent impression of P, and often said to me, "P is geology itself, a very solid rock. S must have been bored at this point with following people addicted to false glamour and have finally learned that her lifelong happiness should be entrusted to such a solid fellow. What a wise girl, after all!"

Before I left Beijing, I went to her grandfather's home to say good-

bye, and dropped in along the way to see P and his family. At that time S was already mother of three children. Their yard contained a sand box, a swing and similar play things. Their house held many more people than before: a nurse for looking after the children, a maid for washing and sewing, a cook, a gardener, a chauffeur, an attendant for sundry duties, etc. "See you in the Great Rear,"^[2] S said to me. I replied merely with a smile, "I'm single and only need to move my feet to begin my journey. But you, how can you manage to move such a 'legation' as yours?" P laughed and said, "Mr. X, please send me any up-to-date information on geology that you happen to acquire after you arrive."

Since then another three years had passed....

It happened unexpectedly one day during my journey in a remote county of Yunnan province. I had lost my way on horseback. It was nearly twilight. I was riding along a stream flowing between the mountains. I asked everybody I met about the way. A cowherd boy pointed vaguely in the distance, "There, on the other side of the mountain, lives a family by the river. They are from downstream area, like you. Go there and ask them. Maybe you will find a place to stay for the night." Leading my horse, I went on foot. Soon I came across a woman, head bent, who was doing her wash by the stream in the light of the setting sun. She raised her head at once, answering my call. I could hardly believe what I saw. Whose big dark eyes but those of S could now be gazing at me, shielded by a pair of plump wrists?

I ran towards her at once. She jumped with joy, throwing her wash into the water and saying, "Shake hands with me if you don't mind that my hands are wet. Go along upward and you will find our home in the cottage on the edge of the hill. P is at home. He will give you some drinking water. I will be back later after I finish my work."

Three children were playing on the meadow in front of the door. P was milking a ewe. He stared at me blankly for a while and then shouted for joy. The four of them surrounded me, took me into the cottage and made me sit down. They offered me tea and cigarettes and asked me all sorts of questions. The eldest of the children, then nine

years of age, slipped out to feed my horse.

S came up with a tub of wash. A maidservant with bound feet emerged from the kitchen, took over the wash and hung it out on a rope to dry. Wiping her hands, S came in, smiling profusely. And then we began our exciting if disorderly conversation, talking about how we had been getting on during the last years. She said that they had come here two years before. I asked her about her grandfather, and she asked me about my father. While speaking, she was always busy doing this or that, so we followed her wherever she went, to keep up the conversation. After supper was over and the kids went to bed, we managed to sit down quietly near a rapeseed oil lamp. While S was darning socks, P and I smoked cigarettes made in Liuzhou and sipped "Victory" brand black tea while talking.

Jokingly she said, "This is a mountain outpost of our 'legation.' Whatever we do should be done up to the mark. Uncle X, this cottage was built by workers under P's guidance. At first they built it in such a way that all the doors opened outwards and none of the windows could shut! We had to pull them down and put them in again, dozens of times. P and I made the desks, bookshelves and armchairs out of seventy-eight wooden boxes that had been used for kerosene drums. The beds are our masterpieces. We put low cupboards beneath them for shoes. It has been great fun. Just as we played in our childhood, we built our house, made our furniture, and brought up our little ones. We cook our meals, do our wash, raise our chickens, and grow our vegetables, keeping busy all day long. But it's great fun! Our children have acquired abilities, and even I have learned a lot from the household chores. Together we lead a camping life, full of good humor. We often speak proudly of our shrewdness and our ability to cope with everything. Tomorrow I will show you our henhouse, sheepfold, honeycomb, and toilet... In a word, it's great fun!"

I stared at her silently. "It's great fun"—these words summarized her outlook on life and her way of dealing with the world. What other women regarded as terribly bad luck, she would get over by taking it easy with her vibrant levity. She kept herself busy, working,

experimenting, gasping in admiration, and telling herself that it was all great fun. She did not feel she was doing something behind the frontline for the War of Resistance against Japan, but she was one of those wonderful artists who, as Bernard Shaw put it, could do everything in the area of Resistance besides the work of Resistance!

That night they put up a camp cot—which they had made from a piece of cattle hide fixed with nails—so I could sleep in P's study, the largest of the three rooms which was used as a sitting room, storage room and general utility room. Pictures and photos were hung on the walls, the shelves were piled heavily with books, and hoes, shovels, saws, shoulder poles^[3] and other implements stood in the corners. After the lights were out, the windows were flooded with moonbeams. For quite a long time, I could not fall asleep. I recalled the "legation in Australia" located in Beijing and also thought of my father, wondering what impressions he would have if he were to observe this mountain outpost.

Sunlight shone on my face. A scent of boiling tea blew my way. Opening my eyes, I saw the sea-blue sky typical of Yunnan province outside the window. Everything around was so silent. I got up quietly, put on my clothes and, coming out of the room, glimpsed S on tiptoes laying the table for breakfast. She raised her head and saw me, and then a smile came over her face, "Did you have a good sleep? We supposed that you must be very tired after a whole day on horseback, so we didn't wake you up. P has gone to work and the kids have gone to school. I have been waiting for you to have porridge with me." She spoke and hurried into the kitchen.

While washing my face and rinsing my mouth, I looked around a house that was flooded with sunshine. The "legation" had a lower material status than that in the old days, but its spirit of tidiness and artistic beauty remained unchanged and had been enhanced by a kind of wild exotic flavor. The table was covered with a hand-woven, red and white patterned cloth. Wild flowers, also red and white, were leaning out crisscross from a pot-bellied ceramic jar. On the table, there was a plate of "Guangdong oranges" as they were called in

Sichuan, and opposite them were two red-hilted knives, two pairs of red chopsticks, two red bakelite washing bowls, two red and white napkins.... I was glancing over all these things when S came in with a plate full of steamed bread slices, soaked in beaten egg and fried in oil. She asked me to sit down across from her. We began to chat while peeling the oranges.

Looking at S in broad daylight, I found her much thinner than three years before, but still in very high spirits. She was wearing a white-patterned shirt made of blue home-woven fabric, with socks and cloth shoes. She wore a small amount of makeup and her nails were painted bright red. I laughed, "You've brought with you all your cosmetics, haven't you?" She also laughed, "Yes, I have. But what I use nowadays are goose egg powder and rough cotton balls. Besides, garden balsam petals pounded together with alum in a mortar can be used instead of nail polish."

We ate salted duck eggs and pickles made by S herself, as well as porridge and tea. Then we sat for a while before she invited me to have a look at the surroundings. Outside the door was a vegetable garden where the chili peppers and tomatoes were red, the beans green, the squashes yellow and eggplants purple. Around the vegetables were beds and beds of flowers glistening with dazzling brightness. In the sunshine, bees were buzzing and butterflies whirling around. What I found behind the vegetable garden was little less than a zoo! A dozen white Italian hens were pecking on the sandy ground. There were also three black sheep, and two wolfhounds—next to them was my own horse!—as well as some squirrels and rabbits kept by the small children. An exceedingly fat, blue-eyed Siamese cat jumped in and out through the crevices of the fence.

I saw a lot of houses on turning to the other side of the hill. S explained to me that I was observing the town, with its food market, its small post agency and its primary school. The Institute of Geological Survey, where P worked, was located in the highest and most splendid building in the area. It had brick walls and a tile roof, and the police post could be found at its gate. While we were strolling

down the main avenue, everybody, old and young, rustic and cosmopolitan, greeted S and talked to her about all sorts of matters. A woman even came out from inside the doorway and showed S her sick baby, carrying the child in her arms. As we proceeded on our journey, I said to S, "Instead of the wife of a minister of state, you're now that of a religious minister!" She just smiled.

Five or six cottages similar to the one where S lived with her family stood at the end of the street. They were houses of the working staff of the Institute of Geological Survey. She went in with me to pay members of the staff visits. The housewives, most of them from other provinces, showed affection towards me, inviting me to join them for tea. Their rooms were similar to that of S, but were furnished in a disorderly and vulgar way. The women themselves were unkempt, while their children cried and made noises. They apologized to me again and again for not being in a position to receive guests in the worthy manner of a host in Beijing and Shanghai. Their rooms were so small and their servants so clumsy that nothing could go smoothly. Feeling bored, I only stayed for a little while and then said good-bye to them.

On our way back, S asked me to return alone, since she had to go to the primary school to teach a class. But instead of going to her home, I dropped in to see P in his Institute of Geological Survey, and observed them at work. We came out together when P finished his work. At the gate, we found the three little ones waiting cheerfully for us, saying, "Mother has prepared stewed chicken, roast meat and steamed egg custard. She is waiting for our guest to come home with us and eat the big buns she has steamed with all her dishes."

After lunch I had a long nap. Waking up, I said that I must be going. But S and P would not let me go for anything in the world. They said that they would invite a few friends to come in the evening to meet me. S added with a smile that there would be several pretty ladies among them. I said, "If you have pity on me, forget all that. I really feel awkward in front of strangers. What is more, if I stay, it will become impossible for you to put the scene of the 'legation' on stage!"

P said, "All right, but please stay here one day more; we will invite no other guests." S thought for a while and said with a delighted look, "I will have something to do before supper. Could you both go with the little ones to play at the far side of the mountain and bring back some azalea flowers at about six o'clock?" We agreed, and the children, cheering, ran ahead of us.

Lying on our backs and enjoying the sunshine on the meadow at the hillside, P and I chatted for a while. I said, "You and your wife make a nice couple! You yourself remain as calm and steady as before. She remains as lively and vivacious as before, but has become more experienced and capable. How lucky you are!" He kept silent for a moment and then said, "Mr. X, you've taken notice of her liveliness and vivacity, but you fail to see her seriousness. She always strives for perfection and maintains high aspirations. However, in the last two years, her health has worsened considerably. Nevertheless, she strives to do the work of six or seven people, without ever calling attention to her delicate constitution. As you know, she likes to use Chinese idioms—English is, after all, her mother tongue, and she often murmurs in English in dreams—but sometimes she uses those idioms in the wrong contexts; it sounds terribly funny. "One day, back home after work, I found her lying in bed. She tried to get up on seeing me. I stopped her, asking her what was wrong. She said that nothing was wrong, but that she felt a little dizzy. I sat on the edge of the bed. She said abruptly, 'Oh, P, I'm a woman with "a mind that aims as high as the sky but a fate as thin as paper"^[4]!' A feeling of sorrow came over me all of a sudden. I forced a smile, 'Don't speak any more nonsense. You know what "thin fate" means in Chinese.' With tears trickling down her cheeks, she turned around, facing inside. Mr. X, how do you find..."

He could not go on. I was also taken aback and then said, "Of course, I have perceived her seriousness in dealing with things. If she had not been serious-minded, she wouldn't have gotten to know you, nor would she have come here to the inland. Her health is not so good now as before. You must take care of her at all times. But don't be too

concerned with the two metaphors she used, since she didn't clearly understand what they mean in Chinese." While saying nothing, he was on the verge of tears.

The children ran in at just that moment, bringing in handfuls of red azalea flowers, saying, "It's time for us to go home. We have to change our clothes before supper."

As soon as we strode indoors, Mrs. Li, the maidservant, wearing black silk trousers and a shirt covered by a snow-white apron, came out to meet us, saying, "Please make yourselves at home in the sitting room." On entering, we found the table covered by a pale tablecloth, ablaze with four red candles. At the center of the table lay a large plate full of red azalea flowers. All the dinner plates and chopsticks were of the same silver set, matched with white napkins.

We were still amazed when Mrs. Li raised the cloth curtain opening onto the bedroom and said, "Madam, the guests have come." Then, beaming with smiles, S emerged from the room in a long red flannel gown. Large ruby earrings hung from her ears. She wore silk stockings and golden high-heeled shoes. Her eyebrows had been drawn and darkened, her lips were bright red and her eyelids were covered with light yellow powder, serving as a foil to bright, intelligent eyes which were brimming with pride and mischief. She stretched her hand to me, and said, "Good evening, Mr. X. How long have you been here? Do you feel comfortable with everything here?" We all burst into laughter. The children hurried to embrace their mother by the legs and cried out, "Mother, how pretty!" They turned round and, clapping their hands, giggled, "Look, even Mrs. Li is so dressed up!" Mrs. Li suppressed her laughter and went into the kitchen.

Hastily we washed our hands and took our seats. Since there were no more guests, the children also sat at the table with the grown-ups. Everybody was in high spirits. After dinner, the little ones had some fruit and cakes, and then went to bed, one after another. While S made coffee, we sat in the corridor enjoying the moonlight. Observing how S's high-heeled shoes glistened in the moonlight, I remarked,

"You don't have much time to dance or play cards now, do you?" She smiled, "It would be strange if I never had time for fun! It was here that P himself learned to dance and play cards. When we were free after supper, I taught him to play 'Honey Moon' cards and asked him to dance. It's quite hard for him to work all day long. From time to time, he should give his mind a rest." Her husband also smiled, "I'm above that sort of thing. In Beijing I never gave my mind a rest. I would prefer you to go to bed early so that I could do some relaxing reading." I asked her, "Can you drive?" She replied, "Yes, I can. But since we came here, I have had no chance to drive." I spoke to her deliberately, "Since you can drive, you must be aware that, no matter how nice and solid your car may be, you can't make it run twenty-four hours a day when you are driving along a rugged mountain path. You know that material resources, let alone human energies, should be used sparingly. You are no longer living a life with 'electric refrigerator and flush toilet,' so it is quite essential that you preserve your physical strength, instead of treating yourself as a mere machine and working incessantly...." She hurried to reply, "That's just the point! It was assumed that I was only able to live on 'electric refrigerators and flush toilets'...." I stopped her and said, "There you go again. You are still as eager as ever to do well in everything! But you should listen to what I say if you look upon me as your uncle." She smiled silently, and raised her head to look at the moon.

Early the next morning, I left this tiny town on horseback. The couple and their three children stood on the highway to watch me depart. I suddenly felt grateful yet grieved as I turned back my head and saw their lovely faces.

On the third day after my arrival at my dwelling place, it was unexpectedly decided that I should move to Chongqing. Before boarding the airplane, I hastily wrote my friends a short letter, expressing my gratitude for their hospitality and telling them about my whereabouts. I promised to write them again as soon as I settled down in Chongqing. But, without warning, on my arrival in the wartime capital^[5], I fell sick from a very bad cold, and afterwards,

moving here and there, I no longer had a fixed address. Two months later, I wrote my friends a rather long letter, but did not receive a reply for quite some time. Another two months passed. I opened a letter from P by the window of a room in the dormitory intended for single professors at my university:

Dear Mr. X,

How big a misfortune I have suffered! S passed away yesterday morning! What happened was as follows: While one of my colleagues was absent on a business trip, his wife suddenly fell sick of acute appendicitis. On learning this, S immediately borrowed a motorcar and drove her to the capital of the province. When I came home after work and found the note she had left me, I hurried there too, on horseback.... The patient was already in the hospital, but the affected part of her body had begun to fester. Fortunately, the operation went well, only she needed a transfusion because of excessive blood loss. At that time blood was very expensive, and the patient, with little money, refused categorically any transfusion. Then S found that she was of the same blood group as the patient and donated 200cc of her blood.... When I was preparing to leave for home, I insisted on her coming with me. S said, however, that the patient had to be taken care of but couldn't afford to pay for a special nurse, so she had to stay with her until the patient's husband arrived. Unable to dissuade her from staying and urged by my work at the Institute, I had to leave her there alone.... Three weeks later, S came home terribly emaciated, for during this period she had donated 400cc of blood to the patient. Then she remained confined to bed. Sometimes she could only get up with great effort, and later she could not even walk. The doctors discovered that she was suffering from military tuberculosis, which meant that all her blood vessels were infected by tubercular bacillus, which was the most violent and incurable variety of tuberculosis. It was due to excessive loss of blood, too much hard work and malnutrition.... The last three months were months of anxiety for her, months of suffering for the children, months of fatigue for me, and we took on all these hardships only to discover that we could not avoid such a disaster!... Born in Shanghai, raised in Australia and married in Beijing, she died in Yunnan, at the age of thirty-two...!

I was shocked as if struck by lightning. In my mind's eye, I saw S's calm and sad face looking upward at the moon! I could not help recalling her tidy and pleasant home, her peaceful and silent husband, her bright and lively children....

All of a sudden, a clarion call for flag-lowering issued from the drill ground. Unconsciously, I dropped the letter from my hand and

drew myself up to my full height. With my hands at my sides, I stared at the radiant and waving flag slowly descending down the pole. Amidst the lingering sound of the horn, I faintly sat down, my face covered with tears that had come to my eyes at some unknown moment.

[1] These were the two most important public places for social contact among people of high position in Beijing at that time.

[2] "Great Rear" refers to the western areas of China unoccupied by the Japanese during the War of Resistance against Japan.

[3] These are poles made of wood or bamboo, used in China to carry loads at both ends, with the middle supported by one shoulder.

[4] In Chinese, the idiom "*bo ming*" (thin fate) refers to women who are believed to have been born under an unlucky star and to be predestined to go through hardships and die early.

[5] Chongqing was the wartime capital of China during the War of Resistance against Japan, since Nanjing, the official capital, was under Japanese occupation.

拾贰 我的学生

S 是在澳洲长大的——她的父亲是驻澳的外交官——十七岁那年才回到祖国来。她的祖父和我的父亲同学，在她考上大学的第二天，她祖父就带她来看我，托我照应。她考的很好，只国文一科是援海外学生之例，要入学以后另行补习的。

那时正是一个初秋的下午，我留她的祖父和她，在我们家里吃茶点。我陪着她的祖父谈天，她也一点不拘束的，和我们随便谈笑。我觉得她除了黑发黑睛之外，她的衣着、表情，完全像一个欧洲的少女。她用极其流利的英语，和我谈到国文，她说：“我曾经读过国文，但是一位广东教师教的，口音不正确……”说到这里，她极其淘气的挤着眼睛笑了，“比如说，他说：‘系的，系的，萨天常常萨雨。’你猜是什么意思？他是说：‘是的，是的，夏天常常下雨。’你看！”她说着大笑起来，她的祖父也笑了。

我说：“大学里的国文又不比国语，学国语容易，只要你不怕说话就行。至于国文，要能直接听讲，最好你的国文教授，能用英语替你解说国文，你在班里再一用心，就行了。”她的祖父就说：“在国文系里，恐怕只有你能用英语解说国文，就把她分在你的组里吧，一切拜托了！”我只得答应了。

上了一星期的课，她来看我，说别的功课都非常容易，同学们也都和她好，只是国文仍是听不懂。我说：“当然我不能为你的缘故，特别的慢说慢讲，但你下课以后，不妨到我的办公室里，我再替你细讲一遍。”她也答应了。从此她每星期来四次，要我替她讲解。真没看见过这样聪明的孩子，进步像风一样的快。一个月以后，她每星期只消来两次，而且每次都是用纯粹的流利的官话，和我交谈。等到第二学期，她竟能以中文写文章，她在我班里写的“自传”长至九千字，不但字句通顺，而且描写得非常生动。这时她已成了全校师生嘴里所常提到的人物了。

她学的是理科，第二年就没有我的功课，但因为世交的关系，她还常常来看我。现在她已完全换了中服，一句英语不说，但还是同欧美的小女孩儿一样的活泼淘气。她常常对我学她们化学教授的湖南腔，物理教授的山东话，常常使全客厅的人们，笑得喘不过气来。她有时忽然

说：“×叔叔，我祖父说你在美国一定有位女朋友，否则为什么在北平总看不见你同女友出去？”或说：“众位教授听着！我的×叔叔昨天黄昏在校园里，同某女教授散步，你们猜那位女教授是谁？”她的笑话，起初还有人肯信，后来大家都知道她的淘气，也就不理她。同时，她的朋友越来越多，课余忙于开会、赛球、骑车、散步、溜冰、演讲、排戏，也没有工夫来吃茶点了。

以后的三年里，她如同狮子滚绣球一般，无一时不活动，无一时不是使出浑身解数的在活动。在她，工作就是游戏，游戏就是工作。早晨看见她穿着蓝布衫、平底皮鞋，夹着书去上课；忽然又在球场上，看见她用红丝巾包起头，穿着白衬衣、黑短裤，同三个男同学打网球；一转眼，又看见她骑着车，飞也似的掠过去，身上已换了短袖的浅蓝绒衣和蓝布长裤；下午她又穿着实验白衣服，在化学楼前出现；到了晚上，更摸不定了，只要大礼堂灯火辉煌，进去一看，台上总有她，不是唱歌，就是演戏；在周末的晚上，会遇见她在城里北京饭店或六国饭店，穿起曳地的长衣，踏着高跟鞋，带着长耳坠，画眉，涂指甲，和外交界或使馆界的人们，吃饭，跳舞。

她的一切活动，似乎没有影响到她的功课，她以很高的荣誉毕业了。她的祖父非常高兴，并邀了我的父亲来赴毕业会，会后就在我们楼里午餐。她们祖孙走后，我的父亲笑着说：“你看 S 像不像一只小猫，没有一刻消停安静！她也像猫一样的机警聪明，虽然跳荡，却一点不讨厌。我想她将来一定会嫁给外交人员，你知道她在校里有爱人吧？”我说：“她的男朋友很多，却没听说过有哪一个特别好的，您说的对，她不会在同学中选对象，她一定会嫁给外交人员。但无论如何，不会嫁给一个书虫子！”

出乎意外的，在暑期中，她和一位 P 先生宣布订婚，P 就是她的同班，学地质土壤的。我根本没听说过这个人！问起 P 的业师们，他们都称他是个绝好的学生，很用功，性情也沉静，除读书外很少活动。但如何会同 S 恋爱订婚，大家都没看出，也绝对想不到。

一年以后，他们结了婚，住在 S 祖父的隔壁，我的父亲有时带我们几个弟兄，去拜访他们。他们家里简直是“全盘西化”，家人仆妇都会听英语，饮食服用，更不必说。S 是地道的欧美主妇，忙里偷闲，花枝招展。我的父亲常常笑对 S 说：“到了你家，就如同到澳洲中国公使馆一般！”

但是住在“澳洲中国公使馆”的 P 先生，却如同古寺里的老僧似的，外面狂舞酣歌，他却不闻不问，下了班就躲在他自己的书室里，到了吃饭时候才出来，同客人略一招呼，就低头举箸。倒是 S 常来招他说话，欢笑承迎。饭后我常常同他进入书室，在那里，他的话就比较的多。虽然我是外行，他也不惮烦的告诉许多关于地质土壤的最近发现，给我看了许多图画、照片和标本。父亲也有时捧了烟袋，踱了进来，参加我们的谈话。他对 P 的印象非常之好，常常对我说：“P 就是地质本身，他是一块最坚固的磐石。S 和一般爱玩漂亮的人玩腻了，她知道终身之托，只有这块磐石最好，她究竟是一个聪明人！”

我离开北平的时候，到她祖父那里辞行，顺便也到 P 家走走。那时 S 已是三个孩子的母亲，院子里又添上了沙土池子、秋千架之类。家里人口添了不少，有保姆、浆洗缝做的女仆、厨子、园丁、司机，以及打杂的工人等等。所以当 S 笑着说“后方见”的时候，我也只笑着说：“我这单身汉是拿起脚来就走，你这一个‘公使馆’如何搬法？”P 也只笑了笑，说：“X 先生，你到那边若见有地质方面新奇的材料，在可能的范围内，寄一点来看看。”

从此又是三年——

忽然有一天，我在云南一个偏僻的县治旅行，骑马迷路。那时已近黄昏，左右皆山，顺着一道溪水行来，逢人便问，一个牧童指给我说：“水边山后有一个人家，也是你们下江人，你到那边问问看，也许可以找个住处。”我牵着马走了过去，斜阳里一个女人低着头，在溪边洗着衣裳，我叫了一声，她猛然抬起头来，我几乎不能相信我的眼睛，那用圆润的手腕，遮着太阳，一对黑大的眼睛，向我注视的，不是 S 是谁？

我赶了过去，她喜欢的跳了起来，把洗的衣服也扔在水里，嘴里说：“你不嫌我手湿，就同我拉手！你一直走上去，山边茅屋，就是我们的家。P 在家里，他会给你一杯水喝，我把衣裳洗好就来。”

三个孩子在门口草地上玩，P 在一边挤着羊奶，看见我，呆了一会，才欢呼了起来。四个人把我围拥到屋里，推我坐下，递烟献茶，问长问短。那最大的九岁的孩子，却溜了出去，替我喂马。

S 提着一桶湿衣服回来，有一个小脚的女工，从厨房里出来，接过，晾在绳子上。S 一边擦着手笑着走了进来，我们就开始了兴奋而杂乱的谈话，彼此互说着近况，从谈话里知道他们是两年前来的，我问起她的祖父，她也问起我的父亲。S 是一刻不停的做这个那个，她走到哪

里，我们就跟到哪里谈着。直到吃过晚饭，孩子们都睡下了，才大家安静的，在一盏菜油灯周围坐了下来。S 补着袜子，P 同我抽着柳州烟，喝着胜利红茶谈话。

S 笑着说：“这是‘公使馆’的‘山站’，我们做什么就是得像什么！× 叔叔！这座茅屋，就是 P 指点着工人盖的，门都向外开，窗户一扇都关不上！拆了又安，安了又拆，折腾了几十回。这书桌、书架、‘沙发’椅子都是 P 同我自己钉的，我们用了七十八个装煤油桶的木箱。还有我们的床，那是杰作，床下还有放鞋的矮柜子。好玩的很，就同我们小时玩‘过家家’似的，盖房子、造家具、抱娃娃、做饭、洗衣服、养鸡、种菜，一天忙个不停，但是，真好玩，孩子们都长了能耐，连 P 也会做些家务事。我们一家子过着露营的生活，笑话甚多，但是，我们也时常赞叹自己的聪明，凡事都能应付得开。明天再带你去看我们的鸡棚、羊圈、蜂房，还有厕所，……总而言之，真好玩！”

我凝视着她，“真好玩”三字就是她的人生观，她的处世态度，别的女人觉得痛苦冤抑的工作，她以“真好玩”的精神，“举重若轻”的应付了过去。她忙忙的自己工作，自己试验，自己赞叹，真好玩！她不觉得她是在做着大后方抗战的工作，她就是萧伯纳所说的：“在抗战时代，除了抗战工作之外，什么都可以做”的大艺术家！

当夜他们支了一张行军床——也是他们自己用牛皮钉的——把我安放在 P 的书室里，这是三间屋子里最大的一间，兼做了客室、储藏室等等。墙上仍是满钉着照片图画，书架上摆着满满的，书，墙角还立着许多锄头、铁铲、锯子、扁担之类。灭灯后月色满窗，我许久睡不着，我想起北平的“澳洲公使馆”，想起我的父亲，不知父亲若看了这个山站，要如何想法！

阳光射在我的脸上，一阵煎茶香味，侵入鼻腔。我一睁眼，窗外是典型的云南的海蓝的天，门外悄无声息。我轻轻的穿起衣服，走了出来，看见 S 蹑手蹑脚的在摆着早饭，抬头看见我，便笑说：“睡得好吧？你骑了一天马，一定累了，我们没有叫你。P 上班去了，孩子们也都上学了，我等着你一块儿吃粥。”说着忙忙的又到厨房里去了。

我在外间屋里，一面漱洗，一面在充满阳光的屋子里，四周审视。“公使馆”的物质方面，都已降低，而“公使馆”的整洁美观的精神，尽还存在，还添上一些野趣。饭桌上蒙着一块白底红花土布，一只大肚的陶罐里，乱插着红白的野花。桌上是一盘黄果，——四川人叫做广柑

——对面摆着两只白盘子，旁边是两把红柄的刀子，两双红筷子，两个红的电木的洗手碗，两块白底红花的饭巾……正看着，S 端了一盘鸡蛋炸馒头片进来，让我坐下，她自己坐在对面。我们一面剥黄果，一面谈话。

白天看 S，觉得她比三年前瘦了许多，但精神仍旧是很好，身上穿着蓝底印白花的土布衫子、短袜子、布鞋；脸上薄施脂粉，指甲也染得很红。我笑说：“你的化妆品都带来了吧？”她也笑说：“都带来了，可是我现在用的是鹅蛋粉，和胭脂棉。凤仙花瓣和白矾捣了也可以染指甲。”

我们吃着 S 自制的咸鸭蛋和泡菜，吃过稀饭，又喝了煎茶。坐了一会，S 就邀我去参观她的环境。出到门外，菜园里红的是辣椒、西红柿，绿的是豆子，黄的是黄瓜，紫的是茄子，周围是一片一片的花畦，阳光下光艳夺目，蜂喧蝶闹。菜园的后面，简直像个动物园！十几只意大利的大白鸡，在沙地上吃食，三只黑羊，两只狼犬——我的那匹马也拴在旁边——还有小孩子养的松鼠和白兔。一只极胖的蓝睛的暹罗猫，在篱隙出入跳跃。

转到山后，便看见许多人家，S 说这便是市中心，有菜场，有邮政代办所，有中心小学校。P 的“地质调查所”是全市最漂亮高大的房子，砖墙瓦顶，警察岗亭就设在门边。我们穿过这条“大街”的时候，男女老幼，村的俏的，都向 S 招呼，说长道短。有个妇人还把一个病孩子，从门洞里抱出来给 S 看。当我们离开这人家的时候，我笑说：“S，如今你不是公使夫人，而是牧师太太了！”她笑了一笑。

大街尽头，便是五六幢和 S 的相似的房子，那是地质调查所同人的住宅。S 也带我进去访问。那些太太们大都是外省人，看见我去都很亲热，让坐让茶。她们的房间和 S 的一样，而陈设就很乱很俗，自己是乱头粗服，孩子们也啼哭喧闹。这些太太们不住的向我道歉，说是房间又小，佣人又笨，什么都不趁手，哪能像北平、上海那样的可以待客呢？我无聊的坐了一会，也就告辞了出来。

回来的路上，S 请我先走，说她还要到小学里去教一堂课。我也不回来，却走到“地质调查所”去找 P，参观了他们的工作。等到 P 下班，我们一同走出来，三个孩子十分高兴的在门口等着，说是“妈妈炖了鸡，烤了肉，蒸了蛋羹，请客人回去吃大馒头去！”

午后我睡了一大觉，醒起便要走路，S 和 P 一定不肯，说今晚要约几个朋友来和我谈谈。S 笑说还有几位漂亮的太太。我说：“假如你们可

怜我，就免了这一套吧，我实在怕见生人；还有，你也扮演不出‘公使馆’那一出！”P说：“也好，你再住一天，我们不请客人好了。”S想了一会，笑了，说：“晚饭以前，我还有事，你们带这几个孩子到对山去玩去，六时左右，带些红杜鹃花回来。”我们答应了，孩子们欢呼着都跑在前面去了。

我和 P 对躺在山头草地上，晒着太阳。我说：“你们这一对儿真好，你从前是那样稳静，现在也是那样稳静。S 从前是那样活泼，现在也是那样活泼，不过比从前更老练能干了，真是难得。”P 沉默了一会，说：“X 先生，你只知道 S 活泼的一方面，还没有看她严肃的一方面。她处处求全，事事好胜，这一二年来，身体也大不如从前了！她一个人做着六七个人的事，却从不肯承认自己的软弱。你知道她欢喜引用中文成语——英文究竟是她的方言，她睡梦中常说英语——有时文不对题的使人发笑。有一天，我下班回来，发现她躺在床上，看见我就要起来。我按住她，问她怎么了，她说没有什么，只觉得有一点头晕。我在床边坐了一会，她忽然说：‘P，我这个人真是“心比天高，命比纸薄”。’我心里忽然一阵难过，勉强笑说：‘别胡说了，你知道“薄命”这两个字，是什么意思。’她却流下泪来，转身向里躺着去了。X 先生，你觉得……”

P 说不下去了，我也不觉愣住，便说：“我自然看出 S 严肃的一方面，她如果不严肃，她不会认得你，她如果不严肃，她不会到内地来。她的身体是不如从前了，你要时时防护着她！至于她所说的那两句话你倒不必存在心里，她对于汉文是半懂不懂的。”P 不言语，眼圈却红了。

这时候孩子们已抱着满怀的红杜鹃花，跑了上来，说：“我们该回去了，晚饭以前，我们还要换衣服呢。”

一进家门，那“帮工”的李嫂，穿着一身黑绸的衣裤，系着雪白的围裙，迎了出来，嘴里笑着说：“客人们请客厅坐。”我们进到中间屋里，看着餐桌上铺着雪白的桌布，点着辉煌的四支红烛，中间一大盘的红杜鹃花，桌上一色的银盘银箸，雪白的饭巾。我们正在诧异，李嫂笑着打起卧房的布帘子，说：“太太！客人来了。”S 从屋里笑盈盈的走了出来，身上穿着红丝绒的长衣，大红宝石的耳坠子，脚上是丝袜，金色高跟鞋，画着长长的眉，涂上红红的嘴唇，眼圈边也抹上淡淡的黄粉，更显得那一双水汪汪的俊眼——这一双俊眼里充满着得意的淘气的笑——她伸出手来，和我把握，笑说：“X 先生晚安！到敝地多久了？对于敝处

一切还看得惯吧？”我们都大笑了起来，孩子们却跑过去抱着 S 的腿，欢呼着说：“妈妈，真好看！”回头又拍手笑说：“看！李嫂也打扮起来了！”李嫂忍着笑，走到厨房里去了。

我们连忙洗手就座。因为没有别的客人，孩子们便也上席，大家都兴高采烈。饭后，孩子们吃过果点，陆续的都去睡了。S 又煮起咖啡，我们就在廊上看月闲谈。看着 S 的高跟鞋在月下闪闪发光，我就说：“你现在没有机会跳舞玩牌了吧？”S 笑说：“才怪！P 的跳舞和玩牌都是到了这里以后才学会的。晚饭后没事，我就教给 P 打‘蜜月’纸牌，也拉他跳舞。他一天工作怪累的，应当换一换脑筋。”P 笑说：“我倒不在乎这些个，我在北平的时候，就不换脑筋。我宁可你在一天忙累之后，早点休息睡觉，我自己再看一点轻松的书。”我说：“S，你会开汽车吧？”S 说：“会的，但到这里以后，没有机会开了。”我笑说：“你既会开车，就知道无论多好结实的车子，也不能一天开到二十四小时，尤其在这个崎岖的山路上。物力还应当爱惜，何况人力？你如今不是过着‘电气冰箱，抽水马桶’的生活了，一切以保存元气为主，不能一天到晚的把自己当做一架机器，不停的开着……”S 连忙说：“正是这话！人家以为我只过‘电气冰箱，抽水马桶’的生活……”我拦住她，“你又来，总是好胜要强的脾气！你如果把我当做叔叔，就应当听我的话。”S 笑了一笑，抬头向月，再不言语。

第二天一早，我就骑着马离开这小小的镇市。P 和 S，和三个小孩子都送我到大会上，我回望这一群可爱的影子，心中忽然感激，难过。

回到我住处的第三天，忽然决定到重庆来。在上飞机之前，匆匆的给他们写一封短信，谢谢他们的招待，报告了我的行踪。并说等我到了重庆以后，安定下来，再给他们写信——谁知我一到陪都，就患了一个月的重伤风，此后东迁西移，没有一定的住址。直到两月以后，才给他们写了一封很长的信，许久没有得到回音。又在两月以后，我在一个大学里，单身教授的宿舍窗前，拆开了 P 的一封信！

“×先生：

我何等的有幸，S 已于昨天早晨弃我而逝！原因是一位同事出差去了，他的太太忽然得了急性盲肠炎。S 发现了，立刻借了一部车子，自己开着，送她到省城。等到我下班，看见了她的字条，立刻也骑马赶了去……那位太太已入了医院，患处已经溃烂，幸而开刀经过良好，只是失血太多，需要输血。那时买血很贵，那位太太因经济关系，坚持不肯。S 又发现她们的血是同一类型，她就输给那太太二百 C C 的血。……我要她同我回来，她说那太太需要人照料，而又请不起特别护士，她必须留在那里，等到她的先生来了

再走。我拗她不过，所中公务又忙，只得自己先走……三星期之后，S 回来了，瘦得不成样子！原来在三星期之内，她输给那太太四百 C C 的血。从此便躺了下去，有时还挣扎着起来，以后就走不动了。医生发现她是得了黍形结核症，那是周身血管，都有了结核细菌，是结核症中最猛烈最无可救药的一种！病原是失血太多，操劳过度，营养不足，……这三个月中，急坏了 S，苦坏了孩子，累坏了我，然而这一切苦痛，都不曾挽回我们悲惨的命运！……她生在上海，长在澳洲，嫁在北平，死在云南，享年三十二岁……”

如同雷轰电掣一般，我呆住了，眼前涌现了 S 的冷静而含着悲哀的、抬头望月的脸！想到她那美丽整洁的家，她的安详静默的丈夫，她的聪明活泼的孩子……

忽然广场上一声降旗的号角，我不由自主的，扔了手里的信，笔直的站了起来。我垂着两臂，凝望着那一幅光彩飘扬的国旗，从高杆上慢慢的降落了下来，在号角的余音里，我无力的坐了下去，我的眼泪，不知从哪里来的，流满了我的脸上了！

13 My Landlady

On February 8, 1937, I arrived at noon in Paris from Geneva. Mr. L, a friend of mine at the Chinese Embassy in France, met me at the railway station. Smiling profusely, he took my small leather suitcase from my hand, and we walked out of the station together. He said, "I received your letter from Rome quite a few days ago. I've been busy running about to arrange what you asked for. I didn't achieve anything until the day before yesterday. An unexpected opportunity indeed! But let me tell you later in detail at the dinner table."

L was also a bachelor, so he had no "home" to take me to when we walked out of the station. We took a taxi and headed directly for the Beijing Restaurant in the Latin Quarter. We chose a table, sat down face to face and ordered the dishes.

Wiping off his chopsticks, L said, "You are quite choosy. Is this any way on earth to choose a dwelling place? You want a good location, a nice landlord, as few tenants as possible, and a landlord who speaks English! Anyway, once I agreed to help you—although I was already aware of how difficult you were to please—I could only do my best. Who would have thought that, when I brought up this matter while talking with our ambassador, he would recommend me to contact a certain lady. She has an aristocratic background and lives in the most quiet and exclusive part of the city, the seventh *arrondissement*. Going to see her the day before yesterday, I had a look at the house...." He scratched his head and giggled, "'Though born a thousand miles apart, souls which are one shall meet,' as the saying goes. This lady is extremely beautiful and intelligent. She is a perfect match for you. Well, you'll see for yourself in just a moment." I could not help laughing, "I didn't ask you to find me a wife. Why talk about 'souls which are one' and 'perfect match'? Instead, tell me something about the house."

At that moment our food arrived, and L ordered some wine. He

raised his glass, saying, "Cheers! I can tell you the place is on the seventh floor of a building on an avenue facing Hôtel Royal des Invalides. It is of course charming and quiet. There's only one landlady. You will be her one and only tenant! Since her family fortunes have recently declined, she wants to take in a renter to help with expenses. The room and board are a little expensive, but I know that a well-off man like you won't care too much about that. Let's go and see as soon as lunch is over."

We chatted idly for a while, and after finishing an elegant meal, L paid the bill. Just as I was about to pick up my suitcase to leave, L stopped me and said, "Don't hurry to pick up your suitcase. The question is not whether you want to be her tenant or not, but whether she wants you or not! It will be a disgrace for us to be driven out with the luggage that we have rashly carried there if no agreement has been reached in advance. You'd better leave the suitcase here. We can pick it up after we come to an agreement with her." I smiled and complied.

Our motorcar raced along broad and smooth avenues, turning left and right, before it lurched to a stop in front of a large building. We entered the corridor, took the elevator and arrived at the door of the top floor. L took off his hat and rang the bell. A very young maid opened the door, and L asked, smiling, "Is Mademoiselle R in? Please let her know that Mr. L from the Chinese Embassy has come with a guest to pay her a visit." The maid, smiling, took his business card and said, "Please take your seats in the sitting room." Then she led us in.

I was viewing and admiring the furnishings and tones of the sitting and dining room when I suddenly saw L rise to his feet. I rose, too. A white-haired old woman came in through the door. L cheerfully introduced me, "I would like you to meet Mr. X, of whom I've spoken earlier." He turned round and said to me, "This is Mademoiselle R."

Smiling, Mademoiselle R shook my hand. We all sat down in front of the fireplace. While talking to L, Mademoiselle R looked me up and down. I was doing the same in return. How beautiful a woman! Her hair was soft and white, and she wore a silver gray gown with small

crimson flowers embroidered around the neck and sleeves. She had a white velvet scarf draped on her shoulders. Her eyes were bright and attractive, her eyebrows were long, her beautiful face was enhanced by a whisper of makeup and a slight touch of lipstick on her lips. It was utterly impossible to guess her age. She reminded me of my mother in a large part of her bearing and movements.

Mademoiselle R began to talk with me, speaking perfect and fluent English. We talked about London, Rome, Switzerland.... When we came to the sculptures in the museums of Rome and the paintings in the museums of Florence, she suddenly stopped and said with a smile, "Mr. X must be tired from his trip. Anyway, we'll have plenty of time to talk about these things. We'd better go look at the room." Saying that, she got to her feet and began to lead the way. Following her, L said to me in a whisper with a smile, "It's yours."

My room was just behind the sitting room and was attached to the bathroom. It had a window overlooking the street. The furniture was simple yet elegant. On the desk beside the window there was a vase with dried brown roses as well as a few stationery articles. Opposite the desk was a bookcase, with its bottom shelves empty but its upper ones filled with hard-covered books by famous English, French and German writers. There was a lamp with a dark reddish brown shade on the small table beside the bed. Finally, the room contained a large wardrobe and a rocking chair. The room seemed quite bright and rather spacious.

We looked around. I smiled and said, "The room is perfect, just what I need." Mademoiselle R also smiled and said, "Here it's a little too quiet and peaceful. Maria, who does rather good housework, cooks quite delicious meals. Whenever you want to eat outside, please let her know beforehand. And if you want to invite one or two guests for dinner, please tell her in advance. We have our clothes washed every week...." We walked back into the sitting room while she was speaking. L picked up his hat and said with a smile, "So it is settled. I'm sure that all of you will get along very well with each other. Now we must be going. Mr. X will return here after dinner: he hasn't paid

his visit to our ambassador yet!"

L and I strolled merrily side by side down the sidewalk under the tall trees. Putting his hand on my shoulder, he smiled and said, "I told you the truth, didn't I? Except for the fact that she is a little too old! Our ambassador says her age is probably over sixty. She is fairly well-known as a novelist and often writes poetry as well. She is quite fussy about choosing her tenant, and so she keeps the room vacant more often than not. She likes to rent it to 'outsiders,' in order, I think, to get to know people apt to become characters in her novels. Who knows if some day you will appear in one of her novels!" I laughed, "I'll suffer no loss at all in renting the place. Only it is a shame that I'm neither a romantic nor a heroic person lucky enough to be captured by her pen."

I did not return to my newly rented room until midnight. I went to bed after washing up. The white bed sheets were soft and warm. Gazing at the dark brown window curtains and lampshade, I suddenly recovered from my fatigue in the dim light. I got up and in bare feet walked to the bookcase, taking out a collection of Goethe's poetry. Soon I began to read in bed, but gradually fell asleep. The next morning it was drizzling. I didn't wake up until Maria knocked at the door, bringing in some hot water for my shave.

Thus I began to live as a tenant at Mademoiselle R's home. Breakfasts were simple, consisting of bread, butter and coffee, which I ate in my room more often than not. After breakfast I would sit for a while in the sitting room so that Maria might tidy up my room. A new comer in Paris, I had so many places to see and so many people to visit that I rarely took my lunch in that house. I would leave early in the morning and come back at midnight. Luckily I had been given a key, so I could come and go without disturbing anyone anytime I pleased. Sometimes, when gently pushing open the door on a cold night, I was assailed by a soft fragrance, and then, stepping on the thick, soft carpet, I would quietly return to my room. There I would always find letters and flowers on the desk, and sometimes even hot coffee or tea with a small dish of pastry. Reading the letters, I would

enjoy the tea and pastry—and this would always remind me of my mother.

One day, while at lunch, I saw Mademoiselle R. Before I could thank her for the late-night refreshments, she said with a smile, "Mr. X, I will have to return your payment for this fortnight's meals. You have never taken your meals here!" Smiling, I sat down and said, "From today on, I will rarely go out. I have seen all the places and visited all the people that interest me. It is now time for me to settle down and write some letters, read and rest quietly." Mademoiselle R laughed, "And don't forget your study of French," she said, "Mr. L told me you wanted to practice your French."

Indeed, my French was terrible. I could read with some difficulty, but nobody could understand my spoken French! Mademoiselle R suggested that we speak French during the meals, but it turned out that our conversation covered so many topics that what I tried to say in French often failed to convey what I intended to say, so much so that I had to pause for a long time, smiling, in order to find the right word or expression. This occurred so repeatedly that both of us felt rather awkward and, as if by prior agreement, burst out laughing. "Forget it!" one of us would say. "No use kicking a dead horse!" From then on, we would become absorbed in discussing various topics, banishing the French language wholly from our minds.

Since winter was quite cold and damp in Paris, we both liked the warmth of the fireplace. We often sat after dinner in Mademoiselle R's study, warming ourselves, smoking and chatting idly. The study was the largest room in the apartment. Its walls were bookshelves from floor to ceiling, filled with literary works. There were a few oriental antiques on the mantelpiece. I learned from her conversation that her father had served as French Ambassador to Britain—she had lived in England for fifteen years—and that he also had been a high-ranking official in the French Far East colonies, where she had lived for another eight years. None of her three brothers was still living. Her two nephews had been killed in the last European War. She had one niece, married with two children, living in the countryside. Her

mother, whom she often mentioned, had been a frail yet talented and virtuous woman. A picture of her mother reminded me of my own mother, especially when I noticed her eyes and eyebrows.

Although I did not learn French, I did learn much about French art and literature. We would often go together to museums and historic sites, listen to the opera, watch dances, buy books and paintings.... As Mademoiselle R was a well-known lady around Paris and we went together for outings nearly every day, people who hadn't seen her personally began spreading the rumor that Mr. X kept company in Paris all day long with a certain beautiful French woman, and that the two of them went to the theater and opera and danced together. The rumor even reached my father, who wrote me a letter from Beijing in which he asked me whether this was true. I replied in my letter, "Yes, it is true. But I am unfortunate to have been born thirty years too late. She is a woman over sixty! Father, if only you could see her with your own eyes, you, too, would feel attracted. She really looks like Mother!"

I could have gone to Berlin, but I was not yet interested in going, as I was enjoying such a beautiful spring in Paris....

One cool spring morning, I received a letter from China written by my second younger brother that announced the news of his engagement. At the time of afternoon tea, I carried the photographs of the newlyweds and the letter into Mademoiselle R's study and told her the good news. I casually pulled from my wallet the pictures of my parents and my first and third younger brothers with their wives. Looking them over, Mademoiselle R made some polite remarks of praise before saying to me, "Mr. X, may I ask you a question? Don't you oriental people maintain that 'Men and women should marry when grown up'? Then why are you still unmarried, let alone the eldest son in your family?"

I laughed, put the pictures back in my wallet, pulled up an ottoman close to the fireplace and sat down on it. Poking the fire with a copper rod, I said, "A great deal of people have asked me this question before, so you are not the first one. Well, the reason is this:

My parents were rather modern in their thinking. Since my youth they had never forced me to become engaged or to marry. For my own part, after I grew up, I have been so choosy that I have never come across a single woman who meets my standards, nor have I resigned myself to accept one who doesn't measure up. Finally I simply stopped looking...."

Mademoiselle R gazed fixedly at me and said, "Don't you feel something missing in your life?" I replied, "You never can tell. I am not looking at all. I believe marriage without love is not only meaningless, but even immoral. Once you talk of love, the problem is even bigger, for love is not something you can search for with a lantern. We oriental people believe in what we call 'predestined relationships.' 'Born a thousand miles apart, souls which are one shall meet,' as the saying goes. By the same token, souls that are disunited shall *not* meet even if they happen to come across each other...." At this point, I suddenly recalled what L had said in this respect. I unwittingly looked up at Mademoiselle R and saw her reclining leisurely in the armchair, dressed in a light purple dress with several violets pinned to her chest. The glistening glow of the fireplace, set against the darkness outside the window, made the fireside corner even cozier and sweeter.

Holding a cup of coffee in her hand, she continued looking at me. I added, "Speaking frankly, I don't find life empty yet. Sometimes a single man enjoys more leisure, more calm, more freedom.... I don't find that you lack anything either, do you?" She gently placed her cup down and said with a faint smile, "Me? I am a woman. That makes things quite different...." As she spoke, her soft white fingers reached up and gently pushed some hair behind her ears. While glancing towards me, she picked up her knitting and began working on it again.

I said, "Now I'm sorry I don't understand what you mean. I always thought women were born builders of families. Unlike men, they always care about children and home life. Why then would any woman not want to marry?" Mademoiselle R looked at me and said

very gently, "I am one of those most 'human' and most 'womanly' women. I would love to have a husband capable of taking care of me, showing tenderness and consideration towards me. I love children and I would like to have a perfect home. I'm aware that if I had all of this, I would happily vanish into it. But it is because I know myself all too well that I preferred not to marry and have remained unmarried up to now!"

I stared at her, hugging my knees. She smiled and said, "You find that strange, don't you? Let me explain in detail. There's a problem with me—I like writing!" At that point I hastened to say, "Oh, I know! My French is too poor for me to appreciate good literature, but our ambassador often talks about your work and I have tried to read some of it myself. I never brought it up with you because you never mentioned it, and I was afraid..." Mademoiselle R interrupted me and said, "Now you're straying from the point. I mentioned the fact simply to say that family life is disadvantageous to a woman writer." I said, "But if she can..."

Mademoiselle R laughed at once and went on, "But if she is of delicate constitution... Listen. When a man gets married, he gives up nothing. But when an unhealthy woman marries, she must give up one of the three: her career, if she has one, her health or her household duties. If I had been married, I first would have had to sacrifice my career, second my health and only third my household duties...."

As I put down her words at this moment, I suddenly remember a novel, written last year by one of my female students, entitled *Lost on All Three Sides*. But let me return to the topic of my chat with Mademoiselle R. As she carried on her knitting with bent head, she said, "I am a strong-willed woman, proud, obsessed with quiet and cleanliness. To make matters worse, I am extremely sensitive and thoughtful whenever sentiments are at stake. All these are my fatal weaknesses! Such a mental disposition costs me in everything I undertake ten times the attention and energy required of other people. In these modern times, raising a family is by no means easy.

"Take my mother, for example. As wife of a diplomat and

Governor General of Annam, she had a host of servants and maids waiting on her, yet she...could spare no time taking care of her painting and her own health. All her time was centered around her husband's career and health, her children's upbringing, education and... She toiled at it for fifty years! Even now, I feel sad each time I look at her preliminary sketches. Oh, my poor mother...." She stopped, choked with emotion. Then she cleared her throat softly twice and forced an uneasy smile, "About my mother a whole book can be written. Have you ever read the novel *All Passion Spent* written by the English woman writer, V. Sackville-West?"

I nodded with vague recollection, "Yes, I have. It's well written.... But, Mademoiselle R, a married woman at least has love." She suddenly burst into laughter and said, "Love? That is what I find most difficult to define. What a man regards as love and what a woman regards as love are two essentially different things. Listen. A man lives for his career—and God knows whether he means career or merely occupation! Only a woman lives for love. She sacrifices everything for it. Instead, the husband says to his wife, 'In order to be worthy of your love, I promise to exert myself even more in my career!' Thus he gains both fame and fortune!" At this point she laughed again, and her laughter exuded a tremendous sense of coolness.

I had never seen Mademoiselle so choked with emotion, so I didn't dare to say anything more, although I wanted to say something in favor of men. I believed that I at least was not the kind of man she had in mind.

She seemed to know my thoughts and said, smiling, "Every man before marriage thinks his case is an exception. And I don't think that he is dishonest. But a conjugal relationship is the most delicate and troublesome of all relationships, and time is more inexorable and actual than anything else. Once you share a bed with a man, the relationship will be everlasting.... Oh, everlasting and day after day! And yet, even the hardest sparkling diamond can be ground into opaque sand grains, to say nothing of a soft blood-red human heart!

"So don't take me for a person indulging all day long in romantic

reveries. I see through everything clearly. True, 'career' is important to a man, and he should not give it up for love's sake; besides, love cannot consistently pervade his entire life. But, even more emphatically, a woman is after all a woman; she cannot throughout *her* life merely rely upon ideals of marriage and transcendental goals to prop up a weary mind and body. At the very moments when she is most sad, weak and in need of sympathy and gentle solicitude, if she only receives indifferent words, absent-minded gazes or even acrimonious satire or reproach, what do you think she will feel in her heart? I've seen and heard too much. This is a fast knot you can never undo in a married life. Since I was so aware and clearly conscious of this, I had to decide for myself whether or not it was worthwhile to marry!"

She bent down, picked up a twig and threw it into the fire, saying, "My mother often stared at me with sad eyes and said 'Delicia! Take care of your health! Who will look after you in the future if you don't marry?' I would say nothing. I only stared at her in turn and said to her in my mind, 'You'd better take care of your own health! It has cost you more than your health to care for the five of us, to care about Father's enteritis and relapsing fever...as well as the various rare diseases we children often came down with.... You haven't found enough for yourself in the last thirty years, have you?' But I never told her what I thought."

She smiled faintly and gazed fixedly at the fire. "After all, I wasn't bad-looking when I was young. I had a moderate position in society and a little fame in the world of letters. I believe that I was subject to temptation on more occasions than other girls. Several times I was even about to succumb to temptation..., but I managed to escape in the end. I have been too selfish to imagine putting down my pen. For the sake of my writing, I have had to save my health, and so..."

She went on. "You say I lack love? Perhaps. But there are still two or three men in love with me; they all say I am their one and only woman. They will always know love. I don't question their sincerity. But, in every case, isn't it because we have never lived together? They

are, of course, already married, and I know their gentle and capable wives. Sometimes I am invited to their homes for tea or dinner. Still I by no means envy them their family life. Their wives have also become good friends of mine and occasionally even complain to me about their husbands. While consoling them, if I may touch on the matter lightly, I ask myself whether I would have the courage to complain to anyone else were I to suffer such wrongs. Sometimes during tea or after dinner, I notice their husbands frowning at them, and such a scene makes me shudder! If I had become the wife of one of these gentlemen, and he now frowned at me and showed boredom with me, for me it would be too..."

At that moment, I laughed and very gently patted her on the knee. I said, "But if you were his wife, he would never frown at you. I don't believe there can be any man in the world lucky enough to be your husband yet capable of frowning at you or showing boredom toward you." She smiled, shook her head and said with a sigh, "Thank you, good young man, for what you say about me. But you are too young to understand.... For the last twenty to thirty years, I have been living alone. This has made me feel a little lonely, yet quite comfortable at the same time. Over these years I have written a dozen novels and seven or eight volumes of poetry, I have traveled frequently and made friends with many people.

"My niece has taken my first name, Delicia, god bless her! Little Delicia is a healthy and vivacious young woman, married in her early twenties. She has made love her career and married life her occupation. She is happy all day long, always with her mind free from any contradiction or conflict. Her two children are very much like her. I often go to stay with them in the summer, and she often brings her children to see me whenever she comes to Paris. All I own will be hers when I pass away. My body will be donated to the national hospital for anatomical research before cremation, and the ashes will be cast upon the waters of the Seine. That's how I will end...."

I stood up and was about to speak when Maria came in quietly and, standing at the door, said with her hands by her sides,

"Mademoiselle, dinner is ready." Mademoiselle R, seemingly surprised, rose to her feet and said, smiling, "Well, our chat has made me forget about the time. Mr. X, please go ahead."

At dinner, she brought out some fine champagne and I, for my part, contributed some of my best English cigarettes that a friend in the embassy had given me. We had a relaxing chat about everything, but avoided our previous topic. That evening, Mademoiselle R talked with particular eloquence; her rosy red cheeks communicated excitement and fatigue. Shortly after dinner, I urged her to retire for the night. Standing by the door of the sitting room, I stared blankly from behind at her delicate and slowly receding figure. What a beautiful and intelligent lady! Too beautiful, too intelligent, sad to say!

Ten days later, I left Paris. L saw me off at the station. On the train, I stood by the window till lunchtime, and then entered my stateroom and opened up the basket Mademoiselle R had prepared for me. I found some exquisitely prepared lunch food, a bottle of fine wine and a paperback edition of the English novel, *All Passion Spent*.

Less than one month after I returned to China, Beijing fell into the hands of the Japanese invaders. The French Consulate sent me a short letter from Mademoiselle R:

Dear Mr. X,

I have heard that Beijing has been bombed, and I am constantly concerned for you and your family's safety. Take courage! A noble people will after all be able to raise their heads. Please let me know about your safety whenever convenient.

Your friend,

Delicia

I wrote a letter and sent it to her via the French Consulate. From then on, no more correspondence passed between us.

Three years later, it was my turn to be concerned for her: the Germans had occupied Paris. When I heard that no fuel was available in Paris during the winter and that only those homes lodging German

officers could have coal, I hoped Mademoiselle R had fled that beautiful city. In no way could I imagine this gentle and lovely lady sitting in front of the fireplace with a German officer!

"Take courage! A noble people will after all be able to raise their heads."

拾叁 我的房东

一九三七年二月八日近午，我从日内瓦到了巴黎。我的朋友中国驻法大使馆的 L 先生，到车站来接我。他笑嘻嘻的接过了我的一只小皮箱，我们一同向站外走着。他说：“你从罗马来的信，早收到了。你吩咐我的事，我为你奔走了两星期，前天才有了眉目，真是意外之缘！吃饭时再细细的告诉你吧。”

L 也是一个单身汉，我们走出站来，无“家”可归，叫了一辆汽车，直奔拉丁区的北京饭店。我们挑了个座位，对面坐下，叫好了菜。L 一面擦着筷子，一面说：“你的条件太苛，挑房子哪有这么挑法？地点要好，房东要好，房客要少，又要房东会英语！我知道你难伺候，谁叫我答应了你呢，只好努力吧。谁知我偶然和我们的大使谈起，他给我介绍了一位女士，她是贵族遗裔，住在最清静高贵的贵族区——第七区。我前天去见了她，也看了房子……”他搔着头，笑说：“真是‘有缘千里来相会’，这位小姐，绝等漂亮，绝等聪明，温柔雅澹，堪配你的为人，一会儿你自己一见就知道了。”我不觉笑了起来，说：“我又没有托你做媒，何必说那些‘有缘’‘相配’的话！倒是把房子情形说一说吧。”这时菜已来了，L 还叫了酒，他举起杯来，说：“请！我告诉你，这房子是在第七层楼上，正临着拿破仑殡宫那条大街，美丽幽静，自不必说。只有一个房东，也只有你一个房客！这位小姐因为近来家道中落，才招个房客来帮贴用度，房租伙食是略贵一点，我知道你这个大爷，也不在乎这些。我们吃过饭就去看吧。”

我们又谈了些闲话，酒足饭饱，L 会过了帐，我提起箱子就要走。L 拦住我，笑说：“先别忙提箱子，现在不是你要不要住那房子的问题，是人家要不要你作房客的问题。如今七手八脚都搬了去，回头一语不合，叫人家撵了出来，够多没意思！还是先寄存在这里，等下说定了再来拿吧。”我也笑着依从了他。

一辆汽车，驰过宽阔光滑的街道，转弯抹角，停在一座大楼的前面。进了甬道，上了电梯，我们便站在最高层的门边。L 脱了帽，按了铃，一个很年轻的女佣出来开门，L 笑着问：“R 小姐在家吗？请你转报一声，中国大使馆的 L 先生，带一位客人来拜访她。”那女佣微笑着，接过片子，说：“请先生们客厅里坐。”便把我们带了进去。

我正在欣赏这一间客厅连饭厅的陈设和色调，忽然看见 L 站了起来，我也连忙站起。从门外走进了一位白发盈颠的老妇人。L 笑着替我介绍说：“这位就是我同您提过的 X 先生。”转身又向我说：“这位是 R 小姐。”

R 小姐微笑着同我握手，我们都靠近壁炉坐下。R 小姐一面同 L 谈着话，一面不住的打量我，我也打量她。她真是一个美人！一头柔亮的白发。身上穿着银灰色的衣裙，领边袖边绣着几朵深红色的小花。肩上披着白绒的围巾。长眉妙目，脸上薄施脂粉，也淡淡的抹着一点口红。岁数简直看不出来，她的举止顾盼，有许多地方十分的像我的母亲！

R 小姐又和我攀谈，用的是极流利的英语。谈起伦敦，谈起罗马，谈起瑞士……当我们谈到罗马博物馆的雕刻，和佛劳伦斯博物馆的绘画时，她忽然停住了，笑说：“X 先生刚刚来到，一定乏了，横竖将来我们谈话的机会多得很，还是先带你看看你的屋子吧。”她说着便站起引路，L 在后面笑着在我耳边低声说：“成了。”

我的那间屋子，就在客厅的后面，紧连着浴室，窗户也是临街开的。陈设很简单，却很幽雅，临窗一张大书桌子，桌上一瓶茶色玫瑰花，还疏疏落落的摆着几件文具。对面一个书架子，下面空着，上层放着精装的英法德各大文豪的名著。床边一张小几，放着个小桌灯，也是茶红色的灯罩。此外就是一架大衣柜，一张摇椅，屋子显得很亮，很宽。

我们四围看了一看，我笑说：“这屋子真好，正合我的用处……” R 小姐也笑说：“我们就是这里太静一些，马利亚的手艺不坏，饭食也还可口。哪一天，你要出去用饭，请告诉她一声。或若你要请一两个客人，到家里来吃，也早和她说。衣服是每星期有人来洗……”一面说着，我们又已回到客厅里。L 拿起帽子，笑说：“这样我们就说定了，我相信你们宾主一定会很相得的。现在我们先走了。晚饭后 X 先生再回来——他还没去拜望我们的大使呢！”

我们很高兴的在大树下、人行道上并肩的走着。L 把我的臂儿笑说：“我的话不假吧，除了她的岁数稍微大一点之外！大使说，推算起来，恐怕她已在六旬以外了。她是个颇有名的小说家，也常写诗。她挑房客也很苛，所以她那客房，常常空着，她喜欢租给‘外路人’，我看她是在招致可描写的小说中人物，说不定哪一天，你就会在她的小说中出现！”我笑说：“这个本钱，我倒是捞得回来。只怕我这个人，既非儿

女，又不英雄，没有福气到得她的笔下。”

午夜，我才回到我的新屋子里，洗漱后上床，衾枕雪白温软，我望着茶红色的窗帘、茶红色的灯罩，在一圈微晕的灯影下，忽然忘记了旅途的乏倦。我赤足起来，从书架上拿了一本歌德诗集来看，不知何时，蒙眬睡去——直等第二天微雨的早晨，马利亚敲门，送进刮胡子的热水来，才又醒来。

从此我便在 R 家住下了，早饭很简单，只是面包牛油咖啡，多半是自己在屋里吃。早饭后就到客厅坐坐，让马利亚收拾我的屋子。初到巴黎，逛街访友，在家吃饭的时候不多，我总是早晨出去，午夜回来。好在我领了一把门钥，独往独来，什么人也不惊动。有时我在寒夜中轻轻推门，只觉得温香扑面，踏着厚软的地毡，悄悄的走回自己屋里，桌上总有信件鲜花，有时还有热咖啡或茶，和一盘小点心。我一面看着信，一面吃点心喝茶——这些事总使我想起我的母亲。

第二天午饭时，见着 R 女士，我正要谢谢她给我预备的“消夜”，她却先笑着说：“× 先生，这半月的饭钱，我应该退还你，你成天的不在家！”我笑着坐下，说：“从今天起，我要少出去了，该看的人和该看的地方，都看过了。现在倒要写点信，看点书，养养静了。”R 小姐笑着说：“别忘了还有你的法文，L 先生告诉我，你是要练习法语的。”

真的，我的法文太糟了，书还可以猜着看，话却是无人能懂！R 小姐提议，我们在吃饭的时候说法语。结果是我们谈话的范围太广，一用法文说，我就词不达意，笑着想着，停了半天。次数多了，我们都觉得不方便，不约而同的笑了出来，说：“算了吧，别扭死人！”从此我只顾谈话，把法语丢在脑后了！

巴黎的春天，相当阴冷，我们又都喜欢炉火，晚饭后常在 R 小姐的书房里，向火抽烟，闲谈。这书房是全房子里最大的一间，满墙都是书架，书架上满是文学书。壁炉架上，摆着几件东方古董。从她的谈话里，知道她的父亲做过驻英大使——她在英国住过十五年——也做过法国远东殖民地长官——她在远东住过八年。她有三个哥哥，都不在了。两个侄子，也都在上次欧战时阵亡。一个侄女，嫁了，有两个孩子，住在乡下。她的母亲，是她所常提到的，是一位身体单薄、多才多德的夫人，从相片上看去，眉目间尤其像我的母亲。

我虽没有学到法语，却把法国的文学艺术，懂了一半。我们常常一块儿参观博物院，逛古迹，听歌剧，看跳舞，买书画……她是巴黎一代

的名闻，我和她朝夕相从，没看过 R 小姐的，便传布着一种谣言，说是 × × × 在巴黎，整天陪着一位极漂亮的法国小姐，听戏，跳舞。这风声甚至传到国内我父亲的耳朵里，他还从北平写信来问。我回信说：“是的，一点不假，可惜我无福，晚生了三十年，她已是一位六旬以上的老姑娘了！父亲，假如您看见她，您也会动心呢，她长得真像母亲！”

我早可以到柏林去，但是我还不想去，我在巴黎过着极明媚的春天

在一个春寒的早晨，我得到国内三弟报告订婚的信。下午吃茶的时候，我便将他们的相片和信，带到 R 小姐的书房里。我告诉了她这好消息，因此我又把皮夹里我父亲、母亲，以及二弟、四弟两对夫妇的相片，都给她看了。她一面看着，很客气的称赞了几句，忽然笑说：“× 先生，让我问你一句话，你们东方人不是主张‘男大当婚，女大当嫁’的吗？为何你竟然没有结婚，而且你还是个长子？”我笑了起来，一面把相片收起，挪过一个锦墩，坐在炉前，拿起铜条来，拨着炉火，一面说：“问我这话的人多得很，你不是第一个。原因是，我的父母很摩登，从小，他们没有强迫我订婚或结婚。到自己大了，挑来挑去的，高不成，低不就，也就算了……”R 女士凝视着我，说：“你不觉得生命里缺少什么？”我说：“这个，倒也难说，根本我就没有去找。我认为婚姻若没有恋爱，不但无意义，而且不道德。但一提起恋爱来，问题就大了，你不能提着灯笼去找！我们东方人信‘夙缘’，有缘千里来相会，若无缘呢？就是遇见了，也到不了一处……”这时我忽然忆起 L 君的话，不觉抬头看她，她正很自然的靠坐在一张大软椅里，身上穿着一件浅紫色的衣服，胸前带几朵紫罗兰。闪闪的炉火光中，窗外阴暗，更显得这炉边一角，温静，甜柔……

她举着咖啡杯儿，仍在望着我。我接下去说，“说实话，我还没有感觉到空虚，有的时候，单身人更安逸，更宁静，更自由……我看你就不缺少什么，是不是？”她轻轻的放下杯子，微微的笑说：“我嘛，我是一个女人，就另是一种说法了……”说着，她用雪白的手指，挑着鬓发，轻轻的向耳后一掠，从椅旁小几上，拿起绒线活来，一面织着，一面看着我。

我说：“我又不懂了，我总觉得女人天生的是家庭建造者。男人倒不怎样，而女人却是爱小孩子，喜欢家庭生活的，为何女人倒不一定要结婚呢？”R 小姐看着我，极温柔软款的说：“我是‘人性’中最‘人性’、‘女性’中最‘女性’的一个女人。我愿意有一个能爱护我的、温柔体贴的文

夫，我喜爱小孩子，我喜欢有个完美的家庭。我知道我若有了这一切，我就会很快乐的消失在里面去——但正因为，我知道自己太清楚了，我就不愿结婚，而至今没有结婚！”

我抱膝看着她。她笑说：“你觉得奇怪吧，待我慢慢的告诉你——我还有一个毛病，我喜欢写作！”我连忙说：“我知道，我的法文太浅了，但我们的大使常常提起你的作品，我已试着看过，因为你从来没提起，我也就不敢……”R 小姐拦住我，说：“你又离了题了，我的意思是一个女作家，家庭生活于她不利。”我说：“假如她能够——”她立刻笑说：“假如她身体不好……告诉你，一个男人结了婚，他并不牺牲什么。一个不健康的女人结了婚，事业——假如她有事业、健康、家务，必须牺牲其一！我若是结了婚，第一牺牲的是事业，第二是健康，第三是家务……”

——写到这里，我忽然忆起去年我一个女学生写的一篇小说，叫做《三败俱伤》——她低头织着活计，说：“我是一个要强，顾面子，好静，有洁癖的人；在情感上我又非常的细腻，体贴；这些都是我的致命伤！为了这性格，别人用了十分心思，我就得用上百分心思；别人用了十分精力，我就得用上百分精力。一个家庭，在现代，真是谈何容易，当初我的母亲，她做一个外交官夫人，安南总督太太，真是仆婢成群，然而她……她的绘画，她的健康，她一点没有想到顾到。她一天所想的是丈夫的事业，丈夫的健康，儿女的教养，儿女的……她忙忙碌碌的活了五十年！至今我拿起她的画稿来，我就难过。噯，我的母亲……”她停住了，似乎很激动，轻轻的咳嗽了两声，勉强的微笑说：“我母亲的事情，真够写一本小说的。你看见过英国女作家，V. Sackville-West 写的 All Passion Spent（七情俱净）吧？”

我仿佛记得看过这本书，就点头说：“看过了，写的真不错……不过，R 小姐，一个结婚的女人，她至少有了爱情。”她忽然大声的笑了起来，说：“爱情？这就是一件我所最拿不稳的东西，男人和女人心里所了解的爱情，根本就不一样。告诉你，男人活着是为事业——天晓得他说的是事业还是职业！女人活着才为着爱情；女人为爱情而牺牲了自己的一切，而男人却说：‘亲爱的，为了不敢辜负你的爱，我才更要努力我的事业’！这真是名利双收！”她说着又笑了起来，笑声中含着无限的凉意。

我不敢言语，我从来没有看见 R 小姐这样激动过，我虽然想替男人辩护，而且我想我也许不是那样的男人。

她似乎看出了我的心绪，她笑着说：“每一个男人在结婚以前，都说自己是个例外，我相信他们也不说假话。但是夫妻关系，是种最娇嫩最伤脑筋的关系，而时光又是一件最无情最实际的东西。等到你一做了他的同衾共枕之人，天长地久……呵！天长地久！任是最坚硬晶莹的钻石也磨成了光彩模糊的沙颗，何况是血淋淋的人心？你不要以为我是生活在浪漫的幻想里的人，我一切都透彻，都清楚。男人的‘事业’当然要紧，讲爱情当然是不应该抛弃了事业，爱情的浓度当然不能终身一致。但是更实际的是，女人终究是女人，她也不能一辈子以结婚的理想、人生的大义，来支持她困乏的心身。在她最悲哀、最柔弱、最需要同情与温存的一刹那顷，假如她所得到的只是漠然的言语、心不在焉的眼光，甚至于尖刻的讥讽和责备，你想，一个女人要如何想法？我看的太多了，听的也太多了。这都是婚姻生活里解不开的死结！只为我太知道，太明白了，在决定牺牲的时候，我就要估量轻重了！”

她俯下身去，拣起一根柴，放在炉火里，又说：“我母亲常常用忧愁的眼光看着我说：‘德利莎！你看你的身体！你不结婚，将来有谁来看护你？’我没有说话，我只注视着，我的心里向她叫着说：‘你看你的身体吧，你一个人的病，抵不住我们五个人的病。父亲的肠炎、回归热……以及我们兄妹的种种希奇古怪的病……三十年来，还不够你受的？’但我终究没有言语。”

她微微的笑了，注视着炉火：“总之我年轻时还不算难看，地位也好，也有点才名，因此我所受的试探，我相信也比别的女孩子多一点。我也曾有过几次的心软……但我都终于逃过了。我是太自私了，我扔不下这支笔，因着这支笔，我也要保持我的健康，因此——

“你说我缺少恋爱吗？也许，但，现在还有两三个男人爱慕着我，他们都说我是他们唯一终身的恋爱。这话我也不否认，但这还不是因为我们没有到得一处的缘故？他们当然都已结过了婚，我也认得他们温柔能干的夫人。我有时到他们家里去吃饭喝茶，但是我并不羡慕他们的家庭生活！他们的太太也成了我的好朋友，有时还向我抱怨她们的丈夫。我一面轻描淡写的劝慰着她们，我一面心里也在想，假如是我自己受到这些委曲，我也许还不会有向人诉说的勇气！有时在茶余酒后，我也看见这些先生们，向着太太皱起眉头，我就会感觉到一阵颤栗，假如我做了他的太太，他也对我皱眉，对我厌倦，那我就太……”

我笑了，极恳挚的轻轻拍着她的膝头，说：“假如你做了他的太太，他就不会皱眉了。我不相信世界上有任何男子，有福气做了你的丈夫，

还会对你皱眉，对你厌倦。”她笑着摇了摇头，微微的叹一口气，说：“好孩子，谢谢你，你说得好！但是你太年轻了，不懂得——这二十年来，我自己住着，略为寂寞一点，却也舒服。这些年里，我写了十几本小说、七八本诗，旅行了许多地方，认识了许多朋友。我的侄女，承袭了我的名字，也叫德利莎，上帝祝福她！小德利莎是个活泼健康的孩子，廿几岁便结了婚。她以恋爱为事业，以结婚为职业。整天高高兴兴的，心灵里，永远没有矛盾，没有冲突。她的两个孩子，也很像她。在夏天，我常常到她家里去住。她进城时，也常带着孩子来看我。我身后，这些书籍古董，就都归她们了。我的遗体，送到国家医院去解剖，以后再行火化，余灰撒在塞纳河里，我的一生大事也就完了……”

我站了起来，正要说话，马利亚已经轻轻的进来，站在门边，垂手说：“小姐，晚饭开齐了。”R小姐吃惊似的，笑着站了起来，说：“真是，说话便忘了时候，×先生，请吧。”

饭时，她取出上好的香槟酒来，我也去拿了大使馆朋友送的名贵的英国纸烟，我们很高兴的谈天说地，把刚才的话一句不提。那晚 R 小姐的谈锋特别隽妙，双颊飞红，我觉得这是一种兴奋、疲乏的表示。饭后不多一会，我便催她去休息。我在客厅门口望着她迟缓秀削的背影，呆立了一会。她真是美丽，真是聪明！可惜她是太美丽，太聪明了！

十天后我离开了巴黎，L 送我到车站。在车上，我临窗站到近午，才进来打开了 R 小姐替我预备的筐子，里面是一顿很精美的午餐，此外还有一瓶好酒，一本平装的英文小说，是 All Passion Spent。

我回国不到一月，北平便沦陷了。我还得到北平法国使馆转来的 R 小姐的一封信，短短的几行字：

“×先生：

听说北平受了轰炸，我无时不在关心着你和你一家人的安全！振奋起来吧，一个高贵的民族，终久是要抬头的。有机会请让我知道你平安的消息。

你的朋友 德利莎。”

我写了回信，仍托法国使馆转去，但从此便不相通问了。

三年以后，轮到了我为她关心的时节，德军进占了巴黎，当我听到巴黎冬天缺乏燃料，要家里住有德国军官才能领到煤炭的时候，我希望她已经逃出了这美丽的城市。我不能想象这静妙的老姑娘，带着一脸愁容，同着德国军官，沉默向火！

“振奋起来吧，一个高贵的民族，终久是要抬头的！”

14 My Neighbor

My colleague's daughter, Mrs. M, has been my student and later my neighbor.

The first time I saw her was in her father's home. That year, I had just come to the university as a teacher and, following the usual practice, I paid visits to a few elder colleagues in my department. During my visit to her father, he proudly introduced her to me, "Mr. X, this is my eldest daughter. She is fifteen this year. She is passably talented and likes reading. She is particularly interested in foreign literature. Please offer her guidance from now on."

She was at that time only a young girl, thin and pale, wearing two thick, short braids that were hanging behind her neck. She spoke shyly but laughed quite sweetly, using her fingers from time to time to lift up her lowered glasses.

I spoke with her for a short while. When we came to the topic of English literature, I learned to my great surprise that she had read, for instance, the majority of Hardy's novels and could recite several long poems from the nineteenth century.... Her father, showing delight, fetched a small hand-written book and handed it to me. I saw its title: *Dewdrops*. This was a volume of over two hundred short poems in which she imitated Bing Xin's "Star" style. I turned pages at random and read a couple of them. I found her poems very pure and fresh, with a crystalline transparency like the dewdrops of a spring morning.

I offered a few comments of praise, and her father went on, smiling, "She has even written novels. Go and fetch that novel of yours for Mr. X!" She blushed and said, "There you go again, Daddy. I haven't finished writing it yet." After speaking, she raised the door curtain, ran out, and did not return. Her father said to me, laughing, "You see, she is too spoiled to behave herself. Of all my children, she is the one who has some talent. It's a pity that she has a delicate constitution."

One year later, she became my student. The classes for freshmen were so large that I rarely met her. But from her literary exercises, I could see that she was very promising in creative writing. Her well-conceived writings and minute descriptions place her at a much higher level than her classmates.

Later on, we had many opportunities to talk to each other. I was appointed advisor to the Publication Section of the Student Union, in which she exercised a position of leadership. During her college years, she made great progress in all areas. Her writings often appeared on the pages of literary magazines outside college, where her fairly mature technique and ideas gradually brought her some renown in the world of letters.

After her graduation from college, she married a certain Mr. M, also a writer, and once married, the couple moved to Nanjing. I didn't hear directly from them for seven or eight years.

The next year after the outbreak of the War of Resistance against Japan, I arrived in Kunming. My friends set out to look for a dwelling place for me. They told me there was a house where I could rent a room on an upper floor above a certain Professor M's home. The house was well located with my college nearby. We went there to have a look, and found out that Mrs. M was the daughter of my former colleague. Our meeting gave us great pleasure. The house was quite small and had poor day lighting. But the emerald-green Western mountains could be seen outside the high windows. At M's home there lived an old lady and four children, one following another in age, the youngest one being only two years old. Mrs. M looked paler than before, and her thinness made her look so old that she seemed to be over thirty.

Once agreement about the rent was negotiated, I moved onto the upper floor above M's home carrying my handy luggage and my small box full of books. That evening I met Mr. M and found him much thinner than before, and more irascible as well. His manner suggested that everything was offensive to his eyes. He was having supper with three older children by the dim light of a kerosene lamp. The old lady

was busy doing something in the kitchen. And Mrs. M, holding the youngest child in her arms, walked in and out serving the meal. Everybody was silent. Feeling ill at ease, I sat only for a while by the table and then went upstairs.

Hardly had half a month passed before the idea of moving away occurred to me. The home downstairs was indeed anything but calm and quiet. Furthermore, it was terribly gloomy. Whether because of malnutrition or some other reason, the children often cried and made noise. The old lady didn't stop nagging. She often complained to me of Mrs. M's helplessness in everything. Only when Mr. M came home in the evening did this hubbub of crying and complaining begin to subside, but this was followed by another uproar of his voice scolding the kids, reproaching his wife and complaining of the injustices of the world. Their bedroom was just beneath me. The floorboard was broken, and the tenon had not yet fitted into the mortise. I was alone and always kept silent, but the noises coming up from downstairs, on the contrary, could always be faintly heard. Late at night I often heard a racket as if someone were "weeping and sobbing." Sounds were mingled with sudden clashes of something furiously thrown down by Mr. M and his angry bellow. Whenever this happened, the children began to cry at once, making it impossible for me to fall asleep for a long while.

One morning, when I was thinking about moving out, I went downstairs and found the children's rooms completely quiet, with nobody in. I uttered a call and saw Mrs. M come out from the kitchen with her hands dangling at her sides. Brushing aside the few matted snarls of hair falling on her face, she asked, "What can I do for you, Mr. X? They are all out." I understood that by "they" she meant the old lady and Mr. M. Then I asked, "And the children?" She replied, "So are they, too. I failed in preparing the breakfast for them, and we had just run out of pickles. They said they had to go out to have something for breakfast." With her lips shivering, she forced a sad smile, "How helpless I am! I haven't learned to do any of these things from childhood. My mother used to say, 'Now the tailors only charge a few

dozen cents for making a dress, and a pair of shoes only costs two *yuan*. In such an era girls need not learn such skills. They are better off exerting themselves academically, for after school they can earn money. To think that in my early days there were no schools for me no matter how eager I was to attend!' My father was even more tolerant of me. At home I never stepped into the kitchen.... Now, you see, instead of succeeding in setting fire to the stove, I have filled the entire kitchen with smoke!"

After saying this, she again raised her blackened hand to wipe her eyes. Never had she talked so much to me in the past days since I moved in. Finding her eyes reddened and swollen, and her voice coarse, I realized she must have been weeping. Then I said, "Since they are out for breakfast, you no longer need to light the stove. Wash your hands at once. I have some cakes upstairs. Canned milk should be added to the warm water in the thermos bottle. Now I'll go and fetch them." Without waiting for her answer, I went upstairs and found her by the staircase staring blankly at me, with tears in her eyes.

Bending her head forward, she silently mixed the milk and ate the cakes with an absent-minded look on her face. It was quite a while before I said, "How nice it is in Kunming! The sky is always as blue as the sea! Do you still remember Elizabeth Browning's verses...?" At this moment, all of a sudden, we heard a long and pathetic siren blare outside. It was followed by the noise of sirens everywhere, and then the scamper of people running beyond our door. Mrs. M stood up and said with a shivering voice, "Air raid alarm! Oh, I wonder where on earth my children are at this moment!" I also stood up in a hurry and said, "Don't worry. They must be nearby. Let me go and look for them." Just as we were going towards the door, the old lady appeared with the four children, all of them doddering along. We were told that Mr. M had rushed to the office of his school to salvage some manuscripts and therefore had sent the five of them to come home first.

I helped Mrs. M so that we each took one of the two youngest

children in our arms. Staring at me in fright, she asked, "Mr. X, should we hide ourselves somewhere?" I said, "All right, let's go, then the children won't be frightened." We packed up some of our belongings in a hurry and, dragging the little ones along with us, rushed outdoors. All of a sudden, the old lady came out from the house, carrying in her lap a large bundle wrapped in blue cloth and running towards us, flustered and exasperated, saying, "Don't run so fast, wait for me!" At just this moment, the heavy rumble of flying airplanes could be heard overhead. I looked up and saw nine silver-gray planes flying steadily above us in disciplined formation. After a blast of machine-gun shooting, what followed were a few earthshaking booms, so strong that even the doors and windows began to falter. The children burst out crying, and the old lady fell weak and limp at the door. All of us quickly squeezed into the doorway. Mrs. M hugged her children tightly in her arms and whispered, "Don't be afraid. Mr. X is here with us!" Propping up the old woman, I said, "It doesn't matter, the planes are gone." On saying this, I heard human voices in the street. People had rushed out from every household and were talking, panic-stricken. Mrs. M stood up, patted her clothes and dragged her children outside the door. Standing on our feet, we strained our ears for a while and heard nothing more in the sky. Then I said, "Let's go in and have a rest. The enemy planes are gone." Mrs. M nodded, and then I helped her carry her children into their house. I myself went upstairs. No sooner had I sat down than I heard Mr. M coming home. On striding through the door, he shouted at the top of his voice, "Well, now there isn't a single inch of safe land remaining. Now they have come after us even here in Kunming. I had just rushed out with my bundle of books when the house was bombed. Goddamned devils!"

From that day on, there was an air raid alarm nearly every day. Mr. M, however, always left home before the alarm and only came back after all was clear, complaining besides about not finding supper ready at home. Mrs. M did not say a word, but simply kept on moving with head bent and eyelids swollen. Sometimes in the morning, on seeing me go downstairs to wash my face, she would smile in a timid and wry way, and ask, "Mr. X, you don't go out today, do you?" And I

always replied, "I'll never go out unless I have lessons to teach. Call me whenever you have need for me."

The old woman refused to go to the open country, for fear that it would not be safe to stay in the open air. She preferred invariably to hide herself inside an air-raid shelter at the foot of the city wall. I used to go with Mrs. M and her children outside the city. We chose a trench-like place beneath a big tree, shielded at three sides by adobe walls. The little ones, now used to staying outdoors because of the air raids, began to set up a small mud shack in the trench, reinforcing it with tree branches. They kept on working this way day after day. The youngest of them often fell asleep in his mother's arms. I sometimes carried books for reading. If the signal that all was clear didn't sound before noon, we would have some cakes outdoors for lunch.

We chatted whenever we felt bored sitting idly in the trench. I could guess many of Mrs. M's grievances from fragments of her conversation. She never complained about anything, nor did she even show dissatisfaction with the hardly likable children. She rarely brought up her family affairs, but judging from their food and clothing, I knew that they were having a hard time. Finding her increasingly wan and sallow with every passing day, I decided to lend her a hand. On one occasion, I asked if she would be willing to teach lessons or write something for money. As for the household chores, I said, the old woman might take charge, and things could be kept in order if a servant could be hired. Why didn't she assert her special strengths if such sundry duties were the last thing she was willing to assume?

Sitting cross-legged on the ground and gently rocking her child in her arms, Mrs. M listened silently to me. She was quiet for a long while before she raised her head and said, "Thank you for your good will, Mr. X. I've already thought over all that. When I first came here, I did give lessons, and the school where I taught was even more satisfied with me than with my husband." At this she smiled, the first time I had seen her do so! After a short pause, she continued, "Later on, I didn't know why, he said he was against my giving lessons

outside.... His mother, besides, said she couldn't manage to take care of so many children. I had to give up and stay home again. Some time later, a few friends and colleagues of mine suggested that I should write something. You know, Mr. X, I've liked writing ever since I was a child. Particularly nowadays, as soon as I take up my pen, what my mind...what my mind is filled with begins to flow out in a stream. Then what I see around myself becomes dim and blurred, for while writing one can escape from lots of things existing in reality...." Playing head downwards with the buttons of her child's shirt, she heaved a soft sigh, "But reality is reality. Just a peal of children's cry, a visitor's coming, the murmurs of the old woman or the endless inquiries of the servant are sufficient to startle me and interrupt my train of thought in writing, so much so that after that, I find myself unable to take up my pen for a long while. Furthermore, you indeed need a calm state of mind, although not necessarily a joyful one, for writing. But how am I today? To say nothing of joy, it is very, very difficult for me even to live in peace!

"After I wrote two articles," she went on, "my husband found at first that to write for money is to lose more than to gain! Payment for writing increases almost only one hundredth as quickly as wages, to say nothing of the increase of the tailor's fee and the price of shoes. Indeed it is vain to hope that writing can earn money for children's clothing. I cannot imagine writing a story in five thousand characters in exchange for a small pair of shoes. When I found that there was neither encouragement nor hope for writing, and that writing would do no more than evoke one's own sorrows and incur reproaches from other family members, I dismissed the maidservant. In fact, she had long wanted to go away—our family was so poor, with so many children and ill-tempered members, in short, without anything that she could not bear to part with—unlike me...for I cannot be dismissed!"

And she went on, "While lighting the stove, cleaning the rice and the vegetables for cooking, sewing shoes and darning socks for the children, I feel my mind as empty and numb as a withered tree. In

fact, in these years of the War, who can enjoy an easy life? Such a life is only possible for those who aren't human beings. I don't seek an easy life. I'm sure I can make do with my household chores although I haven't learned to do them, for labor also brings its joy, if only I could get some comfort and warmth in my heart....

"I haven't said a single word about this to anybody." She added, "I myself already have enough to suffer, and then why should I add to other people's sufferings in these times when everybody is in distress? Still less could I let my parents know anything about this. Writing from the North, my father often remarks, 'Surely the exuberant and radiant Southern landscapes have instilled in you a rich poetic mood! But why haven't you sent some of your short poems for me to read?' Recently, somebody unknown told them the truth of our life out here, and my mother, very worried and sad, wrote to me, saying, 'I didn't know you had got into such a plight! But your husband's mother, anyway, must be of some help, isn't she? If I had only known beforehand what would happen today, I would have tried to prevent your health from breaking down in reading and writing, and would have encouraged you to learn something about household chores.'

"The letter made me heartbroken. It would not have mattered for me to suffer alone, but now I have done harm to my parents, disappointing my father and bringing grief to my mother. Mr. X, this is just like what Cai Yong^[1] said in the play, *The Story of a Pipa*: 'Academic studies have destroyed me, and I, in turn, have destroyed my parents.'"

Saying that, she couldn't help pushing her child aside as she burst out crying, while covering her face with the front of her blouse. The children, perhaps already used to their mother's crying, stood by for a while and then finally went away to continue playing. And I? I did not know how to comfort her, and I thought, on the other hand, that here, in this vast open country, out of the miserable and stifling atmosphere she had to endure all day long at home, she might find an outlet to give full vent to her sorrows. So I quietly stepped aside....

Indeed I did not want to go on living there any longer. At that

time my school was in summer vacation. It happened that the air-raided shelter at the foot of the city wall collapsed and many people were injured. Fortunately, the old woman was safe and sound. Then I managed to persuade them to evacuate to the countryside. On my part, I moved to the ancestral temple of a village far, far away. And there I came across another woman!

[1] Cai Yong (132-192 A.D.) was a high-ranking official of the Han Dynasty (202 B.C.-220 A.D.), who was distinguished in literature, calligraphy and painting. He appears as the protagonist of the play *The Story of a Pipa* (*pipa* is a traditional Chinese plucked string instrument with a fretted finger-board), written by Gao Zecheng in the fourteenth century. In this play, Cai Yong leaves his wife and parents at home and goes to the capital to sit for the imperial examination. After success in the examination, he is forced to marry the daughter of the prime minister. But his parents die of hunger in his famine-stricken homeland, and his first wife becomes a beggar and comes to the capital to look for him. She finally reunites with her husband thanks to the help of the prime minister's daughter.

拾肆 我的邻居

M 太太是我的同事的女儿，也做过我的学生，现在又是我的邻居。

我头一次看见她，是在她父亲的家里——那年我初到某大学任教，照例拜访了几位本系里的前辈同事——她父亲很骄傲的将她介绍给我，说：“× 先生，这是我的大女儿，今年十五岁了。资质还好，也肯看书，她最喜欢外国文学，请你指教指教她。”

那时 M 太太还是个小姑娘，身材瘦小，面色苍白，两条很粗的短发辫，垂在脑后。说起话来很腼腆，笑的时候却很“甜”，不时的用手指去托她的眼镜。

我同她略谈了几句，提起她所已看过的英国文学，使我大大的吃惊！例如：哈代的全部小说集，她已看了大半；她还会背诵好几首英国十九世纪的长诗……，她父亲又很高兴的去取了一个小纸本来，递给我看，上面题着“露珠”，是她写的仿冰心繁星体的短篇诗集，大约有二百多首。我略翻了翻，念了一两首，觉得词句很清新，很莹洁，很像一颗颗春晨的露珠。

我称赞了几句，她父亲笑说：“她还写小说呢——你去把那本小说拿来给 × 先生看！”她脸红了说：“爸爸总是这样！我还没写完呢。”一面掀开帘子，跑了出去，再不进来。她父亲笑对我说：“你看她惯的一点规矩都没有了！我的这几个孩子，也就是她还聪明一点，可惜的是她身体不大好。”

一年以后，她又做了我的学生。大学一年级的班很大，我同她接触的机会不多，但从她做的文课里，看出她对于文学创作，极有前途；她思想缜密，描写细腻，比其他的同学，高出许多。

此后因为我做了学生会出版组的顾问，她是出版组的重要负责人员，倒是常有机会谈话。几年来她的一切进步都很快，她的文章也常常在校外的文学刊物上出现，技术和思想又都比较成熟，在文学界上渐渐的露了头角。

大学毕业后，她便同一位 M 先生结了婚。M 先生也是一位作家——他们婚后就到南京去，有七八年我没有得到直接的消息。

抗战后一年，我到了昆明。朋友们替我找房子，说是有一位 M 教授的楼上，有一间房子可以分租，地点也好，离学校很近。我们同去一看，那位 M 太太原来就是那位我的同事的女儿！相见之下，十分欢喜。那房子很小，光线也不大好，只是从高高的窗口，可以望见青翠的西山。M 家还有一位老太太，四个孩子，一个挨一个的，最小的不过有两岁左右。M 太太比从前更苍白了，一瘦就显得老，她仿佛是三十以外的人了。

说定了以后，我拿了简单的行李，一小箱书，便住到 M 家的楼上。那天晚上，便见着 M 先生，他也比从前瘦了，性情更显得急躁，仿佛对于一切都觉得不顺眼。他带着三个大点的孩子，在一盏阴暗的煤油灯下，吃着晚饭。老太太在厨房里不知忙些什么。M 太太抱着最小的孩子，出出进进，替他们端菜盛饭，大家都不大说话。我在饭桌旁边。勉强坐了一会，就上楼去了。

住了不到半个月，我便想搬家，这家庭实在太不安静了，而且阴沉得可怕！这几个孩子，不知道是因为营养不足，还是其他的缘故，常常哭闹。老太太总是叨叨唠唠的，常对我抱怨 M 太太什么都不会。M 先生晚上回来，才把那些哭声怨声压低了下去，但顿时楼下又震荡着他的骂孩子，怪太太，以及愤时忧世的怨怒的声音。他们的卧室，正在我的底下，地板坏了，逗不上笋来。我一个人，总是静悄悄的，而楼下的声音，却是隐约上腾，半夜总听见喳喳嘁嘁的，“如哭如诉”，有时忽然听见 M 先生使劲的摔了一件东西，生气的嚷着，小孩子忽然都哭了起来，我就半天睡不着觉！

正在我想搬家的那一天早晨，走到楼下，发现屋里静悄悄的，没有一个人。我叫了一声，看见 M 太太扎煞着手，从厨房里出来。她一面用手背掠开了垂拂在脸上的乱发，一面问：“X 先生有事吗？他们都出去了。”我知道这“他们”就是老太太同 M 先生了，我就问：“孩子们呢？”她说：“也出去了，早饭没弄得好，小菜又没有了，他们说出去吃点东西。”她嘴唇颤动着惨笑了一下，说：“我这个人真不中用，从小就没学过这些事情。母亲总是说：‘几毛钱一件的衣工，一两块钱一双皮鞋，这年头女孩子真不必学做活了，还是念书要紧，念出书来好挣钱，我那时候想念书，还没有学校呢。’父亲更是由着我，我在家里简直没有进过厨房……您看我生火总是生不着，反弄了一厨房的烟！”说着又用乌黑的手背去擦眼睛。我来了这么几天，她也没有跟我说过这么多的话。我看她的眼睛又红又肿，声音也哑着，我知道她一定又哭过，便说：“他

们既然出去吃了，你就别生火吧。你赶紧洗了手，我楼上有些点心，还有罐头牛奶，用暖壶里的水冲了就可吃，等我去取了来。”我不等她回答便向楼上走，她含着泪站在楼梯边呆望着我。

M 太太一声不言语的，呆呆的低头调着牛奶，吃着点心。过了半天，我就说：“昆明就是这样好，天空总是海一样的青！你记得卜朗宁夫人的诗吧……”正说着，忽然一声悠长的汽笛，惨厉的叫了起来，接着四方八面似乎都有汽笛在叫，门外便听见人跑。M 太太倏的站了起来，颤声说：“这是警报！孩子们不知都在哪里？”我也连忙站起来，说：“你不要怕，他们一定就在附近，等我去找。”我们正往门外走，老太太已经带着四个孩子，连爬带跌的到了门前，原来 M 先生说是学校办公室里还有文稿，他去抢救稿子去了，却把老的小的打发回家来！

我帮着 M 太太把小的两个抱起，M 太太看着我，惊慌的说：“×先生，我们要躲一躲吧？”我说：“也好，省得小孩子们害怕。”我们胡乱收拾点东西，拉起孩子，向外就走。忽然老太太从屋里抱着一个大蓝布包袱，气急败坏的一步一跌的出来，嘴里说：“别走，等等我！”这时头上已来了一阵极沉重的隆隆飞机声音。我抬头一看，蔚蓝的天空里，白光闪烁，九架银灰色的飞机，排列着极整齐的队伍，稳稳的飞过。一阵机关枪响之后，紧接着就是天塌地陷似的几阵大声，门窗震动。小孩子哇的一声，哭了起来，老太太已瘫倒在门边。这时我们都挤在门洞里，M 太太面色惨白，紧紧的抱着几个孩子，低声说：“莫怕莫怕。×先生在这里！”我一面扶起老太太，说：“不要紧了，飞机已经过去了。”正说着街上已有了人声，家家门口有人涌了出来，纷纷的惊惶的说话。M 太太站起拍拍衣服，拉着孩子也出到门口。我们站着听了一会，天上已经没有一点声息。我说：“我们进去歇歇吧，敌机已经去了。”M 太太点了点头，我又帮她把孩子抱回屋去，自己上得楼来；刚刚坐定，便听见 M 先生回来；他一进门就大声嚷着：“好，没有一片干净土了，还会追到昆明来！我刚抱出书包来，那边就炸了，这班鬼东西！”

从那天起，差不多就天天有警报。M 先生却总是警报前出去，解除后才回来，还抱怨家里没有早预备饭。M 太太一声儿不言语，肿着眼泡，低头出入。有时早晨她在厨房里，看见我下楼打脸水，就怯怯的苦笑问：“×先生今天不出去吧？”我总说：“不到上课的时候，我是不会走的，你有事叫我好了。”

老太太不肯到野外去，怕露天不安全，她总躲在城墙边一个防空洞里。我同 M 太太就带着孩子跑到城外去。我们选定了一片大树下，壕

沟式的一块地方，三面还有破土墙挡着。孩子们逃警报也逃惯了，他们就在那壕沟里盖起小泥瓦房子，插起树枝，天天继续着工作。最小的一个，往往就睡在母亲的手臂上，我有时也带着书去看。午时警报若未解除，我们就在野地里吃些干点充饥。

坐在壕沟里无聊，就闲谈。从 M 太太零碎的谈话里，我猜出她的许多委屈。她从来不曾抱怨过任何人，连对那几个不甚讨人喜欢的孩子，她也不曾表示过不满。她很少提起家里的事，可是从她们的衣服饮食上，我知道她们是很穷困的。眼看着她一天一天的憔悴下去，我就想帮她一点忙。有一次我就问她愿不愿去教书，或是写几篇文章，拿点稿费。家务事有老太太照管，再雇个佣人，也就可以做得开了，她本来不喜欢做那些杂务，何必不就“用其所长”？

M 太太盘着腿坐在地上，抱着孩子，轻轻的摇动，静静的听着，过了半天才抬起头来，说：“× 先生，谢谢你的关怀，这些事我都早已想过了，我刚来的时候，也教过书，学校里对于我，比对我的先生还满意。”说到这里，她微笑了，这是我近来第一次见到的笑容！她停了一会说：“后来不知如何，他就反对我出去教书……老太太也说那几个孩子，她弄不了，我就又回到家里来。以后就有几个朋友同事，来叫我写稿子。× 先生，你知道我从小喜欢写文章，尤其是现在，我一拿起笔，一肚子的……一肚子的事，就奔涌了出来。眼前一切就都模糊恍惚，在写作里真可以逃避了许多现实……”她低头玩弄着孩子襟上的纽扣，微微的叹了一口气，说：“但是现实还是现实，一声孩子哭，一个客人来，老太太说东说西，老妈子问长问短，把我的文思常常忽然惊断，许久许久不能再拿起笔来。而且——写文章实在要心境平静，虽然不一定要快乐，而我现在呢？不用说快乐，要平静也就很难很难的了！”

“写了两篇文章，我的先生最先发现写文章卖钱，是得不偿失！稿费增加和工资增加的速度，几乎是一与百之比，衣工，鞋价，更不必说。靠稿费来添置孩子衣服，固然是梦想，写五千字的小说，来换一双小鞋子，也是不可能。没有了鼓励，没有了希望，而写文章只引起自己伤心，家人责难的时候，我便把女工辞退了。其实她早就要走——我们家钱少，孩子多，上人脾气又不大好，没有什么事使她留恋的，不像我……我是走不脱的！”

“我生着火，拣着米，洗着菜，缝着鞋子，补着袜子，心里就像枯树一般的空洞、麻木。本来，抗战时代，有谁安逸？能安逸的就不是人；我不求安逸，我相信我虽没有学过家务，我也能将就的做，而且我也不

怕做，劳作有劳作的快乐，只要心里能得到一点慰安，温暖……

“我没有对任何人说过任何言语，自己苦够了，这万方多难的年头，何必又增加别人的痛苦？对我的父母，我是更不说的。父亲从北方来信，总是说：‘南国浓郁明艳的风光，不知又添了你多少诗料，为何不寄点短诗给爸爸看？’最近不知是谁，向他们报告了这里的实况，母亲很忧苦的写了信来，说：‘我不知道你们那里竟是这个样子！老太太总该可以帮帮忙吧？早知如此，我当初不该由着你读书写字，把身体弄坏了，家事也一点不会。’她把自己抱怨了一顿，我看了信，真是心如刀割。我自己痛苦不要紧，还害得父亲为我失望，母亲为我伤心，× 先生，这真是《琵琶记》里蔡中郎所说的‘文章误我，我误爹娘’了！”她说着眼忍不住把孩子推在一边，用衣襟掩着脸大哭了起来。孩子们也许看惯了妈妈的啼哭，呆立了一会，便慢慢走开，仍去玩耍。我呢，不知道怎样劝她，也想她在家里整天的凄凉掩抑，在这朗阔的野外，让她恣情的一恸，倒也是一种发泄，我也便悄悄的走向一边……

我真不想再住下去了，那时学校里已放了暑假。城墙边的防空洞曾震塌了一次，压伤了许多人，M 老太太幸而无恙。我便撺掇他们疏散到乡下去。我自己也远远的搬到另一乡村里的祠堂里住下——在那里，我遇到了一个女人！

15 Zhang, the Maid

It is a pity that I cannot precede the name "Mrs. Zhang" with the word "my," because she cannot be addressed so to relate to me! Neither neighbor nor servant, she would still less acknowledge herself to be my friend. She was merely the wife of Mr. Zhang, the doorkeeper of the ancestral temple.

I lived upstairs in this temple, and downstairs lived old Mr. and Mrs. Li. The Zhang couple occupied a small room by the gate of the temple.

The young owner of the temple, one of my students, kindly showed me around the building, saying, "It's very calm and quiet here, Mr. X. This is a good place for you to do your writing. Life is not so convenient here up on the hill, but fortunately we have the Zhang couple with us, and you may count on them whenever necessary." On hearing his own name mentioned, Mr. Zhang stood up from the threshold where he was sitting and smiled at me, revealing his yellow teeth. He was about forty, quite short and rather well-behaved. My student asked, "Where is Mrs. Zhang?" He replied, "She's gone to fetch water with her shoulder pole." My student led me upstairs while speaking, "Mrs. Zhang is very capable, much cleverer than her husband. She is also a person of great physical strength. You better talk to her if you are in need of something."

For convenience, I arranged to board with the Li couple, so that I didn't need to go downhill all the time, which would have been very hard on days of wind or rain. Moreover, the canteen in the village swarmed with flies that were very annoying, particularly in the summer. The Li couple, natives of Shanxi province, was extremely kind and affable. Mrs. Li cooked by herself and the meals were delicious. Every morning, after getting up, I went to their kitchen and took water from the jar to wash my face. Then I tidied up my room. Before the meals were ready, I rarely saw them. Mr. And Mrs. Li got

up and went to bed early, and during the daytime they did not make the slightest noise. Everything was always peaceful and silent in the yard, in sharp contrast to the house downtown where Mrs. M's family had been living. I felt very comfortable.

On the third day after I moved in, I approached Mrs. Zhang and asked her to do some washing for me. She emerged from her small, dark room, and her features grew clear in the sunlight. Her sparse, sallow hair was worn in a small bun high above the back of her neck. Her complexion was quite swarthy, whereas her eyes and brows were surrounded by many wrinkles that came from exposure to harsh weather. Her lips were big yet thin, and her eyes bright and piercing. She was short and slender, but her scant stature gave her a strong and capable appearance. She stepped forward to meet me and, smiling profusely, asked, "Is there anything you want me to do for you?" I replied, "Please wash a few of my clothes. They are white, so please be a bit careful." She said, "Oh, I see, you are particular about what you wear. Well, give me a bar of soap."

Mrs. L, leaning against the door and watching what was going on, motioned me to enter and then said in a whisper, "When you need to have anything washed, you better go downhill and have it done there by others. This woman is quite shrewd. Each time she is asked to wash something, she demands invariably a whole bar of soap, and then keeps what is left unused and sells it. We do all our washing ourselves." I thought for a while and smiled, "Let it pass this time. I'll see what to do next time."

Early next morning, Mrs. Zhang brought my clothes and bed sheets upstairs. She had washed them very clean and white and folded them up very neatly. Placing them in a pile on my bed, she said, "Mr. X, here's your laundry. Now please take back the leftover soap." I thanked her and felt pleasantly surprised. She had made a good impression on me.

After we became more familiar with each other, she would come upstairs to sweep the floor, bring me letters, take my laundry and empty my wastepaper basket. My belongings were quite simple, so she

knew where each of them was placed. I never locked my door when I went out, but I never found anything missing: money, clothing, books, and so on. As to matches, pastries, towels and soap, I never worried about how much was available. Although Mrs. Li had warned me more than once to take care, I found it too annoying for anybody to keep constant watch over such trifles, much more so when these things were of too little value for me to be concerned about their possible loss. To my delight, Mrs. Zhang tidied up my room so well that everything else seemed of little importance.

Mrs. Zhang was very kind to me, but rather unkind to the Li couple. Take, for instance, the water she used to fetch for them from the foot of the hill in two pails at both ends of a shoulder pole. For such a service she would demand a higher price almost every other day. She did not demand it directly, but would exact her price by slowing down the water supply. Sometimes she remained unseen for one or two days and the water jar in the kitchen became empty. Then Mrs. Li, worried, approached Mr. Zhang and asked, "Where's your wife?" He would reply with a smile, "She's working in the fields, hired by other people." Then Mrs. Li would ask Mr. Zhang, "You, too, can help us with some water, can't you?" He agreed, but remained motionless. It was necessary for me to come downstairs and hurry him up again and again before he raised the pole sluggishly, laid it on his shoulder and set out. Looking downwards from behind the railing, I saw Mrs. Zhang come up from the fields and talk for a while with her husband at the foot of the hill. Then, after fetching two pails of water, he lay down and complained of abdominal pain. On the next day he would no longer appear. Mr. Li murmured angrily, "These people know quite well how to put pressure on us. They think nobody else will fetch water for us. I'll go downhill and find someone else for this job!" Then he sat long hours in the village teahouse and asked the peasants in the area if they would assume this job. As soon as they learned that the water had to be carried uphill, they all shook their heads and laughed, "Uphill? What a steep path! You should pay more money for this job." When told the price they demanded, Mr. Li shook his head in anger and came back uphill, for they had demanded even

a higher price than Mrs. Zhang did.

Then I went downhill during a quiet moment and found Mrs. Zhang in the fields. I said, "Go back and fetch us water, please. We've run out of water even for drinking." She replied with a smile, "I'm busy now." I smiled, too, and said, "Don't talk nonsense! I understand what you mean. From now on I'll pay for the water you fetch. Anyway, I also need water for drinking and other uses." Smiling broadly, she put the basket on her back and came uphill with me. From then on, even during the busy seasons in farming, we never ran out of water, except for the few days when she gave birth to a child and her husband did the job instead.

Before this happened, I had never noticed anything different in Mrs. Zhang's figure. Her clothes were already too baggy to reveal any change in her body. One day, however, Mrs. Li told me, "Mrs. Zhang is on the verge of giving birth. Before it is too late, you better approach her husband and talk with him about fetching water, in case he refuses to do it at the time when things happen." But I didn't find the way to bring the matter up. Furthermore, as I had just seen Mrs. Zhang coming uphill carrying a large basket of beans on her back, I thought that the moment of childbirth was very much in the future. So I did not discuss the matter that day.

The next morning, Mrs. Zhang did not appear to sweep the floor. While having breakfast, I saw her husband come in carrying a small basket of eggs. I asked him why his wife was absent. He replied, smiling triumphantly, "She gave birth to a baby last night!" We hastened to congratulate him and asked whether the baby was a boy or a girl. Mr. Li said, "People like her are so capable that they can deal with their childbirth by themselves. What is more, although this is the first baby she has had, she managed to get on without making a sound, with even more facility than the way a hen lays eggs." I hurried upstairs, wrapped fifty *yuan* in a piece of red paper^[1] and then went downstairs, handing it over to Mr. Zhang, and saying, "This is for buying some brown sugar^[2] for Mrs. Zhang." Mrs. Li also came out of her room with a red envelope. Mr. Zhang accepted all these gifts with

delight and said, "Thank you all. Would you, Mrs. Li, like to have a look at the baby?" Mrs. Li went into the dark room with great pleasure.

I was chatting idly with Mr. Li in the central room when his wife came in, shaking her head and laughing, "What a big boy! How strong and full of life! But what do you guess Mrs. Zhang is doing just now? She is knitting fishnets in bed. The baby was born just before dawn. Only a little time has passed, but she is now working again, without feeling fatigue and weakness. Isn't she a woman made of iron?" With that as an introduction, she told the story of how Mrs. Zhang had become a child bride^[3] at the age of twelve and had married when she was fifteen. Her mother-in-law, while alive, often beat her so ruthlessly that she could only hide in a cavern and weep for her misfortune. After the old woman died, she has been able to live quietly for the past year with her flabby husband. This means that she was now only twenty-five.

That was another thing that surprised me, for I had supposed that she was already between thirty and forty. Hard labor had washed away the brightness of her person without leaving behind the slightest vestige of youth! But she never inquired, never doubted, never complained. She began her everyday toil early at sunrise and did not retire until sunset—fetching water, cutting firewood, doing the wash and tilling the land, turning around all day like a windmill, going and coming, downhill and uphill. Whenever the sun glistened upon her, she could be seen engaged in doing some activity. When there was moonlight, she worked through the darkness threshing beans!

Afterwards, it rained continuously for five or six days. As the weather cleared up on the seventh day, we saw Mrs. Zhang going out again with a basket on her back and a sickle in her hand. From then on, Mr. Zhang was often observed sitting in the doorway, holding the baby in his arms and babbling. Sometimes, when Mrs. Zhang was late coming home and the baby cried ceaselessly from hunger, Mr. Zhang would walk up and down anxiously at the gate. At that point, we said to him, laughing, "It would be better for you to work in the fields, and

let her hold the baby. How much easier it would be! It is exhausting for her to cook in a hurry and breast-feed the baby as soon as she comes back from the fields." But Mr. Zhang shook his head and said with a smile, "It's she who works well in the fields and they want her. I am of no use!" He looked self-assured and justified as he spoke, but I felt ashamed to hear him speak in that way.

Each time when I, leisurely and carefree, sat in front of the building, while reading a good book, I saw Mrs. Zhang come up and go out, always in a hurry, and always with something on her back, on her shoulders, in her hands or at her waist. Then I realized she was doing real, hard and productive work in the rear. And I? In each letter written to friends, I revealed ambiguous signs of fatigue, misery and low spirits, whereas in reality I was a man sitting leisurely and carefree, surrounded by a beautiful landscape of bright mountains and shadowy pine trees, but still moaning and groaning without being ill! Confronted with the high spirits, diligence, and conscientiousness I found in Mrs. Zhang, who bound herself to her tasks and exerted herself completely, I often put aside my book suddenly and stood up....

One day, my student and his schoolmates, organized in a propaganda team, came to the front gate of the ancestral temple and put up some posters. On one of these posters appeared the words: "Fight the enemy relentlessly on the front, and step up production in the rear!" Mrs. Zhang, standing behind the crowd, gazed in amazement at the poster. Turning around, she caught sight of me and asked, smiling, "What is written there?" I replied, "The first half refers to your fellow villagers who are fighting on the front, and the second half refers to you." Quite surprised, she asked, "And you, Mr. X?" I could not help bending my head low and said, ashamed, "And I? There's no place for me there!"

[1] In China, it is customary, when giving money as a present of congratulation, to wrap it in a red envelope.

[2] Brown sugar ("red sugar" as is literally translated from Chinese) is traditionally believed to be a blood tonic, good for women after childbirth.

[3] According to a traditional practice in rural China, some young girls, still in

childhood, were taken into the families of their husbands-to-be and were raised by their future parents-in-law, awaiting marriage at a later day, and there they had to work as simple maidservants.

拾伍 张嫂

可怜，在“张嫂”上面，我竟不能冠以“我的”两个字，因为她不是我的任何人！她既不是我的邻居，也不算我的佣人，她更不承认她是我的朋友，她只是看祠堂的老张的媳妇儿。

我住在这祠堂的楼上，楼下住着李老先生夫妇，老张他们就住在大门边的一间小屋里。

祠堂的小主人，是我的学生，他很殷勤的带着我周视祠堂前后，说：“这里很静，×先生正好多写文章。山上不大方便，好在有老张他们在，重活叫他做。”老张听见说到他，便从门槛上站了起来，露着一口黄牙向我笑。他大约四十上下年纪，个子很矮，很老实的样子。我的学生问：“张嫂呢？”他说：“挑水去了。”那学生又陪我上了楼，一边说：“张嫂是个能干人，比她老板伶俐得多，力气也大，有话宁可同她讲。”

为着方便，我就把伙食包在李老太太那里，风雨时节，省得下山，而且村店里苍蝇太多，夏天尤其难受。李老夫妇是山西人，为人极其慈祥和蔼。老太太自己烹调，饭菜十分可口。我早晨起来，自己下厨房打水洗脸，收拾房间，不到饭时，也少和他们见面。这一对老人，早起早睡，白天也没有一点声音，院子里总是静悄悄的，同城内 M 家比起来，真有天渊之别，我觉得十分舒适。

住到第三天，我便去找张嫂，请她替我洗衣服。张嫂从黑暗的小屋里，钻了出来，阳光下我看得清楚：稀疏焦黄的头发，高高的在脑后挽一个小髻，面色很黑，眉目间布满了风吹日晒的裂纹；嘴唇又大又薄，眼光很锐利；个子不高，身材也瘦，却有一种短小精悍之气。她迎着我，笑嘻嘻的问：“你家有事吗？”我说：“烦你洗几件衣服，这是白的，请你仔细一点。”她说：“是了，你们的衣服是讲究的——给我一块洋碱！”

李老太太倚在门边看，招手叫我进去，悄悄的说：“有衣服宁可到山下找人洗，这个女人厉害得很，每洗一次衣服，必要一块胰皂，使剩的她都收起来卖——我们衣服都是自己洗。”我想了一想，笑说：“这次算了，下次再说吧。”

第二天清早，张嫂已把洗好的衣服被单，送了上来——洗的很洁

白，叠的也很平整——一摞的都放在我的床上，说：“×先生，衣服在这里，还有剩下的洋碱。”我谢了她，很觉得“喜出望外”，因此我对她的印象很好。

熟了以后，她常常上楼来扫地、送信、取衣服、倒纸簋。我的东西本来简单，什么东西放在哪里她都知道。我出去从不锁门，却从不曾丢失过任何物件，如银钱、衣服、书籍等等。至于火柴、点心、毛巾、胰皂，我素来不知数目，虽然李老太太说过几次，叫我小心，我想谁耐烦看守那些东西呢？拿去也不值什么，张嫂收拾屋子，干净得使我喜欢，别的也无所谓了。

张嫂对我很好，对李家两老，就不大客气。比方说挑水，过了三天两天就要涨价，她并不明说，只以怠工方式处之。有一两天忽然看不见张嫂，水缸里空了，老太太就着急，问老张：“你家里呢？”他笑说：“田里帮工去了。”叫老张，“帮忙挑一下水吧。”他答应着总不动身。我从楼上下来，催促了几遍，他才慢腾腾的挑起桶儿出去。在楼栏边，我望见张嫂从田里上来，和老张在山脚下站着说了一会话。老张挑了两桶水，便躺了下去，说是肚子痛。第二天他就不出来。老先生气了，说：“他们真会拿捏人，他以为这里就没有人挑水了！我自己下山去找！”老先生在茶馆里坐了半天，同乡下人一说起来，听说是在山上，都摇头笑说：“山上呢，好大的坡儿，你家多出几个钱吧！”等他们一说出价钱，老先生又气得摇着头，走上山来，原来比张嫂的价目还大。

我悄悄的走下山去，在田里找到了张嫂，我说：“你回去挑桶水吧，喝的水都没有了。”她笑说：“我没有空。”我也笑说：“你别胡说！我懂得你的意思，以后挑水工钱跟我要好了，反正我也要喝要用的。”她笑着背起筐子，就跟我上山——从此，就是她真农忙，我们也没有缺过水，——除了她生产那几天，是老张挑的。

我从不觉得张嫂有什么异样，她穿的衣服本来宽大，更显不出什么。只有一天，李老太太说：“张嫂的身子重了，关于挑水的事，您倒是早和老张说一声，省得他临时不干。”我也不知道应当如何开口，刚才还看见张嫂背着一大筐的豆子上山，我想一时不见得会分娩，也就没提。

第二天早起，张嫂没有上来扫地。我们吃早饭的时候，看见老张提着一小篮鸡蛋进门。我问张嫂如何不见？他笑嘻嘻的说：“昨晚上养了一个娃儿！”我们连忙给他道贺，又问他是男是女。李老太太就说：“这些人真有本事，自己会拾孩子。这还是头一胎呢，不声不响的就生下

来了，比下个蛋还容易！”我连忙上楼去，用红纸包了五十块钱的票子，交给老张，说：“给张嫂买点红糖吃。”李老太太也从屋里拿了一个红纸包出去，老张笑嘻嘻的都接了，嘴里说：“谢谢你家了——老太太去看看娃儿吗？”李老太太很高兴的就进到那间黑屋里去。

我同李老先生坐在堂屋里闲谈。老太太一边摇着头，一边笑着，进门就说：“好大的一个男孩子，傻大黑粗的！你们猜张嫂在那里做什么？她坐在床板上织渔网呢，今早五更天生的，这么一会儿的工夫，她又做起活来了。她也不乏不累，你说这女人是铁打的不是！”因此就提到张嫂从十二岁，就到张家来做童养媳，十五岁圆的房。她婆婆在的时候，常常把她打的躲在山洞里去哭。去年婆婆死了，才同她良懦的丈夫，过了一年安静的日子，算起来，她今年才廿五岁。

这又是一件出乎我意外的事，我以为她已是三四十岁的人，“劳作”竟把她的青春，洗刷得不留一丝痕迹！但她永远不发问，不怀疑，不怨望。日出而作，日入而息——挑水，砍柴，洗衣，种地，一天里风车儿似的，山上山下的跑——只要有光明照在她的身上，总是看见她在光影里做点什么。有月亮的夜里，她还打了一夜的豆子！

从那天起，一连下了五六天的雨。第七天，天晴了，我们又看见张嫂背着筐子，拿着镰刀出去。从此我们常常看见老张抱着孩子，哼哼唧唧的坐在门洞里。有时张嫂回来晚了，孩子饿得不住的哭，老张就急得在门口转磨。我们都笑说：“不如你下地去，叫她抱着孩子，多省事。她回来又得现做饭，奶孩子，不要累死人。”老张摇着头笑说：“她做得好，人家要她，我不中用！”老张倒很坦然的，我却常常觉得惭愧。每逢我拿着一本闲书，悠然的坐在楼前，看见张嫂匆匆的进来，忙忙的出去，背上、肩上、手里、腰里，总不空着，她不知道她正在做着最实在、最艰巨的后方生产的工作。我呢，每逢给朋友写信，字里行间，总要流露出劳乏，流露出困穷，流露出萎靡，而实际的我，却悠然的坐在山光松影之间，无病而呻！看着张嫂高兴勤恳的、鞠躬尽瘁的样儿，我常常猛然的扔下书站了起来——

那一天，我的学生和他一班宣传队的同学，来到祠堂门口贴些标语，上面有“前方努力杀敌，后方努力生产”等字样。张嫂站在人群后面，也在呆呆望着。回头看见我，便笑嘻嘻的问：“这上面说的是谁？”我说：“上半段说的是你们在前线打仗的老乡，下半段说的是你。”她惊讶的问：“×先生，你呢？”我不觉低下头去，惭愧的说：“我吗？这上面没有我的地位！”

16 My Friend's Mother

In the spring of this year, while I was ill with flu, Mrs. K, that is, K's mother, came to see me.

It was about three in the afternoon. My high fever had only begun to abate. While half asleep, I felt somebody standing in front of my bed. I tried hard to open my eyes and saw Mrs. K grinning from ear to ear and gesturing to restrain me. She pulled up a stool and sat down at my bedside. While untying a bundle wrapped in a handkerchief, she said with a smile, "I heard K say that you had been ill for a few days and that he had taken over a couple of classes for you during your absence. Today I made a steamed corn cake and I found it quite delicious. So I have brought it here all the way for you to have a taste." Saying that, she placed beside my pillow a plate with savory slices of bright yellow steamed corn cake crowned with a few red jujubes. I hastened to half rise from my bed and thanked her, saying, "It's too kind of you." At the same time, I tried to call the janitor to bring tea for her. But she stood up and said, "Don't trouble yourself. On my way up, I found the corridor quiet and empty, without anybody. At such an hour, everybody was in class, and you were in bed with your illness. Then they took advantage of the moment, left their jobs and snuck away. I'll help myself with tea if I need to!" She stepped towards the desk, took up the thermos bottle, gave it a few shakes and said in laughter, "No water. I had tea myself just now at home, but I'm afraid you'll be thirsty. Let me go and fetch some water for you." Before I could stop her, she went out with the thermos bottle.

I sat up in a hurry and roughly made my bed. I tried to put on my clothes, but a sudden fit of dizziness forced me to lie down again. At this moment, Mrs. K came in again, poured out a cup of hot tea and put it on my bedside stool. I smiled and thanked her, "It's too much for me to be served by an elderly lady...." Mrs. K sat down and said, also smiling, "It's nothing. I feel obligated. You single men are living too

hard. On falling ill, you cannot afford to have even a cup of warm water. Among them, you are one of those who live less hard. I see this from the tidiness of your room. But K is another kind of man. He always needs to be taken care of by others: his mother, his sister or his wife...." I said, "K has been a lucky man since childhood. Has he received any letter from his wife recently?"

The old woman shook her head. Suddenly, she gazed at me and said, "Miss F has joined the army. I saw her off this morning...."

Unwittingly, I raised my head and stared at her.

She smiled and heaved a sigh, then spread the handkerchief smoothly on her knee and began to stroke it ceaselessly. She raised her head, looked at me and said, "As a good friend of K's, you must be aware of what has been going on. As to Miss F, she is really a very gentle and lovable girl, kind in disposition and versatile in music, chess, calligraphy, painting and everything else. She might be regarded as a natural match for K. But I think I would have been unfair to my daughter-in-law in Beijing and my three grandchildren if I had let them go on this way."

I remained speechless and simply gazed at her.

A grave and quiet look came over her face, "I am aware K doesn't hide any truth from you, and therefore I might as well talk to you in detail about this matter, if you are not too tired to listen. K is quite upset these days. After your recovery, please talk to him and give him some comfort."

I nodded assent at once and said, "Of course, I will. K is too serious to take anything easy."

The old lady said, "Exactly! He fell in love with a girl in France but they broke up and this made him quite heart-broken. After he returned to China, he kept on pledging celibacy. Then I tried to persuade him, saying, 'Your father passed away and left me long ago. I had to endure all kinds of hardships for many years to raise you and your sister. Now that you have finished your studies abroad and come

back home, I hope nothing more than to see you marry and start your career. This will not only bring me satisfaction, but also will comfort the soul of your late father. Fancy you having been always so good a son in the past but now showing no consideration at all for your family only because of a foreign girl! Marriage itself is not one's own business. Your wife will be your parents' daughter-in-law and your children's mother. Even though you don't want a wife, I do want grandchildren! To say nothing of you being our only son!' He replied, 'Then choose a woman for me, who is to your liking.' It was in this way that he got married. You were also present at his wedding that day, weren't you?"

I nodded assent again, and I recalled many, many things about K....

"As to my daughter-in-law, it is true that she isn't an outstanding person, but, after all, she did graduate from a normal college. She is calm and quiet. She manages to get along in home life and takes care of the children. She is quite acceptable in everything, so I am fairly satisfied with her. To say nothing of the three chubby grandchildren of mine she has given birth to!"

There was a pleasant smile on her face, full of kind tenderness. It was as if in her fixed gaze she could see K's round-faced children dancing and skipping.

"K dearly loves his children. After they were born, he got along very well with his wife. They often chatted and laughed together. Do you still remember our house in East Jingshan Street in Beijing? There in the courtyard we had 'awning, fish bowl and pomegranate tree.'^[1] Every day, coming home after school, K used to water the flowers, view and admire the fish, draw pictures, practice calligraphy, read, hold the children in his arms, thus fully enjoying the pleasures of life. Watching all this as an onlooker, I naturally felt even more pleased. Ten years passed in this way. As a matter of fact, Miss F was then already his teaching assistant, but there was nothing special between them...."

"Later on," she went on, "with the advent of war, his colleagues went southward one after another, some of them even with their families. It was my fault to refuse to go away. I couldn't bear to abandon our house in Beijing and to part with the children. I told K, 'It seems to me that this war will last one or two years at most. You have your job, and it's all right for you to leave Beijing for the time being. The children and their mother might as well stay here with me. Anyway, we are a group of either old people or little ones, and I don't think the Japanese will dare to be too hard on us.' K himself was already planning to go alone and leave behind his wife and children, and then he followed my advice and hurried away. But who could know he would be absent for as long as eight years?"

"Then," she went on, "we stayed there with our doors shut and remained indifferent to what was happening outside, waiting all day long for nothing but K's letters. In this way, three or four years passed. At first, we could still receive some letters and some money from K. But afterwards, letters came less and less frequently and it became very difficult for us to receive money. My daughter-in-law, however, was able to keep things going, looking after the children and me steadily and surely. I still had some savings to make ends meet. But three years ago, I received in Beijing a telegram sent from Hong Kong by K's elder sister's husband, telling me that his wife, my daughter, was critically ill. He urged me to go to Hong Kong, and I started my journey in a hurry, but who would have thought my daughter would die less than ten days after my arrival in Hong Kong...."

The old woman was on the verge of tears. She pressed her handkerchief to her eyes. I silently moved the cup of tea a little closer to her. Forcing an uneasy smile, she picked up the cup, took a sip and then laid it down.

"And who would have thought Hong Kong would fall into the hands of the Japanese only ten days after my daughter's death? Then my son-in-law made haste to leave Hong Kong for Chongqing. He asked me whether I wanted to go back to Beijing. If I did, he would ask someone to take care of me during my trip to Shanghai. At that

time my mind was in utter turmoil. My daughter was dead, and for a long time nothing certain had been heard about my son, except for some news obtained from people in and out of Chongqing who told me that he was leading a hard life in the city and often fell ill. Now that there was an opportunity for me to meet him, I found it hard to give it up.

"Then I said to my son-in-law, 'Well, I will go with you. Life is hard in the rear, but there I can live together with K. As to Beijing, my daughter-in-law is a capable woman and there's no harm in leaving her and the children there for one or two years.' It was in this way that I came here after traveling a long way by way of Shaoguan, Guilin and Guiyang...."

"When I met K," she went on, "I could hardly help bursting into tears. Who would have thought my son would become so wan, sallow and shabbily dressed in a few years! He was overjoyed by my arrival, but cried bitterly when he learned the sad news of his sister's death. Afterwards, he asked about his children, but very little about his wife. I was the one who told him something about her. When I inquired about how he had been living here, he said he was living just like all the others. Life was much harder than before with regard to clothing, food and lodging, but he felt quite gratified in his heart. When expressing gratitude, he pointed to Miss F, who was there by his side, and said, 'You should thank Miss F for taking care of me for so many years.' Only then did I realize that she had been standing near."

"Miss F also looked thinner than before," the old woman went on, "but seemed more beautiful for just this reason. Showing some shyness, she greeted me and asked me about her parents, who were still in Beijing. I told her that I had often seen them there. They were older, but they had managed to get along in their livelihood.... After we talked a while, Miss F said to K, 'Would Mrs. K like to have dinner with us?' K nodded, and we went together to Miss F's dwelling place."

"Then," she went on, "I stayed there with Miss F before I found my own dwelling place. She occupied two rooms and had maid service. It was there that K took his meals and had his clothes washed. During

the days of my stay, K, of course, was together both with Miss F and me all day before he went back alone to his dormitory at night. Watching how things were going on, I found that K and Miss F were on congenial terms as they talked and read about art. As to Miss F, she took care of K in such a considerate way that not even the smallest details were overlooked. Both of them often told me how hard and dangerous it had been for them to trek their way up here. They ran away together during the air raids and more than once they were nearly killed in the bombing. K fell ill on several occasions and once he almost died of scarlet fever. He mentioned none of this in his letters to us. Talking about all of this with excitement and nervousness, K often cast glances of gratitude and tenderness towards Miss F. For my part, I listened to them with nervousness and gratitude, too, but, at the same time, began to experience a vague feeling of unease...."

"After I moved out from there," she continued, "the wives of K's colleagues paid me visits and, hemming and hawing, asked me why K's wife hadn't come with me. I told them that at first I had only planned to go to Hong Kong and therefore had not thought of taking her and the children with me. Then these women said, 'Now things can go better since you are here. Otherwise it would be quite pitiful for Mr. K to live here alone. Nowadays it is hard for single men to stay far away from home. Life is hard for them, to say nothing of...the gossip people so enjoy!' Then they asked me whether Miss F was a relative of ours and what was her family background. I read too much into their words and I replied ambiguously, saying that our friendship could be traced to older generations, that upon graduation Miss F had begun to work as K's teaching assistant, that she had a kind, warm heart, and that I was very grateful to her for helping and taking care of my son...."

"Nevertheless," she went on, "my feeling of unease never left me. I was always thinking about the children in Beijing. It was more than I could stand to hold back my worries and not to express them before my son. The opportunity finally came when the maid had gone and K

suggested, 'Mother, we better have our meals together with Miss F. Even when someday we find a new maid, you needn't trouble yourself with cooking. To dine together is the most rational solution.' Then I replied, 'Is it possible that I don't dislike all these troubles? Of course, I'm getting on in years and I haven't done such heavy household chores before. I feel quite tired. But I still prefer to toil myself, so that people won't gossip about you and Miss F because we dine together!' K stared at me with open eyes. Then I tactfully let him know other people's criticism, and added, 'I'm sure that you had no special intentions towards each other. The War of Resistance against Japan has united you, and your feeling for each other has been enhanced through the sharing of painful experiences. Your suffering will cease when everything is over, because you already have your family and your children. But you will have led such a gifted girl as Miss F to waste her time, won't you?' K remained speechless and lowered his head, keeping silent for four or five days."

"On the night of the sixth day," she went on, "I was already in bed when he stepped into my room in the darkness, sat at the edge of my bed and took my hand, saying, 'Mother, I have thought it over for four or five days, and I don't think I ought to make her waste her time. I believe she and I will never be happy if we part company with each other. So I want...I want to divorce my wife in Beijing....' I did not say a word. He stopped for quite a while before he bowed his head and shook me, asking desperately, 'What's the matter, Mother? Are you weeping?' I couldn't help bursting into tears, and then I said, 'I'm weeping for everyone. You are unfortunate, and so is Miss F, but the most unfortunate ones are your wife and your three children in Beijing. They haven't hurt anyone. They are keeping things going at home in spite of all the hardships, waiting for nothing but the day of reunion. It doesn't matter if I pass away, for I have already lived my years, no matter how bitter my life has been. If you...you better let me go back and keep company with them!' Upon hearing this, K also burst into tears. He firmly grasped my hand, turned around and stepped outside."

Her voice broke off. I quietly hastened to say, "I wonder if I might have a cup of water? The steamed corn cake you brought here is so sweet-smelling that I would like to have a slice." With tears in her eyes, she stood up and smiled, pouring two cups of tea. We both picked up slices of steamed corn cake and began to eat them in silence.

The old woman coughed, wiped her mouth with her handkerchief and said, "I thought the matter over carefully throughout that night. Early in the morning, I went to see Miss F. She was about to leave for lessons. On seeing me, she seemed quite surprised, perhaps because I looked rather queer. I said, 'Excuse me, but I would like to take a moment of your time to talk with you about a certain matter.' Her face turned pale at once. She turned around immediately and invited me into her inner room. She locked the door and sat by my side, waiting quietly for me to begin. I kept silent for quite a while, but then I could not help weeping. I said, 'Miss F, I don't know how to talk in a roundabout way. I have heard that K wants to marry you, doesn't he?' Miss F blushed noticeably. Before she could speak, I pressed her hand and said, 'Don't be nervous. This is of course K's fond dream. I'm not a mother who likes to speak highly of her son, but I must say that K is by nature a good match for you. It is a pity he already has a wife and children....' Miss F remained speechless and stared at me. I went on, 'Of course, there are lots of cases of divorce among people who have wives and children. But, as you must know, K loves his children intensely. Besides, his wife has never done anything unworthy of him.' Miss F bent her head low, and I added, 'Miss F, I have been fond of you and admired you since your childhood. If you were my own daughter, I would never like to see you marry a divorced man. Such a marriage would make him a lucky fellow, but would be far from worthwhile for you.'

"I stroked her hand and said, 'Think about how things went when we were in Beijing. At that time you often came to our house, didn't you? But did you feel any love towards him at that time? I'm sure your ideal man in those days was not one like him. But the war

brought both of you together and allowed you to help each other in times of hardship and sickness. Sharing your troubles in this way and feeling increasingly grateful to each other, you cultivated a deep friendship. At the same time, both of you were homesick and felt lonely, and lonely hearts can easily come together. The war has dragged on for seven or eight years so that returning home seemed quite unlikely. With each passing day, everything relating to your place of origin has become more and more remote, and everything visible to your eyes has become more and more real. Things can end up such that what was in itself untrue becomes true. People caught in the clouds and mists become content with temporary ease and comfort, but the day will come when the clouds will melt and the mists will disperse under the sunlight. Then, with the sun shining over them, people will discover that they lost their normal sobriety and ability to judge in those days of bewilderment."

"I went on," she said, "Have you seen people traveling together on a long journey by train? The passengers are confined to a small world but the journey will take a long time. In such a situation, even perfect strangers will introduce themselves solicitously to one another, chat affectionately, sing together, play cards, eat and drink, as if they were already lifelong friends. However, as the final destination draws nearer and nearer, everybody will stand up, pack their luggage and, leaning on the windowsill, wait for their dear ones and friends to meet them at the station. As soon as the train pulls in, they will wave to those standing on the platform and, even before the train stops, they will hurry down. At such a moment, the few, if any, passengers who remember to turn around and say goodbye to those who remain on board must be regarded as especially polite. The majority of the passengers will go their way without glancing backward. No matter how long the war is to last, the day of peace is bound to come sooner or later. And when the day of victory comes and this wonderful occasion uplifts the hearts of so many people, "the birds will part company, each one flying to its own forest," and nothing will be left but a vast expanse of blank wilderness."

"And I went on," she said, "Suppose you both will succeed in getting married. Will you go back or not? What if you do? As your parents' only daughter, you must go to see them. Perhaps K may grudge going to see his wife, but he won't be able to bear parting with his children. I don't believe you and he can live with a good conscience and remain light-hearted if you stay in the same place as before. A married couple that lives on a desert island would be bored in a few days, months or years, and would yearn for the world outside. You don't understand K so well as I do. Like his father, he is sentimental, susceptible to change, and always inclined to melancholy. He never feels totally happy and satisfied, but always wants something. He is in fact most happy precisely when he finds himself in an unsatisfactory and depressing environment. Maybe you don't understand what I have said, because you never lived with such a man."

She continued, "I said, 'Therefore, considering your interests and for the sake of your happiness, I advise you to part with K. Out of sight, out of mind. You are still very young. You are of excellent character and great learning. You indeed have a very promising future. Before I left Beijing, your mother came to see me. She said that, since correspondence between Hong Kong and Chongqing was easy, she would like me to write to you on her behalf. She wanted me to tell you that your parents were already old and could not predict when the war would finish, and that they wondered whether they would ever see you again. They had no other message than to express the desire to see you entrust your life to a man capable of protecting you, endowed with talent and virtue.'

"I've just mentioned all this in order to remind you that K throughout his life has been a mere boy, always needing help from others, instead of knowing how to take care of others. He has his own way of doing things! That's all I had to tell you. Please think it over!' At this moment, she was already in tears...."

"I tried to comfort her," she continued, "but suddenly I heard K calling me from outside. Then I hastened to go out, shut the door

behind me and headed for home. K followed me in silence."

"From then on," she added, "I kept my mouth shut about this matter. But, strange to say, K seemed to be in a more calm and unruffled mood. I did not know whether he had talked it over with Miss F, so I only continued to quietly await their decision. Finally, the night before the previous day, K told me that Miss F had decided to join the army and would go away the next day. She hoped I would go to see her off. While speaking, K did not sound melancholy, whereas I felt quite sad. What a smart and resolute girl! Not that I am hard-hearted, but I believe that life and training in the army will be beneficial to her. At least it will give her a chance to find a sound and lofty outlet for her prolonged sense of solitude and sorrow. When I saw her off this morning, she did not shed a tear, but instead got on the truck with her chin up and chest out.... Oh Heavens! It's war that has made a mess of human relations...."

The old woman stopped. Her story had saddened and shocked me. Then I smiled, "Don't feel sad any more. After all, the matter has come to an end, and I'm sure both of them will be grateful to you in the future. You really deserve my highest admiration. No wonder my friends always speak highly of your ageless learning. You use literary and philosophical terms with great care and accuracy." Then she laughed and said, "True, I am lagging quite behind you young people. To you young people it may seem ridiculous, but I was a student in a modern school for a few days when I was young. By now I have forgotten all my English, but I can still read K's Chinese books and magazines. But now I think I must be going, for you must be tired and I have been outside for quite a while. Whenever you want anything to eat, don't hesitate to let me know, and I will prepare whatever you like and bring it to you." Saying that, she stood up and proceeded to leave.

I half rose from my bed and said, "I'm sorry I cannot walk you to the door. But your visit and what you explained have sobered me a great deal. If you don't mind the shabbiness of this dormitory for single men, please drop in whenever you like." The old woman

stopped and smiled, "By the way, I have heard that someone tried to make a match of you and Miss F. Why didn't you agree? How good it would have been and how much trouble could have been saved if you had agreed!" Then I smiled, "It was not that I didn't agree, but I dared not ask. She is too versatile for me to be worthy of her!" The old woman shook her head and smiled, "Not at all. The fact is that you are too choosy. I'm far from mocking you, but I must say, 'One gets the more dim-sighted the more he chooses.'..."

The sound of her steps gradually faded away in the corridor. Gazing at the ceiling, I continued ruminating on the words: "The birds will part company, each one flying to its own forest!"

At that moment the shades of dusk were spreading into my room through the windows!

[1] This is a typical description of a traditional Beijing "*siheyuan*," or compound with houses around a courtyard. It was the residence of one household in the past, but it was usually occupied by several households since the late 1950s and early 1960s.

拾陆 我的朋友母亲

今年春天，正在我犯着流行性感冒的时候，K 的母亲——K 老太太来看我。

那是下午三时左右，我的高热度还未退清、蒙蒙眈眈的觉得有人站在我床前，我挣扎着睁开眼睛，K 老太太含着满脸的微笑，摇手叫我别动，她自己拉过一张凳子，就坐在床边，一面打开一个手绢包儿，一面微笑说：“我听见 K 说你病了好几天了，他代了你好几堂课，我今天新蒸了一块丝糕，味儿还可口，特地送来给你尝尝。”她说就把一碟子切成片儿嫩黄喷香上面嵌着红枣的丝糕，送到我枕畔。我连忙欠身起来道谢，说：“难得伯母费心。”一面又喊工友倒茶。K 老太太站起来笑说：“你别忙了，我刚才来的时候，甬道里静悄悄的没有一个人。这时候大家都上着课，你再一病倒睡着，他们可不就都偷懒出去了？我要茶自己会倒！”她走向桌边，拿起热水壶来，摇了摇，笑说：“没有开水了，我在家里刚喝了茶来的，倒是你恐怕渴了，我出去找点水你喝。”我还没有来得及拦住她，她已经拿着热水壶出去了。

我赶紧坐起，把衾枕整理了一下，想披衣下床，一阵头昏，只得又躺下去。K 老太太又已经进来，倒了一杯热茶，放在我床前凳子上，我笑着谢说：“这真是太罪过了，叫老太太来服侍我——”K 老太太一面坐下，也笑着说：“哪里的话，这是我应该做的事。你们单身汉真太苦了，病了连一杯热水都喝不到！你还算好，看你这屋子弄得多么干净整齐，K 就不行，他一辈子需要人照应，母亲、姐姐、太太——”我说：“K 从小是个有福气的人——他太太近来有信吗？”

老太太摇了摇头，忽然看着我说：“F 小姐从军去了，今早我去送她的……”

我不觉抬头看着 K 老太太。

K 老太太微笑着叹了一口气，把那块手绢平铺在膝上，不住的摩抚着，又抬头看着我说：“你和 K 这样要好，这件事你一定也知道了。说起 F 小姐，真是一个温柔的女子，性格又好，模样儿也不错，琴棋书画，样样都来得，和 K 倒是天生一对！——不过我觉得假若由他们那样做了，我对不起我北平那个媳妇，和三个孙儿。”

我没有言语，只看着老太太。

老太太面容沉寂了下来，“我知道 K 什么事都不瞒你，我倒不妨同你细谈——假如你不太累。K 这两天也不大开心呢，你好了请你从旁安慰安慰他。”

我连忙点了点头，说：“那是一定。K 真是一个实心的人，什么事都不大看得开！”

老太太说：“可不是！他从前不是在法国同一个女孩子要好，没有成功，伤心的了不得，回国来口口声声说是不娶了，我就劝他，我说：‘你父亲早撇下我走了，我辛苦半生，好不容易把你和你姊姊抚养大了，你如今学成归国，我满心希望你成家立业，不但我看着高兴，就是你父亲在天之灵，也会安慰的。你为着一个异种外邦的女人，就连家庭也不顾了，亏得你平常还那样孝顺！本来结婚就不是一个人的事，你的妻子也就是你父母的儿媳，你孩子的母亲。你不要媳妇我还要孙子呢，而且你还是个独子！’他就说：‘那么您就替我挑一个吧，只要您高兴就行。’这样他就结了婚，那天你不是还在座？”

我又点一点头，想起了许多 K 的事情——

“提起我的媳妇，虽不是什么大出色的人物，也还是个师范毕业生，稳稳静静的一个人，过日子，管孩子，也还过得去。我对她是满意的，何况她还替我生了三个白白胖胖的孙儿？”

老太太微笑了，满面的慈祥，凝望的眼光中似乎看见了 K 的那几个圆头圆脸、欢蹦乱跳的孩子。

“K 也是真疼他那几个孩子，有了孩子以后，他对太太也常是有说有笑的。你记得我们北平景山东街那所房子吧？真是‘天棚鱼缸石榴树’，K 每天下课回来，浇浇花、看看鱼、画画、写字、看看书、抱抱孩子，真是很自得的，我在一旁看着，自然更高兴，这样过了十年——其实那时候，F 小姐就已经是他的助教了，他们并没有怎么样……”

“后来呢，就打起仗来了，学校里同事们都纷纷南下，也有带着家眷走的。那时也怪我不好，我不想走，我抛不下北平那个家，我又不愿意他们走，我舍不得那几个孩子。我对 K 说：‘我看这仗至多打到一两年，你是有职分的人，暂时走开也好，至于孩子们和他们的母亲，不妨留着陪我，反正是一门老幼，日本人不会把我们怎么样。’K 本来也不想带家眷，听了我的话，就匆匆的自己走了，谁知道一离开就是八年。

“我们就关起门来，和外面不闻不问，整天只盼着 K 的来信，这样的过了三四年。起先还能接到 K 的信和钱，后来不但信稀了，连拨款也十分困难。我那媳妇倒是把持得住，仍旧是稳稳静静的服侍着我，看着孩子过日子，我手里还有些积蓄，家用也应付得开。三年前我在北平得到 K 的姐夫从香港打来的电报，说是我的女儿病重，叫我就去，我就匆匆的离开了北平，谁想到香港不到十天，我的女儿就去世了……”

老太太眼圈红了，折起那块手绢来，在眼边轻轻的按了一按，我默默的将那杯茶推到她的面前。

老太太勉强笑了笑，端起茶杯来，呷了一口就又放下。

“谁又知道我女儿死后不过十天，日本人又占领了香港，我的女婿便赶忙着要退到重庆来，他问我要不要回北平？若是要回去呢，他就托人带我到上海。我那时方寸已乱，女儿死了，儿子许久没有确实消息，只听过往的人说他在重庆生活很苦，也常生病，如今既有了见面的可能，我就压制不住了。我对我女婿说：‘我还是跟你走吧，后方虽苦，可是能同 K 在一起。北平那方面，你弟妇还能干，丢下他们一两年也不妨。’这样，我又从韶关、桂林、贵阳，一路跋涉到了这里——

“看见了 K，我几乎哭了出来，谁晓得这几年的工夫，把我的儿子折磨得形容也憔悴了，衣履也褴褛了！他看见我，意外的欢喜，听到他姐姐死去的消息，也哭了一场。过后才问起他的孩子，对于他的太太却淡淡的不提，倒是我先说了几句。问起他这边的生活，他说和大家一样，衣食住都比从前苦得多，不过心理上倒还痛快。说到这里，他指着旁边的 F 小姐，说：‘您应当谢谢 F 小姐，这几年来，多亏得她照应我。’我这时才发觉她一直站在我们旁边。

“F 小姐也比从前瘦了，而似乎出落得更俊俏一些，她略带羞涩的和我招呼，问起她在北平的父母。我说我在北平的时候，常和他们来往，他们都老了一点，生活上还过得去……说了一会，F 小姐便对 K 说：‘请老太太和我们一块儿用饭吧？’K 点头说好，我们就一同到 F 小姐住处去。

“在我找到房子以前，就住在 F 小姐那里，她住着两间屋子，用着一个女工，K 一向是在那里用饭的，衣服也在那边洗。我在那边的时候，K 自然是整天同我们在一起，到晚上才回到宿舍去。我在一旁看着，觉得他们很亲密，很投机，一块儿读书说画，F 小姐对于 K 的照应体贴，更是无微不至。他们常常同我说起，当初他们一路出来，怎样的

辛苦，危险；他们怎样的一块逃警报，有好几次几乎炸死；K 病了好几场，有一次患很重的猩红热，几乎送了命。这些都是 K 的家信中从来不提的，他们说起这些经历的时候，都显着很兴奋，很紧张，K 也总以感激温存的眼光，望着 F 小姐。我自然也觉得紧张、感激，而同时又起一种说不上来的不安的情绪——

“等到我搬了出来，便有许多 K 的同事的太太，来访问我，吞吞吐吐的问我 K 的太太为何不跟我一同出来？我说本来是只到香港的，因此也没想到带着他们。这些太太们就说：‘如今老太太来了就好了，否则 K 先生一个人在这里真怪可怜的——这年头一个单身人在外面真不容易，生活太苦，而且……而且人们也爱说闲话！’她们又问 F 小姐和我们有没有亲戚关系？她的身世如何？我就知道话中有因，也就含含糊糊的应答，说 F 家同我们是世交，F 小姐从一毕业就做着 K 的助教，她对入真好，真热心。她对于 K 的照应帮忙，我是十分感激的——

“不过我不安的情绪，始终没有离开我，我总惦记着北平那些孩子，我总憋着想同 K 说开了，所以就趁着有一天，我们的女工走掉了，K 向我提议说：‘妈妈不必自己辛苦了，我们还是和 F 小姐一块儿吃去吧，就是找到了女工，以后也不必为饭食麻烦，合起来吃饭，是最合理的事。’我就说：‘我难道不怕麻烦，而且我岁数大了，又历来没有做过粗活，也觉得十分劳瘁，不过我宁可自己操劳些，省得在一起让人说你们的闲话！’K 睁着大眼看着我，我便委婉的将人们的批评告诉了他，又说：‘我深知你们两个心里都没有什么，抗战把你们拉在一起，多同一次患难，多添一层情感。你是有家有孩子的人，散了就完了，人家 F 小姐一个多才多艺的女子，岂不就被你耽误了？’K 低着头没有说什么，从那时起，一直沉默了四五天。

“到了第六天的夜里，我已经睡下了，他摸着黑进来，坐在我的床沿上，拉着我的手，说：‘妈妈，我考虑了四五天，我不能白白的耽误人家。我相信我们分开了，是永远不会快乐的，我想——我想同北平那个离了婚……’我没有言语，他也不往下说，过了半天，他俯下来摇我，急着说：‘怎么，妈妈，您在哭？’我忍不住哭了出来，说：‘我哭的是可怜你们这一班苦命的人，你命苦，F 小姐也命苦，最苦命的还是北平你那个媳妇和三个孩子。他们没有对不起任何人，他们辛辛苦苦的在北平守着，等待着团圆的一天。我走了，算不了什么，就是苦命，也过了一辈子了，你若是……还是我回去守着他们吧！’这时 K 也哭了，紧紧握了我的手一下，就转身出去。

老太太咽住了，又从袖口里掏手绢，我赶紧笑说：“对不起，伯母，请您给我一杯水，这丝糕放在这里怪香的，我想吃一块。”老太太含着泪笑着站起，倒了两杯茶来，我们都拈起丝糕来吃着，暂时不言语。

老太太咳嗽了一声，用手绢擦一擦嘴，说：“我想了一夜，第二天一早，我就去看 F 小姐。她正要上课去，看见了我，脸上显出十分惊讶，我想我的神色一定很不好，我说：‘对不住，我想耽误你半天工夫，来同你谈一件事，’她的面色倏然苍白了，连忙回身邀我进到内屋去，把门扣上，自己就坐在我的旁边，静静的等着。我停了半天，忍不住又哭了，我说：‘F 小姐，我不会绕弯儿说话，听说 K 想同你结婚？’F 小姐把脸飞红了，正要说话，我按住她的手，说：‘你别着急，这自然是 K 一方面的痴心妄想，不是我做母亲的夸自己的儿子，K 和你倒是天生的一对，可惜的是他已经有妻有子的人了……’F 小姐没有说话，只看着我。我说：‘自然现在有妻有子的人离婚的还多得很，不过，K 你是晓得的，极其疼爱他的孩子，同时他太太也没有对不起他的地方。’F 小姐低下头去，我又说：‘F 小姐，你从小我就疼你，佩服你，假如你是我的亲女儿，我决不愿你和一个离过婚的人结婚，在他是一个幸福，在你却太不值得了。’我抚摩着她的手，说：‘你想想，从前在北平的时候，你还不是常常到我们家里来？你对他发生过感情没有？我准知道那时你的理想，也不是像他那样的人。只因打了仗，你们一同出来，患难相救护，疾病相扶持，这种同甘苦、相感激的情感的积聚，便发生了一种很坚固的友情——同时大家想家，大家寂寞，这孤寂的心，就容易拉到一起。战争延长到七八年，还家似乎是不可能的事，家里一切，一天一天的模糊，眼前一切，一天一天的实在。弄到后来，大家弄假成真的，在云雾中过着苟安昏乐的日子——等到有一天，雨过天晴，太阳冲散了云雾，日影下，大家才发现在糊里糊涂之中，丧失了清明正常的自己！’

“你看见过坐长途火车的没有？世界小，旅途长，素不相识的人也殷勤的互相自己介绍，亲热的叙谈，一同唱歌，一同玩牌，一同吃喝，似乎他们已经有过终身的友谊。等到目的地将到，大家纷纷站起，收拾箱笼，倚窗等望来接他们的亲友，车一开入站，他们就向月台上的人招手欢呼，还不等到车停，就赶忙跳了下去。能想起回头向你招呼的，就算是客气的人，差不多的都是头也不回的就走散了，战事虽长，也终有和平的一天，有一天，胜利来到，惊喜袭击了各个人的心，那时真是“飞鸟各投林”，所剩下的只是一片白茫茫的大地——

“假如你们成功了呢，你们是回去不回去？假如是回去了呢？你是

个独女，不能不见你的父母。K 也许可以不看他的太太，而那几个孩子，他是舍不得丢开的。你们仍旧生活在从前环境中间，我不相信你们能够心安理得，能够快乐，能够自然。人们结婚后不是两个人生活在孤岛上，就是在孤岛上，过了几天、几月、几年以后，也会厌倦腻烦，而渴望孤岛外的一切。你对 K 的认识，没有我清楚，他就像他的父亲，善感，易变，而且总倾向于忧郁，他永没有完全满足快乐的时候，总是追求着什么。在他不满足、忧郁的情境之中，他实在是最快乐的，你也许不懂得我的话，因为你没有同这样的一个人，共同生活过。

“所以我替你想，为你的幸福起见，我劝你同 K 分开，“眼不见为净”，你年纪轻轻的，人品又好，学问又好，前途实在光明得很——我离开北平之前，你母亲还来找我，说香港和重庆通讯容易，要我替她写信给你，说他们老了，这战事不知几时才完，他们不知道将来能不能见着你，他们别无所嘱，只希望你谨慎将事，把终身托付给一个能爱护你、有才德的人。我提到这些，就是提醒你，K 一辈子是个大孩子，他永远需要别人的爱护，而永远不懂得爱护别人，换句话说，就是他有他自己爱护的方法！我把话都说尽了，你自己考虑考虑看。”这时 F 小姐已哭得泪人儿一般……

“我正在劝慰她，忽然听见 K 在外面叫我，我赶紧把门反掩上，出来便往家走，K 一声不响的跟着我回来。

“此后我绝口不提这件事，K 的情绪反而稳定了下来。我不知道他同 F 小姐又说过没有，我只静候着他们的决定。终于在前天夜里，K 告诉我说 F 小姐决定从军去了，明天便走，她希望我能去送她。K 说着并没有显出特别的悲伤，我反而觉得难过。这女孩子真是聪明，有决断！不是我心硬，我相信军队的环境和训练，是对她好的，至少她的积压的寂寞忧伤，有个健全高尚的发泄。今早我去送她，她没有掉下一滴泪，昂着头，挺着胸，就上了车……咳，都是这战争搅得人乱七八糟的……”

老太太停住了。这一篇话听得我凄然而又悚然，我便笑说：“伯母也不必再难过了，这件事总算告一段落，我想他们将来都会感激您的。伯母！我真是佩服您，怪不得朋友们都夸您通今博古，您说起文哲名词来，都是一串一串的！”老太太笑了，说：“别叫你们年轻人笑话，我小的时候，也进过几天的‘洋学堂’，如今英文差不多都忘光了，不过 K 的中文杂志书籍，我还看得懂——我看我该走了，你也乏了，我也出来了半天。你想吃什么，只管打发人去告诉我，我就做了送来。”她说着一面站起要走。

我欠起身来，说：“对不起，我不能送了。您来这么一说，我倒觉得清醒了许多。您若不嫌单身汉屋里少茶没水的，就请常过来坐坐。”老太太站住了，笑说：“真的，听说从前有人同你提过 F 小姐，你为什么不答应，你答应了多好，省去许多麻烦。”我笑说：“不是我不答应，我是不敢答应，她太多才多艺了，我不配！”老太太笑着摇头说：“哪里的话，你是太眼高了，不是我说你，‘越挑越眼花’——”

老太太的脚声，渐渐的在甬道中消失了。我凝望着屋顶，反复咀嚼着“飞鸟各投林”这一句话！

这时窗外的暮色，已经压到屋里来了！

Epilogue

I have revealed my experience of life while writing about fourteen women. My life is nothing but a thin and hazy patch of cloud floating in the sky, giving prominence to the crystal-clear splendor of the moon.

I am sure that I have a very plain, prudent and sound opinion of women. She is neither the goddess as described by the poet, nor the devil in the eyes of the man disappointed in love. Just like all of us, she is a being of feeling and rationality. But she is more sensitive, quicker in response and livelier in action. She is, therefore, more colorful and more expressive than man. She is more likely to go to extremes as far as human character is concerned, whatever that may be. Compared with us men, she is gentler but more courageous, more vivacious but more profound, more exquisite but sharper.... Nobody can tell what would become of the world were there no women in it! What I can imagine is that a world without women would be deprived of at least five-tenths of what it knows to be "Pure," six-tenths of what it knows to be "Good," and seven-tenths of what it knows to be "Beautiful."

I dare not say I have compassion for women, but women are indeed very pitiful. Forty years of dispassionate observation have enabled me to discover a principle, which turned out to be nothing else than what an ancient man said long ago: "Man lives for the sake of his career, whereas woman lives for the sake of love"—although there may be one exception in every ten million cases—but nothing is more conducive to misery or more dangerous than to persist in living for love!

A woman seems to attach more importance to love between parents and children, love among brothers and sisters, love between husband and wife, love among friends.... She willingly sacrifices everything for her loved ones. Actually, the matter isn't whether she is

willing or unwilling to do so. She opts for such a sacrifice unconditionally, "despite having been scraped all over, from top to toe,"^[1] and puts off everything except love. In this process of "being scraped all over, from top to toe," she willingly suffers all the pains that may befall a human being, and these pains become unimaginable if she finds herself uncompensated for her sacrifices.

You might say that we had better advise women to give up "love," but this is utterly impossible! God created woman so that she might love and keep this world just as it is. She is a machine of "love" in God's life-creating factory. This is true not only of woman, but also of any other living being who bears the word "female": such a creature always loves in a "selfless" and unconditional way, giving all until life itself comes to an end!

Just look at the hen, the cow, and even the lioness. In terms of the love that God endowed them with, they are equally selfless, equally capable of enduring, equally gentle and equally courageous in defying their own danger.

Now that I'm writing about this, I would like to mention a wonderful and funny phenomenon I myself have more than once witnessed. A boy three or four years old will firmly grasp the candy he has in his hand and refuse to give it to anybody, however much you coax him or scare him. In the case of a little girl, however, you may fall headlong into her arms and earnestly ask her as if you were her spoiled child, "Mommy, give some to me!" This will be sufficient to allow her maternal instinct to bud in her heart! She will stare at you in amazement, and, after a while, lovingly express sadness, and then turn toward you and say, "You greedy child! Mommy will share with you!"

My goodness! Thank God, I am not a woman!

In this book, I have written about only fourteen women. Actually I know at least over one thousand: aunts, cousins and nieces, schoolmates, colleagues, students, neighbors, fellow travelers, as well as friends' aunts, sisters, cousins and nieces, many of whom are so

talented or so beautiful or have accomplished such magnificent exploits or heroic deeds that all my lifetime would be insufficient for me to write about them all. They are, however, "known far and wide" so that if I had written about them, everybody would have realized that they are none other than those well-known women. As I have always cherished my friendship with women, I am afraid that they will reproach me for writing about them. So let me put this off until some other day.

Many of my friends hoped that, as I continued writing and writing, I would end up with something about my "bride." I am grateful to them for their best wishes, but my fate in this respect is "already irremediable in this life and still unpredictable in the next one"! For the last forty years, I have respected women in a universal way, I have been fond of a lot of women and have fallen in love with two or three. But I never felt attached to any of them. Such a psyche of "love without attachment," which has earned me the criticism of a few friends concerning my style of love, is indeed my fatal weakness!

I do not think I deserve to be any woman's husband. Just because I look on women with the utmost respect and consideration, I think that I must not bring them any more suffering. I have brought suffering to a woman whom I profoundly respected and loved—my own mother, but this I did "in spite of myself." By no means can I bear again to make another woman suffer for me. Men are by nature more selfish, more likely to be idle and irresponsible while living with the opposite sex—partly due to their not knowing how to exert themselves—and I am afraid that I may be no exception. Although unable to actively prevent men from ill-treating women by means of marriage, I'm at least in a position to forbid myself from doing so.

Shi Nai'an^[2] once said, "A man still unmarried at the age of thirty should not marry at all. A man who has not yet taken up an official post at the age of forty should not do so at all. One should not stay home at the age of fifty, nor go out touring at the age of sixty...." But as a man still unmarried at the age of forty, I, for my part, prefer from now on to go touring everywhere, like the floating clouds and the wild

cranes, so long as my financial resources permit. My brothers and friends are worrying about my future days "after the age of sixty," but I feel quite sure I can get along.

In our big family, a rather strong feminist atmosphere prevails. I now count seven nieces who are daughters of my own brothers. Countless others are daughters of my cousins on the paternal and maternal sides. As long as these little women continue loving this "uncle" of theirs twenty years from now, just as they do today, it will be quite easy for me to divide the three hundred and sixty five days of the year among their homes, with ten days each. Even if all of this fails to happen, I will still be able to get along, for by then it will be highly probable that I shall have a son or two daughters of my own to ensure the continuity of our lineage and to have someone to share my cares and sorrows. The only thing to worry about is: What if I cannot manage to live to be sixty?

Having arranged in good order all these "important lifelong affairs," the author is now feeling at ease, and the reader no longer needs "to fret over the worries of long-departed people."

So now let me say a few words about why and how I wrote this book. In the winter of 1940, when I had just come to Chongqing, the *Weekly Review* asked me for something to publish, and I, prompted by a moment's enthusiasm, wrote an article, entitled *About Women*, to make do with the demands of the editors. But once I started, I could not stop. I continued writing and did not stop until the *Weekly Review* ceased its publication. In the spring of this year, when the Tiandi Publishing House had one of my female students pass on to me the message that they wanted to publish *About Women* in book form, I sent them, for the time being, the nine essays already published in the *Weekly Review*. But, unexpectedly, I was ill in late spring and early summer. The first half of this book meanwhile had been typeset three months before, yet the book could not come out because its second half was still missing.

So I was showered with letters from the Tiandi Publishing House, urging me to send them the required manuscripts. I had to continue

writing although I had not yet recovered completely from my illness. I had many visitors in the mountains, so during those three weeks I had to get by and managed somehow to put an end to my work, after writing, off and on, a total of some thirty thousand characters amidst chats and meetings with all sorts of people, couth and uncouth.

Here I must express my gratitude to a little woman, my niece Xuan, but for whose help in my numerous "house chores," I, a single man, would not have been able to finish the last seven articles even if I had "worked my heart out."

Midnight, August 30, 1943

Mt. Da Huang, Sichuan.

[1] This phrase comes from an expression used by Mencius to describe Mozi's self-sacrifice in doing good for mankind.

[2] Shi Nai'an was a famous Chinese writer in the last years of the Yuan Dynasty and the first years of the Ming Dynasty. He is supposed to be the author of the novel *Heroes of the Water Margin*.

后记

写了十四个女人的事，连带着也呈露了我的一生，我这一生只是一片淡薄的云，烘托着这一天的晶莹的月！

我对于女人的看法，自己相信是很平淡，很稳静，很健全。她既不是诗人笔下的天仙，也不是失恋人心中的魔鬼，她只是和我们一样的，有感情有理性的动物。不过她感觉得更锐敏，反应得更迅速，表现得也更活跃。因此，她比男人多些颜色，也多些声音。在各种性格上，她也容易走向极端。她比我们更温柔，也更勇敢；更活泼，也更深沉；更细腻，也更尖刻……世界若没有女人，真不知这世界要变成怎么样子！我所能想象得到的是：世界上若没有女人，这世界至少要失去十分之五的“真”、十分之六的“善”、十分之七的“美”。

我并不敢说怜悯女人，但女人的确很可怜。四十年来，我冷眼旁观，发现了一条真理，其实也就是古人所早已说过的话，就是：“男人活着是为事业，女人活着是为爱情。”——这虽然也有千万分之一的例外——靠爱情来维持生活，真是一件可怜而且危险不过的事情！

女人似乎更重视亲子的爱，弟兄姊妹的爱，夫妻的爱，朋友的爱……她愿意为她所爱的对象牺牲了一切。实际上，还不是她愿意不愿意的问题，她是无条件的、“摩顶放踵”的牺牲了，爱了再说！在这“摩顶放踵”的过程之中，她受尽人间的痛苦，假如牺牲而又得不到代价，那她的痛苦，更不可想象了。

你说，叫女人不“爱”了吧，那是不可能的！上帝创造她，就是叫她来爱，来维持这个世界。她是上帝的化工工厂里，一架“爱”的机器。不必说人，就是任何生物，只要一带上个“女”字，她就这样“无我”的、无条件的爱着，鞠躬尽瘁，死而后已！

你看母鸡、母牛、甚至于母狮，在上帝所赋予的爱里，她们是一样的不自私，一样的忍耐，一样的温柔，也一样的奋不顾身的勇敢。

说到这里，还有一件很可爱很可笑的现象，我就遇到过好几次；平常三四岁的孩子，手里拿着糖果，无论怎样的诤哄，怎样的恐吓，是拿不过来的；但如它是个小女孩子，你可以一头滚到她怀里去，撒娇的说：“妈妈！给你孩子一点吃吧！”这萌芽的母性，就会在她小小的心坎

里作怪！她十分惊讶的注视着你，过了一会，她就会欣然的，爱娇的撅着小嘴，搂过你的头来，说：“馋孩子，妈妈给你一点吃吧！”

真要命！感谢天，我不是一个女人！

这本书里只写了十四个女人，其实我所认识的女性，往少里说，也有一千个以上：我的姑姨妯娌，姊妹甥侄，我的女同学，我的女朋友，我的女同事，我的女学生，我的邻居，我的旅伴；还有我的朋友们的姑姨妯娌，姊妹甥侄……这其中还有不少惊才绝艳，丰功伟烈，我真要写起来，一辈子也写不完。但是这些女人，一提起来，真是“大大的有名”！人人知晓，个个熟认，我一生宝贵女人的友情，我怕她们骂我——以后再说吧——

许多朋友，希望我写来写去，会以“我的新妇”结束。感谢他们的祝福，这对于我，真是“他生未卜此生休”的事情了！这四十年里，我普遍的尊敬着一般女人，喜欢过许多女人，也爱过两三个女人，却没有恋过任何女人。这“爱而不恋”的心理——这是几个朋友，对于我用情的批评——就是我的致命伤！

我觉得我不配作任何女人的丈夫；惟其我是最尊敬体贴她们，我不能再由自己予她们以痛苦。我已经苦了一个我最敬爱的女人——我的母亲，但那是“身不由己”，我决不忍使另一个女人再为我痛苦。男子在共营生活上，天生是更自私、更偷懒、更不负责的——自然一半也因为他们不知从何下手——我恐怕也不能例外。我不能积极的防止男子以婚姻方式来摧残女人，至少我能消极的禁止我自己也这样做！

施耐庵云：“人生三十而未娶，不应更娶；四十而未仕，不应更仕；五十不应在家，六十不应出游……”我以三十未娶、四十未仕之身，从今起只要经济条件允许，我倒要闲云野鹤似的，到处漫游。我的弟兄朋友，就为我“六十以后”的日子发愁，但我还觉得很有把握。我们大家庭里女权很盛；我的亲侄女，截至今日止，已有七个之多。堂的、表的，更是不计其数。只要这些小妇人，二十年后，仍是像今天这样的爱她们的“大伯伯”，则我在每家住上十天，一年三百六十天，也还容易度过。再不然，我去弄一个儿子、两个女儿，来接代传宗，分忧解愠，也是一件极可能的事——只愁我活不到六十岁！

以上把我“终身大事”，安排完毕，作者心安理得，读者也不必“替古人担忧”——如今再说我写这本小书的经过：廿九年冬，我初到重庆，《星期评论》向我索稿，我一时高兴，写了一篇《关于女人》来对付朋

友，后来写滑了手，便连续写了下去，到了《星期评论》停刊，就没有再写。今年春天，“天地出版社”托我的一个女学生来说，要刊行《关于女人》，我便把在《星期评论》上已经印行的九段，交给他们。春夏之交，病了一场，本书的上半本，排好已经三月，不能出版，“天地社”催稿的函件，雪片般的飞来，我只好以新愈之身，继续工作。山上客人不少，这三个星期之中，我在鸿儒谈笑、白丁往来之间，断断续续的又写了三万字，勉强结束。

这里，我还要感谢一个小女人，我的侄女，萱。若没有她替去了我这单身汉的许多“家务”，则后面的七段，我纵然“呕尽心血”，也是写不出来的！

一九四三年，八月三十午夜，四川大荒山。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早

在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

My Wishes

In blood the pages of this book were soaked red,

And in tears I dipped my pen to write.

But able to complete it before my demise,

I found it the highest joy of my life,

The best gift to the offspring I could bequeath.

Let it come into being,

Radiating all my blessings.

No hatred and revenge it spreads,

But a mirror it should look like,

Evil and virtue, ugliness and beauty all reflected

And despair and hope also to be sighted.

It is bringing my loyalty and sincerity

To our great country and people far and wide.

祝 词

这一本小书是用血换来的，
是和泪写成的。

我能够活着把它写出来，
是我毕生的最大幸福，
是我留给后代的最佳礼品。

愿它带着我的祝福
走向人间吧。

它带去的不是仇恨和报复，
而是一面镜子，
从中可以照见恶和善，丑和美，
照见绝望和希望。

它带去的是对我们伟大祖国和人民的
一片赤诚。

INTRODUCTION

When I first read *Random Recollections of the Cow Shed* thirteen years ago, I was stunned by its haunting depictions of brutality, torment, injustice and agony. That was in 1998, a few years after I finished my graduate program in the U.S. and started to teach English at Beida or Peking University. I immediately expressed my desire to translate it from Chinese into English. Dr. Ji Xianlin, retired and living in his Langrunyuan home at Peking University, called me one afternoon in my Yandongyuan home.^[1] He told me that seventy-two faculty members of Peking University were persecuted to death during the Cultural Revolution. "Chapter 8: On the Edge of 'Taking My Own Life Against the People' " of his book catches one of the heart-wrenching moments. But that death ratio still shocked me, given the rough figures of 1,000 faculty members and 11,000 students of the university at that time. I told him that my grandfather did not survive the disaster. He was formerly an undergraduate physics major at Peking University from 1916-1921, the period of the May 4th Movement, and went on for graduate study at the University of Leeds, U.K., on a competitive state-funded student program. Later he returned to teach as professor of physics and electrical engineering and department head at Hebei University. He committed suicide in early September, 1966, the following day after our home, where I grew up and lived with him, was raided and confiscated by the Red Guards. Dr. Ji expressed his compassion and regret. Later he granted my request with his authorization for my translation. Today my years of effort has brought down the curtain on the translation. It is regretful that Dr. Ji did not live to see the day. I wish my translation could be dedicated to the memory of Dr. Ji and my grandfather for their commitment to sciences and seeking truth.

In the reading of *Random Recollections of the Cow Shed*, I think a few points deserve notice in terms of the significance of its writing and publication, a unique arrangement of the materials, the author's

relentless lashing of his persecutors, a contrast between his humanistic concern with his fellow Cow Shed victims and an absence of account for his family, and the breezing literary style.

First, the significance of the book's writing and publication lies in its courageous and substantial recounting of the victimization of Chinese intellectuals at the institution of higher education during the Cultural Revolution. Dr. Ji started to write this memoir in 1992 and published it in 1998. Before that he had "waited twelve years" as he states in his "Preface," keeping hoping that many other Cow Shed inmates across the country like him, with some of the most horrifying experiences, would write and publish on their suffering. But his hope was shattered as no one had written anything in recounting his or her stories of that history. He decided to pick up his pen and write his own. The reason that no one had written anything even though almost two decades had passed since the end of the ten-year turmoil is that some of the persecutors, instead of being brought to justice, had come to power at that time, as the author states in his book. Many victims were refrained from airing their mind and writing. However, one writer, Ba Jin, a well-known, Shanghai-based freelance literary writer, published his *Random Thoughts* in 1978. In this collection of essays, Ba Jin recounts his suffering in the Cultural Revolution and reveals his dull-mindedness and cowardice in the face of savageness and injustice. In comparison, Dr. Ji's memoir has produced the first detailed narration of this kind of experience from a professor's perspective of the most prestigious and politically clamped university in modern China. His writing represents the historical moments and displays courage and a sense of duty.

Second, the arrangement of the materials of the book is unique for its free flow of thoughts and careful classification of the periods. Though the book is called "random recollections," the author blends recalls with reflections and gives an unrestrained release of rationale and emotion. The "Preface" and chapters 20-21 provide compelling accounts of the author's Cow Shed life and reexamine his reactions. The accounts of his Cultural Revolution experience are clearly divided

into three sections: his life before being detained in the Cow Shed (chapters 1-11), his life in the Cow Shed (chapters 12-17), and his life after being released from the Cow Shed (chapters 18-19). "The Autobiography of Ji Xianlin," offers a brief look at the author's life in his early and later years. The book can be read as a memoir with a focus on the author's personal experience in the Cultural Revolution against the backdrop of collisions between social changes and individual aspirations in twentieth-century China.

Third, the author's relentless lashing on his persecutors unveils the heart of darkness and sings an ode to the triumph of justice. His narration truly represents the willful trampling of laws, savage torment, blatantly lying, and unashamed ungratefulness, such as the raiding of his home, repeated torture sessions, inhumane conditions of the Cow Shed, fabricated big-character-poster accusations and ridiculous speeches at the session of denouncement, his favorite student turning into a ferocious tormentor, etc. The author laments at places that the legacy of Chinese history and culture only lends itself to a disguised brutality, as he depicts the concoctions and brush arts of big-character posters, and the laying out of the "Regulations for Reform Persons" and the "evening forewarning speech" in the Cow Shed. His frequent castigating of the "Old Dowager" can hardly be deemed as personal. All his accounts raise a question, "Why can young students and friendly colleagues turn overnight into fierce, treacherous, bloodthirsty factionalists and foes?" But the triumph of justice is something to be celebrated as he was restored to work and power in the later years of the upheaval. Though he frankly states he is not vengeful, the tone strikes a clear note that the human folly of ignorance and selfishness is lethal and an infliction of injustice is ephemeral.

Fourth, the reader may also be impressed by a contrast in the memoir between the author's compassion for others and an odd absence of narration about his own family. The author tells stories with understanding and sympathy about the leading figures of the university at the torture session, such as Lu Ping and Peng Peiyun,

Professor Wang of history and Party general secretary Cheng of the Department of Chinese who committed suicide, and the faculty and students perishing in the Cow Shed, such as the professor from the library, the professor of law, the female teacher from the Department of Eastern Languages, Party general secretary of the Department of Biology, the female teacher from the affiliated primary school, the "rightist" student, and the professor of physics. Indebtedness is not forgotten as he mentions his Cow Shed fellow Ma Shiyi who offered him a cart ride on his painful walk to the clinic for his swollen testes; the same gratitude is expressed to his "reactionary" fellows Zhang Xueshu and Wang Enyong who supported him back home after the university torture session on May 4, 1968 and to a few workers who humanitariously treated him, the author spares no space in expressing his appreciation.

However, the memoir feels short of narrating his own family. A scanty account is given to his only two family members, his wife and aunt, and no further information is found in his "Autobiography" either. The author got married during his college period at Tsinghua University from 1930 to 1934 when in his early twenties. His wife, Peng Dehua, was from his home village, four years his senior and illiterate. She bore him one girl, Ji Wanru, and one boy, Ji Cheng. But the author did not return home and see them very often at that time. The following ten years continued to see a split family when the author went to Germany for graduate study and was stranded there due to the Second World War before returning to Beijing in 1946. But his reunification with his wife did not come until 1962 when she moved to Beijing to join him. His son later came to study Russian in Beijing and worked in China's Academy of Sciences. It was said that the author was originally disappointed with his marriage. It might be due to a family marriage intervention, or the discrepancy in education, or a difference of national character and writing style. However, his reservation in writing and sharing information about his family, particularly his children, during the Cultural Revolution has left some food for thought with the reader, especially one from the West. In front of us is a personality with a glittering integrity and

career with an incomplete family life.

Finally, *Random Recollections of the Cow Shed* is written in a breezy, matter-of-fact manner. His command of the language with a solid grounding in both Western and Chinese classics is remarkable. His doctorate is in Hindu study with focuses on Sanskrit, Balinese, the language of Tukhara, Russian, Slavic and Arabic. He is a prolific essayist and translator, particularly with his work *A Trace of Cultural Exchange: A Chinese History of Cane Sugar* and translation of the Hindu epic *Ramayana*. The writing of his memoir certainly reflects this established and assured style, unrestrained, informal, and studded with classical references, historical anecdotes, poetic lines, quotations, bitter jokes, mocks, and self-mockeries. The writing is colloquially rippling and graphically substantial. A Western reader may find awkward repetition and modesty at places in the book such as his reassuring of refusing to revenge and repeated stating of his ordinary social status and academic lack of luster. Modesty might be an ethnic trait of the East. But the political environment plays a major role that self-depreciation was encouraged or even required in the society when the Cultural Revolution was over. In the 1990s the country was still grappling with the ideological residues of the past political moments, when the author wrote the book. The author's cautious steps in writing could be understood.

During the Cultural Revolution the Cow Shed was a household word in China. Those, locked up in Cow Sheds, guarded quarters for torture and forced physical labor, joined the dubbed herd of "cattle, ghost, snake and demon," most of them government officials, reputed intellectuals and celebrities. Dr. Ji wrote a memoir in his late years of his suffering during the national political and social tsunami. His courage, frankness and dedication to seeking truth helped produce this book, as "a mirror" in his words, so that a lesson should be learned and the "tuition" will not be paid in vain. Today rising generations of youth are privileged with chic products of the economic reform, from Apple computers to HDTV, from the Internet to smart phones, Facebook and Twitter. But Dr. Ji's book will remain readable if we

believe that in the equation of life human nature is a constant and time and place are variables.

In translating the book, I tried to accommodate the needs of both Chinese and Western readers. I did my best to put in clear, contemporary and edited American English. The notes I supply may appear tedious at places to a Chinese reader but would be helpful to a Western one.

I want to thank Dr. Deanna Robinson, emeritus professor of journalism from the University of Oregon for her proofreading of chapters 9-20 of the draft and valuable suggestions for revision. My thanks also go to Foreign Language Teaching and Research Press editors Duan Huixiang and Yi Lu for their editing and checking of the complete manuscript to eliminate many errors. Without these helps and contributions the publication of this work would not have been possible.

All the errors and lapses will remain to be mine.

Perry W. Ma

[1] Beida, the short term for Peking University in Chinese.

PREFACE

Why did Random Recollections of the Cow Shed not appear until 1998, though it was written six years earlier? It looks a little unusual with respect to a normal publication process. The reader may be curious about the reason that caused the delay.

This curiosity is truly understandable. Admittedly there is indeed a reason. The reason is not foggy. It is nothing but a selfish concern that can be thought of as "gauging the heart of a gentleman with a small man's mean measure." ^[1] I was already struck down on the ground by the "young revolutionaries," some of them not young at all, with one thousand feet stamped on my body and never allowed to be a man of his own fate.^[2] But the wheel has turned in full circle and that part of nature is irresistible. After that catastrophe was over I have not only survived and stood up to helm my boat of life again but I have been flying high in my career and government tenure, snatching one position after another and sending shivers down the spines of those "young revolutionaries." If I had been vengeful, I would have been able to work out one thousand ways of punishment, as easily as blowing off dust, just to settle the score.

But I've not done anything of this kind. I've not retaliated for the wrong I had received, given someone tight shoes to wear and wielding a club to hit someone. Am I a respectful, benevolent and forgiving gentleman? No, I am not in the least. I love and hate. I can be envious and vengeful. I am not more forgiving than anyone else. But whenever the idea of revenge arises in my mind, I believe that, during that period, everyone, no matter what ideological faction or affiliation he or she had, was metamorphosed into a non-human. Today one person may call another "swine." I think that is an insult to cattle. A wild beast eats humans because it is hungry. But it does not lie, nor is it atrocious. Never does it first elaborate on the *raison d'être* of carnivorousness, profusely citing sources and documenting, before

opening its mouth and devouring a human. But humans are different. Here I am using a term "non-human" to refer to a particular group of people instead of cattle. At one time even when I was flogged to death, the skin torn and the flesh gaping with the whole body dripping with blood, my faith in the correctness of the "Cultural Revolution" scarcely waned. How could I have pointed my finger to someone for his or her fault? The tormentor and the victim are both victimized. They differ only in the position they each hold. Because of these thoughts I have not revenged myself.

But this explanation only shows one facade of my inner world. I also have the heart of selfishness.

Those people, who went through the "Cultural Revolution," know very well that it was a time when factional clashes ran rampant. Each of the institutions, schools, government offices, plants, enterprises, and even some military units, split into two combating factions, each claiming itself as "the most leftist" and "being extremely conceited." From today's point of view they all committed beating, smashing, looting and even homicide and arson. Two birds of one feather, they are no better than one another. Today if a debate had been ignited on who was right and who was wrong it would have looked senseless. But at that time there was something called "factional tendency," which was not tangible and visible. It was at once baseless and illogical but was treacherous and malicious with no rationale at all. If you happened to get hooked on it you would behave as if you were bewitched by sorcery and consequently dismantled your family, an otherwise lovely, closely knitted family miserably split into two factions. This clash might end up in a divorce, or a disaccord between a father and his son, or a feud between brothers, as endless brawls dragged on each day. I have read a lot in the last eighty years, but never heard of this kind of mindset. It truly opens up a new area of research for sociological and psychological scholars.

Of course, I was no exception, nor was I less fervent on the factional tendency. But to my mind I obtained my factional tendency at the risk of losing my life, something that was not an easy haul.

When the Revolution was first rolled out, I was a department head at Beida and did not qualify for joining "the revolutionary masses" in making revolution. "Making revolution is nothing wrong, and making havoc is justified," the chant resounded across the country. But it had nothing to do with me. In the beginning I was merely one of the targets in "making the revolution" and "making havoc." In the past, before the founding of new China, I hated politics the most and had no connection with the Kuomintang (KMT) on any level, thus steering clear of political charges.^[3] Now it was only natural and reasonable that I was labeled as a "capitalist roader" and an "influential counter-revolutionary scholar."^[4] After the two gusts lashed over, I retrieved my original shape, a free man again who could submerge among revolutionary masses and pass myself for one of them.

Frankly speaking, if I had lain low I undoubtedly could have been a free and unfettered man, enjoying a couple of leisurely and carefree years. Would that be a blessing or not? Heaven imparted stubbornness to me and made me air my mind from a sense of justice. In fact, if some part of my personality is worth touting, it is my stubbornness. No matter how many weaknesses I have, I would feel proud with this part of my personality and believe I have not lived a life in vain. During my periods of repose I watched with a cold eye but found something outrageous: that powerful "Old Dowager" of Beida ran amok, took all administrative and financial powers into her hands, relentlessly repressed the weak factions and even ordered power cutoffs and connived with her followers in killing the high school students coming on campus.^[5] How could a decent person be able to tolerate her tyranny? By that time I did not quite understand what this political line or that political line meant. But as my stubbornness flared up, I jumped to my feet and joined the revolutionary faction opposing the "Old Dowager." The "Old Dowager" was noted for her wickedness and cruelty. For this decision I would have paid with my life in my late years. For details to be listed in the rest of the book, I will stop here.

Without being affiliated in factionalism, my life ran uneventful.

However, the moment I signed up, the factional tendency, like a huge venomous snake, tightly wound my body, ridding me of abilities to act and speak in my senses. After the ten years of turmoil was over, the sky was clear and the sun came through. But the factional tendency has left the imprint of varying degrees on the minds of the people and periodically surfaces whenever caution is not exercised. More than half of my colleagues were on the opposite side of me during the Revolution, publically denouncing me, slandering me, interrogating me, and kicking and beating me. Many of them now appear regretful. I think they are all good comrades, just like myself who temporarily became crazy with the heart seized by impulses of foolishness and acted irrationally. Obviously no one is immune from making mistakes in the world, the universally acknowledged truth. If some of these people, originally good-willed, learned I had hidden a book, called Random Recollections of the Cow Shed, in the desk drawer of my room, they would certainly think I was revengeful, keeping these notes and setting up a black list for retaliation when chances arose in the future. Despite the absence of those names in my book which I deliberately kept from being revealed, those parties concerned should immediately understand their respective identities in reading the stories. If they were disturbed with that sort of apprehension how could I be able to work with them on a daily basis? Therefore I wrote this book but did not share it with my colleagues to avoid the embarrassment.

Then you may ask, "Why didn't you simply give up the idea of writing such a book?" It is a good question hammering home the point that is widely concerned.

Originally, I did not intend to write the book. Otherwise, what is the point of letting so many years intervene between the close of the ten-year chaos in 1976 and the publication of my book sixteen years later in 1992? These sixteen years is my period of reflection, observation, confusion and waiting. I repent that I was such a donkey in politics.^[6] The so-called proletarian Cultural Revolution, with all its barbarism and upheaval, defamed our great Chinese nation and

brought the economy to the verge of collapse. It was unprecedented in history and will not happen in the future, which is my hope. It is a tragedy about which no comprehensive, genuine accounts have been given so far. Quite a few people were able to understand its nature long ago. But unfortunately I dallied in its mists until the fall of the "Gang." What a shame on me!

Once clear-headed, I started to feel something wrong with the way that someone in charge handled the assessment of this disaster. One saying is that it is good to overlook things rather than nail them down. But I believe we have overreached in overlooking things. As mentioned before, most of the participants of the Cultural Revolution were misled. But, given that they were misled, a lesson should be learned from this occurrence, this rare occurrence in our history of thousands of years, for the benefit of improving our people's ability to perceive things and avoid relapsing into the same kind of stupidity in the future. Frankly, such a learning opportunity will hardly be likely to arise in the future. Moreover, among those beating, smashing and looting people are doubtlessly thugs, worse than wild beasts but craftier than ordinary people. In the Cultural Revolution, a term that got widely circulated was "chameleon." Those people are exactly chameleons. As soon as they see a change in the way the wind blows they immediately adjust their color for a new identity; some pass as decent gentlemen; some quickly win the hand of the daughter of a certain military commander or a high-ranking government official, taking refuge in the political umbrella; some move heaven and earth with a deceitful tongue, concealing their identity and lying low until opportunities arise in the future so they can regain power and lord it over others again. Ambitious and full of viciousness, they are versed at mobster codes and excel at bootlicking. In reality they are cancer cells of our society, which will sooner or later run uncontrollable. We spared them then but left behind the roots of future troubles. Today our country and society generally look secure and stable, full of promise. But I have been always concerned with unethical issues in daily life, numerous government corruptions, and misconducts by quite a few people. If we take a closer look, the origins of these

occurrences can be traced to the ten-year turmoil and are tied with the role that these previously mentioned people play.

What I have said so far is my reflections and observations that have constantly perplexed me. But what am I expecting now?

I am expecting someone will write and recount his or her own experiences of suffering. In our country, many marshals and veteran generals dedicated more than half their life to the military career, fighting with an utter tenacity and fidelity; their awesome deeds put all people in their debt. Some government leaders, too, are heroes, making revolution throughout their whole life. The majority of well-known intellectuals, writers, actors and actresses, are hard-working and loyal to the Party. All these good people were dumped on with sludge, slandered with false charges and willful exaggerations, for no reason at all except for their destruction so as to content their victimizers. What heinous motive their victimizers have! An old Chinese saying goes, "With all birds killed, the bow has to be put aside; with all hares captured, the hound has to be cooked for dinner." But these deeds are committed by the emperors and lords of feudal societies, whereas ours is a socialist country with all its pretensions. Thus feudal rulers pale into inadequacy. In addition, no historical records have been made on such a broad range of torturing. Could the victims have no grievances? Why don't they pour out their heart? I have awaited day and night, year in and year out. But I am quite disappointed now, for no one is willing to set pen to paper or even give an oral account and let someone else write. I am baffled and worried. If nothing is recorded of this horrible disaster, our offspring will not learn a due lesson and some rascals will seize an opportunity and commit atrocities of the same kind in the future. What a nightmare! When talking to youngsters of today about the ten years of turmoil, I usually find them astonished, staring in suspicion, with an obvious disbelief that something like this could have ever happened. They must have thought I have lied and told them the story of the three Penglai mountains, "the imaginary mountains."^[7] It is true that the "Traumatic Literature" became popular for a short period of time

right after the Revolution.^[8] But, to my understanding, that literary description of the havoc is just the depiction of a bruise that will heal soon with the application of the liquid healing medicine mercurochrome. But the major wound is inflicted on the heart of many people and has not been depicted. I hope the victims will come forward and give accounts in the future.

Furthermore, I have another expectation which may sound quite impractical. The expectation that I mentioned earlier refers to those who suffered in the calamity. But those "rebels," the tormentors or even killers but actually a bunch of beaters, smashers and looters, why should they also stand out and recall and recount their torturing mentality and process in an article or a book? They should be in their forties and fifties now, some of them holding key government positions. Even if the victims did not come and square accounts with them or if these people still retained a sense of integrity and shame, would they be able to withdraw at night, after a day's feast and revelry, and sleep soundly? If these people, quite a number of them by my calculation, also put something down on paper so that the public can read in comparison with the writings by those victims, our people, our coming generations in particular, would learn a great deal. I do not ask them to plead guilty and repent. This is not my main concern. I am simply expecting them to give true accounts. With their writing they would render an awesome service to our nation; their writing would undoubtedly be highly acclaimed, and they will never be condemned. I am positive in this regard.

Therefore I waited for people to write the accounts from both sides, terribly longing as stars rose and fell and the moon sailed across the sky. Twelve years had passed. My hopes had been dashed though the sun continued to rise in the east.

However, time raced by to 1992. Many of the victims in the Revolution were aging rapidly like tree leaves swept away in the fall. When suffering at that time most of them were not young, but life and death is an irresistible law of nature. My days were numbered too. An old saying goes, "To wait for the water of the Yellow River to become

clear is impractical." In terms of the first of my two expectations, I am not in a position to force any victimizer to write a memoir. In terms of the second on the victim, I, one of many, can surely contribute my share. Why should I be so dumb and slothful, awaiting others to complete something, like "the fool waiting at a tree for a hare to commit suicide by dashing its head into the trunk," instead of taking the initiative myself? It is better to place hopes on oneself rather than on others. Let me assume the mission. This is my motive for writing *Random Recollections of the Cow Shed*. I have never lied in writing. Now I am presenting the accounts of my experiences in a true fashion, hoping that the reader will find something useful. Nevertheless, though I have fulfilled my own expectation, I will not give up my two other expectations on others. In such a state of mind, I am concluding this preface, hoping my remaining expectations will be materialized too.

March 9, 1998

[1] A popular saying, derivative from *The Analects* of Confucius. Confucius (551-479 BC) classifies two kinds of people, noble men (or gentlemen) and little men.

[2] "Young revolutionaries," a popular phrase used in the Cultural Revolution for the "Red Guards"; "with one thousand feet stamped on my body and never allowed to be a man of his own fate," a popular slogan used in the Cultural Revolution.

[3] The Kuomintang (KMT), also Romanized as Guomindang.

[4] The "capitalist roader" and the "counter-revolutionary scholar" were two major labels made during the Cultural Revolution.

[5] The "Old Dowager," refers to Nie Yuanzi, a woman in her early forties when the Cultural Revolution started in 1966. Nie used to be Party general secretary of the Department of Philosophy at Peking University. In China, it is a despising term for any cruel and tyrannical old lady with the reference to Dowager Cixi toward the end of the Qing Dynasty (1616-1911). The author uses this term in the book for contempt and avoidance of political sensitivity.

[6] A donkey means a stupid person in Chinese culture.

[7] The three Penglai mountains, three fairytale mountains in ancient China, which are located in the East Sea off Shangdong, China.

[8] Traumatic Literature, a literary tendency that became popular in the aftermath of the Cultural Revolution in the late 1970s and early 1980s. It is generally in the form of reportage, short story and poetry focusing on the description of the suffering of

intellectuals, particularly the young middle and high school students, who left cities for the country and settled down there for farming, during the Cultural Revolution, in answering Mao Zedong's call for the education of the young generation by the poor and lower-middle farmers.

自序

《牛棚杂忆》写于1992年，为什么时隔六年，到了现在1998年才拿出来出版。这有点违反了写书的常规。读者会怀疑，其中必有个说法。

读者的怀疑是对的，其中确有一个说法，而这个说法并不神秘，它仅仅出于个人的“以小人之心度君子之腹”的一点私心而已。我本来已经被“革命”小将——其实并不一定都小——在身上踏上了一千只脚，永世不得翻身了。可否极泰来，人间正道，浩劫一过，我不但翻身起来，而且飞黄腾达，“官”运亨通，颇让一些痛打过我、折磨过我的小将们胆战心惊。如果我真想报复的话，我会有一千种手段，得心应手，不费吹灰之力，就能够进行报复的。

可是我并没有这样做，我对任何人都没有打击、报复，穿小鞋，耍大棒。难道我是一个了不起的、宽容大度的正人君子吗？否，否，决不是的。我有爱，有恨，会妒忌，想报复，我的宽容心肠不比任何人高。可是，一动报复之念，我立即想到，在当时那种情况下，那种气氛中，每个人，不管他是哪一个山头，哪一个派别，都像喝了迷魂汤一样，异化为非人。现在人们有时候骂人为“畜生”，我觉得这是对畜生的污蔑。畜生吃人，因为它饿。它不会说谎，不会耍刁，决不会先讲上一大篇必须吃人的道理，旁征博引，洋洋洒洒，然后才张嘴吃人。而人则不然。我这里所谓“非人”，决不是指畜生，只称他为“非人”而已。我自己在被打得“一佛出世，二佛升天”的时候还虔信“文化大革命”的正确性，我焉敢苛求于别人呢？打人者和被打者，同是被害者，只是所处的地位不同而已。就由于这些想法，我才没有进行报复。

但是，这只是冠冕堂皇的一面，这还不是一切，还有我私心的一面。

了解“十年浩劫”的人们都知道，当年打派仗的时候，所有的学校、机关、工厂、企业，甚至某一些部队，都分成了对立的两派，每一派都是“唯我独左”、“唯我独尊”。现在看起来两派都搞打、砸、抢，甚至杀人、放火，都是一丘之貉，谁也不比谁强。现在再来讨论或者辩论谁是谁非，实在毫无意义。可是在当时，有一种叫做“派性”的东西，摸不着，看不见，既无根据，又无理由，却是阴狠、毒辣，一点理性也没

有。谁要是中了它，就像是中了邪一样，一个原来是亲爱和睦好端端的家庭，如果不幸而分属两派，则夫妇离婚者有之，父子反目者有之，至少也是“兄弟阋于墙”，天天在家里吵架。我读书七八十年，在古今中外的书中还从未发现过这种心理状况，实在很值得社会学家和心理学家认真探究。

我自己也并非例外。我的派性也并非不严重。但是，我自己认为，我的派性来之不易，是拼着性命换来的。运动一开始，作为一系之主，我是没有资格同“革命群众”一起参加闹革命的。“革命无罪，造反有理”，这呼声响彻神州大地，与我却无任何正面的关系，最初我是处在“革命”和“造反”的对象的地位上的。但是，解放前，我最厌恶政治，同国民党没有任何沾连。大罪名加不到我头上来。被打成“走资派”和“资产阶级反动学术权威”，是应有之义，不可避免的。这两阵狂风一过，我又恢复了原形，成了自由民，可以混迹于革命群众之中了。

如果我安分守己、老老实实的话，我本可以成为一个逍遥自在的逍遥派，痛痛快快地混上几年的。然而，幸乎？不幸乎？天老爷赋予了我一个犟劲，我敢于仗义执言。如果我身上还有点什么值得称扬的东西的话，那就是这一点犟劲。不管我身上有多少毛病，有这点犟劲，就颇值得自慰了，我这一生也就算是没有白生了。我在逍遥中，冷眼旁观，越看越觉得北大那一位炙手可热的“老佛爷”倒行逆施，执掌全校财政大权，对力量微弱的对立派疯狂镇压，甚至断水断电，纵容手下喽啰用长矛刺杀校外来的中学生。是可忍，孰不可忍？我并不真懂什么这路线、那路线，然而牛劲一发，拍案而起，毅然决然参加了“老佛爷”对立面的那一派“革命组织”。“老佛爷”有名的心狠手毒。我几乎把自己一条老命赔上。详情书中都有叙述，我在这里就不再啰唆了。

不加入一派则已，一旦加入，则派性就如大毒蛇，把我缠得紧紧的，说话行事都失去了理性。“十年浩劫”一过，天日重明；但是，人们心中的派性仍然留下了或浓或淡的痕迹，稍不留意，就会显露出来。同我一起工作的同事一多半是“十年浩劫”中的对立面，批斗过我，诬蔑过我，审讯过我，踢打过我。他们中的许多人好像有点愧悔之意。我认为，这些人都是好同志，同我一样，一时糊涂油蒙了心，干出了一些不太合乎理性的勾当。世界上没有不犯错误的人，这是大家都承认的一个真理。如果让这些本来是好人的知道了，我抽屉里面藏着一部《牛棚杂忆》，他们一定会认为我是秋后算账派，私立黑账，准备日后打击报复。我的书中虽然没有写出名字——我是有意这样做的——但是，当事

人一看就知道是谁，对号入座，易如反掌。怀着这样惴惴不安的心理，我们怎么能同桌共事呢？为了避免这种尴尬局面，所以我才虽把书写出却秘而不宣。

那么，你为什么干脆不写这样一部书呢？这话问得对，问得正中要害。

实际上，我最初确实没有写这样一部书的打算。否则，“十年浩劫”正式结束于1976年，我的书十六年以后到了1992年才写，中间隔了这样许多年，所为何来？这十六年是我反思、观察、困惑、期待的期间。我痛恨自己在政治上形同一条蠢驴，对所谓“无产阶级文化大革命”这一场残暴、混乱、使我们伟大的中华民族蒙羞忍耻、把我们国家的经济推向绝境、空前、绝后——这是我的希望——至今还没人能给一个全面合理的解释的悲剧，有不少人早就认识了它的实质，我却是在“四人帮”垮台以后脑筋才开了窍。我实在感到羞耻。

我的脑筋一旦开了窍，我就感到当事人处理这一场灾难的方式有问题。粗一点比细一点好，此话未必毫无道理。但是，我认为，我们粗过了头。我在上面已经说到，绝大多数的人都是受蒙蔽的。就算是受蒙蔽吧，也应该在这个千载难遇的机会中受到足够的教训，提高自己的水平，免得以后再度蹈覆辙。这样的机会恐怕以后再难碰到了。何况在那些打砸抢分子中，确有一些禽兽不如的坏人。这些坏人比好人有本领，“文革”中有一个常用的词儿：变色龙，这一批坏人就正是变色龙。他们一看风头不对，立即改变颜色。有的伪装成正人君子，有的变为某将军、某领导的东床快婿，在这一张大伞下躲避了起来。有的鼓其如簧之舌，施展出纵横捭阖的伎俩，暂时韬晦，窥探时机，有朝一日风雷动，他们又成了人上人。此等人野心大，点子多，深通厚黑之学，擅长拍马之术。他们实际上是我们社会主义社会潜在的癌细胞，迟早必将扩张的。我们当时放过了这些人，实在是埋藏了后患。我甚至怀疑，今天我们的国家和社会，总起来看，是安定团结的，大有希望的。但是社会上道德水平有问题，许多地方的政府中风气不正，有不少人素质不高，若仔细追踪其根源，恐怕同“十年浩劫”的余毒有关，同上面提到的这些人有关。

上面是我反思和观察的结果，是我困惑不解的原因。可我又期待什么呢？

我期待着有人会把自己亲身受的灾难写出来。一些元帅、许多老将

军，出生入死，戎马半生，可以说是为人民立了功。一些国家领导人，也是一生革命，是人民的功臣。绝大部分的高级知识分子、著名作家和演员，大都是勤奋工作，赤诚护党。所有这一些好人，都被莫名其妙地泼了一身污水，罗织罪名，无限上纲，必欲置之死地而后快。真不知是何居心。中国古来有“飞鸟尽，良弓藏；狡兔死，走狗烹”的说法。但干这种事情的是封建帝王，我们却是堂堂正正的社会主义国家。所作所为之残暴无情，连封建帝王也会为之自惭形秽的。而且涉及面之广，前无古人。受害者心里难道会没有愤懑吗？为什么不抒一抒呢？我日日盼，月月盼，年年盼；然而到头来却是失望，没有人肯动笔写一写，或者口述让别人写。我心里十分不解，万分担忧。这场空前的灾难，若不留下点记述，则我们的子孙将不会从中吸取应有的教训，将来气候一旦适合，还会有人发疯，干出同样残暴的蠢事。这是多么可怕的事情啊！今天的青年人，你若同他们谈“十年浩劫”的灾难，他们往往吃惊地又疑惑地瞪大了眼睛，样子是不相信，天底下竟能有这样匪夷所思的事情。他们大概认为我在说谎，我在谈海上蓬莱三山，“山在虚无缥缈间”。虽然有一段时间流行过一阵所谓“伤痕”文学，然而，根据我的看法，那不过是碰伤了一块皮肤，只要用红药水一擦，就万事大吉了。真正的伤痕还深深埋在许多人的心中，没有表露出来。我期待着当事人有朝一日会表露出来。

此外，我还有一个十分不切实际的期待。上面的期待是对在浩劫中遭受痛苦折磨的人们而说的。折磨人甚至把人折磨至死的当时的“造反派”实际上是打砸抢分子的人，为什么不能够把自己折磨人的心理状态和折磨过程也站出来表露一下，写成一篇文章或一本书呢？这一类人现在已经四五十岁了，有的官据要津。即使别人不找他们算账，他们自己如果还有点良心、有点理智的话，在灯红酒绿之余，清夜扪心自问，你能够睡得安稳吗？如果这一类人——据估算，人数是不老少的——也写点什么东西的话，拿来与被折磨者和被迫害者写的东西对照一读，对我们人民的教育意义，特别是我们后世子孙的教育意义，会是极大极大的。我并不要求他们检讨和忏悔，这些都不是本质的东西，我只期待他们秉笔直书。这样做，他们可以说是为我们民族立了大功，只会得到褒扬，不会受到谴责，这一点我是敢肯定的。

就这样，我怀着对两方面的期待，盼星星，盼月亮，一盼盼了十二年。东方太阳出来了，然而我的期待却落了空。

可是，时间已经到了1992年。许多当年被迫害的人已经如深秋的树

叶，渐趋凋零；因为这一批人年纪老的多，宇宙间生生死死的规律是无法抗御的。而我自己也已垂垂老矣。古人说：“俟河之清，人寿几何。”在我的两个期待中，其中一个我无能为力，而对另一个，也就是对被迫害者的那一个，我却是大有可为的。我自己就是一个被害者嘛。我为什么竟傻到守株待兔、专期待别人行动而自己却不肯动手呢？期待人不如期待自己，还是让我自己来吧。这就是《牛棚杂忆》的产生经过。我写文章从来不说谎话，我现在把事情的原委和盘托出，希望对读者会有点帮助。但是，我虽然自己已经实现了一个期待，对别人的那两个期待，我还并没有放弃。在期待的心情下，我写了这一篇序，期望我的期待能够实现。

APPENDIX THE AUTOBIOGRAPHY OF JI XIANLIN

附录 自传

[返回总目录](#)

1 MY WRITING MOTIVE

The Cow Shed is a familiar term and everyone knows its meaning. But no one is sure of whether its usage is official or not. Today we embrace "a rule of law." The first thing to do, in talking about "a rule of law," is to straighten out incorrect uses of terms. But how can the term "the Cow Shed" be straightened out? In reality its coinage contradicts the laws. Now one wants to correct it on the basis of law. Wouldn't it look like desiring for going south but driving the car north instead?^[1]

At Beida, the Cow Shed was not well-known. In our university, instead, our "authorities" called it the "Labor Reform Yard," or the "Black Gang Yard," to be more acceptable. The meaning is the same. The latter is more graphic and substantial so its usage hit it off immediately on our campus. To take a closer look, one should be clear that it means the "black gang," not the "red gang."^[2] The people from the black gang are night-crawlers, outlawed for their opposition to the "Revolutionary Headquarters." Their quarters of custody are called the "Black Gang Yard."

"Kids are yet to learn about life, since they don't know how wonderful it is to gain a first-hand experience as opposed to eating the preserved sweet fruit."^[3] I was fortunate to move into the Yard. From the linguistic point of view this word "move" should be in the passive voice, "to be moved." And I lived there for about nine months. To say living is comfortable there is not true. But I am grateful for the rare opportunity given to me for experiencing that ten-year turmoil, unprecedented in the past and never to be matched in the future, I hope, since "one can hardly live up to one hundred years."^[4] I should thank heaven for its appreciation and blessing, feeling so indebted that my tears keep rolling down my cheeks at the thought. Otherwise searching for such a chance would be as formidable as pushing a camel through the eye of a needle. Not only did I run into this

opportunity I also lived there for a while. Just think. Would it be possible today to have someone build a Yard for me, then put me there in a round-the-clock watch, and provide me with absolute security?

I can be counted as one dabbled in Buddhist study. I study both the history of Buddhism and its theology. But the most intriguing part of my study does not lie in the Buddhist doctrines. Rather I am quite fascinated by those writings of the inferior and coarse taste, the superficial stuff, and the depictions of hell in particular. There are parallel portrayals in the Buddhist scriptures, but those oral sagas going around in the public are more ravishing. Early descriptions of tortures truly mirrored the experiences that ordinary Chinese and Indians sustained. They were later crystallized and took shape in "keeping essentials by removing dregs and preserving truth by eliminating falsehood." They are masterpieces of imagination. Who could read those horror stories of hell without the heart frozen and hair standing on end?

Years ago I longed to shift my academic interest to the comparative study of hell. But many years of research experience has taught me that Western depiction of hell is very simple, shallow, unpalatable and monotonous. If this sounds exaggerating to you, go and read Dante Alighieri's *The Divine Comedy*, which contains some accounts of the Hades. Dante's poetry is unquestionably well composed. But its lyric embodiment of the hell is disappointing, its imagination utterly shriveling up, structures simple and details superficial. It sounds naive in reading. In contrast the rendering of the hell in Indian literature is compelling and awesome. Later the Chinese colored the writings and added touches to make the abode of the damned appear like nothing but a glittering tower brilliantly decorated with pearls and jewels. Would anyone who has read the Chinese classics, like *Stories of Judgment*, not be amazed with the impressive accounts of stretches of fire and ridges of blade, giant iron jars filled with oil and gigantic saws, Ox Head and Horse Face, a full cast and a maximum application of stage property?^[5] Evidently, the

East has overtaken the West in civilization and wisdom.

I admired commoners for their power of imagination and relished reading their depictions of the hell. I thought they had applied their intellectual resources to the full and sketched a perfect picture. However, after having lived in the Cow Shed, I realized that the remarkable construction and management with terror of the Cow Shed by our "young revolutionaries" in a broad daylight in Chinese society by far outstrip the creation of the Buddhist hell and make the Indian depiction of horror pale into triviality. The Western literary productions are even less impressive, purely a competition of a spit against a tidal wave.

I am not quite sure whether some of the young men might have been my students of Buddhism. Also I think probably they not only majored in the Buddhist history and theories but also minored in the study of the hell. Besides they put theories into application, constructed the Black Gang Yards at Beida, improving them from the far to the near and from the inside to the outside and using them to the full, which were immediately crystallized into a model for all universities across the country to emulate. Their achievements proved the saying that "Blue comes from the indigo dye but turns out to be bluer than its source." My forty years of teaching at Beida had not been done in vain. Though I was invited to be incarcerated, I felt proud and gratified.

What is more is that this herd of young revolutionaries took the initiative in innovation. The Cow Shed had nothing of the kind like ridges of blade, iron jars of oil, Ox Head and Horse Face. But if one were able to create an atmosphere many times more horrifying than that of the Buddhist inferno, given the limited resources to work with, who could refrain from showering him with buckets of praise? In the ancient world of the diabolic, Ox Head and Horse Face carry out the warranty issued by the King of Hell, spearing the body of the felon with the trident, sticking it into the oil-boiling iron jar and then tossing it onto the blade covered ridge. It is a corporal punishment at most, with no inflictions such as "pricking on the soul," "battling

selfishness and denouncing Revisionism," and "fighting living thoughts."^[6] At Beida our young revolutionaries, under the guidance of the "Old Dowager," created the activity of reciting Mao's quotations.^[7] This innovation had never been heard of in the past, Ox Head and Horse Face ordering outlaws to recite, from the Buddhist Scriptures, some things like "Satya, satya, sate hitam satyam" and slapping them across the face for any slip of tongue.^[8] The after-dinner routine admonitory talk is another missed item on the agenda of the ancient hell. When night fell, the inmates stood in line, awaiting reprimands, as ferocious howls and clear boxes on the ear resounded through the canopy of nightly skies. Outside the yard, a few saunterers rambled around on a little mound in dim light. With a sideways glance I spotted a few "free people," who were enjoying this rare sight of living, just as foreign visitors are awed at the spectacle of the exchange of guards, performed by the British soldiers, on the square in front of the Buckingham Palace. My heart sank at this moment.

To cut a long story short, the Cow Shed witnessed many inventions. Life here was at once colorful and gruesomely biting to the bone. Inside the Yard our minds tensed up to a maximum degree with each passing day, night, minute and second, as our five senses were harnessed to the highest alert for bumps, hollows and brambles, over which one trip was sure to bring misfortunes. This life was unprecedented to me and inconceivable to an outsider. At that time no accurate statistics were gathered on the number of people retained in the Cow Shed across the country, but they were surely in their hundreds upon thousands. When compared with the whole population of the country, the number is starkly tiny. In other words, getting into the Cow Shed was not easy. It could be a rare opportunity in a lifetime. Didn't we often hear the call for literary writers to experience in life before creating a given fictional character? However, is there any writer who is willing to come and experience the life in the Cow Shed? It would be difficult to become one of the black gangs; its qualification could be rather demanding.

As one of the lucky few rounded into the Cow Shed, I acquired

some experiences hard earned by narrowly escaped dying an unnatural death in my later years. I think I should write a book recounting these experiences. Though not a professional writer, I once practiced writing. If I want to recount those experiences, the writing is not quite a challenge to me. But it is the memories of that part of my life that hold me back from writing. A mere recalling would send a chill of apprehension down my spine to this day. It is okay not to recollect the past. I am harboring a slim wish that some writer who was incarcerated in the Cow Shed would pick up his pen, tap his talents and put his excruciating sufferings on paper, completely and graphically. His depictions would uplift the mist that has been hanging over the mind of readers of the country and the world about that part of history. It would be a worthy contribution to the people.

I have longed for the stars and moon to slide west across the sky and the sun to rise in the east. I have been waiting until today. I have read some writers' memoirs and books. But I'm not satisfied, since what I want to read has not appeared. There are surely thousands of people who knew the grinding teeth of the Cow Shed and are established writers. How come they have all remained silent? If things continued to be like this, these people would soon be buying the farm one after another under the guidance of laws of nature, so those costly experiences would be gone for ever. To humankind, this would be a terrible loss. To those who were able to write but had chosen not to do so, that would be a huge bungle to commit. What worries me most is that it has been less than two decades since the close of the ten-year turmoil, but nearly nothing of it has remained in the mind of the people. When talking to youngsters of today, or even some of the middle-aged, about that calamity, I often met with popped eyes and grimaces of suspicion. Their facial expressions assure me of their head filled with questions; they are suspicious that I am telling stories from *The Arabian Nights*, exaggerating occurrences; they are suspicious that I have some cloaked motive; though they do not want to embarrass me by rebuking me face to face, the look darting from their eyes evidently raises their inquiry, "How could this absurd thing have ever taken place?" I feel desperately downhearted, isolated, and panicky.

I feel downhearted for the stories of the life-and-death experience that I went through set off no ripples of understanding and empathy. Realistically I don't expect a thorough comprehension and sympathy. In fact I only recounted a modicum of my experience, some scraps of reality. I have even withheld from revealing gross details to my family members and close friends. They remained repressed at the bottom of my heart. Naively I thought the stories I had shared with the public would make a splash for understanding. In the end I got a blasted result. Therefore I am rather downhearted.

I feel isolated because, as a gray, old man, I feel like I am wobbling along on a vast land, with neither the ancients nor coming generations in sight. The aged are like tree leaves in the depth of fall, drifting down on the ground, while the young are, to me, like the recently Japanese dubbed term, "new humankind," whose sentiments are doggedly abstruse. Should I hand in my dinner pail this way, carrying all these secrets along with me? So I feel isolated.

I feel panicky because I am afraid that this once-in-a-thousand-year experience might be down the toilet without producing "social returns," an utter waste at the cost of the suffering of millions of people. Chances of copying such learning experience in the future would be most likely next to zero. So I feel panicky.

On top of having feelings of downheartedness, isolation and panic, I have a firm belief. If something is written about those heart-wrenching occurrences, that will become a mirror in the history of our great nation. Periodically looking into the mirror will be enormously beneficial, reminding us what should be done and what should not, with no bad effects at all.

Thus, after long periods of consideration, I have decided to do the work myself and write a memoir. First, I am making a solemn announcement before I set about the mission: I will never lie and exaggerate my experience in my book; I will keep my accounts accurate of the events as I went through; "cutting one additional inch of cloth would be a misfit to a design, while writing a paragraph one phrase shy of the reality would be a distortion." Sticking to my goal, I

will not offer an attentive ear to gossips, those things like "the autumn winds sweeping across my face." Making a name by lying is unethical; it is not my way of life, nor is a goal that I desire to achieve. Moreover I believe my recalling of those past events will be dependable. With the temperament of the so-called Cultural Revolution's fire and brimstone, I "have seen ebbs and flows of life" so I fear nothing now. If someone reads my memoir and feels uncomfortable as if his or her wound were pricked, or if someone is inclined to identify himself or herself with those persons I mention in my writing, I would like to notify that person here that I will not care whatever he or she will do. Though I may not be able to produce a good work, the writing will be an outgrowth watered in blood and tear. My memoir will not be fictional either. Therefore I would appreciate the reader's understanding and sympathy.

The above is my motive for writing this book.

[1] The set phrase in the Chinese original is "going south by driving north."

[2] Ji uses the "black gang" and the "white gang" in his text; the translation of the latter into the "red gang" is for clarity.

[3] An old Chinese saying.

[4] Another old Chinese saying.

[5] *Stories of Judgment*, a popular book, published in the late Qing Dynasty, with solicit persuasions on ethics and penalty; Ox Head and Horse Face, two demon attendants of the King of Hell, according to the Chinese popular culture.

[6] "Pricking on the soul," "battling selfishness and denouncing Revisionism," and "fighting living thoughts," popular sayings in the Cultural Revolution.

[7] Reciting the quotations of Mao Zedong, a daily activity conducted at all levels of work and institution.

[8] Ji uses the Sanskrit words which loosely mean "truth" in English.

壹 缘起

“牛棚”这个词儿，大家一听就知道是什么意思。但是，它是否就是法定名称，却谁也说不清楚。我们现在一切讲“法治”。讲“法治”，必先正名。但是“牛棚”的名怎么正呢？牛棚的创建本身就是同法“对着干的”。现在想用法来正名，岂不是南辕而北辙吗？

在北大，牛棚这个词儿并不流行。我们这里的“官方”叫做“劳改大院”，有时通俗化称之为“黑帮大院”，含义完全是一样的。但是后者更生动，更具体，因而在老百姓嘴里就流行了起来。顾名思义，“黑帮”不是“白帮”。他们是专在暗中干“坏事”的，是同“革命司令部”唱反调的。这一帮家伙被关押的地方就叫做“黑帮大院”。

“童子何知，躬逢胜饯”！我三生有幸，也住进了大院——从语言学上来讲，这里的“住”字应该作被动式——而且一住就是八九个月。要说里面很舒服，那不是事实。但是，像“十年浩劫”这样的现象，在人类历史上绝对是空前的——我但愿它也绝后——“人生不满百”，我居然躬与其盛，这真是千载难逢的机会，我不得不感谢苍天，特别对我垂青、加佑，以至于感激涕零了。不然的话，想找这样的机会，真比骆驼穿过针眼还要难。我不但赶上这个时机，而且能住进大院。试想，现在还会有人为我建院，派人日夜守护，使我得到绝对的安全吗？

我也算是一个研究佛教的人。我既研究佛教的历史，也搞点佛教的义理。但是最使我感兴趣的却不是这些堂而皇之的佛教理论，而是不登大雅之堂的一些迷信玩意儿，特别是对地狱的描绘。这在正经的佛典中可以找到，在老百姓的口头传说中更是说得活灵活现。这是中印两国老百姓集中了他们从官儿们那里受到的折磨与酷刑，经过提炼，“去粗取精，去伪存真”然后形成的，是人类幻想不可多得的杰作。谁听了地狱的故事不感到毛骨悚然、毛发直竖呢？

我曾有志于研究比较地狱学久矣。积几十载寒暑探讨的经验，深知西方地狱实在有点太简单、太幼稚、太单调、太没有水平。不信你去读一读但丁的《神曲》。那里有对地狱的描绘。但丁的诗句如黄钟大吕；但是诗句所描绘的地狱，却实在不敢恭维，一点想象力都没有，过于简单，过于表面。读了只能让人觉得好笑。回观印度的地狱则真正是博大精深。再加上中国人的扩大与渲染，地狱简直如七宝楼台，令人目眩神

驰。读过中国《玉历至宝钞》一类描写地狱的书籍的人，看到里面的刀山火海、油锅大锯，再配上一个牛头、一个马面，角色齐全，道具无缺，谁能不五体投地地钦佩呢？东方文明超过西方文明，东方人民的智慧超过西方人民的智慧，于斯可见。

我非常佩服老百姓的幻想力，非常欣赏他们对地狱的描绘。我原以为这些幻想力和这些描绘已经是至矣尽矣，蔑以复加矣。然而，我在牛棚里呆过以后，才恍然大悟，“革命小将”在东胜神州大地上，在光天化日之下建造起来的牛棚，以及对牛棚的管理措施，还有在牛棚里制造的恐怖气氛，同佛教的地狱比较起来，远远超过印度的原版。西方的地狱更是瞠乎后矣，有如小巫见大巫了。

我怀疑，造牛棚的小将中有跟我学习佛教的学生。我怀疑，他们不但学习了佛教史和佛教教义，也学习了地狱学。而且理论联系实际，他们在建造北大的黑帮大院时，由远及近，由里及表，加以应用，一时成为全国各大学学习的样板。他们真正是青出于蓝而胜于蓝。仅此一点，就足以证明，我在北大四十年的教学活动，没有白费力量。我虽然自己被请入瓮中，但衷心欣慰，不能自己了。

犹有进者，这一群革命小将还充分发挥了创新能力。在这个牛棚里确实没有刀山、油锅、牛头、马面等等。可是，在没有这样的必需的道具下而能制造出远远超过佛教地狱的恐怖气氛，谁还能吝惜自己的赞赏呢？在旧地狱里，牛头马面不过根据阎罗王的命令把罪犯用钢叉叉入油锅、叉上刀山而已。这最多只能折磨犯人的肉体，决没有“触及灵魂”的措施，决没有“斗私批修”、“狠斗活思想”等等的办法。我们北大的革命（？）小将，却在他们的“老佛爷”的领导下在大院中开展了背语录的活动。这是崭新的创造，从来也没有听说牛头马面会让犯人背诵什么佛典，什么“揭谛，揭谛，波罗揭谛”，背错一个字，立即一记耳光。在每天晚上的训话，也是旧地狱中决不会有的。每当夜幕降临，犯人们列队候训。恶狠狠的训斥声，清脆的耳光声，互相应答，融入夜空。院外小土山上，在薄暗中，人影晃动。我低头斜眼一瞥，知道是“自由人”在欣赏院内这难得的景观，宛如英国白金汉宫前面广场上欣赏御林军换岗的盛况。此时我的心情实在不足为外人道也。

简短截说，牛棚中有很多新的创造发明。里面的生活既丰富多彩，又阴森刺骨。我们住在里面的人，日日夜夜，分分秒秒，都让神经紧张到最高限度，让五官的本能发挥到最高限度，处处有荆棘坑坎，时时有横祸飞来。这种生活，对我来说，是绝对空前的。对门外人来说，是无

法想象的。当时在全国进入牛棚的人虽然没有确切统计，但一定是成千累万。可是同全国人口一比，仍然相形见绌，只不过是小数一端而已。换句话说，能进入牛棚并不容易，是一个非常难得的机会。人们不是常常号召作家在创作之前要深入生活吗？但是有哪一个作家心甘情愿地到黑帮大院里来呢？成为黑帮一员，也并不容易，需要具备的条件还是非常苛刻的。

我是有幸进入牛棚的少数人之一，几乎把老命搭上才取得了一些难得的经验。我认为，这些经验实在应该写出来的。我自己虽非作家，却也有一些舞笔弄墨的经验。自己要写，非不可能。但是，我实在不愿意再回忆那一段生活，一回忆一直到今天我还是不寒而栗，不去回忆也罢。我有一个渺渺茫茫的希望，希望有哪一位蹲过牛棚的作家，提起如椽大笔，把自己不堪回首的经历，淋漓尽致地写出来，一定会开阔全国、全世界读者的眼界，为人民立一大功。

可是我盼星星，盼月亮，盼着东天出太阳，一直盼到今天，虽然读到了个别人写的文章或书，总还觉得很不过瘾，我想要看到的东西始终没有出现。蹲过牛棚、有这种经验而又能提笔写的人无虑百千，为什么竟都沉默不语呢？这样下去，等这一批人一个个遵照自然规律离开这个世界的时候，那些极可宝贵的、转瞬即逝的经验，也将会随之而消泯得无影无踪。对人类全体来说，这是一个莫大的损失。对有这种经验而没有写出来的人来说，这是犯了一个极大的错误。最可怕的是，我逐渐发现，“十年浩劫”过去还不到二十年，人们已经快要把它完全遗忘了。我同今天的青年，甚至某一些中年人谈起这一场灾难来，他们往往瞪大了眼睛，满脸疑云，表示出不理解的样子。从他们的神情中可以看出来，他们的脑袋里装满了疑问号。他们怀疑，我是在讲“天方夜谭”，我是故意夸大其辞。他们怀疑，我别有用心。他们不好意思当面驳斥我，但是他们的眼神却流露出：“天下哪里可能有这样的事情呢？”我感到非常悲哀、孤独与恐惧。

我感到悲哀，是因为我九死一生经历了这一场巨变，到头来竟然得不到一点了解，得不到一点同情。我并不要别人会全面理解，整体同情。事实上我对他们讲的只不过是零零碎碎、片段片段。有一些细节我甚至对家人好友都没有讲过，至今还闷在我的心中。然而，我主观认为，就是那些片段就足以唤起别人的同情了。结果却是适得其反。于是我悲哀。

我孤独，是因为我感到，自己已届耄耋之年，在茫茫大地上，我一

个人踽踽独行，前不见古人，后不见来者。年老的像三秋的树叶，逐渐飘零。年轻的对我来说像日本人所说的“新人类”那样互不理解。难道我就怀着这些秘密离开这个世界吗？于是我孤独。

我恐惧，是因为我怕这些千载难得的经验一旦泯灭，以千万人遭受难言的苦难为代价而换来的经验教训就难以发挥它的“社会效益”了。想再获得这样的教训恐怕是难之又难了。于是我恐惧。

在悲哀、孤独、恐惧之余，我还有一个牢固的信念。如果把这一场灾难的经过如实地写了出来，它将成为我们这个伟大民族的一面镜子。常在这一面镜子里照一照，会有无限的好处的。它会告诉我们，什么事情应当干，什么事情又不应当干，决没有任何坏处。

就这样，在反反复复考虑之后，我下定决心，自己来写。我在这里先郑重声明：我决不说半句谎言，决不添油加醋。我的经历是什么样子，我就写成什么样子。增之一分则太多，减之一分则太少。不管别人说什么，我都坦然处之，“只等秋风过耳边”。谎言取宠是一个品质问题，非我所能为，亦非我所愿为。我对自己的记忆力还是有信心的。经过了所谓“文化大革命”炼狱的洗礼，“曾经沧海难为水”，我现在什么都不怕。如果有人读了我写的东西感到不舒服，感到好像是揭了自己的疮疤；如果有人想对号入座，那我在这里先说上一声：悉听尊便。尽管我不一定能写出什么好文章，但是这篇文章是用血和泪换来的，我写的不是小说。这一点想能得到读者的谅解与同情。

以上算是缘起。

2 STARTING FROM THE SOCIALIST EDUCATION MOVEMENT¹

In the first half of the 1960s, another political movement was launched across the country that made one's teeth clatter. It was called the "Socialist Education Movement" (SEM).^[1] Beida had to experience another round of helter-skelter. But this course slid into the familiar groove that if you made me suffer in the last movement I would get even with you for this in the next. After a period of commotion died down everyone was sent to the countryside to promote the SEM there.

In the fall of 1965, after the "Symposium at the International Hotel," I was sent to Nankou, a village on the outskirts of Beijing.^[2] There I worked as deputy team leader leading the SEM of the village in charge of Strengthening the Party. This was a small mountain village but a key traffic point overlooking a main highway before the completion of the construction of a railroad. The locals told me the village used to be a bustling commercial hub in the past with stores strung out along roads. Each day, hundreds of camels crouched on the street at night, as the sound of finger-guessing game roared in inns nearby until dawn. But the village took on a new face immediately after the completion of a railroad. Now with all those things gone that it once knew the village hung on languidly with shattered walls and deserted alleys. The past prosperity only lingered in receding memories of the elderly.

Here I will not talk about the proceeding of the SEM in the village. Instead, I will focus on some occurrences concerned with the Cultural Revolution. This so-called "unprecedented" Revolution erupted with some hidden scheme, which became well-known. I don't need to ramble on it. In fact, it started in the winter of 1965, the time when I worked at Nankou. By that time, Yao Wenyan had just published his article "On the Newly-revised Historical Play *Hai Rui Removed from Office*," which ignited the bonfire of the "Revolution."^[3]

This writing stirred up troubles and tried to wring truth from nonsense and make false charges. It was known that the publication of the article was in the control of a big hand behind the scene. Yao was nothing but a pawn "brandishing a chicken feather as the arrow-shaped stick of order" and performing at the forestage.^[4] It was at Nankou that I read the article. I was never politically sensitive. Though I had never missed any daily session of ideological education since the founding of new China, I overlooked the class struggle, dull-headed as I had always been in campaigns. I did not smell out any class struggle from it, not aware of the signal that foreboded another imminent crushing political tornado, just as "the wind blows as a storm looms large upon the tower."^[5] I thought the article was no more than any ordinary one. Besides my tongue was hanging out for anything in my mind, a weakness (or advantage?) of mine. After reading it, I started prating, endlessly and heedlessly. I remarked everywhere, "I don't see *Hai Rui Removed from Office* has anything to do with Peng Dehuai." I also said, "I know all the three village leaders of 'the Village of Three Families,' one or two of them even my friends."

^[6] Wu Han and I were classmates at Tsinghua University in the early 1930s. In 1946 when I returned to Peking, I delivered a speech to the students of Tsinghua at his invitation and stayed in his home that night." I jabbered away, unaware of some observant listener being around. One of my favorite students worked with me now at Nankou during the SEM. The son of a poor farmer, he came from the poor-peasant and family-member-of-a-revolutionary-martyr stock. In the past he was reverent and respectful and I intended to train him as my "academic successor." It is this "sworn follower" of mine that kept my remarks in mind. With courtesy and smile he was biding his time for an assault in the future. Later when the Cultural Revolution was at full throttle, I stuck my neck out and went against that notorious "Old Dowager" of Beida, who sent me into the Cow Shed. This "good" student of mine knew the time was ripe to drop a stone after I fell into a well so as to obtain a small "black gauze cap."^[7] Now he made public what I said about Yao, as he "poured beans out of a bamboo tube." He rained down attacks on me with distortions, calling me a "little lackey

of 'the Village of Three Families!' " By the way, I would like to add an update that this poor farmer's son and a family member of revolutionary martyr, who was one hundred times more eligible for being chosen as a proletarian successor, has immigrated to a small European country and become a footman of his new foreign master. Alas, time is cruel, letting one see an image of his own identity in a mirror he himself manufactured.

Getting back to Yao Wenyan's article, I found him formulating abstruse deductions and cooking up fallacies on things of which he got wind or got a sniff, thus setting up a notorious prototype for making false charges in the rest periods of the Revolution. Frankly speaking, I am skeptical that he could claim that he had invented these preposterous scams. In all likelihood he at most plagiarized them from that very influential high ranking figure. But anyway this despicable practice has inflicted devastating and boundless impact and generated countless wrongs. It dethroned the ethical rein in the mind of youth, and its influence is persistent even today.

There is another occurrence that deserves mention here. We were from different workplaces and came to Nankou to work together in the socialist education team. Besides those of us coming from Beida, some were from the National Central Broadcast Station and Beijing's General Brigade of Police. According to the regulations that we received, we were all to be attired in plain clothing, without revealing our respective work units, and keep our identity and updates only among our colleagues. However, though we did not know each other before, we got on good terms soon, and the initial alienation quickly gave way to a form of cooperation, mutual understanding and trust. One man, called Comrade Chen, who was from Beijing's Public Security Corps, was quite young but a veteran with a ten-year seniority of Party membership. He had a rich experience of working in the police department and was easy to get along with. We two maintained close relationship, sharing everything between us. Yet, one thing caught my attention: he burned all the mail right after he had received and read it. It was completely contrary to what I usually did.

I had a habit, hard to determinate its merit: I carefully kept not only the letters I received but also those purchase receipts of no significance. Why did I do it? I had no idea, nor did I ever think about it seriously. Now Chen's behavior puzzled me. On the New Year's Day by the lunar calendar of that year, he received a letterpress New Year card from his workplace, Beijing's General Department of Police. Evidently, it was of red tape, nothing serious. But Chen would not simply trash this card. He made sure he burned it completely to ashes instead of tearing it into pieces. I could hardly repress a cry of curiosity so I started the following conversation,

"Why did you burn the card?"

"I don't want to leave any trace of it behind."

"You might have torn it into pieces and cast it into the latrine as well?"

"No! It would still be possible to leave some trace behind."

"You're overcautious."

"No. Doing the kind of work I've been doing, I understand pretty well the terrible consequences that would arise out of any single reckless act. You'll never know why you should end up with a sting in the tail at a certain time of your life in the future. When caught with it, you can never clean yourself up."

A stunning remark that I had never heard of! I pondered: I may run into a sting in the tail, too; I have many shortcomings with a handful of pigtails, which are easy to get caught, if someone is nit-picking.^[8] But I was very confident that I had never opposed the Party and socialism, nor did I join any counter-revolutionary organization; so there was no reason at all to label me a "counter-revolutionary." I felt smug and relaxed, giving no further thought. However, Chen's words turned out to be a crystallized motto which had repeatedly been proved true in reality. Before long I stuck my neck out and opposed that "Old Dowager" of Beida and therefore had the cap of "counter-revolution" placed on my head.^[9] I once tinkered with poetry

and turned out a couple of lines: "As twenty years of staying at Beida flew by in a doze, I've earned the reputation of opposing the Party and socialism, much to my surprise." I'll quit here and pick up this topic later in the book.

[1] The Socialist Education Movement, a political movement launched in 1964 across the country for about two years, with the aim to remove bourgeois and capitalist practices. Advising teams were sent across the country in helping carry out this campaign.

[2] The "Symposium at the International Hotel," a conference held in Beijing in the fields of arts, sciences and education in the political campaign of attacking the history *Hai Rui Removed from Office*, written by historian and government official Wu Han.

[3] "On the Newly-revised History *Hai Rui Removed from Office*," an article written by Yao Wenyuan, a member of the Gang of Four, and published in the Shanghai-based newspaper *Wenhui Daily* on November 10, 1965.

[4] "Brandishing a chicken feather as the arrow-shaped stick of order," a popular Chinese saying, which shows scorn on those people who are extremely submissive in serving their superiors.

[5] "The wind blows as a storm looms large upon the tower," a line of poetry by Xu Hun, a poet of the Tang Dynasty, in his poem "The East Tower of Xianyang City."

[6] "The Village of Three Families," the pseudonym used in writing essays by Wu Han and Liao Mosha before the Cultural Revolution. Before the Cultural Revolution, Liao was president of the Beijing Committee of the United Front, a sub-committee of the United Front Work Department of the CPC Central Committee. Wu and Liao wrote their serialized work "Reading Notes of the Village of Three Families," which was published in *Frontline*, a periodical under the control of the Beijing Committee of the CPC, and *Beijing Daily*.

[7] "Black gauze cap," a popular Chinese metaphor used to mean the government position. The "black gauze cap" is originally a cap worn by the government official in ancient Chinese society.

[8] Pigtales, a popular term used in the Cultural Revolution, meaning one's shortcomings or weaknesses, which are caught by others for criticism.

[9] Cap, a popular Chinese term used in the Cultural Revolution, meaning a label.

贰 从社教运动谈起

60年代前半，在全国范围内又掀起了一场惊心动魄的叫做“社会主义教育运动”的运动。北大又大大地折腾了一番。规律仍然是：这场运动你整我，下次运动我整你。混战了一阵，然后平静下来，又都奉命到农村去搞社会主义教育运动。

我于1965年秋天，开完了“国际饭店会议”以后，奉命到了京郊南口村，担任这个村的社教队的副队长，分管整党工作。这是一个小小的山村。在铁道修建以前，是口内外的交通要道。据当地的老百姓告诉我，当年这里十分繁华，大街上店铺林立，每天晚上卧在大街上的骆驼多达几百头，酒馆里面划拳行令之声通宵达旦。铁路一修，情况立变，现在已是今非昔比。全村到处可见断壁颓垣，一片荒凉寂寞，当年盛况只残留在老年人的记忆中了。

村里社教运动进行的情况，我不想在这里谈。我只谈与“文化大革命”有关的一些情况。这一场“史无前例的”所谓“革命”，来头是很大很大的。这是尽人皆知的事实，用不着我再去细说。它实际上是在1965年冬天开始的，正是我在南口村的时候。这时候，姚文元写了一篇文章：

《评新编历史剧〈海瑞罢官〉》，点起了“革命”的烽火。这一篇文章鼓其如簧之舌，歪曲事实，满篇邪理。它据说也是颇有来头的。姚文元不过是拿着鸡毛当令箭出台献艺的小丑而已。我读到这篇文章就是在南口村。我脑袋里一向缺少政治细胞，虽然解放后几乎天天学习政治，怎奈我天生愚钝，时时刻刻讲阶级斗争，然而我却偏偏忽略阶级斗争。我从文章中一点也没有体会出阶级斗争的味道。我一点也没有感觉出这就是“山雨欲来风满楼”，这就是大风暴将要来临的信号。我只把它当做一篇平常的文章来看待。兼之我又有肚子里藏不住话的缺点（优点？）。看完了以后，我就信口开河，大发议论，毫无顾忌。我到处扬言：我根本看不出《海瑞罢官》会同彭德怀有什么瓜葛。我还说，“三家村”里的三位“村长”我都认识，有的还可以说是朋友。我同吴晗30年代初在清华是同学。1946年，我回到北平以后，还曾应他的邀请到清华向学生做过一次报告，在他家里住过一宿。如此等等，说个没完。我哪里知道，说者无心，听者有意。同我一起来南口村搞社教运动的有我的一位“高足”，出身贫农兼烈属，平常对我毕恭毕敬，我内定他为我的“接班人”。

就是这一个我的“心腹”，把我说的话都记在心中，等待秋后算账，脸上依然是笑眯眯的。后来，到了“文化大革命”中，我自己跳出来反对北大那一位臭名远扬的“老佛爷”，被关进牛棚。我的这一位高足看到时机已到，正好落井下石，图得自己捞上一顶小小的乌纱帽，把此时记住的我说的话，竹筒倒豆子，再加上一点歪曲，倾盆倒到了我的头上，把我“打”成了“三家村的小伙计”！我顺便说一句，这一位有一百个理由能成为无产阶级接班人的贫农兼烈属的子弟，已经溜到欧洲一个小国当洋奴去了。时间是毫不留情的，它真使人在自己制造的镜子里照见自己的真相！

闲言少叙，书归正传。我仍然谈姚文元的文章。姚文元在这篇文章中使用的深文周纳的逻辑，捕风捉影莫须有的推理，给以后在整个“文化大革命”中给人罗织罪名，树立了一个极坏的样板。这一套荒谬绝伦的东西是否就是姚文元个人的发明创造，我看未必。他可能也是从头来很大的人那里剽窃来的。无论如何，这一种歪风影响之恶劣，流毒之深远，实在是罄竹难“数”。它把青年一代的逻辑思维完全搞混乱了。流风所及，至今未息。

还有一件小事，我必须在这里讲一讲。我们在南口村的社教工作队，不是来自一个单位。除了北大以外，还有人来自中央广播电台，来自警察总队等单位。根据上面的规定，我们一律便衣，不对人讲自己的单位。内部情况只有我们自己明白。我们这一伙来自四面八方的杂牌军队，尽管过去并不认识；但是萍水相逢，大家都能够团结协作，感情异常融洽。公安总队来了一位姓陈的同志，他是老公安，年纪还不小，但已有十年的党龄。他有丰富的公安经验，人也非常随和。我们相处得非常好，几乎是无话不谈。但是，有一件小事却引起了我的注意：他收到无论什么信，看完之后，总是以火焚之。这同我的习惯正相反。我有一个好坏难明的习惯：我不但保留了所有的来信，而且连一张小小的收条等等微末不足道的东西，都精心保留起来。我这个习惯的心理基础是什么呢？我说不清楚，从来也没有去研究过。看了陈的行径，我自然大惑不解。特别是过旧历年的时候，公安总队给他寄来了一张铅印的贺年卡片。这本是官样文章，没有什么重要意义。但是陈连这样一张贺年卡片也不放过，而且一定要用火烧掉，不是撕掉。我实在沉不住气了，便开始了这样的谈话：

“你为什么要烧掉呢？”

“不留痕迹。”

“撕掉丢在茅坑里不就行了吗？”

“不行！仍然可能留下痕迹。”

“你过分小心了。”

“不是，干我们这一行的深知其中的利害。一个人说不定什么时候就会碰到点子上。一碰上，你就吃不了的兜着走。”

我大吃一惊，这真是闻所未闻。我自己心里估量：我也会碰到点子上的。我身上毛病不少，小辫子也有的是。有人来抓，并不困难。但是，我自信，我从不反党、反社会主义；我也没有加入任何反动组织，“反革命”这一顶帽子无论如何也是扣不到我头上来的。心里乐滋滋的，没有再想下去。岂知陈的话真是经验之谈，是从无数事实中提炼出来的真理。过了没有多久，我自己一跳出来反对北大那一位“老佛爷”，就被扣上了“反革命”的帽子。我曾胡诌了两句诗：“廿年一觉燕园梦，赢得反党反社名。”这是后话，这里就先不谈了。

3 THE FOURTH OF JUNE 1966

Despite the village's remoteness and isolation, Nankou was a scenic spot and the villagers were friendly. But it was in no sense a tiny Utopia.^[1] We were here to carry out the class struggle. Personally I didn't like the "left" idea of carrying on the daily ideological formality which stressed the necessity of making class struggle. It was true that, like any other place, Nankou had some problems of its own, and carrying out a little "class struggle" there was not absolutely unnecessary. But it caught us off balance that, as we were busy with class struggle there, a tornado of class struggle swept through the whole country. This tornado originated in Beijing, while Beida was the center of attention in Beijing.

We were unaware of this forthcoming storm in the beginning. Working in the SEM on the suburb of Beijing, we felt as though we were away from the hassle of the world but close to nature. The spring of 1966 arrived late as usual, which was normal for this mountain village. But, finally, those trees of peaches, apricots and pears gradually blossomed, forming delightful pink and snow-white patches in the spring that brought liveliness and joy to the secluded place. It seemed things were uneventful as had been with us. But, in reality, word got around from outside that a large-scale movement was looming large on us. The political movement always first hit Peking University. This time, not on campus, we were not well-informed. But we were all conscious of the advent of something perilous in the making, as thick gloomy clouds began to outline the shape of an oncoming thunderstorm. Staying out of town only left us with an incalculable instant of peace.

As May drew near, word kept reaching us from outside and became more and more disturbing. The Central Committee of the Party issued one directive after another, something like the "5.16 Memo."^[2] What the situation meant was quite clear. But, as I said

before, my head was woefully void of political cells and, in particular, lacked the "string" of class struggle for the friction of the bow to strike. Thus I took it easy as if nothing had happened. Bathed in the balmy weather of Nankou with the exuberance of fruit trees, I, like the frog sitting at the bottom of a well, never thought about the connection between this political thunderstorm and my destiny.

At this moment the campus of the university must have taken on a new look. People returning from the city told us that the university exploded with emotion. Two factions (or numerous factions according to rumors) were locked in a daily brawl against one another, and the violence began to appear. It was said that some influential figure, sent by the Central Committee to Beida, summoned a meeting one night with a view to stop the law-breaking outrages. It was said that this move was effective only for a short period of time. On May 25, a few days later, a big-character poster, written by a couple of people from the Department of Philosophy under the directive of the "Old Dowager," appeared on campus, entitled, "What do Song Shuo, Lu Ping and Peng Peiyun want to do?"^[3] Heated debates with pros and cons blew up immediately. I learned that, outside the main student cafeteria, everyday crowds of debaters stood in circle howling against each other through the night. No one knew how many circles of crowd were formed there and how many participants were present. As a result, Beida was hurled into chaos, just as a serene pond no longer knew its peace after a boulder had been dropped in.

We were not quite sure about the message that the big-character poster carried. But we felt at once it was a continuation of the SEM on campus. At the "Symposium at the International Hotel," mentioned earlier, the faction opposing Lu Ping lost this round of strife and had to take some heat of reproach. According to the patterns of the political movements we had experienced for many years, this time would be the turn for those persecuted last time to persecute others.

On June 1, I heard the news, from the National Central Broadcast Station, that the big-character poster was touted, by the one in power, as a "Marxist-Leninist big-character poster." I had not read the poster,

because, by that time, I was swamped with my work and I also lacked the political perspective to figure out why a common big-character poster could be rated as a "Marxist-Leninist" writing. Today I still have had to grapple with its "profound" meaning. In any case, its Marxist-Leninist nature had to be accepted unconditionally and unquestionably at that time as it was so said. It was as decisive as the nail was driven into the wooden board. We people at Nankou, of course, discussed the big-character poster, too, but only perfunctorily and without splitting into two antagonizing factions. Then the news from the campus kept reaching us in succession, but we were still undisturbed. Indeed, we were not certain of what was going on, as if "one hears the rumble of distant thunder and is not worried about the coming rain at the moment." Our SEM continued as we continued to indulge in our privilege of leisure and freedom.

The Department of Eastern Languages of Beida had about seven or eight faculty members participating in the SEM at Nankou, including the Party general secretary and myself as department head. We were targets of chastisement in light of the intention of the high-ranking authority in the Revolution, because we were all "capitalist roaders." Almost all those in power, except a few privileged ones on top of the power, were officials embracing capitalism (the expression is shortened as "*zouzipai*" in the powerful and inconceivably-rich Chinese language). At Nankou, the "capitalist roaders" of the Department of Eastern Languages were on good terms with the faculty and students. Thus we, the two "capitalist roaders," were dumb for good in our own right, totally unaware that we walked to the edge of the precipice and might fall any time, with a sneak push from behind, into the deep valley below. And some of those that would push us in the near future were now just around us in reverence and treated as a lovable pug.

We should have been on our guard at the sniffs of trouble, if we had had some political sense. Unexpectedly on June 4, we received an order sent by one unknown source from the university: "Return to the university immediately and participate in the movement." We did not

bring there with us a lot of belongings, having neither books nor jewelry and other valuables; the only personal possessions that our hands could lay on were a couple of quilts and a washbasin, which were quickly bundled up into a roll before we flocked onto the bus dispatched from the university. We were ready to say bye to Nankou where we stayed for about eight months. "A short residence in a strange place makes one feel as attached to it as to his hometown." My tenderness was unmistakable, and a sorrow of parting arose from my heart. Nevertheless, the rush of departure felt like the chaos of war and left me with no moment for emotional lingering. I had no idea how others felt. Our Party general secretary was more politically mature and experienced. He said nothing, as if he had a presentiment of foreboding. But no one was sure of what was to befall himself or herself in the future. So was I, uncertain and a little panicky, with no time to ponder over the situation. Each time I returned home on leave from Nankou in the past, I was in high spirits. This time I felt like I were heading for an unknown land (*terra incognita*).^[4]

One hour later we arrived at the campus. Before the arrival I had a faint feeling that the faculty and students of our department would all come and meet us, shaking hands and chatting with us, as we, two leaders, were not stripped yet of our positions as Party general secretary and head of department. But as I walked into the university I was shocked by the sight: how one could be able to tell this was the campus Peking University once knew! It became a huge bazaar. The campus' tree-lined, shaded boulevards were littered with cars and trucks parked in disorder. Countless bikes, like schools of fish in the Yangtze, filled every space around the buildings and under the trees. It was an impressive view of a bike ocean. In terms of the number of people, they were numerous, either from inside the university or from outside, heads bobbing around and sounds in a hubbub. Centering around the main student cafeteria, crowds pushed and pulled, packed like sardines. Right after entering the gate of the university our bus had to inch ahead and eventually rolled to a stop. We all alighted to foot it. But we were just a few drops of water melting into waves of the ocean and making no splash at all, as those fantasies of mine

about the welcome etiquette of hand-shaking and chatting totally vanished into thin air.

It was said that the gathering became a way of life after June 1. Pilgrims flocked to Beida like surging waves to pay homage to the first "Marxist-Leninist big-character poster." In the eye of the "Marxist" disciples, Beida was a holy place, more sacred than Mecca, Jerusalem and the Leiyin Temple on Mount Lingjiu in India.^[5] One visit in pilgrimage could purge the body and soul of impurities and sinful ideas. Visitors poured in each day in seventy to eighty thousands, or even hundreds of thousands. At first people arrived from nearby schools and universities. Gradually, the sources stretched farther away. And finally, the passionate exodus to Beida spread out across the country to institutions of education thousands, or tens of thousands, of *li* away.^[6] Residents from Beijing, of course, would not want to miss the opportunity. Their participation fueled the chaos, since a day-trip to Beida delighted them more than going to Tianqiao on holiday.^[7] In addition to the crowds, big- and small-character posters were posted on the walls, ground and trees with a unanimous support of the "first Marxist-Leninist big-character poster." It was a sea of people and posters bustling with various colors and incessant roars.

At this sight, I was tongue-tied. Then I edged my way into the throngs. Though there was no welcome ceremony, there were no reprimands, denouncements, slaps, fists and kicks either. As a free man I sneaked into the multitudes, sauntering around. Our Party general secretary coming back with me was not as fortunate. Stepping down from the bus, he was "taken away," or "kidnapped," by the young revolutionaries to somewhere no one knew.^[8] He was labeled a "capitalist roader," an authentic target to be punished. From then on, I did not see him in the following few years. On the walls of the Building of Foreign Languages, I saw many big-character posters charging him with being "the shepherd Party secretary" and showering on him all slanders and insults. He was called a "member of Lu Ping's capitalist university black clique," "defender of the de facto university authorities" and "staunch supporter and vanguard of capitalism." As

for Lu Ping himself, the day and night, of course, became painfully long. His name was listed on the "Marxist-Leninist big-character poster"; he was the leading felon, aimed to be first brought down by some authorities. I had little idea about him; I only learned that he was singled out by the "revolutionaries" and chastised in the sessions of crowd torture around the clock. The denouncement would go on for forty-eight hours a day. The torture session was held right in his residence. He was forced to stand on the low yard-wall, surrounded by participants chanting slogans and hurling gibes, as the host of the session spoke about his crimes irresponsibly amidst the riotous "incitation" and "rage." Condemning Lu Ping became the most popular treat of sightseeing. No matter who you were, watching him stoop was a must for all visitors to Beida. And every one was entitled to pull Lu Ping out of his room for a round of torture, just like the audience picking up a theatrical item, which was to be played by a well-known Peking opera actor, in the theater before the founding of new China.

How about myself? Though I was aware of the portentous circumstances, in which I was landed like a clay figure of Bodhisattva crossing a river and being able to worry about nobody else but itself. But no one came to "take" me away so I could still stay at home and move around freely. Some people put up a few big-character posters against me. That was understandable, since people had to do it in order to fulfill their quota of revolutionary mission. Fortunately, I did not draw quite a lot of criticism from big-character posters. One day I went to student dormitory Building 40, in which students from the Department of Eastern Languages lived, to read those big-character posters. One writing berated me for one of my popular essays, entitled "Beida's Campus Bathed in the Spring." To the mind of the "young revolutionaries," the spring symbolized capitalism, and to sing praises of the spring was to champion capitalism. I was confused: "Why does the beautiful spring, symbolizing the rebirth of life and honored by Chinese and foreigners of all ages, become a symbol of capitalism?" I failed to straighten out the confusion in the ten years that followed. Even today the issue still puzzles me. I'm just a woodenhead and, in all likelihood, will not turn wiser for the rest of my life. As is said

above, Yao Wenyan wrote his stinky article on *Hai Rui Removed from Office*, quoting writers from the classics, distorting reality and braiding allegations with fallacies. His initiation of making false charges was further developed later in his writings condemning the work *Evening Chats at Mount Yan* written by one of "the Village of Three Families."^[9] It is quite obvious that his diabolism was approved by some influential figure behind the scene. Later on, it gained epidemic proportion and prevailed over the country, with a series of "theories" such as "opposing the Party with novels." I was not politically savvy; and I piously believed in God. But for one thing I am quite sure: the spring I talked about in my article had nothing to do with capitalism, and I was sincerely praising the spring of my country. When reading this big-character poster, I felt a rage surging inside me and blurted out a groan. This groan took me less than half a second. But someone sneaking behind me picked it up and made a note, exactly as in the case of Nankou in which my discontent of Yao Wenyan's article was overheard by someone (there was no cassette recorder by that time, but it was recorded in someone's mind). Later it was used as a heavy shell fired at me after I jumped out to oppose the "Old Dowager."

By that time I still could be able to go around freely. The Beida campus was now a lot messier than on the fourth of June that year. At that time many pilgrims, due to long distances from their home towns in remote and border areas to Beijing, were held up or delayed in their homage paying journey to the holy place of Beida. Now they all made it here. In the past, the university had a rather spacious campus. But with this "congregation of believers" from every corner of the country, the university was tightly packed and hopelessly cramped. People gathered on hillsides, in bushes and in every nook and cranny. An ordinary man, I looked like nothing in the multitude but a drop of water in the ocean and a grain of rice in a huge granary.

To my understanding, the spearhead of the Revolution at this stage pointed to the so-called capitalist roader. What's the capitalist roader? Each workplace, no matter whether it was up in the central government of the country or down to a department office of an

institution, at least had a leader to be labeled a capitalist roader, thus resulting in a sudden creation of numerous capitalist roaders in all workplaces. My political zeal was extremely low. At that time and in the subsequent long periods, a hearty God-worshipper, I welcome the Cultural Revolution with open arms. I just couldn't be convinced of the assessment that there must be one capitalist roader in each workplace. If it had been true, how could we have achieved great success in the past? The thought lingered in my mind, and I was unable to speak of it anywhere or to anyone. Since it was the will of some higher-ups and in agreement with the desire of "young revolutionaries," I had to accept this belief. "Making revolution was not as genteel as treating people to dinner."^[10] What else could I say? It was shame that we had learned materialism and dialectics for more than ten years but never put them to use. A materialist should seek truth. What kind of truth seeking did our action indicate at this moment? I was confused.

The young revolutionaries were not to be looked down on. They had inexhaustible originality, as they forced the capitalist roaders to walk with a big board dangling around their neck, which carried their own names on it. It was an innovation by Beida's talented young revolutionaries. As Paris set the pace in dress fashion in the world, Beida of that time, in fact, led the country in making the Cultural Revolution. Hanging the wooden board on the neck of a man emerged as a brand-new practice and immediately spread nationwide. In some places, the iron wire became thinner, the wooden board bigger and heavier. Gravity caused the iron wire to bite into the flesh and the blood to ooze out. In this regard Beida fell behind, since I did not see any bloody scene. But I witnessed quite a few torture sessions. If it were run inside a room, the capitalist roader would have to stand on the podium, lowering his head and holding the board with his neck, while the "revolutionary people" sat on the chairs; if it happened outside, the capitalist roader would stand on the chair, or the wall, or a rock, anything that could lift him up a little from the ground to give a better view of himself, unmistakably head hung and neck suspending the wooden board. I did not have the opportunity to see

the procedure of a "torture session." But it would be conducted in a standardized fashion: first, the quotations of Chairman Mao were read; then the host yelled, "Bring so-and-so the capitalist roader up to the front"; and then the man was marched by two or more young students, the red armband worn on the arm, up to the front, his arms bent up high from behind and head pressed down; this was immediately followed by passionate chants of the participants, chants like "Long live so-and-so"; the next step was the delivering of the speech by the keynote speaker, who marched to the front and started to denounce the man by listing the crimes that he had committed, close to 100 percent made up stories; finally the speaker routinely wound up his address with a terrifying false charge: the capitalist roader had been against the Party, socialism and the great leader. Whatever the speaker said was true; whatever he uttered was law; the revolutionary masses held a bunch of caps in their hands and would willfully place any of them on the head of the "criminal." Besides, they would force the man to plead guilty. A slight hesitation to the order would ensure blows and kicks until the man was black-and-blue all over his body. What were they up to in conducting this kind of torture? I had no idea. To intimidate the "criminal"? I was not sure either. Among participants and visitors, some were serious and rapt with a brimming look of justice; others came for fun, chatting and laughing; still others, who arrived in their pilgrimage from all parts of the country, took advantage of this opportunity in venting their desire of torture. Everybody was satisfied. A day of revelry for the masses! This "advanced" model was learned and soon snowballed across the country. By that time Beida was yet to see the "jet riding," a later popularized new standing pose of torture. Who created it? Nobody has studied it. As long as I know so far no one has stood out and applied for its patent.

In the Department of Eastern Languages, two men were the target of persecution at this time: the Party general secretary who I mentioned previously, with the ready-made cap of capitalist roader, and the other being one of my colleagues, whose cap was also ready-made, an "influential counter-revolutionary scholar," plus the cap of

historical counter-revolutionary. They were both condemned in many big-character posters and brutally tormented at torture sessions. Once I happened to see one of these sessions for the Party general secretary, which was held in front of a long straw-matted palisade, specifically designed for putting up the big-character posters. Those posters listed his "offenses," disparaging him as "the shepherd Party secretary." He stooped, the head lowered. I don't remember if he had a board hanging around the neck, but a piece of white paper, pasted on his chest, carried his name, on which a red cross was printed. This was something that might have been learned from the judiciary, or read off ancient fictions that describe the convict being marched to the execution ground, carrying a wooden board tied on his back with his name and the red cross printed on it. Now the Party general secretary received the same treatment. In the course of the session, the emotion ran high and the chanting was deafening. When it was over, he was sent away, upon a stern shout, "Go back home," with a big-character poster glued onto his back. The big-character poster was not supposed to be taken down even when he got back home. Otherwise he would be assumed to ask for more punishment for his newly-committed offense.

The first torture session against that professor was held in the conference room of the Building of Foreign Languages. Inside the building the walls were pasted with big-character posters from the first floor all the way up to the second floor. Among them there were quite a few cartoons showing the professor holding a sword in his hand, with his red canine teeth sticking out and blood dripping from the sword, which symbolized he had killed a lot of people. Bloodiness and terror filled the building. In such atmosphere, in which the old man, deprived of the right to defense, was to be "denounced," his suffering could be imaginable. Understandably the participants, the young students, uttered truth mingled with lies, spit flying and swear words hurled, the air full of gunpowder. At one time, a wastepaper basket was placed on the head of the professor. And the next, someone poured a whole bottle of blue ink on his clothes, which at once became colorful, patch-dotted American army fatigues. Then, hearing

shouts of "Get out," the old man, debased as he was, walked back home.

Later on June 18 of that year, an extraordinary idea hit a certain "talented" person that one grand session of "torturing devils" should be held. The venue was chosen to be the high platform east of the student dormitory Building 29. I was afraid of going there to watch, because I knew the score about myself, a clay figure of Bodhisattva, which needed to take care of itself, and had better tuck my tail between my legs. I sat at home, listening to the uproars and deafening chants outside in the south. Later on, I learned all the "devils," those that had already been labeled so far as the capitalist roader, had to go through this round of torture for the purpose of demonstrating the will and confidence of the people and embracing the Revolution. Each "devil" was marched onto the platform and then waited until the finish of a few chants of revolutionary slogans. He finally got kicked and tumbled from the platform. The "devil" got up from the muddy ground, dizzy and tippy, and reeled back home. This night of castigation spared no one, as all the professors, who were labeled the "devil," some even in their sixties and seventies or bed-ridden, were dragged all the way up there on the platform. Some of them were too weak to walk so a large bamboo basket was used for carrying them to the site. These sick and crippled people had to lie on the "devil-punishing platform," endure an outburst of swearing, get finished off with the kick that sent them dropping on the ground, and were then carried home in the same bamboo basket. It was said that the beating and swearing were heard everywhere on Beida's campus that night. But I think those, who called others "ox, monster, snake and devil" at the time of chaos are exactly satanic beasts themselves, contemptible, barbarous and brutal, for whatever disguise they assumed.

From then on, the eighteenth of June had become an annual ritual, the day of "devil chastisement." I never knew, by that day, that I was yet to join the troop of "devils" in two years to the day. I would be one of the "devils," condemned and skinned alive, too, a rare experience in a millennium. This is another topic that I will put in

reserve for the moment.

[1] Utopia, Ji uses "*Shiwaitaoyuan*" in the original Chinese text, meaning a remote village away from the city's frenetic activity. The metaphor comes from the writing "A Story of the Peach Village," written by Tao Qian, a poet of the Jin Dynasty (265-420), which describes a remote place for living away from the devastation of war.

[2] The "5.16 Memo," a short form for "The Memo of the CCCPC on May 16, 1966," which was issued to the country to declare the Party's "left" theory as its guiding platform in leading the country in carrying out class struggle as the priority mission in the socialist period. Though it came as a direct criticism on the "Platform of February 1966," laid down by Peng Zhen, mayor of Beijing in 1966, the memo later became the guiding line of the Party for making the Cultural Revolution. See p. 90, *A Brief History of the Cultural Revolution* by Xi Xuan and Jin Chunming. Beijing: CPC Party's History Press, 1996.

[3] Song Shuo, Party secretary of the Peking University Committee of the CPC; Lu Ping, president of Peking University; Peng Peiyun, deputy Party secretary of the Peking University Committee of the CPC.

[4] "Terra incognita," unknown territory, a phrase of Latin origin, which Ji uses in his text.

[5] Mount Lingjiu, a mountain with its top looking like a vulture's head and supposedly the sacred place in ancient India, on which Buddha used to preach.

[6] *Li*, a traditional Chinese unit of length, equivalent to 0.5 kilometer or 0.311 mile.

[7] Tianqiao, a place in Beijing, which served as a bazaar as well as an entertaining center before 1949 and has remained as a source of local cultural tradition and tourist spot.

[8] "Taken away" and "kidnapped," a pun that Ji uses in the original text, both pronounced "jie" in Chinese.

[9] *Evening Chats at Mount Yan*, a five-volume collection of short articles written by Deng Tuo, chair and editor-in-chief of the *People's Daily*; Deng wrote for the column "Evening Chats at Mount Yan" of the newspaper *Beijing Evening News* from 1961-1966 under the pseudonym of Ma Nancun. Deng was persecuted in early 1966 and committed suicide on May 18 of that year.

[10] "Making revolution was not as genteel as treating people to dinner," a quotation from Mao Zedong's work.

叁 1966年6月4日

南口村虽然是一个僻远的山村，风景秀丽，居民和善，但是也决非世外桃源。我们来这里是搞阶级斗争的。虽然极“左”的那一套年年讲、月月讲、念念不忘阶级斗争，我并不同意。但是，南口村，正如别的地方一样，决不是没有问题的，搞一点“阶级斗争”看来也是必要的。我们哪里想到，在我们在这里搞阶级斗争的同时，全国范围内已经涌起了一场阶级斗争的狂风暴雨。这一场风暴的中心是北京，而北京的中心是北京大学。

这一点我们最初是不知道的。我们僻处京郊，埋头社教，对世事距离好像比较远，对大自然好像是更为接近。1966年的春天，同过去任何一个春天一样，姗姗来迟。山村春来迟，是正常的现象。但是，桃花、杏花、梨花都终于陆续绽开了，萼葵一片粉红雪白，相映成趣，春意盎然了。我们的活动，从表面上来看，一切照常，一切平静。然而从报纸上来的消息，从外面传进来的消息，知道一场大的运动正逼近我们。北京大学一向是政治运动的得风气之先的地方。此时我们虽然不在学校，情形不十分清楚；但是那里正像暴风骤雨前浓云密布那样，也正在酝酿着什么，我们心里是有底的。只不过是因为身居郊外，暂时还能得到一点宁静而已。

5月来临，外面的风声越来越紧。中央接二连三地发出一些文件，什么“五一六通知”之类。事情本来已经十分清楚；但是，我上面已经说到，我脑袋里最缺少政治细胞，缺少阶级斗争那一根弦。我仍然我行我素，在南口村和煦的阳光中，在繁花如锦的环境里，懵然成为井中之蛙，从来没有把这一场暴风雨同自己的命运联系起来。

此时城里的燕园恐怕完全是另一番景象。从城里回来的人中得知学校里已经开了锅。两派（或者说不清多少派）之间争辩不休，开始出现了打人的现象。据说中央派某某大员到北大去，连夜召开大会，想煞住这一股不讲法制、胡作非为的歪风。听说，在短时间内起了一些作用。但是，过了没有几天，到了5月25日，那位“老佛爷”纠集了哲学系的几个人，贴出了一张大字报：“宋硕、陆平、彭珮云要干什么？”（编者注：大字报的名称应为“宋硕、陆平、彭珮云在文化革命中究竟干什么？”）立即引起了两派人的辩论，有的人赞成，有的人反对。听说在大

饭厅附近，争辩的人围成了圈子，高声嚷嚷，通宵达旦。不知道有多少圈子，也说不清有多少人参加。好像是一块巨石击破了北大这块水中天，这里乱了套了。

这一张大字报的详细内容，我们不清楚。但是，我们立刻就感觉到，这是校内社教运动的继续和发展。在我上面提到的所谓“国际饭店会议”上，反陆平的一派打了一个败仗，挨了点整。按照我们最近多少年来的运动规律，这一次是被整者又崛起，准备整别人了。

到了6月1日，忽然听到中央广播电台播出了那一张大字报，还附上了什么人的赞美之辞，说这是一张什么“马列主义大字报”。我没有时间，也没有水平去推敲研究：为什么一张大字报竟会是“马列主义的”？一直到今天，我仍然没能进化到能理解其中的奥义。反正马列主义就是马列主义，这好像钉子钉在案板上，铁定无疑了。我们南口村的人当然也议论这一张大字报；可是并没有形成壁垒森严的两派，只不过泛泛一谈而已。此时校园内的消息不断地陆陆续续地传了过来，对我们的心情似乎没有产生多大干扰，我们实在是不了解真实情况，身处山中，好像听到从远处传来的轻雷，不见雨点，与己无干，仍然“社教”不已，心中还颇有一点怡然自得的情趣。

北大东语系在南口村参加社教的师生有七八人之多，其中有总支书记，有系主任，那就是我。按照上面的规定，我们都是被整的对象，因为我们都是“当权派”。所有的当权派，除了最高层的少数几个天之骄子以外，几乎都是走资本主义道路的（神秘莫测的中国语言把它缩简为“走资派”）。在南口村，东语系的走资派和一般教员和学生，相处得非常融洽。因此，我们这两位走资派“难得糊涂”，宛如睡在甜甜蜜蜜的梦中，一点也没有意识到，自己正走在悬崖边上，下临无地，只等有人从背后一推，立即能堕入深涧。而个别推我们的人此时正毕恭毕敬地围绕在我们身边，摇着秀美的小尾巴，活像一只哈巴狗。

没有想到——其实，如果我们政治嗅觉灵敏的话，是应该想到的——6月4日，我们忽然接到学校里不知什么人的命令：立即返校，参加革命。我们带的东西本来不多，一无书籍，二无细软，几床被褥，一个脸盆，顺手一卷，立即成行，挤上了学校派去的大汽车。住了七八个月的南口村，现在要拜拜了。“客树回看成故乡”，要说一点留恋都没有，那不是实情。心头也确实漾起了一缕离情别绪。但是，此时有点兵荒马乱的味道，顾不得细细咀嚼了。别人心里想什么，我不清楚。我们那一位总支书记，政治细胞比我多，阶级斗争的经验比我丰富。他沉默不

语，也许有点什么预感。但是此时谁也不知道自己的前途是什么样子。我虽然心里也有点没底儿，有点嘀咕，我也没有时间考虑太多太多。以前从南口村请假回家时，心里总是兴高采烈的；但是这一次回家，却好像是走向一个 *terra incognita*（未知的土地）了。

一个多小时以后，我们到了燕园。我原来下意识地期望，会有东语系的教员和学生来迎接我们，热烈地握手，深情地寒暄，我们毕竟还是总支书记和系主任，还没有什么人罢我们的官嘛。然而，一进校门，我就大吃一惊：这哪里还是我们前不久才离开的燕园呀！这简直是一个大庙会。校内林阴大道上，横七竖八，停满了大小汽车。自行车更是多如过江之鲫。房前树下，角角落落，只要有点空隙，就要挤满了自行车。真是洋洋大观，宛如自行车的海洋。至于校内的人和外面来的人，更是不计其数。万头攒动，人声鼎沸。以大饭厅为中心，人们成队成团，拥挤拥挤，真好像是针插不进，水泼不入。我们的车一进校门，就寸步难行。我们只好下车步行，好像是几点水珠汇入大海的波涛中，连一点水花都泛不起来了。什么迎接，什么握手，什么寒暄，简直都是想入非非，都到爪哇国去了。

据说从6月1日起，天天如此。到北大来朝拜“第一张马列主义大字报”的人，像潮水般涌进燕园。在“马列主义”信徒们眼中，北大是极其神圣、极其令人向往的圣地，超过了麦加，超过了耶路撒冷，超过了西天灵鹫峰雷音寺。一次朝拜，可以涤除身体上和灵魂中的一切污浊、一切罪孽。来的人每天有七八万、十几万甚至几十万。先是附近学校里的人来，然后是远一点学校里的人来，最后是外地许多大学里的人，不远千里，不远万里，风尘仆仆地赶了来。本地的市民当然是当仁不让，也挤了进来凑热闹，夹在里面起哄。这比逛天桥要开心多了。除了人以外，墙上，地上，树上，还布满了大小字报，内容是一边倒，都是拥护“第一张马列主义的大字报”的。人的海洋，大字报的海洋，五光十色，喧声直上九天。

我在目瞪口呆之余，也挤进了人群。虽然没有迎接，没有欢迎；但没有怒斥，没有批斗，没有拳打，没有脚踢。我以一个自由人的身份，混入人海中，暂且逍遥一番。一同回来的那一位总支书记，处境却不美妙。一下车，他就被革命小将“接”走，或者“劫”走，接到不知道什么地方去了。他是钦定的“走资派”，罪有应得。从此以后，在长达几年的时间内，我就没有再见到他。我在外文楼外的大墙上，看到了一大批给他贴的大字报，称他为“牧羊书记”，极尽诬蔑、造谣、无中生有、人

身攻击之能事。说他是“陆平的黑班底”，“保皇派”，“走资本主义道路的骁将、急先锋”。陆平的日子当然更为难过。他是马列主义大字报上点了名的人，是祸首罪魁，是钦犯。他的详细情况，我不清楚。我只知道，他被“革命”群众揪了出来，日夜不停地批斗，每天能斗上48个小时。批斗的场所一般就在他住的地方。他被簇拥着站在短墙头上，下面群众高呼口号，高声谩骂。主持批斗的人罗织罪名，信口开河。此时群情“激昂”，“义愤”填膺。对陆平的批斗一时成为北大最吸引人的景观。不管什么人，只要到北大来，必然来参观一番。而且每个人都有权把陆平从屋子里揪出来批斗，好像旧日戏园子里点名角的戏一样。

我自己怎样呢？我虽然已经意识到，自己是泥菩萨过江，自身难保；但是还没有人来“接”我，我还能住在家里，我还有行动自由。有人给我贴了大字报，这是应有之义，毫不足怪。幸而大字报也还不多。有一天，我到东语系学生住的四十楼去看大字报。有一张是给我贴的，内容是批判我的一篇相当流行的散文：《春满燕园》。在贴大字报的“小将”们心中，春天就象征资本主义；歌颂春天，就是歌颂资本主义。我当时实在是大惑不解：为什么古今中外的人士无不欢迎的象征生命昭苏的明媚的春天会单单是资本主义的象征呢？以后十几年中，我仍然不解；一直到今天，这对我仍然是一团迷雾。我的木脑袋不开窍，看来今生无望了。我上面说到，姚文元的那一篇批判《海瑞罢官》的臭文，深文周纳，说了许多歪理。后来批判“三家村”的《燕山夜话》等著作，在原来的基础上又有了发展。看来这一套手法是有来头的，至少是经过什么人批准了的。后来流毒无穷，什么“利用小说反党”等等一系列的“理论”依次出笼，滔滔者天下皆是矣。（编者注：“利用小说反党”的理论在1962年批判小说《刘志丹》时已有。）我的政治水平，并不比别人高。我也是虔诚信“神”的人。但是，有一点我是清楚的：我文章里的春天同资本主义毫不相干。我是真心实意地歌颂祖国的春天的。因此，我看了那一张大字报，心里真是觉得憋气，不由自主地哼了一声。这一哼连半秒钟都没有用上，孰料这一哼竟像我在南口村谈姚文元的文章一样，被什么隐藏在我身后的人录了下来（当时还没有录音机，是用心眼录下来的）。到了后来，我一跳出来反对他们那一位“老佛爷”，就成了打向我的一颗重型炮弹。

反正我此时还是一个自由人，可以到处逍遥。这时的燕园比起6月4日来，其热闹程度又大大地增加了。那时候，许多边远的省份，受到了千山万水的阻隔，没有能赶到北京来，朝拜北大这一块“圣地”。现在都

赶来了。燕园在平常日子看上去还是比较辽阔的。但是，在这“八方风雨会燕园”的日子里，却显得极其窄狭，极其渺小。山边树丛，角角落落，到处都挤满了人。我这渺小的人，更像是大海中一滴水、太仓中一粒米了。

据我的观察，这一阶段，斗争的矛头是指向所谓“走资派”的。什么叫“走资派”呢？上至中央人民政府，下至一个小小的科室，只要有一个头头，他必然就是“走资派”。于是走资派无所不在，滔滔者天下皆是矣。我政治觉悟奇低，我在当时一直到以后相当长的时间内，我总是虔心敬神，拥护“文化大革命”的。但是，每一个单位必有一个走资派，我却无论如何也不能理解。每一个大小头头都成了走资派，我们工作中的成绩是怎样来的呢？反正我这个道理没有地方可讲，没有人可讲。既然上头认为是这样，“革命小将”也认为是这样，那就只有这样了。革命不是请客吃饭嘛，我还有什么话可说呢？可怜我们虔诚地学习了十几年唯物论和辩证法，到头来成了泡影。唯物主义者应该讲实事求是，当前的所作所为，是哪一门的实事求是呢？我迷惑不解。

革命小将也决不可轻视，他们有用之不竭的创造力。北大的走资派在脖子上被挂上了大木牌，上面写着这个走资派的名字。这个天才的发明就出自北大小将们之手。就像巴黎领导世界时装的新潮流一样，当时的北大确实是领导着全国“文化大革命”的新潮流。脖子上挂木牌这一个新生事物一经出现，立即传遍了全国。而且在某一些地方有了新的发展。挂木牌的钢丝愈来愈细，木牌的面积则愈来愈大，分量愈来愈重。地心吸力把钢丝吸入“犯人”的肉中，以致鲜血直流。在这方面北大落后了，流血的场面我还没有看到过。但是“批斗”的场面我却看了不少。如果是在屋中，则走资派站在讲台上，低头挂牌，“革命”群众坐在椅子上。如果是在室外，则走资派站在椅子上，墙头上，石头上，反正是高一点的地方，以便示众，当然是要低头挂牌，我没有见到过批斗程序，但批斗程序看来还是有的。首先总是先念语录，然后大喊一声：“把某某走资派押上来！”于是走资派就被两个或多个戴红袖章的青年学生把手臂扭到背后，按住脑袋，押上了审判台。此时群众口号震天，还连呼“什么万岁！”。主要发言人走上前去发言进行批斗。发言历数被批斗者的罪状，几乎是百分之百的造谣诬蔑，最后一定要上纲上到惊人的高度：反党，反社会主义，反伟大领袖。反正他说什么都是真理，说什么都是法律。“革命”群众手中的帽子一大摞，愿意给“犯人”戴什么，就戴什么，还要问“犯人”承认不承认，稍一迟疑，立即拳打脚踢，必至“犯人”鼻青

脸肿而后已。这种批斗起什么作用呢？我说不清。是想震慑“犯人”吗？我说不清。参加或参观批斗的人，有的认真严肃，满脸正义。有的也嘻嘻哈哈。来自五湖四海的到北大来取经朝圣的人们，有的也乘机发泄一下迫害狂，结果皆大欢喜，人民大众开心之日果然来到了。这种“先进”的经验被取走，转瞬之间，流溢全国。至于后来流行的坐喷气式，当时还没有见到。这是谁的发明创造呢？没有人研究过，好像至今也还没有人站出来申请专利。

在北大东语系，此时的批斗对象，一个是我上面谈到的总支书记。帽子是现成的：走资派。一个是和我同行的老教授。帽子也是现成的：反动学术权威，另外还加上了一顶：历史反革命。给他们二人贴的大字报都很多，批斗也激烈而且野蛮。对总支书记的批斗我只见过一次，是在一个专门为贴大字报而搭起的席棚前面。席棚上贴的都是关于他的大字报，历数“罪状”，什么“牧羊书记”之类的人身攻击。他站在棚前，低头弯腰。我不记得他脖子上挂着木牌，只在胸前糊上了一张白纸，上面写着他的名字，上面用朱笔画了一个叉。这是从司法部门学来的，也许是从旧小说中学来的。一个犯人被绑赴刑场砍头时，背上就插着一个木牌，写着犯人的名字，上面画着红叉。此时书记也享受了这种待遇。批斗当然是激烈的，口号也是响亮的。批斗仪式结束以后，给他背上贴上一张大字报，勒令：“滚回家去！”大字报不许撕下来，否则就要罪上加罪。

对那位教授的首次批斗是在外文楼上大会议室中。楼道里，从一层起直到二层，都贴满了大字报。还有不少幅漫画，画着这位教授手执钢刀，朱齿獠牙，点点鲜血从刀口上流了下来，想借此说明他杀人之多。一霎时，楼内血光闪闪，杀气腾腾。这样的气氛对一个根本不准发言的老人进行所谓“批斗”，其激烈程度概可想见了。结果是参加批斗的青年学生群情激昂，真话与假话并举，吐沫与骂声齐飞，空气中溢满了火药味。一只字纸篓扣到了老教授头上。不知道是哪一位小将把整瓶蓝墨水泼到了他的身上，他的衣服变成了斑驳陆离的美国军服。老先生就是在这样的情况下被勒令“滚蛋”走回家中去的。

到了6月18日，不知道是哪一位“天才”忽发奇想，要在这一天大规模地“斗鬼”。地址选在学生宿舍二十九楼东侧一个颇高的台阶上。这一天我没有敢去参观。因为我还是有一点自知之明的。我这样一座泥菩萨最好是少出头露面，把尾巴夹紧一点。我坐在家中，听到南边人声鼎沸，口号震天。后来听人说，截止到那时被揪出来的“鬼”，要一一斗上

一遍，扬人民之雄风，振革命之天声。每一个“鬼”被押上高台，喊上一阵口号，然后一脚把“鬼”踹下台去。“鬼”们被摔得晕头转向，从地上泥土中爬起来，一瘸一拐，逃回家去。连六七十岁的老教授和躺在床上的病人，只要被戴上“鬼”的帽子，也毫无例外地被拖去批斗。他们无法走路，就用抬筐抬去，躺在斗“鬼”台上，挨上一顿臭骂，临了也是一脚踹下高台，再用抬筐抬回家去。听说那一夜，整个燕园里到处打人，到处骂人，称别人为牛鬼蛇神的真正的牛鬼蛇神疯狂肆虐，灭绝人性。

从此以后，每年到了6月18日，必然要斗“鬼”。我可万万没有想到，两年后的这一天，我也成了“鬼”，被大斗而特斗。躬与其盛，千载难遇。此是外话，这里暂且不表了。

4 CHECK THE NUMBER AND SIT IN THE RIGHT SEAT

The short period of peace and quiet delighted me. But I did not believe it was going to be long. I was pretty sure I should have a label of one kind or another. How could I be able to slip through this bout of raid, since I had been department head in the Department of Eastern Languages for twenty years?

I mused: I need to check the number and sit in the right seat with respect to the evaluation of the performance. At that time caps were produced at will and ticketed numbers were given everywhere. Two caps or two numbers, I felt, were quite fit for me, the capitalist roader and the influential counter-revolutionary scholar. The two caps fit my head well, not large nor small.

What is a capitalist roader? First, he had to be one in power; one who was not in command was not eligible for this cap. I was department head, a bottom rung administrative position, many times lower than Rank Seven.^[1] However, it was a position anyway, and then I was undoubtedly a capitalist roader. Did I travel along the capitalist road? I was not quite clear. What could I have been rated otherwise, if all ranking officials of the country had become capitalist roaders? Hence, I quite fit the slot.

What is an influential counter-revolutionary scholar? I was a Professor of Rank One, even if my academic achievements might be cheesy, and a member of the division of the Chinese Academy of Sciences.^[2] I could not avert being labeled as influential either. Was I a capitalist? The essence of capitalism is the focus on selfishness. I had learned about politics for almost twenty years and was quite certain of the meaning of capitalism. I had my personal concerns, quite a lot. They were definitely capitalist thoughts. I had these thoughts and then I was a capitalist. All capitalists are counter-revolutionary. In addition

to the scholarly authority, what could I have been if I had not been an influential counter-revolutionary scholar? These few factors put together, the image of a confirmed counter-revolutionary scholarly authority was cut. If this cap was withheld from me, I would feel unfair and uncomfortable. At the bottom of my heart, I felt guilty and had no complaint. "The emperor rules with providential wisdom, and I, a humble subject, deserve death for my crime."^[3]

Meanwhile things were not as simple as were reckoned. What worried me most was: of which contradiction was my behavior?^[4]

In the middle 1950s, political study sessions were conducted across the country, concerning the doctrine of two contradictions of different nature. Without exception I was a participant. The more I studied, the more I felt admiration, totally overwhelmed by the theory. At many study sessions, I prattled away irrationally, sharing my interpretations of the documents. I was emotional and spit in all directions. When the Cultural Revolution came, however, I realized that my past understandings were the ivory tower of bookishness, isolated from reality. Now I had to be down-to-earth and relate to my experience. What I wanted to know was what kind of nature these two caps were in terms of the two contradictions.

As is well-known, the masses are unquestionably better off in new China. But, if one were forced to wear the cap of the contradiction between the people and the enemy, due to whatever reason, he would lead a hard life, as if he was treading on thin ice and sitting on a bed of nails; tucking his tail between the legs, he still would periodically bring some misfortune to himself from nowhere. The day of revelry for the masses is the day of soreness for counter-revolutionaries. In the past I only understood this statement intuitively and was not really concerned. Now that the Cultural Revolution arose, the issue loomed large on me, making me aware of its portentous nature. I should check my number and sit in the right seat. I would be willing to put on those two caps, not because I had a particular fancy for running a cap store. I had no alternative. But what kind of contradiction was of the nature of these two caps? This issue was extremely crucial to me, not a

theoretical topic any more but a concern of life and death. I was starting to search for clues in resolving the puzzle.

Newspaper and magazines all stressed it was necessary to make a clear-cut distinction between the two contradictions in judging the individual conduct. In reality the line was particularly hard to draw, harder than splitting a hair of one centi-millimeter. In other words, something plausibly existed but appeared indistinctly, difficult to pin it down. Under certain circumstances, any specialist in the world, either in the quantitative analysis or in the qualitative analysis, would find himself impotent with the issue. I became even more disoriented: "Is this issue of distinguishing between the two contradictions one of philosophy or that of law?" If it was philosophical, what pragmatic problem did it deal with? If it was legal, why was it not specified in any legal documents? I was law-illiterate. But during my five years of working in the highest legislature of the country in the past, I had never seen any words about the two contradictions in legal documents. What were the reasons? I was baffled.

It was not true that I was fascinated by some theory. I loathed, rather than appreciated, the opportunistic practice of talking about white today and switching to red tomorrow. Now the problem pertaining to me was not theoretical. In the course of checking my number and sitting in the right seat, I was on tenterhooks. Obviously, I was concerned with a very pragmatic matter. I hung in the middle between the enemy camp and that of the people, anxious about where I belonged. My days passed in apprehension, though I moved about freely, a mix of freedom and anxiety.

In the past, when talking about setting a political cap on someone's head, no one had the empathy. "One does not care if it is none of his business."^[5] After the founding of new China, numerous political movements were rolled out one after another, and caps were created, too, in colorful designs. Because all caps were placed on others' heads I was not concerned. I had led a free and quiet life of almost twenty years and never been distressed. I saw those cap-wearing people humble and obedient; "the emperor rules with

providential wisdom, and I, a humble subject, deserve death for my crime." I never thought of going into their feelings of wearing a cap. Nor had I had ever seen one take the initiative in asking for one. But now I kept pondering, feeling that I would never be content and at ease until I had one cap placed on my head, as if I were about to go out in a freezing, windy day. Given the fact that the caps were manufactured everywhere, I was just wondering who was in charge of their distribution. Was there a division of work in the divinity between God and deputy God with the latter being responsible for stocking caps?

I had no idea how I was assessed in the eye of revolutionary people. Up to this point one thing was certain: no one had ever berated me, let alone beating me. I had not been officially removed from my position as department head. But the rubber stamp of the department had mysteriously slipped through my hand on some day which I did not know. Moreover, a few occurrences raised my angst, causing a flurry of activity for quite a while. One day, for instance, I went to the Building of Foreign Languages and saw a notice, put on the bulletin board, saying: "Ji Xianlin is ordered to hand in 3000 *yuan*!" I was addressed without using any title like the capitalist roader or influential counter-revolutionary scholar. "The bare-headed king rules without crowning." I was rather disappointed. Meanwhile, the order must be obeyed in promptness and respect. Therefore I at once withdrew 3000 *yuan* from my bank account and sent the money to the designated room in the student dorm. Forcing a smile, I handed over the money to the students sitting there. They looked weird, motionless and stern, which terrified me. To my surprise, they refused to accept it and uttered, "Take it back home!" I obeyed without delay, deferentially of course.

Another time, I was reading a book at home when someone violently pounded on the door and then a few young students broke in, saying they wanted to "destroy the Four Olds."^[6] What is "the Four Olds"? I had no idea how to define it, nor did I have time to do research. I had to let these Red Guards have my belongings at their

disposition.^[7] I had a plethora of trinkets hung on the walls and set on the tables, glittering with colors. They caught the eye of these youth for destroying; if they pointed their finger at one article, then it was one of the "Four Olds" and I immediately removed or smashed it. I obeyed the orders with no objection, because the current standardized mantra of the time was that the Red Guards stood for the mainstream of the Revolution. Within half an hour, I "destroyed" a few of my favorites. In retrospect, one of the things that still remains fresh in my memory is a Huishan clay figure of a chubby smiling boy made very lovely, which I brought back from Wuxi.^[8] Then a whimsical idea suddenly hit the Red Guards, when they saw the picture of the great leader, which I put on the wall, free of dust. Assuming I put it up only moments earlier, they started bawling me out for my disloyalty to the great leader. Frankly speaking, they were accurate in their denouncement. But I tried to cover up my fault with an excuse by saying, "It is because of my loyalty that I have kept dusting it off all the time." The admiration arose in me for the young revolutionaries' faithfulness and prudence. In fact I had an antipathetic feeling at that time when I was in the grip of piety: "To talk about doing away with the Four Olds, the oldest thing would be the earth itself. So the earth should be first smashed. Why didn't they destroy the earth first?" From then on word came in succession about the occurrences of destroying the Four Olds across the country. One professor told me that he had kept two paintings, one by Qi Baishi and another by Wang Xuetao, and they were both wiped out as the Four Olds.^[9] Their annihilation amounted to nothing in comparison. The statistics would probably never come to light on how many national treasures were destroyed at that time. If the policy of ridding the country of the Four Olds had been implemented thoroughly at that time, what would have been left of the precious relics of the country? What legacy would we have been able to preserve for coming generations, even if we had wanted to? This thought has sent shivers down my spine.

Let me get back to the issue of the cap, memories of which still linger on and are hard to be eliminated from my mind. What cap did the revolutionary people or those in power want to place on my head?

To figure out the answer was beyond me. As the Cultural Revolution ran in full throttle, I gradually had the intuition that they would make me wear the cap of counter-revolutionary scholarly authority. As mentioned above, it was the cap I wanted to wear. My prediction and their intention happened to coincide. How wonderful! At face value, my misconduct was of the nature of the contradiction between the enemy and the people. But some higher-ups said the problem of the contradiction between the enemy and the people could be treated as that of the contradiction among the people. Probably my case fell into this category.

The revolutionary people kept my name in mind. From time to time, they summoned me for a meeting of criticism. Please note here, it was the session of criticism, not the session of crowd torture. One character in difference could be poles apart in reality. Basically they criticized me for my pedagogic emphasis on Learning First. They called it "revisionism." What a remarkable connection! It was said that I embraced revisionism, too, in my writing "Beida's Campus Bathed in the Spring," and, because of it, the reputation of the Department of Eastern Languages was affected. It was also said that the major problem related to the department was Learning First. I agreed on this allegation. If it was revisionism, I would be satisfied in receiving this terror-striking cap of revisionism. In the political movements since 1949, I had repeatedly made self-criticism, either for myself or on behalf of the Department of Eastern Languages. Each time I focused on my revisionist misconduct of stressing Learning First and each time I survived. The Cultural Revolution was not exceptional. But I was always a "pig-headed" man. As soon as the self-criticism was over and the approval was granted to me, I renewed my revisionism. As I recall today, something has dawned on me. If I had not implemented some revisionism in the past forty years of my life, I would, most probably, have come to naught in career and my seven-to-eight-million-word work of translation would have not appeared.^[10] Indeed, I should appreciate my hopeless pig-headedness. In any case I was quite content that I was treated as a capitalist scholarly authority deviating on research with the nature of the contradiction among the people. I

clearly understood my condition was not secure at best and I might be tortured at will and at any time, like a bird flying in the air, subjected to calamity by snares, gun shots and stone hits. However, there were moments free of assault, so I would take advantage of them and enjoy myself for the moment.

[1] Rank Seven, one of the nine ranks classified in the government of ancient Chinese society. Rank Seven is a low position, and a popular phrase is "the position of rank seven as tiny as sesame."

[2] Professor of Rank One, the top of the five ranks for professorship categorized by China's Ministry of Education before the Cultural Revolution.

[3] "The emperor...for my crime," a phrase Ji uses scornfully to refer to the traditional belief in ancient China that the imperial edict is providentially revealing and must be abided by completely.

[4] "Of which contradiction was my behavior," Ji means the two kinds of contradiction, the contradiction among the people and the contradiction between the people and the enemy, a doctrinal classification posited by Mao Zedong in 1957 in his article "Correctly Handle Contradiction Among the People."

[5] "One does not care if it is none of his business," a quotation from the treatise "Opposing Liberalism" of Mao Zedong, published in 1937.

[6] To "destroy the Four Olds," to remove old ideas, old culture, old custom and old habits, a slogan popularized at the beginning of the Cultural Revolution, which immediately triggered the raiding of homes of those considered as counter-revolutionaries across the country.

[7] The Red Guards, college or middle and high school students, exclusively selected with the revolutionary family background, who raided homes and cleaned up the Four Olds in the second half of 1966.

[8] Wuxi, a city in Southern Jiangsu province in East China.

[9] Qi Baishi and Wang Xuetao, two well-known painters of Chinese painting in the first half of the twentieth century in China.

[10] Ji's translation of *Ramayana* into Chinese.

肆 对号入座

暂时的逍遥，当然颇为惬意。但是我心里并不踏实。我清楚地意识到，我的头上也是应该戴上帽子的。我在东语系当了二十年的系主任，难道就能这样蒙混过关吗？

我苦思苦想：自己也应该对号入座。当时帽子满天飞，号也很多。我觉得有两顶帽子，两个号对我是现成的：一个是走资派，一个是反动学术权威。这两顶帽子对我都非常合适，不大不小，恰如其分。

什么叫走资本主义道路的当权派呢？首先他应该是一个当权派；不是当权派就没有资格戴这顶帽子。我是一系之主，一个比七品芝麻官还要小好多倍的小不点官儿。但这也毕竟是一个官儿。我是当权派无疑了。我走没有走资本主义道路呢？我说不清楚。既然全国几乎所有的当权派都走了资本主义，我能不走吗？因此，我认为这一顶帽子蛮合适。

什么叫资产阶级学术权威呢？不管我的学问怎样，反正我是一级教授、中国科学院的学部委员，“权威”二字要推也是推不掉的。我是不是资产阶级呢？资产阶级的核心是个人主义。我学习了将近二十年的政治，这一点深信不疑。我有个人考虑，而且还不老少。这当然就是资产阶级思想。我有这样的思想，当然就是资产阶级。资产阶级就反动。再加上学术权威，我不是反动的资产阶级学术权威又是什么呢？几个因素一拼凑，一个活脱脱的反动权威的形象就树立了起来。不给我戴这顶帽子，我反而会觉得不公平、不舒服。我是心悦诚服，“天王圣明，臣罪当死”。

但是问题还不就这样简单。我最关心的是：这是什么性质的矛盾？

从50年代中期起，全国都在学习两类不同性质的矛盾。我当然也不例外。我越学习越佩服，简直是打心眼儿里五体投地地佩服。在无数次的学习会上，我也大放厥词，谈自己的学习体会，眉飞色舞，吐沫飞扬。然而，到了“无产阶级文化大革命”，我才发现，以前都是纸上谈兵，没有联系自己的实际。现在我必须联系自己的实际了。我想知道，这样两顶帽子究竟是什么性质的矛盾？

大家都知道，在新社会，对广大人民群众来说，生活当然是好的。但是，不管出于什么原因，如果被扣上敌我矛盾的帽子，日子却会非常

不舒服，简直是如履薄冰，如坐针毡；夹起尾巴，还会随时招来横祸。人民大众开心之日，就是反革命分子难受之时嘛。过去我对于这一点只有理性认识，从来也不十分关心。“文化大革命”一起，问题就要发生在自己身上了。我才知道，这是万分重要的问题。我自己对号入座，甘愿戴上那两顶帽子。非我喜开帽子铺，势不得不尔也。但是，这两顶帽子是什么性质的矛盾呢？这个问题对我来说万分关键。到了此时，这已经不是一个纯理论问题，而是一个现实问题，我努力想找一个定性的根据了。

所有的报刊杂志都强调，要正确区分和处理这两类矛盾。但是其间界限却万分微妙，简直连一根头发丝的十万分之一都不到。换句话说就是若无实有，却又难以捉摸。在某一些情况下，世界上任何定性分析专家 and 任何定量分析专家都无能为力。我自己也是越弄越糊涂。两类不同性质的矛盾的理论是一个哲学问题呢，还是一个法律问题？如果是一个哲学问题，它究竟有什么实际意义？如果是一个法律问题，为什么法律条文中又没有表露出来？我对法律完全是门外汉。但是我在制定法律的最高权力机构呆过五年，从来没在法律条文中见到什么“两类不同性质的矛盾”这样的词儿。原因何在呢？我迷惑不解。

我不是对理论有了兴趣。我对今天说白、明天说红的完全看风使舵的理论，只有厌恶之感，没有同情之意。但是，现在对我来说，这却不是一个理论问题。我在对号入座的过程中，忧心忡忡，完全是为了这一个非常现实的问题。我是身处敌我之间，心悬两类之外，形迹自由，内心矛盾，过着有忧有虑的日子。

我们平常讲到戴政治帽子，往往觉得这是非常简单的事情。“事不关己，高高挂起”嘛。解放以后，政治运动形形色色，戴的帽子五花八门。给别人戴什么帽子，都与己无关。我就这样顺利地度过了将近二十年，从来没有切肤之感。我看被戴上帽子的人都是毕恭毕敬，“天王圣明，臣罪当死”。他们内心里的感受，我从来没想去了解过。我也从来没有见过一个人主动争取戴帽子的。可我现在左思右想，前瞻后顾，总觉得或者预感到，自己被戴上一顶帽子，心里才踏实，好像是寒天大风要出门那样。现在帽子满天飞，可是不知道究竟掌握在谁的手中。难道正副上帝分工还有一个掌管帽子的上帝吗？

在革命群众眼中，我不知道自己的地位如何。反正还没有人公开训斥我，更不用说动手打我。我这个系主任还没有明令免职，可是印把子却不知道是从什么时候起从我手中滑掉了。也有几次小小的突然袭击，

让我忙上一阵子，紧张一阵子。比如，有一天我到外文楼去，在布告栏里贴着一张告示：“勒令季羨林交出人民币三千元！”我的姓名前面没有任何字眼，既无“走资派”，也没有“反动学术权威”，“秃头无字并肩王”。我觉得颇为失望。但是，既有成命，当然要诚惶诚恐地加以执行。于是立即取出三千元，送到学生宿舍指定的房间。我满脸堆笑，把钱呈上。几个学生脸上都有点怪物相，不动不笑，令我毛骨悚然。但是，完全出乎我的意料，他们拒绝接受，“你拿回去吧！”他们说。我当然敬谨遵命了。

又有一次，我正在家里看书，忽然随着极其激烈的敲门声，闯进来了几个青年学生，声称是来“破四旧”的。什么叫“四旧”呢？我说不清楚，要考证也没有时间，只好由这一群红卫兵裁决。我的桌子上、墙上、床上摆着或挂着许多小摆设，琳琅满目。这些就成了他们破的主要对象。他们说什么是四旧，我就拿掉或者砸掉。我敬谨遵命，心里头连半点反抗的意思都没有。因为经典性的说法是，他们代表了革命的大方向。在半小时以内，我“破”了不少我心爱的东西。我回忆最清楚的是一个我从无锡带回来的惠山泥人大阿福，是一个胖胖的满面含笑的孩子，非常逗人欢喜。他们不知道怎样灵机一动，发现我挂在墙上的领袖像上没有灰尘，说我是刚挂上的，痛斥我敬神不虔诚。事实上，确实是我刚挂上的；但我敬谨对曰：“正是由于我敬神虔诚，‘时时勤拂拭’，所以才没有灰尘。”革命小将的虔诚和细心，我不由得由衷地敬佩。但是，我在当时虔诚达到顶峰的时期，心里就有一个叛逆的想法：要想破四旧，地球上最旧的东西无疑是地球本身，被破的对象地球应当首当其冲。顺理成章地讲，为什么不先把地球破掉呢？从那以后，我陆陆续续地听到了许多关于全国破四旧的消息。一位教授告诉我，他藏有一幅齐白石的画、一幅王雪涛的画，都被当做四旧破掉了。这只是小小者。全国究竟破掉了多少国宝，恐怕永远无法统计了。如果当时全国真正完完全全贯彻破四旧的方针的话，我们祖国的宝贵文物岂不一扫而光了吗？即使我们今天想发扬，还留下什么东西值得发扬的呢？我真是不寒而栗。

我还是回头来谈戴帽子的问题，这是我念念不忘、念念难忘的一件事。革命群众或者上头什么人究竟要给我戴哪一顶帽子？这不是我能决定的一个问题。随着革命的前进，我渐渐感觉到，他们大概给我戴资产阶级反动学术权威这一顶帽子。我上面已经说过，我自己想戴的也正是这样一顶帽子。双方不谋而合，快何如之！按字面来讲，这是敌我矛盾。但是，上头又说，敌我矛盾也可以按人民内部矛盾来处理。我大概

就属于这个范畴吧。

革命群众没有把我忘掉，时不时地还找我开个批判会什么的——要注意，是批判会，而不是批斗会；一字之别，差以千里——主要批判我的智育第一、业务至上，他们管这个叫做“修正主义”，多么奇妙的联系啊！据说我在《春满燕园》中所宣扬的也是修正主义。连东语系也受到了我的牵连。据说东语系最突出的问题就是智育第一、业务至上。对于这一点，我心悦诚服地接受。如果这就是修正主义的话，我乐于接受修正主义这一顶颇为吓人的帽子。解放后历届政治运动，只要我自己检查或者代表东语系检查能够检查这一点，检查到自己智育第一、业务至上的修正主义思想，必然能顺利过关。“文化大革命”也不例外。但我是一个“死不改悔”者。检查完了，关一过，我仍然照旧搞我的修正主义。到了今天，回首前尘，我恍然若有所悟。如果我在过去四十年中没有搞点这样的修正主义的话，我今天恐怕是一事无成，那七八百万字的著译也决不会出现。我真要感谢自己那一种死不改悔的牛劲了。不管怎样，给我戴上与业务挂帅有一些联系的资产阶级反动学术权威的帽子而又当做人民内部矛盾来处理，我真是十分满意。虽然我自己也清晰地意识到，自己的处境也并非就是完全美妙，自己还是像一只空中的飞鸟，处处有网罗，人人可以用鸟枪打，用石头砸；但是毕竟还有不打不砸的时候，我乐得先快活一阵子吧。

5 HALF A YEAR OF QUIET

As is well-known, there is "A Three-*li* Trail of Cheerfulness" on Mount Tai.^[1] It means a three-*li* easy ascent after a long strenuous climb to the top of the mountain, which demands little effort and is rather enjoyable, providing the mountaineer with a recess. So it is dubbed "A Three-*li* Tail of Cheerfulness."

The Cultural Revolution is unmistakably a hard mountain hike, immensely harder than the climbing to the Nantianmen on Mount Tai.^[2] Consequently I became a climber too in this Revolution. But there was a period of more than half a year, from somewhere in the second half of 1966 to the end of the first half of 1967, when I found the road, on which I trekked, little taxing, if not completely smooth. Though the university, along with the country, was being wrecked by a crushing hurricane, a clear sky hung over my head. After the first stormy spell, I settled in an interlude of recess. I was delighted and sauntered along my three-*li* trail of cheerfulness.

In the past, I only knew some philosophers were interested in researching a human being's position in the cosmos and a related issue is the individual human being's position in society. But I had never thought about my own social position. Since the founding of new China, great changes had taken place, as political movements broke out one after another. In each of these movements, everyone had to face the challenge of locating his or her position accordingly. Roughly speaking there were two categories of people: those who persecuted others and those who were persecuted. Certainly a further classification would be very complicated, and one's position was not invariant. The proceeding of each political movement redefined and reshaped the rank and file. The persecutor could become the persecuted, and vice versa. One was persecuted in this movement and would become a persecutor of others in the next. The variation of the individual's social status was infinite. Like Prime Minister Zhuge

Liang's Eight Trigrams Tactics, it dazzled and baffled me.

In the Cultural Revolution, I was surely worried about the assessment of me. The issue of "cap" as I talked about previously was primarily a concern of assessment. But it hung long in the air; the suspension had made me fret and unable to eat and sleep well. Later I gradually learned I was not considered as the enemy and felt at ease. I was still one of the "people," which was of life and death to me. Thus, I assumed my early buoyant deportment. It should be noted that at that time a huge valley lay between the people-enemy contradiction and the contradiction among the people and between the people and the so-called counter-revolutionaries. If a person was placed on the side of the people, things would not get out of control, and his reckless action, or a slip of the tongue, would be considered as committed due to carelessness, nothing serious. However, to be classified as the enemy on the other side of the valley, one would have endless trouble, no matter what caution one took, tucking one's tail between the legs and trying never to talk and act in a wholly irresponsible way. Once in a while when one stumbled in talking and acting, for example, uttering a wrong word like "socialism" in the place of "capitalism" or vice versa, then this behavior would be definitely classified as being counter-revolutionary, and the transgressor would be labeled an active counter-revolutionary and have to go through sessions of denouncement and torture.^[3]

Who had the power over categorizing people between the enemy and the people? I had no idea. I was simple-minded; I pondered a hundred times and still remained perplexed. Though I was on this side of the valley for the moment, I felt like walking on a tight cable and a single slip would send me plummeting down into the other side of the valley. That would be a landing in the hell condemned to eternal suffering.

I had been the department head until now. Was I relieved of the post or was I removed from it? Nobody knew. Nevertheless it was unnecessary to clear it up. "Making revolution is nothing wrong, and making havoc is absolutely correct," which was the grounds for all

action of the day.^[4] As for what was making revolution and what was making havoc, no one cared. Even the state leader, the president of the country, was pulled out for criticism and torture. A department head like me was even more a trash like a sesame seed or a mung bean. What gave me moments of relief was the fact that I was pardoned with the withholding of the "cap" from being placed on my head, though that black gauze cap of mine, almost worthless to me, was taken away.^[5]

By this time a PLA team of Mao Zedong Thought Propaganda (MTP) had been dispatched to our university for assisting the revolutionary faction, and each department had a few soldiers and military officers stationed.^[6] Accordingly "the havoc-making people" of our department also had a leading body formed.^[7] How did those become "the havoc-making people"? In terms of the situation of the Department of Eastern Languages, things generally evolved in the following pattern: some of the faculty members and students assumed they had a revolutionary family background so that they were dependable in implementing the "class line" rigorously.^[8] Then they formed the "havoc-making people," starting to wear an armband made of red cloth, a sign of making revolution. The so-called revolutionary family background included the origins of poor-and-lower-middle peasants, family members of revolutionary martyrs, government officials and mill workers. These people issued from the qualifying stock with the revolutionary makings and, unquestionably and irreparably, became leaders in the Revolution. Another part of these people was made up of those who opposed Lu Ping during the SEM. They showed a good understanding of the Revolution and were entitled to leading the Revolution now. I remember only the first group of them qualified for wearing the red armband. With the red armband pinned on their left arm, they radiated red, face glowing with health, and stalked along in an imposing manner, breast thrown ahead and eying high, as if they were the conquering hero of the world. I had no idea why the second group of them were denied the privilege of wearing the red armband. This was the business of the revolutionaries, restrained from me, so I did not bother to think about

it. What surprised me was that no one seemed to pass off himself as a revolutionary like Ah Q does, with a badge pinned on his cloth.^[9] Obviously it indicated what high revolutionary consciousness these revolutionaries had. It is only the destiny of the sons and daughters of ranking revolutionary officials that was enigmatic. Their armbands were made of silk as opposed to the cloth-made ones that the rest wore. But their future was rather unfathomable. Today they stood head and shoulders above others and swaggered around because their parents, brothers and sisters were in power. The following day when their family members fell from power, a common occurrence like that happening everyday at that time, their sons and daughters immediately became "the whelp of counter-revolutionary beasts" and had to marginalize themselves in humiliation.

The so-called opposition to Lu Ping traces back to the Socialist Education Movement, in which most of the University's faculty, staff members and students, influenced by the "leftist" ideology, viewed Lu Ping, the secretary of the Party Committee and president of the university, as an official carrying out a capitalist restoration line, which was a revisionist line. So they rose in disclosing his misconduct, turning the campus into chaos, foul and rotten. Because I was as dull as dishwater in political understanding, the "leftist" ideology hit me right away and I went into the movement with all my heart. The more was disclosed, the more I was shocked, thinking Beida had gone to the dogs. I did these dumb things wholly out of my delusion of defending the so-called revolutionary line. I was naive but sincere, absolutely without any personal concerns and ends. In fact, I maintained a good personal relationship with Lu Ping, to whom I was indebted and against whom I held no grudges. Haunted by some heretic ideas, I was bent on criticizing him, ignoring my debt to him, for the goals of socialism. That is the genuine thought of mine at that time. Later Lu Ping's case was redressed at the Symposium at the International Hotel held by the Party's central committee in a call for a unity of the whole university. Those who had criticized him were not hurt at all. I examined my doings, admitted the mistakes I committed and made self-criticism. Before long I went to Nankou in the participation in the

When the Cultural Revolution started, as I mentioned previously, I rode out its initial waves, the stage of condemning counter-revolutionary capitalist scholars. These events were followed by the entering of the PLA team of MTP into the university and the reshaping of the leading body of the Department of Eastern Languages. As one former Lu Ping opponent, I should have fallen into the category of "revolutionary ranking officials." But word had it that I eventually surrendered to Lu Ping, which showed my frail revolutionary conviction, so I should be removed from the revolutionary rank. In contrast, those people, who stood in their ground, believing they had never been wrong for denouncing Lu Ping at the Symposium at the International Hotel, turned out to be heroes. Some of them were promoted to leaders of the Revolutionary Committee of the Department of Eastern Languages and some even to leaders of the Revolutionary Committee of the university.^[10] I had no objection to their promotion. I was concerned with my own fate. One of the young revolutionaries, who was on good terms with me, secretly told me that he saw my name listed under the category of "the critical group" on the PLA team's confidential document. What is "the critical group"? It means I was placed on the side of the people along the line of contradiction between the enemy and the people. A push further would send me down to the side of enemy. At this news, I was at once astonished and overjoyed. I was astonished that I still held my footing at the edge of the precipice. I was overjoyed as if I were on the safe side of the Yin-Yang demarcation on Mount Tai and one step inched further would plunge me down into the bottomless Black Dragon Pond.

In the meantime, the "nationwide revolutionary notes-comparing trip" erupted.^[11] The free train travel provided the opportunity for people of various kinds to make extensive trips across the land in the name of "making revolution." Train stations nationwide were dramatically jam-packed with young travelers on their way to desired destinations, and some people, more aggressive and rough than

others, crawled into carriages through windows. Someone from the top authority said in incitation that it was revolution and exactly the torch lighting. As a result, the country was tossed into hurly-burly. Again someone called it "the right way to disorient the enemy." What sheer nonsense! A shocking baloney! In reality the revolutionary camp itself was first ripped in chaos. The enemy would have relaxed and enjoyed itself if there had been such enemy. But, politically muddle-headed, I never questioned the absurd occurrences then.

The Cultural Revolution started in Peking University. By now the campus had become the holy place of the Revolution, into which each day hordes of visitors, many times the number at the beginning of the huge havoc, flooded in pilgrimage, people coming from every corner of the country on the "nationwide revolutionary notes-comparing trip." They were said to be invited here by someone as guests, to be accommodated not just for their sightseeing but also for their room and board. How could Beida dare to give the slightest cold shoulder to them! All departments set about warm welcomes and shared responsibilities for receiving those "guests" who quickly brimmed a dormitory building. As a man in the "critical group," I was anxious to show my gratitude and faithfulness. I worked hard day and night, taking my share of duty; the "guests" needed quilts so I, with a few others from our department, took quilts from home and brought them to the "guests"; we pushed the water cart and brought hot water to the "guests" every day; after learning they needed washbowls, I paid from my own pocket to purchase twenty washbowls; seeing them using the brand-new washbowls, I was complacent.

But I had been smug with no reason and gone too far, as testified by the old saying that a lifetime is eighty to ninety percent full of misfortune. The young revolutionaries and, of course, some middle-aged revolutionaries, did not appreciate my dedication. Used for only a few days, the new quilts took on a completely new look, with the torn-out exterior layer of fabric revealing the interior cotton. Turning around to look at the washbowls that had been used by them for only a few days, I was even more frustrated; their worn-out appearance,

with dents and scars, was unmistakably a heartbreaking sight. Originally I was sincere and treated these "guests" with awe and respect. The "guests," however, behaved this way in return. It seemed as if I were hit by a sledge-hammer on the head, as a mix of feelings, sour, sweet, bitter and spicy, all sprang up in me, hard to be described.

A period of time later, the country would be swerving to a terrible crisis, if no steps were taken to stop the continued damaging inflow of visitors into Beijing and renew production in some plants, where production ceased and workers went on pleasure tours. Some unknown leading institution made a decision that the fun-seeking visitors to Beijing should be persuaded to leave for home to "make revolution and increase production." Beida's PLA team of MTP assumed this mission. Our department took the responsibility, too, and sent people to the temporary quarters that housed most visitors and talked them into leaving Beijing. Led by the PLA team of MTP, we first went to Xiyi Hotel to talk to those visitors. Why would those pleasure-seeking people listen to us? Hence talking was followed by argument and, sometimes, even heated debate. I grew thirsty, as my voice ran hoarse, and had to swallow humiliation. Finally, our effort paid off, when they gradually started to leave for home.

Then we moved from Xiyi Hotel to the National Bureau of Meteorology, where another round of talk, argument and debate ensued exactly as in Xiyi Hotel. But the experience here broadened my vision. First the big-character posters put out over here excelled in quality. Contrary to the thousands of uniform and vapid big-character posters I had seen previously, the big-character posters and slogans here at the National Bureau of Meteorology emerged with accurate, clear-cut and graphic presentation. Admittedly, some of them were still in the general formality. But some did have the eye popping, stunning expressions, such as "chop so-and-so to pieces" and "deep-fry so-and-so." What a vivid expression the word "deep-fry" is! It gave one an enduring memory. Were these expressions learned from the infernal world as I mentioned at the beginning of this memoir? The

most unforgettable was a session of mass torture I attended against a capitalist roader. A car slowly pulled up and, as the door swung open, a neatly suit-clad (or costly woolen tunic clothed) capitalist roader stepped down from the car, probably an official of a government bureau.^[12] He carefully picked up, from the back seat of the car, a paper-made bizarrely shaped hat, painted with colors and hung with some trinkets, and set it on his head. One of the little things was a small turtle, particularly eye-catching and dangling as the man walked along. When he walked into the room, thundering chants of slogans shot up immediately and echoed through the building. Then speeches of criticism were delivered one after another. When the procedure was over, the capitalist roader was sent out of the room. He stopped before the door of the car and took off the precious headgear; I saw the small turtle still dangling there; and then he carefully put it on the back seat of the car, probably for the sake of using it next time. He smiled all the time. I was totally bewildered. Where did the smile come from? Think about it that he could smile after all the humiliation of "chopping him to pieces" and "deep-frying him." His smile was more puzzling than that of the well-known painting *Mona Lisa*. Anyway the experience uplifted my knowledge to a higher level.

After the mission at the National Bureau of Meteorology was finished, we continued with our work, but, this time, trekked to an institute way from Beida. It was now the winter of 1966. Each day I set off from the university by bike and rode more than one hour before arriving at the destination. Occasionally in the freezing snowy weather when the road was slippery, it would take two hours to get there. We stayed there for lunch but there was no room provided to us. So a shed was set up in the yard as our lunch room. The shed let in winds. How could it shield us from cold air? The food was not warm and turned icy when it was ladled into the bowl. An instant of procrastination in devouring and speedily dumping it into the stomach would turn it into frozen chunks. I imagined Su Wu probably ate this kind of icy food when tending his sheep near the North Sea.^[13] Was it hard life? It is not sincere to deny the fact. But I was in high spirits and joyful. During the first wave of the Revolution, I narrowly missed

being labeled a capitalist roader. Now I was particularly blessed to blend in with the people and make revolution. I should have no complaint.

Some weeks passed this way before the national travel frenzy to Beijing died down and "revolutionaries" gradually took off for home. We successfully completed the mission of persuasion and returned on campus.

In the days that followed, there were some events that delighted me and repeatedly came back to my memory. The first thing was the election of the deputies to the National People's Congress (NPC) of the Haidian district, Beijing. In China, the National People's Congress is composed of three levels of administration. The lowest level is the general meeting of deputies to the NPC from the county or district, who are elected by voters in the local area. Next, they elect deputies to the NPC at the level of the province and municipality. Finally, the National People's Congress, the top level of the legislature, is formed by election of these deputies. The election at the level of county and district is primary but competitive, as voters freely cast their ballots in favor of their own choice, reflecting true democracy. Before the Cultural Revolution I was elected a member of the Chinese People's Political Consultative Conference for a few terms and people's representative of Beijing for one term. Besides, I took part in the election of people's representatives of the Haidian district, Beijing, a couple of times. Now it came as a complete surprise that casting one's ballot was a hard earned right! This election took place after the initial thunderstorm of the Cultural Revolution, in which many former representatives were unable to participate, because they were labeled capitalist roaders and thrown out of the ranks of the "people." Fortunately, I was allowed to stay among the people so I maintained my right to vote. Seeing my name on the list of representatives thrilled me as if the glittering three characters of my name were about to jump off the red paper. The joy, I guessed, would eclipse the excitement of the candidate in ancient times of Chinese history, who successfully passed the imperial examination and saw his name on top

of the list of the announcement. At the moment, I had the feeling that some personal possessions, earlier taken for granted, were actually hard earned. On the voting day, I dressed up and stood among the "people," the ballot clutched in my hand, feeling like it weighed one thousand kilograms. My bliss went beyond description. I did not become, I understood, one of those Indian untouchables, and no one was afraid of my stepping on his shadow.^[14] The ripple of excitement ran through me for days on end.

Another occurrence, also delightful, was stone carved in my memory. In a wheat harvesting summer, the "revolutionary" faculty members and students were sent to help reap the crops, under the leadership of the PLA team of MTP, in a village close to Nanyuan in the suburbs of Beijing. It was, I remember, a year of abundant rainfall, and it rained daily during our stay of more than ten days there. The shower hit and then stopped in a blink of an eye, leaving damages behind. During the day, we carried home bundles of wheat on our backs from the fields and spread them over the threshing ground to dry before threshing. When a shower struck, we were flurried, spreading sheets of oilcloth over the wheat. Right after the shower ceased and the sun came through, we pulled off the sheets. Sometimes we had to do this a few times a day. What bothered us more was the rain at night when we had to leap from sleep and rush to the threshing ground to cover the wheat with sheets of oilcloth. We were dripping with sweat and rain. However, no villager showed up throughout the rescue. At that time, the peasants enjoyed eating from the "Iron Rice Bowl" in the People's Commune, which was supposed to bring them to paradise, instead of pushing ahead on farming.^[15] As a "Stinking Number Nine" that was supposed to be educated by poor and lower middle peasants, I was just unable to make any sense out of it.^[16] In what sense did people like them qualify for educating us? Their conduct was completely contradictory to the portrayal of peasants' admirable moral character, presented in some popular full-length novels of the day. I began to see through those writers' opportunistic and sinister nature. From then on I stopped reading any novel of this kind.

Passing myself off as "people," I was highly motivated. Each day, I carried on my shoulder bundles of wheat in the wheat field. "General Han Xin commands troops as many as he can in war."^[17] So I would carry as much as I could and never let young men beat me in work. Back in the university after the labor, I was commended in the department. I was proud of myself. Life at Nanyuan was, frankly speaking, rather rough. The daily work wore me down. A big warehouse was our lodging at night, which was jammed with the makeshift beds on the floor, providing each sleeper with only room for lying down. In the countryside, mosquitoes were rampant. I was the only one who did not bring the mosquito net and mosquito repellent lotion with me. When the time came for bed at night, others rolled into the net, protecting themselves from mosquito bites. But I offered myself for stings. So the blood-suckers swarmed around me, humming around annoyingly. I became the dutiful son, in the traditional folktale, who draws the mosquitoes to himself to free his parents of the bites. The following morning, I woke up with the mosquito bites all over my body. But I swallowed my discomfort. On the other hand, life there was not monotonous, as we were often gladdened by occasional amusing episodes. One day, for example, a hare suddenly sprang into our sight, when we were carrying the wheat-bundles. Immediately setting down the bundles, we started to chase the hare. It leaped and scampered but we were many, trying to close in. Finally, the hare was caught, one leg broken. In addition, some one liked eating snakes. One day we caught one. Immediately we brought the snake back to the village, found a place, barbecued it, quickly chowed it down, lock, stock and barrel, right on the spot. Didn't these trivial episodes light up those days of monotony and give us some joys?

Half a year of my life flew away in ease and comfort.

[1] Mount Tai, one of the five famous mountains in China, which is located in Shandong, north China.

[2] The Nantianmen, the South Celestial Entrance, a pass and gateway of Mount Tai.

[3] "Active counter-revolutionary," a term used to refer to those who commit counter-revolutionary crimes at recent times, particularly after the founding of new China. The term is usually used to distinguish from the "counter-revolutionary in

history," who committed counter-revolutionary crimes before the founding of new China.

[4] "Making revolution is nothing wrong, and making havoc is absolutely correct," a quotation from Mao Zedong's writing.

[5] The black gauze cap, a cap worn by the government official in ancient China and a figurative usage for government position in new China.

[6] The PLA team of Mao Zedong Thought Propaganda (MTP), groups of the Liberation Army soldiers sent to the colleges by the Central Committee of the CPC, the State Council, the Central Military Commission and the Central Leading Board of the Cultural Revolution issued on January 23, 1967, to give total support to the "left" factions of revolutionary people during the Cultural Revolution.

[7]"The havoc-making people," a popular term used positively during the Cultural Revolution, refer to those revolutionaries actively engaged in attacking the targets of the Revolution but later became a despising term for those who were ambitious for power and committed atrocities in the Revolution.

[8]The "class line," a "left" fundamentalist policy, used in political movements, employment, particularly in the Cultural Revolution, which emphasizes one's family background, or specially the revolutionary family background, as a primary consideration for employment, college admission, the Party and Communist Youth League membership, etc.

[9] Ah Q, the protagonist in Lu Xun's novel *A Biograph of Ah Q*, who is inspired by lofty and impractical ideas and never admits defeat.

[10] The Revolutionary Committee, Ji refers to the board of administration of Beida that replaced the original administration during the early stage of the Cultural Revolution; the first Revolutionary Committee was Shanghai Municipal Revolutionary Committee established on February 23, 1967.

[11] The "nationwide revolutionary notes-comparing trip," a large-scale student activity, in which college and middle school students from all parts of the country, from September to the middle of November of 1966, took trips to destinations of their own choice by train or bus free of charge and were provided with the accommodations at discount or free of charge. During this period, 11 million of Red Guards and revolutionary students came to Beijing and received the review of Mao Zedong in eight separate times in Tian'anmen Square.

[12] An official of a government bureau, an administrative government position right below the minister or provincial governor.

[13] Su Wu (140–60 B.C.), a messenger sent by Emperor Wudi of the Han Dynasty

(206 B.C.–A.D. 220)in 100 B.C. to the country of the Huns north of China, but arrested and exiled by the Huns for nineteen years.

[14] Indian untouchables, meaning the Shudras in the Indian caste.

[15]The "Iron Rice Bowl" and the People's Commune, a form of the planned system, carried out in the years of 1958 and 1959, in which Chinese peasants worked in the collective fields and had free meals in the dining hall of the People's Commune, eventually causing catastrophe to the agricultural production.

[16] "Stinking Number Nine," a contemptuous term used to refer to intellectuals during the Cultural Revolution, who were ranked at the bottom of the nine most despised categories of people—landlords, rich peasants, counter-revolutionaries, bad elements, Rightists, traitors, spies, capitalist roaders, and intellectuals.

[17] Han Xin (c. 231–196 B.C.), a general in the Han Dynasty, during the reign of Liu Bang (256-195 B.C.). Once he talks with Liu Bang about the number of troops a general can command, saying, "In terms of my commanding of troops, the more, the better."

伍 快活半年

大家都知道，泰山上有一个“快活三里”。意思是在艰苦的攀登中，忽然有长达三里的山路，平平整整，走上去异常容易，也就异常快活，让爬山者疲惫的身体顿时轻松下来，因此名为“快活三里”。

“文化大革命”无疑是一场艰苦的攀登，其艰苦惊险的程度远远超过攀登泰山南天门。我也不不可避免地成为这一场“革命”的攀登者。可是从1966年下半年至1967年上半年，大约有半年多的一段时间，我却觉得，脚下的路虽然还不能说是完全平坦，可走上去比较轻松了。尽管全国和全校正为一场惊天动地、巨大无比的风暴所席卷，我头上却暂时还是晴天。在经过了第一阵艰险的风暴以后，我得到了一个喘息的机会，心里异常喜悦，我在走自己的“快活三里”了。

我从前只知道，有一些哲学家喜欢探讨人在宇宙中的地位问题，与此有牵连的是人在社会中的地位问题。我可从来没有关心过我自己在社会中的地位如何。解放以后，情况变了。政治运动一个接一个。在每一次政治运动中，每一个人都有一个在运动中的地位问题。粗略地说，地位可以分为两大类：整人者与被整者。细分起来，那就复杂得多了，而且这个地位也不是一成不变的。随着运动的进展，队伍不断地分化，重新组合。整人者可以变为被整者，而被整者也可以变为整人者。有的在这次运动中整人或者被整，到了下一次运动，地位正倒转过来。人们的地位千变万化，简直像诸葛武侯的八阵图，令人眼花缭乱，迷惑不解。

在“文化大革命”中，我当然非常关心自己的地位。我在上面谈到的帽子问题，实际上也就是地位问题。我的地位长期悬在空中，心里老是嘀嘀咕咕，坐卧不宁。后来我逐渐发现，自己还没有被划归敌我矛盾。有这一点，我就放心了。我仍然是“人民”，这对我来说是天大的事情。我于是打着人民的招牌，逍遥起来了。要知道，在当时，在敌我矛盾与人民内部矛盾之间，在人民与所谓“反革命分子”之间，横着一条其宽无比、其深无比的鸿沟。如果处在鸿沟这一边，在人民的这一边，许多事情都很好办，即使办错一件事，说错一句话，这都算是一时不小心所犯的 error，没有什么了不起。但是，如果被划到对岸去，成为敌人，那就会有无限的麻烦，即使夹起尾巴，处处谨小慎微，决不敢乱说乱动；可是一时不慎，办错一件事，说错一句话，比如把“资本主义”说成“社会主

义”或者倒转过来，那就必然被上纲到反革命的高度，成为现行反革命，遭到批斗。

但是划分敌我、划分两类不同性质的矛盾，这个权力掌握在谁手里呢？我真有点说不清楚。我的脑筋简单，百思不得其解。虽然我暂时处在鸿沟的这一岸，但是却感觉到，自己像是在走钢丝，一不小心，就能跌落下去，跌落到鸿沟的对岸。那就等于跌落到地狱里，永世不得翻身了。

我原来是东语系的系主任。这时当然已经不再是了。是免职？是撤职？谁也搞不清楚，反正也用不着搞清楚。“革命无罪，造反有理”，这就是当时的行动方针。至于什么叫“革命”，什么又叫“造反”，也没有人去追问。连堂堂的国家主席，也不用经过任何法律就能够拉出来批斗，我这个小小的系主任，不过等如一粒芝麻、绿豆，当然更不在话下了。但是，我虽然失掉了那一顶不值几文钱的小小的乌纱帽，头上却还没有被戴上其他的帽子，这就可以聊以自慰了。

这时候，学校里已经派来了支“左”的军宣队。每一个系都有几个解放军战士和军官。系里的“造反派”也组成了一个领导班子。造反派是怎样产生出来的呢？专就东语系而言，情况大概是这个样子：一些自命为出身好的教员和学生，坚决贯彻“阶级路线”，组成了造反派，在自己胳膊上缠上一块红布，这就算是革命者的标志。所谓出身好，指的是贫下中农、革命烈属、革命干部、工人。这些人根子正，一身红，领导革命，义不容辞。再一部分人就是在社教运动中反对过陆平的人。他们觉悟高，现在来领导革命，也是顺理成章。我记得，戴红臂章的人似乎只限于第一种人。臂章一戴，浑身红透，脸上更是红光满面，走起路来，高视阔步，威风凛凛，不可一世。为什么第二种人不能戴红臂章，我不清楚。这是他们革命家内部的事，与我无干，我也就不再伤脑筋了。我奇怪的是，好像还没有人像当年的阿Q那样，别上徽章，冒充革命。由此也可见，这些革命家的觉悟有多么高了。只有革命干部的子弟有点玄乎，虽然他们比别人更自命不凡，臂章一定要红绸子来做，别人只能带红布的；但是他们的地位却不够稳定。今天他们父母兄姐仍在当权，他们就能鹤立鸡群，耀武扬威；明天这些人一倒台——当时倒台是非常容易的——他们的子弟立刻就成为“黑帮的狗崽子”，灰溜溜地靠边站了。

所谓反对陆平，是指1964年在社教运动中，北大一部分教职员工和学生，在极“左”思想的影响下，认为当时的党委书记兼校长陆平同志有严重问题，执行了一条资本主义复辟的路线，是修正主义的路线。于是

群起揭发，一时闹得满园风雨，乌烟瘴气。我的水平奇低，也中了极“左”思想的毒，全心全意地参加到运动中来。越揭发越觉得可怕，认为北大已经完全烂掉了。我是以十分虔诚的心情来干这些蠢事的，幻想这样来保卫所谓的革命路线。我是幼稚的，但是诚实的，确实没有存在着什么个人考虑、个人打算。专就个人来讲，我同陆平相处关系颇为融洽，他对我有恩而无怨。但是，我一时糊涂蒙了心，为了保卫社会主义的前途，我必须置个人恩怨于度外，起来反对他。这就是我当时的真实的思想。后来中央出面召开了国际饭店会议，为陆平平反，号召全校大团结，对反对过陆平的人，连一根毫毛也没有碰。我经过反思，承认了自己的错误，做了自我批评。到了1965年的深秋，我就到了京郊南口村，参加农村的社教运动。

到了“文化大革命”，正如我在上面已经谈过的那样，我经过了首次冲击，比较顺利地度过了资产阶级反动学术权威这个阶段。后来军宣队进了校，东语系干部队伍重新组合。我曾经是反过陆平的人，按理说也应该归入“革命干部”队伍内；但是，据说我向陆平投降了，阶级立场不稳，必须排除在外。那几个在国际饭店坚持立场，坚决不承认自己有任何错误的人，此时成了真正的英雄。有的当了东语系革命委员会的头头，有的甚至晋升到校革命委员会中，当了领导。我对此并无意见。但是，我仍然关心自己的地位。一位同我比较要好的革命小将偷偷告诉我，他看到军宣队的内部文件，我是被排在“临界线”上的人。什么叫“临界线”呢？意思就是，我被排在敌我矛盾与人民内部矛盾中间那一条界线的人民这一边。再往前走一步，就堕入敌我矛盾了。我心里又惊又喜。惊的是自己的处境真是危险呀，喜的是，我现在就像是站在泰山上阴阳界那一条白线这一边，向前走上一寸，就堕入万丈悬崖下的黑龙潭中去了。

此时，全国革命大串联已经开始。反正坐火车不花钱。于是全国各地的各类人物，都打着“革命”的旗子，到处旅游。所有的车站上都是人山人海。只要有劲，再耍上一点野蛮，就能从车窗子里爬过人墙，爬进车厢，走到愿意到的地方去。上面有人号召说，这就是革命，这就是点燃火炬。结果全国一团混乱，到处天翻地覆。有人说，这叫做“乱了敌人”。一派胡言乱语，骇人听闻。是自己乱起来了。如果真有敌人的话，他们只会弹冠相庆。我觉悟低，对于这一套都深信不疑。

北京大学本来就是“文化大革命”的发源地。到了此时，更成了革命圣地。每天通过大串联到燕园来朝圣的，比“文化大革命”初起时，更多

了不知多少倍。来的这一批人据说是什么人的客人。不但来看，而且还要来住，来吃。北大人怎敢怠慢！各系都竭诚招待，分工负责一座住满了“客人”的楼。我自己既然被恩准呆在临界线的这一边，为了感恩图报，表示自己的忠诚，更加振奋精神，昼夜值班。“客人”没有棉被，我同系里的其他人，从家里抱去棉被。每天推着水车，为“客人”打开水。我看到“客人”缺少脸盆，便自己掏腰包，一买就是二十个。看着崭新的脸盆，自己心里乐得开了花。

但是，正如俗话所说的，天下不如意事常八九。我快活得太早了，太过分了。革命小将，当然也有一些中将，好像并不领情。新被子，只要他们盖上几夜，总被弄得面目全非，棉花绽了出来，被面被撕破。回头再看脸盆，更让人气短。用了才不过几天，盆上已经是疮痍满目，惨不忍睹。最初我真是出自内心地、毕恭毕敬地招待这些“客人”，然而“客人”竟是这样，我的头上仿佛狠狠地给人打了一巴掌，心里酸甜苦辣，简直说不出是什么味道了。

过了一段时间，大概到北京来的人实在太多了，有的地方甚至停产旅游，再不抓，就会出现极大的危机了。上头不知道是哪一个机构做出决定，劝说盲流到北京来的人回自己的原地区、原单位去，在那里“抓革命，促生产”。北大的军宣队也接受了这一项任务。东语系当然也分工负一部分责，到校外外地人住得最多的地方去说服。我们在军宣队的带领下，先到离学校最近的西颐宾馆去劝说。那些尝到甜头的外地人哪里会自动离开呢？于是劝说，辩论，有时候甚至有极其激烈的辩论。弄得我口干舌燥，还要忍气吞声。终于取得了一些成果，外地人渐渐离开这里，打道回府了。

从西颐宾馆转移到稍稍远一点的国家气象局。在这里仍然劝说、辩论，展开激烈的辩论，一切同在西颐宾馆差不多。但是，我在这里却大开了眼界。首先是这里的大字报真有水平。大字报我已经看了成千累万，看来看去，觉得都非常一般化，我的神经已经麻木，再也感不到什么新鲜味了。这里的大字报，大标语却真是准确、鲜明、生动。那些一般化的大字报当然也有，可也有异军突起、石破天惊的，比如“切碎某某某”、“油炸某某某”等等。“油炸”这个词儿多么生动有力！令人看了永世难忘。难道这也是同我在本书开头时讲的那样从阴曹地府里学来的吗？最难忘的一件事情就是，我亲眼目睹了一次批斗走资派的会。一辆小轿车慢慢地开了过来。车门开处，一个西装（或者是高级毛料制服）笔挺的走资派——大概是局长之类——从车上走了下来，小心翼翼地从车的

后座上取出来一顶纸帽子，五颜六色，奇形怪状，戴到了自己头上。上面挂满了累累垂垂的小玩意儿，其中特别惹人注目的是一个小王八，随着主人的步伐，在空中摇摆着。他走进了会场，立即涌起了一阵口号声，山呼海啸，震天动地。接着是发言批判。所有的仪式都进行完毕了以后，走资派走出会场，走到车前，把头上的桂冠摘下来——我注意到小王八还在摆动——小心翼翼地放到后座上，大概是以备再用。他脸上始终是笑眯眯的。这真让我大惑不解。这笑意是从哪里来的呢？在“切碎”、“油炸”了一通之后，居然还能笑得出来！这点笑容真比蒙娜丽莎脸上著名的笑容，还更令人难解。我的见识又提高到了一个新的高度。

气象局的任务完成了，我们又挥师远征，到离开北大相当远的一个机关，去干同样的工作。此时已是1966年的冬天，天气冷起来了。我每天从学校骑车到现场去，长途跋涉，一个多小时才能到达。遇上雪天，天寒地滑，要走两个小时。中午就在那里吃饭。那里根本没有我们呆的房间。在院子里搭了一个天棚，吃饭就在这里。这个天棚连风都遮不住，遑论寒气！饭菜本来就不够热，一盛到冰冷的碗里，如果不用最快的速度狼吞虎咽地把饭菜扒拉到肚子里，饭碗周围就会结成冰碴。想当年苏武在北海牧羊，吃的恐怕就是这样带冰碴的饭。这样的生活苦不苦呢？说不苦，是违心之谈。但是，我的精神还是很振奋的，很愉快的。在第一次革命浪潮中，我没有被划为走资派，而今依然浪迹革命之内，滥竽人民之中，这真是天大的幸福，我应该感到满足了。

这样过了一些日子，外地来京串联的高潮渐渐过去，外地来京的“革命群众”渐渐都离开了北京。我们劝说的任务可以说是胜利完成，于是班师回校。

回到学校以后，仍然有让我忆念难忘，也颇值得高兴的事情。首先是海淀区人民代表的选举。在中国，人民代表大会是三级制，最下一级是区、县的人民代表大会，是由选民直接选举代表而组成的。再由区、县人民代表大会选出省、市人民代表大会的代表。最后由省、市人民代表大会选出代表，组成最高一级的全国人民代表大会。区、县代表名义上虽低，但是真正由选民选出的，最能体现真正的民主，竞争也最激烈。在“文化大革命”以前，我担任过几届全国政协委员，一届北京市人大代表。海淀区人大代表选举也参加过几次。当时我可真是万万没有想到，能投上一票也并不容易！这一次选举是在“文化大革命”初期风暴过后举行的。很多以前有选举权的“人民”，现在成了走资派，相应被挤出“人民”的范围，丢掉了选票。我幸而还留在人民内部，从而保住了选

举权。当我在红榜上看到自己的名字时，那三个字简直是熠熠生光，仿佛凸了出来一样。当年在帝王时代“金榜题名时”的快乐，恐怕也不会超过我现在的快乐，我现在才体会到，原来认为唾手可得的東西，也是来之不易啊！投票的那一天，我换上了新衣服，站在“人民”中，手里的红红的选票像千斤一般重。我真是欢喜欲狂了。我知道，自己还没有变成像印度的不可接触者那样。还没有人害怕我踩了他的影子。幸福的滋味溢满我的心中，供我仔细品尝，有好多天之久。

还有一件事情也带给了我极大的快乐，给我留下的回忆永世难忘。在一个麦收季节，东语系的“革命”师生奉派在军宣队率领下到南苑附近的一个村庄里去协助麦收。记得那一年雨比较多。在那里住了十多天，几乎天天下雨。雨下不长，几乎是转眼就过。可也制造了不少麻烦。我们白天从麦田里把捆好的麦子背回村里，摊在麦场上，等候晒干，再把麦粒打出来。一阵雨一来，我们就着了慌，用油布把麦子盖上。雨一过，太阳一出，再把油布掀掉。有时候一天忙活好几阵子。特别是夜里下雨，我们立即起身，跑到场里盖油布，忙得浑身大汗，再被雨水一浇，全身成了落汤鸡，然而农民却没有一个出来的。那时他们正在通向天堂的人民公社里吃大锅饭，谁也不肯卖力。像我这样准备随时接受贫下中农再教育的“老九”，实在有点想不通。这样一些人拿什么来教育我们呢？再想到那些风行一时的、把农民的觉悟程度拔到惊人高度的长篇小说，便觉得作者看风使舵，别有用心。从那时起，再也不读这样的小说了。

我混迹“人民”之中，积极性特别高。白天到麦田里去背捆好了的麦子，我是“韩信将兵，多多益善”，我背的捆数决不低于年轻的小伙子。因此回校以后，受到系里的当众表扬，心里美滋滋的。但是，在南苑的生活却不能说是舒服的。白天劳动一天，身体十分疲惫。晚上睡在一间大仓库里。地上密密麻麻地布满了地铺，一个人所占的面积仅能容身。农村蚊子特多，别人都带了蚊帐，外加驱蚊油。我是孑然一身，什么都没有带。夜里别人都放下帐子，蚊子不得其门而入。独独我这里却是完全开放的，于是所有的蚊子都拥挤到我这里来，蚊声如雷，下袭如雨。我就成了旧故事中的孝子，代父母挨咬。早晨起来，伤痕遍体，我毫无怨言。而且生活并不单调，也时有興味盎然的小插曲。比如有一天，正当我们在麦田里背麦捆时，忽然发现了一只小野兔。于是大家都放下自己手中的活，纷纷追赶兔子。不管兔子跳得多快，我们人多势众，终于把小兔的一条腿砸断，小兔束手被擒。另外，有的人喜欢吃蛇。一天捉

住了一条，立即跑回村内，找了一个有火的地方，把蛇一烧，就地解决，吞下肚中。这样一些再小不过的小事，难道不也能给平板的生活涂上一片彩色，带来一点快乐吗？

我就是这样度过了快活半年。

6 STICKING MY NECK OUT

My good time did not last long.

I enjoyed myself until the end of the summer in 1967.

At this time of the Revolution, Beida's young revolutionaries, joined by some middle-aged and old ones, divided into a few factions. As it follows the law of nature, a true statement from *Three Kingdoms* goes like this, "The law of alternation between unity and separation prevails in the evolution of human existence."^[1] Now it was time for separation.

During a short period of time before the breakup, the university was united and there was only one grass-roots revolutionary organization, called "New Beida Commune." One of the leaders of this organization was the notorious "Old Dowager," one of the authors of the so-called "first Marxist-Leninist big-character poster." It was said that this person was a capitalist roader of "Sanba Type," conventionally considered as a revolutionary veteran.^[2] But she did not behave well after being assigned to work at Beida. An old lady, she dressed up bewitchingly. She first worked as deputy head of the Department of Economics and was then transferred to the Department of Philosophy, where she worked as Party general secretary. With a stroke of luck, she became the center of attention overnight and stood a chance of rising in power, just thanks to her signing on the first Marxist-Leninist big-character poster, endorsed by some higher-ups in the central government and the Party, and her contribution as an informer. I met this woman a couple of times and knew quite well she was worthless, dumb, cunning, bull-headed and vain. She would make a mess and ridicule herself each time she delivered a speech. Hence during her speech each time, the heart of her faithful followers was in their mouth until it was over. It was weird that a person of this kind found her way up the University's hierarchy of Party and administration, unscrupulous as she was in riding roughshod over

others.

It is universally true in history that oppression leads to rebellion. Gradually some students could not tolerate her domineering, and a bunch of big and small organizations came into being parallel to the "New Beida Commune" as the Revolution proceeded. These organizations defined themselves as the combat brigade and almost all named themselves after the phrases from Mao Zedong's poetry, things like the "Grey-Dragon-Catching Brigade," the "Ninth Heaven Moon-Clasping Brigade" and "Over-Leaping Brigade."^[3] The poetry was exhausted of its phrases for the naming and the newly established brigades found themselves lacking an appropriate name. The brigades varied in size considerably, big ones each having tens or hundreds of people and small ones with any number between more than a dozen and less than half of it. It was said that there were even some single-person brigades, each of which contained just one person. The paper work for registering such a brigade was exceptionally simple, just putting out a big-character poster, scribbling a few words on it like "The east wind raging and the beat of drums roaring, let us go to the war and see who wins and who loses," and then yelling a couple of slogans, "Long live so-and-so." That was done. There was no such thing as registration and approval by a higher-level administration, nor did any person ever come to check on the legal proceedings. It defied any tallying how many combat brigades had eventually been set up at that time. Even if Mr. Hu Shih had risen from his tomb, he would probably have found himself oafish, given all his erudite research capabilities.^[4]

Meanwhile the big-character posters mushroomed. The walls and mat-covered makeshift bulletin boards were long in shortage. So another large group of mat-covered makeshift bulletin boards were erected for use. In addition to most big-character posters announcing the establishment of the new combat brigades, some writings denounced capitalist academic authorities. Some of the big-character posters ran on about four or five pieces of paper; others expanded to nine or ten pieces and even to a hundred, with the tendency of getting longer and longer. Some nearby residents made a living by collecting

and selling the paper. It was said that some students practiced calligraphy in writing big-character posters. On the basis of my observation, the handwriting on the big-character posters, unquestionably, improved drastically, as time went on. It is a by-product of the Cultural Revolution, which many have probably failed to take into account in assessment.

Taking advantage of the big-character posters, combat brigades emerged one after another in various splendid forms. After the initial contention for individual identity, they started to merge with each other. Their numbers grew and then settled down to two big factions: the original, formally authorized "New Beida Commune" and its antagonistic conglomerated "Jinggangshan." The first ran like the majority party and the second like the minority party, just like the Conservative Party and Labor Party in Great Britain. Between the two factions, power struggle was inevitable and, in most cases, was reflected in the form of the big-character poster. I am not well-informed about the politics of the two parties in Great Britain. But it is said that they generally stick to the rule of "fair play." In China, fair play, that foreign stuff, was primarily ignored. In this country, the ends were pursued with no consideration of means. It was quite common to hurt others with rumor, slander and personal attack. This practice gave rise to a new "material" called "faction strife." As soon as this new thing was produced, its force immediately took on an epidemic dimension. Anyone who picked up this bug would become hostile to those holding a different political stand; friends became foes and a family ended up in a divorce. I was absolutely perplexed. Why didn't people show such hostility in resistance to foreign invasion? Someone even put up a big-character poster claiming, "I'll devote my whole life to the defense of Nie and Sun and never regret!"^[5] What an extraordinary resolution! If they had made such considerable effort in realizing the four modernizations, China would have become the large industrial dragon in Asia to stun the "Four Little Dragons."

Many years have passed. How are these two major factions evaluated? At that time when the factional strife rampaged, it was

impossible to make an objective assessment. I think such work can be done now. The two factions are basically made up of young faculty members and students. For various reasons, the elderly were not very interested in joining in these organizations. Naturally each faction had its own platform, but I don't think any of them was very clear about what its platform meant. In terms of their political tendency, they all followed the line of fundamental "leftism," to the same extent, by committing crimes of beating, smashing, looting and home raiding. Sometimes when a professor, or an administrative official, was falsely charged with misconduct, each of the two factions would subject the person to criticism and torture. In the meantime the way the torture sessions were conducted was exactly the same. It seemed that the people of both factions suffered from the same acute mania of persecution and brutality. As the condemned person got bruises and cuts, head bleeding, the people from either faction just found lots of pleasure in watching, chatting and laughing. The tool for torture also showed the persecutor's originality, the bike chain wrapped up with a piece of rubber. It had the effect of imposing severe pain but causing no bleeding during the beating and leaving no evidence for accusation. To intimidate others that "Old Dowager" often brandished her legitimate power in terms of her connections with Jiang Qing, to terrify her opponents. "Jinggangshan" displayed no submissiveness and claimed its access to Jiang Qing, too. However, neither of the two factions was able to justify its claim with evidence that it was Jiang Qing's closest follower. Indeed, they were quite different in one way: the "New Beida Commune" was in power at Beida and swaggered around; "Jinggangshan," in contrast, was always oppressed, which usually resulted in ordinary people's sympathy.

From my observations, the two factions rivaled for power, since their respective platforms were just six of one and half a dozen of the other. "Have the power and then have everything," an aphorism that both truly believed. To grab the power and rule the university, the opposing faction must be crushed. Accordingly, they both painstakingly solicited and persuaded faculty and staff members to win them over to their respective sides and enlarge their ranks. At this

time, each side controlled parts of the property with the "New Beida Commune" possessing the lion's share of the campus, "All lands under the Heaven are in the reign of the king."^[6] "Jinggangshan" took only a few student dormitory buildings in the residential area. Each building was gradually turned into a fort and heavily guarded. Later each faction developed some hand-made weapons. Financially better off, the power-holding "New Beida Commune" made a spear out of the costly steel tube by cutting off one end and sharpening it to a point. This weapon was rather primitive, but it was quite a threat to those empty-handed fighters from "Jinggangshan." Not content with its inferior equipment, "Jinggangshan" scraped together some weapons for use, too. It was said that each side had some people working on the production of bombs. The hostility eventually led to a few skirmishes, and one high school student, an outsider happening to come on campus one day, was speared to death by the "New Beida Commune" members.

It was a war of life and death. But it was periodically peppered with amusing occurrences. The backbone of the battling forces from both sides was the young students; they were green and frivolous. For example, one day the two factions held a debate session in the main student cafeteria. During the heated and tense debate, emotion ran high on both sides and supporters chanted slogans for their respective sides. Suddenly a bunch of worn-out shoes, strung through with the rope, were lowered down from the ceiling of the cafeteria. The meaning of "the worn-out shoe" was very clear to the Chinese, particularly to people from northern China.^[7] ... In such a tense atmosphere, each side focused on how to rout the other in deep hatred, when the unexpected appearance of the shoes at once caught the attention of all present. The first reaction from the crowds was surprise, which was quickly followed by a burst of laughter. But how could a serious debate be carried on? Later on strings of worn-out shoes also dangled out of the windows of a student dorm occupied by "Jinggangshan." The intention was the same. Were these events not entertaining interludes?

I attended another debate session in the cafeteria. The leaders of the two sides were seated on the platform, and their supporters took seat in the audience. The titles of these leaders were changed. They were called "orderly" (probably only used by "Jinggangshan") instead of the dean or department head. The change felt as fundamentally revolutionary as the French Revolution, during which the leaders were addressed as ordinary people. Among the leaders of "Jinggangshan" sitting on the platform was an old man who was a famous scholar on fluid dynamics and relativity and a man of integrity. He enjoyed widespread respect from faculty members and students and was one of a few scholars who the Central Party Committee specified for protecting from harassment in the Cultural Revolution. I have no idea how he joined the unofficial faction organization. Later I picked up scraps of information that he was discontented with the behavior of the "Old Dowager" and became gradually sympathetic with the "Jinggangshan." Then, the "New Beida Commune" sent its members to harass him; some pestered him at home; some taunted and intimidated him by phone. The old man was rather disturbed. Originally he did not intend to join "Jinggangshan." Forced into a corner now, he resolved to throw his lot together with that of the organization. At once, he was elected one of the general "orderlies" of the "Jinggangshan." Now participating in the debate in the main student cafeteria, he was the oldest among those sitting around him on the platform. The cafeteria was packed to capacity with people of both sides present. The topics ranged over many issues, and the speeches filled with nothing but boasts about one's own side and taunts against the other, quite reminiscent to me of the face-to-face presidential debates televised live in the United States. A climax usually occurred when the crowds applauded and cheered at witty remarks uttered by speakers. Then the sword drawn and bows bent hostility mixed with boisterous conviviality, a rowdy scene rocking the student cafeteria.

Meanwhile the whole university was hardly different either (as well as the whole country). That well-known saying, "the right way to disorient the enemy," was simply out of whack. Who knew who was

the enemy? At that time, the country as a whole underwent a reshaping of factional organizations, dividing and merging, before two large antagonistic factions were formed in each area. In Beijing the two factions were called the "Sky Party" and the "Earth Party." Each party considered itself revolutionary and the opposing party as the enemy. The PLA teams were sent to colleges and universities in support of the "left" factions but found it hard to distinguish the "left" from the right. Eventually the military men, in some local places, took sides too. Actually, the revolutionaries deranged themselves. If there had been some real enemies, they would have stood by in silence, clapping and cheering in secret.

How did I fare at this moment?

Well, I appreciated my hard gained opportunity for passing myself off as one of the people. Therefore I decided never to join any factional group. To be a man of non-affiliation was my only choice but also a rather broad road to take. In the chaos of the university, taking this road would allow me to be free of concern and anxiety and live in a place of quiet like Utopia. As "classes were suspended for making revolution," I had no teaching responsibilities, nor did I need to write for publication. Once in a while when I was in good mood I would venture out and explore the big-character posters and attend the sessions of debate. I was carefree and enjoyed myself, like a living immortal. I couldn't help smiling, occasionally, at the thought.

However, there was neither Utopia in the world, nor at Beida. I was rocked by the occurrences that took place every day around me. I had feeling and emotion and could scarcely remain numb. I had to respond. At Beida, I had been department head for twenty years and worked as president of the Trade Union of the University and held a few important social positions in the past, including those as the member of the Chinese People's Political Consultative Conference and representative of the People's Congress of Beijing. One old saying goes like this, "A tall tree catches the wind." I was not a very tall tree but certainly tall enough to catch some wind. Besides, I have some unique personal features. It is the sense of justice, if put in good terms. To

view its flip side, it is my inborn obstinacy. Even if Beida had had a sanctuary could I have been able to get inside? I was destined to weather storms.

What should I do if I did not seek the sanctuary? Gradually, I discovered that the woman leader of the "New Beida Commune" was disgusting. What she did contradicted the revolutionary line discussed previously. What was the revolutionary line? I didn't quite understand it. I had attended the political study more than ten years, listening to those discussions every day. Bit by bit, I slowly shook off my slow-wittedness and understood that good work could not be completed unless there was a close relationship with the masses. I believed the way a leader responds to criticisms of the people was a fundamental rubric for evaluating his conduct and an important standard for judging whether or not he carried out the supremely upheld revolutionary line. In this regard I thought, in my personal view, that the woman veered off the correct course. She was an empress leading the "New Beida Commune," which was in power at the university. At this point, the university's "Revolutionary Committee" was established on the instructions of the higher authorities. "The Revolutionary Committee is good," the quotation, from the supreme leader, immediately resounded through the country after it was issued. Certainly Beida would not content itself with being left behind so that woman "legitimately" became the chieftain of the new power, director of the Revolutionary Committee of Peking University. What good luck she had! It only puffed her up with arrogance, who was, from top to toe, a loafer with a low Intelligence Quotient and nothing useful to brag about except cunning gimmicks; then she grew more arrogant and bossy, flattered by her subordinates. A slight discontent toward her would surely ensure severe penalties in terms of removal from office, salary suspension and a stab in the back, occurrences settling into daily rituals. A harsher treatment would be the declaration of "down with so-and-so" immediately turning one into the enemy and subjecting him to death at will. She was, indeed, responsible for a few persons' lives, such as the high school student who was killed with the spear by the people of the "New Beida Commune," whom I talked

about previously. Her behavior toward common people enraged me, so I believed she acted against the revolutionary line. I just could not sit tight on a fishing boat when the wind was rising and waves were surging.

But I knew of this woman chieftain quite well. A bonehead, she was wicked, treacherous and cruel. I would rather avoid confronting her directly. Therefore, I had to be low profiled, straddling the issue of faction as a fence sitter.

Meanwhile, a few events call for attention at this point. First, a rally was held in front of the Indonesian Embassy to China in Beijing, probably to retaliate the incident of setting fire to the Chinese Embassy to Indonesia in Djakarta. It was a widely acclaimed patriotic action. Neither of the two factions of Beida would like to miss this opportunity to assert influence and win more masses unto their sides. They sent all their members on the trip to the rally. Lined along the avenue leading to the south gate were tens of rented trucks awaiting the rally participants from both factions. As people walked to the trucks of their respective sides, I had problem deciding on which side's truck I should board. Seeing me hesitating, a few major leaders from both sides rushed over and courteously tried to talk me into getting onto their trucks. One woman, on the side of "Jinggangshan," was from the Department of Eastern Languages. She was particularly solicitous in doing so. Frankly, I wanted to go with them. But I was a little worried and did not want to run risks. The "New Beida Commune" was no less eager to bring me onto its bandwagon. After quite a while of hesitation over the choices, I got on the Commune's truck. It was a boisterous ride with the flags flying on the truck. Over there in front of the Indonesian Embassy, we chanted slogans before riding through the city back home, everyone in high spirits.

Another event is the trip to the home of a high-ranking PLA officer to "make revolution" or "single him out for condemnation." He lived somewhere in the area of Yuquanshan.^[8] I forgot the reason why we should go to his place and harass him. But it was quite ordinary at that time that any combat brigade, backed up by a certain ranking

official, had the legitimate right to do away politically with whoever it wanted to. I was not sure of his exact address. Since it was a short trip, no truck was needed, so the majority of us walked there. I was one of "the bike class" people and so I rode my bike. This time I did not have the predicament of identifying with any faction as I did on the previous trip to the Indonesian Embassy. No people vied with one another for pulling me over onto their side. As an independent party, I merged into the stream of bicyclists, not knowing which faction they were from. As we rode past Qinglongqiao, I saw some people riding toward the Western Hills.^[9] Then I followed them all the way to the Wan'an Cemetery on the other side of Yuquanshan. Knowing I was lost, I turned around and got back to Qinglongqiao. Then I heard some people talking loudly that "the revolution was done." So I followed the group back to the university. Even at this point, I had no idea where that high-ranking PLA officer lived and what his gate looked like. I think this is the way that the revolution was "made" at that time.

Another important happening deserves mention. The two factions of Beida both ran faculty and staff study programs in order to rope in members for their respective ranks. Some university officials, who were denounced and tortured as capitalist roaders, were now, for some undeclared reasons, left alone and free of condemnation. They became targets of being won over by the two factions. I was one of them. Many faculty members of the Department of Eastern Languages encouraged me to join in their study program. "Jinggangshan" tried to talk me into going with it, while its opposing side did the same. After a long time of observation and hesitation, I thought I should take a cautious step. If I made my debut in the study program run by "Jinggangshan," my life would be at stake. Obviously the "New Beida Commune" reigned and swayed the university with its overwhelming strength of membership as well as that narrow-minded partisan leader. If I offended them, I could no doubt incur unimaginable retaliations upon me. I pondered long before making the final decision of attending the program of the "New Beida Commune," for the sake of my security. On the surface, the two sides did not differ from each other in achieving their objectives, both declaring their loyalty to the

great leader, and his wife in particular. Their unchecked demonstration of loyalty to the latter was inconceivable in one sense that innumerable big-character posters were put up, showering her with flatteries as if she were the Virgin Mary incarnate. I was politically crack-brained and therefore credulous whole-heartedly. Though later I overheard some speculations against her, I didn't change my views.

With the lapse of time I could not keep the lid on my thought any longer thanks to my inborn candidness. I had to speak out and then I would feel relieved. My frank avowal of perception toward the two sides would soon land me in a quagmire. Followers of each faction, particularly students, took turns in coming and persuading me into joining them. Students from the "New Beida Commune" came to my home and office. How could I maintain my office by then? But I remember, though I'm not quite sure, I did meet them in my office. I may bring back the memory of it later on. They made their requirement clearly to me by saying, "You can't join Jing's side," meaning "Jinggangshan." Obviously, it was a courteous expression. A direct and rude utterance would be a warning like this, "Watch your head!" At the same time, someone called me at home, talking and admonishing me; some used polite and complementary words, while others gave me stern rebukes. Such talks came in various ways and steadily. Now I found myself in the same circumstance as that of the professor I talked about before. I could not sit tight any more. But, obstinate as I was, the more you press on me, the more I won't go for it. After turning it over and over in my mind, I resolved to have a showdown, though pretty sure of the risk I would be taking. In one entry in my diary, I wrote, "To defend Chairman Mao's revolutionary line, I'll risk my life and never regret!" It is a true display of my state of mind at that time.

Thus I climbed the mountain, "Jinggangshan."

Students from "Jinggangshan" were delighted. Immediately they elected me the orderly of the 9th army of the Department of Eastern Languages of "Jinggangshan," which was rather rare.

Now I had gone to the ocean and climbed the mountain. It was a double-edged sword. On the positive side, it brought peace to my mind, a psychological balance which ridded me of the worry on the joining of the factional organization. On the flip side, it fostered factionalism in me. In effect, I originally had factional inclination. In the past, however, this partisan tendency had to be covered up in one way or another. Now, setting the tune with one beat of the gong, I needed not to be wary of my behavior. I went with my fellow members of the faction, young students, putting up big-character posters and delivering speeches against the "New Beida Commune." Admittedly, my words were not completely true and free of swear.

Admittedly I took a chance on doing this. I thought, even if I lacked an understanding of the Communist Party, I didn't join the KMT or any other reactionary organizations in the past. I had a clean record. I believed the "New Beida Commune" might not be that unscrupulous to lay its hands on me.

Surely it was my personal wish. At this point that woman boss of the "New Beida Commune" must have considered me a thorn in her side. I was aware of her cruelty. In addition, she was at the zenith of her political career, an alternative member of the Central Committee of the Communist Party of China (CPC) and a deputy president of the Beijing's Revolutionary Committee. She was really riding high. If I dared to infuriate her, how would she spare me? Moreover metaphysics ran rampant, in which fragments of oral and written expression, if caught by the opposing side, could be distorted, exaggerated and used as evidence for willful false charges so as to label one a counter-revolutionary or an active counter-revolutionary. For instance, the words, "capitalism" and "socialism," were two cards stored together in one of the language drawers of one's brain and might be picked by mistake. A slip of tongue would allow the opposite side a handgrip on the speaker's weakness and the "cap" of active counter-revolutionary would be set on his or her head. That female doltish ringleader often committed such mistakes and made her followers constantly worried for her. This sort of metaphysics, plus

partisanship, could undoubtedly condemn one to death, about which I was quite clear.

Therefore, it was rather risky for me to take chances. With this mindset, I was walking on a tightrope and could fall into a deep gorge any time. I was clear-minded about this too. From the summer to the autumn of 1967, I had been an apprehensive tightrope walker, as if I had fifteen young stags in my heart. At this point, rumors were flying everywhere all the time; one said that I would be soon singled out; moments later another said that my home would be raided. I did not know who I should listen to. In my diary, I would make an entry each week, "Heavy clouds are hanging over my head." The storm would strike any time and crush me. Probably other faculty members from "Jinggangshan" all had the same concern about themselves. I was the eldest of them all. I was restless as the long, hot summer and gloomy, golden autumn were ticking away.

[1] *Three Kingdoms*: A historical novel written by Luo Guanzhong (c. 1330-c. 1400) and first printed in 1522 and translated by Moss Roberts (Beijing, China: Foreign Languages Press, 1991).

[2] "Sanba Type," a popular saying in China, particularly before and during the Cultural Revolution, refers to the type of revolutionary veteran who joined the revolution around 1938, a period marking the end of the First Chinese Civil War (1927-1937) and the beginning of the War of Resistance Against Japan (1937-1945). "Sanba" is the *pinyin* for the Chinese characters of "thirty-eight."

陆 自己跳出来

好景从来不长。

我快活到了1967年的夏秋之交。

此时北大的革命小将，加上一些中将与老将，早已分了派。这是完全符合事物发展规律的。《三国演义》上说得好：“夫天下大事，分久必合，合久必分。”现在是到了分的时候了。

在分裂之前的一个短时期之内，北大曾有过一个大一统的局面。此时群众革命组织只有一个，这就是新北大公社。公社的头子就是那位臭名昭著的所谓“第一张马列主义大字报”的作者之一的“老佛爷”。此人据说是“三八式”，也算是一个老干部、老革命了。但是，调到北大来以后，却表现得并不怎么样。已经是一个老太婆了，却打扮得妖里妖气。她先在经济系担任副系主任。后来又调到哲学系，担任总支书记。她夤缘时会，在第一张马列主义大字报上签了一个名，得到了中央某一些人的大力支持，兼之又通风报信，这一个女人就飞黄腾达起来，一时成为全国的中心人物，炙手可热。但是，我同这个人有过来往，深知她是一点水平都没有的，蠢而诈，冥顽而又自大。每次讲话，多少总会出点漏子，闹点笑话。在每次开会前，她的忠实信徒都为她捏一把汗。可就是这样一个人，一时竟成了燕园的霸主，集党政大权于一身，为所欲为，骄横恣纵。

有压迫就有反抗，古今中外，概莫能外。对于这样一个女人，有的学生逐渐感到不能忍受。于是在新北大公社之外，风起云涌，出现了大大小小的革命组织。大都自称为某某战斗队，命名几乎全取自毛泽东的诗词，什么“缚苍龙”战斗队，什么“九天揽月”战斗队，又是什么“跃上葱茏”战斗队，诗词中可以用来起名的词句，几乎都用光了，弄到新组成的战斗队没法起名的地步。至于战斗队的人数，则极为参差不齐，大的几十人、几百人；小的十几人、四五人；据说还有一个人组成的战斗队。成立手续异常简单，只要贴出一张大字报，写上几句“东风吹，战鼓擂，看看究竟谁战胜谁”，再喊上几句“万岁”，就算是成立了。不用登记，不用批准，决没有人来挑剔法律程序。当时究竟成立了多少战斗队，谁也不清楚。即使起有考据癖的胡适之先生于九原，恐怕他也只能认输了。

这时学校里大字报的数目有增无减。原来有的墙壁和搭的席棚早已不敷应用。于是又有一大批席棚被搭了起来，专供贴大字报之用。大字报的内容，除了宣布某某战斗队成立之外，还有批判资产阶级学术权威的。有的大字报只有四五张、五六张；有的则扩大到九十张，甚至百张，大有越来越长之势。附近的居民有的靠捡揭下来的大字报卖钱为生。据说有的学生则靠写大字报练习书法。据我个人的观察，大字报的书法水平确是越来越高，日新月异。这一个“文化大革命”的副产品，恐怕很多人会想不到吧。

用大字报来亮相的战斗队，五花八门，五光十色。最初各占山头，后来又逐渐合并。从由少变多，变为由多变少。终于汇成了两大流派：一个是正宗的、老牌的、掌权的新北大公社，一个是汇集众流、反抗新北大公社的井冈山。可以说是一个在朝，一个在野，有如英国的保守党和工党。两派当然要互相斗争，这斗争也多半利用大字报表现出来。英国的保守党和工党怎样斗争，我不大清楚。据说他们是颇为讲究“费厄泼赖”的。在中国，则不大管那一套洋玩意儿。只管目的，不择手段；造谣诬蔑，人身攻击；平平常常，司空见惯。因此就产生了一种新的“物质”，叫做“派性”。这种新东西，一经产生，便表现出来了无比强大的力量。谁要是中了它的毒，则朋友割席，夫妻反目。一个和好美满的家庭，会因此搞得分崩离析。我实在不能理解，为什么对抗外敌时都没有这么大的劲头，而在两派之间会产生这样巨大的对抗力量？有人贴出大字报：“老子铁了心，誓死保聂孙！”这是何等地惊人的决心！如果在建设四化中有这个劲头，我们中国早就成了亚洲第一条大龙，后来的四小龙瞠乎后矣。

现在时过境迁，怎样来评价这两大派呢？在当时，在派性猖狂的时候，客观评价根本上不可能的。现在我觉得可以了。两派基本上都由年轻的教员和学生组成。由于种种原因，老头参加的是不多的。两派当然都有各自的政纲。但是，具体的内容我看谁也说不清楚。论路线，两派执行的都是一条极“左”的路线，打、砸、抢、抄，大家都干，不分彼此，难定高下。有时候，一个被诬蔑成有问题的教员或干部，两派都抓去批斗。批斗的方式也一模一样。两派都有点患迫害狂的样子，以打人为乐事。被打者头破血流，打人者则嘻嘻哈哈。打人的武器颇具匠心。自行车链条，外面包上胶皮，打得再重，也不会把皮肉打破，不给人留下口实。那一位“老佛爷”经常打出江青的旗号，拉大旗，作虎皮，藉以吓唬别人。对立面井冈山也不示弱，他们照样打出江青的招牌。究竟谁

是江青的最忠实的信徒，更是谁也说不清楚了。但是，两派之间有一个极大的区别：新北大公社掌握北大的大权，作威作福，不可一世；而井冈山则始终处在被压迫的地位。这很容易引起一般人的同情。

根据我个人的观察，两派的政纲既然是半斤八两，斗争的焦点只能是争夺领导权。“有了权，就有了一切”，这是两派共同的信条。为了争权，为了独霸天下，就必须搞垮对方。两派都努力拉拢教员和干部，特别是那一些在群众中有影响的教员和干部，以壮大自己的声势。这时两派都各自占领了一些地盘。当权派的新北大公社占有整个北大，“率土之滨，莫非王土”。井冈山只在学生宿舍区占领了几座楼。每一座楼房都逐渐成为一个堡垒，守卫森严。两派逐渐自己制造一些土武器。掌权的新北大公社财大气粗，把昂贵钢管锯断，把一头磨尖，变成长矛。这种原始的武器虽“土”，但对付手无寸铁的井冈山，还是绰有余裕。井冈山当然不肯示弱，也拼凑了一些武器。据说两边都有研究炸药的人。在这剑拔弩张的情况下，两派交过几次手，械斗过几次。一名外边来的中学生就无缘无故地惨死在新北大公社长矛之下。

这真正是你死我活的搏斗，但中间也不缺少令人解颐的插曲。主斗者都是青年学生，他们还没有完全脱离孩子气。他们的一些举动迹近儿戏。比如有一次，两派正在大饭厅里召开大会进行辩论。唇枪舌剑，充满了火药气味。两派群众高呼助威，气氛十分紧张、严肃。正当辩论到紧急关头，忽然从大饭厅支撑住屋顶的大木梁上，嘭地一声，掉下来了一串破鞋。“破鞋”是什么意思，我国人民，至少是北方人民，都明白的。……然而正在这样一个十分严重的关键时刻，两派群众都瞪红了眼睛，恨不能喷出火焰焚毁对方。然而从天上降下来这样一个插曲来，群众先是惊愕，立刻转为哈哈大笑。这一场激烈无比的辩论还能继续下去吗？同样成串的破鞋，还出现在井冈山占领的学生宿舍的窗子外面。其用意完全相同。这些小小的插曲难道不能令人解颐吗？

我还在大饭厅参加了另一场两派的大辩论。两派的主要领导人坐在台上，群众坐在台下。领导人的官衔也全都改变了，不叫什么长、什么主任，而叫（也许只有井冈山这样叫）“勤务员”。真正让人感到一股革命的气氛，就好像法国大革命的那样，领导人的头衔也都平民化了。坐在台上的井冈山领导人中居然有一位老人。他是著名的流体力学专家、相对论专家，是一个富有正义感的人，在群众中有相当高的威信，是党中央明令要保护的少数几个人中之一。他是怎样参加群众性的革命组织井冈山的，我不十分清楚。只是从别人嘴中断断续续地听说，他不满那

位“老佛爷”的所作所为，逐渐流露出偏袒井冈山的情绪。于是新北大公社就组织群众，向他围攻；有的找上门去，有的打电话谩骂、恫吓。弄得这一位老先生心烦意乱。原来他并没有参加井冈山的意思。但是，到了此时，实逼处此，他于是横下了一条心，干脆下海，立即被井冈山群众选为总勤务员之一。现在他也到大饭厅来，坐在台上，参加这一场大辩论，成为坐在主席台上年龄最大的人。这时大饭厅里挤得水泄不通，两派群众都有。辩论的题目很多，无非是自以为是，而对方为非。这让我立即想到美国总统选举的两派候选人在电视上面对面辩论的情况。辩论精彩时，台下的群众鼓掌欢呼。一时大饭厅中剑拔弩张而又逸趣横生，热闹非凡。

当时整个学校的情况就是这样闹嚷嚷，乱哄哄（全国的情况也是这样）。那一句“乱了敌人”的名言，在这里无论如何也对不上号。谁能知道谁是敌人呢？当时全北京，全国的群众组织在分分合合了一阵以后，基本上形成了两大派，在北京这叫做天派与地派。每一派都认为对方是敌人，唯我独革，军队被派出来支“左”，也搞不清楚谁是“左”。结果有的地方连军队也分了派。这实际上是乱了自己。如果真有敌人的话，他们会站在旁边，站在暗中，拍手称快。

在这样的情况下，我自己怎样呢？

我滥竽人民之中，深知这实在是来之不易。所以我最初下定决心，不参加任何一派，做一个逍遥派是我唯一可选择的道路，这也是一条阳关大道。在全校乱糟糟的情况下，走这样一条路，可以不用操心，不用激动，简直是乱世的桃花源。反正学校里已经“停课闹革命”，我不用教书，不用写文章，有兴趣就看一看大字报，听一听辩论会，逍遥自在，无忧无虑，简直像一个活神仙。想到快意处，不禁一个人发出会心的微笑。

但是，人世间决没有世外桃源，燕园自不能例外。燕园天天发生的事情时时刻刻地刺激着我，我是一个有知觉有感情的人，故作麻木状对我来说是办不到的。我必须做出反应。我在北大当了二十年的系主任，担任过全校的工会主席，担任过一些比较重要的社会职务，其中有全国政协委员、北京市人大代表等等。俗话说：“树大招风。”我这棵树虽然还不算大，但也达到了招风的高度。我这个人还有一些特点，说好听的就是，心还没有全死，还有一点正义感。说不好听的就是，我是天生的犟种，很不识相。在这样主客观的配合下，即使北大有一个避风港，我能钻得进去吗？我命定了必须站在暴风雨中。

不钻避风港，我究竟应该怎样做呢？我逐渐发现，那一位新北大公社的女头领有点不对头。她的所作所为违背了上面的革命路线。什么叫革命路线？我也并不全懂。学习了十多年的政治理论，天天听那一套东西，积之既久，我这冥顽的脑袋瓜似乎有点开了窍，知道干一切工作都必须走群众路线。我觉得，对待群众的态度如何，是判断一个领导人的重要的尺度，是判断他执行不执行上面的革命路线的重要标准。而偏偏在这个问题上，我认为——只是我认为——那个女人背离了正确道路。新北大公社是在北大执掌大权的机构，那个女人是北大的女皇。此时已经成立了“革命委员会”，这是完全遵照上面的指示的结果。“革命委员会好”，这个“最高指示”一经发出，全国风靡。北大自不能落后，于是那个女人摇身一变成了北大“合法”政权的头子，北京大学革命委员会主任。这真是锦上添花，岂不猗欤休哉！然而这更增加了这一位不学有术、智商实际上是低能的“老佛爷”的气焰。她更加目空一切，在一些“小李子”抬的轿子上舒舒服服，发号施令，对于胆敢反对她的人则采取残酷镇压的手段，停职停薪，给小鞋穿，是家常便饭。严重则任意宣布“打倒”，使对方立即成为敌人，可以格杀勿论。她也确实杀了几个无辜的人，那一个校外来的惨死在新北大公社长矛下的中学生，我在上面已经谈到。看了这一些情况，看了她对待群众的态度，我心里愤愤难平。我认为她违反了上面的革命路线。我有点坐不稳钓鱼船了。

但是，我是深知这一位女首领的。她愚而多诈，心狠手辣。我不愿意冒同她为敌的风险。我只好暂时韬晦，依违两派之间，做出一个中立的态度。

在这期间，有几个重大的事件值得一提。第一件是到印尼驻华大使馆去游行示威。大概是因为印尼方面烧了我们驻雅加达的大使馆，为了报复，就去示威。这是一个深得人心的爱国行动。北大的两大派哪一个也不想丢掉这个机会来显示自己的力量，争取更多的群众。两派都可以说是“倾巢”出动。在学校南门里的林荫大道上，排上了几十辆租来的大汽车，供游行示威者乘坐之用。两派的群众当然分乘自己的车。可我哪一派都不是，想乘车就成了问题。两派认识我的几个干将看到有机可乘，都到我跟前来献殷勤，拉我上他们的车，井冈山的一位东语系的女干将，拉我特别积极。从内心里来说，我是愿意上他们的车的。但是，我还有顾虑，不愿意或者不敢贸然从事。新北大公社派来拉我的人也很积极。最后，经过了一阵不大不小的思想斗争，我还是上了公社的车。一路上，人声鼎沸，红旗招展。到了印尼大使馆，喊了一阵口号，又浩

浩浩荡荡地回到燕园来，皆大欢喜。

另一件事情是到解放军一位高级将领家中去“闹革命”，或者是去“揪”他。他的家是在玉泉山的一个什么地方。我并没有听清楚，为什么单单到他家去“闹”。反正当时任何一个战斗队，可能在某某后台的支持下，都有权宣布打倒什么人，“揪”什么人。我连他住的确切地方都不知道。这一次因为路近，没有乘坐大车，绝大部分人是步行前往。我因为属于“有车阶级”，于是便骑车去了。由于两派群众混杂在一起，我没有像到印尼使馆去示威时那样受窘。没有人来拉我参加哪一派的游行。我成了骑车单干户。在分不清是哪一派的车队中随大流骑向前去。过了青龙桥，我看还有人骑车向西山奔去，我也就盲从起来，跟着那些车骑向前去。一直到了万安公墓，是玉泉山背后了。知道不对头，忙回转头，又来到了青龙桥，却听群众中有人大声嚷嚷，说是已经“闹过革命”了。我只好随人流回到燕园。到底我也不知道，那一位将军究竟住在什么地方，我连大门都没有看到。我想，当时很多人闹革命就是这样闹法。

还有一件事情比较重要，必须提一提。北大两派为了拉拢干部，壮大声势，都组织了干部学习班。有一些在前一阶段被打成走资派的干部，批斗了一阵之后，不知是由于什么原因，虽然靠边站了，却也不再批斗，这些人有的也成了两派争取的对象。我也是被争取的对象之一。有不少东语系的教员动员我参加学习班，井冈山的人动员我参加他们的班，新北大公社的人动员我参加自己的学习班。虽然我经过长期的观察和考虑，决心慎重行事。我要是到井冈山学习班去“亮相”，其中隐含着极大的危险性。新北大公社毕竟是大权在握，人多势众，兵强马壮，而且又有那样一个心胸狭隘、派性十足的领袖。我得罪了他们，后患不堪设想。迟疑了很久，为了个人的安全，我还是参加了新北大公社的学习班。两派学习班的宗旨，从表面上来看，看不出什么差别，都拥护伟大领袖，都竭尽全力向领袖夫人表忠心。对后一位的吹捧，达到了惊人的程度。两派各自贴了不知道多少大字报，把她捧得像圣母一样。我水平低，对于这一点完全赞同。虽然我也曾通过小道消息听了不少对她十分不利的话；但我依然不改初衷。

随着时间的推移，由于我这个人善于掩蔽自己的想法，有话必须说出来，心里才痛快，我对于两派的看法，大家一清二楚，这就给我招来了麻烦。两派的信徒，特别是学生，采用了车轮战术来拉我。新北大公社的学生找到我家，找到我的办公室（我怎能还有什么办公室呢？但

是，在我记忆中，确实是在办公室中会见了她们。我现在一时还想不清楚，以后或许能回忆起来）来，明白无误地告诉我说：“你不能参加O派（井冈山）！”这还是比较客气的。不客气的就直截了当地对我提出警告：“当心你的脑袋！”有的也向我家打电话，劝说我，警告我；有甜言蜜语，也有大声怒斥，花样繁多，频率很高。我发现，我现在的处境几乎同我上面提到的那一位老教授完全一样。我有点不耐烦了。我曾说过，我是天生的犟种，有点牛脾气。你越来越逼我，我就越不买账。经过了激烈的思想斗争，我决心干脆下海。其中的危险性我是知道的。我在日记中写道：“为了保卫毛主席的革命路线，虽粉身碎骨，在所不辞！”可见我当时心情之一斑。

我就这样上了山（井冈山）。

反公社派的学生高兴了，立即选我为井冈山九纵（东语系）的勤务员。这在当时还是非常罕见的。

海下了，山上了。这个举动有双重性。好处是，它给我的内心带来了宁静，带来了平衡，不必再为参加或不参加这样的问题而大伤脑筋了。坏处是，它给我带来了恶性发作的派性。派性我本来就有的。但过去必需加以隐蔽。现在既然一锤定音，再也用不着躲躲闪闪了。我于是同一些同派的青年学生贴大字报，发表演说，攻击新北大公社，讲的也不可能全是真话，谩骂成分也是不可避免的。

我心中也不是没有侥幸心理。我自恃即使自己过去对共产党不了解，但我从来没有参加过国民党或任何其他反动组织，我的历史是清白的。新北大公社不一定敢“揪”我。

但这只是我的想法的一面。此时，新北大公社那位女头领肯定已视我如眼中钉。她心狠手辣，我所深知。况且她此时正如日中天，成为中共中央候补委员、北京市革命委员会的副主任，趾高气扬，炙手可热。我季某竟敢在太岁头上动土，她能善罢干休、饶过我吗？而且此时形而上学猖獗，在对立面成员的言谈中、文章中，抓住片言只语，加以曲解，诬陷罗织，无限上纲，就可以把对方打成反革命或现行反革命。比如“资本主义”与“社会主义”在大脑中管语言的那一部分里可能是放在一个卡片柜里面的，稍一不慎，就容易拿错。一旦拿错，让对方抓住小辫儿，“现行反革命”的帽子必能戴上。那一位弱智的女头领就常常出现这个问题，她的徒子徒孙经常为此而为她捏一把汗。这样的形而上学再加上派性，就能杀人而且绰有余裕。这一点我是清清楚楚的。

因此，我自己的侥幸心理并不可靠。我怀着这种侥幸心理，在走钢丝，随时都能够跌下来，跌入深渊。这一点我也是清清楚楚的。在1967年的夏天到秋天，我都在走钢丝。我心里像揣着十五只小鹿，七上八下，惴惴不安。此时，流言极多。一会儿说要揪我了；一会儿又说要抄我的家了。我听也不是，不听也不是。在我的日记里，我几乎每一周都要写上一句：“暴风雨在我头上盘旋。”这暴风雨说不定什么时候就会压了下来，把我压垮、压碎。这时候反公社的北大教员恐怕都有我这种感觉，而我最老。炎炎的长夏，惨淡的金秋，我就是在这种惴惴不安中度过的。

7 HOME RAIDING

As it was getting cold the situation was becoming tense. Dark clouds gathered over my head: that woman chieftain, Old Dowager, was about to batter me.

Did I still take a chance now?

Yes, but only to a certain degree. I don't have braids of hair and grow a tail so I don't think you can easily find fault with my conduct.

[1]

But I was wrong.

On the night of November 30, 1967, I was in sound sleep after taking sleeping pills. Suddenly I was woken up by the honk of car horn outside, followed by the bangs on the door. Slipping into the garment, I opened the door. In came a group of six or seven sturdy men, who were students from my department, all deep-dyed followers of the woman chieftain. Wooden clubs in hands, they looked threatening. I understood something had happened. But I was psychologically ready and not surprised. An old saying goes, "A great man sizes up an adverse situation and avoids rash action and unnecessary suffering." I was not a great man but would not want to face the odds head-on and suffer. I showed no sign of resistance so they had no use for their clubs. Their action was so-called "revolutionary action," which derived from the popular slogan chanted every day, "Making revolution is nothing wrong, and making havoc is absolutely correct." I knew this was a quotation by some weighty figure. But it sounded absurd. "Making revolution" and "making havoc" seemed quite straightforward in meaning, but no one understood their true meaning. Under the shield of the brilliant terms "making revolution" and "making havoc," misdemeanors and atrocities of all kinds were committed in broad daylight. I was a person with some rather eccentric behaviors and went out of my way to advocate someone's "revolutionary line." Now the revolution spearheaded its

attack on me, but I, thick-headed, still hung on to the "revolutionary line."

I didn't have chance to put on my coat before being rounded up to the kitchen, where I joined my aunt and wife. Old as they were, three of us became the criminals under arrest. During the late hours of the night, piercing gusts blew through the kitchen and the whole family huddled there, everyone shivering in cold. I could not figure out what the two old ladies were thinking about at the moment. We were not allowed to talk to each other, as big clubs were constantly brandished about in front of us. Right now I knew what I should do. The thought of humanitarianism did not come to my mind, since humanitarianism had long been rejected as trash and whoever mentioned it would be "a revisionist." Today, I'm still wrestling with the confusion why a revealing of humanitarianism, or a touching upon it, was denied to ordinary people. In the Chinese history of philosophy of thousands of years, the origin of kind-heartedness versus evil in human nature has been a topic of discussion and people still argue about it today. In the past I believed in kind-heartedness and thought compassion was universally innate. But, on the day of the raiding of my home, I adopted the view of evil as prevailing human nature. "Human beings are evil at birth and kind-heartedness is a result of cultivation." With regard to the storming of my home, would you say these people were kind-hearted? Can you deny their beastly quality? Today a person of integrity can be but concerned with the deteriorating social morality. Who on earth is to blame for the corruptions in the society? And where on earth did these depravations originate?

I've digressed too far. Some of my thoughts did not occur to me at that time; they only formed gradually in later time. In that circumstance, I did not dare to disobey orders, nor was I willing to beg for better treatment. Dealing with savage species, one could never speak in human terms and show feelings. Therefore I huddled on the ice-cold cement floor, watching and listening silently. I was curious: Why do you use an ox cleaver to kill a chicken, and why do you fuss

about handling three feeble, helpless old persons? Just send one young guy and that is enough to complete the task. Meanwhile I saw two burly men standing by the kitchen door, one of them being a student of mine with the last name of Gu. My student and I, a professor, now turned the bitter foes. I knew our life was on their hands. One could beat a person to death and get away with it at that time. The spears and clubs, held in their hands, were laws.

I couldn't see what was happening outside but could hear the sounds. These young revolutionaries were inexperienced, ignorant of the process of kidnapping in old China, in which kidnappers taped the victim's eyes with the healing plaster and filled his ears with the deposited oil from the kitchen range. As a teacher I failed to fulfill my teaching responsibility in giving them these lessons. But my past neglect of teaching duty now benefited me. I heard something going on outside, something gruesome. A clamor of cracks and snaps in the two rooms of mine, one big and the other small, came to me steadily. It seemed I had obtained the "clairvoyant telescope," which is depicted in the Buddhist scriptures and able to see through the walls, and seen the "young revolutionaries" rummaging through the bed and chests. The students destroyed whatever they wanted by smashing and kicking. If something was locked inside a container, no matter whether it was a wooden chest or an iron box, they simplified the way of unlocking it by knocking down the lock with an ax. I had some antiques and trinkets, which I had collected over many years of frugal living. These objects, difficult to come by and worth keeping in commemoration, embodied care, effort and hardship of my life. In a flash, however, they were shattered to pieces. Undoubtedly, these young people were quite experienced in raiding a home, after a vigorous round of practicing in the early months of the Revolution, agile and dexterous as "rolling back the enemy as we would a mat."^[2] But my heart was bleeding.

After they completed playing havoc with my properties upstairs, one student of the Thai language, whose surname was Wang, asked me for the keys to downstairs rooms. It turned out that he came to my

home once before so he knew my books were all stored downstairs. Since I moved into this building, I had lived on the second floor. The officials from a certain administrative department of the university once suggested I move my books down to the garage, concerned with the heavy weight that would damage the floor. The garage was originally used to house bikes used by residents of the building, when bikes were a few, and did provide roomy space for the purpose. As the number of bikes increased quickly later, the garage could no longer function as expected but was left empty. Then, with the approval of the other residents of the building, I moved the books down into it. The young revolutionaries, heedful and sharp-sighted, would leave no stone unturned. As he came over to me, I could do nothing but submit the key, understanding I was dealing with a sophisticated hand. Over there downstairs, those books I had highly treasured were ruthlessly ravaged. But I couldn't see or hear what was going on. However, again it seemed as if I was endowed with the "clairvoyant telescope" and hearing aid, observing with my mental eyes the wrecking in detail. My heart was bleeding.

These young revolutionaries might not have studied Eastern literatures with flying colors later. But they were unmistakably knowledgeable of various cases of vilification and false charge in Chinese history. In ancient China, a prevailing way of penalty, called "reaching for the watermelon through its vines," was to trace relatives and close friends of the accused by way of raiding the home and then execute them all. They forced me to hand in my address book containing my friends' addresses so as to locate them. Now I had to worry about them. Those innocent relatives and friends of mine would never know that their casual contacts with me would place them in hot water, for I had kept their addresses on my notebook. My heart was bleeding.

I huddled in the kitchen, torn by a surge of apprehension like tidal waves. How did I feel at this point? "I was simply at a loss what to do." I don't know how to describe my state of mind. Generally I had a blend of feelings as if I had knocked over the cooking rack, mixing

up seasonings of sour, sweet, bitter and hot, which were hard to be distinguished from one another. Was I distressed? Yes, but not in the absolute sense. Was I enraged? Yes, but not in the absolute sense. Was I terrified? Yes, but not in the absolute sense. Was I at ease? Yes, but certainly in a narrow sense. Basically, I was at once sober-minded and confused. It was the time when the lives of us three old persons were at the hands of others. Like a few ants, we could be crashed to powder with a wipe of finger at any moment. We cried and groaned to heaven and earth but no one came to our rescue. We were perplexed at our whereabouts. Were we still in an abode of this world? Or were we dropped into the infernal regions? Or were we herded to a jungle of beasts? Life, once dear and precious to us three elderly persons, suddenly turned so hostile that we were begrudged the mere existence. "Banging on my chest in desperation, I can only count on my mother for help." I wished I could be Shagongdaluo, the female protagonist in the ancient well-known Hindu opera *Abhijnanasakuntala*, in which Shagongdaluo's angel mother suddenly descends from heaven at the moment of the daughter's plight and carted her off back to the celestial sphere.^[3] It was only a fairytale and a Utopian fantasy in daily life. Then, where was my way out?

Night sauntered by outside the windows. Nature turned a blind eye to what was going on in human society, tragic or comic as it might be, as if nothing had happened. The revolution made, the "heroes" let out a mania to their heart's content, as the "birds fluttered off upon a bout of twitter." Instantly the voice faded out in the yard and the two stout men I saw moments ago vanished. Outside the building the truck engine started grumbling as the heroes withdrew themselves in triumph. The vast darkness echoed with the boom of the truck receding into distance before hush gradually regained its reign at night. It was the first day of a new month by the Chinese lunar calendar, when this blow of fate struck me. As I pulled myself together, looking around in undisturbed wonder, it seemed nothing had taken place, with the three of us elderly souls left behind in a deserted horror of the club-brandishing heroes' foray into the revolutionary battlefield.

Now my home was a sight of dumpster. Tables, chairs, and everything that was movable were turned over. Those trinkets, little antique and anything that was fragile, were smashed to pieces. The floor was littered with books, tumbled off the book-shelves, and papers, scattered from the drawers. Half of the research materials I had collected for tens of years of study were taken away, the other half scattered around on the floor. My bedding was searched and the sturdy hot-water bag, originally tucked under the quilt, was stamped broken by someone, discharging water onto the bed. We gaped in motionless silence. What could we say now? At this point we could only leave our misfortune with heaven for judgment. How could we renew sleep in such a state of mind? We all turned clay figures, having lost vocal and emotional properties. Alas, we were vegetables!

However, I had consciousness and I was thinking. I recalled a popular saying of the time, "When a good person beats a good person, it results from misunderstanding; when a bad person beats a good person, the latter should take the suffering as a valuable experience; when a good person beats a bad person, the latter deserves the treatment; when two bad persons beat each other, they should be left alone in internal strife." If the populace was classified on children's dichotomy between good and bad persons, where did I stand? I was pretty sure I fell into the category of good persons, no matter how many weaknesses I had and how many blunders I had committed. I cared about others, though I was concerned with myself in many cases. I was not Cao Mengde, who believed "One should always make sure that he owes others something instead of being owed."^[4] I met the standards for a good person. What about those young revolutionaries who raided my home? Certainly some of them were good persons, who were deceived for misconduct, and should not be to blame. But most of them, probably, took advantage of our predicament to enjoy brutally torturing others for baleful ends. If they were not condemned as bad persons, would there be any bad person at all in the world? They committed crimes unscrupulously under the shield of those words mentioned above. Isn't everything self-evident? I once held those sentences in blind admiration. From my perspective of

today, those are nothing but the most worthless quibbles of metaphysics blending right and wrong, confusing black with white, and rejecting morals and justice. Unfortunately the harmful impact was huge, as tens of thousands, later millions, of young people were deceived. Among them, who are in their 40s and 50s now, are some upstarts who have become son-in-laws of wealthy families through marriage and others who have made their fortune themselves and obtained high social positions. But it is weird that some of them don't feel guilty at all for what they did in the past! Are they truly that forgetful? Are they really rid of conscience, the primary human faculty?

The night roved at a snail's pace before the day broke. "At what time will it dawn as if the night inches into infinity?" It is the longest night I have ever known in life, a night to be remembered, too, for which I feel short of expression. Once it was morning, I rode my bike to the headquarters of "Jinggangshan". I had a pipe-dream, expecting to seek assistance from "my own faction." On my way I heard the repeated chants, "Down with Ji Xianlin," and the listing of my "crimes" blasted from campus loud-speakers. Maybe I was somewhat influential so that the "New Beida Commune" went to great lengths to defame me. Now Ji Xianlin, a nobody, rode into the resounding frenzy of "Down with Ji Xianlin." I was caught in a hallucination that I landed in a fairyland, a realm of devils. Today as I recall my state of mind then, the experience was, I think, at once a mock and a fear. From then on I became a bird, a game that everyone could snare and dispose of at will.

When I arrived at the headquarters of "Jingangshan" and talked about what had happened to me the night before, those people in charge said they learned about it earlier. Now they were sending a photographer to my home to take pictures of the scene. At the meantime, they started to investigate my history, with a view to dumping me as a burden, as I was now likely to cause harm rather than provide help to them, in the factional strife against the "New Beida Commune". I learned of their intention later. At that time I was

still confident of my dependence upon my factional organization. Stepping out of the gate, I saw the bike, which I left leaning on the tree, now locked with the tree. Obviously it was what someone from the "New Beida Commune" did. Frustrated, I said bye-bye to the bike, parting it for ever, which had kept my company for twenty years, and shuffled back home.

Back at home, I saw the photographer, sent from the headquarters of "Jinggangshan", rummaging through a pile of trash. I knew he was certainly not looking for something of aesthetic originality. Behind this scenario, there was a political motive. The photographer was searching for a sign of irreverence those home-raiding people left behind, such as a smeared picture, or a stamped newspaper photo, of the great leader, which could be used as a handle for turning the tables on their foes. If he picked up something expected and photographed it, then it could be used to accuse the opposing side of committing the terrifying crime of showing disrespect toward the great leader. But the "New Beida commune," well-versed in political rivalry, showed no loophole in their home raiding and committed no "mistake" or "crime" of that kind. Having combed through the rooms, the photographer beat a retreat, wondering at his opponents' seamless work.

The leaders of "Jinggangshan" showed perfunctory sympathy with me. I had one idea when there with them, but that idea later on sent shivers down my spine; I wanted to stay inside the headquarters of "Jinggangshan," because I feared the opposing side would send people to catch me at any time and lock me up somewhere, which was then a common practice. The headquarters of Jinggangshan were a sanctuary for me, and the building almost became an armored stronghold. But I hesitated. Though I had no idea that the "Jinggangshan" people would soon send someone on a nationwide investigation tour on my background as "New Beida Commune" had done, I learned a couple of days earlier that "Jinggangshan" did send someone to investigate the background of another old professor I mentioned before, who used to work as chief orderly in its headquarters.^[5] Those faction leaders

thought elderly professors, those returnees from abroad in particular, usually had a complex political background. So they had better scrutinize their credentials themselves and take protective measures, if necessary, before its opponents took the upper hand. Since that professor was treated this way, why shouldn't they do the same to me? I was rather disillusioned at that time. I was now denounced as the enemy of the people. What would my faction do in order to reject a bumme like me? I had a clear record, I was sure. But both trapped in the delirium of metaphysics and factionalism, the two factions could do things like killing people. Could the investigation, conducted in light of metaphysics, be accurate? Could it be just? I would rather subject myself to whatever treatment might befall me and let my body be the meat on their chopping block than set my face against my fate. With my mind made up, I went straight home. Now my home became my jail. As I mentioned above, I felt, at each moment in the summer and fall of that year, dark clouds were gathering over my head as a storm was about to strike me any time. Now it seemed I was lying on the guillotine waiting for the drop of the blade. Originally I believed the sky was boundless and the land vast. But they looked so cramped and infinitesimal that I, skinny and light, was denied room for existence. I remember I once read a piece of writing by Jin Shengtang before he was executed, "It's a painful experience to be executed. I didn't know I would end up this way, so I may feel delighted in going through it as well!"^[6] I didn't work to attain the "counter-revolutionary" cap, either. But I would never say, "I feel delighted!" What I could say is "What's to be done! What's to be done!"

Anyway I turned "counter-revolutionary" overnight from being of "people," a transformation between the two positions poles apart. Without any paper work, I became an outlaw simply because of one cry, "Down," uttered by the "New Beida Commune". The branch section of the Commune in the Department of Eastern Languages ordered me, "Stay at home! Behave yourself. Don't talk about what you shouldn't. Don't stir around! Wait for summons!" But I waited and waited before a few days passed and no one came to bother me. What had happened? After the ten-year turmoil was over, someone told me

the Commune took me as a thorn in its side and resolved to pull me out. However, those people were short of substantial evidence for my "crime." Therefore they decided to condemn me first and then started searching for proof, hoping to come by some "solid" testimony in ravaging my home, so as to prove what they did was correct. Eventually their scheme "worked." Distorting facts, belittling me severely and fabricating false charges, they achieved their goal. About three or four days after the raiding of my home, two Red Guards wearing red armbands forced their way into my house, blustering and swaggering. They marched me to the Building of Foreign Languages. I used to walk into the building as department head. Now I was led inside as a prisoner. It was a shame that I ended up in such distress after more than twenty years of service as the department head, assiduously, painstakingly, and through thick and thin. What a total freak of humanity!

I was allowed to sit in the first session of interrogation, in which I didn't appreciate their courtesy and my attitude was rather "uncooperative." I felt injured, pretty sure that I had left no "braid" and "tail" as a handle for attack, and wrangled with the interrogators. I thought, "One old saying goes like this, 'It's easier to catch a tiger than set it free.' Let's wait and see how you're going to release me later." I spoke loudly, emotions running high on me. As expected, the interrogation ended in no result. Then the second and third sessions followed. A few of the interrogators, who were my former students, were a little embarrassed in the beginning but their air grew harsh as the process went on. They might have secured more materials against me, the "backup evidence" that raised their confidence. In retrospect, I would like to make an inquiry here, "Those friends of mine who interrogated me at that time, how did you view the 'backup evidence' you procured? Did you really believe all the charges against me were true?"

I have digressed too far. Let me get back to their "backup evidence." The first piece of evidence was a basket, which contained a bunch of letters halfway burned to ashes. They said it was the

testimony to my destroying the letters in order to avoid being charged. The letters, they claimed, were all of paramount importance, containing strict confidential information. The truth is, however, that I originally lived in a four-bedroom condo. Later when the Cultural Revolution broke out, I turned in two large rooms to the university to show my revolutionary inclination, after seeing the movement progressing more and more menacingly. I asked one of my old friends, who lived downstairs, to move upstairs and live with me. Then I was further shanghaied into yielding the two downstairs rooms to one female staff member of the Department of Western Languages, a "Jinggangshan" member who missed no chance to gain advantage by trickery and shamelessly flaunted her "revolutionary family origin." With the living space cut in half, I had piles of letters in need of storage. Thinking some of the letters could be rid of so as to have more space, I burned them in broad daylight, with no other motive at all. When one young revolutionary stopped me, I put the half-burned letters into a bamboo basket. Now it was the "proof of my crime." I recounted the event to the interrogators, who said my attitude was extremely dishonest and crafty. The second piece of "backup evidence" was a kitchen knife. It was found under the pillow of my aunt during the raiding of my home. The truth is that, as the Cultural Revolution raged on, public security went down. It was said that burglars usually went to the kitchen, took the kitchen knife and mugged the host at knifepoint. My aunt was old and timid. Each night she would tuck the kitchen knife under her pillow in case that it was snatched off by a burglar. Now the interrogators said the knife was discovered under my pillow and I intended to use it for killing the Red Guards. When I presented the story, the interrogators, again, said my attitude was increasingly uncooperative. The third piece of "backup evidence" came from a lithographic print of Chiang Kai-shek and his wife Soong May-ling. It was given to me as a gift, when I was in Gottingen, Germany, by a Chinese "student" surnamed Zhang, who was probably a member of the Youth League of Three Principles of the People or the Blue Shirts Society.^[7] My impression of Chiang, except a short period of time of confusion, has never been good since our petition tour to

Nanjing in 1932. I thought he was a ruffian and never believed he would be successful in regaining the rule over the mainland of China. The law of history is that once a bad ruler is removed from power by the people, his chances are extremely slim to make a comeback. However, I had a bad habit that I kept all things given to me by others, even scraps of paper. It was quite contrary to the practice of Comrade Chen from Beijing's General Department of Police that I mentioned previously, who burned all his letters to ashes. Therefore, this print now brought me into trouble. The interrogators made a peremptory claim that I wanted to keep it until the time when the Chinese nationalists regained the control of the mainland of China, so I would rise and claim rewards with it for my loyalty to the KMT. They were not so straightforward to label me a "disguised KMT spy," from which I knew I made a hairbreadth escape. Once again I explained my reason for keeping the print, but, again, they rejected me as being extremely deceitful.

Even if I had grown a hundred mouths, I could not have been able to clear up the case. What else could I do?

[1] Here Ji figuratively combines the two sayings popularized in the Cultural Revolution, "Seize one's braid of hair worn at the back" and "Clutch one's tail" to mean he leaves no shortcomings and loopholes for others or his fault-finding enemies to their advantage.

[2] A line from Mao Zedong's poem "Against the Second Encirclement Campaign: To the Tune of *Yu Jia Ao*,"

The very clouds foam atop White Cloud Mountain,

At its base the roar of battle quickens.

Withered trees and rotten stumps join in the fray.

A forest of rifles presses,

As the Flying General descends from the skies.

In fifteen days we have marched seven hundred *li*

Crossing misty Gan waters and green Fujian hills,

Rolling back the enemy as we would a mat.

A voice is heard wailing;

His "Bastion at every step" avails him nought!

See pp. 24-25, *Mao Zedong Poems*. Beijing: Foreign Languages Press, 2007.

[3] *Abhijnanasakuntala*, an ancient Hindu opera written by Kalidasa, a major Hindu playwright and poet living in the fourth and fifth centuries. His other two well-known plays are *Shengman* and *Huotianyou* and *Vikramorvasiya*. His works are unique for their description of the character's inner world and national character.

[4] Cao Mengde, or Cao Cao, styled Mengde, a politician and strategist in the late Han Dynasty and a major character in the Chinese classical fiction about the same period of time, *Three Kingdoms: A Historical Novel* written by Luo Guanzhong. In the fiction, Luo Guanzhong creates a stereotype out of the description of Cao Cao as an ambitious, crafty and evil person.

[5] In the Cultural Revolution, the organizations of Red Guards, at the early stage of its development, and the factions, at the middle stage of its development, often sent people to various places in the country to investigate, or fabricate in fact, the family and working background of a person, who was, or about to be, denounced as counter-revolutionary, for the purpose of persecution.

[6] Jin Shengtan (1608-1661), Chinese literary writer and critic in the late Ming Dynasty (1368-1644) and early Qing Dynasty, well known for his literary criticism on *The Outlaws of the Marsh*, authored by Shi Nai'an, and other Chinese classics.

[7] The Youth League of Three Principles of the People, a youth organization under the leadership of the KMT, which was founded in 1938 with Chiang Kai-shek as its first head and dismissed in 1947; the Blue-Shirts Society, also known as the Society of Practice of the Three Principles of the People, which, founded in 1932 and dismissed in 1946, was a secret clique and a secret police or para-military force in the KMT under the direction of Chiang Kai-shek.

柒 抄家

随着天气的转凉，风声越来越紧。我头上的风暴已经凝聚了起来：那一位女头领要对我下手了。

此时，我是否还有侥幸心理呢？

还是有的。我自恃头上没有辫子，屁股上没有尾巴，不怕你抓。

然而我错了。

1967年11月30日深夜。我服了安眠药正在沉睡，忽然听到门外有汽车声，接着是一阵异常激烈的打门声。连忙披衣起来，门开处闯进来大汉六七条，都是东语系的学生，都是女头领的铁杆信徒，人人手持大木棒，威风凛凛，面如寒霜。我知道发生了什么事，我早有思想准备，因此我并不吃惊。俗话说：“英雄不吃眼前亏。”我决非英雄，眼前亏却是不愿意吃的。我毫无抵抗之意，他们的大棒可惜无用武之地了。这叫做“革命行动”，我天天听到叫嚷：“革命无罪，造反有理！”我知道这话是有来头的。我只感到，这实在是一桩非常离奇古怪的事情。什么“革命”，什么“造反”，谁一听都明白；但是却没有谁真正懂得是什么意思。什么样的坏事，什么样的罪恶行为，都能在“革命”、“造反”等堂而皇之的伟大的名词掩护下，在光天化日之下公然去干。我自己也是一个非常离奇古怪的人物，我要拼命维护什么人的“革命路线”，现在革命革到自己头上来了。然而我却丝毫也不清醒，仍然要维护这一条革命路线。

我没有来得及穿衣服，就被赶到厨房里去。我那年近古稀的婶母和我的老伴，也被赶到那里，一家三人作了楚囚。此时正是深夜风寒，厨房里吹着刺骨的过堂风，“全家都在风声里”，人人浑身打战。两位老妇心里想些什么，我不得而知。我们被禁止说话，大棒的影子就在我们眼前晃。我此时脑筋还是清楚的。我并没有想到什么人道主义，因为人道主义早已批倒批臭，谁提人道主义，谁就是“修正主义分子”。一直到今天，我还是不明白，难道人就不许有一点人性，讲一点人道吗？中国几千年的哲学史上有性善、性恶之争，迄今仍是众说纷纭，莫衷一是。我原来是相信性善说的，我相信，恻隐之心人皆有之的。从被抄家的一刻起，我改变了信仰，改宗性恶说。“人性本恶，其善者人为也。”从抄家的行动来看，你能说这些人的性还是善的吗？你能说他们所具有的不

是兽性吗？今天社会风气，稍有良知者都不能不为之担忧。始作俑者究竟是谁呢？这种不良的社会风气究竟是从什么时候开始的呢？

这话扯得太远了。有些想法决不是被抄家时有的，而是后来陆续出现的。我当时既不敢顽强抵抗，也不卑躬屈膝请求高抬贵手。同禽兽打交道是不能讲人谈话人情的。我只是蜷缩在厨房里冰冷的洋灰地上，冷眼旁观，倾耳细听。我很奇怪，杀鸡焉用牛刀？对付三个手无寸铁的老人，何必这样惊师动众！只派一个小伙子来，就绰绰有余了。然而只是站厨房门口的就是两个彪形大汉，其中一个姓谷的朝鲜语科的学生。过去师生，今朝敌我。我知道，我们的性命就掌握在他们手中，当时打死人是可以不受法律制裁的。他们的木棒中，他们的长矛中，就出法律。

我的眼睛看不到外面的情况，但耳朵是能听到的。这些小将究竟年纪还小，旧社会土匪绑票时，是把被绑的人眼睛上贴上膏药，耳朵里灌上灶油的。我这为师的没有把这一套东西教给自己的学生，是我的失职。由于失职，今天我得到了点好处：我还能听到外面的情况。外面的情况并不美妙。只听到我一大一小两间屋子里乒乓作响，声震屋瓦。我此时仿佛得到了佛经上所说的天眼通，透过几层墙壁，就能看到小将们正在挪动床桌，翻箱倒柜。他们所向无前，顺我者昌，逆我者亡。他们愿意砸烂什么，就砸烂什么；他们愿意踢碎什么，就踢碎什么。遇到锁着的東西，他们把开启的手段一律简化，不用钥匙，而用斧凿。管你书箱衣箱，管你木柜铁柜，喀嚓一声，铁断木飞。我多年来省吃俭用，积累了一些小古董、小摆设，都灌注着我的心血；来之不易，又多有纪念意义。在他们眼中，却视若草芥；手下无情，顷刻被毁。看来对抄家这一行，他们已经非常熟练，这是“文化大革命”中集中强化实践的结果。他们手足麻利，“横扫千军如卷席”。然而我的心在流血。

楼上横扫完毕，一位姓王的学泰语的学生找我来要楼下的钥匙。原来他到我家来过，知道我书都藏在楼下。我搬过来以后，住在楼上。学校有关单位，怕书籍过多过重，可能把楼压坏，劝我把书移到楼下车库里去。车库原来准备放自行车的。如果全楼只有几辆车的话，车库是够用的。但是自行车激剧增加，车库反而失去作用，空在那里。于是征求全楼同意，我把楼上的书搬了进去。小将们深谋远虑，涓滴不漏。他伸手向我要钥匙，我知道他是内行，敬谨从命。车库里我心爱的书籍遭殃的情况，我既看不见，也听不到。然而此时我既得了天眼通，又得了天耳通。库里一切破坏情况，朗朗如在眼前。我的心在流血。

这一批小将，东方语文学得不一定怎样有成绩，对中国历史上那一套诬陷罗织却是了解的。古代有所谓“瓜蔓抄”的做法，就是顺藤摸瓜，把与被抄家者的三亲六友有关的线索都摸清楚，然后再夷九族。他们逼我交出记载着朋友们地址的小本本，以便进行“瓜蔓抄”。我此时又多了一层担心：我那些无辜的亲戚朋友不幸同我有了关系，把足迹留在我的小小本本上。他们哪里知道，自己也都要跟着我倒霉了。我的心在流血。

我蜷曲在厨房里，心里面思潮翻滚，宛如大海波涛。我心里是什么滋味呢？“只是当时已惘然”，现在更说不清楚了，好像是打翻了酱缸，酸甜苦辣，一时俱陈。说我悲哀吗？是的，但不全是。说我愤怒吗？是的，但不全是。说我恐惧吗？是的，也不全是。说我坦然吗？是的，更不全是。总之，我是又清楚，又糊涂；又清醒，又迷离。此时我们全家三位老人的性命，掌握在别人手中。我们像是几只蚂蚁，别人手指一动，我们立即变为齏粉。我们呼天天不应，呼地地不答。我不知道，我们是置身于人的世界，还是鬼的世界，抑或是牲畜的世界。茫茫大地，竟无三个老人的容身之地了。“椎胸直欲依坤母”。我真想像印度古典名剧《沙恭达罗》中的沙恭达罗那样，在走投无路的情况下，生母天上仙女突然下凡，把女儿接回天宫去了。我知道，这只是神话中的故事，人世间是不会有。那么，我的出路在什么地方呢？

暗夜在窗外流逝。大自然根本不管人间有喜剧，还是有悲剧，或是既喜且悲的剧。对于这些，它是无动于衷的，我行我素，照常运行。“英雄”们在革过命以后，“兴阑啼鸟尽”，他们的兴已经“阑”了。我听到门外忽然静了下来，两个手持大棒的彪形大汉，一转瞬间消逝不见。楼外响起了一阵汽车开动的声音：英雄们得胜回朝了。汽车声音刺破夜空，越响越远。此时正值朔日，天昏地暗。一片宁静弥漫天地之间，仿佛刚才什么事情也没有发生，只留下三个孤苦无告的老人，从棒影下解脱出来，呆对英雄们革过命的战场。

屋子里成了一堆垃圾。桌子、椅子，只要能打翻的东西，都打翻了。那一些小摆设、小古董，只要能打碎的，都打碎了。地面堆满了书架子上掉下来的书和从抽屉里丢出来的文件。我辛辛苦苦几十年积累起来的科研资料，一半被掳走，一半散落在地上。睡觉的床被彻底翻过，被子里非常结实的暖水袋，被什么人踏破，水流满了一床。看着这样被洗劫的情况，我们三个人谁都不说话——我们还有什么话可说呢？人生到此，天道宁论！我们哪里还能有一丝一毫的睡意呢？我们都变成了木雕泥塑，我们变成了失去语言、失去情感的人，我们都变成了植物人！

但是，我的潜意识还能活动，还在活动。我想到当时极为流行的一种说法：好人打好人是误会；坏人打好人是锻炼；好人打坏人是应该；坏人打坏人是内讧。如果把芸芸众生按照小孩子的逻辑分为好人与坏人两大类的话，我自己属于哪一类呢？不管我自己有多少缺点，也不管我干过多少错事，我坚决认为自己应该归入好人一类。我除了考虑自己以外，也还考虑别人，我不是“宁教我负天下人，不能教天下人负我”的曹孟德。这就是天公地道的好人的标准。来到我家抄家打砸抢的小将们是什么人呢？他们之中肯定有好人，一时受到蒙蔽干了坏事，这是可以原谅的。但是，大部分人恐怕都是乘人之危，藉此发泄兽性的迫害狂，以达到不可告人的目的。如果说这样的人不是坏人，世界上还有坏人吗？他们在上面那种说法的掩护下，放心大胆地作起恶来。事情不是很明显吗？那几句话，我曾五体投地地崇拜过。及今视之，那不过是不讲是非、不分皂白、不讲原则、不讲正义的最低级的形而上学的诡辩。可惜受它毒害的年轻人上十万，上百万，到了今天，他们已经是四五十岁的成年人了，有的飞黄腾达；有的找到一个阔丈人，成了东床快婿；有的发了大财，官居高品，他们竟没有一个人对自己过去的所作所为感到一点悔恨，岂非咄咄怪事！难道这些人都那么健忘？难道这一些人连人类起码的良知都泯灭净尽了吗？

好不容易才熬到了天明。“长夜漫漫何时旦”？这一夜是我毕生最长的一夜，也是最难忘的一夜，用任何语言也无法形容的一夜。天一明，我就骑上了自行车到井冈山总部去。我痴心妄想，要从“自己的组织”这里来捞一根稻草。走在路上，北大所有的高音喇叭都放开了，一遍又一遍地高呼“打倒季羨林”！历数我的“罪行”。我这个大概还有一点影响，所以新北大公社才这样兴师动众，大张旗鼓。一个渺小的季羨林骑在自行车上，天空弥漫着“打倒季羨林”的声音。我此时几疑置身于神话世界、妖魅之国。这种滋味连今天回忆起来，都觉得又是可笑，又是可怕。从今天起，我已经变成了一只飞鸟，人人可以得而诛之了。

到了井冈山总部，说明了情况。他们早已知道了。一方面派摄影师到我家进行现场拍摄；另一方面——多可怕呀！——他们已经决定调查我的历史，必要时把我抛出来，甩掉这个包袱，免得受到连累，不利于同新北大公社的斗争。这是后来才知道的，当时我还是一片痴心。走出大门，我那辆倚在树上的自行车已经被人——当然是新北大公社的——用锁锁死。没有别的办法，我只好步行回家。从此便同那辆伴随我将近二十年的车永远“拜拜”了。

回到家中，那一位井冈山的摄影师，在一堆垃圾中左看右看，寻找什么。我知道，在这里有决定意义的不是美，而是政治。他主要寻找公社抄家时在对待伟大领袖方面有没有留下可抓的小辫子，比如说领袖像，他们撕了或者污染了没有？有领袖像的报纸，他们用脚踩了没有？如此等等。如果有一条被他抓住，拍摄下来，这就是对领袖的大不敬，可以上纲上到骇人的高度，是对敌斗争的一颗重型炮弹。但是，要知道新北大公社的抄家专家也是有水平的，是训练有素的，那样的“错误”或者“罪行”他们是决不会犯的。摄影师找了半天，发现公社的抄家术真正是无懈可击，嗒然离去。

我的处境，井冈山领导表面上表示同情。我当时有一个后来想起来令我感到后怕的想法：我想留在井冈山总部里。我害怕，公社随时都可能派人来，把我抓走，关在什么秘密的地方。这是当时屡次出现过的事，并不新鲜。井冈山总部是比较安全的，那里几乎是一个武装堡垒。可是我有点迟疑。我虽然还不知道他们准备同公社一样派人到处去调查我的历史。但是，在几天前我在井冈山总部里听到派人调查我在上面提到的那一位身为井冈山总勤务员之一的老教授的历史。他们认为，老知识分子，特别是留过洋的老知识分子的历史复杂；不如自己先下手调查，然后采取措施，以免被动。既然他们能调查那位老教授的历史，为什么就不能调查我的历史呢？我当时确曾感到寒心。现在我已经被公社“打倒”了。为了摆脱我这个包袱，他们会采取什么措施呢？我的历史，我最清楚。但是，那种两派共有的可怕的形而上学和派性，确实是能杀人的。用那种形而上学的方式调查出来的东西能准确吗？能公正吗？与其将来陷入极端尴尬的境地，被“自己人”抛了出去，还不如索性横下一条心，任敌人宰割吧。我毅然离开那里，回到自己家中。现在的家就成了我的囚笼。我在上面谈到，那年夏秋两季我时时感到有风暴在我头上凝聚，随时可以劈了下来。现在我仿佛成了躺在砍头架下的死囚，时时刻刻等待利刃从架上砍向我的脖颈。原来我认为天地是又宽又大的。现在才觉得，天地是极小极小的，小得容不下我这一身单薄的躯体。从前读一篇笔记文章，记载金圣叹临刑时说的话：“杀头，至痛也。我于无意得之，不亦快哉！”我这个“反革命”帽子，也是于无意中得之，我却无论如何也说不出：“不亦快哉！”我只能说：“奈何！奈何！”

不管怎样，一夜之间，我身上发生了质变：由人民变成了“反革命分子”。没有任何手续，公社一声“打倒！”我就被打倒了。东语系的公社命令我：必须呆在家里！只许规规矩矩，不许乱说乱动！要随时听候传

讯！但是，在最初几天，我等呀，等呀；然而没有人来。原因何在呢？“十年浩劫”过了以后，有人告诉我：当时公社视我如眼中钉，必欲拔之而后快。但是，他们也感到“罪证”尚嫌不足。于是便采用了先打倒、后取证的战略，希望从抄家抄出的材料中取得“可靠的”证据，证明打倒是正确的。结果他们“胜利”了。他们用诬陷罗织的手段，深文周纳，移花接木，加深了我的罪名。到了抄家后的第三天或第四天，来了，来了，两个臂缠红袖章的公社红卫兵，雄赳赳，气昂昂，闯进我家，把我押解到外文楼去受审。以前我走进外文楼是以主人的身份，今天则是阶下囚了。可怜我在外文楼当了二十多年的系主任，晨晨昏昏，风风雨雨，呕心沥血，努力工作，今天竟落到这般地步。世事真如白云苍狗了！

第一次审讯，还让我坐下。我有点不识抬举，态度非常“恶劣”。我憋了一肚子气，又自恃没有辫子和尾巴，同审讯者硬顶。我心里还在想：俗话说，捉虎容易放虎难，我看你们将来怎样放我？我说话有时候声音很大，极为激烈。结果审讯不出什么。如是一次，两次，三次。最初审讯我的人——其中有几个就是我的学生——有时候还微露窘相。可是他们的态度变得强硬了。可能是由于他们掌握的关于我的材料多起来了，他们心中有“底”了——我禁不住要在这里提出一个问题：当年审讯我的朋友们，你们当时对这些“底”是怎样想的呀？你们是不是真相信，这一切全是真的呢？

这话扯远了，还是回来谈他们的“底”。第一个“底”是一只竹篮子，里面装着烧掉一半的一些信件。他们说这是我想焚信灭迹的铁证。说我烧的全是一些极端重要的、含有重大机密的信件。事实是，我原来住四间房子，“文革”起来后，我看形势不对，赶忙退出两大间，让楼下住的我的一位老友上来住，楼下的房子被迫交给一个无巧不沾的自命“出身”很好的西语系公社的一位女职员。房子减了一多半，积存的信件太多，因此想烧掉一些，减轻空间的负担。我在光天化日之下公然焚烧，心中并没有鬼。然而被一个革命小将劝阻，把没有烧完的装在一竹篮中。今天竟成了我的“罪证”。我对审讯我的人说明真相，结果对方说我态度极端恶劣。第二个“罪证”是一把菜刀，是抄家时从住在另一间小房间里我婶母枕头下搜出来的。原来在“文革”兴起以后，社会治安极坏，传说坏人闯入人家抢劫，进门先奔厨房搜寻菜刀，威胁主人。我婶母年老胆小，每夜都把菜刀藏在自己枕下，以免被坏人搜到。现在审讯者却说是我的房里我的枕头下搜出来的，是准备杀红卫兵的，我把真相说

明，结果对方又说我态度更加极端恶劣。第三个“罪证”是一张石印的蒋介石和宋美龄的照片。这是我在德国哥廷根时一个可能是三青团员或蓝衣社分子的姓张的“留学生”送给我的。我对蒋介石的态度，除了一段时间不明真相以外，从1932年南京请愿一直到今天，从来没有好过。我认为他是一个流氓。我也从来没有幻想过他真会反攻大陆。历史的规律是，一个坏统治者，一旦被人民赶走，决不可能再复辟成功的。可是我有一个坏毛病，别人给我的信件，甚至片纸只字，我都保留起来，同我在上面提到的那一位公安总队的陈同志正相反，他是把所有的收到的信件都烧掉的。结果我果然由这一张照片而碰到点子上了。审讯者硬说，我保留这一张照片是想在国民党反攻大陆成功后邀功请赏的。他们还没有好意思给我戴上“国民党潜伏特务”的帽子，但已间不容发了。我向他们解释，结果是对方认为我的态度更加极端恶劣。

我百喙莫明。我还有什么办法呢？

8 ON THE EDGE OF "TAKING MY OWN LIFE AGAINST THE PEOPLE"

Now I was in hypertension. In the past I believed I had not committed any political mistake. But the "revolutionaries" grabbed a bunch of my braids and tails, none of which looked less severe, some being "evidence of heinous crime." Despite the fact that I was still confident of my future, nothing could be done on my part when the hackles of the "revolutionaries" were raised. How could I be able to persuade them now caught in swings of factionalism and metaphysics?

Absolutely not.

In the few days that followed I suffered insomnia. During the day, I was high-strung to the maximum. At night I kept rolling from one side to another, head on the pillow and eyes riveted on the ceiling, awaiting the dawn. I had no mood for tea or appetite for food, a stretch of pitch-darkness before my eyes with a nagging concern about when the night would be over and whether I could survive it. Moreover I lost my faith in my future. It seemed I was in dream even during the day. At night one nightmare cut into another. At one time I saw that kitchen knife of mine, feeling that a man was brandishing it and hacking down at me rather than I was chopping someone else. I was suddenly roused in a cold sweat over all my body. The next moment I saw that basket containing those half burned letters, from which flames sprang all of a sudden, raging their way toward me. Another cold sweat broke, tossing me back to reality. A while later I saw the lithographic print of Chiang Kai-shek and Soong May-ling. The former bore down on me, his bloody mouth open and sharp teeth sticking out, while the latter wiggled in front of me in the figure that had the head of a beauty and the body of a cobra. I was startled out of sleep in a bigger cold of sweat.

Should one live this way?

These experiences were not the most horrible.

The most horrible came when I meditated on my current state and future.

My present situation was obviously dangerous. I fell into a snare filled with prickly bushes and sharpened iron sticks, unable to maneuver. Due to my opposition to that "Old Dowager," I incurred trouble for myself just as I stirred up the hornet's nest. Of the adversaries of mine, I believe, the majority of people were of good will, though some were evil. Good or bad as they were, however, they were faction frenetic and could do anything unimaginable. They wanted to be content with nothing but my destruction. I thought I had more than twenty years of working experience as department head, building up the Department of Eastern Languages by hiring, among my friends and colleagues or through my connections, professors and teachers of all ages. Admittedly, I had weaknesses. But I treated people sincerely and fairly rather than bossed them around. Now the faculty and students split in two antagonistic sides, which was absurd and totally perplexed me. I originally thought the faction that I belonged to should treat me differently but it turned out to behave exactly as our opposing faction. Once I was denounced as political enemy, "Jinggangshan," adding insult to injury, lost no time sending its own Red Guards to fetch me for an interrogation in an unknown place. They were two factions of the same feather, two siblings of racket. At this point, human follies suddenly dawned on me, which was only belated.

The most undecipherable and intolerable of all were the two "disciples of mine." One of them, from the origin of poor-and-lower-middle peasants and a family member of the revolutionary martyr, was really riding high in the movement. His academic performance was hardly emblematic of mediocrity. To implement the so-called "class line," I risked the danger of being disgraced in offering him the position as my teaching assistant upon his graduation.^[1] Another student paired him off in being so feather-headed as the "Chinese jujube tree" that he could barely read anything of Sanskrit when he

graduated. He, too, had a sparkling revolutionary background. To "keep all proletarian brothers and sisters from falling behind," I used to treat him specially in class such as asking him more questions.^[2] "A teacher's heart toward the student can be hardly repayable."^[3] Now I became "a class revenger."^[4] It was these two students, also members of "Jinggangshan," that grabbed me and marched me over for interrogation. Yelling and taunting at me was not a harsh treatment. They even tormented me physically, tweaking my ears. Alas, laughing out of the other side of my mouth, I had to gulp down the bitter ale I had brewed for myself. What alternative did I have? This Mr. Ma, the family member of the revolutionary martyr, said a few times in public that "he would never be one of the Golden Boys and Jade Maidens of bourgeois intellectuals."^[5] To the contrary, this most faithful revolutionary betrayed his country later by immigrating to a small European country and becoming a Chinese European, an impostor who had not been able to conceal his true nature long as a fox can't hide its tail. "The criminal can't remain at large long." "The spit that one spat onto someone else has dropped on his own face!" Influenced by the feudal system of belief in one way or another, I think a student ought to be reverent to his teacher in token of his gratitude for the debt he owes, though I don't quite believe in the old saying, "One day of school starts a life relationship between the student and teacher, for which the student should treat his teacher as father for the rest of his life."

In short, both mentally and in reality, I found myself stranded in a gorge, unable to turn left and right or move forward and backward. Lying ahead were a mountain of swords and a sea of flames. Where should I go?

Over one year and more, I had witnessed countless mass torture sessions, in which the great leader's quotations were yelled in deafening volume, fist blows and kicks coupled slaps in the face, and swear words and insults were hurled about at will, all aimed at the pitiful who bent his back through the ordeal. Once the torture was over, the poor guy was sent rolling down with a kick amidst the shout

"Get away!" Sweat running down the face, the man often lay on the ground, unable to prop himself up. Each time I encountered a scene like this, shudders ran down my spine. One old Chinese saying goes, "The scholar can be executed rather than humiliated." What was happening now was far beyond the limit of humiliation! It was inconceivable to see some people degraded to such a state of wretchedness. What shame for a nation like ours with a long history of civilization! Originally I thought I might stay idle and out of harm's way. But at this moment I found myself like an encased turtle or an encaged lion, ready to be slaughtered. The horrible experience many others had gone through might befall me any time! I even more deserved such treatment with the most outrageous crime of having a basket of half-burned letters and keeping a kitchen knife and a photo of Chiang Kai-shek at home. With ten thousand mouths grown all over my body in self-defense and plea of not guilty, I would have been unable to clear the name of myself. I had already become one who "had committed abominable crimes with no probation." However, I would never kowtow in a plea for mercy that "the almighty authority is omniscient, and I, as a subject, deserve punishment." I knew I had even bleaker prospects in comparison with the fate of those capitalist roaders. The sight of bloody scenes haunted me, as my mind turned blank....

What should I do?

I must make a choice.

Evidently two alternatives lay in front of me, bear the suffering, or take my own life. I would never go for the former. Then I was left with the latter.

This was a very difficult decision to make. It is often said that "ants know their life is precious." What would a human being do in such a circumstance? Even if the odds for survival were ten thousand times slimmer, one would choose life. In addition, one would be further accused of "choosing to become the enemy of the people," a terrifying label like the "Golden Hoop," for whatever reason to take the step.^[6] When cornered with no way out, one could muster the last

ounce of courage left to take his own life. If the action was regarded as "opposing the people through to the end," I would rather take it. Why should one have something to be afraid of if he feared no death? How could I care the consequence arising hereafter? I would close my eyes and die, leaving the world behind for gossip.

My mind made up, I felt clear-headed and at ease.

Calmly and thoroughly I thought about the next steps I should take, those details regarding ending my life.

The first thing that came into my mind was those members of Beida's faculty and cadre who had committed suicide since the start of the Cultural Revolution. The first name was Mr. Wang, a professor of history, who was interrogated by the young revolutionaries at his home a few days after the start of the Revolution. Did they torture him? I had no idea. But I doubted they did, because it took those torturers some time to reach the stage of the savage tormenting of their victims. I had a general impression that the revolutionaries were suddenly rushed into the Revolution. Still conscious of the gentility of conventional social conduct, they slowly picked up the revolutionary frenzy of violence. Professor Wang, however, cared about his reputation very much, sticking to the idea that "the scholar can be executed rather than humiliated." Driven beyond forbearance, he committed suicide by taking plenty of sleeping pills. Right after his death, he was labeled a "counter-revolutionary" and the big-character posters carrying the words "Down with the Counter-revolutionary Wang" appeared on the east-side wall of the main student cafeteria, stirring up the campus. I knew Professor Wang pretty well. Before the founding of new China, he risked his life in secretly joining the Communist Party of China. His teaching and behavior were commendable. Now he became "counter-revolutionary" overnight. I was perplexed and sympathetic with him.

Another person's name that pricked my conscience was Mr. Cheng, Party general secretary of the Department of Chinese, another old acquaintance of mine. On the eve of the liberation, he was one of the underground student movement leaders and later became

president of the Student Association of Peking University. Though still in his prime, he was a revolutionary veteran. He took his own life, too. According to his status, he should have been charged with being a "capitalist roader," less serious than being an "influential counter-revolutionary scholar." He was once denounced. At the June 18 session of condemning "devils," he was among the "devils"; he also had to participate in the forced campus physical labor with the humiliating board hanging around the neck. Probably these "special treatments" drove him beyond the limit. It was said that one night he left home with a bottle of liquor and a bottle of DDT and ran to a wood in the West Hills. He might have drunk the liquor to numb himself before downing the toxicant. Thinking he must have rolled on the ground and felt burned in his stomach after the fatal gulp, I shuddered with fear.

I also thought of suicides committed by other people, such as jumping off the high-rise building to death and lying on the rails to let the train run over. I picked up these stories on streets but never ran into any of the happenings. Stories of this sort were numerous and I did not have time recalling them all. One thing was for sure that each victim had a crisis before death, a frightful state of mind. I just could not go on with the thought but had to drop the matter.

My mind, nevertheless, digressed and wandered to the days of the 1950s, when two professors drowned themselves in the Weiming Lake (lake with no name) on Beida's campus. How did they succeed in doing so, since the water was shallow, only waist deep? The only answer to the puzzle seemed to be their resolve to die. Did they bury the head in the water and smother themselves to death? Almost in the same period, a professor of philosophy, surnamed Fang, severed his arteries and bled profusely. People tried everything in vain to stop the bleeding. He was watched to die a slow agonizing death.

Then the stray of my thought took me way back in history to the death of Qu Yuan, who drowned himself in a river.^[7] Years later Xiang Yu died by cutting his own throat in finding himself besieged on all sides.^[8] I was scared of cutting the throat. How much courage and

effort did it take to accomplish this act? It was much more primitive and barbarous an act to take than using a pistol. Xiang Yu would, to my mind, have picked up a shotgun instead of using a sword, if he had had access to it.

After I scanned the Chinese history of thousands of years, my mind also reached across borders in a journey of thousands of *li*. I thought of Adolf Hitler and his Nazi leading figures. It was said that they, aware of the forthcoming grave consequences due to their atrocities, each got some potassium cyanide ready in case it was needed to have a bite of it before going to heaven or hell. The German chemical industry was advanced, and its application of the development of chemistry in suicide was remarkable in the world. The Japanese were well-known for committing harakiri, definitely their patent. Rarely had it been heard that they were followed in the way to die by people of other nations. But a single person couldn't complete this process, because one did not die immediately after ripping open the abdomen. An assistant was needed to behead him. I also heard some young Japanese lovers plunged together into the crater at the peak of their love. This practice was absolutely impossible where the volcano was not available.

Thus my mind kept on wandering. Sometimes things appeared tangible and graphic, as if the dead body was in front of me as I saw the blood stream all over it. The sight was at once terrifying and appealing. I knew this indulgent wandering could only discomfit me. But I could not pull out of the rut. Could heaven really leave me with no way out?

I had never researched on suicide. Now it was time to take it into consideration, something that used to be far away and has nothing to do with me. But now it was close up. I never thought of creating a new "marginal academic area," called suicide or comparative suicide. At this time, this new area of learning must be established. A new area was always developed on the theoretical basis. My learning, in the past, was theoretically sketchy in many dimensions. Similarly I now lacked a well-developed theory for comparative suicide. But I had

some ideas about it, which I did not consider as remarkable, and would like here to present them in public.

It is unnecessary to gather all the materials in history for a study of suicide. The above-mentioned cases are quite substantial for drawing conclusions. On the basis of the historical materialism, I can classify the forms of suicide according to its development. The most primitive but also sustained are hanging oneself from a beam and plunging into a well, which originated in the primitive society and were used in the feudal society and capitalist society. The application of these suicides with a history of thousands of years still goes on in the world today. Potassium cyanide was produced specially for Nazi chiefs; harakiri and plunging into the crater are probably solely practiced in Japan, two forms that are commonly seen in both feudal and capitalist societies. Cutting the artery, meanwhile, needs some understanding of physiology, which the educated people, as opposed to the general public, tend to possess. Taking sleeping pills is a typical capitalist way of suicide, quite popular in the world now and easy to execute no matter whether you were "branded as Capitalist or Socialist." But I think intellectuals may be the exclusive group of people, who often suffer from insomnia thanks to mental overwork, and are inclined to take sleeping pills, while farmers working manually every day in fields are seldom aware of the effects. Why do I say taking sleeping pills is a capitalist form of suicide? The tranquilizer is used in traditional Chinese medicine, too, but it has mild effects. It is fit for sleeping, not strong enough for terminating life. Most sleeping drugs are produced in capitalist countries, and therefore I say it is a capitalist way of ending life. Taking sleeping pills is most effective and least painful and can be regarded as one of the advantages that capitalism has produced.

That is generally what I can postulate here about my theory.

Theory should be put into application. What form did I choose to end my life? It should be obvious to the reader, the capitalist one. As a "counter-revolutionary," denounced and condemned, I didn't care anything about the nature of the way of ending my life.

The crucial step in the process of committing suicide, after making the decision to end one's life, was the way of carrying it out. Now that I'd made up my mind on how I should do it, the rest would trail off. I should move on to schedule the time and place. The time was not a problem, to act immediately and as soon as possible. But it took me quite a while in deciding on the location. I had to decided on the "major point on an issue," a popular phrase at that time. The major point concerning me now was the choice of the location, at home or some place away from home. It was certainly a lot easier to implement my plan at home. But I was worried. We had only two rooms in my apartment, a large one and a small one. If I took sleeping pills at night and was found lying cold on the bed the next morning, the two old ladies would be frightened to death, or faint at least. What a terrifying sight it would be! I had been concerned about others and so was I at this moment. How could they be comfortable staying in the room where their closest family member had just died and the body had been removed out? What could they do then if they feared to stay inside? Who would dare to come to their help at this terrible time of maintaining relations solely on the basis of one's social status? Now I had two counter-revolutionary labels, one obtained from the "New Beida Commune" and the other due to my committing suicide as an act of "opposing the people through to the end." Thus I ruled out dying at home.

Then I had to die away from home. The issue that I had to choose an appropriate location arose, a thornier problem to solve. At first, I thought of the Western Hills, inspired by the death of that Party general secretary of the Department of Chinese, a scenic spot with dense woods and bushes as creeks splashed and gurgled on. What a lyric my death would look like, if I ended my life, lying on my back and facing the blue sky with the head on pine needles! It would be the most beautiful poem I had ever written in life. But the place was way out in the west. If I was caught by the Red Guards on the way there with inexplicable purposes, horrible misfortune would ensue. I rejected this idea. Then the Summer Palace hit my mind. Many celebrities brought their life journey to an end in the lake of the

imperial park, among whom Wang Guowei was the most famous.^[9] I didn't want to follow suit. I might go to a secluded cave on the far side of the hill in the park and carry out my plan. I was, however, worried that young lovers who usually strolled in the park might be frightened. It was not a good idea either. After racking my brains, I thought of Yuanmingyuan, another imperial park across the street north of the campus. It was early winter in which exuberant reeds covered large areas in the park. If I waded into the reedy marsh, it would take no effort to achieve my goal. What a wonderful idea! I was overjoyed that I had finally solved the problem. I thought it would be the last time and the most glitteringly that my talent sparkled. After that I would sing my "Guanglingsan."^[10]

I felt at ease, so completely that I was a little scared. I didn't study the state of mind of those people, in history and at present, who knew they were at the doorway to death. When Qu Yuan rambled along the bank of the Miluo river, composing poems, right before his suicide, his thoughts could be read in his works, but only sketchily. Logically, taking one's own life was an extremely difficult decision to make, since one had to go through a grueling derangement. Close to being crazy, one might cry, be restless during the day and unable to fall into sleep at night, before reaching the determination. The poet Jiang Yan said, "From ancient times death has been a way of life. Many died, swallowing their grievances and uttering no word of sorrow." I did not swallow my grievances nor did I keep my mouth shut. My mind was very calm, so calm that I felt like something was amiss and it baffled me.

In fact, I was not completely free of anxiety. At times, I was assailed with the thought that, by this time the following day, I would be lying cold and stiff in the quiet reedy marsh of Yuanmingyuan, a secluded place devoid of human trail. No one knew how long it would have been before someone discovered my remains, which might have been rotten, probably one arm or one leg missing, bitten off by a vulture or an animal; maybe my belly was ripped open, my internal organs devoured and the body badly marred. A sickening sight! I was

now still a man of life and limb. But what would become of me by then? Quivering, I stopped thinking. It seemed as if I heard the blare of the loudspeaker of the "New Beida Commune," "Counter-revolutionary Ji Xianlin opposed the people through to the end by committing suicide. He deserves a cruel death!" Eager to show more revolutionary zeal, "Jinggangshan" would vie with its antagonist for campus radio reprobation of me.

Given those horrifying images that I had conjured up, no spasm of hope for life was kindled. Once the decision was made, I would not change my mind. In tranquil wait, I was thinking of what I ought to do in the final hours of my life of more than fifty years. I felt sorry for my elderly aunt who had been terrified in living with me, my wife who had gone through the ebbs and flows of forty years with me, my children and grandchildren, and a few relatives and friends of mine, who remained faithful to me. Probably, I was indebted to many more. To all of them, I would say, "See you in nether world." Casually, I handed the two elderly ladies my savings book and a few certificates of deposit from my bank, trying to hold back the tears from dropping onto them. The message I wanted to get across in silence was, "Poor old ladies! You're left with the little amount of money to live on in the future! I'm not cruel, nor am I selfish. There are many ways in the world to cross a river, but I'm left with only one choice to go through this single-log bridge. What could I do?" They must have understood me, with emotions under control, shedding no tears. I didn't draw up a will, because I thought it was useless. As time ran out, I had no chance to worry about those precious books I had kept all my life. In the last moment of my life, I was frightened with the alarming tranquility which my mind was in.

I suffered insomnia for about half of my life and took heavy doses of Chinese and Western sleeping medication, already quite a specialist in this area. I kept quite a lot, both the bolus and liquid, a blend of Chinese and western medicine, which I had accumulated through medical services I had received. Now I gathered them together, thinking I would first place boluses inside my mouth and then wash

them down with the liquid. What a perfect pair, the combination of strings of pearls and girdles of jade! Slipping the medicine into a cloth sack, I was ready to sneak out of my apartment building, climb over the wall and cross a brook and a street before entering Yuanmingyuan.

All done, I was about to step out of the door...

[1] See [the note 7, Chapter 5](#).

[2] "Keep all...out of school," a sign of carrying out the class line, often at the expense of the student's academic performance.

[3] "A teacher's heart toward the student can be hardly repayable," Ji derives this sentence from a well-known Chinese saying, "Parents' heart toward their children can be hardly repayable," which originates in the writing of the Dowager Empress Cixi (1835-1908) dedicated at her mother's seventieth anniversary of birthday.

[4] "A class revenger," one of those who were the target of the class line but rebellious in one way or another during the Cultural Revolution.

[5] "The Golden Boys and Jade Maidens," young followers.

[6] In the Chinese classic *Journey to the West*, the "Golden Hoop" is placed on the head of Monkey, who follows Monk Xuanzang on his way to the West for the Buddhist scriptures. In a case of need, the monk chants the incantation of the "Golden Hoop" to tighten the hoop so as to bring Monkey under control.

[7] Qu Yuan (340-278 B.C.), a high-ranking official of the State of Chu in the Spring and Autumn Period (770-476 B.C.), who committed suicide after he failed to carry out his reform plans for ridding the country of corruption and strengthening its power.

[8] Xiang Yu, a warlord and a descendent of a noble family in the Western Han Dynasty (206 B.C.-A.D. 25), who committed suicide after being defeated by Liu Bang, another warlord and Xiang Yu's only enemy in their rivalry for the reign of the country.

[9] Wang Guowei (1877-1927), Chinese philosopher, writer and dramatist, who taught at Tsinghua University, Beijing, in the 1920s. Among his most well-known works are *The Jing'an Collection of Essays* and *A Study of the Plays in the Song and Yuan Dynasties*.

[10] "Guanglingsan," one of the ten well-known ancient Chinese songs, which, also known as "Nie Zheng Assassinating the King of Han" (a Warring States event of assassination) is sung by Ji Kang, a guqin player, before his execution in the Eastern Jin Dynasty (317-420) due to his opposition to the king Sima Zhao. The song embodies a feeling of dedication and unyieldingness.

捌 在“自绝于人民”的边缘上

现在我真正紧张了。我原以为自己既无辫子也无尾巴。可人家“革命家”一抓就是一大把，而且看上去都是十分可怕的，有的简直是鲜血淋淋的“铁证”。尽管我对自己没有失去信心，但是对这些“革命家”我却是完全没有办法了。在派性加形而上学的控制之下，我能有什么办法说服他们呢？

这是决不可能的。

我于是连夜失眠。白天神经紧张到最高限度，恭候提审，晚上躺在枕头上，辗转反侧，睁大眼睛，等候天明。我茶不思，饭不想，眼前一片漆黑，而且也不知道，什么时候黑暗才会过去。能不能过去？我也完全失掉了信心。我白天好像都在做梦。夜里，在乱梦迷离中，我一会儿看到那一把菜刀，觉得有什么人正用那一把刀砍我，而不是我砍别人。我不禁出一身冷汗，蓦然醒来。我一会儿又看到那一只装满了烧掉一半的信件的篮子。那篮子忽然着起火来，火光熊熊，正在燃向我的身边。我又出了一身冷汗，蓦地醒来。我一会儿又看见了蒋介石和宋美龄的照片，蒋介石张开血盆大口，露出了满嘴的朱齿獠牙，正想咬我，宋美龄则变成了一个美女蛇。我又出了一身更大的冷汗，霍地从梦中跳了出来。

这难道是一个人过的日子吗？

最可怕的还不是这一些东西。

最可怕的是环顾眼前，瞻望未来。

环顾眼前，我已经坠入陷阱，地上布满了蒺藜和铁刺，让我寸步难挪。我反对那一位“老佛爷”，这一下子可真捅了马蜂窝。站在我对立面的不都是坏人，我相信绝大部分是好人。可是一旦中了派毒，则不可以理喻。他们必欲置我于死地而后快。我自惟二十多年以来，担任东语系的系主任，所有的教员，不管老中青，都是直接或间接由我聘请的。我虽有不少缺点，但从不敢作威作福，总以诚待人。如今一旦分派，就视若仇人，怒目相向，我无论如何也难以理解。原来我认为是一派，态度与敌对的一派毫无二致。我被公社“打倒”了，井冈山的人也争先恐后，落井下石。他们也派自己的红卫兵到我家来，押解我到属于井

冈山的什么地方去审讯。他们是一丘之貉，难兄难弟。到了此时，我恍如大梦初觉，彻底悟透了人生。然而晚矣。

最让我难以理解也难以忍受的是我的两个“及门弟子”。其中之一是贫下中农出身又是“烈属”的人，简直红得不能再红了。学习得并不怎样，我为了贯彻所谓“阶级路线”，硬是把他留下当了我的助教。还有一个同他像是“枣木球一对”的资质低劣，一直到毕业也没有进入梵文之门。他也是出身非常好的。为了“不让一个阶级弟兄掉队”，我在课堂上给他吃偏饭，多向他提问。“可怜天下老师心”，到了此时，我成了“阶级报复”者。就是这两个在山（井冈山）上的人，把我揪去审讯，口出恶言，还在其次。他们竟动手动脚，拧我的耳朵。我真是哭笑不得，自己酿的苦酒只能自己喝，奈之何哉！这一位姓马的“烈属”屡次扬言：“不做资产阶级知识分子的金童玉女！”然而狐狸尾巴是不能够永远掩盖的。到了今天，这一位最理想的革命接班人，已经背叛了祖国，跑到欧洲的一个小国，当“白华”去了。“天网恢恢，疏而不漏”，自己吐出的吐沫最后还是落在自己脸上！我脑袋里还有不少封建思想，虽然我不相信“一日师徒，终身父子”这样的说法，但是对自己有恩无怨的老师，至少还应该有那么一点敬意吧！

总之，我在思想感情中，也在实际上，完全陷入一条深沟之内，左右无路，后退不能，向前进又是刀山火海。我何去何从呢？

一年多以来，我看够了斗争走资派的场面：语录盈耳，口号震天；拳打脚踢，耳光相间；谩骂凌辱，背曲腰弯；批斗完了，一声“滚蛋！”踢下斗台，汗流满面。到了此时，被批斗者往往是躺在地上，站不起来。我作为旁观者，胆战心颤。古人说：“士可杀，不可辱。”现在岂但辱而已哉！早已超过了这个界限。我们中华古国，礼义之邦，竟有一些人沦落到这种程度，岂不大可哀哉！原来我还可以逍遥旁观，而今自己已成瓮中之鳖，阱中之兽，任人宰割，那些惊心动魄的场面就要降临到自己头上了！何况还有别人都没有的装满半焚信件篮子、一把菜刀和蒋介石的照片。我就是长出一万张嘴，也是说不清了，我已是“罪大恶极，罪在不赦”。但是要承认“天王圣明，臣罪当诛”，那是绝对办不到的。我知道，我的前途要比我看到的被批斗的走资派更无希望。血淋淋的斗争场面，摆在我眼前，我眼前一片漆黑……

我何去何从呢？

我必须做出抉择。

抉择的道路只有两条：一是忍受一切，一是离开这一切，离开这个世界。第一条我是绝对办不到的；看来只有走第二条道路一途了。

这是一个万分难做的决定。人们常说：蝼蚁尚且贪生，何况人乎？倘有万分之一的生机，一个人是决不会做出这样的决定的。况且还有一个紧箍咒：谁要走这一条路，不管出于什么原因，都是“自绝于人民”。一个人被逼得走投无路，手中还剩下唯一的一点权力，就是取掉自己的性命。如果这是“自绝于人民”的话，我就自绝于人民一下吧。一个人到了死都不怕的地步，还怕什么呢？“身后是非谁管得”？我眼睛一闭，让世人去说三道四吧。

决定一旦做出，我的心情倒平静下来了，而且异常地平静，异常地清醒。

我平静地、清醒地、科学地考虑实现这个决定的手段和步骤。我想了很多，我想得很细致，很具体，很周到，很全面。

我首先想到的是“文化大革命”开始以来北大自杀的教授和干部。第一个就是历史系教授汪某人。“文革”开始没有几天，革命小将大概找上门去，问了他若干问题，不知道是否动手动脚了。我猜想，这还不大可能。因为“造反”经验是逐步总结、完善起来的。折磨人的手段也是逐步“去粗取精”地“完善”起来的。我总的印象是，开始时“革命者”的思想还没有完全开放，一般是比较温和的。然而我们这一位汪教授脸皮太薄，太遵守“士可杀，不可辱”的教条，连温和的手段也不能忍受，服安眠药，离开人间了。他一死就被定为“反革命分子”。“打倒反革命分子汪某”的大标语，赫然贴在大饭厅的东墙上，引起了极大震惊和震动。汪教授我是非常熟悉的。他在解放前夕冒着生命危险加入了地下党，为人治学都是好的。然而一下子就成了“反革命”。我实在不理解。但是我同情他。

第二个我想到的人是中文系总支书记程某某。对他我也是非常熟悉的。他是解放前夕地下学生运动的领导人之一，后来担任过北大学生会的主席。年纪虽不大，也算是一个老革命了。然而他也自杀了。他的罪名按逻辑推断应该是“走资派”，他够不上“反动学术权威”这个杠杠。他挨过批斗，“六·一八”斗“鬼”时当过“鬼”，在校园里颈悬木牌劳动也有他的份。大概所有这些“待遇”他实在无法忍受，一时想不开，听说是带着一瓶白酒和一瓶敌敌畏，离家到了西山一个树林子里。恐怕是先喝了白酒，麻痹了一下自己的神智，然后再把敌敌畏灌下去，结束了自己的一

生。我一想到他喝了毒药以后，胃内像火烧一般，一定是满地乱滚的情况，浑身就汗毛直竖，不寒而栗。

我还想到了一些别的人，他们有的从很高的楼上跳下来，粉身碎骨而死；有的到铁道上卧轨，身首异处而死。这都是听说的，没有亲眼见到。类似的事情还听到不少，人数太多，我无法一一想到了。每个人在自杀前，都会有极其剧烈的思想斗争，这是血淋淋的思想斗争，我无法想下去了。

我的思绪在时间上又转了回去。我想到了很多年前的50年代，当时有两位教授投未名湖自尽。湖水是并不深的。他们是怎样淹死的呢？现在想来，莫非是他们志在必死，在水深只达到腰部的水中，把自己的头硬埋入水里生生地憋死的吗？差不多同时，一位哲学系姓方的教授用刮胡刀切断了自己的动脉，血流如注，无论怎样抢救也无济于事，人们只能眼睁睁地看着他慢慢地痛苦地死去。

我的思绪在时间上更向后回转，一转转到了古代，我想到了屈原，他是投水死的。比屈原稍晚一点的是项羽，他是在四面楚歌声中自刎死的。对自刎这玩意儿我实在非常担心。一个人能有多大劲能把自己的首级砍下来呢？这比用手枪自杀原始得多了。我想，如果当年项羽有一把手枪的话，他决不会选择刀剑。

我的思绪不但上下数千年，而且纵横几万里，我想到了以希特勒为首的德国法西斯头子们。据说，他们自知罪恶多端，每个人都准备了一点氰化钾，必要时只要用牙齿一咬，便可以上天堂或入地狱了。德国化学工业名震寰宇，他们便把化学技术应用到自杀上，非其他国家所能望其项背。日本人则以剖腹自杀闻名于世，这是日本人的专利，没听说其他国家向日本学习的。不过这种方式一个人还实行不了，因为剖了腹一个人也是不会立即死去的，必须有一个助手在旁，自杀者一经剖腹，助手立刻砍下他的脑袋，日文叫做“介错”。我还听说，日本青年男女在热恋最高潮时往往双双跳入火山口中。这也不能普遍实行，没有火山的地方，就绝对行不通的。

就这样，我浮想联翩，想入非非。有时候，我想得非常具体，非常生动，我把死人想象得就像在自己眼前一样。我仿佛看到了鲜红的血流淌满尸体，可怕而又具有吸引力。我知道，这决不会给我带来愉快，然而却是欲罢不能，难道上苍就真不给我留一条活路了吗？

我从来没有研究过自杀学，可现在非考虑不行了。我原以为离开自

己很远很远、与自己毫不相干的事情，现在就出现在自己眼前了。我决无意于创建一门新的“边缘科学”，自杀学或比较自杀学。现在是箭在弦上，非创建不行了。凡是一门新兴学科，必有自己的理论基础。我在别的方面理论水平也很低，对于这一门新兴的比较自杀学，我更没有高深的理论，但是想法当然是有一点的。我不敢敝帚自珍，现在就公开出来。

我用不着把历史上和当前的自杀案例一一都搜集齐全，然后再从中抽绎出理论来。仅就我上面提到的一些案例，就能抽绎出不少的理论来了。使用历史唯物主义阶级分析的方法，我能够把历史上出现的自杀方式按社会发展的程序分成不同的类型。悬梁、跳井，大概是最古老的方式，也是生命力最强的方式，从原始社会，经过封建社会和资本主义社会，都能使用。今天也还没有绝迹。可谓数千年一贯制了。氰化钾是科学发达国家法西斯头子的专用品。剖腹和跳入火山口恐怕只限于日本，别国人是学不来的。这方式在封建社会和资本主义社会都同样可以使用。至于切开动脉仅限于懂点生理学的知识分子，一般老百姓是不懂得。服安眠药则是典型的资本主义方式，是世界上颇为流行的方式，无论姓“资”还是姓“社”，都能懂得的。不过，我想，这也恐怕仅限于由于脑力劳动过度而患神经衰弱的知识分子，终日锄地的农民是不懂得服安眠药的。我为什么说它是资本主义方式呢？中药也有镇静剂；但药力微弱，催眠则可，自杀不行。现在世界上流行的安眠药多半出自资本主义国家，所以我说它是资本主义方式。服安眠药自杀最保险，最无痛苦，这可以说是资本主义优越性表现之一吧。

我的理论基础大抵如此。

理论必须联系实际：我究竟要采用什么方式呢？不用细说，大家一定都能猜到：资本主义方式。好在我已经被打倒，成了“反革命分子”，这一点嫌疑我也无须避讳了。

在自杀行动中，决心下定以后，最重要的问题就是决定用什么方式。现在我的方式既已选定，大功告成就在眼前，我可以考虑行动的时间和地点了。时间问题很容易解决：立即实行，越快越好。至于地点问题则颇费周折。解决这个问题，首先——恕我借用一个当时极为流行的词儿——要考虑大方向。大方向无非是有两个：一近一远。近是就在家，远则要走出家门。最方便当然是在家。但我顾虑重重。我们家里只有一大间一小间房子。如果在家实施我的计划，夜里服下安眠药，早晨一起床，两个老太太看到我直挺挺地躺在床上，她们即使不被吓

死，也必然被吓昏。这是多么可怕的情景呀！我一生为别人考虑过多，此时更是不得不尔。把我的尸体抬出去以后，死过人而且是死过自己亲人的房间，她们敢住下去吗？不敢，又待如何？值此世态炎凉、人情如纸的时代，谁肯谁又敢向这两位孤苦无告的老太婆伸出援助之手呢？我现在已成为双料的“反革命分子”：新北大公社已经给我戴上了这样一顶帽子，如今又“自绝于人民”，是在反革命之上又加反革命了。总之，在家里不行。

那就在外面吧。在外面也有一个方向问题，而且方向的头绪更多。我首先是受了我上面提到的中文系那一位总支书记的启发，想到了西山。西山山深林密，风光秀丽。倘我能来到此处，猎猎松涛，淙淙泉声，头枕松针，仰视碧空，自己亲手消灭掉一生最可宝贵的生命，多么惬意，又是多么有诗意呀！简直是我一生中最后的一首最美妙的诗。但是，那地方太远，路上倘被红卫兵截获，那就要吃不了的兜着走了。我否定掉这个想法，又想到颐和园。过去有不少名人到这里来寻短见，王国维是最著名的例子。可我不想学王老先生投水自尽。在山后找一个洞穴，吞下安眠药，把花花世界丢在身后，自己一走了之。但是我又怕惊吓了游兴正浓的游园的仕女君子。这个主意也不妥。我想来想去，想到了后面只有一条马路之隔的圆明园。这里有极大的苇坑。时值初冬，芦花正茂。我倘能走到芦苇深处，只须往地上一躺，把安眠药一服，自己的目的立即达到。何等干净，又何等利索！想到这里，我对自己非常满意，我高兴得简直想手之舞之，足之蹈之。我认为，这简直是我的天才的火花最后而又最光辉的一次闪烁，过此则广陵散矣。

我的心情异常地平静，平静得让自己都感到害怕。我没有研究过古今自杀人的死前心理学。屈原在泽畔行吟时的心情，从他的作品中得知一二，但也不够具体。按道理，一个人决定死是非常困难的，感情应该有极其剧烈的波动，甚至痛哭流涕，坐卧不宁，达到半疯的地步；然后横下一条心，慷慨死去。江淹说：“自古皆有死，莫不强思怨恨哭泣而不敢出声。”我一没有饮恨，二没有吞声。我的心情很平静，平静得让我自己都感到异样，感到不可解。

但是，平静中也有不平静。我想到明天此时，我直挺挺地躺在圆明园荒凉寂寞的大苇坑中。那里几乎是人迹不至的地方，不知道会隔多少时候才会有人发现了我的尸体。此时我的尸体也许已经腐烂了，也许已经被什么鸟兽咬掉一只胳膊或一条腿；肚子也许已经被咬开，肠子、五脏都已被吃掉；浑身血肉模糊，惨不忍睹。眼下还是一个完整的我，到

了那时候会变成什么样子呢？我浑身颤抖，我想不下去了。我仿佛能听到那时候新北大公社的广播台声嘶力竭地一遍又一遍播放：“反革命分子季羨林自绝于人民，畏罪自杀，罪该万死！”井冈山的广播台也决不会自甘落伍，同新北大公社展开“打倒季羨林”的竞赛。

但是，不管这些幻想多么可怕，它仍然阻挡不住我那自杀的决心。决心一下，决不回头。我心情平静，我考虑我这五十多年的一生最后几个钟头必须做的事情。我有点对不起陪我担惊受怕的我那年迈的婶母，对不起风风雨雨、坎坎坷坷、伴我度过了四十年的老伴，对不起我那些儿女孙辈，对不起那恐怕数目不多的对我仍怀有深情厚谊的亲戚和朋友。我对不起的人恐怕还有很多很多，我只能说一句：“到那边再会了。”我把仅有的几张存款单，平平淡淡地递给婶母和老伴，强抑制住自己，没有让眼泪滴在存款单上。我无言地说：“可怜的老人！今后你们就靠这一点钱生活下去吧！不是我狠心，也不是我自私，茫茫宇宙，就只给我留下这样一条独木桥了，我有什么办法呢？”她们一定明白我的意思的，她们的感情也没有激动，眼泪也没有流下。我没有考虑立什么遗嘱，那毫无用处。伴我一生的那些珍贵的书籍，我现在管不了啦，这就是我生离死别的一幕。一切都平静得平淡得令我害怕。

我半生患神经衰弱失眠症，中西安眠药服用的成箩成筐，我深通安眠药之学。平日省吃俭用，节约下来不少，丸与水都有，中与西兼备。这时我搜集在一起，以丸打头，以水冲下，真可谓珠联璧合，相辅相成。我找了一个布袋子，把安眠药统统装在里面，准备走出门去，在楼后爬过墙头，再过一条小河和一条马路，前面就是圆明园。

一切都准备就绪，只等我迈步出门——

9 AT THE CRITICAL JUNCTURE

But knocks on the door went bang. Obviously, it was the Red Guards. Three students strode into the room, haughtily displaying the red armbands they wore. They were here to march me somewhere for a torture session.

I understood I was not allowed any inquiries or arguments at this moment. I was just like one head of cattle being driven to the slaughter house. At once I secretly dropped my sack of sleeping medicine and followed them quietly. The two old ladies were speechless too, helplessly seeing their family member being taken away. Obviously we were the meat on somebody else's chopping block. On the way, I walked with one Red Guard on each side and another one following behind. They reprimanded me loudly, saying I was so recalcitrant in responding to criticism of me that I talked back at times. Thus they planned to trim me to the required behavior this time. I said nothing, aware of a tsunami being surging toward me. The disaster that had struck many others befell me today. A once spectator of the play now became its protagonist. It was not true to say I was not afraid. But what else could one do? I felt dizzy one moment and sober the next. Then, amid the confusion, a hazy illusion drifted into my mind that I was being marched to the execution ground. I have never been there. Was I going to have an experience of that kind now? I couldn't tell. Admittedly, I would like to be beheaded or shot to death. With a chop of sword or a shot of the gun, my crisis would be over. But I did not know how long the session would take and what kind of torment they would use.

On the way I was afraid to raise my head and look around. I didn't know how others viewed me. I thought of Lu Xun's fiction *Displayed in Public*.^[1] Now I was the book's main character, displayed in public. I must have been followed around by a crowd of people, talking about me. In my case, however, I was worried more about

myself than their gossip.

A while later I was brought to a strange place. Judging from the floor I saw, I knew I was in the main student cafeteria, the largest assembly hall on campus. Stepping into a tiny room from the back door, I spotted a few more "convicts" there, all standing motionless facing the wall. They looked like the lifeless clay figures of Buddha. Daring not to look up, I had no idea who they were. I was ordered to stand facing the wall, too. The only body part I could use was my ears. I heard people talking and some familiar voices in the commotion caught my attention. I only saw a bedlam of figures and heard a clatter of voices. I thought the people were from the "New Beida Commune," instead of from "Jinggangshan." The next moment, as I stood quietly, a clear slap on the face rang out. Feeling I was not hurt, I knew someone else had got the hit. My relief lasted a few seconds before I heard another but more severe slap. This time the sound was closer to me. My cheek now burned. Unmistakably, I realized I was the receiver. I was terrified. Immediately after the first blow I received another on the back and a kick on the leg. It was understandable that they vented their hostility at me because of my outrageous opposition against their woman chief as if I had eaten the guts of a tiger and leopard. I stewed in my own juice. Was that straightly clear? On the flip side of the experience, I learned something more: some people enjoyed torturing others. In classical Chinese philosophy, a difference is made between human beings and wild beasts, and the former, the analytical species, are definitely considered as superior to the latter. But, in this regard, I agree with Lu Xun who says that the latter are superior to the former because wild beasts do not go through the formality of dwelling on the rationale why a certain prey should be eaten and why the predator is absolutely entitled to the dinner as their human counterparts do when carrying out the victimization of a fellow creature. I believe this ritual sets human beings apart from wild beasts. In other words, a wild beast is straightforward, devouring whatever animal that can satiate its hunger. Therefore the beast is better than the human being. What conclusion can be drawn if I compare the "human beings" of the "New Beida Commune" with wild

beasts?

These ideas are realizations to which I gradually came later. At the moment of incarceration, however, I was like a head of cattle ready to be slaughtered for dinner, anxious and frightened, clear-minded and stupefied. I stood looking straight at the wall, straining my ears attentively and getting ready for blows and kicks on any part of my body. I was pretty sure this was the prelude and the complete proceedings would follow.

I was right. All of a sudden, I heard a cry, "March Ji Xianlin over there!" Two Red Guards raced up. Each of them grabbed one of my arms and twisted it up on my back, while putting another hand on my neck to keep my head down. I was shoved first to the front and then to the left. "Bend!" Okay, I bent my back. "Lower your head!" Okay, I did accordingly. Another heavy blow came down on my back, "Bend further!" Okay, I would surely do that. The next moment my leg got a hard kick, "Bend still further!" Alas, I had to do as told. I could not keep balance so I tried to support my body by putting my hands on my knees, which incurred another fist blow and a kick along with the yell, "Hands off your knees!" With two hands hanging on the sides, I felt my legs shaking. The "young revolutionaries" wanted me to stand in the posture as a jet plane. They were very strict about implementing their plan, taking minutes to adjust my posture. My legs felt sore and hurt. I wished I could drop on the ground; but that, I was pretty sure, would bring me another round of beating. I could do nothing now but put up with all this and hang on.

I was taken aback by an abrupt voice of someone from behind me at the rostrum. But I had no idea how many people were over there, nor did I know how many of us were standing together for the ordeal and how large the crowd was in the audience. I was afraid to raise my head for a look. The deafening uproar and chant of the crowd assured me of its size. As I was unable to focus my attention, the speaker's words went unheard. Gradually, I figured out I was not the major target of today's torture. I was brought here as a token of intimidation in company with the vice president, surnamed Ge, of the university

and deputy Party secretary of the University's CPC Committee, who was on the crosshairs for today. Ge joined in the Chinese revolution in the late 1930s and once worked as president of Hebei University, a true revolutionary veteran. His crime was opposing the "Old Dowager," for which he was rejected as a heretic for chastisement by the "New Beida Commune." As I understood the role I was going to play today, my anxiety began to ease up a little. On my right-hand side, probably at the center of the platform was the designated spot for that old comrade. I was not sure whether he was standing or sitting or kneeling. Maybe he had to take the jet plane posture. I could only hear clear face-slap cracks, pounding kicks and thumps, repeatedly and incessantly. I knew he was in the soup. I guessed he was being burned on the skin by someone using a burning cigarette. But I had to worry about myself first, like the clay figure of Bodhisattva crossing a river. Furthermore, my legs were so shatteringly sore that I was on the verge of collapse. I saw stars, sweat streaming down my cheeks. But, gritting my teeth, I warned myself, "Hold on! You can't collapse. Otherwise the consequence would be inconceivable!" Suddenly, a spit of thick phlegm hit the left side of my face. Certainly I had no idea where it came from. Daring not to wipe it off, I held myself steady, letting it dry gradually. With my teeth clenched even harder, I started to count numbers silently, wishing time could pass before I knew it. The next moment, however, I felt the large hall suddenly turn hushed as if I were the only person left in it, on campus, in Beijing, in China, and in the universe.

Silence lasted no time before clamor resumed reign, as the hall echoed with waves of ear-splitting chanting. It turned out that the torture session was over. Before getting a chance to pull myself together, I was marched out of the room to a truck, my hands twisted back up and my neck clutched fast from behind. I realized I was about to be carried away for the street show. The "heroes" had me stand in the middle, flanked by one on each side holding my arm tight. I could not raise my head or look around, nor did I dare to try. It seemed the campus road was lined with crowds. Some people threw stones at me, which hit me on the head, face and body. I felt as if one thousand

hands were waving over my head, one thousand feet kicking me on the legs, and one thousand mouths spitting at me. I could not fend off the attacks, nor did I dare to. I lost track of the direction, as the truck rolled forward. I had lived here for nearly twenty years, familiar with each inch of the property. But now it looked strange to me. I was like a small boat tossing in the rough sea, a hare or fox closed in on by a few hounds, a willow catkin carried away in the wind, a stray bird trying to locate a tree branch for perching. Raging chants and yells shot up along the road ceaselessly, echoing in the air like a thrilling cantata. I felt dizzy. Knowing my life was in the hands of others, I wrote off my security, letting things take their own course.

I could not tell how long the truck moved and in which direction it rolled. Finally, it pulled up suddenly. A student, or a mill worker if it was not a student, kicked me off the truck. I tumbled and rolled over on the ground. Barely had I lifted myself from the ground when an old mill worker stepped up to me and dealt a heavy fist blow to my face. Immediately, my nose and mouth began to bleed. I knew who he was. Later, as a representative of Beida's working class, he even emerged, when Division 8341 of the PLA entered the campus, to welcome their arrival.^[2] I felt rather bad. Did he qualify for being a worker? That is what I thought later, so no more of it now. At that time both my mouth and nose were bleeding, as I was terrified and lost for what to do. "Beat it!" I heard a mill worker shout. I reckoned it was time for me to leave. Like the convict in an old Chinese fiction who, when waiting on an execution ground, was suddenly set free at the command "Stop the execution," I regained control of my senses. I found my hat and one of my shoes gone. When I limped back home, the two old ladies were shocked at the sight, but, instantly, became joyful: I was back alive.

It was the first time in my life of more than fifty years that I went through a round of torture, hair-raising life experience. Such event is a display of the cruel part of human nature. On the other hand, it pulled me back from death at the last moment. "It was unthinkable that I could bear such torment," I murmured to myself. "Why should I worry

since I have survived the first torture and learned something about inhuman practice? I'd better live," I thought. In retrospect, I quivered with fear that I could have been dead at this point, after climbing over the low rear-yard wall of my residence, going to Yuanmingyuan and taking the sleeping pills, if the Red Guards had arrived half an hour later. If I had behaved a little obediently, I would not have been singled out by the leaders of the branch of the Department of Eastern Languages of the "New Beida Commune" for this round of brutality. My body could have turned cold by now in the weedy marsh of Yuanmingyuan. Could there be something more frightful than this? I reached a conclusion, a lesson learned for the rest of my life that sometimes one should treat bad people badly. Because I was defiant in the past, my life was saved now. I also could take this experience as a test of the extent of my endurance in times of brutality. I survived anyway. These were my mental wanderings. This time I narrowly escaped the claws of death. In recapitulating the happening of the events, should I celebrate my survival or regret the suffering that my stupidity had incurred? I'm still baffled to this day.

Since I decided to live on, I should be ready for more brutal and crushing torture sessions. I was psychologically ready.

Now let me digress a little to elaborate on the issue of conducting the torture session. I wonder who invented this form of savageness. Probably it is a product of collective originality passed through many years of evolution and revision. Its talented inventor, or inventors, should be granted a patent and awarded a prize if the legitimacy of this invention is formally approved. But, to my mind, it is a stupid talent. This form of physical and mental abuse looks vigorous and impressive, but it resolves no problem at all. In old China, a "criminal," at the command of the county magistrate or the judge, was flogged on the buttocks, his body or a limb was pressed between two boards, and even his fingernails were pierced through with sharpened bamboo sticks. The punishment was used to force a confession to a false charge. What result was expected of today's public torture of us? Was it for the purpose of forcing a person to accept his or her label as

a capitalist roader or a counter-revolutionary scholar? The conviction was already made, in fact, through public criticism via campus broadcasts and big-character posters. What was the point of forcing a "criminal" to confess? This inventor, or this group of inventors, might have been influenced by the Western concept of the "art for art's sake" in coming up with their idea of the torture for torture's sake. Worse than that, their motive lay in the basic instinct of enjoying the tormenting of others. By and large, holding these rounds of torture was useless. However, I must show my admiration and respect for the inventor's remarkable learning of science and technology, in terms of the creation and practical use of the jet plane posture for the purposes of today. This creation is beyond the capabilities of beasts. What a high species human beings are!

To return to my story, I was happy that I survived the torture. But now I lived to be tortured. A few days later, another torture session was held, this time by the Department of Eastern Languages. At the previous session, I was a subordinate character in the play. This time I was going to be in the spotlight. The same procedure was followed. The violent bangs on the door ushered in two Red Guards (one less than in the previous time), who strutted into the room, the eye-catching armband of "Red Guard" sending shivers down my spine. I was quickly brought into the Building of Foreign Languages. There I was ordered to stand in the hall facing the wall and behaving in absolute submission. It was boisterous in the building. Standing with me were two men, who I understood were brought along with me as victims to be terrorized. I had worked in the department for more than twenty years and cultivated an earnest and rigorous working style among the faculty and students. I was impressive that this style was still maintained. My mind was brought back to the present situation by the shout from inside the room, "March Ji Xianlin up here!" From where I stood outside the door to the teaching platform, it was a ten-step walking distance. But now it took forever to get there! Four hands held my arms up from behind, while another few hands clenched the back of my neck. I was clamped with at least seven or eight hands, not matching up to a one-thousand-hand and one-

thousand-eyed Buddha, but quite close. Meanwhile, more hands, numerous as they were, were stuck in through those hands, trying to punch and pound on me. Thus I was dragged and jostled onto the platform. It was the place, a location of reverence, in which I had stood, fulfilling my duties as a teacher and department head in the past twenty years. Today I was a "counter-revolutionary," a despised convict. Life is just a bowl of cherries full of unpredictable events. The moment I entered the classroom, loud chants of slogans sprang up. A woman took the lead, "Down with Ji Xianlin the element of...," as the crowd followed her in chanting. The omission of the label or blank "..." in the sentence could be filled up with anything they desired. For example, the "influential counter-revolutionary capitalist scholar" could be replaced with the "capitalist roader" next time and replaced again with the "ruffian left behind by the KMT" in the following chant. I have to make an announcement here: I never joined the KMT in my life. The verbal substitution went on, but I don't remember what other labels they used. Each time the replacement was made, the crowd followed the leader in repeating the chant of slogan. It seemed I had collected all the caps produced in the Cultural Revolution and become a king of caps at Peking University.

Looking sideways, I saw three items on the table on the platform: a gleaming cleaver, a bamboo basket containing scotched old letters, and a red-ink crossed photo of Chiang Kai-shek and Soong May-ling. My heart missed a beat. I almost fainted, thinking, "My goodness! I'm going to be killed today!" To the people present at the gathering, any one of the three items would trigger a series of images about my crime and I would definitely be devoured by the hatred whipped up thereafter. I could tell that my day would be fraught with danger. An old saying is quite right, "Take things as they come." I could not find a crack on the floor for taking refuge. So I'd better "take things."

After the chanting, the host read aloud the quotations of Mao Zedong, something like "making revolution is not something like throwing a party" and "the evil thing does not automatically disappear until removed." I didn't understand why the reading of the quotations

had something to do with the denouncement. Did it inspire and encourage the revolutionary crowd? Or did it frighten the "convict"? Anyway, one quotation after another was read. Finally, the reading was over, and the assigned speaker, who seemed to be Wang studying the Thai language in the past and raiding my home with others days before, delivered an address in make-believe rage and listed my "crimes." I could only concentrate one fourth of my hearing on his speech, since I was now performing the jet plane posture, trying hard to hang on with my uncontrollable sore legs. Ninety-nine percent of his speech was false charges, fabrications and lies. But I was clear-headed and remained emotionally detached, since I was used to insults. When he came to the points he meant to stress, the emotional chant rose again, as if the audience was the only representatives of justice in the world. Now people started to gather around me as blows and kicks rained down on my body until I collapsed on the floor. In the torture session that took place in the main student cafeteria previously, I only heard blows and kicks that fell on other "criminals." This time, however, it was I that bore the brunt of pain. I had no way to check whether I became black and blue. The next moment, someone lifted me up from the floor for a new round of pounding, but more violent. Now, I even lost the privilege of taking the jet plane posture and keeping myself out of the blows. I identified a few students in the frenzied crowd, Zheng, a major in Hindi, Gu in Korean, and Wang in Vietnamese. The first one had the gift of gab, nicknamed "electric switch," who was one of the faithful followers of the "Old Dowager." The last two were burly and rough, each with "two arms capable of lifting thirty thousand *jin*."^[3] Then the idea that I had when my home was raided suddenly came back to me: to knock down an elderly man like me and strike fear into him, who was too feeble to clutch a chicken, a loyal female member of the Commune would be enough. Why did the revolutionaries bother to send these men of muscular physique, who could be more useful for more violent street fights, for this simple task? These giants, however, did not slight their assignment and all their strength went into the pummeling. The reader can imagine how easily I was handled as "a chicken

slaughtered with an ox-cleaver."

I didn't know how long the torture lasted. But I was sure it came to an end when its full scale was reached as I "performed" (passively) satisfactorily. I thought everyone present shared the enjoyment. "Take Ji Xianlin away!" the shout awoke me. Then, in a shower of fists and kicks and loud chants, I was shoved out of the building, as my hands were folded back up. But, because their emotion was not completely released, the revolutionary crowds chased me, battering and kicking. I tried, in vain, to fend them off and escape. Probably because a certain Luo, a professor of Arabic, said something, the chasers calmed down a little. By the time I almost raced to the Building of Democracy, I turned around and saw no sign of my pursuers. With a sigh of relief I felt as if my heart were retrieved. Now my body began to ache all over, something sticky oozing out around my nose, mouth and forehead. I guessed it was blood and sweat. I hobbled back home.

I survived another round of bloody torture.

[1] Lu Xun (1881-1936), Chinese contemporary writer; among his most well-known collections of essays are *call to Arms* and *Wandering*.

[2] Division 8341 of the PLA, the Beijing garrison troop during the Cultural Revolution.

[3]*Jin*, a Chinese unit of mass equal to half a kilogram.

玖 千钧一发

然而门上响起了十分激烈的敲门声。我知道，红卫兵又光临了。果然，一开门便闯进来了三个学生，雄赳赳，气昂昂，臂章闪着耀眼的红光。他们是来押解我到什么地方去进行批斗的。

在这样的情况下，我深知自己毫无发言的权力。我只是一头被赶赴屠宰场的牲畜，任人宰割，任人驱使。我立即偷偷地放下那只装着安眠药的袋子，俯首帖耳，跟着出去。家里的两位老太太眼睁睁地看着自己的亲人被押走。她们也同我一样一言不发。当前是人为刀俎，我为鱼肉，生杀大权操在别人手中的时刻。走在路上，我被夹在中间，一边一个红卫兵，后面还有一个，像是后卫。他们边走边大声训斥，说我的态度恶劣至极，竟敢反唇相讥。今天要给我一点颜色看，煞煞我的威风。我只有洗耳恭听，一声不吭。我意识到，一场特大的风暴正在我头上盘旋。我以前看过的那些残酷斗争的场面，不意今天竟临到自己头上了。原来只是一个旁观者，今天成了主角了。说心里不害怕，那不是真话。但是害怕又有什么用处呢？我脑袋里懵懵懂懂，又似清楚，又似糊涂，乱成一团。我想到被绑赴刑场的场面，我还没有被绑赴刑场去杀头或者枪毙的经验。我现在心里的滋味是不是同那件事有点相似呢？我不清楚。事实上，我认为还不如杀头或者枪毙，那只是一秒钟的事儿，刀光一闪，枪声一响，我就度过难关了。现在我却不知道，批斗要延长多久，也不知道，有些什么折磨人的花样……

一路之上，我不敢抬头，不敢看别人。我不知道，别人怎样看我。我想到鲁迅的小说：《示众》。我现在就是那个被示众者。我周围必然有一大群像小说中所说的观众。他们大概也是指指点点，议论纷纷。可惜我不可能也无心去聆听他们的议论了。

不知道是怎样一来，我就被押解到一个地方。我低头看到地面，我知道这是大饭厅，这是全校最大的室内聚会场所。我从后门走进去，走到一间小屋子里，那里已经有几个“囚犯”，都成了达摩老祖，面壁而立。我不敢看任何人，我不知道他们是谁。我也被命令面壁而立。我的耳朵还没有堵上，我还能听到说话的声音，有的声音我是熟悉的。我只觉得人影纷乱，我只听得人声嘈杂。到场的人一定都是新北大公社的，井冈山的人是不会来的。我屏心静气地站在那里，蓦地听到一声清脆的

耳光声，而自己脸上并没有什么感觉，知道是响在别的“囚犯”的脸上的。我心里得到了一点安慰。但是立刻又听到了一声更为清脆的耳光声，声音近在眼前，我脸上有点火辣辣的。我意识到，这一声是发生在自己脸上了。我心里有点紧张了。可是我的背上又是重重的一拳，腿上重重的一脚。我吃了老虎胆、豹子心，胆敢起来反对他们那一位女主人。他们把仇恨集中到我身上，这是很自然的。我自作自受，又何怪哉？除此以外，我想还有别的根由：有的人确实是从折磨别人中得到快感享受的。中国古代的哲人强调人禽之辨。他们的意见当然是，人高于禽兽。可是在这方面，我还是同意鲁迅的意见的。他说，动物在吃人或其他动物时，张嘴就吃，决不会像人这样，先讲上一通大道理，反复解释你为什么必须被吃，而吃人者又有多少伟大的道理，必须吃人。人禽之辨，也就是禽兽与人的区别，就在这里；换句话说，禽兽比人要好，它们爽直，肚子饿了就吃人或别的动物。新北大公社的“人”，同禽兽比一比，究竟怎样呢？

这些想法是后来才有的。当时我只是一头就要被吃的牲畜，我既紧张，又恐惧；既清醒，又糊涂。我面壁而立，浑身的神经都集到耳朵上，身体上的一切部位，随时都在准备着，承受拳打，承受脚踢。我知道，这些都只能算是序曲，大轴戏还在后面哩。

果然，大轴戏终于来了。我蓦地听到空中一声断喝，像一声霹雳：“把季羨林押上来！”于是走上来了两个红卫兵。一个抓住我的右臂，拧在我的背上。一个抓住左臂，也拧在背上。同时，一个人腾出来一只手，重重地压在我的脖颈上，不让我抬头。我就这样被押上了批斗台，又踉踉跄跄地被推搡到台的左前方。“弯腰！”好，我就弯腰。“低头！”好，我就低头。但是脊梁上又重重挨了拳：“往下弯！”好，我就往下弯。可腿上又凶猛地被踢了一脚：“再往下弯！”好，我就再往下弯。我站不住了，双手扶在膝盖上。立刻又挨了一拳，还被踢了一脚：“不许用手扶膝盖！”此时双手悬在空中，全身的重力都压到了双腿上，腿真有点承受不了啦。“革命小将”按照喷气式飞机的构造情况，要我变成那个样子。他们工作作风谨严至极，光是调整我的姿势，就用去了几分钟，可我的双腿已经又酸又痛。我真想索性跪在地上。但是，我知道那样一定会招来一阵拳打脚踢。我现在唯一的出路只有咬紧牙关忍受一切了。

忽然听到身后主席台上有人讲话了。台上究竟有多少人，我不清楚。有多少批斗者，又有多少被批斗者，我更不清楚。至于台下的情况，我当然不敢睁眼去看，只听得人声鼎沸，口号之声震天动地。那个

讲话的人究竟讲了些什么，我根本没有心思去听。我影影绰绰地知道了，今天我不是主角，我只是押来“陪斗”的。被斗的主角是一个姓戈的老同志。论革命资历，他早于三八式。论行政经历，他担任过河北大学校长和北大副校长、党委副书记。这样一位老革命，只因反对了那一位“老佛爷”，也被新北大公社“打倒”，今天抓来批斗。我弄清楚了自己在这一次空前的大批斗中的地位，心里稍感安慰。在我的右面，大概是主席台的正中，是那位老同志呆的地方。他是站着？是坐着？是跪着？还是坐喷气式？我都不清楚。我只听得清脆的耳光声，剧烈的脚踢声，沉重的拳头声，声声不绝。我知道他正在受难。也许有人（？）正用点着的香烟烧他的皮肤。可我自己正是泥菩萨过江，自身难保。况且我的双腿已经再没有力量支撑我的身体了，酸痛得简直无法形容。我眼前冒金星，满脸流汗。我咬紧了牙根，自己警告自己：“要忍住！要忍住！你可无论如何也不能倒下去呀！否则那后果就不堪设想了！”忽然，完全出我意料，一口浓痰啪地一声吐在我的左脸上。我当然不知道是从哪里来的。我也只能“唾面自干”。想用手去擦，是绝对不可能的。我牙根咬了再咬，心里默默地数着数，希望时光赶快过去。此时闹哄哄的大饭厅里好像突然静了下来，好像整个大饭厅，整个北大，整个北京，整个中国，整个宇宙，只剩下了我一个人。

突然间，大饭厅里沸腾起来，一片震天的口号声，此伏彼起，如大海波涛：批斗大会原来结束了。我还没有来得及松一口气，又被人卡住脖子，反剪双手，押出了会场，押上了一辆敞篷车。我意识到我的戏还没演完，现在是要出去“示众”了。英雄们让我站在正中间，仍然是一边一个人，扭住我的胳膊。我什么也看不见，什么也不敢看，只觉得马路两旁挤满了人。有人用石头向我投掷，打到我的头上，打到我的脸上，打到我的身上。我觉得有一千只手挥动在我的头顶上，有一千只脚踢在我的腿上，有一千张嘴向我吐着吐沫。我招架不住，也不能招架。汽车只是向前开动。开到什么地方去？我完全不知道。我在这里住了将近二十年，每一寸土地我都是稔熟的。可我现在完全糊涂了。我现在像一只颠簸在惊涛骇浪中的小船，像一只四周被猎犬包围住的兔子或狐狸，像随风飘动的柳絮，像无家可归的飞鸟。路旁的喊叫声惊天动地，口号声震撼山岳，形成了雄壮无比的大合唱。我脑袋里糊里糊涂，昏昏沉沉。我知道，现在是生命掌握在别人手中，横下了一条心，听天由命吧。

过了不知多久，也不知道车开到了什么地方。车猛然停了。一个人——不是学生，就是工人——一脚把我踹下了汽车。我跌了一个筋斗，

躺在地上，拼命爬了起来。一个老工人走上前来，对着我的脸，猛击一掌，我的鼻子和嘴里立即流出了鲜血。这个老工人，我是认识的。后来，当8341进校时，他居然代表北大的工人阶级举着牌子欢迎解放军。我心里真不是滋味。他够得上当一个工人吗？这是后话，暂且不提。我当时嘴里和鼻子里鲜血都往下滴，我仓皇不知所措。忽然听到头顶上工人阶级一声断喝：“滚蛋！”我知道是放我回家了。我真好像是旧小说中在“刀下留人”的高呼声中被释放了的死囚。此时我的灵魂仿佛才回到自己身上。我发现，头上的帽子早已经丢了，脚上的鞋也只剩下一只。我就这样一瘸一拐，走回家来。我的狼狈情况让家里的两位老太太大吃一惊，然而立即转惊为喜：我总算是活着回来了。

这是我活了五十多年第一次受到的批斗，它确实能令人惊心动魄，毕生难忘。它把人的残酷的本性暴露无遗。然而它却在千钧一发之际救了我一条命，“这样残酷的批斗原来也是可以忍受得住的呀！”我心里想。“有此一斗，以后还有什么可怕的呢？还是活下去吧！”我心里又想。可我心里真是充满了后怕。如果押解我的红卫兵晚来半个小时的话，我早就爬过了楼后的短墙，到了圆明园，服安眠药自尽了。如果我的态度稍微好一点的话，东语系新北大公社的头领们决不会想到要煞一煞我的威风，不让我来陪斗，我也早已横尸圆明园大苇塘中了。还能有比这更可怕的事情吗？我还得到了一个结论，一条人生经验：对待坏人有时候还是态度坏一点好。我因为态度坏，才拣了一条命。这次批斗又仿佛是做了一次实验，确定一个人在残酷的折磨下能够忍受程度的最低线，我所遭受的显然还是在这一条线上的。这些都是胡思乱想，反正性命是拣到了。可是拣到了性命，我是应该庆幸呢？还是应该后悔？我至今也还没有弄清楚。

既然决心活下去了，那就要准备迎接更残酷、更激烈的批斗。这个思想准备我是有的。

我在这里想先研究一个问题：批斗问题。我不知道，这种形式是什么人发明的。大概也是集中了群众的智慧，去粗取精，去伪存真才发明出来的吧。如果对这种发明创造也有专利权的话，这个发明者是一个天才，他应当获得头等大奖。但是我认为他却是一个愚蠢的天才。这种批斗在形式上轰轰烈烈，声势浩大，实则什么问题也不能解决。在旧社会，县太爷或者什么法官，下令打屁股，上夹板，甚至用竹签刺入“犯人”的指甲中，目的是想屈打成招。现在的批斗想达到什么目的呢？如果只想让被批斗者承认自己是走资派，是资产阶级反动学术权威，罪名你

不是已经用大喇叭、大字报昭告天下了吗？承认不承认又有什么用处呢？这个或这些发明者或许受了西方为艺术而艺术的影响，他或他们是为批斗而批斗。再想得坏一点，他或他们是为了满足人类折磨别人以取乐的劣根性而批斗。总之，我认为，批斗毫无用处。但是，在这里，我必须向发明者奉献出我最大的敬意，他们精通科学技术，懂得喷气式飞机的构造原理，才发明了喷气式批斗法。这种方法禽兽们是想不出来的。人为万物之灵，信矣夫！

闲言少叙，书归正传。命拣到了，很好。但是拣来是为了批斗的。隔了几天，东语系批斗开始了。原来只让我做配角，今天升级成了主角了。批斗程式，一切如仪。激烈的敲门声响过之后，进来了两个（比上次少了一个）红卫兵，雄赳赳，气昂昂，臂章闪着耀眼的红光，押解着我到了外文楼。进门先在楼道里面壁而立。我仍然是什么都不敢看。耳旁只听得人声嘈杂。我身旁站着两个面壁的人。我明白，这是陪斗者。我在东语系工作了二十多年，现在培养出来的教员和学生，工作起来，有条不紊，滴水不漏，心里暗暗地佩服。还没有等我思想转回到现场来，只听得屋里一声大喊：“把季羨林押上来！”从门口到讲台也不过十几步。然而这十几步可真难走呀！四只手扭住了我的胳膊，反转到背上，还有几只手卡住脖子。我身上起码有七八只手，距离千手千眼佛虽还有一段差距，然而已经够可观的了。可是在这些手的缝里还不知伸进了多少手，要打我的什么地方。我就这样被推推搡搡押上了讲台。此处是我二十年来经常站的地方，那时候我是系主任，一系之长，是座上宾；今天我是“反革命分子”，是阶下囚。人生变幻不测，无以复加矣。此时，整个大教室里喊声震天。一位女士领唱。她喊一声：“打倒××分子季羨林！”于是群声和之。这××是可以变换的，比如从“资产阶级反动学术权威”变为“走资派”，再变为“国民党残渣余孽”——我先声明一句：我从来没有参加过国民党——再变为什么，我记不清了。每变换一次，“革命群众”就跟着大喊一次。大概“文化大革命”所有的帽子都给我戴遍了。我成了北京大学集戴帽子之大成的显赫人物！

我斜眼看了看主席台的桌子上摆着三件东西：一是明晃晃一把菜刀；一是装着烧焦的旧信件的竹篮子；一是画了红×的蒋介石和宋美龄的照片。我心里一愣，几乎吓昏了过去。我想：“糟了！我今天性命休矣！”对不明真相的群众来说，三件东西的每一件都能形象地激发起群众的极大的仇恨，都能置我于死地。今天我这个挂头牌的主角看来是凶多吉少了。古人说过：“既来之，则安之。”地上没有缝，我是钻不进去

的。我就“安之”吧。

“打倒”的口号喊过以后，主席恭读语录，什么“革命不是请客吃饭”，什么“你不打他就不倒”之类。我也不知道，读语录会起什么作用。是对“革命群众”的鼓励呢？还是对“囚犯”的震慑？反正语录是读了，而且一条一条地读个没完。终于语录结束了。什么人作主旨发言——好像就是到我家去抄过家的学泰语的王某某——历数我的“罪状”，慷慨激昂，义形于色。我此时正坐着喷气式，两腿酸痛得要命。我全身精力都集中到腿上，只能腾出四分之一的耳朵聆听发言。发言百分之九十九是诬蔑、捏造、罗织、说谎。我的头脑还是清楚的，但是没有感到什么忿忿不平——惯了。他说到激昂处，“打倒”之声震动屋瓦，宇宙间真仿佛充满了正气。这时逐渐有人围了过来，对我拳打脚踢，一直把我打倒在地。我在大饭厅陪斗时，只听到拳打脚踢的声音，这声音是发生在别人身上的。这次却发生在自己身上。我是否已经鼻青脸肿，没有镜子，我自己看不到。不久有人把我从地上拖了起来，是更激烈的拳打脚踢。此时我想坐喷气式也不可能了。围攻者中我看清楚的有学印地语的郑某，学朝鲜语的谷某某，还有学越南语（？）的王某某。前一个能说会道，有“电门”之称，是“老佛爷”麾下的铁杆。后者则都是彪形大汉，“两臂有千钧之力”。我忽然又有了被抄家时的想法：我这样一个糟老头子，手无缚鸡之力，你们只须出一个女的铁杆社员，就足能把我打倒在地，并且踏上一千只脚了。何必动用你们武斗时的大将来对付我呢？你别说，这些巨无霸还真恪尽厥职，决不吝惜自己的力量。他们用牛刀来杀我这一只鸡。结果如何，读者自己可以想象了。

我不知道，批斗总共进行了多长的时间。真正批得淋漓尽致。我这个主角大概也“表演”（被动地表演）得不错。恐怕群众每个人都得到了自己那一份享受，满意了。我忽听得大喊一声：“把季羨林押下去！”我又被反剪双手，在拳头之林中，在高呼的口号声中，被押出了外文楼。然而革命热情特高的群众，革命义愤还没有完全发泄出来，追在我的身后，仍然是拳打脚踢，我想抱头鼠窜，落荒而逃；然而却办不到，前后左右，都是追兵。好像一个姓罗的阿拉伯语教员说了几句话，追兵同仇敌忾的劲头稍有所缓和。这时候我已经快逃到了民主楼。回头一看，后头没了追兵，心仿佛才回到自己的腔子里，喘了一口气。这时才觉得浑身上下又酸又痛，鼻下、嘴角、额上，有点黏糊糊的，大概是血和汗。我就这样走回了家。

我又经过了一场血的洗礼。

10 THE EARLY PERIOD OF FORCED PHYSICAL LABOR

The following period saw the mass torture in full swing.

From the winter of 1967 to the spring of 1968, I was taken out at a few day intervals, so I became accustomed to sessions of physical abuse. Like "the man who thinks little of the river and lake because he has seen the ocean," I was rather experienced in enduring torment and disgrace. At this moment, I, with a different state of mind, valued my life, so hardly retrieved as one pushes a camel through the eye of a needle, and gave up the idea of going to Yuanmingyuan.

The peak of torture split into two periods. The first period ran from late 1967 to early 1968, mainly for torture and interrogation. The second period followed the first period until May 3, 1968, focusing on torture and interrogation and forced physical labor.

During the first period, I was under attack by many administrative departments of the university for various allegations. I once worked at the Trade Union of Peking University and won, for the first time in my life, the title of "Advanced Worker," that is, "an advanced worker of the Union." My working affiliation with this organization can be traced back to the early years after the liberation of Beijing.^[1] At that time, I took part in the work and leadership of Peking University's Faculty Association, which later was reorganized into the Association of Faculty and Staff of Peking University and, finally, was transformed into today's Trade Union of Peking University. At first, workers were said to be proud of their working-class identity but find themselves humiliated in being with faculty members. Later, they were talked to by someone and reluctantly agreed to form a union with the faculty. After the founding of the Union, I worked successively as head of its Personnel Department and Chair of the Shatan Department.^[2] At Shatan, I conducted campaign

tours to compete for the leading position in the Union, a tactic learned from American political system. I went from the University's branch campuses of engineering, agriculture and medicine to the University Press at Guohui Avenue. I delivered campaign speeches and was very excited. In the early years of the new China everything was seen as rosy. I enjoyed working with a few young men around the clock on days when we decorated the campaign room. At that time I was puzzled by one question: what was the relationship between intellectuals like me and the working class, the leading class of the country? The question kept coming up in my mind. Later, I heard an influential source explain that intellectuals were not workers but fell into the category of the working class. I was not good at political theory and did not understand why that reasoning was true. I took the idea as a compromise designed to reduce conflict between the faculty and campus workers, though the confusion was never completely resolved. Nevertheless, I set about working industriously in the Union. In the years after Beida was moved out of town in 1952, I was still an active member of the Union. Later, I was elected Chair of the Union, an extraordinary honor that had been enjoyed only by three or four professors.

But this part of experience became a great crime in the Cultural Revolution. The logic of Beida's working class went like this: the fact that a contemptible intellectual, educated in old China, could become a member of the working class (akin to fishing in troubled waters) showed the liberalism of the working class. However, it was definitely absurd and monstrously offensive that such a person should work his way up to the position of a leader of the Union, a working class organization. Frankly, I understood the sentiment underlying this logic, and, in some sense, even accepted it. As discussed above, I absolutely agreed that I was a bourgeois intellectual because I sought personal ends at times. But I never questioned the assumption that campus workers were entirely free of selfish thoughts and worked in the interest of the collective and others. During the Cultural Revolution, a popular saying was that the control of our universities by bourgeois intellectuals could no longer be tolerated. The idea

confounded me. We bourgeois intellectuals became professors and department heads, or even vice presidents and chairs of the Union. But we did not bring universities under our command. Universities were under the leadership of revolutionary veterans appointed by higher authorities. On the basis of my experience these appointees loyally worked and implemented the policies laid down by higher leaders. They proved themselves good government officials. In the Cultural Revolution, they were labeled capitalist roaders. I thought they were wronged. Now we faculty members were regarded as "rulers" of the universities, an absurd theory that sounded like the situation described in an old Chinese saying: "A fire on the city gate brings disaster to the fish in the moat."

I'll set this issue aside and talk about my work as Chair of the Union. After I was labeled a counter-revolutionary, the campus workers did not want to miss an opportunity to demonstrate their revolutionary zeal. They joined in the torture of me. As manual workers, they had quite different ideas and behaviors from the faculty and students. They had greater physical strength and were more "revolutionary" in violence. They enjoyed watching performances of folk art such as local operas of north and northeast China and cross talks at leisure times. During the Cultural Revolution workers probably found torture more enjoyable than folk arts, so they became passionate and quickly adopted this new pastime. Why would they want to miss such an opportunity to torture me? So one day two workers came to my home by bike and violently banged on the door. They broke in and took me out to some place. Because I had lost my bike, I walked in the middle with one man pushing his bike on each side, just like a visiting head of state in a foreign country rides in a limousine protected by a motorcade on each side. Of course, this was not my state of mind then, when I was deeply worried and definitely in no mood for frivolity or the vainglory of Ah Q.^[3]

Word went around that the workers would round up all of the three professors who had worked as Chair of the Union in different periods of time for a torture session. What a wonderful Peking Opera

performance for the workers! It would be more fun than the performance of Yang Xiaolou and Mei Lanfang.^[4] Unfortunately, one professor had been transferred to work at the Chinese Academy of Social Sciences, and another one was not found either, leaving only myself available. A greater part of the fun was gone. But, the workers believed, "We workers are powerful." Thus, they would not allow any enemy to escape punishment. On the contrary, they carried out the procedure of torture to the letter instead of slighting the work or doing a perfunctory joy. In addition, they were rather original. They turned the indoor frenzy into a "tour show" by holding a marching torture around the campus. This new sort of flagellation at once drew larger crowds, interested in picking up street diversions, plus satisfying the curiosity, or desire, of some people. Having lost directions, I dared not to look up or talk but was simply worried about the forthcoming battering and insult from along the road. I had no idea how many people were "sightseeing." The commotion down the streets assured me that there were large crowds. The chants rose one after another, peppered with laughter. Truly, the performance was a hit. The working class had its unique personality, with less rhetoric but more fist blows, louder chanting and more stone throwing. I was used to slaps on the face and kicks. I felt quite indebted that this time they spared me the jet plane posture.

Hardly had the Union storm stopped before the "revolutionary crowd" of Beida's Institute of Asian and African Studies came over to fetch me. People tended to swarm round a spot and join in the fun: either no one got down to work or people vied with one another in completing a mission. Before the Cultural Revolution, Beida's Institute of Asian and African Studies was founded at the suggestion of the Chinese Ministry of Education. Lu Ping, president and the secretary of the Party Committee of the university, talked to me and appointed me its head. In fact, I held the position only in name. I maintained a generally good relationship with my colleagues. Once I was in deep water, those former friends of mine in the Institute took advantage of the good chance to victimize me in order to show their "revolutionary stand" or some other stand. Is it the practice that "one adds insult to

injury to someone in plight"? I leave this question for the reader to answer. Then I was taken to Yannanyuan, where the Institute was located.^[5] This session of crowd abuse was conducted in a small room and the participants were fewer than before. I felt like Monkey King, who emerged from the furnace of the Eight Trigrams of Most Exalted Lord Lao after undergoing hardship and adversity.^[6] Having seen worse things, I turned my nose up at this small-sized torture, in which chanting was sporadic, beating was spared, and my taking of the jet plane posture not strictly required. The whole process was "a short item of performance," which I simply dismissed as unpalatable. I felt disappointed. In terms of the speech delivered, ninety percent of it was, as always, sheer nonsense and nine percent was fabrication and false charges, leaving the remaining one percent to come close to the point. In general, my torturers did a lousy job. When the session was over, I sauntered back home. If I were asked to grade this round of torture, it, at most, deserved thirty points, far from a passing grade.

At one session of torture run by the Department of Eastern Languages, which, by the way, only one of the numerous, I cannot remember clearly for all its details due to my biological and psychological incompetence of holding those receding memories of events, I caught glimpses of some faces from the opposing "Jinggangshan", in addition to those of "New Beida Commune." Despite their savagely clashes, fueled even with spears and other home-made weapons, as if they were sworn enemies ready to lay down their lives, they were jackals from the same lair, both committed to that stuff of fundamentalism, the ideological basis of metaphysics and the competition for showing loyalty to the "Red Empress."^[7] Now, in fighting against a common enemy, which was me, they joined forces. It was understandable. One time, I remember, they found a sentence in my diary: "After Jiang Qing gave the 'New Beida Commune' an injection of morphine, they were aroused again to commit all kinds of outrages." It was a challenge to a strict taboo and a preposterous show of irreverence. My persecutors were people who were far from educated; in fact they had never been formally educated; and they never spoke logically. When I was taking the jet

plane posture, a feeling of contempt arose in me. It is obvious that I, now much more experienced in attending the torture sessions, was carefree, taking time off to evaluate their speeches. Meanwhile, I thought of the factional tendency I wrote about in that diary entry in the early periods of the Revolution. But I was rewarded for my loyalty to that group by its collaboration with its opposing side in crushing me, the common enemy. Bending down now in the jet plane posture, I felt betrayed.

This sort of torture went on ceaselessly for some time. Occasionally, I was lost in thought, a wave of emotion surging up. I took a stroll down memory lane. If I had stayed in my village in my early years, I would have lived with survival literacy at best. My family had only a two-*mu* plot, on which I had to work in the field every day.^[8] If my life had remained unchanged like that, I later would have been classified as a poor farmer at that time of the liberation and privileged to educate intellectuals. Life might have been hard. But I could have been carefree, since "worry comes with learning." How happy I would have been in life! Now, as a professor of the university, I had won a good reputation and honors for my successful career. Once I became a "counter-revolutionary scholar," however, I was terror-stricken every day at sessions of torture, with the numerous caps placed on my head, which doomed me. How painfully I regretted my choice of life! What a despicable mean trick of heaven!

Such regret did not help, I was sure. I stopped thinking of the past and got down to worrying about things at present. It was more practical. I thought it was crucial to build up my body. It was a special physical exercise, different from the physical exercise in general terms. To be specific, it was exercising my legs. I realized the essential part of my endurance with the jet plane posture came from enough leg strength to sustain a two-to-three-hour stance. As mentioned above, if I fell down on the floor because of the pain, the ensuring grave consequence was inconceivable. The tormentors would think I faked physical collapse. Thus, I would receive blows as well as other types of

torture because they would believe I had committed a new crime. Therefore, I must hang on. But it was no easy job. Just half an hour into taking the jet plane posture, my back and legs started to ache, and I sweated all over my body. Later on, I felt my body rock, my mind swim, figures become blurred, and things rumble in the ears. At the critical junctures I had to grit my teeth. Sometimes I recited silently a quotation from Mao Zedong, "Resolve, fear no death and overcome difficulty of all kinds to achieve success!" What I actually meant was, "Resolve, fear no death and overcome difficulty of all kinds to prevent myself from collapse!" Believe it or not, this tactic was quite effective sometimes. As I kept pushing myself to hold on, the speeches of the speakers and slogans shouted by the crowds, no matter how thundering and passionate they were, seemed empty and faded into the distance.

Having gone through such experiences for some time, I found the fundamental problem unsolved. To be physically ready for long-term tortures I had to exercise my legs. I made up my mind and started training every day on the balcony of my home, bending double without my hands propped on my knees. I practiced the jet plane posture, counting in silence to calculate the amount of time that I could endure until I sweated and felt dizzy. Such physical exercise had never been heard of at home or abroad since time immemorial. Probably these experiences would have sounded untrue without my accounts. It would be all Greek to any listeners. Today, the mere thought of that part of my life breaks my heart.

Exercising on the balcony had another function. I could see the Red Guards walking toward my home to take me away for interrogation or mass torture. I was an impetuous man and strictly punctual in doing things. When it came to torture sessions, I also wanted to get started on time. Certainly, I could not control the time to bring it to an end.

In the meantime, the balcony exercise sometimes brought me some unexpected discoveries. One day, right after the "exercise," I looked around and suddenly saw a few sparrows perched on the

nearly bamboo twigs. It was winter and the trees were stripped of leaves except for the pines, cypresses and bamboos. I was as delighted as if I were seeing the Song Dynasty (960-1279) painting "Sparrows in the Winter," providentially bestowed upon me by heaven. It was good tidings in hard times. But, immediately, I hit upon the idea that it was absurd to enjoy myself at this point. If this presumptuous trespass was discovered, I would be denounced as a hardened criminal. How could I deny the charge by then?

Moreover, I had other bizarre ideas. Each time I was marched along the lake to the Building of Foreign Languages, or other places, for a torture session, the forthcoming torture would panic me. How fortunate if I could flee the scene! But where could I run, given the vast area of the country? Walking along the side of the lake, I thought of a pastime when I came here to watch tortoises dry their shells on a withered tree trunk. The creeping creatures, hearing the sound of steps, slipped into a run and rolled into the water in a blink of an eye, leaving no sign at all except some ripples. Why shouldn't I change into a tortoise? I saw ants flitting about and pondered how I could assume their form. As an ant, I could crawl into the grass and disappear. Then, why shouldn't I become a bird, when I saw it glide into the air so freely? The bird soared in the broad sky and no one would lay hands on it. Finally, I concluded I was unfortunately endowed with an enormous human body, of which I had felt proud in the past but now wanted to shake it off.

It was all useless fantasy. Did I hit on any useful idea? Yes, it was the idea of escape. I considered it seriously. The key part of it was where I could go. Running to my hometown in Shandong was the most stupid idea. Some people fled to their hometown. But the "New Beida Commune" considered such flights outrageous violations of law and sent people to bring the escapees back. The following torture was many times crueler and more brutal. This idea was a dead end. Then where else could I go? I thought of many places and then got more ideas from other people about the possibilities of going to my friends and relatives. I tried hard to save and gather national food coupons so

as to avoid starving on my way out into the country.^[9] But, I was still restless, turning the idea over in my mind again and again. In the end, I gave it up, thinking it was unpractical and risky, and decided to stay on in Beida. This choice was most realistic but also most discomfiting and unendurable. I would be agitated each day, waiting to be taken away by Red Guards to a place. My sorrows could hardly be expressed in words.

One day, I received an abrupt order from the leaders of the Department of Eastern Languages branch of the Commune, "Go to work." The assignment was called "reform through forced physical labor," or "labor reform" in short. Without physical labor, how could one go through reform? It would make a change to my predicament of daily waiting at home. I was somewhat at ease.

From then on, I would go out and labor with that elderly professor I talked about previously, the one who was among the first to be tortured in the Revolution. When misfortune hit him, I was pleased with my placement in the rank of the people. Only one year later, we now were "comrades." Such unpredictable vicissitudes are a fact of life and often catch one unprepared.

Two fellow victims who used to work together in founding the department, we reported at the specified place at eight every morning and did odd jobs under the supervision of one worker. We stopped working at twelve and went home for lunch, resumed working at two in the afternoon and were off work at six in the evening. We had many working locations and the job varied from time to time. Occasionally we were assigned a different working site each day. We two were like thinking and talking livestock, working on whatever was assigned, being whipped by workers, and not daring to say or question anything. To my mind, Beida's maintenance workers became the new white-collar class from then on. They were also like jail officers, who guarded convicted inmates, like "gentlemen" spending all day just giving orders instead of working. I had complaints. But they were the leading class, while I was an outlaw. In no way would I dare to make that kind of audacious comment even if I ate the heart of a

tiger and the guts of a leopard. According to my understanding, the so-called Cultural Revolution, in light of its proceedings at Peking University, was a political movement designed for workers to persecute intellectuals. In old China a huge social status and income discrepancy existed between professors and workers. Some professors were arrogant about their social superiority. Workers were not treated very respectfully, so complaints and resentments were common. That was a time when workers had to bury their humiliations and pains. Things changed after the liberation. When the Cultural Revolution began, opportunities finally arrived. Those pent-up grievances exploded under the incitation of some people. Volleys of clear slaps were hit by a number of workers across faces of the professors standing in front of the wall of the main student cafeteria for their condemnation and torture. These words of mine may sound unacceptable to some workers. But we, as materialists, should seek truth from facts. Call a spade a spade. Reality denies any attempt for unwillingness to accept its existence.

Now I worked under the supervision of such a worker. I had to do whatever job he wanted me to do. As soon as he uttered anything, I must rush to the assignment, no matter how hard and filthy it was. He was arrogant and bossy, standing there doing nothing. His action perfectly exemplified the "leading" role that the working class played.

Did I have a sense of security while working this way? Not in the least. I did not care whether I had to labor or not. But such labor, except depriving me of exercising my legs, positioned me in the readiness for being dragged off at any time for torture sessions by some chiefs, either from the Department of Eastern Languages or any other department of Beida, those who, seized by whims, were able to send people and easily take me away from my work site no matter how far and remote it was. Sometimes, I had to resume work after the torture session. After experiencing the taking of the jet plane position for a while, I found, in comparison, a lot of joys in physical labor. Alas, I was degraded to such a low status as a rotten piece of wood that could not be carved.^[10]

On my way to work or going back home, I was afraid to take the main street because walking on that path was dangerous. I could bump into Red Guards strolling haughtily in threes and fours or in groups of tens, red bands on arms and spears in hands, sensing "they were the most highly privileged and respected people in the world." My attire and appearance would immediately reveal my identity as "reactionary." A person like me would look self-abased, dull-eyed, in dusty ragged clothes, undoubtedly a beggar. Besides, we were the game birds subject to hunt. A fist blow or a face slap was a display of staunch revolutionary belief evoking respect, instead of a violation of law. Young teenagers all knew we were "wicked" and could be subjected to humiliation at will. They were tacitly encouraged to hit us with rubble and spit at us, acts which would be entered into a record of "honor." Some youngsters spread lime over our eyes. We could be blinded with the chemical. In such a case, we were not supposed to say anything to stop their misbehavior, let alone strike back. The only method of self-protection was "running away in humiliation." One time, a seven-year-old held a fragment of brick in his hand and said to me, "Come here! I want to smack you!" I had to avoid it by quickening my steps. But I could not run away too fast. Otherwise the "flowers of our country" would be frightened, which would add up to another serious crime to my criminal record.^[11] At times of repose, I shuddered with the thought that I might be blinded, kicked about, and trampled on by "one thousand feet." That would be my doomsday, condemning me to everlasting, infernal suffering.

To avoid public notice, I picked reclusive paths. In the decade of turmoil, there were a lot more such paths than now, usually behind old and rundown houses and along filthy ditches. Such a path often was overgrown with weeds and littered with piles of garbage and excrement, squalid and stinking. Nobody would wander around there. But now it was the place in which I took refuge. Though the stench was hard to bear, the path was quiet. Once in a while I ran into wild dogs and cats. These animals were "politically unenlightened," ignorant of "class struggle." They did not know I was "reactionary." To them, I was a human and a human had to be dodged. Meandering on

the winding path, I often raised my head and looked at the blue sky, feeling extremely joyful as I could do what I dared not at other places. Instead of avoiding the foul smell by covering my nose, I would slow down and dawdle to have more fun in the paradise of the humans like me.

It is a common occurrence that catastrophe hits in succession, and paradise does not hold bliss for long. One day I was required to dismantle a mat railing. Accidentally, I stepped on a one-inch-long nail sticking out from a board on the ground. With a thinly soled shoe, the arch of my foot was pierced through. I felt a sharp pain. As I pulled up my foot, it started to bleed profusely. My supervisor was right on the spot. He was not concerned about what had happened to me. Instead, he flared up, saying, "You people are idiots!" The reference of "idiots" to professors was quite clear to both of us. I was ready for a couple of face slaps. To my surprise, he was rather merciful this time and said, "Go away!" I went away accordingly. Too painful to walk, I hobbled toward my home, using one foot only. I was afraid to go to the University's health center because the doctors and nurses took the side of the Commune. Their fierce looks of hate would frighten me. Why should I bite the hook and offer myself as a sacrifice? Back at home, the two old ladies were shocked to see my state. Desperate, they had to use the traditional method of submerging my foot in hot water for a while and then applying mercurochrome on the wound before binding it up with a white cloth bandage. However, I had to work in the afternoon. Otherwise if the leaders at higher levels found something awry, not only would I be in trouble, but that worker would be held responsible as well. I didn't expect to be treated humanely at this time. Captured KMT troops were treated as human beings. But, I certainly was not one of them. I was dismissed as non-human, so humanitarianism did not apply to me.

In the meantime, strife broke out between the two factions of the university. Both sides set up their own arsenals and combat brigades. Previously I talked about the weapons they used in the previous discussion. The Commune was in power and undoubtedly extravagant.

Its members cut costly steel tubes to make long spears with sharpened points. These weapons in hand, they had an awesome bearing. "Jinggangshan" affiliates were less privileged but managed to be equipped, too, with their best weapons. Each side was stationed in a few buildings all heavily guarded. I was not allowed to watch any violence. I was naive and imagined factional strife to be serious because it was a life and death business. But one day when summoned by my supervisor to clean up a battleground right after a fierce battle, I saw a ravaged area of student dorms with all its windows smashed, the ground covered with stones and brick detritus, which were used as arms in the fight between the two sides. But when I looked up, to my surprise, a few strings of worn-out shoes hung outside the windows. I sneered silently. ... I found these young students rather lovely in their immature and frivolous conduct. They turned bloody combat into a short melodrama. The last time that I laughed had already dropped into oblivion. Today, I seemed to have retrieved my property of laughing. I took it as a refreshing anecdote in the nadir of my life.

But I did my best, if possible, to keep away from all faction battles. This was a knowing smile I snatched unexpectedly, not fit for a model. I was beyond redemption like "the Pig that looks into a mirror and sees an image as ugly and disgusting as its appearance in life."^[12] As an enemy of both sides, I could be victimized by each if caught in the violence. If I was caught by them, why should they let go of this hate releasing opportunity? Since I've survived the first crisis, I'd better protect myself. I conducted a comparative study of suicide. But I did not want to commit suicide now, nor was I willing to be killed by anyone. I wanted to live.

This is the early period of my "labor reform."

[1] The liberation of Beijing, the period in early 1949, right before the founding of the People's Republic of China.

[2] Shatan, the original location of the main campus of Peking University in its early years of development in 1898-1952, before the university was moved to the present location in northwest Beijing in 1952.

[3] See [note 8, Chapter 5](#).

[4] Yang Xiaolou (1878-1938) and Mei Lanfang (1894-1961), both well-known Peking Opera artists, the former for his playing of the male role portraying military heroes and the latter for his playing of female roles.

[5] Yannanyuan, the southern part of the main campus of Peking University.

[6] The Eight Trigrams, eight combinations of three lines joined in pairs to form sixty-four hexagrams; the lines are either all broken, or all solid, or a combination of solid and broken lines. It is mainly discussed in *The Book of Changes* in ancient China. In *Journey to the West*, Monkey King is thrown into the Furnace of Most Exalted Lord Lao and burned for forty-nine days as a punishment for making havoc in heaven. But he is not killed. Instead he emerges from the furnace, after the tempering, with greater strength and more powerful properties to achieve whatever he wants. Most Exalted Lord Lao is the deified ancient Chinese philosopher Lao Tze, reputed founder of Taoism.

[7] Jiang Qing, who claimed to be the "Red Empress."

[8] *Mu*, a traditional Chinese unit of area equivalent to 6.667 ares or 0.165 acres.

[9] Food coupons started to be issued a few years after the founding of the People's Republic of China by the central and provincial governments because of food shortages until this food rationing system phased out in the late 1970s when China turned to the economic reform.

[10] **Ji refers to the quotation from Section Gongye Chang, *The Analects*, written by Confucius, "One cannot carve on the rotten wood and trowel a wall of dried dung."**

[11] Children, as they grow, are regarded as the "flowers of the country" and a symbol for the bright future of the country.

[12] Pig, ugly, greedy and foolish, is the second disciple of Monk Xuanzang in the Chinese classical fiction *Journey to the West*.

拾 劳改的初级阶段

跟着来的是一个批斗的高潮期。

从1967年冬天到1968年春天，隔上几天，总有一次批斗。对此我已经颇能习以为常，“曾经沧海难为水”，我是在批斗方面见过大世面的人，我又珍惜我这一条像骆驼钻针眼似的拣来的性命，我再想不到圆明园了。

这一个高潮期大体上可以分成两个阶段：从开始直到次年的春初为批斗和审讯阶段；从春初到1968年5月3日为批斗、审讯加劳动阶段。

在第一个阶段中，批斗的单位很多，批斗的借口也不少。我曾长期在北大工会工作。我生平获得的第一个“积极分子”称号，就是“工会积极分子”。北京刚一解放，我就参加了教授会的组织和领导工作。后来进一步发展，组成了教职员联合会，最后才组成了工会。风闻北大工人认为自己已是领导阶级，羞与知识分子为伍组成工会。后经不知什么人解释、疏通，才勉强答应。工会组成后，我先后担任了北大工会组织部长、沙滩分会主席。在沙滩时，曾经学习过美国竞选的办法，到工、农、医学院和国会街北大出版社各分会，去做竞选演说，精神极为振奋。当时初经解放，看一切东西都是玫瑰色的。为了开会布置会场，我曾彻夜不眠，同几个年轻人共同劳动，并且以此为乐。当时我有一个问题，怎么也弄不清楚：我们这些知识分子同中华人民共和国的领导阶级工人阶级是什么关系呢？这个问题常常萦绕在我脑海中。后来听说一个权威人士解释说：知识分子不是工人，而是工人阶级。我的政治理论水平非常低。我不明白：为什么不是工人而能属于工人阶级？为了调和教授与工人之间的矛盾，我接受了这个说法，但是心里始终是糊里糊涂的。不管怎样，我仍然兴高采烈地参加工会的工作。1952年，北大迁到城外以后，我仍然是工会积极分子。我被选为北京大学工会主席。北大教授中，只有三四人得到了这个殊荣。

然而到了“文化大革命”中，这却成了我的特殊罪状。北大“工人阶级”的逻辑大概是：一个从旧社会过来的臭知识分子，得以滥竽充数工人阶级，已经证明了工人阶级的宽洪大量，现在竟成了工人阶级组织的头儿，实在是大逆不道，罪在不赦矣。对北大“工人阶级”的这种逻辑，我是能够理解的，有时甚至是同意的。我在上面已经谈到，我心悦诚服地

承认自己是资产阶级知识分子，因为我有个人考虑。至于北大“工人阶级”是否都是大公无私，毫不利己，专门利人，我当时还没有考虑。但是对当时一个流行的说法“资产阶级知识分子统治我们学校的现象，再也不能继续下去了”，我却大惑不解。我们资产阶级知识分子，虽然当了教授，当了系主任，甚至当了副校长和工会主席，可并没有真正统治学校呀！真正统治学校的是上级派来的久经考验的老革命。据我个人的观察，这些老革命个个都兢兢业业地执行上级的方针政策，勤勤恳恳地工作。他们不愧是国家的好干部。“文化大革命”中，他们都成了“走资派”，我觉得很不公平。现在又把我们这些知识分子拉进了“统治”学校的圈子。这简直是“城门失火，殃及池鱼”。

这个问题现在暂且不谈，先谈我这个工会主席。我被“打倒”批斗以后，北大的工人不甘落后。在对我大批斗的高潮中，他们也挤了进来。他们是工人，想法和做法都同教员和学生有所不同。他们之间的区别是颇为明显的：工人比学生力气更大，行动更“革命”（野蛮）。他们平常多欣赏评剧，喜欢相声等等民间艺术。在“文化大革命”中，他们大概发现了大批斗比评剧和相声要好看、好听得更多，批斗的积极性也就更高涨。批斗我的机会他们怎能放过呢？于是在一阵激烈的砸门声之后，闯进来了两个工人，要押解我到什么地方去批斗。他们是骑自行车来的，我早已无车可骑。这样我就走在中间，一边一个人推车“护驾”，大有国宾乘车左右有摩托车卫护之威风。可惜我此时心里正在打鼓，没有闲情逸致去装阿Q了。

听说，北大工人今天本来打算把当过北大工会主席的三位教授揪出来，一起批斗。如果真弄成的话，这是多么难得的一出戏呀！这要比杨小楼和梅兰芳合演什么戏还要好看得多。可惜三位中的一位已经调往中国社会科学院，另一位不知为什么也没有揪着，只剩下我孤身一人，实在是大煞风景。但是，“我们工人有力量”，来一个就先斗一个吧。就这样，他们仍然一丝不苟；并没有因为只剩下一个人，就像平常劳动那样，偷工减料，敷衍了事。他们决不率由旧章，而是大大地发挥了创造性：把在室内斗争，改为“游斗”，也就是在室外大马路上，边游边斗。这样可以供更多的人观赏，满足自己的好奇心或者别的什么心。我糊里糊涂，不敢抬头，不敢说话，任人摆布，任人撮弄。我不知道沿途“观礼”者有多少人，从闹哄哄的声音来推测，大概人数不少。口号声上彻云霄，中间掺杂着哈哈大笑声。可见这一出戏是演得成功了。工人阶级有工人阶级的脾气：理论讲得少，拳头打得重，口号喊得响，石块投得

多。耳光和脚踢，我已经习以为常，不以为忤。这一次不让我坐喷气式，这就是对我最大的安慰，我真是感恩戴德了。

工会的风暴还没有完全过去，北大亚非所的“革命群众”又来揪斗我了。人们干事总喜欢一窝蜂的方式，要么都不干，要么都抢着干。我现在又碰到了这一窝蜂。在“文革”以前，北大根据教委（当时还叫教育部或者高教部）的意见，成立了亚非研究所。校长兼党委书记陆平亲自找我，要我担任所长。其实是挂名，我什么事情都不管。因此我同所里的工作人员没有任何利害冲突，我觉得关系还不错。可是一旦我被“打倒”，所里的人也要显示一下自己的“革命性”或者别的什么性，决不能放过批斗我的机会。这算不算“落井下石”呢？大家可以商量研究。总之我被揪到了燕南园的所里，进行批斗。批斗是在室内进行的，屋子不大，参加的人数也不多。我现在在被批斗方面好比在老君八卦炉中锻炼过的孙大圣，大世面见得多了，小小不然的我还真看不上眼。这次批斗就是如此。规模不大，口号声不够响，也没有拳打脚踢，只坐了半个喷气式。对我来说，这简直只能算是一个“小品”，很不过瘾，我颇有失望之感。至于批斗发言，则依然是百分之九十是胡说八道，百分之九是罗织诬陷，大约只有百分之一说到点子上。总起来看水平不高。批斗完了以后，我轻轻松松地走回家来。如果要我给这次批斗打一个分数的话，我只能给打二三分，离开及格还有一大截子。

在一次东语系的批斗会上——顺便说一句，这样的批斗会还是比较多的；但是，根据生理和心理的原则，事情太多了，印象就逐渐淡化，我不能都一一记住了——我瞥见主斗的人物中，除了新北大公社的熟悉的面孔以外，又有了对立面井冈山的面孔。这两派虽然斗争极其激烈，甚至动用了长矛和其他自制的武器，大有你死我活不共戴天之势。然而，从本质上来看，二者并没有区别，都搞那一套极“左”的东西，都以形而上学为思想基础，都争着向那一位“红色女皇”表忠心。现在是对“敌”斗争了——这个“敌”就是我——大家同仇敌忾，联合起来对我进行批斗，这是完全可以理解的。有一次斗争的主题是从我被抄走的日记上找出的一句话：“江青给新北大公社扎了一针吗啡，他们的气焰又高涨起来了。”这就犯了大忌，简直是大不敬。批斗者的理论水平极低——他们从来也没有高过——说话简直是语无伦次。我坐在喷气式上，心里无端产生出鄙夷之感。可见我被批斗的水平已经猛增，甚至能有闲情逸致来评断发言的水平了。从两派合流我想到了自己的派性。日记中关于江青的那一句话，证明我的派性有多么顽固。然而时过境迁，我认为对之

忠贞不二的那一派早已同对立面携起手来对付我了。我边坐喷气式，边有点忿忿不平了。

这样的批斗接二连三，我心中思潮起伏，片刻也不能平静。我想得很多，很多；很远，很远。我想到我的幼年。如果我留在乡下的话，我的文化水平至多也只是个半文盲。我们家里大约只有一两亩地。我天天下地劳动。解放以后还能捞到一个贫农的地位，可以教育知识分子了。生活当然是清苦的，“人生识字忧患始”，我可以无忧无虑，多么舒服惬意呀！如今自己成了大学教授，可谓风光已极。然而一旦转为“反动权威”，则天天挨批挨斗，胆战心惊，头顶上还不知道戴上了多少顶帽子，前途未卜。我真是多么后悔呀！造化小儿实在可恶之至！

这样的后悔药没有什么用处，这一点我自己知道。我下定决心，不再去想，还是专心致志地考虑眼前的处境为佳，这样可能有点实际的效益。我觉得，我在当时的首要任务是锻炼身体。这种锻炼不是一般的体育锻炼，而是特殊的锻炼。说明白一点就是专门锻炼双腿。我分析了当时的种种矛盾，认为最主要的矛盾是善于坐喷气式，能够坐上两三小时而仍然能坚持不倒。我在上面已经谈到过，倘若在批斗时坐喷气式受不住倒在地上，其后患简直是不堪设想。批斗者一定会认为我是故意捣乱，罪上加罪，拳打脚踢之外，还不知道用什么方法来惩罚我哩。我必须坚持下来，但是坚持下来又是万分不容易的。坐喷气式坐到半个小时以后，就感到腰酸腿痛，浑身出汗；到了后来，身子直晃悠，脑袋在发晕，眼前发黑，耳朵轰鸣。此时我只能咬紧牙关。我有时也背语录：“下定决心，不怕牺牲，排除万难，去争取胜利！”我的潜台词是：“下定决心，不怕苦痛，排除万难，去争取不要倒下！”你别说，有时还真有效。我坚持再坚持。到了此时，台上批斗者发言不管多么激昂慷慨，不管声音多么高，“打倒，打倒”的呼声不管多么惊天动地，在我听起来，只如隔山的轻雷，微弱悠远而已。

这样的经验，有过多次。自己觉得，并不保险。为了彻底解决、根本解决这个主要矛盾，我必须有点长久之计。我于是就想到锻炼双腿。我下定决心，每天站在阳台上进行锻炼。我低头弯腰，手不扶膝盖，完全是自觉自愿地坐喷气式。我心里数着数，来计算时间，必至眼花流汗而后止。这样的体育锻炼是古今中外所未有。如果我不讲出来，决不会有人相信，他们一定认为这是海外奇谈。今日回想起来，我真是欲哭无泪呀！

站在阳台上，还有另外一个作用。我能从远处看到来我家押解我去

批斗或审讯的红卫兵。我脾气急，干什么事我都从来不误到。对待批斗，我仍然如此。我希望批斗也能正点开始，至于何时结束，那就不是我的事了。

站在阳台上，还有意想不到的发现。有一天，我在“锻炼”之余，猛然抬头看到楼下小园内竹枝上坐着的麻雀。此时已是冬天，除了松柏翠竹外，万木枯黄，叶子掉得精光。几杆翠竹更显得苍翠欲滴。坐在竹杆上的几只小麻雀一动也不动。我的眼前一亮，立刻仿佛看到一幅宋画“寒雀图”之类。我大为吃惊，好像天老爷在显圣，送给我了一幅画，在苦难中得到点喜悦。但是，我稍一定神，顿时想到，这是什么时候我还有这样的闲情逸致。我的资产阶级修正主义思想真可谓顽固至极，说我“死不悔改”，我还有什么办法不承认呢？

类似这样的奇思怪想，我还有一些。每一次红卫兵押着我沿着湖边走向外文楼或其他批斗场所时，我一想到自己面临的局面，就不寒而栗。我是多么想逃避呀！但是茫茫天地，我可是往哪里逃呢？现在走在湖边上，想到过去自己常在这里看到湖中枯木上王八晒盖。一听到人声，通常是行动迟缓的王八，此时却异常麻利，身子一滚，坠入湖中，除了几圈水纹以外，什么痕迹都没有了。我自己为什么不能变成一只王八呢？我看到脚下乱爬的蚂蚁，自己又想到，我自己为什么不能变成一只蚂蚁呢？只要往草丛里一钻，任何人都找不到了。我看到天空中飞的小鸟，自己又想到，我自己为什么不能变成一只小鸟呢？天高任鸟飞，翅膀一展，立刻飞走，任何人都捉不到了。总之，是嫌自己身躯太大。堂堂五尺之躯，过去也曾骄傲过，到了现在，它却成了累赘，欲丢之而后快了。

这一些幻想毫无用处，自己知道。有用处的办法有没有呢？有的，那就是逃跑。我确实认真考虑过这一件事。关键是逃到什么地方去。逃到自己的家乡，这是最蠢的办法。听说有一些人这样做了。新北大公社认为这是犯了王法，大逆不道，派人到他的家乡，把他揪了回来，批斗得加倍地野蛮残酷。这一条路决不能走。那么逃到哪里去呢？我曾考虑过很多地方，别人也给我出过很多点子，或到朋友那里，或到亲戚那里。我确曾认真搜集过全国粮票，以免出门挨饿。最后，考虑来，考虑去，认为那些都只是幻想，有很大的危险，还是留在北大吧。这是一条最切实可走的路，然而也是最不舒服、最难忍受的路，天天时时提心吊胆，等候红卫兵来抓，押到什么地方去批斗。其中滋味，实不足为外人道也。

然而，忽然有一天，东语系公社的领导派人来下达命令：每天出去劳动。这才叫做“劳动改造”，简称“劳改”，没有劳动怎么能改造呢？这改变了我天天在家等的窘境，心中暂时略有喜意。

从今以后，我就同我在上面谈到的首先被批斗的老教授一起，天天出去劳动。仅在一年多以前“十年浩劫”初起时，在外文楼批斗这一位老教授，我当时还滥竽人民之内，曾几何时，我们竟成了“同志”。人世沧桑，风云变幻，往往有出人意料者，可不警惕哉！

我们这一对难兄难弟，东语系的创办人，今天同为阶下囚。每天8点到指定的地方去集合，在一个工人监督下去干杂活。12点回家，下午2点再去，晚上6点回家。劳动的地方很多，工种也有变换，有时候一天换一个地方。我们二人就像是一对能思考、会说话的牛马，在工人的鞭子下，让干什么干什么，半句话也不敢说，不敢问。据我从旁观察，从那时起，北大工人就变成了白领阶级，又好像是押解犯人的牢头禁子，自己什么活都不干，成了只动嘴不动手的“君子”。我颇有点腹诽之意。然而，工人是领导一切的阶级，我自己只不过一个阶下囚，我吃了老虎心豹子胆也不敢说三道四了。据我看，专就北京大学而论，这一场所谓“文化大革命”，实际上是工人整知识分子的运动。在旧社会，教授与工人地位悬殊，经济收入差距也极大。有一些教授自命不凡，颇有些“教授架子”，对工人不够尊重。工人心中难免蕴藏着那么一点怨气。在那时候他们也只能忍气吞声。解放以后，情况变了。到了“十年浩劫”，对某一些工人来说，机会终于来了。那股潜伏的怨气，在某一些人鼓励煽动下，一古脑儿爆发出来了。在大饭厅批斗面壁而立时，许多响亮的耳光声，就来自某一些工人的巴掌与某一些教授的脸相接触中。我这些话，有一些工人师傅可能不肯接受。但我们是唯物主义者，要实事求是，事情是什么样，就应该说它是什么样。不接受也否认不了事实的存在。

我现在就是在一个工人监督下进行劳改。多脏多累的活，只要他的嘴一动，我就必须去干。这位工人站在旁边颐指气使。他横草不动，竖草不拈，就这样来“领导一切”。

这样劳动，我心里有安全感了没有？一点也没有。我并不怕劳动。但是这样的劳动，除了让我失掉锻炼双腿的机会而感到遗憾外，仍然要随时准备着，被揪去批斗，东语系或北大的某一个部门的头领们，一旦心血来潮，就会派人到我劳动的地方，不管这个地方多么远，多么偏僻，总能把我的手到擒来。有时候，在批斗完了以后，仍然要回原地劳

动。坐过一阵喷气式以后，劳动反而给我带来了乐趣，看来我真已成了不可雕的朽木了。

无论是走去劳动，还是劳动后回家，我决不敢，也不愿意走阳关大道。在大道上最不安全。戴红袖章、手持长矛的红卫兵，三五成群，或者几十成群，雄赳赳气昂昂地走在路上，大有“天上天下，唯我独尊”之概。像我这样的人，一看打扮，一看面色，就知道是“黑帮”分子。我们满脸晦气，目光呆滞，身上鹑衣百结，满是尘土，同叫花子差不多。况且此时我们早已成了空中飞鸟，任何人皆可得而打之。打我们一拳或一个耳光，不但不犯法，而且是“革命行动”，这能表现“革命”的义愤，会受到尊敬的。连十几岁的小孩都知道我们是“坏人”，是可以任意污辱的。丢一块石头，吐几口吐沫，可以列入“优胜纪略”中的。有的小孩甚至拿着石灰向我们眼里撒。如果任其撒入，眼睛是能够瞎的。在这样的情况下，我们也不敢还口，更不敢还手。只有“夹着尾巴逃跑”一途。有一次，一个七八岁的小男孩手里拿着一块砖头，命令我：“过来！我拍拍你！”我也只能快走几步，逃跑。我还不跑得太快，否则吓坏了我们“祖国的花朵”，我们的罪孽就更大了。我有时候想，如果我真成了瞎子，身上再被“踏上一千只脚”，那可真是如堕入十九层地狱，“永世不得翻身”了。

不敢走阳关大道怎么办呢？那就专拣偏僻的小路走。在“十年浩劫”期间，北大这样的小路要比现在多得多。这样的小路大都在老旧房屋的背后，阴沟旁边。这里垃圾成堆，粪便遍地，杂草丛生，臭气熏天。平常是绝对没有人来的。现在却成了我的天堂。这里气味虽然有点难闻，但是非常安静，野猫野狗是经常能够碰到的。猫狗的“政治觉悟”很低，完全不懂“阶级斗争，一抓就灵”。它们不知道我是“黑帮”，只知道我是人，对人它们还是怕的。到了这个环境里，平常不敢抬的头敢抬起来了，平常不敢出的气现在敢出了，也还敢抬头看蔚蓝色的天空，心中异常地快乐。对这里的臭气，我不但不想掩鼻而过，还想尽量多留一会。这里真是我这类人的天堂。

但是，人生总是祸不单行的，天堂也决非能久留之地。有一天，我被押解着去拆席棚，倒在地上的木板上还有残留的钉子。我一不小心，脚踏到上面，一寸长的钉子直刺脚心，鞋底太薄，阻挡不住钉子。我只觉脚底下一阵剧痛，一拔脚，立即血流如注。此时，我们那个牢头禁子，不但对此毫不关心，而且勃然大怒，说：“你们这些人简直是没用的废物！”所谓“无用的废物”，指的就是教授。这我和他心里都是明白的。

我正准备着挨上几个耳光，他却出我意料大发慈悲，说了声：“滚蛋吧！”我就乘机滚了蛋。我脚痛得无法走路，但又不能不走。我只能用一只脚正式走路，另一只是被拖着走的。就这样一瘸一拐地走回家来。我不敢进校医院，那里管事的都是公社派，见了我都会怒目而视，我哪里还敢自投罗网呢？看到我这一副狼狈相，家里的两位老太太大吃一惊，也是一筹莫展，只能采用祖传的老办法，用开水把伤口烫上一烫，抹点红药水，用纱布包了起来。下午还要去劳动。否则上边怪罪下来，不但我吃不消，连那位工人也会受到牵连。我现在不期望有什么人对我讲革命的人道主义，对国民党俘虏是可以讲的，对我则不行，我已经被开除了“人籍”，人道主义与我无干了。

此时，北大的两派早已开始了武斗。两派都创建了自己的兵工厂，都有自己的武斗队。兵器我在上面已经提到一点。掌权的公社派当然会阔气非凡。他们把好好的价值昂贵的钢管锯断、磨尖，形成了长矛，拿在手里，威风凛凛。井冈山物质条件差一点，但也拼凑了一些武器。每一派各据几座楼，相互斗争。每一座楼都像一座堡垒，警卫森严。我没有资格亲眼看到两派的武斗场面。我想，武斗之事性命交关，似乎应该十分严肃。但是，我被监工头领到学生宿舍区去清理一场激烈的武斗留下的战场。附近楼上的玻璃全被打碎，地上堆满了砖头石块，是两派交战时所使用的武器。我们的任务就是来清除这些垃圾。但是，我猛一抬头，瞥见一座楼的窗子外面挂满了成串的破鞋。我大吃一惊，继而在心里莞尔一笑。……我真觉得这些年轻的大孩子顽皮到可爱的程度，把这兵戎大事变成一幕小小的喜剧。我脸上没有笑意已经很久很久，笑这个本能我好像已经忘掉了，不意今天竟有了想笑的意思。这在囚徒生活中是一个轻松的插曲。

但是，真正的武斗，只要有可能，我还是尽量躲开的。这种会心的微笑于无意中得之，不足为训。我现在是“猪八戒照镜子，里外不是人”。两派中哪一派都把我看做敌人。我若遇到武斗而躲不开的话，谁不想拿我来撒气呢？我既然凭空捡了一条命，我现在想尽力保护它。我虽然研究过比较自杀学，但是，我现在既不想自杀，也不想他杀。我还想活下去哩。

劳改初级阶段的情况，大体如此。

11 THE GRAND SESSION OF TORTURE

Thus days passed uneventfully.

But my mind never eased up. Each day I was on twenty-four-hour alert. No matter whether at home or at work, I was ready to be taken away by the Red Guards, exactly as in the period before the forced physical labor. Consequently, even when working in a less busy place, I could spot a "Red Guard" armband in the distance as it sprang toward me and I knew my disaster was coming. I became an animal, speechless and dumb, and was tamely led to some unknown place. The torture was stereotyped, exactly in the same pattern as before. Now I was skilled at taking the jet plane posture, without the Red Guards' ferocious corrections of kick and blow. My graceful performance left no room to be desired. I was happy that my painstaking balcony exercise eventually paid off. Though my legs were still a little uncomfortable, I didn't feel sore and hurt unendurably. While bending down over there, I turned a deaf ear to the speeches delivered, which were routinely full of lies and worse than the eight-part essay.^[1] The discourses were pieces of trash like "the wind blowing past in the autumn." On the other hand, I was satisfied that each session of torture took one part of labor off my working schedule and gave me a recess. As I experienced the ordeal of mass torture, I moved through the course of torture sessions and was close to graduation with a bachelor's degree in this field of learning.

Sometimes, I was taken away for interrogation instead. The location was the same, the Building of Foreign Languages, though the rooms varied from time to time. I didn't know the reason. Once I marched inside, I saw the branch leaders of the Commune in our department; I apologize here for not knowing about their positions at that time; they sat seriously in a row as judges at a trial. I thought I had to take the jet plane posture, but, thank goodness, this time they spared me, asking me to stand there and permitting me to look up. I

felt uncomfortable, like Jia Gui of *The Famen Temple*.^[2] In the early period of the Revolution, I behaved badly in circumstances of this kind. Since the survival of my crisis, I had been quite cooperative. I realized resistance would bring me no good. The interrogation usually focused on the diaries with millions of characters that they confiscated from my home, pointing to some minor details or sentences in order to make false charges and slurs. While listening to their hoots of nonsense, I felt infuriated sometimes, thinking they had gone too far. Aware of the danger of offending them, I tried to check my emotion. At that time, when willful vilification raged, it was quite easy to find faults in the tons of diaries and papers. On top of that I was required to answer their questions. But answering their questions would fuel my discontent, which, by all means, should be brought under control. How distressed I felt! Occasionally I would rather prefer forming the jet plane posture during the torture session, a less emotionally depressed state in which I could ignore the speaker's ridiculous address at the cost of receiving a couple of slaps on the face. One old saying goes, "It's always the other mountain that looks higher." Was I so bedeviled that taking the jet plane posture felt more desirable?

The interrogators were either some former students of mine or faculty members I had hired in the past. At this point it never occurred to me that they were "ungrateful." In fact the thought was very unrealistic. I could forgive most of them. Like myself, they were victims of the factional frenzy that stripped them of the reasoning. But a few of them stuck out for their behavior. For example, a young professor of Korean, who was a firm supporter of the Commune, displayed extreme hostility toward me in the interrogation. Did he hope to claim a reward and promotion from the "Empress" by torturing his victims? Another faculty member of Indonesian, who used to be extremely deferential in front of me, now treated me in a shockingly rude manner. It turned out that he was not revolutionary before the liberation, when he worked against revolutionary students and attended the anti-Soviet rally. Later, when the disgraceful part of his history was revealed by someone, he took his own life, using the capitalist life-ending method.

But what most disturbed and frustrated me was the conduct of a teacher of Arabic. Before the Revolution he was honest and decent and we got along well. Now he joined the branch section of the Commune in our department, but not as a leading member. He was assigned the work of reading the diaries and papers confiscated from my home. With a pile of papers more than one meter high, I knew it was a mammoth and monotonous task for him to read and detect evidence of my "counter-revolutionary behavior." On the one hand, it was easy to pick up a few sentences from the papers and concoct a false charge based on them. On the other hand, it would take a great amount of patience, eye-strain and mental power to finish this job. If I were asked to read them once again myself, I would hardly be able to accomplish the mission. But this gentleman, whom I was not in a position to call "comrade" by that time, worked day and night and finally succeeded in reading all the papers gathered together and providing plenty of evidence for denouncing me. It is amazing that he spent a great deal of time reading the papers written by an unknown man like me. It would have been a worthwhile project to study my works if I had been a noted scholar or he had been really interested in the "Study of Ji Xianlin." Didn't he squander his life? From another perspective he undoubtedly would have been able to write a good research paper if he had spent the same amount of time and energy reading works of Arabic language and literature. Securing his master's degree and getting a promotion would have been down the road. I felt sorry for him that he failed to achieve academic success due to the involvement in my case. But what could I have done for him given the circumstances I was in?

The Commune members of our department were fairly polite while interrogating me, though emotion ran high occasionally. Certainly no one slapped me, for which I was profoundly indebted to them.

Given the fact that I became accustomed to the daily routine, I grew tired of a life going to work, torture and interrogation. Again my mind wandered aimlessly. I wished the country could have a savior,

benevolent and sympathetic, to end this catastrophe and free innocent people like me from the shackles of agony. I was never a believer in anything, any religious deity, God, Heaven, Buddha or Bodhisattva, nor did I say any prayers for something. I counted on the leaders of my country. One woman, my next-door neighbor, had long treated me as "an enemy" and "a counter-revolutionary." She never looked at me directly. Instead she urged the two old ladies of my family to do the same as a token of expressing their firm revolutionary belief. The two ladies frankly rejected her by saying, "We depend on him as a bread earner!" When off work, I started to write letters to our state leaders, sitting in my dimly lighted room in such an unfriendly atmosphere, wanting to express my wishes for a dignified life. But it was only a pipedream. How could a miracle of that sort happen? A popular saying was that "the Cultural Revolution should be made at seven-to-eight-year intervals and last for seven to eight years each time."^[3] I was fighting a losing battle as "a blind man wastes his material by lighting a candle in darkness." In my illusion I longed for a sudden turn in my life for the better when, one morning, I would wake up to see the close of the Cultural Revolution and feel myself lifted back to earth from the infernal world. By that time I would be thousands of times more zealous in eulogizing our "Great Savior of the People." How wonderful it would be! In the pitch-dark universe I seemed to see a pale beam of light flickering from the "Highest Building" (Mr. Chen Yinque has a line of poetry, "It is difficult to enjoy the beauty of the highest building at near sight").^[4] Such a happy result, however, was nothing but a distant mirage on the political horizon. My daily routine continued to alternate between going to work, torture sessions and interrogations.

Even at home, free of outside disturbance, I was not relaxed. The next-door harsh lady, whom I had talked about just now, went out of her way to pester me by requiring that I move out of her room a mahogany square-pieced table and a couch, two pieces of furniture, which I had stored there thanks to a lack of space. The table was said to be the only one left in history in Beijing. I was hard put. I only had two rooms, one large and one small, which the Red Guards left with

me after raiding my home. They now were full of things. How could I squeeze the big furniture into my rooms? The garage downstairs, which was used to store books, became almost a disgusting dumpster after the home-raiding. To add fuel to fire, a female member living downstairs put up a small- character poster requiring me to move my books out of the garage. Now I lost all my friends. Like a virus carrier, to whom could I turn for help? Would I be courageous enough to go outside? I was like Xiang Yu, who was besieged on all sides in front of the river Wujiang. As I had made a comparative study of suicide earlier, I would not take my own life by cutting my throat as Xiang Yu did. I wanted to live on. But what kind of life would I want to lead? I was desperate.

What was in store for me was not the light at the end of the tunnel but the light from an on-coming train.

The manual labor dragged on for the whole spring of 1968. It was a time of sunshine and glee again. Nature ran in its own cycle; it showed no damage from the Cultural Revolution and, instead, turned the campus into a garden of colorful blossoms. Spring was a lovely season for all and I had particular affection for plants. However, my pitiful state of mind color-blinded me to the sublimity of nature.

On the other hand, the "revolutionaries" were aroused by the balmy weather and unfolded new "revolutionary enthusiasm." The leaders of the Commune believed in the old Chinese saying that "a bumper harvest in the fall depends on timely plowing in the spring." They hoped to improve their endeavors and avoid resting on their laurels by outlining a set of creations. Of course, these creations were to be applied to the nearly one hundred identified criminals. I am not sure whether each of the revolutionaries was serious about "making the revolution." However, I can say that the majority of them enjoyed torturing others. The evil side of humanity had been restrained in the past. But now it was unleashed. By the way, I should make it clear that, among a few thousand campus workers and more than ten thousand students in the university, only a tiny population participated in the torture. These activists were born rascals,

disobedient, riotous, cunning, greedy, lazy and lustful for private gains. Now they were provided with a rare opportunity for giving full play to their despicable instincts.

On May 4, 1968, the anniversary of the May 4th Movement and the Festival for Chinese Youth, we were picked up from home and marched to the coal yard.^[5] This place was notorious. As the name suggests, it was used for storing coal and run by a group of workers. During the Revolution, it happened that all those who worked there supported the "Old Dowager." These men were heavily-built and their profession with coal required great physical strength. Dealing with us weakly-set scholars hardly did justice to their physique. A slap on the face or a kick to the body was as powerful as that given by Li Kui and Lu Zhishen in *The Outlaws of the Marsh*.^[6] Such experience was personal to us and beyond description. To those "capitalist roaders," who once labored in the coal yard during the first persecution stage of the Revolution, the place sounded horrifying, just like descriptions of Zhazi Cave run by the KMT.^[7]

This time we were taken there. Now I noticed that only some of us were singled out and sent to the coal yard. The decision was made by "going through a careful selection" and "regrouping for a desired result," because we were the "chief culprits."^[8] Among us were Lu Ping and Peng Peiyun, who were condemned by the first Marxist-Leninist big-character poster. Each of us carried a heavy board of more than ten *jin*, which hung from the neck and bore our name on it. Ordered to sit on the ground, we fearfully kept quiet. I guessed this session would take a long time, so I asked to go to the restroom. It was a tedious trip and I tottered along with the board dangling about. I managed to get back soon and sat down on the ground as required. I was nervous, trying to figure out what disaster would befall me.

The suspense resembled that when the convict waited for his execution in ancient Chinese society. But finally it was the time. We heard a loud shout, "March them away!" A number of stout men came up, two grabbing each of us. As usual, our arms were twisted back up and two hands pressed hard against the neck from behind. The

walking took forever until I saw No. 3 Student Cafeteria. We filed in from the left door and then stood in a line, taking the jet plane posture. There was no platform in the hall, so the host and speakers all stood behind a long table. A sideways glance told me Peng Peiyun was on my right side. But I couldn't see further to know about the positions of the rest of the troop. The routine proceeded as expected. Noisy chants of "down with so-and-so," probably the names of us being substituted one after another, were followed by a worshipful reading of Mao Zedong's quotations, for example, "Making revolution is not something like throwing a party." Then the speeches began. I didn't hear any of the words uttered. Frankly I didn't want to. I was tired of and loathed the nonsense. What I heard was the speaker's expressions to demonstrate loyalty to someone, sheer hoarse and exhausted howls. The repetitions of derision had long benumbed me. What I was most concerned about was that at what time this round of hell would finish. There was no way of checking my watch. I don't remember carrying my watch with me that day. I silently counted one, two, three, four, five, six, seven, and eight and kept counting all the way up to three thousand. But the howls did not abate. I started to waver on my long-exercised legs and became dizzy with blurred vision. I had to stop counting. I took a glance and saw Peng Peiyun with a puddle of sweat on the floor in front of her. Whether I had a similar puddle in front of me, however, I didn't notice. The board grew heavier, as the iron wire gashed its way into my skin. I almost lost consciousness.

I had no idea how long had elapsed before I heard another shout, "Get them out!" I knew the affliction was over but not quite in the same way as last time. "When pulling a wooden winnowing spade, the mouse carries the small end, leaving the big end behind." I was then marched out of No. 3 Student Cafeteria, with the "assistance" of at least three students or workers. Hands back up and the neck clenched from behind, I kept my head low and my body bent down. I was dragged to the street. I had no idea how big the crowd waiting there to "enjoy the show" was, certainly bigger than that in the main student cafeteria, I guessed. The hubbub ran on like the mosquito buzz on a summer night. It was another street show but ran faster than last time.

With the load on me and the exhaustion I had after taking the jet plane posture, I didn't feel up to walking fast. So the young men beside me hauled me forward as if they were dragging a dead dog. My shoes kept rubbing on the ground. Then the front parts of the shoes were torn and came off. As the socks could not stand the tearing, my toes stuck out after losing their protection. The consequence could be imagined. I had no way knowing whether my toes bled or not. I didn't even feel the pain. Now and then, rubble hit my head, causing no pain at all. I was lost about my existence between reality and dream. Vaguely I remember I was hauled along some road to some place, probably the main student cafeteria. But, a moment later, I was lugged back for no reason. Suddenly I found myself back outside the coal yard.

This extensive torture was an extraordinary violence, much crueler than any of the previous ones. I was left completely exhausted, lying on the ground, feeling dizzy and light-headed, my eyes blurred, ears ringing and heart beating fast. In half consciousness I felt a shocking pain caused by my toes which were bleeding. I collapsed. Now the place at once hushed, the tormentors were gone, and the audience, satisfied with the spectacle, left for dinner somewhere. Only the two men were with me now, Zhang Xueshu and Wang Enyong, as if we were the only humans left in the universe. They were younger and stronger than I, so they propped me up from the ground and helped me back home. The compassion they showed toward me at that moment left an indelible mark in my memory.

[1] The eight-part essay, a prescribed literary writing in ancient China, designed for the imperial civil service examination, known for its rigidity of form and poverty of ideas.

[2] Jia Gui, a subordinate character in the Peking Opera, *The Famen Temple*, who is a court eunuch, submissive to his superior Liu Jin but tyrannical to his inferiors. In the opera, Liu Jin asks Jia Gui to sit down and talk to him, but the latter would rather stand, subserviently replying, "I, your humble servant, have been accustomed to standing and would not like to be seated." Today Jia Gui is widely referred to one who is lack of self-esteem and confidence.

[3] The saying is a variation of Mao Zedong's quotation.

[4] Chen Yinque (1890-1969), contemporary Chinese writer, poet and scholar, who was persecuted to death during the Cultural Revolution.

[5] The May 4th Movement, a democratic student movement that took place on May 4, 1919, in Beijing, when college students gathered in Tian'anmen Square and took to the streets, calling for an introduction of science and democracy and the building of a strong China.

[6] Li Kui and Lu Zhishen, two major characters in the Chinese classical fiction *The Outlaws of the Marsh* by Shi Nai'an, who are burly and rough but also courageous and faithful to their cause of advocating equality and eliminating injustice.

[7] Zhazi Cave, a prison, also named the Sino-American Institution of Cooperation, located on the outskirts of Chongqing and run by the KMT during the third civil war period of 1946-1949.

[8] "Going through a careful selection" and "regrouping for a desired result," two popular phrases used in the area of education in China during the Cultural Revolution.

拾壹 大批斗

日子就这样一天天地过去，时光流逝得平平静静。

但是我却一点平静都没有。我一天二十四小时都在提心吊胆中。不管是什么时候，也不管是什么地方，在家里，在劳动的地方，红卫兵一到，我立刻就被押解着到什么地方去接受批斗，同劳改前一模一样。因此，即使在一个非常僻远几乎是人迹不到的地方，只要远处红卫兵的红袖章红光一闪，我就知道，自己的灾星又到了。我现在已经变成了不会说话的牲畜，一言不发，一句不问，乖乖地被押解着走。走到什么地方去，只有天晓得。这种批斗同劳改前没有任何差别，都是“行礼如仪”，没有任何的花样翻新。喷气式我已经坐得非常熟练，再也不劳红卫兵用拳打脚踢来纠正我的姿势了。我在阳台上争分夺秒的锻炼也已取得出乎意料的成功，我坐喷气式姿势优美，无懈可击；双腿微感不适，再也没有酸痛得难忍难受之感了。对那些比八股都不如的老一套胡说八道、谎话连篇的所谓批判发言，我过去听得就不多，现在更是根本不去听，“只等秋风过耳边”了。总之，批斗一次，减少劳动一次，等于休息一次。我在批斗的炼狱中已经接近毕业，应该拿到批斗实践学的学士证书了。

可是，有时候红卫兵押着我不是去批斗，而是去审讯，地方都在外文楼，但不总是在一间屋子里。其中奥秘我不得而知。一进屋子，东语系公社的领导——恕我不知道他们是什么官职——一排坐在那里，面色严肃，不露一丝笑容，像法庭上的法官。我走进去，以为也要坐喷气式，但是，天恩高厚，只让我站在那里，而且允许抬头看人。我实在感到异常别扭，我现在已经成为《法门寺》的贾桂了。原来我在这种场合，态度很不好。自从由于态度不好而拣回一条命以后，我的态度好多了。我觉得，态度不好，一点用处也没有。他们审讯的主题往往是在抄走了我的几百万字的日记中，捕风捉影，挖出几句话，断章取义，有时还难免有点歪曲。我在洗耳恭听之余，有时候觉得他们罗织得过于荒谬，心中未免有点发火。这当然会影响我的态度，但是我尽量把心中的火压下去。在被抄走的几百万字的手稿和日记中，想用当时十分流行的形而上学的诬陷的方法挖出片言只字，进行歪曲是非常容易的。他们还一定要强迫我回答，不说不行，说又憋着一肚子气，而这气又必须硬压下去。这种滋味真难受呀！有时候我想，还不如坐在喷气式上，发言者

的胡说八道可以不听，即使挨上几个耳光，也比现在这样憋气强。俗话说：“这山望着那山高。”我难道说也是望着被批斗的那一座山高吗？

审讯我的人，不是东语系原来的学生，就是我亲手请进来的教员。我此时根本没有什么“忘恩负义”的想法。这想法太陈腐了。我能原谅他们中的大部分。他们同我一样，也是受了派性的毒害，以致失去评断是非的理智。但是，其中个别的人，比如一位朝鲜语教员，是公社的铁杆，对审讯我表现出反常的积极性，难道是想用别人的血染红自己的顶子，期望他的“女皇”对他格外垂青，飞黄腾达吗？还有一位印尼语教员，平常对我毕恭毕敬，此时也一反常态，积极得令人吃惊。原来他的屁股并不干净，解放前同进步学生为敌，参加过反苏游行，想以此来掩盖自己的过去。但狐狸尾巴是掩藏不住的，后来终于被人揭发，用资本主义的自杀方式去见上帝去了。

最令我感到不安，甚至感到非常遗憾的是一位阿拉伯语教员。这是一位很老实很正派的人，我们平常无恩无怨，关系还算是过得去的。现在他大概在东语系公社中并不是什么主要人物，被分配来仔细阅读我被抄的那一些日记和手稿。我比谁知道得都清楚，这是一件万分困难、万分无聊的工作。在摞起来可以高到一米多的日记和手稿中，寻求我的“反革命”的罪证，一方面很容易，可以任意摘出几句话来，就有了足够批斗我一次的资料。但在另一方面，如果一个字一个字地细读，那就需要有极大的耐心，既伤眼力，又伤脑筋。让我再读一遍，我都难以做到。然而这一位先生——我没有资格称他为“同志”——却竟然焚膏继晷，把全部资料都读完了，提供了不少批斗的资料。如果我是大人物，值得研究；如果他真有兴趣来研究“季羨林学”，那还值得。但我只是一个很平凡的人。读了那样多的资料，费了那么大的力量，对他来说不是白白浪费自己的生命吗？反过来说，如果他同样大的力量和同样多的时间，读点阿拉伯语言、文学或文化的资料，他至少能写成一篇像样的论文，说不定还能拿到硕士学位，被提升一级哩。因此，我从内心深处同情他，觉得对他不起。可这是我能力以外的事，我有什么办法呢？

东语系对我的审讯，并不总是心平气和的，有时候也难免有点剑拔弩张。但是没有人打我耳光，我实在是非常感恩戴德了。

即使是这样，这种劳改、批斗和审讯三结合的生活，确也让我感到厌烦。我又有了幻想。我幻想能有一个救世主，大慈大悲，忽然大发善心，结束这一场浩劫，至少对像我这样无辜的人加恩，把我解放。我从来没有相信过任何教门，上帝、天老爷、佛爷、菩萨，我都不去祈祷。

我想到的是我们国家领导人。在劳改、批斗之余，夜里在暗淡的灯光下，在十分不友好的气氛中——同一个单元住的一位太太早已把我看做“敌人、反革命分子”，不但不正眼看我一眼，而且还鼓动我们家两位老太太，同我划清界限。我们的老祖直截了当地告诉她说：“我们还靠他吃饭哩！”——我伏案给我们的国家领导人写信，妄想世间真会出现奇迹。但是世间怎会出现奇迹呢？世间流传的是：“‘文化大革命’七八年一次，一次七八年。”我写这些信，等于瞎子点灯，白费一支蜡。我却一厢情愿，痴心妄想，妄想有一天一睁眼，“文革”结束，我这个鬼再转变成人，那时我真要更加用万倍的激情来歌颂我们“人民的大救星”。那够有多么好呀！在弥漫宇宙仿佛凝固起来的黑暗中我隐隐约约从“最高楼”（陈寅恪先生有诗曰：“看花愁近最高楼”）上看到流出来的一线光明。然而最终证明，这只是一片海市蜃楼，转瞬即逝。我每天仍然是劳改、批斗、审讯。

就是在家，不劳改，不批斗，不审讯，日子也过得不得安生。同住一单元的要同我划清界限的那一位太太，我在上面已经谈过几句了。但是麻烦还不止这一些，她逼我把存在他们屋中的据说北京只有一张的红木七巧桌和大沙发搬出来。我真是进退两难。我现在只剩下堆满了东西的一大间和一小间房子。这些大家伙往哪里放呢？楼下存书的车库，抄家之后，一片狼藉，成了垃圾堆，我看都不忍看。沙发和七巧桌无论如何也是搬不进去的。火上加油，楼下住的一位女教员还贴出小字报，要我把书搬出车库。我此时一个朋友也没有，谁都视我如瘟神，我向谁求援呢？我敢走出去吗？我好像是乌江边上四面楚歌的项羽。幸亏我已经研究过比较自杀学，我决不自刎。我还要活下去。但是活下去又怎样呢？我真已经走到了山穷水尽了。

但是来的却不是“柳暗花明又一村”，而是更大的灾难。

我劳改了整整1968年的一个春天。此时大地重又回春。大自然根本不理睬什么“文化大革命”，依旧繁花似锦，姹紫嫣红，燕园成了一片花海。人人都喜欢春天，而我又爱花如命。但是，到了此时，我却变成了一个色盲，红红绿绿，在我眼睛里统统都成了灰色。

但是，在另一方面，烂漫的春光却唤醒了“革命家”的“革命”热情。新北大公社的头子们谨遵“一年之计在于春”的古训，决定使自己的工作水平再提高一步，着重发明创造，避免固步自封，想出了一套崭新的花样。对象当然还是这百十口子囚徒。他们之中是否有真正想“革命”的，我说不准。但是，绝大多数，如果不是全体的话，却绝对是以虐待别人

来取乐的。人类的劣根性，过去被掩盖住，现在完全“解放”了。他们可以为了所欲为了。我在这里顺便声明几句：在北大几千名工人中，在北大上万名学生中，参加这个活动的只是极少数。他们平常就是一些调皮捣蛋、耍奸卖滑、好吃懒做、无巧不沾的类似地痞流氓的人物。现在天赐良缘，得到了空前的千金难买的好机会，可以施展自己的本领了。

1968年5月4日，五四运动的纪念日，中国规定的青年节，我们这一批囚徒一个个从家中被押解到了煤厂。提起煤厂，真正是大大地有名。顾名思义，这里是贮存煤炭的地方，由一群工人管理。在“文化大革命”分派时期，里面的工人碰巧都是拥护“老佛爷”的。运煤工人当然个个都是身强体壮的彪形大汉，对付煤块他们有劲；对付我们这一批文弱书生，他们的劲有极大的剩余。他们打一个耳光或踢上一脚，少说也抵得上《水浒传》里的黑旋风和花和尚。具体的感受不可言宣，只有我们这些人的骨肉才说得清楚。特别是浩劫第一阶段（重点在批走资派的那一阶段）在煤厂劳改过的“走资派”，一提到煤厂，无不寒而栗，谈虎色变，简直像谈到国民党的渣滓洞一样。

现在我们这一批囚徒又被押到这里来了。我仔细看了一下，不是所有的囚徒，而是“择优录取”，或是“优化组合”，选了一批特别“罪大恶极”的。其中有“第一张马列主义大字报”点了名的陆平和彭珮云等等。我们每一个人的脖子上都被带上了一块十几斤重的大木板，上面写着自己的名字。我们被命令坐在地上，谁也不敢出声。我估计批斗的时间不会短的。为了保险起见，先请求允许到厕所去一趟。路颇远，我仍然挂着木牌，嘀里当啷，踉踉跄跄，艰难跋涉，到了目的地，赶快用超人的速度完成任务，回去坐在地上待命。我心里直打鼓，谁知道，这是一阵什么样的风暴呢？

时间终于到了，虽然不是午时三刻，然而滋味也差不多。只听到远处一声大喝：“把他们押走！”于是上来了一大堆壮士，每两个对付一个囚犯，方式没有改变，双臂被拧到背后，脖子上还有两只粗壮的手。走了很长的路，才到了我依稀认出的当时的学三食堂。从左边的门进去，排成一行，坐上了喷气式。这里没有讲台，主持人和发言者也都站在平地上一张桌子的后面。我只瞥见我的右手是彭珮云。其余的人的排列顺序就看不清了。行礼一切如仪。先是声震屋瓦的“打倒”声，大概每一个囚犯都打倒一遍。然后恭读语录，反正仍然是那一套“革命不是请客吃饭”等等。接着是批判发言。说老实话，我一个字都没有听见，我一个字也不想听到，那一套胡说八道，我已经听够了，听腻了。我只听到发言

者为了对什么人表示忠诚，发言时声嘶力竭，简直成了嚎叫。这对我毫无影响，对这些东西我的神经已经麻木了。我最关心的是希望批斗赶快结束。我无法看表，大概当时手表是没有戴的。我在心里默默地数着数：一二三四五六七八，一直数下去，数到了二三千了，耳边狼嚎之声仍然不断。可我这双经过锻炼的腿实在有点吃不消了，眼里也冒出了金星，脑袋里昏昏沉沉，数也数不下去了。斜眼一看，彭珮云面前的地上已经被头上流下来的汗水滴湿。我自己面前怎样，我反而没有注意。此时只觉得脖子上的木牌越来越重，挂牌子的铁丝越来越往肉里面扎。我处于半昏迷的状态之中。

又过了不知多久，耳边只听得一声断喝：“把他们都押出去！”我知道，仪式结束了。但是同上一次大饭厅的批斗一样，仪式并没有完全结束。“老鼠拉木锨，大头还在后面”。我被押出了学三食堂，至少有三个学生或工人在“服事”我。双臂被弯到背上，脖子上不知道有几只手在卡住，头当然抬不起，连身子也站不直。就这样被拖到马路上。两旁有多少人在“欣赏”，我说不出来，至少比在大饭厅批斗时还要多。只听得人声嘈杂，如夏夜的蚊声。这又是一次游斗；但是比上次的速度可要快多了。我身上有那么多累赘，又刚坐过喷气式。要让我自己走路，我是走不这么快的。于是我身旁的年轻人就拖着走，不是架着，好像拖一只死狗。我的鞋在水泥马路和石头上同地面磨擦。鞋的前头已经磨破、磨透，保护脚趾的袜子当然更不值得一磨，于是脚趾只好自己出马。这样一来，其结果如何，概可想见。当时是否流了血，自己根本无法知道，连痛的感觉都一点也没有。小石块又经常打在头上。我好像已经失去知觉，不知道自己是在人间，还是在梦中。自己被拖到什么地方，走的哪一条路，根本不知道。看样子好像已经拖到了大饭厅。不知道怎样一来，又被拖了回来。几个人把我往地上一丢。我稍一清醒，才知道自己躺在煤厂门外。

这一次行动真是非同小可。比上几次的批斗和游斗都不一样。我已经完全筋疲力尽，躺在地上再也爬不起来。头脑发昏，眼睛发花，耳朵里嗡嗡作响，心里砰砰直跳。在蒙眬中感觉到脚趾头流出了血，刺心地痛。我完全垮了。此时周围一下子静了下来，批斗的人走了，欣赏者也兴尽到什么地方去吃饭了。抬眼看到身旁还有两个人：一个是张学书，一个是王恩涌。宇宙间好像只剩下我们三个被批斗者。他俩比我年轻，身体也结实。是他们俩把我扶了起来，把我扶回了家。这种在苦难中相濡以沫的行动，我三生难忘。

12 THE TAIPING VILLAGE

I thought, or probably I should say I hoped, that we might be offered a few days off after the grand session of torture. I could hardly bear it any more.

But the "rebels" thought otherwise.^[1]

They wanted "to strike while the iron is still hot."

The day following the grand session of torture, we, more than one hundred "reactionaries," were told to gather in the coal yard, bringing with us the bedding and clothing. I believed a new way of torture had been cooked up, unknowing of the whereabouts they would take us. Depressed and panicked, I shambled along a trail, which wound its way by the lake and mounds, carrying a roll of bedding on my shoulder. Then I saw a man walking along. He was Professor Hu of economics, who was tortured as a "capitalist roader" earlier in the Revolution. Though not "liberated," he was dismayed.^[2] But to me he looked like a man on holiday, because he was spared this summon to the coal yard.

I entered the coal yard, an infernal region that struck horror into all of us "counter-revolutionaries." Memories of what happened the day before were still fresh, chilling my blood with increasing intensity. I was led to a bulletin board outside the yard and told to stand there and bend double. This seemed like intimidation. I was ready to take a couple of slaps, fist punches and kicks on any part of my body. To my surprise, nothing of this kind occurred. I was puzzled and uncomfortable, believing that a lack of action was a bad omen. I dared not, however, make a sincere request for a couple of slaps across the face, which would appear normal and soothe me. I had to bury this discomfort at the bottom of my heart.

Moments later we were required to line up in two columns. A student-like man came forward to the front, holding a steel-tube spear

in his right hand, and began to admonish us. Spared the jet plane posture, I could focus my attention. His speech was nothing but absurd utterances. Admittedly he did produce some aphorisms, as in the sentence, "Listen, you sons of bitches! You committed unpardonable crimes, and we had irrefutable evidence. Don't attempt to clear yourselves of charges!" Several times he shook the spear in his hand and raised his voice, "You sons of bitches should be clear about it that my spear is not made for show!" I understood and believed what he meant. Revolutionary spears had pierced the flesh of a number of people, including a middle school student. I prayed that I should not be the next target. At that time of insanity, killing a counter-revolutionary was like killing a fly. It was not only widely acceptable—the laws all abolished by then—but regarded as a "revolutionary deed." As he blustered away, some of us were pulled out. They received slaps or kicks and were struck to the ground. Then a brutal thrashing came, leaving them with bloody noses and swollen faces. The victims uttered no groans before getting back into the line. This selective violence was "a trick of killing the chicken to frighten the monkey," I knew. The problem was that I didn't know on what basis they made the choices for the punishment. I was terrified anyway. Fortunately I was only a watching monkey this time.

When the game of intimidation had been played out, we were led to mount a few trucks under the threat of the spear and headed for a branch campus of the university, nicknamed Number 200, near the Ming Tombs.^[3] An hour's ride brought us there. But our final destination was Taiping Village, about four or five *li* away, where we were supposed to do manual labor. For some reason only one truck was allowed to go all the way there. This meant the majority of us had to foot it. As we lined up again for the trek, a few of us elderly people were called out. This time our tormentors were not planning to play the chicken-and-monkey game. Instead, we were treated better by being allowed to ride, while the rest walked, to the destination. This treatment came as a shocking surprise and was the greatest debt I owed to my abusers. How can you say that they showed no signs of humanitarianism?

Upon arriving at Taiping Village, we settled into a few one-story rooms. I didn't know what the rooms were originally used for. But they had remained unused for a long time, the windows and doors shattered and thick dust covering the floor and wooden beds. Because we were not humans anymore, we should not be concerned about sanitary conditions. Four of us stayed in one room. I was with that old professor from my department and Professor Zhao from the Department of Political Science, who, familiar to me, had been suffering from the beginning, first as a "capitalist roader" and then as a bourgeois scholar, and never missed one round of torture. We were friends but were afraid to chat and laugh; instead we resembled clay or wood-cut figures with our frozen appearance and were transformed into "inhuman forms," probably some products of "metamorphosis."

In fact I was not in a mood to ponder philosophical issues. Water was what I needed most right now. Since early in the morning, I hadn't drunk any water. The sweltering heat and exhaustion after the trip drove me to the limit of endurance. Sitting on the bed, I had only one idea in mind, water, water and water.

If I had seen some water in front of me now, no matter whether it was from a river, lake, ocean, even a puddle or a cesspool, I would have drunk it to my heart's content. At the moment the most luxurious thing in life was water. I dreamed that, one day when "things took a drastic change" and I was "liberated," the first thing I would do was to find water and drink until satisfied. If I had a cool beer, that would be my mellow wine.

"Water, water, and water," I prayed.

But not a single drop of water was in sight.

Suddenly the line of the poem "The Rime of the Ancient Mariner" by the British romantic poet Samuel Taylor Coleridge sprang into my mind, which I read when I was a college student,

"Water, water, everywhere."^[4]

The poet talked about sea water, which was abundant but salty and

not drinkable. In a worse circumstance, I didn't see any water. It was only brown earth in front of me. Contrary to what Coleridge describes, I had one line of my poetry in mind,

"Water, water, nowhere."

I sat there, maniacally thinking about water, in an unknown span of stupor.

Located at the foot of the Yan Mountains, this place leaned on mountains to the north and overlooked a crisscrossed network of crop fields to the south, a rather distance from the living centers of Taiping Village. In the wilderness, actually, it was crouched in the middle of nowhere. Yet such a shut-off scenic spot gave the young revolutionaries no peace of mind. Probably they feared that the counter-revolutionaries, far more than the revolutionaries in number, would stage a riot. Therefore our enemies would not set down their spears anywhere at any time. Actually they had no reason to be intimidated, because we were old and ailing. How could we have had our nerve and physical strength to launch a revolt? The only concern we had was about our safety, as we kept praying to be spared of the spear. Their suspicion and fear were ridiculous.

When night fell, security was tightened. I guessed they were concerned that we would escape. How could it have been possible for us to make an escape, given our physical and psychological wretchedness? Maybe the men on sentry were indeed frightened, so an order was issued, "No one is allowed to go out at night, and otherwise watch the spears. If someone really needs to go to the latrine, say loudly 'Reporting' for permission." One night I happened to have this need and went out. It was pitch dark and quiet, the moon hanging high in the sky. Seeing no soul around, I shouted to the distance, "Reporting!" To my surprise a response shot up from the darkness, "Okay." I was sure this man had a spear in his hand.

We were here to be reformed through physical labor, which was the primary mission for us. The following morning, we went half way up a hill to plant sweet potato vines. Frankly it was not hard. But I

hadn't recovered from the wound I got recently. So the planting gave me no easy time, as I knelt in the field planting vines with my hands. I tried to do my best and dared not to slack up on the job. Suddenly I got a hard club hit on the head. Looking up, I saw a man holding a spear in one hand, a club in the other, crying sternly, "Ji Xianlin! Do you care for a beating?" No, I definitely would not. Turning back I worked harder as the scratches caused my finger to bleed.

It was truly a beautiful place. It was early summer, when peach and apricot blossoms fell. The trees radiated light green everywhere and the ground was covered with a variety of flowers, the hills rising high into the sky. What a spectacle! The beauty of nature would have overjoyed me. However, I was not the least cheerful for sightseeing now. Instead I was particularly cautious for fear of being struck with the club. Alas, I was hopelessly irredeemable. With sweat streaming down my body and clothes smudged with mud, I hit upon a line of poetry when I spotted the green woods,

"When, in the Yan Mountains, we planted sweet potato vines,
Surprised and shamed I saw the nearby woods green."

In history Tao Yuanming wrote the line, "I am relaxed in seeing the Southern Hills."^[5] I could only be surprised and shamed instead of being relaxed. Nature ignored class struggle in human society, no matter how relentless and devastating, and displayed earthly excellence as usual. What else could I do?

After a few days of labor I was struck down by mental stress, fatigue and the wound inflicted on me in the university. I suddenly found my testes swollen to the size of a rubber ball, sharply hurting and leaving my legs apart all the time. I could not stand steadily, let alone walking. I could not work anymore; even walking to dinner was impossible. The man watching me showed inconceivable kindness. He let the old professor of our department, who lived with me, fetch the dinner for me. I was permitted to stay at home. But I could not remain idle. So I was asked to pick up rubble and fragments of brick and throw them out of the yard. Then I crawled around on the ground

with my legs apart to gather the stuff and throw it out with excruciating pain. The rest of the people in the yard were all gone for work on the hill, leaving only a few guards behind. A deathly hush reigned in the yard over the vast area outside, at the foot of the hill, in the woods, and in the fields and village. The hush bore down on the vicinity, in which a conversation was clearly heard a few *li* away. People who were used to the hullabaloo of the city would find the atmosphere depressing and uncomfortable. It seemed as if I were creeping about in a universe of deadly stillness. I could hardly refrain from "being awed by the broadness of the heavens and vastness of the earth and shedding tears in sorrow for myself."

Two more days passed, and my supervisors saw that I was scarcely able to manage my daily life with my testes remaining swollen. They permitted me to go to the PLA clinic located at Number 200, a few *li* away, for medical treatment. They sternly told me that I had to make sure to let the clinic doctor know I was a "reactionary." Keeping this order in mind, I crawled like a snail, carrying my ball-like testes between my legs. On the way I encountered Ma Shiyi, a fellow reactionary, who pushed a two-wheeled cart on his way to Changping to purchase vegetables.^[6] He insisted I get on his cart and take a ride to Number 200. How brazen I would have been to accept his offer! Of course I turned it down. But the compassion he showed in my time of adversity would live forever in my memory.

I crawled two hours before reaching the destination. There was indeed a PLA clinic. I saw a doctor in the military uniform sitting in the room. Jumping to his feet, he came over to help me with a smile, the red badge on his collar shining brilliantly. The red color represented hope and brightness. It was what I needed. But I had to behave as told and shouted, "Reporting, here I am, a reactionary!" Alas, things took a drastic turn for the worse. The doctor's sunny face suddenly plunged into a gloom of pitch-blackness, without even an interval of cloudiness. To him, I became a man who was tested HIV positive. Letting down his hands, he stammered, "Get away! Get away!" Originally I thought I would be able to have my testes checked

and get some pain reliever. Now my hope was dashed, as the brightness I saw earlier turned gray. I set out on the hard journey back.

Human endurance of hardship and agony is mysterious and unfathomable. I continued to work for a few more days, taking no medication at all. But the welling testes were gone. At this time the planting of sweet potato vines was finished. I was told to smooth out bumps and hollows under some peach trees in a plot of land together with another old professor from our department. In my estimation we two formed a working team under the watch of one man, who was a teacher of Arabic. In terms of seniority the man should be among our students. Now he was our boss and we were his captives, as if we were a world apart in social status. In front of us two aged and fragile men, our boss displayed the usual arrogance and intimidation, like one of the Four Heavenly Generals holding a spear in his hand.^[7] Even though this working site was quieter and more beautiful than the sweet potato plot, I was not light-hearted for sightseeing here, either.

Our life, if still called life for all its pretensions, was reduced to mere survival. We had dinner at the foot of a hill, separated from our one-story dwelling place by a stretch of sand and earth. The rooms here were tidy and clean. They were taken care of by the residents. Our kitchen was set up here. Our jailers ate inside the rooms, sitting on chairs at the table. Their menu also differed from ours. We were fed outside in the air, on the grass, or under the trees. Of course we were not entitled to chairs and tables. Our food was coarse rice and steamed cornbread, which went down with cabbage and hot water. A taste of the deep fried cake dough would be a luxury.^[8] Eating was for survival. Our sleeping alternated between working and eating with no other activities.

But we had our sense of joy; we didn't need to worry about sessions of torture over here. Those torture-running organizations and departments were back on campus. Here we might be struck with a club or receive verbal abuse. There was no jet plane posture taken and no ridiculous speech delivered. This was the most pleasant time we

could relish.

I wished I could stay on in this place.

[1] The "rebels," the "revolutionary rebels," refer to the activist participants in the Cultural Revolution.

[2] Not "liberated," not relieved of the accusation placed on a condemned person as counter-revolutionary in the Cultural Revolution.

[3] The Ming Tombs, or the Thirteen Tombs, located on the north outskirts of Beijing, where thirteen or sixteen emperors of the Ming Dynasty lie buried with their empresses and concubines.

[4] From Line 119, "The Rime of the Ancient Mariner" by Samuel Coleridge.

[5] Tao Yuanming (376-427), Chinese poet in the Eastern Jin Dynasty.

[6] Changping, a town thirty miles north of Beijing.

[7] The Four Heavenly Generals, four fierce-looking heavenly guardians in ancient Hindu myth, whose gigantic statues stand inside the entrances to Buddhist temples, two on each side.

[8] The deep fried cake dough, a popular northern Chinese food.

拾贰 太平庄

我原以为，或者毋宁说是希望，在大批斗以后，能恩赐两天的休息时间。我实在支持不住了。

然而“造反派”的脾气却不是这样。

他们要趁热打铁。

就在大批斗的第二天，我们一百多号“黑帮分子”接到命令，到煤厂去集合，而且要带上行李。我知道又出了新花样，还不晓得要把我们带到什么地方去哩。我心里真不是滋味，觉得非常凄凉。当我扛着行李走在那一条倚山傍湖的曲径上时，迎面遇到前一阵被当做走资派批斗过的姓胡的经济系教授。他虽然还没有“解放”，仍然是一脸晦气；但他毕竟用不着到煤厂去集合了。在我当时的眼中，他已是神仙中人，真让我羡慕。

我战战兢兢地走进了煤厂。对我们“反革命分子”来说，这里是非常令人发怵的地方，无异于阎王殿。昨天的记忆犹新，更增加了我的恐怖感。我走了进去，先被领到一个墙外的木牌子下面，低头弯腰，站在那里。这是第一个下马威。我随时准备着脸上、头上、肩上、背上、脚上，被打上几个耳光，挨上几拳，被踢上几脚。然而，这些都没有发生。我觉得这十分反常，心里很不踏实，很不舒服。觉得这不一定是吉兆，其中暗藏着杀机。然而我又不能虔心请求，恩赐几个耳光，那样我才会觉得正常，觉得舒服。我只有把这痛苦的不安埋在自己心中。

过了一会儿，我们这一群“黑帮”被命令排成两列纵队。一个新北大公社学生模样的人，大模大样，右手执钢管制成的长矛一根。开口训话，讲了一大篇歪理。我们现在没有坐喷气式，能够清清楚楚地听懂他说的话。其中警句颇为不少，比如：“你们这一群王八蛋，你们的罪恶，铁证如山，谁也别梦想翻案！”他几次抖动手里的长矛，提高声音说：“老子的长矛是不吃素的！”这一点我最清楚，而且完全相信。因为他们的长矛确实曾吃过几次人肉了，其中包括校外一个中学生的肉。我现在只希望，他们这吃肉的长矛不要吃到我身上来。当时杀死一个“黑帮”等于杀死一只苍蝇，不但不会受到法律制裁——哪里还有什么法律！——反而会成为“革命行动”。在训话的同时，有人就从我们黑帮队伍中

拖出几个人去，一个耳光或用脚一踹，打倒在地，然后几个人上去猛揍一顿，鼻青脸肿，一声不敢吭，再回到队伍中。这是杀鸡给猴看的把戏，我是懂得的。我只是不知道他们拖人的原则，生怕自己也被拖出去，心里吓得直打哆嗦。我幸而只是猴子，没有成鸡。

杀鸡的把戏耍完，“黑帮”们在长矛队的押解下，排队登上了几辆敞篷车，开往十三陵附近的北大分校，俗称二百号。路上大约走了一个小时。到了以后，又下车整队，只能有一辆车开往我们此行的目的地，也就是我们劳改的地方太平庄。从二百号到太平庄，还有四五里路是要步行的。可是在列队时，我们几个年老的黑帮被叫出队列。这次不是要杀鸡给猴看了，而是对我们加以优待。我们可以乘车到太平庄，其余的人都要步行。这次天恩高厚，实在出我意外。你能说人家一点人道主义也没有吗？我实在真是受宠若惊了。

到了太平庄以后，我们被安排在一些平房里住下。我不知道，这些平房是干嘛用的。现在早已荒废不用。门窗几乎没有一扇是完整的。屋里到处布满尘土，木板床上也积了很厚的土。好在我们此时已经不再像人。什么卫生不卫生，已经同我们无关了。每屋住四个黑帮，与我同屋的有东语系那一位老教授，还有我非常熟悉的国政系的一位姓赵的教授。他好像是从走资派起一直到资产阶级反动学术权威，“全程陪同”，一步没缺。我们都是熟人；但没有一个人敢吭上一声，敢笑上一笑。我们都变成了失掉笑容不会表情的木雕泥塑。我们都从“人”变成了“非人”。这也算是一种“异化”吧。

我此时关心的决不是这样的哲学问题，就只是想喝一点水。我从早晨到现在滴水没有入口。天气又热，又经过长途跋涉，渴得难以忍受。我木然坐在床板上，心里想的只是：水、水、水。

如果我眼前有一点水的话，不管是河水、湖水，还是海里的水、坑里的水，甚至臭沟里的水，我一定会埋头狂饮。我感觉到，人生最大的幸福就是能有水喝。我梦想，“时来运转风雷动”，我一旦被“解放”，首先要痛痛快快地喝一通水。如果能有一瓶冰镇啤酒，那就会赛过玉液琼浆了。

“水，水，水，”我心里想。

但是一滴水也看不到。

我忽然想到在大学念书时读过的英国浪漫诗人柯勒律治

(Coleridge) 的《古舟子咏》(*Ancient Mariner*) , 其中有一行是 :

Water, water, everywhere (水 , 水 , 到处都有) 。

这里指的是海水。到处有水 , 却是咸的 , 根本没法子喝。我此时连咸水也看不到 , 我眼前只有一片干黄的尘土。同古舟子正相反 , 我是 :

Water, water, nowhere (水 , 水 , 无处有水) 。

我坐在那里 , 患了思水狂。恍恍惚惚 , 不知呆了多久。

此地处在燕山脚下 , 北倚大山 , 南面是纵横交错的田畴。距离居民聚居的太平庄 , 还有一段路。实际上它孤立在于旷野之中。然而押解我们到这里来的革命小将和中将 , 对于这个风景宜人宛如世外桃源的地方 , 却怕得要命。他们大概害怕 , 人数远远超过他们的黑帮会团结起来举行暴动。所以在任何时候 , 在任何地方 , 他们都是手持长矛。他们内心是胆怯的。其实我们这一群手无缚鸡之力的中老年知识分子 , 哪里还能有什么暴动的能力和勇气呢 ? 我们只是虔心默祷上苍 , 愿不吃素的长矛不要刺到我们身上 , 我们别无所求 , 别无所图。看了他们这种战战兢兢的神气 , 心里觉得非常可笑。

到了夜里 , 更是戒备森严 , 大概是怕我们逃跑 , 试问在于旷野荒郊中我们有逃跑的能力和勇气吗 ? 也许是押解人员真正心慌。他们传下命令 : 夜里谁也不许出门 , 否则小心长矛 ! 如果非到厕所去不行 , 则必须大声喊 : “报告 !”得到允许 , 才能行动。有一天夜里 , 我要小便 , 走出门来 , 万籁俱寂 , 皓月当空。我什么人都看不到 , 只好对空高呼 : “报告 !”在黑影里果然有了人声 : “去吧 !”此人必然是长矛在手 , 但是我没有见到人影。

我们是来劳动改造的。劳动是我们的主课。第二天早晨 , 我们就上了半山 , 课程是栽白薯秧。按说这不是什么累活。可是我拖着带伤的身体 , 跪在地上 , 用手栽秧 , 感到并不轻松。但是我仍然卖劲地干 , 一点不敢懈怠。可是我头上猛然挨了一棒 , 抬头看到一个一手执长矛一手执棒的押解人员 , 他厉声高喊 : “季羨林 ! 你想挨揍吗 ? !”我不想挨揍 , 只好低下头 , 用出吃奶的力气来干活 , 手指头磨出了血。

此地风光真是秀美。当时是初夏 , 桃花、杏花早已零落 ; 但是周围全是树林 , 绿树成阴 , 地上开满了各种颜色的小花 , 如锦绣一般。再往上看 , 是高耸入云的山峰。在平常时候 , 这样美妙的大自然风光 , 必然会引起我的兴趣 , 大大地欣赏一番。但是此时 , 我只防备头上的棒子 ,

欣赏山水的闲情逸致连影儿都没有了。也许真是积习难除，在满身泥污、汗流浹背的情况下，我偶一斜眼，瞥见苍翠欲滴的树林，心里涌起了两句诗：

栽秧燕山下，

慊然见绿林。

当年陶渊明是“悠然见南山”。我此时却是“悠然”不起来的，我只能“慊然”。大自然不关心人间的阶级斗争，不管人间怎样“黄钟毁弃，瓦釜雷鸣”，它依然显示自己的美妙。我不“慊然”能行吗？

我干了几天活以后，心理的负担，身体的疲劳，再加上在学校大批斗时的伤痕，我身心完全垮了。睾丸忽然肿了起来，而且来势迅猛，直肿得像小皮球那样大，两腿不能并拢起来，连站都困难，更不用说走路。我不但不能劳动，连走出去吃饭都不行了。押解人员大发慈悲，命令与我同住的那一位东语系的老教授给我打饭，不让我去栽秧，但是不干活是不行的，安排我在院子里拣砖头石块，扔到院子外面去。我就裂开双腿，爬在地上，把砖石拣到一起，然后再爬着扔到院子外面。此时，大队人马都上了山，只有个别的押解人员留下。不但院子里寂静无声，连院子外面，山脚下，树林边，田畴上，小村中也都是一片静寂。静寂铺天盖地压了下来，连几里外两人说话的声音都能听到。久住城市的人无法领会这种情景。我在仿佛凝结了起来的大寂静中，一个人孤独地在地上爬来爬去。我不禁“念天地之悠悠，独怆然而泪下”了。

又过了两天，押解人员看到我实在难熬，睾丸的肿始终不消，便命令我到几里外的二百号去找大夫。那里驻有部队，部队里有医生。但是郑重告诫我：到了那里一定要声明自己是“黑帮”。我敬谨遵命，裂开两腿，夹着一个像小球似的睾丸，蜗牛一般地爬了出去。路上碰到黑帮难友马士沂。他推着小车到昌平区去买菜。他看到我的情况，再三诚恳地要我上车，他想把我推到二百号。我吃了豹子心老虎胆也不敢上车呀！但是，他这一番在苦难中的真挚情意，我无论如何也是忘不了的。

我爬了两个小时，才爬到二百号。那里确实有一个解放军诊所。里面坐着一个穿军服的医生。他看到了我，连忙站起来，满面春风地要搀扶我。我看到他军服上的红领章，这红色特别鲜艳耀眼，闪出了异样的光彩。这红色就是希望，就是光明，就是我要求的一切。可是我必须执行押解人员的命令。我高声说：“报告！我是黑帮！”这一下子坏了。医生脸上立刻晴转阴，连多云这个阶段都没有。我在他眼中仿佛是一个带

艾滋病毒的人，连碰我一下都不敢，慌不迭地连声说：“走吧！走吧！”我本来希望至少能把我的睾丸看上一眼，给我一点止痛药什么的。现在一切都完了，我眼前的红色也突然暗淡下来。我又爬上了艰难的回程。

人类忍受灾难和痛苦的能力，简直是没有底儿的，简直是神秘莫测的。过了几天，我一没有停止劳动，二没有服任何药，睾丸的肿竟然消了。我又能够上山干活了。此时，白薯秧已经栽完。押解人员命令我同东语系那一位老教授上山去平整桃树下的畦。我们俩大概算是一个劳动小分队，由一名押解人员率领，并加以监督。他是东语系阿拉伯语教员。论资排辈，他算是我们的学生。但现在是押解人员，我们是阶下囚，地位有天壤之别了。就我们这两个瘦老头子，他还要严加戒备，手执长矛，威风凛凛，宛如四大天王中的一个天王。这地方比下面栽白薯秧的地方，更为幽静，更为秀美。但是我哪里有心去欣赏呢？

我们的生活——如果还能算是“生”，还能算是“活”的话——简单到不能再简单。吃饭的地方在山脚下，同我们住的平房群隔一个干涸的沙滩。这里房子整洁，平常是有人住的。厨房就设在这里。押解人员吃饭坐在屋子里，有桌有椅，吃的东西也不一样。我们吃饭的地方是在房外的草地上，树根下；当然没有什么桌椅。吃的东西极为粗糙，粗米或窝头，开水煮白菜，炸油饼等算是珍馐，与我们绝对无缘。我们吃饭不过是为了维持性命。除了干活和吃饭睡觉外，别的任何活动都没有。

但是，我们也有特殊的幸福之感：这里用不着随时担心被批斗。批斗我们的单位都留在校内了。在这里除了偶尔挨上一棒或一顿骂之外，没有喷气式可坐，没有胡说八道的批斗发言。这对我们来说已是最大的幸福。

我真希望长期呆下去。

13 BUILDING THE COW SHED

Our hope again was shattered.

The behavior of the revolutionary rebels was still obscure to us.

One day an order was issued, "Go back to campus." So our stay at Taiping Village was cut short to less than one month.

I didn't care where we went. Our circumstances were just like that of "a lame person who falls into a well and does not care whether someone comes to help him out or not, because things will not change and sitting is the only position he can take." I had no idea how important our more-than-twenty-day stay in the small village was in their project of torturing us and what new forms of abuse were being formulated after we returned to the university.

We got off the truck in front of the horrifying coal yard. The leader of the Commune, who had reprimanded us before leaving for Taiping Village, delivered another gross speech, waving his spear. The following day we were led to three rows of one-story dwellings behind both the Buildings of Foreign Languages and Democracy. We were required to construct a Cow Shed as our living quarters.

I knew the existing dwellings pretty well. Each day in the past I passed them on my way to work in the Building of Foreign Languages. Sometimes I also taught inside them. Old and dilapidated, the rooms there were simply structured with thin roofs that could not shield the inside from scorching sunshine in the summer and broken windows that did not shut out freezing air in the winter. No heating system was installed. Instead a coal stove was used, which barely provided enough heating for living. The floor was paved with brick, damp and cold. My experience of teaching there told me these buildings were unfit for living.

Now the leaders of the Commune picked this location to build our new living quarters. With the Building of Democracy to the east and

the Building of Foreign Languages to the south, a fence of weedy mat, the construction material, would be erected in the open area along the west and north sides. In the area between the two buildings, another new fence would form the gate to the Cow Shed. We were grouped and assigned rooms, twenty in a room, into the one-story dwellings divided between men and women. Each room was so cramped that we were sardine packed when lying down for the night. Long unused, the floor was mildewed. One man in charge made a special announcement, "By the kindly permission of 'Old Dowager,' a number of boards were shipped here for keeping off the damp." His intention was evident that we should feel indebted. Our guards would never live in such accommodations. They had their headquarters and offices in the Building of Democracy, where some of them probably lived. As usual they feared us, a group of the weak and aged. A door, which led to our place, was opened at the back of the building. Inside and outside the door, something like a fence of barbed wire was set up. Certainly security was strengthened by use of spears. When evening came, the door was shut tightly for protection against a riot we might stage, a calculation both ridiculous and deplorable. Close by the women's lodgings on the west, a mat shed, called the investigation room, was set up. Later it was renamed the interrogation room to sound more "revolutionary." In the days to come, many people were interrogated and tortured there. Outside the Building of Foreign Languages, a large mat shed was built as the eating place for the inmates.

These components constituted the Cow Shed's form. Because the old rooms had long fallen into disrepair and the ground was bumpy and hollow as well as overgrown with weeds and bushes, a lot of work needed to be done. We were "special" new hosts living in these rooms, and it was our job to uproot the weeds and pave the yard. Our leaders were intelligent and confident. They selected a small number of us, young and strong, to form a platoon for this hard mission. The rest of us, weak and aged, along with the women, went to do other jobs. The yard was immediately turned into a bustling working site. Different from before, however, it was a place devoid of human aspiration. Here

panicked and depressed men and women worked in silence in a labor environment that had never been seen in any place and at any time before.

Originally I was assigned the job of planting posts and building the mat shed in front of the one-story dwellings, located east of the Building of Archaeology. Those dwellings were dismantled later. We first dug holes and placed the wooden posts. Then wooden sticks were fixed between the posts to make a framework. Finally we nailed the weedy-mat ten feet high on the framework. It was high enough to prevent people from climbing over. A path that once went through the place was now blocked with heavy and awesome structures to keep walkers away.

This work done, I was called to the interrogation room to solidify and smooth out the ground with a spade and a cudgel. We were worried and cautious so the work was done with all our might, not because we were more revolutionary than before but because we feared a new round of disaster would befall us any time. Our guards behaved differently this time, too; they were not brandishing their spears. I guessed that here in the headquarters of the Commune, not a wilderness area like Taiping Village, they felt a lot more secure. But we knew very well that, though they held clubs in their hands instead of spears, they could pick up and use the weapons that were stored inside the Building of Democracy any time they wished. Furthermore their spears were able to pierce the human body, and their clubs could be no less fatal.

My worry was later justified in the case of a fairly old professor of French from the Department of Western Languages. He seemed to have some eye problems and to be a little dull-headed. I was not sure whether he was in his right mind or not. It seemed he had not suffered in a place like Taiping Village. Consequently, having been curtailed off from this world, he had little idea of what torture looked like and how the spear was not manufactured for show. Now he was sent here to work with us. Without any reason he stopped working for a moment with the spade in his hand. To his surprise he was hit on the

back with a heavy blow by a guard who, with a club in his hand, had been standing right behind him. The professor woke up and resumed work. This was just an interlude. After it was over, work resumed. The pounding of the spade on the ground echoed in the interrogation room, at once lustily and harmoniously, like a symphonic masterpiece.

Thus the Cow Shed was constructed.

The construction's finishing touch was very impressive. Eight big characters written in white announced: "Wipe Out All Monsters and Demons." Higher than human height, the characters, written with elegance and liveliness, showed the writer's accomplishment in calligraphy and completely changed the face of the yard. But the writing struck us with fear and awe, an effect more powerful than one hundred deliveries of smearing speeches accompanied by threatening spears. Personally, I admired these characters and liked to watch them, thinking the writer should be entered in the Chinese copybook of calligraphy. In this regard I concluded that the Cultural Revolution provided opportunities for practicing calligraphy through writing big-character posters, increasing wrist strength by beating people, improving rhetorical skills in the delivering of speeches at torture sessions, and promoting courage during factional fighting. One should learn to perceive things in both ways. How can you say the decade of turmoil was fruitless?

In addition I thought what Lu Xun said was absolutely correct that China was a country of characters, not only with a tradition of playing with characters throughout history but also with the intention to further their development in modern times. One phrase originated in the Song Dynasty, "At night one scholar dreams of being robbed by highwaymen but wakes up for a blessing day," which can be translated into simple language, "One has a nightmare at night but sets out for a pleasant journey the following day." As long as these characters were written on the gate of one's home, fortune would arrive. Later this game of characters took on a variety of forms, such as the popular sayings, "A visit to the home of a friend will bring good luck," and "May good luck be yours as you desire." In China even ghosts were

afraid of characters, a predilection best exemplified in "Mount Tai's Shigandang."^[1] As the country entered its stage of socialist development in the 1950s, this practice of playing with characters continued. For example, the five characters *wei renmin fuwu* for "Serving the People" were ubiquitous. Chinese people were interested in what was said rather than what was done, as if putting the idea into practice was completed once the characters were expressed in one way or another. Now the eight characters for "Wipe Out All Monsters and Demons" added another instance of utilization of writing. It seemed that, once the eight characters were written, we, the monsters and demons, would be eliminated automatically. What a simple and direct way of doing things! What a blank vent of emotion!

From then on we "prisoners" were to live in terror of these eight characters.

^[1] "Mount Tai's Shigandang," a stone tablet set up in Mount Tai, in Shandong, China, carrying the characters "*shigandan*" to keep off the evil spirits.

拾叁 自己亲手搭起牛棚

但是，我们的希望又落了空。

造反派的脾气我们还没有摸着。

有一天，接到命令：回到学校去。我们在太平庄呆的时间并不长，反正不到一个月。

返校就返校吧。反正我们已是“瘸子掉在井里，扶起来也是坐”，到什么地方去都一样。太平庄这二十来天，我不知道，在虐待折磨计划中占什么地位。回来以后，我也不知道，他们还会想出什么花样来继续虐待和折磨我们。

到了学校，下车的地点仍然是渣滓洞阎罗殿煤厂。临走时给我们训话的那一个学生模样的公社头子，又手执长矛，大声训了一顿话。第二天，我们这一群黑帮就被召到外文楼和民主楼后面的三排平房那里去，自己动手，修建牛棚，然后再请君入瓮，自己住进去。

这几排平房我是非常熟悉的。我从家里到外文楼办公室去，天天经过这里。我也曾在这里上过课。房子都是简陋到不能再简陋的程度。屋顶极薄，挡不住夏天的炎阳。窗子破旧，有的又缺少玻璃，阻不住冬天的寒风。根本没有暖气。安上一个炉子，也只能起“望梅止渴”的作用。地上是砖铺地，潮湿阴冷。总之，根据我在这里上课的经验，这个地方毫无可取之处。

然而今天北大公社的头子们却偏偏选中了这块地方当做牛棚，把我们关在这里。牛棚的规模是，东面以民主楼为屏障，南面以外文楼为屏障，西面空阔的地方，北面没有建筑的地方，都用苇席搭成墙壁，遮了起来。在外文楼与民主楼之间的空阔处，也用苇席围起，建成牛棚的大门。我们这一群“牛”们，被分配住在平房里，男女分居，每屋二十人左右，每个人只有躺下能容身之地。因为久已荒废，地上湿气霉味直冲鼻官。监改者们特别宣布：“老佛爷”天恩，运来一批木板，可以铺在地上挡住潮气。意思是让我们感恩戴德。这样的地方监改者们当然是不能住的。他们在民主楼设了总部，办公室设在里面，有的人大概也住在那里。同过去一样，他们非常惧怕我们这一群多半是老弱的残兵。他们打开了民主楼的后门，直接通牛棚。后门内外设置了很多防护设施，还有

铁蒺藜之类的东西，长矛当然也不会缺少。夜里重门紧闭，害怕我们这群黑帮会起来暴动。这情况令人感到又可笑又可叹。在西边紧靠女牢房的地方搭了一座席棚，原名叫外调室。后来他们觉得这不够“革命”，改名为审讯室。在这里确审讯过不少人，把受审者打得鼻青脸肿的事情，也经常发生。在外文楼后面搭了一座大席棚，后来供囚犯们吃饭之用。

黑帮大院的建筑规模大体上就是这样。这里由于年久失修，院子里坑坑洼洼，杂草丛生，荒芜不堪。现在既然有我们这一批“特殊”的新主人要迁入，必须大力清扫，斩草铺地。这工作当然要由我们自己来做。监改人员很有韬略，指挥若定。他们把我们中少数年富力强者调了出来，组成了类似修建队的小分队，专门负责这项工作。其余的老弱残兵以及一些女囚徒则被分配去干其他的活。工地上一派生气勃勃的劳动气氛。同任何工地不同之处则是，这里没有一个人敢说说笑笑，都是囚首丧面，是过去在任何时候、任何地方都没有见过的劳动大军。

我原来奉命在今天考古楼东侧的一排平房（平房现在已经拆掉）的前面埋柱子，搭席棚。先用铁锹挖土成坑，栽上木桩，再在桩与桩之间架上木柱，搭成架子，最后在架子上钉上苇席，有一丈多高，人们是无法爬出来的。原来是毫无阻拦的通道，现在则俨然成了铁壁铜墙，没有人胆敢跨越一步了。

席棚搭完，我又被调到审讯室去，用铁锹和木棍把地面捣固，使之平整。我们被调去的人，谁也不敢偷懒耍滑。我们都是鼓足干劲，力争上游。并不是因为我们的觉悟特别高。我们只害怕有意外的横祸飞临自己头上。这时候，监改人员手里都不拿着长矛了，同在太平庄时完全不同。也许是因为太平庄地处荒郊野外，而此处则是公社的大本营，用不着担心了。我们心里也清楚：虽然他们手里没有长矛，但大批的长矛就堆他们在民主楼内的武器库中，不费吹灰之力就可以拿到手的。而且他们现在手中都执有木棒。他们的长矛是不吃素的，他们的木棒也不会忌荤的。

我的担心并没有错。西语系教法语的一位老教授，当时岁数总在古稀以上。他眼睛似乎有点毛病，神志好像也不那么清醒，平常时候就给我以痴呆的印象。他大概是没有到太平庄去经受大的洗礼；在被批斗方面，他也没有上过大的场面，有点闭目塞听，不知道天高地厚，没有长矛不吃素的感性认识。现在也被调来用铁锹捣地。在干活的时候，手中的铁锹停止活动了一会儿。他哪里知道，监改人员就手执木棒站在他身后。等到背上重重挨了一棒，他才如梦方醒，手里的铁锹又运转起来

了。这可能算是一个小小的插曲。插曲一过，天下太平，小小的审讯室里响彻铁锹砸地的声音，激昂而又和谐，宛如某一个大师的交响乐了。

劳改大院终于就这样建成了。

落成之后，又画龙点睛，在大院子向南的一排平房子的墙上，用白色的颜料写上了八个大字：横扫一切牛鬼蛇神。每一个字比人还高，龙飞凤舞，极见功力，顿使满院生辉，而且对我们这一群牛鬼蛇神极有威慑力量，这比一百次手执长矛的训话威力还要大。我个人却非常欣赏这几个字，看了就心里高兴，窃以为此人可以入中国书谱的。我因此想到，在“文化大革命”中，写大字报锻炼了书法，打人锻炼了腕力，批斗发言锻炼了诡辩说谎，武斗锻炼了勇气。对什么事情都要一分为二。你能说“十年浩劫”一点好处都没有吗？

此外，我还想到，鲁迅先生的话是万分正确的，他说中国是文字之国。这种做法古已有之，于今为烈。宋朝有“宵寐匪祲，札闼洪庥”，翻成明白的话就是“夜梦不祥，题门大吉”^[1]。只要把这几个字往门上一写，事情就“大吉”了。后来这种文字游戏花样繁多，用途极广，什么“进门见喜”、“吉祥如意”等等，到处可见。连中国的鬼都害怕文字，“泰山石敢当”是最好的例子。中国进入社会主义阶段以后，此风未息。“为人民服务”五个字，很多地方都能看到。好像只要写上这五个字，为人民服务的工作就已完成。至于服不服务，那是极其次要的事情了。现在我们面临的“横扫一切牛鬼蛇神”，也属于这种情况。八个字一写，我们这一群牛鬼蛇神，就仿佛都被横扫了。何其简洁！何其痛快！

从此以后，我们这一群囚徒就生活在这八个大字的威慑之下。

[1] （此事最早见于宋人编《锦绣万花谷》前集卷二〇，为北宋欧阳修与宋祁同修《新唐书》之轶事。后世亦多转述，较清晰者如明彭大翼《山堂肆考》卷一二〇《嘲文艰深》一则云：“宋景文修《唐史》，好以艰深之辞，文浅易之说，欧阳公思有以训之。一日大书其壁曰：‘宵寐匪祲，札闼洪庥。’宋见之曰：‘非“夜梦不祥，题门大吉”耶？何必求异如此？’欧公曰：‘《李靖传》云“震霆无暇掩聪”，亦是此类也。’景文惭而改之。按宋祁，谥景文，尝与欧公同修《唐书》，《李靖传》乃景文所作也。’）

14 LIVING IN THE COW SHED (PART ONE)

As the construction of the Cow Shed was finished, we were "invited as guests" to live inside.

Living in it was not totally without value. Didn't some writers believe each fabric of life provides inspiration?

But my days in the Cow Shed are not easy to describe. "With an enormous collection of the seventeen history books, one finds it hard to get started on a review."^[1] I thought a long time, and then an idea suddenly came to me. I should use the method called "discussing history by first introducing theory," which, considered almost as a fundamental law, had long been popular in China. Admittedly my theory could not be presented as a theory because I did not formally study this area, nor did I use classical sources. My theory was, in fact, an account of my experiences and observations together with some thoughtful analyses. I am sure my account is all based on facts, though it can hardly be called a piece of academic work. I think it is good to share it with the reader here. My writing may cause some suspicion and be dismissed as deceptive and shameless talk, but I can do nothing but ignore the risk.

What is my theory? In short it is the "theory of torture." I think what the "young revolutionaries" did in the Cultural Revolution boils down to one simple, fundamental guiding principle of torture. All the rhetoric they used was sheer hogwash, no matter what words they uttered in an effort to show their loyalty to someone or some revolutionary line. From the period of "condemnation and raiding homes" to the period of "reform through physical labor," this guiding principle prevailed everywhere and every minute. I will not talk about its psychological and ideological bases, as those have been discussed previously. The young revolutionaries' ways of torture were various

and inconceivable, yet unmistakably effective. Of course the torture went through a process of evolution. In the beginning, though its perpetrators never departed from their resolve to persecute victims, they found themselves short of experience. They got over this dilemma by emulating what they learned from ancient novels of Chinese history. The book *Stories of Judgment* is a case in point, which I mentioned at the beginning of this book. At this time torture was developmentally primitive: simple, crude, direct and fragmented forms of slapping faces and kicking bodies, which its deliverers knew by instinct. But these youngsters were quick to learn from books and each other. Like the swift development of arms in wars, their methods of torture improved and expanded rapidly as the Revolution went along. More often than not, a new way to torture people was first invented in a university and then traveled nationwide at the speed of light. For example, hanging a board on a victim's neck was first invented at Beida, with which its creator should have applied for a patent. As a result, all "revolutionary rebels" joined forces, contributing respective shares, gathering ideas of the masses, refining from raw materials, and proceeding from the outside to the inside, the near to the far, and the few to the multitudes, and finally formulated a template of torture, illuminating and electrolyzing the universe. When a need for use arose next time, it would be very handy.

This is my so-called "theory."

So, what will follow in terms of the "history"?

This history is a jumble of things. Actually I talked a little about it earlier in this book. Now I will focus on this topic in relationship to Beida's Cow Shed. To me the building of the Cow Shed is a good example of putting theory into practice.

Here is the story in detail.

(1) Renaming

Confucius says, "Action should be justified by a cause. Without declaring the cause, the action cannot be carried out without dispute

and opposition." What should we call a host of criminals whose families were attacked and their homes raided? It was a paramount task in the Revolution to label us. Originally we were called "black gangsters," the term that the masses used to refer to us. But the term was not elegant. For some time we were addressed as "sons of bitches." But in comparison that label also was vulgar. We were once named "counter-revolutionaries." It was indeed a "legalized term." But for some unknown reason it was not widely adopted either. A few more terms suffered the same fate. So "labeling" was a knotty issue yet to be tackled. Once the Cow Shed was built, management required some standard procedure to be specified to us. The first day we moved into the Cow Shed, we saw a poster on the wall of each room entitled "Regulations for Labor-reform Persons." It listed in stern detail the rules we should obey. The poster seemed to have been written by a learned person. At that time no one had guts to propose for a rule of law. Our young "revolutionaries" were truly pacesetters who worked out impressive legal terms. I have to say that their initiative not only regulated our behavior but drew admiration from us as well.

An old saying goes like, "The wisest man may outline one thousand schemes but at least one of them must be flawed." "Regulations for Labor-reform Persons" was replaced, only two days after we moved into the rooms, with a new list, "Regulations for Labor-reform Criminals." The revision of two characters hammered the point home. What a clear and uncompromising usage of "criminals"! The sight of this term immediately reminded us of our social position that we were dismissed as social dregs and condemned to eternal torment and suffering. From now on we scholars, who had never had the nerve to rise in rebellion, would reform ourselves through physical labor, bear the label of criminal, and be extremely cautious about our behavior day and night as though treading on thin ice.

In reference to the reform, here are four lines of self-ridicule that I wrote,

"The building of the Cow Shed is complete,

Everything is arranged nice and neat,

The choice of name is finally decided on,

And the whole world rests in peace."

(2) Our Living Quarters

Now I'm going to talk a little more about our living quarters, though I touched upon this topic earlier.

The "criminals" were arranged to fit into rooms in three rows of the one-story dwellings.

These dwellings were very simple in structure. A little better than thatched sheds, they might have been meant for temporary shelters at the time of construction. At a time when the university was short of classrooms, they were used to meet that need. Now classes had been suspended in universities across the country for nearly two years. At Beida many regular classrooms were left unused. Who would care for these shabby dwellings? Thus they were covered with heaps of earth on the floor and cobwebs on the walls. With low roofs and damp floors, the rooms smelt of mildew and were full of mice, geckoes, probably scorpions too, as well as other creatures. In other words the rooms contained all living creatures that depended on dark, moist environment for living. They were totally unfit for humans to live in. But we were not humans anymore. We were criminals. Any lodgings, no matter how rotten they were, should be accepted with gratitude. How could we raise unreasonable demands?

During the first days of our stay there, we slept on straw mats, which were spread over brick-paved floors, covered with an additional thin layer of straw that could not keep the moisture out. During the day the rooms swarmed with flies, and at night the constant drone of mosquitoes kept us awake. Each of us got mosquito bites all over the body and felt terribly itchy. Later we were provided some planks of wood, which we stuck under the straw mats; on top of that strips of cloth, dipped with DDT, were hung in each room for the purpose of keeping mosquitoes away. We were touched to tears by this "humanitarian concern."

Meanwhile our labor troop was greatly expanded, almost doubled in fact. We didn't know what caused the enlargement, nor did we want to know. What was the point of knowing the reason? I noticed a few "important" criminals joined us, such as Lu Ping. They had been housed in another place before, probably a small Cow Shed. Why they were sent here to be with us was unclear to me. Certainly a few new faces emerged in our rank, while others were familiar ones I had encountered at some torture sessions months earlier. Probably the "class struggle" rolled up new targets as its attack intensified. In fact I should say that our group grew larger and larger as we were steadily joined by new "criminals" from the time of the completion of the Cow Shed to that of its dismantling.

(3) Our Daily Life

From the time the "Regulations for Labor-reform Criminals" was enforced in the Cow Shed, inmates seemed to have a definite law laid down for them. Occasionally amendments were made, but basically they were uttered casually and never added in written form. Here we didn't have the "Congress of Labor Reform," so there was no voting procedure. The avoidance of such legislative red tape benefited the compound's administration, as the truth and law were the words, no matter what rolled off the tongue of those "reform guards," a term that I'm not sure whether is the official terminology or not.

Thus our life became standardized and strict with the enforcement of the "constitution" and verbal amendments. At six every day we had to get up, not earlier or later. As the bell rang, we slipped into clothes and raced out of the rooms. The first task was to run along the yard with the reform guards standing at the center and giving orders. I remember, by that time, the guards rarely held spears in their hands. Probably they felt secure in this place. Is jogging a beneficial exercise? Yes, it is, according to common sense. But we, a bunch of "labor-reform criminals," actually had plenty of physical exercise as we were asked to do manual labor from dawn to dusk and were denied any time for reading. What was the point of jogging? In addition we were "sons of bitches" who had been warned that the

accusation that we had committed crimes was irrefutable because of the solid evidence: to redress any of our cases was absolutely impossible. We deserved a wretched death without redemption, so the daily physical exercise was perfunctory. The only rationale I found was the "theory of torture," which posited that the morning jog was a way of "tormenting," exhausting us physically before a whole day's work load was imposed upon us.

The jogging done, we first washed up at the running water faucet in the yard and then went to the Second Staff Cafeteria for breakfast. On our way there, more than one hundred of us generated quite a sight, our long line stretching along the road, our heads dangling in front of us as if we were mourning the deaths of our parents. According to the "verbal law," we were not allowed to walk with our heads held high. A violation would ensure us a bunch of fives on the back or a kick. Inside the cafeteria we were supposed to purchase the specified food, cone-shaped steamed buns of cornmeal and pickles. Things like deep-fried cake dough were "high-end luxuries" and totally forbidden to eat. By that time we had a monthly income of sixteen and a half *yuan* and a subsidy of twelve and a half *yuan* for dependents.^[2] Even if we had permission to purchase the "luxuries," how would we have been able to afford them? How could we survive and live on this meager salary? As everywhere else, there were tables and wooden benches in the cafeteria. But they were supplied to "humans," not to us. We had to squat down under trees or on the steps outside the building to have our "meal." To dine on meat dishes, which were available at lunch and supper, was completely inconceivable for us. What we ate was salty cucumber or plainly stewed vegetables. After a whole day's hard labor, the non-meat meal could barely satisfy our appetite, so we filled our stomachs with cornmeal buns. Where could we manage to obtain additional food coupons at a time when the country had a food rationing system? It was the third time I had suffered from starvation. The first occurred in Germany while the second happened in the so-called "three-year hard time."^[3] However, I had to make a distinction among the three times of hunger. During the first two I was only starved. But today's craving

for food was aggravated by physical fatigue and threats of beating. Now those past hard years looked like paradise in the beyond and were remembered with a sense of jealousy.

After breakfast we went out and waited for work assignments. We all became draft horses. At that time campus maintenance crews had long given up work. They were now supervisors and jailers. When they were given work assignments, particularly heavy and filthy ones, they came to the Cow Shed and took some of us, the "labor-reform criminals," off for the tasks. As brigade leaders in the countryside who managed draft animals, the workers now became supervisors, bossing us around and doing nothing themselves. The Beida working class was really riding high after the founding of new China.

Another important thing will always stay in my mind. Each day when we left for work, we were supposed to write on a board hung on a tree trunk the "supreme directive" that we had learned to recite. This directive often came as a long discourse. Each "criminal," no matter what kind of work or where to work for the day, was supposed to be able to recite the directive free of errors. Any reform guard could stop one of us in any place and ask him to recite. If an error was committed, the "criminal" would at least receive a slap on the face or a harsher punishment for the unfortunate day. Occasionally we were called into the office. According to the regulation, we then had to say loudly, "Reporting," and stand firmly with the head lowered. Then the reform guard usually picked the first sentence from a paragraph of Mao Zedong's quotations and read it, while we were supposed to complete the rest in recitation. If we blurted out a wrong character, a punishment as described above would unquestionably ensue. A professor of geophysics was quite old. He could memorize all mathematical equations but seemed unable to add anything else to his brain, even the holy "supreme directive." Many a time I saw him beaten black and blue with two swellings right below his eyes. I felt sorry for him, as I did for myself.

What was the purpose of reciting the quotations? Some people might have thought we were hardened criminals, whose reactionary

nature would deny reform of any sort. Accordingly the "revolutionaries" came up with a method similar to studying the Scriptures that Jesus Christ used in teaching his disciples. It was said that the method was powerful. Unfortunately I felt ashamed that the method did not have any effect on me. But I unflinchingly believe in the "theory of torture," my scholarly contribution, as the best explanation for the forced recitations of quotations that has been produced so far. Actually the reform guards, themselves, were skeptical of the reforming power of reciting the "supreme directives." Revolutionary as our supervisors were, they could barely recite the quotations without an error themselves. One of them often blurted out a lead-in sentence wrongly but without realizing the error. In completing the quotation, I sometimes committed slips of the tongue because of being nervous. Aware of the fact that the guard was unable to detect the problem, I got away with errors by not being stupid enough to make a correction. If I had been dumb enough to confess to the mistake, wouldn't the reform guard have felt hurt in his pride? The consequence would have been inconceivable.

Since that time we had started reciting quotations while working, which pushed our already intensified physicality and psyche to the brink of collapse.

In terms of the nature of the work I did a colossal number of jobs. I remember a couple of work sites in which I worked the longest. The place that first comes to my mind is the Northern Material Mill, a work unit controlled by the "New Beida Commune" with all of its workers being diehard supporters of the "Old Dowager." We "labor-reform criminals" were treated differently on the basis of our original factional inclinations. I had a double identification, a "labor-reform criminal" and a former member of "Jinggangshan". For the second background, I received some "special treatments," which means more verbal abuse. Here we carried wayward bricks from one spot to the side of a little pool in the mill and then stacked them neatly to keep them from tumbling down. These bricks were heavy and could kill you if you got hit by them. So we were particularly cautious in

handling them. After the work was finished, we were sent to pull nails out of old boards. In doing this work, a lot lighter job, we were allowed to sit on stools, which gave us tremendous pleasure and struck us as good fortune. When we completed the work inside the mill, the next assignment was to carry sand from a large mound outside the mill, prepared for construction, to another place. At the Northern Material Mill I worked for a few weeks. Here I should make a note. Those who worked there were only a small fraction of the convicted population working here. Because I have no idea about what assignments other people had, I will keep the discussion to our group.

One summer I was sent to carry coal in the dormitory area. Trucks carried coal from somewhere to the campus and dumped it all over the ground. When the trucks were gone, our jobs started, as we swept up, carried baskets of coal to a nearby place, and heaped the coal into a mound in order to save space. This work was rather demanding, both physically wearying and filthy. For the two elders, carrying a basketful of coal chunks or powder weighing more than one hundred *jīn* and sometimes going up the coal mounds were, by all estimates, extremely demanding tasks. When the wind started to blow, we were covered with coal ash all over the body. In the past we had never walked into a place like this. Now things had changed. We felt quite comfortable about the situation because nothing offended our sense of personal hygiene. One old Muslim, who shouldered a basket with me, was a former underground Communist veteran who risked his life doing revolutionary work at Yenching University in Beijing before 1949.^[4] When the reform guards were not around, he whispered in my ear, "Our doom is set now. Chances are that we will be sent to a remote area to labor for reform for the rest of our life." This was a prevailing concern. What could I have thought otherwise?

Later I did other jobs. For a time I worked along with our group in the rice fields, which later became the Shaoyuan Guest Compound of today, carrying rocks and digging up the soil. One day one old professor from the Department of Western Languages and I were sent

to fix an underground water pipe outside the eastern wall of student dormitory Building 35. This time a worker joined us. He did the major part of the work while we two old men were only his "teaching assistants," helping him by carrying cement bags around and handing him spades. This worker did not utter any word of hostility, though he pulled a long face throughout the time. I felt deeply indebted. After the decade of turmoil I often saw him ride his bike through the campus. Each time I would pause and gaze at him in gratitude as his figure faded into distance.

At other times I was sent to do a variety of things such as repairing houses and pulling up weeds, which I will not talk about in detail.

Because this part of our life was dubbed "labor reform," our primary occupation was manual labor. Of course we could not avoid meeting reform guards at work as well as in performing other daily routines. Wherever an encounter happened we had to follow the head-lowering rule strictly. Usually we did not know whomever we met. But the first few words tossed out toward us from the opposite direction were invariably those of swearing, which were used as customarily as Americans say "hello" in greeting. However, the difference was that the "greeting" we received here was supposed to be replied in silence. The vocabulary they used was rich. Beside the four-letter words frequently used there were colorful varieties of slur like "you bastard" and "you son of a bitch." If a reform guard had not started his hailing to me with a derogative remark, I would have felt skewed and disquieted.

(4) The Evening Admonishment Speech

I shall make a formal note here: the evening admonishment speech was the greatest and most brilliant innovation that the reform guards had designed.

I talked previously about the routine life of our reform and also touched upon many inventions reform guards developed in supervising us. Except for a few staff members and workers, the

majority of our bosses were students. I had no idea about these students' academic progress. But their performance in managing the Cow Shed would certainly have pulled an A for the course they took from me as their teacher. In the past our teaching was basically separated from reality. As the University's pedagogies should take the brunt of the blame, we faculty members were hardly free of responsibility either. In the Cow Shed the students put theory into practice and displayed a myriad of talents, leadership skills, administrative strategies, forewarning-speech rhetorical proficiencies, quibbling, fact-distortion and false charges competences, and many more. In addition our young leaders were rather determined and courageous in conducting violence and especially quick with their fists and feet when flogging and kicking us. Their expertise stunned and eclipsed us teachers.

The evening admonishment speech showcased their gifts.

What was the "evening admonishment speech"? Each day after dinner all the "criminals" gathered between the two rows of the single-story houses in the Cow Shed and listened to a man deliver a speech. This man, probably one of those Commune chiefs, was seldom around in the yard during the day. But the speaker was repeatedly replaced with a new one at a few day intervals. I had no idea about the rationale behind the substitution. The speaker usually addressed a different topic each day, because the purpose of the presentation was not for teaching us some revolutionary doctrines, which otherwise would have been repetitive in the following evening. Structurally each speech focused on the "study of torture," the application of this subject of learning. The speaker prattled on, catching short braids or fault-finding on us, literally. We all had many "braids" on the head. Even if we didn't, they could make us wear some. Primarily the braid usually came in two kinds, the trifling error that was made during the day and the so-called "problem" that was detected in the report we wrote about our thoughts after one day's work. We all worked hard, not because we were "fundamentally revolutionary" but because we were afraid of our supervisors' fists and feet. When one is bent on nit-picking, false

charges can be ready made. Each day one unfortunate Cow Shed "mate" of us was picked up by the reform guards and reprimanded during the evening admonishment speech. Meanwhile, our reports of thoughts were also placed, as a top priority, on the daily agenda. In a country like China, in which learning is both respected and taken advantage of, turning a word game into a way of life and finding an error in documents like our reports were as easy as turning one's hand over. In Chinese history well-known cases of being wronged by false charges are plentiful. The Qing emperor Yongzheng once had a minister executed on the charge of the fact that the official had reversed the word order when writing the phrase "Your Majesty is cautious and conscientious about your work from night till morning" instead of following the original order "Your Majesty is cautious and conscientious about your work from morning till night." In fact the stylistic uniqueness did not weaken the feeling of respect the original phrase carried. But the minister's imprudence enraged the emperor and cost the official his head. Our reform guards had much higher IQs than ancient emperors. The error picking on our reports was carried out strictly to make sure one victim was singled out for the evening admonishment speech of the day. Whoever unluckily caught the searching eye of the reform guards could expect an evening of hell.

The speech was usually delivered this way. We stood silently in four rows in the small yard. Then the roll was called. I have gone through thick and thin in life and nothing in particular has left a print on my mind as indelible as the event that happened on every of those evenings. I won't forget it for the rest of my life. One professor had returned home from overseas. He was over sixty and plagued with a sustained sickness. Though bedridden he was carried to the Cow Shed in some way. He was at death's door, having flat lost the ability to work. He even could not get up for his meals. So he was permitted to "reform" in bed. The place for our evening gathering was outside his room. Each time his name was called, a feeble, hoarse, trembling voice drifted out of his room, "Yes, here I am." Shaken to the soul each time, I was on the edge of tears.

Standing outside his room, the rest of us were nervous. Usually the speaker called the name of one of us aloud. Before the man stepped out of the line, two sturdy young men walked up and pulled him out with his arms twisted high on his back and a fist pressed on the back of his neck, exactly the way used at torture sessions. Smacks on the face and kicks followed as the piercing sounds of beating soared across the nightly sky. But a heavier punishment included a blow that knocked a man to the ground and a foot that stomped on his back. Certainly the revolutionaries' popular saying of "stepping one thousand feet on the back" exaggerates the case. Such episodes are also part of my study of the "theory of torture."

Such a spectacular event could only be seen during the Cultural Revolution. Aren't our people interested in talking about things for which China ranks first in the world? I should say some of those past claims deserve further debate. However, what happened in the Cow Shed could definitely rank first with respect to sightseeing.

The evening admonishment speech in the Cow Shed became hot news, spreading quickly overnight and attracting large crowds on campus. The gathering was as grandiose as the change of imperial guards at Great Britain's Buckingham Palace. Every day when standing in line at this moment, I was very scared of being singled out as the target. Occasionally I stole glances sideways and saw, outside the mat fences, a few small mounds covered with human figures in the dim light of the road's electric poles. In the bushes and under small trees surrounding the yard, crowds by the hundreds stood silent. They came to groove with the exciting scene, an opportunity even more difficult to obtain than witnessing the change of British imperial guards riding on impressive horses with tall hats on their heads, a tradition maintained for hundreds of years. It was a shame that this splendid campus view at the top university in Beijing, the capital city of China, existed for only a few months. Otherwise it would have brought in huge tourism revenues for the country.

Another sight also was worth looking at, but our visitors unfortunately didn't have the patience to wait until the wee hours.

Otherwise they would have been fascinated with the more terrifying occurrence. This spectacle was occasional and not every one of us living in the Cow Shed was lucky enough for a view. One night I went out to relieve myself and saw some figures in the yard, each standing under a tree with the arms stretched out as if trying to embrace something. Actually they were embracing the air, nothing else. I had no idea how long our Cow Shed mates had stood there sustaining that position. I have never tried that position myself. But I thought it was somewhat like the jet plane posture. If I had been ordered to perform it, I probably could have held it hardly for a quarter of an hour. I wondered how many hours they had stood that way and at what late hour they would be released. The residents in the Cow Shed knew well that, at this moment, nothing could be said and these miserable guys should be left alone. I rushed back into my room. But the images of those victims repeatedly came back to me in dream for the rest of the night.

(5) Strange Regulations

In the Cow Shed we had the "Regulations for Labor-reform Criminals" as the constitution plus some other rules, laid down by word of mouth, as I said before. Now I'd like to cite two examples for further explanation.

Here are two of the rules, "Walk with the head held down and sit with no legs crossed."

I'm not a scholar of law. But I've lived in many countries and read some articles about laws. I have never seen or heard any rule that prohibits pedestrians from holding the head up. Except for a person with a crooked neck, the ordinary human is sure to walk with his head held straight up.

But here in the Cow Shed at Beida, our supervisors denied us the normal way of walking. I wonder how they made up that extremely bizarre rule. Did they pick it up from an ancient text secretly handed down from ancestors? Or from some inscription on a stone tablet like those mentioned in *The Outlaws of the Marsh*? Or was it a spark of

talent? I was not able to figure out the answer. Anyway, it was the law and had to be strictly obeyed.

Walking with the head held down was complied with not only in our rooms but anywhere in and outside the Cow Shed. We had to take particular caution when talking to a reform guard. If someone defied the rule, the consequence would be inconceivable. A smack in the face would be considered a lenient treatment. Probably a sound flogging, or even a knocking-down on the ground, should be assessed as an appropriate response. With this risk in mind, I always fixed eyes on the ground or the feet of a reform guard when standing in front of him. Therefore I could tell exactly what shoes he wore that day but had only a vague idea about his face. At work, for example, when I carried the coal basket, the head could be held up. Otherwise the work could not be done. One day we were in line for dinner. For one reason or another, which I did not know for sure, I looked up, probably for one tenth of a second at most. Immediately the man marching us to the cafeteria shouted at me, "Behave yourself, Ji Xianlin!" Instinctively I expected to receive a slap in the face or a kick. Fortunately I was spared the strike this time. From that day on I was particularly cautious and never failed to "behave myself."

In terms of the second rule, almost everyone sits with his legs crossed. It is the normal sitting position. People prefer it because it releases one from weariness. But it was prohibited in the Cow Shed. I remember I read a book which said Yuan Shikai never sat with his legs crossed.^[5] He always sat straight, legs closed up, in a dignified manner. Probably, as a military man, he had got into that habit. We were "labor-reform criminals," a group of ordinary people, not like him, the Hongxian emperor.^[6] How could we be able to do that?

There is another event that is also noteworthy. As I said earlier, we were deprived of the human faculty of laughing. How could that happen? It did not result from implementing the "reform constitution," nor was it the consequence of complying with a paramount order of the reform guards. It utterly grew out of our own desire. Let me put it in another way. Can a person be able to laugh when his security is

threatened with the possibility of sustaining tortures at any time? In the Cow Shed laughter was not heard. If somebody laughed, the sound came from a reform guard. Occasionally laughter shot up from the silence of the Cow Shed, which was dead as an ancient tomb, and sounded as clear as a melody, striking note of liveliness. But how did we find a laughter in such circumstances? I had no idea about others' feelings. Like an owl hoot at deep night, a laughter usually sent shivers down my spine.

[1] The seventeen history books, a collection of history books of Chinese ancient history written by Wang Mingsheng (1722-1797): *The Records of the Historian*, *The History of the Han Dynasty*, *A Sequel to the History of the Han Dynasty*, *Records of the Three Kingdoms*, *The History of Jin Dynasty*, *The History of the Song State*, *The History of the Southern Qi State*, *The History of the Liang State*, *The History of the Chen State*, *The History of the Wei State*, *The History of the Northern Qi State*, *The History of the Zhou State*, *The History of the Sui Dynasty*, *The History of the Southern Dynasty*, *The History of the Northern Dynasty*, *The New History of the Tang Dynasty*, and *The History of the Five Dynasties*.

[2] Sixteen and a half *yuan* could only maintain a living of survival on food by that time, in which an ordinary factory worker had a monthly income of about 40 *yuan*. Ji received the monthly income of 340 *yuan* as a Professor of Rank One before the Cultural Revolution.

[3] The "three-year hard time," a severe famine, as has been documented officially, across the country during the period from 1959-1961.

[4] Yenching University, the first American missionary university in China, founded in 1919 and located in the western suburb of Beijing; in 1952 it merged into Peking University, when the latter moved to the former's location from downtown Beijing; one of the founders of Yenching University and its first president was John Leighton Stuart.

[5] Yuan Shikai (1859-1916), an important Chinese general and politician, who abdicated the last Qing Emperor of China, came to power as the second president of the Republic of China following Sun Yatsen, and proclaimed himself as the "Great Emperor of China" on January 1, 1916 under the era of Hongxian or literally "Abundant Constitution."

拾肆 牛棚生活（一）

我们亲手把牛棚建成了，我们被“请君入瓮”了。

牛棚里面也是有生活的。有一些文学家不是宣传过“到处有生活”吗？

但是，现在要来谈牛棚生活，却还非常不容易，“一部十七史，不知从何处说起”。我考虑了好久，忽然灵机一动，我想学一学过去很长时间内在中国史学界最受欢迎，几乎被认为是金科玉律的“以论带史”的办法，先讲一点理论。但是我这一套理论，一无经可引，二无典可据，完全是我自己通过亲身体验，亲眼观察，又经过深思熟虑，从众多的事实中抽绎出来的。难登大雅之堂，是可以肯定的。但我自己则深信不疑。现在我不敢自秘，公之于众，这难免厚黑之诮、老王卖瓜之讽，也在所不顾了。

我的理论是什么呢？一言以蔽之，可名之为“折磨论”。我觉得，“革命小将”在“文化大革命”中自始至终所搞的一切活动，不管他们表面上怎样表白，忠于什么什么人呀，维护什么什么路线呀，这些都是鬼话。要提纲挈领的话，纲只有一条，那就是：折磨人。这一条纲贯彻始终，无所不在，无时不在，左右一切。至于这一条纲的心理基础，思想基础，我在上面几个地方都有所涉及，这里不再谈了。从“打倒”抄家开始，一直到劳改，花样繁多，令人目迷五色，但是其精华所在则是折磨人。在这方面，他们也有一个进化的过程。最初对于折磨人，虽有志于斯，但经验很少，办法不多。主要是从中国过去的小说杂书中学到了一点。我在本书开头时讲到的《玉历至宝钞》，就是一个例子。此时折磨人的方式比较简单、原始、生硬、粗糙，并不精美、完整。比如打耳光、用脚踹之类，大概在原始社会就已有了，他们不学自通。但是，这一批年轻人勤奋好学，接受力强，他们广采博取，互相学习，互相促进。正如在战争中武器改良迅速，在“文化大革命”中，折磨人的方式也是时新日异，无时不在改进、丰富中。往往是一个学校发明了什么折磨人的办法，比电光还快，立即流布全国，比如北大挂木牌的办法，就应该申请专利。结果是，全国的“革命造反派”共同努力，各尽所能，又集中了群众的智慧，由粗至精，由表及里，由近及远，由寡及众，折磨人的办法就成了体系，光被寰宇了。如果有机会下一次再使用时，那就方便多

了。

我的“论”大体如此。

这个“论”“带”出了什么样的“史”呢？

这个“史”头绪繁多。上面其实已经讲了一些。现在结合北大的“牛棚”再来分别谈上一谈。据我看，北大黑帮大院的创建就是理论联系实际的结果。

下面分门别类来谈。

（一）正名

孔子曰：“必也正名乎。”“名不正则言不顺。”我们这一群被抄家被“打倒”的罪犯应该怎样命名呢？这是“革命”的首要任务。我们曾被命名为“黑帮”。但是，这是老百姓的说法，其名不雅驯。我们曾被叫做“王八蛋”；但是，此名较之“黑帮”，更是“斯下矣”。我们曾被命名为“反革命分子”。这确实是一个“法律语言”；不知为什么，也没有被普遍采用。此外还有几个名，也都没有流行起来。看来这个正名的问题，一直没有妥善地解决。现在黑帮大院已经建成了，算是正规化了，正名便成了当务之急。我们初搬进大院来的时候，每一间屋的墙上都贴着一则告示，名曰“劳改人员守则”。里面详细规定了我们必须遵守的规矩，具体而又严厉。样子是出自一个很有水平的秀才之手。当时还没有人敢提倡法治。我们的“革命”小将真正是得风气之先，居然订立出来了类似法律的条款，真不能不让我们这些被这种条款管制的人肃然起敬了。

但是，俗话说：“智者千虑，必有一失。”我们这些小智者也有了“一失”，失就失在正名问题上。《劳改人员守则》贴出来大概只有一两天就不见了，换成了《劳改罪犯守则》。把“人员”改为“罪犯”，只更换了两个字，然而却是点铁成金。“罪犯”二字何等明确，又何等义正辞严！让我们这些人一看到“罪犯”二字，就能明确自己的法律地位，明确自己已被打倒，等待我们的只是身上被踏上一千只脚，永世不得翻身了。我们这一群从来也不敢造反的秀才们，从此以后，就戴着罪犯的帽子，小心翼翼，日日夜夜，都如临深渊，如履薄冰，把我们全身，特别是脑袋里的细胞，都万分紧张地调动到最高水平，这样来实行劳改。

我有四句歪诗：

大院建成，

乾坤底定。

言顺名正，

天下太平。

（二）我们的住处

关于我们的住处，我在上面已经有所涉及。现在再简略地谈一谈。

“罪犯们”被分配到三排平房中去住。

这些平房，建筑十分潦草，大概当时是临时性的建筑，其规模比临时搭起的棚子略胜一筹。学校教室紧张的时候，这里曾用作临时教室。现在全国大学都停课闹革命已经快两年了。北大连富丽堂皇的大教室都投闲置散，何况这简陋的小屋？所以里面尘土累积，蛛网密集，而且低矮潮湿，霉气扑鼻。此地有老鼠、壁虎，大概也有蝎子。地上爬着多足之虫，还有土鳖，以及其他许许多多的小动物，总之，低矮潮湿之处所有的动物，这里应有尽有。实际上是无法住人的。但是我们此时已经被剥夺了“人”籍，我们是“罪犯”。让我们在任何地方住，都是天恩高厚。我们还敢有什么奢望！

最初几天，我们就在湿砖地上铺上席子，晚上睡在上面，席子下面薄薄一层草实在挡不住湿气。白天苍蝇成群，夜里蚊子成堆。每个人都被咬得遍体鳞伤，奇痒难忍。后来，运来了木头，席子可以铺在木头上了。夜里每间房子里还发给几个蘸着敌敌畏的布条，悬挂在屋内，据说可以防蚊。对于这一些“人道”措施，我们几乎要感激涕零了。

这时候，比起太平庄来，劳动“罪犯”的队伍大大地扩大了，至少扩大了一倍。其中原因我们不清楚，也不想清楚，这同我们有什么关系呢？我观察了一下，陆平等几个“钦犯”，最初并没有关在这里，大概旁处还有“劳改小院”之类，这事我就更不清楚了。有一些新面孔，有的过去在某个批斗会上见过面，有一些则从没有见过面，大概是随着“阶级斗争”的深入发展，新“揪”出来的。事实上，从入院一直到大院解散，经常不断地有新“罪犯”参加进来。我们这个大家庭在不断扩大。

（三）日常生活

牛棚里有了《劳改罪犯守则》，就等于有了宪法。以后虽然也时常有所补充，但大都是口头的，没有形诸文字。这里没有“劳改罪犯”大

会，用不着什么人通过。好在监改人员——我不知道这是不是官方的称呼？——出口成法，说什么都是真理。

在“宪法”和口头补充法律条文的约束下，我们的牛棚生活井然有序。早晨6点起床，早了晚了都不允许。一声铃响，穿衣出屋，第一件事情就是绕着院子跑步。监改人员站在院子正中，发号施令。在我的记忆中，他们很少手执长矛，大概是觉得此地安全了。跑步算不算体育锻炼呢？按常理说，是的。但是实际上我们这一群“劳改罪犯”，每天除了干体力活以外，谁也不允许看一点书，我们的体育锻炼已经够充分的了，何必再多此一举？再说我们“这一群王八蛋”已经被警告过，我们是铁案如山，谁也别想翻案。我们已经罪该万死，死有余辜，身体锻炼不锻炼完全是无所谓的。唯一的合理解释就是我发现的“折磨论”。早晨跑步也是折磨“罪犯”的一种办法。让我们在整天体力劳动之前，先把体力消耗净尽。

跑完步，到院子里的自来水龙头那里去洗脸漱口。洗漱完，排队到员二食堂去吃早饭。走在路上，一百多人的浩浩荡荡的队伍，个个垂头丧气，如丧考妣。根据口头法律，谁也不许抬头走路，谁也不敢抬头走路。有违反者，背上立刻就是一拳，或者踹上一脚。到了食堂，只许买窝头和咸菜，油饼一类的“奢侈品”，是绝对禁止买的。当时“劳改罪犯”的生活费是每月十六元五角，家属十二元五角。即使让我买，我能买得起吗？靠这一点钱，我们又怎样“生”，怎样“活”呢？餐厅里当然有桌有凳；但那是为“人”准备的，我们无份。我们只能在楼外树底下、台阶上，或蹲在地上“进膳”。中午和晚上的肉菜更与我们无关，只能吃点盐水拌黄瓜、清水煮青菜之类。整天剧烈的劳动，而肚子里却滴油没有。我们只能同窝头拼命，可是我们又哪里去弄粮票呢？这是我继在德国挨饿和所谓“三年困难时期”之后的第三次堕入饥饿地狱。但是，其间也有根本性的区别：前两次我只是饿肚子而已，这次却是在饿肚之外增加了劳动和随时会有皮肉之苦。回思前两次的挨饿，宛如天堂乐园可望而不可即了。

早饭以后，回到牛棚，等候分配劳动任务。此时我们都成了牛马。全校的工人没有哪个再干活了，他们都变成了监工和牢头禁子。他们有了活，不管是多脏多累，一律到劳改大院来，要求分配“劳改罪犯”。这就好比是农村生产队队长分配牛马一样。分配完了以后，工人们就成了甩手大掌柜的，在旁边颐指气使。解放后的北大工人阶级，此时真是踌躇满志了。

还有一件最重要的事情，无论如何也是不能忘记的。在出发劳动之前，我们必须到树干上悬挂的黑板下，抄录今天要背诵的“最高指示”。这指示往往相当长。每一个“罪犯”，今天不管是干什么活，到哪里去干活，都必须背得滚瓜烂熟。任何监改人员，不管在什么场合，都可能让你背诵。倘若背错一个字，轻则一个耳光，重则更严厉的惩罚。现在，如果我们被叫到办公室去，先喊一声：“报告！”然后垂首肃立。监改人员提一段语录的第一句，你必须接下去把整段背完。倘若背错一个字，则惩罚如上。有一位地球物理老教授，由于年纪实在太老了，而且脑袋里除了数学公式之外，似乎什么东西也挤不进去。连据说有无限威力的“最高指示”也不例外。我经常看到他被打得鼻青脸肿，双眼下鼓起两个肿泡。我颇有兔死狐悲之感。

背语录有什么用处呢？也许有人认为，我们这些“罪犯”都是花岗岩的脑袋瓜，用平常的办法来改造，几乎是不可能的。“革命家”于是就借用了耶稣教查经的办法，据说神力无穷。但是，我很惭愧，我实在没有感觉出来。我有自己的解释，这解释仍然是我发明创造的“折磨论”。我一直到今天还认为，这是唯一合理的解释。监改人员自己也不相信，“最高指示”会有这样的威力，他们自己也并背不熟几条语录。连向“罪犯”提头时，也往往出现错误。有时候他提了一个头，我接着背下去，由于神经紧张，也曾背错过一两个字；但监改人员并没有发现。我此时还没有愚蠢到“自首”的地步，蒙混过了关。我如真愚蠢到起来“自首”，那么监改人员面子不是受到损害了吗？那后果就不堪设想了。

从此，我们就边干活，边背语录。身体和精神都紧张到要爆炸的程度。

至于我参加的劳动工种，那还是非常多的。劳动时间最长的有几个地方。根据我现在的回忆，首先是北材料厂。这里面的工人都属于新北大公社一派，都是拥护“老佛爷”的。在“劳改罪犯”中，也还是有派别区分的。同是“罪犯”，而待遇有时候会有不同。我在这里，有两重身份，一是“劳改罪犯”，二是原井冈山成员。因此颇受到一些“特殊待遇”，被训斥的机会多了一点。我们在这里干的活，先是搬运耐火砖，从厂内一个地方搬到小池旁边，码了起来。一定要码整整齐齐，否则会塌落下来。耐火砖非常重，砸到人身上，会把人砸死的。我们“罪犯们”都知道这一点，干起活来都万分小心谨慎。耐火砖搬完，又被分配来拔掉旧柱子和旧木板上的钉子。干这活，允许坐在木墩子上，而且活也不累，我们简直是享受天福了。厂内的活干完了后，又来到厂外堆建房用的沙堆

旁边，去搬运沙子，从一堆运到另一堆上。在北材料厂我大概干了几个星期。我在这里还要补充说明几句，在这里干活的只是“罪犯”的一小部分。其余的人都各有安排，情况我不清楚，我只好略而不谈了。

我从北材料厂又被调到学生宿舍区去运煤。现在是夏天，大汽车把煤从什么地方运到学校，卸在地上，就算完成任务。我们的任务是把散堆在地上的煤，用筐抬着，堆成煤山，以减少占地的面积。这个活并不轻松，一是累，二是脏。两个老人抬一筐重达百斤以上的煤块或煤末，有时还要爬上煤山，是非常困难的。大风一起，我们满脸满身全是煤灰。在平常时候这种地方我们连走进都不会的。然而此时情况变了。我们已能安之若素。什么卫生不卫生，更不在话下了。同我长时间抬一个筐的是解放前在燕京大学冒着生命的危险参加地下工作的穆斯林老同志，趁着监督劳动的工人不在眼前的时候，低声对我说：“我们的命运看来已经定了。我们将来的出路，不外是到什么边远地区劳改终生了。”这种想法是有些代表性的。我自己何尝不是这样想呢？

以后，我的工种有过多次变化。我曾随大队人马到今天勺园大楼的原址稻田的地方去搬过石头，挖过稻田。有一次同西语系的一位老教授被分配跟着一个工人，到学生宿舍三十五楼东墙外面去修理地下水管。这次工人师傅亲自下了手，我们两个老头只能算是“助教”，帮助他抬抬洋灰包，递递铁锹。这位工人虽然也绷着脸，一言不发，但是对我们一句训斥的话都没有说过。我心里实在是铭感五内。“十年浩劫”以后，我在校园里还常见到他骑车而过，我总是用感激的眼光注视着他的背影渐渐消逝。

此外，我还被分配到一些地方去干活，比如修房子、拔草之类，这里不一一叙述了。

既然叫做“劳改”，劳动当然就是我们主要的生活内容。不管是在劳动中，还是在其他活动中，总难避开同监改人员打交道。见了他们，同在任何地方一样，我们从不许抬头，这已经是金科玉律。往往我们不知道，站在面前谈话的是什么人。但是对方则一张口就用上一句“国骂”，这同美国人见面时说“hello!”一样，不过我们只许对面的人说而已。监改人员用的词汇很丰富，除了说“妈的”以外，还说“你这混蛋”、“你这王八蛋”等等，词彩丰富多了。如果哪个监改人员不用“国骂”开端，我反而觉得非常反常，非常不舒服了。

（四）晚间训话

我先郑重声明一句：这是劳改监改人员最伟大的最富有天才的发明创造。

在我上面谈“劳改罪犯”的日常生活时，曾谈过监改人员在管理“劳改罪犯”时的许多发明创造。这些监改人员，除了个别职员和一些工人以外，有一多半是学生。这些学生平常学习成绩怎样，我说不清楚。但在管理劳改大院时的表现，我作为一个老师，却不能不给他们打很高的分数。过去我们的教学颇多脱离实际的地方。这主要由教学制度负责，我们当教员的也不能辞其咎。在劳改大院里，他们是完全联系实际的，他们表现出来的才能是多方面的：组织的才能，管理的才能，训话的才能，说歪理诡辩的才能，株连罗织的才能，等等，简直说也说不完。再加上他们表现出来的果断和勇气，说打人伸手就打，抬脚就踢，丝毫不游移迟疑，我辈老师实在是望尘莫及。

但是，他们发明创造的天才表现得最最突出的地方，却是晚间训话。

什么叫“晚间训话”呢？每天晚上，吃过晚饭，照例要全体“罪犯”集合，地点在两排平房之间的小院子里。每天总有一个监改人员站在队列前面训话，这个人好像是上边来的，不是我们在大院里常碰到的那些人，他大概是学校公社的头子之一。这个训话者常换人，个中详情我说不清楚。训话的内容，每天不同。因为它的目的不在讲大道理，而大道理是没有多少的，讲大道理必然每天重复。他们的训话是属于“折磨学”的，是这一门学问的实践。训话者每天主要做法是抓小辫子，而小辫子我们满头都是，如果真正没有，他们还可以栽在你头上嘛。小辫的来源大体上有两个：一个是白天劳动时一些芝麻绿豆大的小事；一个是我们每天的书面思想汇报中一些所谓“问题”。我们劳动都是非常兢兢业业的，并不是由于我们“觉悟”高，而是由于害怕拳打脚踢。但是，欲加之罪，何患无辞，说不定哪一个“棚友”今天要倒霉，让监改人员看中了。到了晚间训话时，就给你来算账。至于写书面的思想汇报，那更是每天的重要工作。不管我们怎样苦思苦想，细心推敲，在中国这个文字之国，这个刀笔师爷之国，挑点小毛病是易如反掌的。中国历史上这类著名的例子多如牛毛。清朝雍正皇帝就杀过一个大臣，原因是他把“朝乾夕惕”，为了使文章别开生面，写成了“夕惕朝乾”。这二者其实是一样的，都是“颂圣”之句。然而“龙颜大怒”，结果丢掉了脑袋。我们监改人员的智商要比封建皇帝高多了。他们反正每天必须从某个“罪犯”的书面汇报中挑点小毛病。不管是谁，只要被他们选中，晚间训话时就倒了大霉。

晚间训话的程序大体上是这样的。“罪犯”们先列队肃立，因为院子不大，排成四行。监改人员先点名。这种事情我一生经历多了，没有留下什么深刻的记忆。只有一件极小极小的小事，却给我留下了毕生难忘的回忆，就是我将来了阎王爷，也不会忘记的。有一位西语系的归国华侨教授，年龄早过了花甲，而且有重病在身，躺在床上起不来。不知道是用什么东西把他也弄到黑帮大院里来。他行将就木，根本不能劳动，连吃饭都起不来。就让他躺在床上“改造”。他住的房子门外就是晚间训话“罪犯”们排队的地方。每次点名，他都能听到自己的名字。此时就从屋中木板上传出来一声：“到！”声音微弱、颤抖、苍老、凄凉。我每次都想哭上一场。这声音震动了我的灵魂！

其他“罪犯”站在这一间房子的门外，个个心里打鼓。说不定训话者高声点到了谁的名字，还没有等他自己出队，就有两个年轻力壮的监改人员，走上前去，用批斗会上常用的方式，倒剪双臂，拳头按在脖子上，押出队列，上面是耳光，下面是脚踢。清脆的耳光声响彻夜空。更厉害的措施是打倒在地，身上踏上一两只脚——一千只脚是踏不上的，这只不过是修辞学的夸大而已，用不着推敲，这也属于我所发现的“折磨论”之列的。

这样的景观大概只有在“十年浩劫”中才能看到。我们不是非常爱“中国之最”吗？有一些“最”是颇有争议的；但是，我相信，这里决无任何争议。因此，劳改大院的晚间训话的英名不胫而走，不久就吸引了大量的观众，成为北大最著名的、最有看头的景观。简直可以同英国的白金汉宫前每天御林军换岗的仪式媲美了。每天，到了这个时候，站在队列之中，我一方面心里紧张到万分，生怕自己的名字被点到；另一方面在低头中偶一斜眼，便能看到席棚外小土堆上，影影绰绰地，隐隐约约地，在暗淡的电灯光下，在小树和灌木的丛中，站满了人。数目当然是数不清的。反正是里三层外三层地人不在少数。这都是赶来欣赏这极为难得又极富刺激性的景观的。这恐怕要比英国戴着极高的黑帽子、骑在高头大马上的御林军的换岗难得的多。这仪式在英国已经持续了几百年，而在中国首都的最高学府中只持续了几个月。这未免太煞风景了，否则将会给我们旅游业带来极大的经济效益。

还有一点十分值得惋惜的是，我们晚间训话的棚外欣赏者们，没有耐性站到深夜。如果他们有这个耐性的话，他们一定能够看到比晚间训话更为阴森森的景象。这个景象连我们这个大院里的居民都不一定每个人都能看到。偶尔有一夜，我出来小解，我在黑暗中看到院子里一些树

下都有一个人影，笔直地站在那里，抬起两只胳膊，向前作拥抱状。实际上拥抱的只是空气，什么东西都没有。我不知道，我们这几个棚友已经站在那拥抱空虚有多久了。对此我没有感性认识，我只觉得，这玩意儿大概同喷气式差不多。让我站的话，站上一刻钟恐怕都难以撑住。棚友们却不知道已经站了多久了，更不知道将站到何时。我们棚里的居民都知道，在这时候，什么话也别说，什么声也别出。我连忙回到屋里，在梦里还看到一些拥抱空虚的人。

（五）离奇的规定

在黑帮大院里面，除了有《劳改罪犯守则》这一部宪法以外，还有一些不成文法或者口头的法规。这我在上面已经说过几句。现在再选出两个典型的例证来说上一说。

这两个例证：一是走路不许抬头，二是坐着不许翘二郎腿。

我虽不是研究法律的学者，但是在许多国家呆过，也翻过一些法律条文；可是无论在什么地方也没有看到或者听到一个人走路不许抬头的规定。除了生理上的歪脖子以外，头总是要抬起来的。

但是，在北京大学的劳改大院里，牢头禁子们却规定“罪犯”走路不许抬头。我不知道，他们是怎样想出这个极为离奇的规定来的。难道说他们读到过什么祖传的秘典？或者他们得到了像《水浒》中说的那种石碣文？抑或是他们天才的火花闪耀的结果？这些问题我研究不出来。反正走路不许抬头，这就是法律，我们必须遵守。

除了在个人的牢房里以外，在任何地方，不管是在院内，还是在院外，抬头是禁止的。特别在同牢头禁子谈话的时候，绝对不允许抬头看他一眼的。如果哪一个“罪犯”敢于这样干，那后果真是不堪设想。轻则一个耳光，重则拳打脚踢，甚至被打翻在地。因此，我站在牢头禁子面前，眼光总是落在地上，或者他的脚上，再往上就会有危险。他们穿的鞋，我观察得一清二楚，面孔则是模糊一团。在干活时，比如说抬煤筐，抬头是可以的。因为此时再不允许抬头，活就没法干了。有一次，我们排队去吃饭，不知道由于什么原因，我稍稍抬了一下头，时间最多十分之一秒。然而押送我们到食堂的监改人员立即作狮子吼：“季羨林！你老实点！”我本能地期望着脸上挨一耳光，或者脚上挨一脚。幸而都没有，我从此以后再也不敢不“老实”了。

至于翘二郎腿，那几乎是人人都有一个习惯。因为这种姿势确实

能够解除疲乏。但是在劳改大院里却是被严厉禁止的。记得在什么书上看到有关袁世凯的记载，说他一生从来不翘二郎腿，坐的时候总是双腿并拢，威仪俨然。这也许是由于他是军人，才能一生保持这样坐的姿势。我们这一群“劳改罪犯”都是平常的人，不是洪宪皇帝，怎么能做得到呢？

还有一件不大不小的事情，我想在这里提一提。我在上面已经说到过，我们“罪犯”们已经丢掉了笑的本领。笑本来是人的本能，怎么竟能丢掉了呢？这个“丢掉”，不是来自“劳改宪法”，也不是出自劳改监督人员的金口玉言，而是完全“自觉自愿”。试问，在打骂随时威胁着自己的时候，谁还能笑得起来呢？劳改大院里也不是没有一点笑声的，有的话，就是来自牢头禁子的口中的。在寂静如古墓般的大院中，偶尔有一点笑声，清脆如音乐，使大院顿时有了生气。然而，这笑声会在我们心中引起什么感觉呢？别人我不知道，在我耳中心中，这笑声就如鸱鸒在夜深人静时的狞笑，听了我浑身发抖。

15 LIVING IN THE COW SHED (PART TWO)

(6) Developing Secret Agents

Even without formal education, our young jailers were quick to learn about and to emulate the Gestapo and KGB abroad as well as KMT's Bureau of the Investigation and Statistics of the Central Executive Committee and Bureau of the Investigation of Statistics of the Military Council at home. They learned to rule via a system of secret agents. Obviously, they didn't call them secret agents. Instead these chosen men were called "reporters." Each room in the Cow Shed had a person assigned as the "reporter." What kind of person among us prisoners qualified for this special mission? How did these fortunate men receive assignments from the jailers? These things were extremely confidential in respect to us "non-reporters." On the basis of my observation, designated reporters enjoyed special privileges. For example, they were allowed to go home each Sunday and usually stayed longer at home than we "non-reporters." Here I have to make one point. Some of us were never allowed to go home during our stay in the Cow Shed; some of us could go home at longer intervals, while others went home weekly. This so-called "different treatment" was decided absolutely by the reform guards. "A gentleman only works for the master under whose leadership the talent is treasured and put into full use."^[1] To repay his master for such rewards, a reporter strove to be productive in his "reports." He took trifles into account and was quick to submit findings to his boss. Some of the reporters certainly knew what they were doing. When observing that a "criminal" was becoming "out of favor" with the jailers, a reporter would be rather picky and harsh in telling on him in an attempt to attain more privileges. One day I saw a reporter in a room, bending his back and saying something in front of a jailer. Immediately one of his roommates was pulled into a room specially used for torture. I had no

way of peeping in the room. But what was going on there was beyond doubt.

(7) Coping with the Dossier Investigation

The "dossier investigation" was a special term for an examination of someone's file of political background. Such an analysis usually was conducted by a person sent to the Cow Shed by a work unit outside Beida because the person under scrutiny used to work in that unit. Whether or not he had been called a "criminal" in his original work unit was not known. Probably the coinage of this term was claimed as Beida's intellectual property. At that time numerous persons were sent at high costs to conduct dossier investigations in all parts of the country, even some of the most remote and poorest villages. The detectives gathered evidence in support of false charges against former employees of the original work unit; as a result the "criminals" would be politically outlawed forever. Take me for example. I indiscreetly offended that tyrannical "Old Dowager." So her followers regarded me as a thorn in the side and went out of their way to gather evidence around the country about my "crimes." One of my childhood friends told me that probably two investigators from Beida came to my home village and wanted to label me a "landlord." My friend rebuked them by saying, "If you want to find who was poor or rich before the liberation, Ji Xianlin should rank first in poverty and suffered the most!" So the investigators slunk off. From the context of my friend's conversation, I knew they later made a second tour there. As I said before, when my home at Beida was raided, the Red Guards made sure to take away my book of correspondence in order to use it for "dossier investigations" according to the addresses I listed in it. In conducting an investigation of this kind, other work units did not differ from Beida. For a period of time, great numbers of investigating persons ran everywhere around the country.

Since I was detained in the Cow Shed, I had got involved with the investigators. These people raised different requirements. Some of them only gave me the name of the man to be examined and required me to write something on whatever I knew before my written

response was forwarded by a reform guard. Others requested a face-to-face talk with me, which usually proceeded with a certain degree of courtesy and respect. But some of the investigators were rather rude. One morning two men came from Shandong University and wanted to see me personally. I was sent into the interrogation room to meet these men from my home province. They wanted to check the relations between a Shandong University professor of Classical Chinese, who grew up in Beijing, and me. I knew then that this friend of mine was in trouble, too. I might have been of some help to him, if I had not been a counter-revolutionary gangster. Unfortunately I had to be worried about myself at this time and could not give him a hand. Suddenly I found myself, a former "convict" to the "New Beida Commune," also a "convict" to Shandong University. The two fellow native men banged on the table and looked daggers at me. They plucked my hair, struck and kicked me. They spoke in the typical Jinan accent, which reminded me of a line by Wu Mi, "Such language uttered in the native accent sounds so terrible."^[2] With such rough yells in the familiar accent blaring in my ears and ferocious expressions glaring at me, I was grimly disgusted. Different from that of Beijing, the vulgar Jinan verbal expression comes in three characters, "Fuck your mother!" With the language peppered with such expression, the two men forced me to confess my "reactionary" relations with that professor and my own crimes. Their overbearing manners made me shudder with revulsion, sweat streaming down my body, even though I was a "hardened criminal." The interrogation went on for two hours and well passed the lunch time. Even our reform guards thought the visitors had gone too far, so they stopped them. My fellow native men had to beat a retreat, their enjoyment nipped in the bud. Their torture left me physically and mentally paralyzed. But what came to my mind first, then, was the concern for my friend's safety instead of my own, "At the hands of these brutes, you will have little chance to come off well!"

(8) Ceaseless Torture Sessions

During those days we were led away each morning to our labor

sites by reform guards or workers that came to the Cow Shed to take us for assignments. Past experiences sprang to my mind. During the late 1950s when the cooperative transformation of agriculture, or People's Commune, was in full swing, brigade leaders assigned farm cattle to peasants before work started each morning. We were not far removed from the cattle now. The cow, unable to speak and think, was led away by the person that wanted to use it. Yet we, with speaking ability, feared to utter any thoughts.

Physical labor, however, was not the sole item on our routine agenda. In other words, it was not the only way of "reforming us." Didn't we often say, "Reforming through physical labor"? Now many years have passed, but I still have not come to terms with the validity of this theory, despite the fact that I have had many years of experiencing this practice under my belt. Reform through physical labor could only hurt the body but failed to encourage ideological transformation. It inflicted suffering on the bodies of "criminals" such as swelling, bleeding and scars. It definitely infuriated the "criminals." What else could be done, if physical labor failed to achieve its purpose? The torture session was an alternative. Before physical labor was adopted, reform depended upon torture session alone. Later after physical labor came into being, overall reform was strengthened by an incorporation of the two dimensions. As I remarked earlier, torture sessions imposed harsher and more violent agonies even though, in comparison to the physical aspect of labor reform, it may have been only six of one and half a dozen of the other.

The difference between the labor reform and the torture session could not be ignored. If we had been allowed to make a choice, we would have picked the former. Unfortunately, we were left with no choice. Therefore we were very apprehensive during our confinement in the Cow Shed. In the morning, whenever we followed the workers to some labor site for the day's assignment, we feared that one of us would be taken away for a torture session at a certain hour by a certain work unit for a certain reason, probably out of someone's desire to enjoy himself. When such a need arose, the Red Guards of

the Commune, wearing their red armbands, haughty and swaggering, rushed over to the "office" of the Cow Shed. The one in charge of the "office" granted the request for the designated man. The duration of the torture session varied. But the victim, when brought back, was invariably downcast, with rumpled hair like weeds and, occasionally, badly battered.

I had no way of calculating the total number of us marched off for daily torture sessions, but things like this happened all the time. Among my fellow inmates in the Cow Shed, I was an "important criminal." Due to the fact that I, an orderly of "Jinggangshan", committed unpardonable crimes of opposing the "Old Dowager," I was a lot more likely to be chosen for torture sessions. Each morning when breakfast was over, I started to worry about whether I was to be the one to be taken away and not allowed to work for the day. I was on tenterhooks, as seconds ticked by like years. Each time when left waiting in a room from which I would be marched off, I thought of my fellow Cow Shed men who were then working somewhere, comfortable and carefree, as if they were elevated to the existence of paradise. I tried to imagine what kind of calamity was lying ahead of me. Soon Red Guards arrived to get me as the reform guards called me to the front of something like a reed mat screen, which bore many characters I could not remember. I bent double, listening to the instruction, "Behave yourself, Ji Xianlin, at the session of denouncement!" It sounded like what a parent says to a child on leaving, "Behave, sweetie." My stay in the Cow Shed saw me taken away to many places for torture sessions. I will not talk about these experiences in detail because their procedures ran exactly the same way; the chants of "Down with Ji Xianlin" roared up first, followed by speeches full of slander and nonsense as the major part of the mission. Once in a while emotions ran high and I was given a couple of slaps in the face. The sessions wound up with the shout, "March Ji Xianlin away!" Then I got back to the Cow Shed, my home to some extent, depressed with disheveled hair.

(9) The Grand Torture Session of June 18, 1968

I reviewed the history of the Cultural Revolution at Peking University earlier in this book. The first grand session of "torturing devils" took place in the university on June 18, 1966. At that time I did not qualify for being a "devil." So on that day I lay in bed at home, listening to the shrieks and hubbubs in the distance. One year later, June 18 was marked as the first "anniversary" of the activity, when the second "devil" torturing session took place. This time I still did not qualify as a "devil" so I narrowly missed the hit.

When June 18, 1968 arrived, I was a member of the Cow Shed, having stayed there more than one month. I was now a qualified "devil" for the occasion. The day came as a heavy blow to me, a disaster I hadn't had for a long time. Early in the morning our reform guards busily sorted us out on the basis of some so-called guidelines of "careful selection." Not every one of us was considered fit for this rare opportunity. As we lined up and got ready to leave, I noticed only a few of us were chosen this time, among whom the old professor and I were singled out as representatives of the Department of Eastern Languages. Instead of a reform guard, the man marching us off was surnamed Zhang, who used to be in charge of the Instructional Media Center of the department. This change in formality indicated that the list of chosen targets for this grand torture session was decided jointly by individual departments and research institutions. This old colleague of mine, Zhang, upon seeing us, uttered no insults like "son of a bitch." He was even cordial and courteous. I felt uneasy. We were used to inhuman treatment; at least I felt that way. Once we were treated a little better, it felt "abnormal." Zhang's sympathy will live in my memory for the rest of my life.

But the devil victimizers behaved quite differently. Who were they? I had no idea. I dared not raise my head to take a look at the crowds standing by the road, nor did I know which road I took. I vaguely traced the path out of the Cow Shed and around the Lake-overlooking Pavilion and Russian Building up the slope.^[3] At that time the University's main library was not built yet. There was only one route leading to the southern Beida campus and Philosophy Building.

Probably we went along the foliage-shaded path to a place near that building. I had no idea at which place I eventually arrived, nor did I know how I was treated at that day's torture session before I was brought back "home." That day, it seemed, I was not forced to take the jet plane posture long and no criticism was pointed particularly toward me. I got the impression that it was a tumultuous gathering, with uproars around me and occasional chants rising and falling. Maybe we were dealt with by the individual departments or institutions to which we belonged. I seemed to be sleep-walking forward, hanging the head and bending the back. I glanced at the men and women who flocked around, not only in front and at the back of me but by my sides as well. At times I found myself closed in on by the throngs from above and below. What I saw was only shoes and pant legs. On my way back "home" it seemed that I was drawing more spectators about me, hearing louder noises and being hit by more rubble. Meanwhile, I was numbed, feeling little pain when struck by fists. Back in the Cow Shed, I took off my shirt and found a big turtle drawn on it with the shirt's corner tied up with a leafy willow twig. I guessed it symbolized a dog tail. The Cow Shed, which used to seem fearsome, like a satanic abode, now appeared as extremely tranquil and neat, an incredible pleasant dwelling place.

I calmed down and tried to recall the day's occurrences. Why was the torture session administered on such a large and boisterous scale? Small-scale sessions took place every day and were quite enough for the purpose. According to psychological theory, curiosity fades from repetition while exception sparks interest. Those small-scale sessions became flat to most people. So the anniversary of the grand session became a day of celebration and attraction on the campus.

(10) A Few Scraps of Tabloid News of the Cow Shed

I call these stories "scraps of tabloid news" because they were different from the news people read in the newspaper. Because I can't think of a better term off the top of my head, let me use it for the moment. What I want to tell you about are some unusual experiences that my Cow Shed mates went through, some insignificant events that

left deep impressions on me. Though these happenings look routine, they are rather illustrative and suggestive of life in the Cow Shed. Because most readers are interested in stories, I will remove those names concerned. But those involved would identify them immediately without a scholarly index to this book.

1. A Professor of Library Science

This professor was once head of the Beijing Library and a well-known scholar on library science and the Dunhuang Caves.^[4] We got to know each other and became close friends long before the Cultural Revolution. The fact that he was in trouble during that terrible period is no surprise. For a while I did not learn of the false charges imposed on him and the way he was tormented at torture sessions. Even when we met in the Cow Shed I could not ask about his recent experiences because we were rendered mute. Luckily, not struck blind, I was able to see.

Writing a report of thought was required every day. One day, when the routine evening admonishment speech was going on, my friend received a clear slap across his face, followed by fist blows and kicks, until he was punched to the ground and forced on his knees. This punishment happened because he wrote his report of thought on coarse toilet paper and turned it in. In those months of terror I was never delighted by any event. But this occurrence cheered me up for some time. I wondered whether this professor was confused at the moment of emergency when he needed appropriate paper for writing or if he purposely challenged the arrogant reform guards by courageously performing this act of ridicule. If the latter was true, he certainly insulted, as dregs of society, those men who held power over his life. In old China his legendary deed, in the form of written notes, would have gone down in history. I at once was worried about him and deeply admired his audacity. He was the hero who released us from long repressed rage.

2. A Professor of Law

This professor was a veteran revolutionary official, who joined

the revolution before the Anti-Japanese War. I was not clear about his biographical background. He came to see me soon after he was transferred to Beida and asked me to translate a famous ancient Hindu code. Then we struck up an acquaintance. In the years that followed we saw each other a lot at conferences on and outside campus. He was kind and congenial with a noble personality that a revolutionary veteran should possess. We shared a great deal in chats. Who knew that we would end up as Cow Shed mates during this political turmoil?

During the Cow Shed days, unless particularly necessary, we were not allowed to talk to each other. Encounters among us fellow men took place as we rushed by each other silently without raising our heads. What happened between the law professor and me was no exception.

One Sunday afternoon, those of us who had received permission to go home returned on time successively. Sitting in my room, I suddenly saw this professor brought inside by a reform guard. Holding a board bearing his name on it, he toured around each room and said loudly, on entering, "I'm so-and-so. I was late in getting back on time. I'm being sent here to make self-criticism and ask for punishment!" I did not know how others felt. I was frightened and perplexed.

3. A Female Instructor from the Department of Eastern Languages

She was an instructor of Mongolian from the Department of Eastern Languages, frank and honest. At the beginning of the Revolution, someone tattled on her, saying that she used to be a competent member of the Youth League of Three Principles of the People of the KMT. It was sheer fabrication. Probably, because she was not reverent toward that female political climber, false charges rained down on her, bringing her to the verge of being accused of the "crimes." For a period of time, another professor from her department and I gathered rubble together, under the supervision of a single worker, in an out-of-the-way place outside the eastern gate of the university. One day the female instructor of Mongolian joined us. I

was puzzled and asked her whether she was sent by the Revolutionary Committee of her department. She answered, "No." "If not, why do you come here?" "Because people say I have committed crimes. I think I'm guilty, so I'm coming of my own accord to reform." What a weird mind! "The stupidity is beyond comparison." The idea flashed across my mind that Christian orthodoxy about "original sin" is very peculiar and puzzling. But the event showed her personality. As an object of the dictatorship and a person who tried to get out of harm's way, I had to follow the directive, "Be humble and subservient. Don't talk and move around without permission." What could I say to her then?

Things went on like this for a while. When we were sent to Taiping Village to work, of course, she was not with us as a "criminal." An old saying goes like this, "One is struck by blows of evil fortune in succession." Later, after coming back from Taiping Village, we moved into the Cow Shed that we had built for ourselves. I didn't see her there either. I thought her absence was reasonable. One evening, a new Cow Shed fellow was suddenly jostled into our compound. A sidelong glance told me it was she. I was stunned. I thought she had been left out of the trouble and would keep out of misfortune instead of "getting mixed up with us counter-revolutionary gangsters." Now she had come! What was on her mind that she wanted to be in the infernal plot? However, I could tell that, this time, she was marched here instead of coming on her own accord. I said nothing to her, as if I had not seen her, though I searched for an answer.

A reform guard asked her, "What's your first name?"

"Hua."

"Which Hua?"

"The Hua as in *Zhong Hua Min Guo* (the Republic of China)."

The candid answer exploded! A "counter-revolutionary criminal" dared to flaunt the name of the Republic of China, ruled by the KMT, in public, in the Cow Shed, a place run by the holy and untouchable Beida Revolutionary Committee? It was absolutely offensive and outrageous! She certainly deserved harsh punishment. The immediate

consequence was that she was labeled an "active counter-revolutionary," knocked down on the ground and pounded soundly. Then a smart reform guard hit upon an idea, so she was led to a tree. This tree was in a peculiar shape, one branch slanting from the trunk. She was first ordered to stand below the branch, her head touching it. The reform guard said,

"March forward!"

As she stepped forward, she had to incline her head backward. Another order came,

"Move forward one more step!"

Now the trunk bent lower, making her head turn backward further and forcing her body to incline as well in order to keep her balance. Yet a third order followed,

"Move forward one more step!"

Now the crooked trunk came very low. She had not been trained in acrobatics and couldn't perform the feat of bending backward to that degree. No further order was given. She stood there, bending her back backward. She was barely able to hold that position for one minute before collapsing to the ground, sweat all over her body. Here, I don't need talk about what happened next. To my mind, the Cow Shed rascals reached a new level of torturing their victims. Her suffering left me deeply disturbed.

I was certainly ignorant of the other tortures she went through that night. The next morning I saw her with a swollen face, black and blue below her eyes.

4. The Party General Secretary of the Department of Biology

I worked as an administrator for decades at Beida and attended many meetings at various levels. Therefore I knew the Party general secretary of the Department of Biology from the beginning of my career at the university; we were old friends.

Unsurprisingly he became a target of torture at the outset of the

Cultural Revolution in the first rounding-up of capitalist roaders; thus, he was at the grand session on June 18, 1966. He was no doubt a veteran of victimization.

I was always puzzled about why many supporters of the "Old Dowager" and most of our reform guards were from the Department of Biology. After the construction of the Cow Shed, many denounced "capitalist roaders" were not thrown into the Cow Shed to be with us "devils" of "bourgeois reactionary scholars." Thus, I was shocked to see this Party general secretary show up there.

Probably, because many reform guards were students of biology, the secretary was "privileged" in some fashion. I can't tell exactly why. But I will present one example for you, which is truly frightening.

One day in August, the hottest month in Beijing, right after lunch hour, the sunshine scorched the earth; it was "burning," to use a local Shandong expression. I saw a man standing in the center of the yard as I walked across. Looking up, he was staring at the dazzling sun. Nor far away, in the shade of trees, a reform guard, a student from the Department of Biology, sat idly. I was perplexed. Later I was told that the Party general secretary was being punished; he was required to stare at the sun without a blink, or he would invite a round of beating. I shuddered. In the history of China and the world, from the slavery society down to the capitalist society, did the ruler of any country in any dynasty punish a criminal this way? If someone is interested in having a try for personal experience, I'm sure he won't be able to hang on for even a second. Could he survive it without being struck blind?

I heard another story. It is about two professors of biology, who offended their students one way or another in the past. The students, now being reform guards, first made the two professors stand in the center of the yard, head against head, and then start to move their feet backward gradually. In other words, the weight of their bodies lay on the pushing of their heads against each other.

There are more stories of this kind. I will stop here. The "art" of torture improved rather rapidly. It is a shame that I haven't seen a

scholarly book written on this subject. It will be a tremendous loss if the legacy is not handed down in history.

5. An Instructor from the Elementary School Affiliated with Beida

Originally I did not know who she was and where she worked. I had no idea why she was put with us either.

On the basis of my observations during a few months in the Cow Shed, I learned there probably was a division of the torture work, according to the "expertise" of each person, among the reform guards. This division was carried out strictly. The man who beat this elementary school teacher was never replaced by others.

One morning I saw the teacher with her arm wrapped up in a bandage and hung on a strip of white cloth over her shoulder. I heard the story that she had been badly flogged in the torture room one night; one of her arms had been broken. But she was ordered to work in the following day. I did not know about other details and what happened to her later. At that time, we "black gangsters" all followed the rule, "Don't snoop in personal affairs of others." I have stayed away from that sort of business so far.

6. A "Long-term Rightist" Student

This student was surnamed Zhou. I did not know him before and had not heard of him either. Now he suddenly came to the Cow Shed.

Certainly there was a story about him, as he was called a "long-term Rightist" student. In China, the Anti-Rightist Movement broke out in 1957.^[5] Was this student labeled a Rightist that year? By the time he was brought to the Cow Shed, he had suffered for nearly ten years as a Rightist. How did he survive that ordeal? I had no idea. When I met him, he looked like a sick elder, with a sallow complexion, a swollen face, and a lot of missing hair. It was said that he was once an intelligent student. But now he appeared dull-witted and slow in action. Obviously, this mental change resulted from the torture inflicted on his body and mind, definitely a tragic life experience. It was true that I was in such a plight myself, with my life

so endangered that I could be killed casually any time by a spear of a reform guard. But, at the sight of this "long-term Rightist," this partially insane young man, I was profoundly touched and sympathetic. I shed tears in secret.

However, in the eye of the reform guards, he was an object for casual beating and humiliation, a toy to be played with for fun. Could they find a two-legged animal somewhere else? According to the victimizers' division of work, a young worker, smart as he looked, was assigned the job of torturing the Rightist. I never saw this young worker beat any other "criminal." However, he randomly beat and kicked the man anytime he wanted. Many times, on the way to the cafeteria for dinner, the worker, with loud taunts and swearwords leaping out of his mouth, drove the hapless man forward. At night, much of the lashing and yelling in the torture room also involved this partially insane man. I took vows that I would never swear in my memoir. However, I have to break my vow here. I'm swearing at that young worker and his fellow men, "What sons of bitches you are! You're trash, more worthless than swine!"

One day I saw a big white turtle drawn on the back of this mad man. It seemed he did not have a family and no one cared about him. He wore his greasy-all-over jacket without change throughout his Cow Shed days. Thus, the big white turtle was rather eye-catching. The sign, visible even in the distance, made people laugh, those "free people" who had the right to laugh. Deprived of such a right we "criminals" were simply sorry for the man and deplored his sad state, while trying to hold back our tears.

7. An Instructor of Physics

A physics instructor was the son of a Beida psychology professor, probably his sole son. For some unknown reason, one of his legs was shorter than the other, and he walked as if he was lame.

Originally I did not know him. I did not see him in the early days of the Cow Shed, nor in Taiping Village. Instead I first encountered him one afternoon right after lunch. By that time we had been

"physically reformed" for a period of time. At this point I think I have to add something for clarification. We were not allowed to take a break after lunch; that professor from the Department of Eastern Languages had been forced at noon to stand in the scorching heat and stare at the sun, simply because of his offense of sitting down and dozing off after lunch. On the day in question I suddenly heard someone being beaten outside the Cow Shed gate. The noise sounded like the person's body was being struck with clubs or bike chains wrapped in inner rubber tubes. Things like this were normal in our place and usually would not arouse our attention. But our numbed conscience was awakened this time by the high pitch and the sound that lasted longer than usual. Because these irregularities triggered my curiosity, I moved close to the window and saw the crippled instructor knocked to the ground by a few "heroes" who waved their weapons and showed no sign of stopping. What I saw was one man trampled by many as he rolled over in the mud with something like blood running down his cheeks.

Why was he brought back late? What crime had he committed? Was he "convicted" recently? I was completely in the dark. Today I still have no idea about what happened to him at that time. Even though I am usually interested in getting to the bottom of a research question like Chinese scholar Dr. Hu Shih, I would not like to show off my academic knowledge here.

From then on, one lame "Cow Shed mate," conspicuous and incongruous in the formation, was added to our neat line as we waited for dinner in the cafeteria every day.

I can write many more "scraps of tabloid news," if necessary, but now I'm not in the mood for expansion. It is painful to bring these stories back from memory and commit them to paper. I will leave the reader with these tales described above, which, I hope, will provide enough material to perceive the magnitude of our suffering.

[1] A popular saying.

[2] Wu Mi (1894-1978), a contemporary Chinese poet and scholar, who went to America in 1917 and earned an undergraduate degree in English from the University of Virginia and a Master in comparative literature from Harvard University; he returned to China in 1921 to teach in a few universities including National Southeastern University, Tsinghua University, National Southwestern Associated University and Wuhan University. He was persecuted during the Cultural Revolution.

[4] The Dunhuang Caves, caves discovered in 1900 in western Gansu, which contain Buddhist statues, frescoes and valuable manuscripts dating from A.D. 366.

[5] The Anti-Rightist Movement, a political movement launched in China in 1957, in which about half a million people, most of them well educated and artistically established, were labeled Rightists and sent to labor camps.

拾伍 牛棚生活（二）

（六）设置特务

这一群年轻的牢头禁子们，无师自通，或者学习外国的“盖世太保”或克格勃，以及国民党的“中统”或“军统”，也学会了利用特务，来巩固自己的统治。他们当然决不会径名之为“特务”，而称之为“汇报人”。每一间牢房里都由牢头禁子们任命一个“汇报人”。这个“汇报人”是根据什么条件被选中的？他们是怎样从牢头禁子那里接受任务？对我们这些非“汇报人”的“罪犯”来说，都是极大的秘密。据我的观察，“汇报人”是有一些特权的。比如每星期日都能够回家，而且在家里呆的时间也长一点。我顺便在这里补充几句。“罪犯”们中有的根本不允许回家。有的隔一段比较长的时间可以回家，有的每个星期日都能够回家。这叫做“区别对待”。决定的权力当然都在牢头禁子手中。“汇报人”既然享受特权，“士为知己者用”，他们必思有以报效，这就是勤于“汇报”。鸡毛蒜皮，都要“汇报”，越勤越好。有的“汇报人”还能看风使舵。哪一个“罪犯”“失宠”于牢头禁子，他就连忙落井下石，以期得到更大的好处。我还观察到，有一天，某一间屋子里的“汇报人”在一个牢头禁子面前，低头弯腰，“汇报”了一通，同房的某一个“罪犯”立刻被叫了出去，拖到一间专供打人用的房间里去了。其结果我无法亲眼看到，但是完全可以想象了。

（七）应付外调

所谓“外调”，是一个专用名词，意思就是从外地外单位向劳改大院的某一个“罪犯”调查本地本单位某一个人——他们那里是不是也叫“罪犯”？这个称呼也许是北大的专利——的“罪行”。当时外调人员满天飞。哪一个单位也不惜工本，派人到全国各地，直至天涯海角，深入穷乡僻壤，调查搜罗本单位有问题人员的罪证，以便罗织罪名，把他打倒在地，让他永世不得翻身。拿我自己来讲，我斗胆开罪了那一位“老佛爷”，她的亲信们就把我看做“眼中钉”，大卖力气，四出调查我的“罪行”。后来我回老家，同村的儿童时的朋友告诉我说，北大派去的人一定要把我打成地主。他把他们（大概是两个人）狠狠地教训了一顿，说：“如果讲苦大仇深要诉苦的话，季羨林应是第一名！”第一次夹着尾巴跑了。听口气，好像还去过第二次。我上面已经说到，在抄家时，他

们专把我的通信簿抄走，好按照上面的地址去“外调”。北大如此，别的单位也不会两样。于是天下滔滔者皆外调人员矣。

我被关进“劳改大院”以后，经常要应付外调人员。这些人也是三六九等，很不相同。有的只留下被调查人的姓名，我写完后，交给监改人员转走。有的要当面对谈，但态度也还温文尔雅，并不吹胡子瞪眼。不过也有非常野蛮粗鲁的。有一天，山东大学派来了两个外调人员，一定要面谈。于是我就被带进审讯室，接受我家乡来人的审讯了。他们调查的是我同山大一位北京籍的国文系教授的关系。我由此知道，我这位朋友也遭了难。如果我此时不是黑帮的话，对他也许能有一点帮助。但我是自身难保，对他是爱莫能助了。我这个新北大公社的“罪犯”，忽然摇身一变，成了山东大学的“罪犯”。这两位仁兄拍桌子瞪眼，甚至动手扯头发，打人；用脚踹我。满口山东腔，“如此乡音真逆耳”，我想到吴宓先生的诗句。我耳听粗蛮重浊而又有点油滑的济南腔，眼观残忍蛮横的面部表情，我真恶心到了极点。山东济南的“国骂”同北京略有不同，是用三个字：“我日妈！”这两个汉子满嘴使用着山东“国骂”，迫我交待，不但交待我同那位教授的“黑”关系，而且还要交待我自己的“罪行”。来势之迅猛，让我这久经疆场的老“罪犯”也不知所措，浑身上下流满了汗。一直审讯了两个钟头，看来还是兴犹未尽。早已过了吃午饭的时间，连北大的监改人员都看不下去了，觉得他们实在有点过分，干脆出面干涉。这两位山东老乡才勉强收兵，悻悻然走掉了。我在被折磨得筋疲力尽之余，想到的还不是我自已，而是我的那位朋友：“碰到这样蛮横粗野没有一点人味的家伙，你的日子真够呛呀！”

（八）连续批斗

被囚禁在牛棚里，每天在监改人员或每天到这里要人的工人押解下到什么地方去劳动。我一下子就想到农村中合作化或人民公社时期生产队长每天向农民分配耕牛的情景。我们现在同牛的差别不大。牛只是任人牵走，不会说话，不会思想；而我们也是任人牵走，会说话而一声不敢吭而已。

但是劳动并不是我们现在唯一的生活内容，换句话说，并不是唯一的“改造”手段。我们不总是说“劳动改造”吗？我一直到现在，虽然经过了多年的极为难得的实践，我却仍然认为，这种“劳动改造”只能改造“犯人”的身体，而不能改造思想，改造灵魂。它只能让“犯人”身上起包，让平滑的皮肤上流血，长疤；却不能让“犯人”灵魂中不怒气冲冲。劳动不

行怎么办呢？济之以批斗。在劳动改造以前，是批斗单轨制。劳动改造以后，则与批斗并行，成了双轨制。批斗我在上面已经谈到，它也只能用更猛烈、更残酷的手段把“犯人”的身体来改造，与劳改伯仲之间而已。

但是劳改与批斗二者之间还是有区别的。如果让我辈“罪犯”选择的话，我们都宁愿选取前者。可惜我们选择的权力一点都没有。因此，我们虽然身居劳改大院，仍然必须随时做好两手准备。即使我们已经被分配好跟着工人到什么地方去干活了，心里也并不踏实。说不定什么时候，也说不定哪一个单位，由于某一个原因——其中并不排除消遣取乐的原因——要批斗我们“罪犯”中的某一个人了。戴红袖章的公社红卫兵立即奉命来“黑帮大院”中押人，照例是雄赳赳气昂昂地，找到大院的“办公厅”，由负责人批准批斗。过了或长或短的时间，被批斗者回来了。无人不是垂头丧气，头发像乱草一般。间或也有人被打得鼻青脸肿。

至于有多少人这样被押出去批斗，我没有法子统计。反正每天都有。我自己在大院中，从某种意义上讲，是“要犯”。我作为一个原井冈山的勤务员，反对了那一位“老佛爷”，这就罪在不赦。从大院中被押出去批斗的机会也就特别多。我每天早饭之后，都在提心吊胆，怕被留下，不让出去劳动。我此时简直是如坐针毡，度秒如年，在牢房里，坐立不安。想到“棚友”们此时正在某处干活，自由自在，简直如天上人。等待着自己的却是一场说不定是什么样的风暴。押解我的红卫兵一走进大院，监改人员就把我叫到对着劳改大院门口的一座苇席搭成的屏风似的東西前面——屏风上有许多字，我现在记不清是什么了——低头弯腰，听候训示：“季羨林！好好地去接受批斗！”好像临行时父母嘱咐孩子：“乖乖的不要淘气！”在这期间，我被押去批斗的地方很多，详细情形我不讲了。每次反正都是“行礼如仪”。先是震天的“打倒”的口号，接着是胡说八道、胡诌八扯的所谓批斗发言。紧张的时候，也挨上两个耳光。最后又在“打倒”声中一声断喝：“把季羨林押下去！”完了，礼仪结束了。我回到大院，等于回到自己家里，大概也是垂头丧气，头发像乱草一般。

（九）1968年6月18日大批斗

我在上面谈到过北京大学“文化大革命”的历史。1966年6月18日，第一次斗“鬼”。因为我当时还不是“鬼”，没有资格上斗鬼台，只是躺在家中，听到遥远处闹声喧天而已。1967年6月18日，此时这个日期已经

被规定为“纪念日”，又大规模地斗了一次“鬼”。因为我仍然没能争取到“鬼”的资格，幸免于难。

到了1968年6月18日，我已经被打成了“鬼”，并已在黑帮大院中住了一个多月。今年我有资格了，可以被当“鬼”来斗了。但是，这也是一个沉重的灾难，是好久没有过的了。一大早，本院的牢头禁子们就忙碌上了。也不知道是根据什么原则来进行“优化组合”。并不是每一个“棚友”都能得到这个一年一度极为难得的机会。在列队出发的时候，我发现只有少数人参加。东语系的“代表”只有二人：我和那一位老教授。押解我们的人，不是本院的监改人员，而是东语系派来的一位管电化教育的姓张的老工作人员。由此也许可以推断，这次斗鬼的出席人员是由各系所单位确定的。这一位姓张的老同事，见了我们，不但不像其他同等地位人员那样，先“妈的”“混蛋”骂上一通，而且甚至和颜悦色。我简直有点毛骨悚然，非常不习惯。我们这一伙“罪犯”，至少是我，早已觉得自己不是人了。一旦被人当人来看待，反而觉得“反常”。这位姓张的老同事使我终生难忘。

但是，那些“斗鬼者”却完全不是这个样子。这些人是谁，我不知道。我不敢抬头，不但路旁的人我看不清，也不敢看，连走什么道路也看不清。只是影影绰绰地被押出黑帮大院，看到眼前的路是走过临湖轩和俄文楼，沿斜坡走上去的。当时现在的大图书馆还根本没有，只有一条路通向燕南园和哲学楼。我们大概就是顺着这一条林荫马路，被押解到哲学楼一带地方。不知道在什么地方，也不清楚是用什么方式，批斗了一番之后，就押解回“府”。我没有记得坐很久的喷气式，也不记得有人针对我作什么批斗发言。我的印象是，混乱一团。我只听到人声鼎沸，间以“打倒”之声。也许是各个系所单位分头批斗的。我自己好像梦中的游魂，稀里糊涂地低头弯腰，向前走去，“前不见古人，后不见来者”，我只感觉到，不但前后有人，而且左右也有人，好像连上下都有人，弥天盖地，到处都是人。我能够看到的却只有鞋和裤子。在“打道回府”的路上，我感觉到周围的人似乎更多了，人声也更嘈杂了，砖头瓦块打到身上的更多了。我现在已经麻木，拳头打在身上，也没有多少感觉。回到黑帮大院以后，脱下衬衣，才发现自己背上画上了一个大王八，衣襟被捆了起来，绑上了一根带叶的柳条。根据我的考证，这大概就算是狗尾巴吧。平常像阎罗王殿一样的黑帮大院，现在却显得异常宁静、清爽，简直有点可爱了。

痛定思痛，我回忆了一下今天大批斗的过程。为什么会这样热闹而

又隆重呢？小小的批斗，天天都有，到处都有。根据心理学的原理，越是看惯的东西，就越不能引起兴趣。那些小批斗已经是“司空见惯浑闲事”了。今天的大批斗却是一年才一次的大典，所以就轰动燕园了。

（十）棚中花絮

这里的所谓“花絮”，同平常报纸上所见到的大异其趣。因为我一时想不出更恰当的名称，所以姑先借用一下。我的“花絮”指的是同棚难友们的一些比较特殊的遭遇，以及一些琐琐碎碎的事情，都是留给我印象比较深的。虽是小事，却小中见大，颇能从中窥探出牛棚生活的一些特点。又由于大家都能了解的原因，我把人名一律隐去。知情者一看就知道是谁，用不着学者们再写作《〈牛棚杂忆〉索隐》这样的书。

1.图书馆学系一教授

这位教授做过北京图书馆的馆长，是国内外知名的图书馆学家和敦煌学家。我们早就相识，也算是老朋友了。这样的人在“十年浩劫”中难以幸免，是意中事。我不清楚加在他头上的是些什么莫须有的罪名。他被批斗的情况，我也不清楚。不知道是怎样一来，我们竟在牛棚中相会了。反正我们现在早已都变成了哑巴，谁也不同谁说话。幸而我还没有变成瞎子，我还能用眼睛观察。

在牛棚里，我辈“罪犯”每天都要写思想汇报。有一天，在著名的晚间训话时，完全出我意料，这位老教授被叫出队外，一记清脆响亮的耳光声在他脸上响起，接着就是拳打脚踢，一直把他打倒在地，跪在那里。原来是他竟用粗糙的手纸来写思想汇报，递到牢头禁子手中。在当时那种阴森森的环境中，我一点开心的事情都没有。这样一件事却真大大地让我开心了一通。我不知道，这位教授是出于一时糊涂，手边没有别的纸，只有使用手纸呢？还是他吃了豹子心老虎胆，有意嘲弄这一帮趾高气扬、天上天下、唯我独尊的牢头禁子？如果是后者的话，他简直是视这一班手操生杀大权的丑类如草芥。可以载入在旧社会流行的笔记中去了。我替他捏一把汗，又暗暗地佩服。他是牛棚中的英雄，为我们这一批阶下囚出了一口气。

2.法律系一教授

这位教授是一个老革命干部，在抗日战争以前就参加了革命。他的生平我不清楚。他初调到北大来时，曾专门找我，请我翻译印度古代著名的法典《摩奴法论》。从那时起，我们就算是认识了。以后在校内外

开会，经常会面。他为人随和、善良，具有一个老干部应有的优秀品质。我们很谈得来。谁又能料得到，在“十年浩劫”中，我们竟有了“同棚之谊”。

在黑帮大院里，除非非常必要时，黑帮们之间是从来不互相说话的。在院子里遇到熟人，也是各走各的路，各低各的头，连眼皮都不抬一抬。我同这位教授之间的情况，也并不例外。

有一天，是一个礼拜天，下午被牢头禁子批准回家的“罪犯”，各个按照批准回棚的时间先后回来了。我正在牢房里坐着，忽然看到这一位老教授，在一个牢头禁子的押解下，手中举着一个写着他自己名字的牌子，走遍所有的一间间的牢房，一进门就高声说：“我叫某某某，今天回来超过了批准的时间，奉命检讨，请罪！”别的人怎么样，我不知道。我却是毛骨悚然，站在那里，不知所措。

3.东语系一个女教员

她是东语系教蒙古语的教员。为人耿直，里表如一，不会虚伪。“文化大革命”一起，不知道是什么人告密，说她是国民党三青团的骨干分子。这完全是捕风捉影的无稽之谈，根本缺乏可靠的材料，也根本没有旁证。大概是因为她对北大那一位女野心家不够尊敬，莫须有的“罪名”浸浸乎大有变成“罪行”之势。当我同东语系那一位老教授被勒令劳动的时候，最初只有我们两个人，在学校东门外的一个颇为偏僻的地方，拣地上的砖头石块，有一个工人看管着我们。有一天，忽然这一位女教员也去了。我有点困惑不解。我问她，是不是系革委会命令她去的？她回答说：“不是。”“既然不是，你为什么自己来呢？”“人家说我有罪，我就有了有罪的感觉。因此自动自愿地来参加劳动改造了。”她这种逻辑真是匪夷所思。“其愚不可及也”，这是我心中的一闪念。我对于这种类似耶稣教所谓“原罪”的想法，觉得十分奇怪，十分不理解。由此完全可以看出她这个人的为人。但是，在我当时的处境中，自己是专政的对象，“只准规规矩矩，不准乱说乱动”，我敢说什么呢？

如此过了一些时候，等我们被押解到太平庄去劳动的时候，“罪犯”队伍里没有她。这是理所当然的。焉知祸不单行，古有明训。等我们从太平庄回来自建牛棚自己进驻以后，最初也没有看到她。这也是理所当然的，我自己心里想。但是，忽然有一天，已经是傍晚时分，从黑帮大院门外连推带搯地推进一个新的“棚友”来，我低头斜眼一看：正是那一位女教员。我这一惊可真不小。我原以为她已经平安过了关。用不着

再自投罗网，“鱼目混珠”了。现在，“胡为乎来哉”！她怎么到这阎王殿来了呢？这次看样子决不是自动自愿的，而是被押解了来的。尽管我心里胡思乱想，然而却一言不发，视而不见。

有一个牢头禁子问她：

“你叫什么名字？”

“××华。”

“哪一个‘华’呀？”

“中华民国的‘华’。”

这一下子可了不得了！一个“反革命罪犯”竟敢在威严神圣的、代表“聂”记北大革委会权威的劳改大院中，在光天化日众目睽睽下为“中华民国”张目，是可忍，孰不可忍！简直是胆大包天，狂妄至极！非严惩不可！立即给戴上了“现行反革命分子”的帽子，拳足交加，打倒在地。不知道是哪一个有天才的牢头禁子，忽然异想天开，把她带到一棵树下。这棵树长得有点奇特：有一枝从主干上长出来的支干，是歪着长的。她被命令站在这个支干下面，最初头顶碰到树干。牢头禁子下令：

“向前一步走！”

她遵令向前走了一步。此时她的头必须向后仰。又下了一个口令：

“向前一步走！”

此时树干越来越低，不但头必须向后仰，连身子也必须仰了。但是，又来了一个口令：

“向前一步走！”

此时树干已极低。她没有练过马戏，腰仰着弯不下去。这时口令停了。她就仰着身子，向后弯着站在那里。这个姿势她连一分钟也保持不了。在浑身大汗淋漓之余，软瘫在地上。结果如何，用不着我讲了。我觉得，牢头禁子把折磨人的手段提高到一个新的水平。然而，这一位女教员却是苦矣。

一夜折磨的情况，我不清楚。第二天早晨起来，我看到她面部浮肿，两只眼睛下面全是青的。

4.生物系党总支书记

我在北大搞了几十年的行政工作，校内会很多。因此，我早就认识这一位总支书记。我们可以算是老朋友了。

“文革”一开始，他在劫难逃，是天然的“走资派”。所以在第一阵批走资派的大风暴中，他就被揪了出来。第一个“六·一八”斗鬼，他必然是参加者之一。在这一方面，他算是老前辈了。

不知道是什么缘故，拥护那位“老佛爷”的“造反派”，生物系特别多。在黑帮大院的牢头禁子中，生物系学生也因而占绝对优势。我可是万没有想到，劳改大院建成后，许多“走资派”在被激烈地冲击过一阵之后，没有再同我们这一批多数是“资产阶级反动学术权威”的“牛鬼蛇神”一起被关进来。这一位生物系总支书记却出现在我们中间。

大概是因为牢头禁子中生物系学生多，他就“沾”了光，受到一些“特殊待遇”。详情我不清楚，不敢乱说。我只看到一个例子，就足以让人毛发直竖了。

有一天，中午，时间大概是七八月，正是北京最炎热，太阳光照得最——用一句山东土话——“毒”的时候，我走过黑帮大院的大院子，在太阳照射的地方，站着一个人：是那位总支书记。双眼圆睁，看着天空里像火团般的太阳。旁边树阴中悠然地坐着一个生物系学生的牢头禁子。我实在莫名其妙。后来听说，这是牢头禁子对这位总支书记惩罚：两眼睁着，看准太阳；不许眨眼，否则就是拳打脚踢。我听了打了一个寒战：古今中外，从奴隶社会一直到资本主义社会，试问哪一个时代，哪一个国家有这样的惩罚？谁要是想实践一下，管保你半秒钟也撑不下来。这样难道不会把人的眼睛活生生地弄瞎吗？

此外，我还听说，没有亲眼看到，也是生物系教员中的两位牛鬼蛇神，不知怎样开罪了自己的学生。作为牢头禁子的学生命令这两位老师，站在大院子中间，两个人头顶住头，身子却尽管往后退；换句话说，他们之所以能够站着，就全靠双方彼此头顶头的力量。

类似的小例子，还有一些，不再细谈了。总之，折磨人的“艺术”在突飞猛进地提高。可惜到现在我还没有看到这方面的专著。如果年久失传，实在是太可惜了。

5. 附小一位女教员

这个女教员是哪个单位的，我说不清楚了。我原来并不认识她。她是由于什么原因被关进牛棚的，我也并不清楚。

根据我在牛棚里几个月的观察，牢头禁子们在打人或折磨人方面，似乎有所分工。各有各的专业，还似乎有点有条不紊，泾渭分明。专门打这位女教员的人就是固定不变的。

有一天早上，我看到这位女教员胳膊上缠着绷带，用一条白布挂在脖子上。隐隐约约地听说，她在前几天一个夜里，在刑讯室受过毒打，以致把胳膊打断。但仍然受命参加劳动。详细情况，当时我就不清楚，后来更不清楚。当时，黑帮们的原则是，事不干己，高高挂起。我就一直挂到现在。

6. 西语系的一个“老右派”学生

这个学生姓周，我不认识他，平常也没有听说过。到了黑帮大院，他突然出现在我的眼前。

既然叫“右派”，而且还“老”，可见这件事有比较长久的历史渊源了。在中国，划右派最集中的时期是1957年。难道这一位姓周的学生也是那时候被划为右派的吗？到了进入牛棚时，他已经戴了将近十年的右派帽子了。这个期间他是怎样活下来的，我完全不清楚。等我见到他的时候，他满面蜡黄，还有点浮肿，头发已经脱落了不少，像是一个年老的病人。据说他原是一个聪明机灵的学生。此时却已经显得像半个傻子，行动不很正常了。我们只能说，这一切都是在身体上和精神上受到十分严重的折磨的结果。这无疑是一个人生悲剧。我自己虽然身处危难，性命操在别人手中，随时小心谨慎，怕被不吃素的长矛给吃掉；然而看到这一位“老右派”，我不禁有泪偷弹，对这一位半疯半傻的人怀有无量的同情！

可是在那一批毫无心肝的牢头禁子眼中，这位傻子却是一个可以随意打骂、任意污辱、十分开心的玩物。这样两只腿的动物到哪里去找呀！按照他们的分工原则，一个很年轻的看上去很聪明伶俐的工人，是分工折磨这个傻子的。我从没有见过这个年轻工人打过别的“罪犯”。唯独对于这个傻子，他随时都能手打脚踢。排队到食堂去吃饭的路上，他嘴里吆喝着又打又骂的也是这个傻子。每到晚上，刑讯室里传出来的打人的声音以及被打者叫唤的声音，也与这个傻子有关。我写回忆录，有一个戒条，就是：决不去骂人。我在这里，只能作一个例外，我要骂这个年轻的工人以及他的同伙：“万恶的畜类！猪狗不如的东西！”

有一天，我在这个傻子的背上看到一个用白色画着的大王八。他好像是根本没有家，没有人管他。他身上穿的衣服，满是油污，至少进院

来就没洗过，鹑衣百结。但是这一只白色的大王八却显得异常耀眼，从远处就能看得清清楚楚。别人见了，有笑的权利的“自由民”会哈哈大笑，我辈失掉笑的权利的“罪犯”，则只有兔死狐悲，眼泪往肚子里流。

7.物理系的一个教员

这个教员是北大心理系一位老教授的儿子，好像还是独生子。不知道是由于什么原因，他的一条腿短一截，走起路来像个瘸子。

我从前并不认识他。初进牛棚时，甚至在太平庄时，都没有见到过他。我们在牛棚里已经被“改造”了一段时间。有一天，是中午过后不久——我在这里补充几句，牛棚里是根本没有什么午休的。东语系那位老教授，就因为午饭后坐着打了一个盹儿，被牢头禁子发现，叫到院子里在太阳下晒了一个钟头，好像也是眼睛对着太阳——我在牢房里忽然听牛棚门口有打人的声音，是棍棒或者用胶皮裹起来的自行车链条同皮肉接触的声音。这种事情在黑帮大院里是司空见惯的事，一天能有许多起。我们的神经都已经麻木了，引不起什么感觉。但是，这一次声音特别高，时间也特别长。我那麻木的神经动了一下，透过玻璃窗向棚口看了看。我看到这一位残伤的教员，已经被打倒在地，有几个“英雄”还用手里拿着的兵器，继续抽打。他身上是不是已经踏上了一千只脚，我看不清楚。我只看到这一位腿脚本来就不灵便的人，躺在地上的泥土中，脸上还好像流着血。

他为什么这样晚才到牛棚里来？他是由于什么原因才来的？他是不是才被“揪”出来的？这些事情我都不清楚。一直到今天也不清楚。我虽然也像胡适之博士那样有点考据癖，但是我不想在这里施展本领了。

从此以后，我们每次排队到食堂去吃饭时，整齐的队伍里就多了走起路来很不协调的瘸腿的“棚友”。

关于牛棚中个别人的“花絮”，如果认真写起来的话，还可以延长几倍。我现在没有再写的兴致，我也不忍再写下去了。举一隅可以三隅反。希望读者自己慢慢地去体会吧。

16 LIVING IN THE COW SHED (PART THREE)

(11) A Private Seat

I knew I was thrown into hell. But for lack of innate moral properties and potentials for Buddhist acceptability I did not know the inferno was hierarchically run. Aren't there the eighteen floors of hell in Buddhism?

It is a long story for which I have to recount from the beginning. One well-known student from the Department of Biology was called Zhang Guoxiang. When the construction of the Cow Shed was completed, I did not see him. He arrived later. I had no idea why and how he was sent there. Those things were classified by the Nie's Beida Revolutionary Committee, none of our business. Meanwhile, we "criminals" dared not make an inquiry. Upon his arrival Zhang put on an air of difference like a crane towering over chickens. But to my mind he was just an ordinary follower rather than a leader. But he went out his way to assume as many responsibilities as possible. Often I saw him on a bike, which he previously had taken from a home-raiding of a "criminal," riding around the Cow Shed yard for fun. The property of any "criminal," even his life, automatically became a possession of the reform guards once the "criminal" was rounded up to the Cow Shed. Guards could go to any "criminal's" home and take whatever personal belongings they needed. Nevertheless, this man's bike-riding pastime appeared conspicuous against the hush of terror that hung over our penitentiary.

For a couple of days, after the evening admonishment speech and, sometimes, even after ten at night, the time at which the "prisoners" were supposed to turn in, this jailer Zhang sat on a chair, in bright lamplight, under the big elm tree in the yard. With one foot lying on the seat of the chair, he kept rubbing and scratching, with his fingers,

between his toes, while asking questions or ferociously yelling at a "criminal" standing in front of him with the head lowered. I was accustomed to this sort of thing. But the way he sat was strange to me and struck me profoundly. What disturbed me more was that one evening I noticed the man standing in front of him was Lu Ping, president and secretary of the Party Committee of Beida. Lu was one of the leaders in the "December 9th Movement" and, after the founding of new China, worked as deputy minister of Railway Transportation.^[1] As one of the few "major criminals" especially attacked by the "Old Dowager" in her big-character poster, Lu was originally housed somewhere else, not with us in the inferno. Now he suddenly showed up here. I had no idea for how long or what kinds of questions Zhang Guoxiang had asked him or what had happened to him later. But the whole event looked peculiar to me.

At that time I never thought such mishap would befall me a few days later. One night, a while later after the bedtime bell rang, I heard a sudden shout, "Ji Xianlin," shooting from behind the Building of Democracy. By that time we were all hyper-tense in "combat readiness." Then I raced as fast as my legs could carry me to the front yard. I saw Zhang Guoxiang sitting there as described previously, his right-hand fingers stroking between his toes. He tossed a question toward me,

"How did you contact the secret agency of the enemy?"

"I have never had such contact."

"Why did you say Jiang Qing gave a morphine injection to the 'New Beida Commune'?"

"I used a figure of speech."

"How many wives do you have?"

I was shocked and replied cautiously,

"I don't have many."

After a "chat" like this, he said,

"I'm pretty merciful toward you tonight!"

Yes, I should admit his words were true. I was not beaten, kicked and humiliated with "Chinese swearing remarks." Wasn't he very merciful to me? I should be grateful for the "imperial favors" bestowed unto me.

But I certainly missed the undertone of "threat" in his voice. "I'm pretty merciful toward you tonight." How about tomorrow?

The following night, after the ringing of the bell for bedtime, I was ready to retire. Suddenly a cry struck like a thunderbolt, "Ji Xianlin!" I rushed out of the room faster than yesterday and saw Mr. Zhang standing in rage around the corner of the two rows of one-story houses rather than in the center of the yard,

"Didn't you hear me calling you? Are you deaf?"

Now I knew I was in trouble. Before I had a chance to think a little more, I felt hot on my face and head, as a rubber-wrapped bicycle chain struck me like a shower of lightning bolts. It hit the upper half rather than the lower half of my body, the vital part of my head. My head swam as I saw stars. Not daring to dodge, I stood upright and motionless. For the first few moments there was a little pain. Gradually my senses were gone as I felt pangs of feeling searing my top of head, eyes, nose, mouth and ears, not really painful but more unbearable than pain. I almost fainted and tumbled. But I instinctively held on. More bike-chain strikes leaped in front of my eyes as verbal abuses, which I was unable to hear clearly (if they were uttered at all), resounded in my ears. I was dazed and did not know how long the flogging lasted. Actually it was quite long, according to what some yard mates living near the corner told me later. They were terrified by the happening and still felt uneasy when talking to me after the event. In contrast I nearly turned into a log or rock at the time, passing out and feeling less horrible than the spectators. A while later I heard, as if in a dream, a shout, "Beat it!" I started to regain consciousness, understanding that this fiend was showing "mercy" to me. So I staggered back to my room in terror.

When I came to, my body hurt severely all over. The first thing I wanted to do was to run a "physical exam," on my own, of all the wounds on me. I first looked at my limbs, which did not fall apart. Then I checked my facial features. My eyes were swollen. I tried to open them and found both of them all right. I was set at ease. A further look showed my face, nose, mouth and ears were all bleeding. Opening my mouth, I ascertained that none of my teeth was gone. I ignored the bleeding from other parts of my body, because it was not fatal. Then I bore the agony.

You can imagine. Would I be able to go to sleep that night? I lay on the board, rolling over and over and feeling hurt. Blood oozed from the cuts and I had to sustain the pain. I did not have a mirror, so I was unable to take a look at my "impressive appearance." In the past I had shuddered at the sight of people who got tortured for a night and came back black and blue, such as the old professor from the Department of Geophysics and the woman instructor from the Department of Eastern Languages. Tonight my cheeks not only were swollen but blue as well. I was not very much concerned because I couldn't see what I looked like.

The following morning, work resumed and the quotations were read aloud as usual. I was assigned the work of sifting sand on the roadside outside the northern mill of building materials. How was I? How did I feel? I became muddled. My body was numbed. I even forgot that committing suicide was a way of relief.

Misfortune never comes singly as the old saying goes. Before this suffering was over, Mr. Zhang broke into my room one noon, telling me to move. Having rolled up my bedding, which included most of my personal belongings, I moved to the room in which I had been tortured previously. The room did not come to mind as something special during the day. However, that night it dawned on me that it was a "private room" for imprisoning important convicts. Throughout the night lights were not allowed to be turned off, and inmates were required to take turns in being a guard instead of sleeping. What should we "guard"? I had no idea. Was the guarding for preventing

inmates from escaping? That was absolutely impossible. Intellectuals had the least guts and dared not escape. Then, most probably, the procedure was to guard against suicides committed by inmates, such as hanging oneself. I gradually realized my status had been elevated in the hellish place, after cruel torture, to a higher level. The "most important criminal," Lu Ping, was housed here. I was condemned to imprisonment in a place like the Buddhists' Avici Hell or the jail for convicts awaiting execution.

But it was not the end of my purgatory. It was Mr. Zhang again who told me, along with a professor of Chinese surnamed Wang, to push a tank cart and fetch hot water three times each day for all inmates housed there. I wondered why Professor Wang qualified for being with me. So far as I knew, he did not join "Jinggangshan," nor did he commit heinous crimes. Why should he be punished so cruelly? Fetching water was no easy job. Three times a day we did it, in addition to the daily quota of labor and loud reading of Mao's quotations. At dinner I watched others eat as I took care of the water. In times of rain I battled with the tank cart until my clothes were soaked through. Even if a downpour brought down daggers, I could not risk being perceived as late in bringing back hot water. The suffering would be inconceivable. To my surprise, Professor Wang took advantage of the job; secretly he made a cup of tea at the boiler and smoked a pipe of tobacco. I could tell he was grooving.

(12) A Special Program

Our reform guards certainly knew what they were doing in terms of their mission. After more than half a year of reforming us through a blend of physical labor, preaching, and torturing of slaps in the face and clubs, they probably thought we had gone through enough physical and ideological discipline, it was time to treat us differently.

Therefore the special program came into being.

I had no idea by what standards our reform guards singled out some of us "reform criminals" for this special program.

This program was run in the Building of Foreign Languages. But the building's entrance was not to be used, while the rear door was locked. Therefore one window served as its passageway, with one long wooden board placed inside the window and another outside as footsteps. One could enter the building through the window which led to a small classroom. What did this classroom look like? Was there any furniture inside? I had no idea. In my eyes, it was close at hand but seemed worlds apart from me.

I craved this program. I thought we would be able to hang on in enduring days of beating, insults, starvation and thirst. But we could not remain unconcerned about our future. When would our suffering come to a close? In my mind I saw myself facing a vast ocean with no way of crossing it because of the lack of a boat and no island in sight. I longed for a break in the course of my life. What a hard time I had to endure in hoping against hope! Now they would run a special program, which I saw as a boat for crossing the ocean.

Those of us chosen for the special program had some enviable privileges. They had the right to bear a badge of the great leader, conduct the morning reading of quotations, make the evening report in front of the portrait of the great leader, and so forth. While staying in the Cow Shed, Party members were stripped of their right to pay membership dues. As a Party member myself I wonder whether members in the special program regained this right or not. Often, I heard melodious singing drifting out of the special program room; there were either songs worshipping the great leader or sounds of reading the great leader's quotations. Each time the singing filled me with admiration. Some of us started to enjoy privileges. I wondered whether the privileges were granted or obtained automatically, for example, sitting cross-legged in a room and walking with the head held a little higher. I envied those people acting the way I dared not to. How I wished I could be able to step onto that long wooden board and get into the Building of Foreign Languages!

Later on, for some unknown reasons, until the dismantlement of the "Black Gang Yard," its attendants never had a chance to transform

themselves into a dragon, rip through a cage and soar into freedom.

(13) The Instructor of Indonesian from the Department of Eastern Languages

This instructor used to be a student of Indonesian; he transferred to Beida, before the founding of new China, from a program of Eastern languages at a college in southern China. After graduation he was appointed to a teaching position at Beida. He was a very intelligent and hard-working scholar. He used to produce high-quality papers. He was, indeed, a competent instructor. When he got a chance to study in Indonesia, I gave him some financial help to get over his tight budget due to his family problems. Therefore we got along well while he treated me with respect.

But people change. The Cultural Revolution split Beida into two factions when he joined the "New Beida Commune." Admittedly each person is entitled to the road he takes. But now this instructor became exceptionally hostile toward me, regarding me as a "political heretic." After I was "singled out" for condemnation, he attended all interrogations held in the Building of Foreign Languages. He raged with glaring eyes, striking tables and stools, and his emotion ran higher than that of others. It was obvious that he wanted to show his loyalty to the "Old Dowager." Did he intend to make amends for his Anti-Soviet Union and Anti-Communism background by appearing politically firm? This question repeatedly came back to my mind. Otherwise, accounting for his abnormal behavior in terms of being simply opportunistic and adding insult to injury to me was far from convincing.

Political strife left no room for personal relationship.

One morning I went out of the Cow Shed yard with my head lowered. My eyes happened to hit the characters written on the road,

"Down with the counter-revolutionary so-and-so," which was the instructor's name.

I was astonished. Not long before, he was the "extremely active

man" at my small-sized interrogation sessions, quite a revolutionary full of promises. How could he become a "counter-revolutionary" overnight? It turned out that his snaky political background was revealed by someone, and he then took his own life one night by using the "capitalist way of suicide" and "alienated himself from the people for ever."

I was not delighted by his death. I understood that human life is complicated and unpredictable.

(14) Giving Up on Myself

After a period of time of staying in the Cow Shed, I was getting more and more mentally confounded and emotionally indifferent. This place was not hell but more miserable than hell. I was not a hungry ghost but, in effect, more starved than it. If I retained any feelings, I felt I was neither a human nor a ghost but a hybrid of human and ghost. Others saw me this way, so did I myself, neither fish nor fowl but mysteriously similar to either kind. Here I use a common philosophical term to describe my state, I was already "metamorphosed."

In the past when people regarded me as human, I took it for granted. I knew I was not perfect and had never been arrogant. Small children usually split people into two categories, the good and the bad. In light of their principle I certainly set myself in the former category. Take money for example. I was not stingy, nor did I worship money. In this regard I felt "more meritorious than others, notwithstanding my weakness." One day, still a teenager in Jinan many years ago, I went to purchase medicine in a drug store. The store assistant made a calculation error and gave me an extra silver dollar in change. In the eye of a small kid like me, one silver dollar meant a fortune. But I returned it to him immediately. He blushed. Later, I gradually learned about the honor of honesty. In 1946 I returned home from abroad. I sold my gold watch in order to send money back to my family in Shandong. Then I exchanged the leftover cash into the KMT's gold currency. The bank teller also made a

calculation error and gave me one more ounce of gold. At that time one ounce of gold was quite a sum. Again I returned it to him. For a well-known man, these common things are not worth mentioning. But, as an ordinary man, I don't think they are absolutely insignificant.

Now I turned ghost overnight. In the beginning I was ill-adjusted and rather rebellious. But as time went on, I grew used to my new life. The line between man and ghost, good and bad, kindness and evil, and beauty and ugliness gradually blurred for me. One appropriate common phrase for describing my state of mind at that time is "writing off my life and acting recklessly." My future became bleak and hopeless. Because I chose not to commit suicide, I let things take their own course, no matter whether my status ran worse or better and what gossip circulated about me.

Meanwhile, I was in a financial predicament. The Nie's Beida Revolutionary Committee gave me a "monthly income" that could hardly support a family of three, the two old ladies and me. Even cutting our budget so that we lived only on steamed cones of cornmeal would cost more than my salary. Because of hard work and lack of greasy food, I often went hungry and tried to find something to eat to abate my appetite. A few times I followed the reform guard and asked him to give me the leftover soup in a jar of pickled bean curd, so that I could eat my steamed cone of cornmeal with it. For one period of time I was dispatched to work near student dormitory buildings 28 and 29. Our job was to clean rooms that had been wrecked in faction fighting and pick up the rubble. I remember a big room, at the southern end of Building 28, that was filled with miscellaneous things with tons of trash littered all over the place. Suddenly I spotted a few chunks of dried, moldy steamed bun on a worn-out wooden steaming rack. The food looked like a treasure to me. I snatched it up and slipped it into my pocket. Later, when I found myself alone, I devoured the rotten bun, ignoring concerns about food hygiene. For a "ghost" it was meaningless to be worried about such matters.

Another accomplishment I attained, in the meantime, was lying.

Upon going out to work in the morning, I sometimes found my hunger unbearable. So I told the worker in charge that I wanted to visit the doctor in the campus clinic. After being granted the request, I made my way home timidly like a mouse by picking out the least traveled path. Once home, I grabbed two steamed buns sandwiched with sesame paste and gulped them down. Then I went back to work, feigning my return from the clinic. In doing so I risked being caught by reform guards or reporters. If that happened, the consequence was imaginable.

One day I saw a few bank notes, ten and twenty cents, on the road. Being delighted, I picked them up and stuck them in my pocket. Later I often took advantage of walking with head lowered in order to find things that "free men" were unable to see. Occasionally I picked up some coins, another profit reaped. Then I discovered the hang of making such haul. The restroom of the Cow Shed was the best place to go, where I would collect some coins left on the ground. From then on I frequented restrooms to which others would shun unless out of necessity.

The stories I have told are about some insignificant occurrences that displayed indecent deeds. If I did not tell them, probably no one would think I did them. If I had not gone through those experiences, I would never have credited their existence. But they are totally true. Actually they are the most execrated doings of all. As I lost sense of sin at that time, I did not feel embarrassment about behaving that way. Now, in retrospect, I tremble with fear and shame. Early in my life I was interested in understanding a person's psychological process of moral deterioration and vaguely attributed such happenings to hereditary factors. Now, my experiences show that my original idea is incorrect.

But who is to blame for such evil doing?

(15) The Conclusion on the "Theory of Torture"

Life in the Cow Shed was varied. What I told before constitutes only major occurrences that I chose from many. At the beginning of

my narration I posited the "theory of torture" in order to "review history from a theoretical point of view." Many readers at first might have been skeptical about my theory. Having read the stories I have recounted from quite different perspectives about life in the Cow Shed, probably readers are now convinced of my theory.

What objective did those "young revolutionaries" want to achieve by virtue of torture? They would never want to reveal their "heart of darkness," nor would they be willing to have someone do the job on their behalf. A high-sounding reply to the question, which is most likely to be produced on their part, was "reform through physical labor." As I mentioned previously, physical labor was an excuse used to shield the real motive behind the torture. Actually physical labor produced effects on the body but would never change one's thinking. If the enforced physical labor did yield some fruit, it was the desire to give up on myself and let things take their own course. Torture works for a fall, instead of a rise, in one's morality.

This is the conclusion I have drawn about the "theory of torture."

[1] The "December 9th Movement, a student patriotic demonstration of anti-Japanese aggression, which took place in Beijing in 1935.

拾陆 牛棚生活（三）

（十一）特别雅座

我自己已经堕入地狱。但是，由于根器浅，我很久很久都不知道，地狱中还是有不同层次的。佛教不是就有十八层地狱吗？

这话要从头讲起，需要说得长一点。生物系有一个学生，大名叫张国祥。牛棚初建时，我好像还没有看到他。他是后来才来的。至于他为什么到这里来，又是怎样来的，那是聂记北大革委会的事情，我辈“罪犯”实无权过问，也不敢过问。他到了大院以后，立即表现出鹤立鸡群之势。看样子，他不是一个大头子，只是一般的小卒子之类。但管的事特别多，手伸得特别长。我经常看到他骑着自行车——这自行车是从“罪犯”家中收缴来的。“罪犯”们所有的财务都归这一批牢头禁子掌握，他们愿意到“罪犯”家中去拿什么，就拿什么。连“罪犯”的性命自己也没有所有权了——在大院子里兜圈子，以资消遣。这在那一所阴森恐怖寂静无声的“牛棚”中，是非常突出的惹人注目的举动。

有几天晚上，在晚间训话之后，甚至在10点钟规定的“犯人”就寝之后，院子里大榆树下面，灯光依然很辉煌，这一位张老爷，坐在一把椅子上，抬起右腿，把脚放到椅子上，用手在脚趾头缝里抠个不停。他面前垂首站着一个“罪犯”。他问着什么问题，间或对“罪犯”大声训斥、怒骂。这种训斥和怒骂，我已经看惯了。但是他这坐的姿势，我觉得极为新鲜，在我脑海里留下的影像，永世难忘。更让我难忘的是，有一天晚上，他眼前垂头站立的竟是原北大校长兼党委书记，一二·九运动的领导人之一，当过铁道部副部长的陆平。他是那位“老佛爷”贴大字报点名攻击的主要人物。黑帮大院初建时，他是首要“钦犯”，囚禁在另外什么地方，还不是“棚友”。不知道什么时候，他竟也乔迁到棚中来了。张国祥问陆平什么问题，问了多久，后果如何，我一概不知。只是觉得这件事儿很蹊跷而已。

可是我哪里会想到，过了不几天，这个噩运竟飞临到我头上来了。有一天晚上，已经响过熄灯睡觉的铃，我忽然听到从民主楼后面拐角的地方高喊：“季羨林！”那时我们的神经每时每刻都处在最高“战备状态”中。我听了以后，连忙用上四条腿的力量，超常发挥的速度，跑到前面大院子里，看到张国祥用上面描绘的那种姿态，坐在那里，右手抠着

脚丫子，开口问道：

“你怎么同特务机关有联系呀？”

“我没有联系。”

“你怎么说江青同志给新北大公社扎吗啡针呀？”

“那只是一个形象的说法。”

“你有几个老婆呀？”

我大为吃惊，敬谨回禀：

“我没有几个老婆。”

这样一问一答，“交谈”了几句。他说：

“我今天晚上对你很仁慈！”

是的，我承认他说的是实话。我一没有被拳打脚踢；二没有被“国骂”痛击。这难道不就是极大的“仁慈”吗？我真应该感谢“皇恩浩荡”了。

我可是万万没有想到，他最后这一句话里面含着极危险的“杀机”。“我今天晚上对你很仁慈”，明天晚上怎样呢？

第二天晚上，也是在熄灯铃响了以后，我正准备睡觉，忽然像晴空霹雳一般，听到了一声：“季羡林！”我用比昨晚还要快的速度，走出牢房的门，看到这位张先生不是在大院子里，而是在两排平房的拐角处，怒气冲冲地站在那里：

“喊你为什么不出来？你耳朵聋了吗？”

我知道事情有点不妙。还没有等我再想下去，我脸上、头上蓦地一热，一阵用胶皮裹着的自行车链条作武器打下来的暴风骤雨，铺天盖地地落到我的身上，不是下半身，而是最要害的头部。我脑袋里嗡嗡地响，眼前直冒金星。但是，我不敢躲闪，笔直地站在那里。最初还有痛的感觉，后来逐渐麻木起来，只觉得头顶上、眼睛上、鼻子上、嘴上、耳朵上，一阵阵火辣辣的滋味，不是痛，而是比痛更难忍受的感觉。我好像要失掉知觉，我好像要倒在地上。但是，我本能地坚持下来。眼前鞭影乱闪，叱骂声——如果有的话——也根本听不到了。我处在一片迷茫、浑沌之中。我不知道，他究竟打了多久。据后来住在拐角上那间牢房里的“棚友”告诉我，打的时间相当长。他们都觉得十分可怕，大有谈虎色变的样子。我自己则几乎变成了一块木头，一块石头，成为没有知

觉的东西，反而没有感到像旁观者感到的那样可怕了。不知到了什么时候，我隐隐约约地仿佛是在梦中，听到了一声：“滚蛋！”我的知觉恢复了一点，知道这位凶神恶煞又对我“仁慈”了。我连忙夹着尾巴逃回了牢房。

但是，知觉一恢复，浑身上下立即痛了起来。我的首要任务是“查体”，这一次“查体”全是“外科”，我先查一查自己的五官四肢是否完整。眼睛被打肿了，但是试着睁一睁：两眼都还能睁开。足证眼睛是完整的。脸上、鼻子里、嘴里、耳朵上都流着血。但是张了张嘴，里面的牙没有被打掉。至于其他地方流血，不至于性命交关，只好忍住疼痛了。

试想，这一夜我还能睡得着吗？我躺在木板上，辗转反侧，浑身难受。流血的地方黏糊糊的，只好让它流。痛的地方，也只好让它去痛。我没有镜子，没法照一照我的“尊容”。过去我的难友，比如地球物理系那一位老教授，东语系那一位女教员等等，被折磨了一夜之后，脸上浮肿，眼圈发青。我看了以后，心里有点颤抖。今天我的脸上就不止浮肿、发青了。我反正自己看不到，由它去吧。

第二天早晨，照样派活，照样要背语录。我现在干的是在北材料厂外面马路两旁筛沙子的活。我身上是什么滋味？我心里是什么滋味？我一概说不清楚，我完全迷糊了，迷糊到连自杀的念头都没有了。

正如俗语所说的：祸不单行。我这一个灾难插曲还没有结束。这一天中午，还是那一位张先生走进牢房，命令我搬家。我这“家”没有什么东西，把铺盖一卷，立即搬到我在门外受刑的那一间屋子里。白天没有什么感觉，到了夜里，我才恍然大悟：这里是“特别雅座”，是囚禁重囚的地方。整夜不许关灯，屋里的囚犯轮流值班看守。不许睡觉。“看守”什么呢？我不清楚。是怕犯人逃跑吗？这是根本不可能的。知识分子犯人是胆小的，不会逃跑。看来是怕犯人寻短见，比如上吊之类。现在我知道，受过重刑之后，我在黑帮大院里的地位提高了，我升级了，升入一个更高的层次。“钦犯”陆平就住在这间屋里。打一个比方说，我在佛教地狱里进入了阿鼻地狱，相当人间的死囚牢吧。

但是，问题还没有完。仍然是那一位张先生，命令我同中文系一位姓王的教授，每天推着水车，到茶炉上去打三次开水，供全体囚犯饮用。我不知道为什么这一位王教授会同我并列。据我所知，他并没有参加“井冈山”，也并没有犯过什么弥天大罪，为什么竟受到这样的惩罚

呢？打开水这个活并不轻，每天三次，其他的活照干，语录照背。别人吃饭，我看着。天下大雨，我淋着。就是天上下刀，我也必须把开水打来，真是苦不堪言。但是，那一位姓王的教授却能苦中寻乐：偷偷地在茶炉那里泡上一杯茶，抽上一烟斗烟。好像是乐在其中矣。

（十二）特别班

这一批牢头禁子们，是很懂政策的。把我们这“劳改罪犯”集中到一起，实行了半年多的劳动改造。念经、说教与耳光棍棒并举。他们大概认为，我们已经达到了一定的水平。现在是采取分化瓦解的时候了。

“特别班”于是乎出。

牢头禁子们不知道是根据什么标准，从“劳改罪犯”中挑选出来了一些，进这个班。

这个班的班址设在外文楼内。但是，前门不能走，后门不能开，于是就利用一扇窗子当作通道，窗内外各摆上了一条长木板，可以借以登窗入楼，然后走入一间小教室。这间教室内是什么样子？有什么摆设？我不清楚。在我眼中，虽然近在咫尺，却如蓬山万里了。

我是非常羡慕这个班的。我觉得，对我们“劳改罪犯”来说，眼前的苦日子，挨打，受骂，忍饥，忍渴，咬一咬牙，就能够过去了。但是，瞻望将来，却不能无动于衷。什么时候是我们的出头之日呢？我眼前好像是一片白茫茫的大海，却没有舟楫，也看不到前面有任何岛屿。我盼望着出现点什么。这种望穿秋水的日子真是度日如年啊！现在出现了特别班，我认为，这正是渡过大海的轻舟。

特别班的学员有一些让人羡慕的特权。他们有权利佩戴领袖像章，他们有权利早请示、晚汇报，等等。在牛棚里，党员是剥夺了交党费的权利的。特别班学员是否有了权利？我不知道。我每次听到从特别班的教室里传出来歌颂领袖的歌声或者语录歌的歌声时，那种悠扬的歌声真使我神往。看到了学员们一些——是否被批准的，我不清楚——奇特的特权，我也是羡慕得要命。比如他们敢在牢房里翘二郎腿，我就不敢。他们走路头抬得似乎高一点了，我也不敢。我真是多么想也能够踏着那一块长木板走到外文楼里面去呀！

后来，不知是由于什么原因，一直到“黑帮大院”解散，特别班的学员也没能真正变成龙跳过了龙门。

（十三）东语系一个印尼语的教员

这一位教员原是从解放前南京东方语专业转来的学印尼语的学生，毕业后留校任教。人非常聪明，读书十分勤奋，写出来的学术论文极有水平，是一个不可多得的人才。他留学印尼时，家里经济比较困难，我也曾尽了点绵薄之力。因此我们关系很好。他对我毕恭毕敬。

然而人是会变的。“文化大革命”北大一分派，他加入了掌权的新北大公社。人各有志，这也未可厚非。但是，对我这一个“异教徒”，他却表现出超常的敌意。我被“揪”出来以后，几次在外文楼的审讯，他都参加了，而且吹胡子瞪眼，拍桌子砸板凳，胜过其他一些参加者。看样子是唯恐表现不出自己对“老佛爷”的忠诚来。难道是因为自己曾反苏反共现在故作积极状以洗刷自己吗？我曾多次有过这样的想法。否则，一般的世态炎凉、落井下石的解释，还是不够的。

然而政治斗争是不讲情面的。

有一天早晨我走出“黑帮大院”，钦赐低头，正好看到写在马路上的大字标语：

打倒反革命分子某某某！

我大吃一惊。就在不久前，在一次审讯我的会上，他还是“超积极分子”。革命正气溢满眉宇。怎么一下子变成了“反革命分子”了呢？原来有人揭了他的老底。他在夜间就采用了资本主义的自杀方式，“自绝于人民”了。

对于此事，我一不幸灾，二不乐祸。我只是觉得人生实在太复杂、太可怕而已。

（十四）自暴自弃

在牛棚里已经呆了一段时间。自己脑筋越来越糊涂，心情越来越麻木。这个地方，不是地狱，胜似地狱；自己不是饿鬼，胜似饿鬼。如果还有感觉的话，我的自我感觉是：非人非鬼，亦人亦鬼。别人看自己是这样，自己看自己也是这样。不伦不类地而又亦伦亦类地套用一个现成的哲学名词：自己已经“异化”了。

过去被认为是人的时候，我自己当然以人待己。我这个人从来不敢狂妄，我是颇有自知之明的。如果按照小孩子的办法把人分为好人和坏人的话，我毫不迟疑地把自己归入“好人”一类。就拿金钱问题来说吧。

我一不吝啬，二不拜金。在这方面，我颇有一些“优胜纪略”。十几岁在济南时，有一天到药店去打药。伙计算错了账，多找给我了一块大洋。当时在小孩子眼中，一块大洋是一个巨大的财富。但是我立即退还给他，惹得伙计的脸一下子红了起来。这种心理我以后才懂得。1946年，我从海外回到祖国。卖了一只金表，寄钱给家里。把剩下的“法币”换成黄金。伙计也算错了账，多给了一两黄金。在当时一两黄金也算是一笔不小的财富。但是我也立即退还给他。在大人物名下，这些都是不足挂齿的小事。然而对一个像我这样平凡的人，也不能说一点意义都没有的。

到了现在，自己一下子变成了鬼。最初还极不舒服，颇想有所反抗。但是久而久之，自己已习以为常。人鬼界限，好坏界限，善恶界限，美丑界限，自己逐渐模糊起来。用一句最恰当的成语，就是“破罐子破摔”。自己已经没有了前途，既然不想自杀，是人是鬼，由它去吧。别人说短论长，也由它去吧。

而且自己也确有实际困难。聂记革委会赐给我和家里两位老太太的“生活费”，我靠它既不能“生”，也不能“活”。就是天天吃窝头就咸菜，也还是不够用的。天天劳动强度大，肚子里又没有油水，总是饥肠辘辘，想找点吃的。我曾几次跟在牢头禁子身后，想讨一点盛酱豆腐罐子里的汤，蘸窝头吃。有一段时间，我被分配到学生宿舍区二十八楼、二十九楼一带去劳动，任务是打扫两派武斗时破坏的房屋，捡地上的砖石。我记得在二十八楼南头的一间大房子里，堆满了杂物，乱七八糟，破破烂烂，什么都有。我忽然发现，在一个破旧的蒸馒头用的笼屉上有几块已经发了霉的干馒头。我简直是如获至宝，拿来装在口袋里，在僻静地方，背着监改的工人，一个人偷偷地吃。什么卫生不卫生，什么有没有细菌，对一个“鬼”来说，这些都是毫无意义的了。

我也学会了说谎。离开大院，出来劳动，肚子饿得不行的时候，就对带队的工人说，自己要到医院里去瞧病。得到允许，就专拣没有人走的小路，像老鼠似的回到家里，吃上两个夹芝麻酱的馒头，狼吞虎咽之后，再去干活，就算瞧了病。这行动有极大的危险性，倘若在路上邂逅碰上监改人员或汇报人员，那结果将是什么，用不着我说了。

有一次我在路上拣到了几张钞票，都是一毛两毛的。我大喜过望，赶快揣在口袋里。以后我便利用只许低头走路的有利条件，看到那些昂首走路的“自由民”决不会看到的东西，曾拣到过一些钢镚儿。这又是意外的收获。我发现了一条重要的规律：在“黑帮大院”的厕所里，掉在地

上的钢镚儿最多。从此别人不愿意进的厕所，反而成了我喜爱的地方了。

上面说的这一些极其猥琐的事情，如果我不说，决不会有人想到。如果我自己不亲身经历，我也决不会想到。但是，这些都是事实，应该说是极其丑恶的事实。当时我已经完全失掉了羞恶之心，并没有感到有什么不对。现在回想起来，真是不寒而栗。我从前对一个人堕落的心理过程发生过兴趣，潜意识里似乎有点认为这是天生的。现在拿我自己来现身说法，那种想法是不正确的。

然而谁来负这个责任呢？

（十五）“折磨论”的小结

牛棚生活，千头万绪。我在上面仅仅择其荦荦大者，简略地叙述了一下。我根据“以论带史”的原则，先提出了一个理论：折磨论。最初恐怕有很多怀疑者。现在看了我从非常不同的方面对“黑帮大院”情况的叙述，我想再不会有人怀疑我的理论的正确性了。

“革命小将”们的折磨想达到什么目的呢？他们决不会暴露自己心里的肮脏东西，别人也不便代为答复。冠冕堂皇的说法是“劳动改造”。我在上面已经说过，这种打着劳动的旗号折磨人的办法，只是改造人的身体，而决不会改造人的灵魂。如果还能达到什么目的的话，我的自暴自弃就是一个最好的例证。折磨的结果只能使人堕落，而不能使人升高。

这就是我对“折磨论”的小结。

17 MOVING THE COW SHED

Winter came. A briquette stove was installed in our room and a fire made. Though the fire was kept at moderate intensity because of a shortage of coal, it was quite warm inside as opposed to the outside cold.

Our reform troop started to shrink. As the number of us dwindled, we were asked to moved into one large room. I did not know the reason, nor did I dare to ask. I had already reached the nadir of my suffering so a minor change in classification and living quarters would not lift me out of the cachet of devil.

The room looked spacious. Probably thanks to the reduced number of people the mice were audacious. They rambled around the room during the day. Their first assaults, a few bites, were on a dried steamed bun I brought from home. I wanted to scatter them. They even gazed at me boldly and played hide-and-seek with me. Probably they, too, came to understand that the residents of this room were not human but "counter-revolutionaries," not species of a higher caliber. So bullying us would not be an act of the culprit.

We dared not feel free to talk and exchange information, but gossip went around fast as an old saying has it, "No wall can shield the wind." Gradually I learned the Nie's Beida Revolutionary Committee altered its policy on "reform criminals." We were no longer to be housed in one place. Instead we were to be sent back to our individual departments. The Department of Eastern Languages was late in sending for its group. Thus the Cow Shed was "moved," so I was back in the Building of Foreign Languages.

A few days earlier I was dying to get into this building. Now here I was, but nothing special took place. A few of us were ordered to live in the classroom for teaching Burmese in the northern part on the second floor. We made the makeshift bed on the floor and slept on it, while our reform guard slept on a big table near the window,

supposedly watching us from above. He had a nickname, "Tinker (*xiaolujiang*)," probably a pun based on this young student's family name, Lu.^[1] To my surprise we were joined by a few more men, who had never lived in the Cow Shed. I wondered, "Were they 'criminals,' too?" Though some things needed to be clarified, it was good to mind my own business and live with them in peace.

Life was slower and easier here. Earlier, in the Cow Shed, we were in highly tense circumstances, alert for the calling of our names in case a late response incurred calamity. Now a reform guard was living with us in the room so we could come to his call promptly. His presence made me feel better.

But the days did not pass uneventfully, nor were they intended to. I was still a "reform criminal." There were many offices and classrooms for various programs on this floor. Before my "fall," I had been department head for twenty years and worked in these rooms every day. I had been in charge here and felt comfortable. As time went by, I became a prisoner because of my "rebellion" (I was asking for trouble). "Paradise is lost as flowers fall and the water runs down the river." I had been a "counter-revolutionary" for over one year. I did not lament the loss of that past time when I was flushed with success. It was crystal clear to me that I was "toppled" and would never be redressed. I only hoped to survive any worsening conditions.

Now there were only three places that I was allowed to go, the room in which I was confined, the restroom and the interrogation room. The last one was not fixed, depending on what room was available. The restroom was shared between "black gangsters" and "white gangsters" ("revolutionaries") because, even though the "black gangsters" were devils, they had to urinate and defecate. Probably a real devil does not have those needs, things I should look into in the future.

Another matter was rather embarrassing. The "black gangsters" were mixed up with the "white gangsters," which ensured unavoidable encounters with each other. China is a nation of courtesy; the Chinese greet each other customarily. But we didn't traditionally greet one

another with expressions like those in English, "good morning," "how are you," or simply "hello." The popular Chinese expression, "*zao'an* (good morning)," is borrowed from abroad and has been popularized only recently. In the past we often greeted each other by asking, "Did you eat your meal?" I would define this expression as the "national greeting." Now, when seeing old friends inside the Building of Foreign Languages, I was afraid to use either the borrowed expression or the "national greeting." The best way to smooth over the embarrassment was to lower my head and race away. How did the "white gangsters" think? I had no idea. But it was certainly an awkward situation to go past and glance at each other without saying a word. Once in a while the "whites" gathered together in one room, chattering excitedly on some topics of common concern. The sentiment was quite "revolutionary" and filled the space. I was never inspired by this revolutionary spirit. We were in an environment in which we listened to the talking and laughing of others but did not join in the conversation. We listened because others talked. However, we were not allowed to utter a sound. We were moving shadows. Shadows shifted in silence.

But life was not wholly tedious because of a lack of exciting news and thrilling experience. Bits of interesting information surfaced not from my talking with someone, which I would never dare to, but from hallway chats that I overheard. One of the most noted stories was about the woman instructor of Mongolian whom I mentioned earlier in the book. Apparently she was the only female "criminal" from the Department of Eastern Languages. Back in the Cow Shed, some rooms were for female inmates. But when we were housed in the Building of Foreign Languages, female rooms were not provided. Due to the gender difference, another room was earmarked for her. The two women guarding her were a student of Korean and a department librarian, but the latter, with the family name of Ye and an unknown first name, was mean, brutal and fascinated with trouble stirring-up. The library where Ye worked was a hotbed of rumor and lurid stories. When the Cultural Revolution hit, she quickly pledged allegiance to the branch committee of the Nie's Beida Commune. She might be

grouped with those who "resolved to live and die for Nie Yuanzi and Sun Pengyi." I remember one night she stormed into my home, yelled and marched me to the Building of Foreign Languages for a torture session. It was quite noticeable when a woman reform guard walked a male "criminal" on campus at Beida. A woman with such a personality would never let a female victim get off easy. One night Ye, along with a group of men, carried out an intense interrogation and beat her female victim severely. Whether the woman convict was battered as excessively as she once was in the Cow Shed was unclear to me. I can't say anything exactly about what happened because I didn't personally witness the event. But after learning of her suffering, I was not surprised because I felt numb by then.

Certainly I never thought that the second story, which caused a flurry among the people, had something to do with me.

Since our entering the Building of Foreign Languages, I had not been beaten. Admittedly the torture of the Cow Shed had not subdued me. Climbing out of purgatory I was still as rebellious as ever. Probably I had an in-bred, dull brain coupled with some cantankerousness, both of which were cemented into me. One day I was called by a PLA officer, maybe a battalion commander, who had been sent to work in the Department of Eastern Languages as part of the military team "supporting the leftists" in the Revolution. His name was Zhao Liangshan, who died later, so far as I know. He asked me to come to his office and then asked me a question, which rather infuriated as well as disappointed me. I thought PLA soldiers should behave in a civilized and decent fashion. But I was incorrect. I replied discontentedly, "You took away all my diaries. They must have been put in one of the rooms in the Building of Foreign Languages. You can simply send someone over there to fetch them. It won't take you five minutes to check it out." I didn't think my answer would explode the tinderbox. He flared up, remarking that I was fairly hostile. To his rebuke I made no response. He was the supreme ruler now.

After dinner I returned to my room. A female instructor, who used to oppose Nie, led a bunch of people into my room, holding in

hands some strips of red and green paper full of slogans and posted them on the wall. Immediately the drab white wall took on a lively air, making the room burst with energy. The slogans were nothing new, lifelessly those like "Ji Xianlin intends to go against the Revolution. Down with him," "Be lenient to those who confess their crimes and severe to those who refuse to," and "Behave yourselves but never act without permission," so on and so forth. As "a common occurrence causes no stir," these threats did not disturb my mental state of peace. I slept well that night as usual, getting ready for the advent of another political storm.

As expected, the "revolutionaries" went into action the following day. The troop of the "Red Guards" from the Department of Eastern Languages, probably comprising both factions of the university, walked me toward student dormitory Building 40. Again I felt like I was a convict sent to a distant place for penal servitude, shambling forward with the head held low. In the historical Peking Opera, the convict was allowed to walk with his head raised. But in new China I was deprived of this right. Alas, I would forget about my misfortune and make the best of it.

At first I did not know where I was going. Close to Building 40, I figured it out by judging the environment. I got a faint impression that the building's walls were posted all over with big-character posters and slogans. Unable to look up I guessed that those posters bore those irreversibly banal words, "Down with the obstinate and rebellious Ji Xianlin" and "Be lenient to those who confess their crimes and severe to those who refuse to," as well as false charges, slanders and smears. Amid the deafening howls, I detected nothing special in their cries in light of the nature of my crime except for the accusation that I was guilty of "reversing the revolutionary verdict."

With my neck gripped from behind and my arms twisted high up on my back, I was dragged into the building. While I went down the narrow hall, students yelled, chanted and struck me on the head and body. As if sailing through clouds and fog, I identified no one before being carried to the second floor as if on a magic carpet. Here the

situation duplicated that on the first floor from one end to the other. The hubbub and shouting roared on as I was jostled up to the third floor. Here I saw nothing new, the formality being flat, monotonous and unsatisfactory. The "ceremony" done, I was marched back to the Building of Foreign Languages.

Later I learned that this new way of physical abuse was called the "torture through the hall." Was this a creation of the Eastern languages students? If so, they should be credited when *A History of the Proletarian Cultural Revolution* is written by someone in the future. Probably, one chapter can be devoted to the discussion of their contribution. As for me, I had gone through hard times in life and was not particularly agonized bodily and mentally. I just thought it was a little "fun."

Meanwhile, the matter by no means would drop. That battalion commander, Zhao, made up his mind to plan another round of torture. The following day a student came to me after breakfast and required me to go to a classroom for a torture session. This time I was allowed to raise my head. I saw one instructor from my old instructional section and a few students present. I was ready to assume the jet plane posture. To my surprise I was offered a seat. I was tied in knots. I thought I almost became Jia Gui of *The Famen Temple*, who is more comfortable with being domineered than with being respected.^[2] Given this treatment, can you imagine what result they possibly could achieve this time? I found the speeches rather hackneyed, so I chose not to listen to what they said; as a poetic line describes, "Ignoring the rocking waves in a windy day, I am sitting calmly on the fishing boat." Suddenly I was woken up by a shout, "March Ji Xianlin away!" I knew this performance was over.

Before returning to my room, I was taken to the office of another instructional section. The same "formal ceremony" was run through. Then the third and fourth instructional sections followed with similar proceedings. I did not count the number of offices I toured that day. I thought I went to all the offices of the department in succession, more than ten of them in all. When the faculty sessions were finished, the

student sessions just commenced. I could not figure out how many student classes our department had by that time. Each class ran one session of criticism (probably some of them held joint sessions). I was not sure about the number of sessions I attended. It should be around the neighborhood of twenty something. If each session took one hour, the total was about thirty hours. Some of the classes "slighted their work by cutting back on time." Therefore the number of hours actually wound up shorter than I calculated. Anyway, for about four days I was busier than "moonlighters." One class after another, the students relayed the sessions, running about nine rounds daily and leaving me only with time for meals. The ordeal was time-wasting and demanding.

What effects did the criticism have on me? I felt only a little tired. "Too many head lice make no itch at all." I even became interested in attending torture sessions. I loved them and found fun in them. As "solemn denouncing speeches" clattered in my ears, I shut my mind and rested. I would "wait at my ease for an exhausted enemy."

The mundane world is complex. I started with a "rebellious attitude" and ended up with it, too. This attitude first saved my life and then enriched me with tranquility. The benefit I reaped might have been inconceivable to the revolutionaries, no matter whether they truly deserved the title or not.

[1] The pun comes from both the pronunciation of the Chinese character "lu" and the name of a negative character "xiaolujiang" in one of the "eight model revolutionary theatrical performances" in the Cultural Revolution, *Taking Mount Tiger by Strategy*.

[2] See [note 2, Chapter 11](#).

拾柒 牛棚转移

时令已经进入了冬季，牢房里也装上了炉子，生上了火。虽然配给的煤不多，炉火当然不能很旺。但是，比起外面来，屋子里已经是温暖如春了。

可是劳改的队伍却逐渐缩小了起来。一来二去，剩下的人不多了，就都受命搬到一间大屋子里来。什么原因呢？我不清楚，当然也不敢问。我此时反正已经堕入阿鼻地狱，再升上一级两级，是鬼总是鬼，对我无所谓了。

屋子里显得空荡荡的。大概是因为人少了，连老鼠的胆子也大了起来，大白天里，竟敢到处乱窜。我从家里带回来的一个干馒头首当其冲，被老鼠咬掉了一些。我想赶走它们，它们竟敢瞪着小眼睛，在窗台上跟我玩捉迷藏。也许老鼠们也意识到，屋子里住的不是人，而是“黑帮”，等级不比老鼠高，欺负他们一下，谅他们也不敢奈自己何。

大家虽然不大敢随便说话，不能互通信息，但是正如俗语所说的“没有不透风的墙”，我逐渐知道了，聂记革委会改变了对待“劳改罪犯”的“政策”，不再集中，而要实行分散，把各系所处的“罪犯”分回各自的单位。姗姗来迟，东语系也把我们几个“罪犯”提回系里。我们的“牛棚”转移了。转移到外文楼去。

前些日子，“特别班”还在外文楼时，我是多么希望能进外文楼来呀！现在果然进来了；却是依然故我。我们几个“罪犯”被分配住在二楼北面的缅甸语教研室里，都在地上搭地铺。靠窗子有一张大桌子，我们的牢头禁子睡在上面，居高临下，监督我们。他外号叫“小炉匠”，大概是姓卢的青年学生。最使我吃惊的是，“我们”又增加了新人，是“黑帮大院”中没有见过的。他们也是“罪犯”吗？我心里纳闷。反正现在是同我们一锅煮了，彼此相安无事。

在这里，生活比较平静了。不像在“黑帮大院”里那样，时时刻刻都要把神经绷得紧紧的，把耳朵伸得长长的，唯恐牢头禁子喊自己的名字时答应晚了，招致灾难。现在牢头禁子就高踞在同一间小屋的桌子上，用不着把神经弄得那样紧张了。

但是，日子也并不好过，也不可能好过。我仍然是“劳改罪犯”。这

楼上有许多办公室，大多是各专业的教研室。在我被“打倒”以前，我当了二十年的系主任。这些办公室我都是熟悉的。周围的气氛当然是非常好的。我是这里的主人。而今时移世迁，我一“跳”（自己跳出来也）而成为阶下囚了。“流水落花春去也，天上人间”，我当“反革命”已经有一年多了。我并不是留恋当年的“威风”，我深知自己已被“打倒在地”，永无翻身之日了，我只求苟延残喘而已。

现在，在整个大楼里，我只有三个地方能进：一是牢房，二是厕所，三是审讯我的屋子，最后这一项是并不固定的。至于第二项则是“黑帮”同“白帮”（“革命者”）共享用的，因为“黑帮”虽然是鬼，也总得大小便呀——真鬼大概是不大小便的，待查。

此外，这里也颇有令人难堪之处。“黑”“白”杂居，抬头不见低头见。中国是礼义之邦，见了面，总得说点什么。可我们又缺少英美人见面说的Good morning! How do you do?或者单纯一声Hello! 现在习用的“早安”之类，是地道的舶来品。我们过去常用的“你吃饭了吗？”是举国通用的问候语，我想缩为“国候”。现在，在外文楼，见到了以前很熟很熟的人，舶来品不敢用，“国候”也不敢用。只有低头，望望然而去之。“白帮”怎么想？我不得而知。似我“黑帮”却实在觉得非常别扭。有时“白人”在某一间屋子里，讨论什么问题，逸兴遄飞，欢笑之声中溢满了“革命气”，在楼道里往复回荡。这革命气却一点也没有熏到我身上。我们现在是“谈笑之声能闻，而老死不相往来”。“能闻”者，能听到也，这是别人的声音，我们是不能有声音的。我们都像影子似的活动着，影子是没有声音的。

但是，这里也并不缺少新闻，缺少有刺激性的东西。这新闻并不是哪一个人告诉我的，现在没有人敢干、肯干这种事。这是我自己从楼道中噉噉喳喳的声音中听出来的。最重要的一条新闻是关于我在上面提到过的那一位蒙古语女教员的。原来东语系“罪犯”中只有她一个女性。在“黑帮大院”时有女囚牢。到了外文楼以后，女囚牢没有了，又不能同我辈男士一起睡在地铺上。所以就把她关在另外一间屋子里。据我的推测，管理她的大概是一个学朝鲜语的女学生和一个系图书室女管理员。后者姓叶，大名暂缺。此人是一个女光棍似的人物，泼辣、粗暴，最擅长惹是生非，兴风作浪。她所在的图书室是东语系小沙龙，谣言由此产生，小道消息在这里集散。“文革”一分派，她就成了聂记公社在东语系的女干将，大概也属于那一种“老子铁了心，誓死保聂孙”类型的人物。有一次是她到我家来，大声叱骂，押解着我到外文楼去接受批斗。

女牢头禁子押解男“犯人”，在北大恐怕是罕见的新鲜事儿。这样一个人物，对唯一的女囚绝对不会放过。在一天夜里，她和其他几个人对这位女囚大肆审讯、殴打。这位女囚是不是像在“黑帮大院”里那样被折磨得眼圈发青，我没有看见，不敢瞎说。我听到这个消息以后，心里没有引起什么波动，我的神经现在已经完全麻木了。

可是我却万万没有想到，第二条引起人们震动的新闻竟然出在我身上。

到了外文楼以后，我没有再挨揍。大概我天生就是一个不识抬举的家伙，一个有着花岗岩脑袋瓜死不改悔的家伙。虽然经过了炼狱的锻炼，我并没有低头认罪。有一天，解放军派来支“左”的常驻东语系的一个大概是营长的军官，大名叫赵良山（此人后来听说已经故去），把我叫到他的办公室里，问我一个问题。我当时心里非常火，非常失望。我想，解放军水平总应该是高的，现在看来也不尽然。我粗声粗气地说道：“我的全部日记已经都被抄来了。一定会放在外文楼某一间屋子里。你派一个人去查一查那一天的日记。最多只用五分钟，问题就可以全部弄明白了。”万没有想到，这一下子又捅了马蜂窝。他勃然变色，说我态度极端恶劣。他现在是太上皇，我哪里还敢吭气儿呢？

晚饭以后，回到牢房。原先反聂的一位女教员，率领着几个人，手里拿着红红绿绿的大标语，把小屋墙上贴满。原来一片白色，非常单调寡味。现在增添了大红大绿，顿觉斗室生光，一片勃勃的生机。标语内容，没有什么创新，仍然是“季羨林要翻天，就打倒他！”“坦白从宽，抗拒从严！”“只许规规矩矩，不许乱说乱动！”等等，等等。“司空见惯浑闲事”，这些东西已经对于我的神经不能产生任何作用了。我夜里照睡不误，等候着暴风雨的来临。

果然，“革命家”们第二天就开始行动了。首先由东语系的“红卫兵”——现在恐怕是两派的都有了——押解着我，走向东语系学生住的四十楼。我自己又像一个被发配的囚犯，俯首帖耳，只能看到地上，踉跄前进。旧剧中，囚犯是允许抬头的。我这个新社会的囚犯却没有这个特权。既来之，则安之，由它去吧。

我原来并不知道把我押向何方。走近四十楼，凭我的本能，我恍然大悟。此时隐隐约约地看到楼外贴满了大字报和大标语，内容不外是那一套。我猜想——因为我不能看——不过是“打倒老保翻天的季羨林！”“坦白从宽，抗拒从严！”此外再加上造谣、诬蔑、人身攻击。从震

耳欲聋的口号声中，听到的也不过是那些东西。我顿时明白了：我现在成了“翻天”的代表人物。

我被卡住脖子，拧住胳膊，推推搡搡，押进楼去，先走过一楼楼道。楼道本来很狭，现在又挤满了学生。我耳朵里听的是口号，头上、身上，挨的是拳头。我一个人也看不到，仿佛腾云驾雾一般，我飞上了二楼。同在一楼一样，从楼道这一头，走（按语法来讲，应该是被动式）到那一头。仍然是震天的口号声。在嘈杂混乱中，我又走（同前）上了三楼。在这里也没有什么新花样，心里颇有点不满足，觉得太单调，不够味。“仪式”完了以后，我又被押解着回到了外文楼。

后来听说，这叫做“楼内游斗”。这是不是东语系学生的发明创造？如果是的话，将来有朝一日编写《无产阶级文化大革命史》时，应该着重提上一笔，说不定还要另立专章的。至于我自己，我是经过了大风大浪的人，身体上，精神上，都没有受到什么痛苦，只觉得有点“好玩”而已。

事情当然不能就这样结束。看来那位赵营长下定了决心，连夜召开会议，制订了斗争方案。第二天，刚吃过早饭，立即有学生来找我，到一间教研室里去批斗。这次准我抬头了，看到的是一个教研室的成员，加上个别的学生。我已摆好了架子坐喷气式。然而有人却推给我一把椅子。我大惊失色，我现在已经成了《法门寺》的贾桂了。在这样的情况下，你想这个批斗会，还能批出什么，又斗出什么呢？我觉得十分平淡寡味。我于是把两个耳朵都关闭了起来，“任凭风浪打，稳坐钓鱼船”，蒙眬中，听到一声：“把季羨林押出去！”我知道，这一出戏算是结束了。

我正准备回自己的牢房，又有人来把我拉到另一个教研室去，“行礼如仪”。然后是第三个教研室、第四个教研室。我没有记录，也无法统计。估计是每一个教研室都批斗一次。东语系十几个教研室，共批斗了十几次。接着来的是学生，我不知道，东语系学生共有多少个班。每班批斗一次（也许有的班是联合批斗），我记不清楚，加起来，总有二十来次。以每次批斗一个小时计算，共有三十来个小时。我看有的班“偷工减料”，质量大有问题。实际上怕用不了这样多的时间。反正在三四天以内，我比出去“走穴”的人还要忙。这个班刚批完，下一个班接着干。每天批斗八九场，只给我留出了吃饭的时间。可谓紧张之至了。

对我产生了什么结果呢？除了感觉到有点疲倦之外，“虱子多了不

痒”，我“被批斗的积极性”反而调动起来了。我爱上了这种批斗。我觉得非常开心。你那里“义正词严”，我这里关上耳朵，镇定养神，我反而是“以逸待劳”了。

世间事真是复杂的。我以“态度恶劣”始，又以“态度恶劣”终。第一个“恶劣”救了我的命，第二个“恶劣”养了我的神。当时的真假革命家们，大概是万万想不到的吧。

18 PARTIAL LIBERATION

What is "partial liberation"? It has no precise definition. It is a personal feeling of mine.

Intense torture lasted until the end of 1968. On the eve of the Spring Festival in 1969 by the Chinese lunar calendar, I received a surprise notice from the revolutionary committee of my department, granting me permission to go home. The person who sent me back home (this time I'd better not use the word "marched") was "Tinker," the one I mentioned earlier. The large living room of my apartment remained sealed. The whole family lived in a nine-square-meter room. The two old ladies of my family told me that, during the time I was away, a male student came with the key to the living room, which had been taken away from me. He and a woman, whom he brought with him, hung around with each other for a long time. They slept in my bed and used my gas stove for cooking. They intimidated the two old ladies, "Don't say anything about us!" Acting otherwise would incur grave consequences. "Tinker" brought back that key to the door. Now I could live inside. Nine months had passed since I quit my bed.

I was delighted. But worry soon crept back on me. I was not released from counter-revolutionary labels and the prospects of my future were as bleak as ever. My meager salary hardly allowed us to survive. I remember I got a raise later but can't recall the amount and the date. I still felt pressure bearing on me. One day I inadvertently overheard a speech given by an old man, whose wife held some leading position in the community committee (the old man, himself, used to be a thug in the KMT's military troops), to all the residents of the building.^[1] He shouted, "Ji Xianlin is back home now. Keep a close watch on him, everyone!" The old man probably was acting according to the will of "higher-ups." At first I was undisturbed by his words. This sort of thing was quite normal. But, later, I did feel a little uneasy that "people were supposed to keep tabs on me," as if I had become a

god of plague or a carrier of HIV that everyone tried to keep away.

Even though no one called my attention to the way I behaved, I found myself somewhat eccentric. I felt uncomfortable walking with the head held straight. Entering the store, I looked like an idiot who was often at a loss for words. I did not dare to address store assistants as "comrade." How dared I do that? If they were not addressed as "comrade," what else should I call them? The use of "miss" and "mister" was not suitable. But it was certainly discourteous to avoid this formality in shopping. As a result I stumbled, dumb-stricken, nonplussed and unable to control my limbs. It was rather embarrassing. I became an old man suffering from dementia.

Before long I was told to attend a "study session" in Building 40. It was the first time that I walked alone from home to the building. The day was freezing, the earth covered with snow. It was quite a long trip, at least three *li*, and would take half an hour usually even to walk fast. I left home and wandered a distance, before I detoured to walk across the ice-covered lake, so as to avoid bumping into people. An ancient saying suddenly hit me, "It is as dangerous as to stand at the edge of the precipice and to walk on thin ice." The expression was an analogy. But didn't it graphically portray my present circumstance? I had no idea what would happen to me in the future. Now I was quite uncomfortable interacting with others. Should I loudly say "reporting" when I arrived at Building 40 and met with the young revolutionaries? Would I still need to hang my head and hands to the sides in front of them? Those were urgent questions, but I had no answers so my walking slowed down to a shuffle.

I walked slower and slower until finally I reached the building. The sight of it reminded me of the past. Not long before it was here that I had attended the "torture through the hall." Today I was back again. What was I now? My mind was not clear. "The ugly bride is afraid of meeting her parents-in-law." Fear didn't help. Plucking up courage, I stepped in to report my arrival. Fortunately there was no crying, chanting and beating. I was met with reserved coldness. This attitude dispersed my anxiety. Then I was assigned to study with a

group of students of Hindi. In the days to follow I attended their study sessions and worked with them without clarification of my identity. Other Cow Shed fellows of my department also were assigned work there but were treated differently. Some were asked to sweep the hall. One was sent to clean restrooms because he was labeled a landlord for no reason. I thought I would be asked to do the dirtiest and hardest job. But I was unexpectedly spared this time.

Feeling restrained and uncomfortable, I was not yet accustomed to being with revolutionary people. Whether I was a human or a devil had not been declared. Without a clear sense about my identity, I often hesitated to act. Students were young, vigorous and active. At the recess they sang songs and played musical instruments. One student was good at playing the two-stringed, bowed Chinese instrument. I enjoyed his performance but dared not show my excitement. The young men chatted, laughed and made fun of each other, while I sat quietly in the corner like a clay idol, a square peg in a round hole.

Even in this comparatively peaceful life, some events popped up from time to time. One of them, as I remember, involved paying the Party membership dues. As mentioned previously, paying dues was forbidden to us in the Cow Shed. At that time I was not allowed to pick up the monthly subsidy granted to my family of three, a sum of forty *yuan* and more. Therefore my aged aunt made a trip each month to the Department of Eastern Languages in the Building of Foreign Languages and picked it up on my behalf. As a dependent of a "counter-revolutionary," she often was humiliated and insulted, particularly when she was looked upon as a dependent of one of "Jinggangshan's" members. The old lady could do nothing but put up with the derogation. However, even in such circumstances, my aunt was worried that her nephew would lose his Party membership and, therefore, paid the monthly dues on time. The official of the Party organization, I wondered who he was, ignored the risk, accepted them and did not notify the Cow Shed. Otherwise I should have expected another round of beating. For that I have been deeply indebted. My

aunt also told me that one old comrade surnamed Yuan did not taunt her but also told her in a low voice, "Be careful about the money and watch your steps on your way home." Each time the old lady recalled occurrences like this, beams of warmth received in a snowy and icy winter, she was filled with gratitude.

After I came to Building 40, I thought I should pay my Party membership dues personally. Conscious of my situation, however, I was too shamefaced to do that. Besides, the Party organization was not active anymore at that time, and I did not know who I should contact in this regard. Consequently I did nothing about it until some time later when a department leader talked to me, "Why didn't you pay the Party membership dues on time?" I answered frankly, "At the time the Party branch decides to expel me from the Party, I will pay the total dues I owe." Clearly I believed my purge from the Party was only a matter of time.

In addition to my trouble with the Party, some other less significant, but deeply impressive, events concerned my stay in Building 40. I was too familiar with this building. By 1966 I had worked as head of the Department of Eastern Languages for twenty years. Because our male students lived in Building 40 for quite a long time, I certainly had chances to make many trips there. This dormitory saw my time of honor as well as that of infamy. As a result I experienced both hospitable and antagonistic treatment there. I don't want to complain about the fact that "human relationship runs like a roller-coaster along the track of one's rise and fall." Such ups and downs have characterized life since time immemorial. Exceptional times occur, but they are rare. Therefore complaints are meaningless.

But I'm easily touched. I know I will never be able to become a hero given my limitations. Nor have I ever desired to be one. A hero is made of special material. I'm by no means that kind of person. I'm an ordinary man, who can be disturbed easily by insignificant events. That decade of turmoil was not an insignificant experience in my lifetime, nor was the suffering it caused me a minor setback. The degree of hardship I experienced and the perseverance I displayed in

surviving this catastrophe, despite my weak will and sensitivity, are inconceivable. When I started to live in Building 40, my situation changed for the better. But the prospects of my future remained murky. Thus the sight of the familiar place triggered a train of thoughts.

Let me focus on the events that happened in the first two years of the Cultural Revolution. Those events relate to Building 40 and always evoke a variety of feelings in me. In June, 1966, when I returned to the university from Nankou, I grumbled on the spot about a big-character poster on Building 40 that criticized me for my writing "Beida's Campus Bathed in the Spring." Also in that building I was required to hand in a "black sum" of three thousand *yuan*, but it was not accepted and was returned to me. Here, at the outset of the Cultural Revolution, I saw for the first time and with my own eyes a grand torture session held against the Department of Eastern Languages "capitalist roaders" and heard with my own ears loud, terrifying chants of slogans. Building 40 was the place in which I tried to "check the number and sit in the right seat" when medicating on possibilities of my fate. Here I also offended a PLA officer by the manners in which I responded to his question and resultantly brought a "torture through the hall" down upon myself.

Alas, Building 40! You were the building that I tried not to think about but just could not avoid.

Now I was back to you, for the second time, as a fake among "revolutionary people."

At Xinhuaying in the Yanqing County

This time I did not stay in Building 40 long. The period probably lasted from the middle of that winter to the middle of the autumn of the following year. One important event transpired in the course of this time, the deployment of the 8341 military troop of the PLA to Beida. In fact only a small number of PLA officers and soldiers arrived on campus to "support the leftists." The 8341 military troop had a shining revolutionary tradition. Its garrison at Beida filled the

majority of us faculty and staff members with confidence in our future. We hope it would set wrongs to rights and restore order to the university. In the heat of the factionalism and chaos, we began to see glimmers of resolve and vigor.

But, according to the order of some level of higher authority, which no one knew for sure, most of the University's faculty and staff members, led by the PLA men, were sent to Liyuzhou, Jiangxi, a long distance from Beijing, to be reformed. The weather was scorching down there and the place was relentlessly plagued with schistosomes. One PLA officer said it was called "thermal treatment," which was actually a new way of persecuting intellectuals. I knew very well that I was one of the persons deserving "thermal treatment." So I got ready, both physically and mentally, to be sent to Poyang Lake in Jiangxi. It turned out that I was left in Beijing. I had no idea about the reasons. Then I was sent to the village of Xinquaying in the Yanqing County together with students of Hindi and Thai to be educated by poor and lower-middle-class peasants. Before I had a chance to express my gratitude, I discovered that this time I was specially treated for "another purpose."

Someone delivered the directive that harsh criticism should apply to a specific "live target," rather than being vague and hollow, in order to make the attack meaningful, severe and most effective. Now I became a "live target." Suddenly the thought leapt to my mind that, when I had stayed in the Xinjiang Uygur Autonomous Region years earlier, I often saw pleasure-seeking people driving a truck that carried a live sheep. They went to a scenic spot with beautiful mountains and lakes and had a good time before taking out a knife and slaughtering the sheep. Then an eat-with-your-hands barbecued mutton dinner was cooked and consumed before returning home. At Xinquaying I was required to rearrange Chinese cabbage in a cellar according to the northern Chinese tradition of storing vegetables for the winter. I was taken out once for a torture session. I knew I lived up to the "expectations" of me and fulfilled my assigned mission as a live target.

On the first day of the Spring Festival in 1970 I was sent back to Beijing.

[1] The community committee, an unofficial neighborhood organization, made up of housewives and retirees, who mediated disputes between families. It played a significant role in carrying out policies during the Cultural Revolution.

拾捌 半解放

什么叫“半解放”呢？没有什么科学的定义。只是我个人的感觉而已。

集中批斗之后，时令已经走过了1968年，进入了1969年。在这一年的旧历元旦前，系革委会突然通知我，可以回家了。送我（这次恐怕不好再说“押解”了）回家的，就是上面提到的那一个“小炉匠”。此时我家的那一间大房间久已被封了门。全家挤住在一间九平米的小屋里。据家里两位老太太告诉我，其间曾有一个学生拿着抄走了的房门钥匙，带着一个女人，在那间被查封了的大屋子里，鬼混了相当长一段时间，睡在我的床上，用我们的煤气做饭。他们威胁两位老太太说：“不许声扬！”否则将有极其严重的后果。现在“小炉匠”就拿着那一把钥匙，开了门，让我睡在里面。我离开自己的床已经有八九个月了。

我此时在高兴之中又满怀忧虑。我头上还顶着一擦帽子，自己的前途仍然渺茫。每月只能拿到那一点钱，吃饭也不够。我记得后来增加了点钱，数目和时间都想不起来了。外来的压力还是有的。有一天我无意中听到楼下一个家属委员会的什么“连长”的老头子（他自己据说是国民党的兵痞）高声昭告全楼：“季羨林放回来了。大家都要注意他呀！”这大概是“上面”打的招呼。我听了没有吃惊，这种事情对我可以说是习以为常了。但是，心里仍然难免有点别扭，知道自己被判“群众监督”了。我仿佛成了瘟神或艾滋病患者，没有人敢接触了。

即使没有人告诉我，毋宁说是提醒我这种情况，我这人已经有点反常。走路抬头，仍不习惯。进商店买东西，像是一个白痴，不知道说什么好。我不敢叫售货员“同志”，我怎么敢是他们的“同志”呢？不叫“同志”又叫什么呢？叫“小姐”，称“先生”，实有所不妥。什么都不叫，更有所不安。结果是口囁嚅而欲言，足趑趄而不前，一副六神无主、四体失灵的狼狈相，我自己都觉得十分难堪。我已经成了一个老年痴呆症的患者了。

过了没有多久，我被指令到四十楼去参加“学习”。我第一次从家里走向四十楼的时候，正是千里冰封、万里雪飘的时候。这一段路相当长，总有三四里路；走快了，也得用半小时。我走出门去，走了一段路，立即避开大路，从湖中的冰上走过去。我忽然想到古人“如临深渊，

如履薄冰”的说法，这只是形象的比喻，可我今天处境不正是这个样子吗？我不知道将来会发生什么事情。我现在已经很习惯同人打交道。我到了四十楼，见了革命小将，是不是还要高喊“报告”呢？是不是还要低头垂手站在他们面前呢？这都是非常现实的问题。我得不到答复，走路来，就磨磨蹭蹭。

我越走越慢，好不容易才走到四十楼。我见景生情，思绪万端。前不久我还在这里被“楼中游斗”，曾几何时，我又回到这里来了。这回是以什么身份？我说不清。“丑媳妇怕见公婆的面”，怕也不行。我一鼓勇气，进去报了到。幸而没有口号的喊声，没有手打脚踹，而是不冷不热的待遇。我心头一块石头落了地，被分派了小组，组员都是学印地语的学生。从此以后，我就以一个莫名其妙的身份，参加了他们的学习和活动。原来东语系的“棚友”都被召唤到那里。可是待遇却不知为什么显然不同了。有的被分配打扫楼道。有一个印地语教员被无端扣上了地主的帽子，被分配打扫厕所。我原来是有思想准备来干最脏最累的活。然而竟然没有，实出我的意外了。

同革命群众在一起，我还非常不习惯，有点拘谨，有点不舒服。我现在是人是鬼，还没有定性。游离于人鬼之间，不知何以自处。学生们是青年人，活泼爱动。学习休息时，他们就吹拉弹唱。有一个同学擅长拉二胡，我非常欣赏；但又不敢忘形。年轻人说说笑笑，打打闹闹，我则呆坐一旁，宛然泥塑木雕。自己也觉得气氛很不协调。

但是，在相对平静的生活中，也不是没有一些波澜。我回忆所及，首先就是党费问题。我上面已经谈过，在“黑帮大院”中，交党费是犯忌讳的。我当时自己不能领每月的生活费，都是我的年迈的婶母代劳。她每月到外文楼东语系办公室去领全家三口人四十多元的生活费。作为“黑帮”的家属，她没少听到闲话。特别是井冈山“黑帮”的家属，更会直接或间接受到奚落。老人没有办法，只有忍气吞声。在这个情况下，她居然还怕自己的孩子丢掉党票，仍然按月交纳党费。东语系不知道哪一位党组织干部居然敢收下，而没有向“黑帮大院”通报。否则我一定会多挨上一顿打。我至今感激不尽。我婶母还告诉我，一位姓袁的老同志，不但对她没有奚落，而且还偷偷地小声对她说：“把钱收好！走路要小心！”她老人家每次谈到这种雪地冰天中的一星温暖，也总是感激不尽。

但是，到了四十楼以后，应该我自己交党费了。我这种非人非鬼的处境，却使我不敢厚着脸皮去交党费。此时党组织好像已经不再活动。我也不知道向谁交。如此就耽误了一些时间。系里的领导找我谈话，问

我：“为什么不按时交党费？”我十分坦诚地告诉他：“等到支部决定开除我出党的时候，我一定会把所有拖欠的党费一文不少地交上，然后离开。”由此可见，我认为，留在党内已经完全不可能了。

除了党费问题，我在四十楼颇有一些小小的无关大局的感慨。这一座楼对我来说实在是太太熟悉了。我在东语系，截止到1966年，已经当了二十年的系主任。东语系的男学生在四十楼也住了极长的时间了。我必然要经常到这里来的。我在这里走过阳关大道，也走过独木小桥。我受到过热烈的欢迎，也遭受过无情的凌辱。我不想发那些什么“世态炎凉，人情如纸”一类的牢骚。因为世态自古以来就是这样，不这样的人与事，只能算是例外。因此这种事情已经不值得再发牢骚了。

但是，我在感情上是异常脆弱的。我不能成为英雄，我有自知之明。我从来也不想成为英雄。英雄是用特种材料造成的，而我实非其侔。我是一个极其平凡的人，小小的个人悲欢，经常来打扰我。何况“十年浩劫”决非小事，我在其中的遭受，也决非小事。以我这个脆弱的心灵来承受这空前的灾难，来承受这一件极大极大的事，其艰难程度完全可以想见了。到了四十楼以后，我的处境应该说是已经有所改变。但是前途仍然笼罩在一片迷雾之中。触景生情，心里就难免有所波动了。

远的不必讲了。专就“文化大革命”开始以来的两年多来说，四十楼就能唤起我很多不同的回忆，激起我很多不同的感慨。1966年6月我从南口村回校，看到批判我的《春满燕园》的大字报，鼻子里不由自主地哼了一声，是在四十楼；我被勒令交出“黑钱”三千元，又被拒绝接受，是在四十楼；亲眼看到“文革”初期批斗东语系“走资派”，口号之声惊天动地，我自己也颇想“对号入座”，是在四十楼；自己顶撞了支“左”的解放军军官而被判处“楼内游斗”，是在四十楼。

啊，四十楼！我本不愿意想但又不能不想的四十楼！

我现在又到你里面来了，第二次滥竽“革命群众”之中。

• 在延庆新华营

这一次我在四十楼呆的时间不算很长，大概是半个冬天，一个夏天，半个秋天。在这期间有一件大事，就是8341部队的进驻。只派不多的军官和士兵，也算是来支“左”吧。这是一支有悠久革命传统的部队，因此，他们的到来引起了绝大多数人，包括我在内的北大师生员工的极大的希望，希望他们能够拨乱反正，整理好北大这个烂摊子。在全校派

性严重、一团乱糟糟的情况下，似乎出现了一派生气勃勃的生机。

不知道是出于哪一级的决定，北大绝大多数的教职员工，在支“左”部队的率领下，到远离北京的江西鲤鱼洲去接受改造。此地天气炎热，血吸虫遍地皆是。这个部队的一个头子说，这叫做“热处理”，是对知识分子的又一次迫害。我有自知之明，像我这样的“人”（？）当然在“热处理”之列。我做好了充分的精神和物质准备，准备发配到鄱阳湖去。可是，最初我不知道是出于什么考虑，让我留在北京，同印地语、泰语的学生到京郊长城以外的延庆新华营去，接受贫下中农的再教育。我没有来得及表露感激之情，我就发现，原来我是“另有任用”。

根据什么人的指示，大批判不能空对空，需要有人做“活靶子”，这样批起来才能有生气，有声势，效果才能最好。现在我就是这样一个“活靶子”。我忽然想到，在新疆时我曾看到郊游时汽车上总载着一只活羊。到了山明水秀的目的地，游玩够了，就拿出刀子，把羊杀掉，做成羊肉抓饭，吃饱了回家。我在新华营，在菜窖里搬菜。曾拉出来，被批斗过一次。我知道，我不辱使命，完成了任务。

1970年旧历元旦，奉召回京。

19 COMPLETE LIBERATION

The last chapter is titled "Partial Liberation" while this chapter is called "Complete Liberation." I have chosen these terms for no specific reason. They are imprecise in meaning and not related to law. In addition the line between the "partial" and "complete" is arbitrarily drawn. I will leave the confusion to scholars of law and philosophy for clarification.

Let me get back to my story. Upon returning to campus, I had feelings of excitement and zeal. With these emotions I settled down to work, along with others, in Building 35. I speculated that this might be someone's new idea or a new regulation to be implemented, that is, each department's office being set up in a student dormitory probably in an effort to embrace the doctrine that students should "attend, run and reform colleges." Its essence was to let students control and reform professors and old intellectuals. One practice, formulated on the basis of this concept, was that freshmen and sophomores should be encouraged to write textbooks for juniors and seniors. There were other examples which I will not elaborate here.

Building 35 was a four-story dormitory building, in which female students lived on the third and fourth floors and male students on the first and second. A few rooms on the second floor were used as offices for the department and the Party's branch committee, with which I had nothing to do. I was assigned to work in an extremely cramped room on the left-hand side of the entrance to the building; the room had a large window facing outside. It was the door-keeper's room. I was supposed to be the doorkeeper, whose responsibilities were, first, to watch the building, then, to deliver telephone calls, and, last, to receive and deliver the mail.

The first job was both difficult and easy. My leaders told me to keep people who had no business to do inside from entering the building. I knew the faculty and staff members of the department, who

had worked there for many years, pretty well and most of the juniors and seniors. The freshmen were new to me. How could I recognize those who came with no business to do inside? For this reason I'd better turn blind to those strange faces. So, wasn't this job both thorny and effortless?

The second job was like the first one. The easy part of it lay in that when the telephone rang I answered it. For the rest of the time I sat idle. What was difficult then? I gradually learned that the majority of the phone calls were directed to female students. Each time I delivered a call, I had to run upstairs to the third or fourth floor. It was good "upstairs-climbing exercise," which many athletic pros suggest. But the problem was the large number of times that I rushed up to deliver messages, ten to twenty times a day. Athletic training experts would find it demanding to complete such task. After I tried a few times, I was exhausted. Then I would stand outside the building and yell toward the upstairs. The method worked only partially. But my voice usually failed to reach the north parts of the building where some girl students boarded. This consequence did generate some trouble. However, I had to ignore the issue, for any alternative would physically push me to the limit.

The third job was quite easy. When newspapers arrived, I sent them up to the offices. When letters arrived, I stood them on the windowsills and let the receivers glance and pick them up.

Time flew like the river running its course, as I observed my three duties. At eight each morning I sauntered from Building 13 to Building 35 and returned home at twelve. At two in the afternoon I made the same trip and got back at six. I worked a full eight hours and walked ten-odd *li*. It was extraordinary physical exercise. I was not apprehensive about anything and was in good condition. I can't remember at what time my reduced salary had resumed the full amount that I originally received before the Cultural Revolution. At any rate I no longer feared about the living of my family. Now I did not have any teaching load, nor did I do any research. No one was audacious to write letters to me and call on me. I was free of

distractions. I was overjoyed with the life of "the untouchable" (Indians of the lower social status). Life was then quite delightful.

- **Translating *Ramayana***

I was used to writing and uncomfortable with idling away time and accomplishing nothing. As a doorkeeper I was not engaged except for answering the telephone and receiving mail as I sat there alone, watching people coming in and going out. Gradually I got bored. "Without a business unprofitable to do, how can one while away a finite life?" I thought of these two lines by an ancient poet. Why couldn't I engage in some business "unprofitable" too? There were actually numerous choices to make in this regard. Of course some of them were forbidden practices to me such as playing mahjong. However, I had been living by the pen. After turning this issue over in my mind, I concluded that I just could not discard my old trade. In such circumstances writing was something that could be done. However, I was not at all in the mood for creative writing. Then the idea of translating flashed across my mind. It was feasible to translate something. I did not want to translate a short and easy text. I felt that door-keeping would probably be my "iron rice bowl."^[1] Therefore, a long, abstruse text that could not be rendered easily was what I needed most. It would save the trouble of selecting texts from time to time. Even if the load of selecting a text could not be avoided once and for all, I could at least be favored with some sustained engagement. Why did I say translating was "something unprofitable"? It was because my translated work would never be accepted by a publisher. Could the translation be called something meaningful if the translator knew his work would never be accepted for publication? On the basis of these thoughts, I decided to translate *Ramayana*, one of the two famous Hindu epics in the world literature. It was a long work containing about twenty thousand odes in the clothbound edition. If one ode was translated into four lines, some of them being longer, the final work would contain at least eighty thousand lines, which was a fairly large undertaking that would keep me occupied for years.

I had a stroke of luck. I didn't expect much when I asked the

librarian of the Department of Eastern Languages to order a clothbound Sanskrit copy of *Ramayana* from the International Bookstore. As was well-known, it was very difficult to order foreign edition books in China at that time. To my astonishment, my order arrived in less than two months. The eight large, impressive volumes of the original text in Sanskrit were now in front of me. I couldn't believe the brand-new books were for me. It was my happiest moment during the Cultural Revolution. The garden plot of my heart, long parched, now seemed to turn bright green. The grin my face knew long ago now made a comeback.

However, I had to stay in the gate room and watch the door. How could I dare to bring the books from my home to the room? I still remained one of the "despised," though I did not know exactly to which scummy group I belonged. I still had "hats" on my head but did not exactly identify the sort of "hats" they were. But I felt I was wearing quite heavy ones. However, "one can always figure out a way out." Finally I thought of a "workable" alternative. To my mind, *Ramayana*, a long poem, should be translated into poetic language. But its Chinese version should not be in the ancient poetic form, nor in vernacular either. I always thought a poem should be written in rhyme, so I should translate it into rhyme. But it should be rhymed in current vernacular instead of the ancient form of rhyme. In sum, the translated text could be called "a rhymed poetic burlesque." Picking an appropriate rhymed word to end a line was challenging. I began spending the evening at home reading the original text carefully and translating it into a vernacular version in prose style. The following day on my way to Building 35 in the morning and at work when not doing the door-keeping and receiving phone calls and mail, I translated the vernacular version into a rhymed poem with lines of the same length. I usually scribbled the prose version on scraps of paper and left home for work, carrying them in my pockets. When my official business was slow, I took the scraps out, pondered on meanings and revised the early drafts. I looked dazed while mulling over the translating in silence. No one, except for the gods, could tell what I was doing. I found translating delightful, forgetting that I was

an outcast and forced to be a door-keeper. Occasionally I looked up and saw, outside the door of the building, Chinese crab apples in full blossom on each side and other plants flourishing with a riot of color. They looked spectacular to me.

• An Interlude

A warm and beautiful spring arrived, but my situation did not change for better. I tried to shake off disturbing thoughts and concentrate on my work assignment as a doorkeeper so that I could "hole up at home to engage in my own business."^[2] But things did not happen as I expected. One thing or another kept popping up to unsettle my mind.

One day, when I looked out for no reason in particular, I suddenly saw a big-character poster written on the yellow paper and posted on a makeshift mat shed. The poster was a critical comment on the "May 16" members and bore the signatures of dozens of Department of Eastern Languages faculty members, some of them still staying in Liyuzhou, Jiangxi. Such criticism was not something new to me. So, at first, I did not want to read it. But, out of curiosity, I sauntered out of the narrow door of my room and went to the poster for a look. To my surprise, the poster leveled its attack at me; I had become a suspect involved with the "May 16" organization! Anyone with minimal Cultural Revolution experience is familiar with this notorious entity, an organization purely made up of a group of young people with revolutionary family backgrounds. I was not a young man, nor did I come from a revolutionary family. I was not a worker, or a poor and lower-middle-class peasant or a revolutionary government official. How could I possibly qualify for the "May 16" membership? I had nothing to do with the organization. The denouncement was totally off the mark. Indeed I could have ignored it with a scornful grin. But this time I simply could not remain detached. A few years earlier when I saw a big-character poster criticizing me for my writing "Beida's Campus Bathed in the Spring," I defied it with a derisive scowl. Now the nonsense did not deserve even a frown. I wondered whether such a fantastic lie would be seriously considered by the

Revolutionary Committee of the Department of Eastern Languages and the PLA and Workers' Teams of the MTP. But the lie was not all that concerned me. Something even more ridiculous was yet to come. Amid the national clamor for uncovering the "May 16" members early in the Cultural Revolution, a leader of "Jinggangshan" made the shocking announcement that he was one of them. Then the dust quickly died down. It turned out that the so-called "May 16" organization had never existed at all. It was as absurd as Don Qixote fighting the windmill. It was the biggest of all jokes during the Cultural Revolution.

- **A Ludicrous Show**

No matter how long the world was tossed about by the political and social roller-coaster and how violent the storm of the Cultural Revolution was in wrecking the nation, time never slowed down its firm, irrevocable ticks ahead. Soon, it seemed that the Cultural Revolution had run out of gas and rolled to a stop. Theoretically, the Revolution "thwarted the enemy," but, in truth, it basically played havoc with revolutionaries themselves.^[3] To my mind, it would have been a lot better not to launch it at all. Now it was time to restore order. The top priority was to reorganize the Party. However, a member of the Workers' Team of the MTP, who was not a Party member, was chosen to be in charge of the Party's branch committee in the department. It was utterly preposterous.

In order to renew activities of the Party's organizations, reestablishment of the administration of Party members was of paramount importance. I don't know since what time and on what regulations that all Party members (except the Gang of Four) had lost their Party membership. To be reinstated, each Party member had to go through a certain kind of procedure, something like a review and discussion by non-Party members and approved by leading authorities. This certainly was a significant matter. Probably the PLA and Workers' Teams of the MTP of the Department of Eastern Languages (of course, including that non-Party-member worker) decided that one Party member from the department should be chosen

as a model so that the procedure could be followed for all Party members. Apparently such a candidate would have huge obligation. For what qualifications should the model Party member be selected? First, he had to have a revolutionary family background. Second, he needed to be faithful to the Party. With these two conditions, a Party member, surnamed Ma, whom I mentioned before as having a poor, lower-middle-peasant family background, was selected after careful consideration and discussion. Ma originally was the person I meticulously chose, when I was the department head and academic advisor, to be my teaching assistant and successor. Now that I had become a "counter-revolutionary bourgeois scholar," I was a hard-to-come-by touchstone for testing his loyalty to the Party. In the Department of Eastern Languages, no one, except for him, was qualified as well or favored by such an opportunity for the "showing." Who could not regard his selection as the best choice?

One afternoon, I remember, I was told to go to the No.1 Student Cafeteria for a meeting, along with other faculty colleagues of our department. We brought out little wooden stools with us. The hall of the cafeteria was empty after the dinning tables were moved away and set along the walls. We put down our wooden stools on the spacious floor and were seated. At the front of the hall stood a few large tables loaded with a bunch of miscellaneous things. I took a look and saw some wool coats and pants, a radio (at that time radio sets were rare and precious, not as widely available as today) and other odd things. Like other "revolutionary people," I was trying to figure out what was going to happen. But I did not feel like browsing the items. The whole situation seemed to be like a flea-market. Beside those things was a pack of mimeographed teaching notes written on coarse paper. At first I did not know what kind of teaching notes they were. Nor did I understand why items of such inferior quality were put side by side with fancy suit pants. I was ignorant about the role the objects would play at this first meeting for the resumption of Party functions. Seated there, I was perplexed and anxious about what would happen.

After all the people arrived, the host declared the beginning of the meeting. He first talked about the purposes and procedures of the meeting and then asked the selected model Party member to address the audience or to make "self-criticism," which actually meant the same thing. Ma stood up and walked to the front, stern and resolute. Then he began to talk about how he had refused to be the Golden Boy and Jade Maiden under the guidance of a bourgeois scholar. To clarify the confusion, by the way, the Golden Boy and the Jade Maiden were paper-made human figures to be burned at funerals in old China. Obvious to all present, the bourgeois scholar was meant to be me. It dawned on me that the performance was aimed at me. I was at once surprised and at ease because I had experienced things of this kind many times. Ma, my former "favorite student" and "successor," angrily denounced the evil bourgeois thoughts which I, the bourgeois scholar, wanted to instill in him in the disguise of academic instruction; he, also, deplored his moral deterioration in seeking a comfortable life thereafter. When condemning himself for almost forsaking his own class origin, he appeared eyes tearing and voice quivering. Pointing at the items displayed on the table, he wanted everyone to believe the evidence was undeniable. When his emotion hit a peak, he snatched up the pack of teaching notes; it turned out that they were in Sanskrit; he tore them to pieces in rage. The scraps of paper drifted like butterflies down on the floor. In my mind the next to be shredded would be the gaudy woolen suit pants and the radio! In a flash of mind, he was abruptly balked, his hand not stretched out. The suit pants and radio were still lying there, motionless and glittering with beauty. I was shocked, so were all those present, I believed. His ripping violence was presumably the climax of that day's drama, worthy of a standing ovation, which, certainly, did not occur. I was at loss to laugh or cry, so were, probably, all present, when a hush fell over the crowd.

A farce thus ended.

On the way back to Building 35, a discussion started among the participants in the meeting, "Why didn't he tear the suit pants, which

best symbolized bourgeois thoughts of comfort and ease, instead of the Sanskrit teaching notes, which could hardly be described as representative of evil thought?" I, too, reflected for a long time on this event. Ma, an "artist," had been at Beida for more than ten years. When with me in the past, he was as meek as a sheep. Earlier in this book, I described his performance during the Cultural Revolution. But that demonstration insufficiently displayed his considerable talent. Only two people had made known their identity by signing their names on the big-character posters that expressed the writers' political opinion at Beida. Both signees, including this young man, were from the Department of Eastern Languages. His remarkable behavior at the meeting quickly became a "delightful" topic for gossip and the butt of jokes. These reactions reminded me that I once had criticized him at a group meeting, when I first "messed around" in a faction organization as a "revolutionary person," by saying he did not look like the family member of a revolutionary martyr, nor resemble a poor peasant. Maybe he took my remarks to heart. Could anyone deny that what later transpired was relevant to his desire for revenge?

After the staging of the "model" farce, the Party members of the Department of Eastern Languages gradually resumed their regular activities in their individual Party branches. I was not interested in what they did, because such involvement still was none of my business, and today I just cannot recall it either.

• **The Resumption of My Party Membership**

A long time went by, and its exact length was not calculated until the resumption of Party membership for all Beida members was almost completed. The work left only three cases unsettled, one of them mine. If a list of the three was posted, my name would certainly be at its bottom, or as the popular saying goes, "I am behind Sun Shan, who comes last on the list of the scores of the examinations."^[4]

One day the men in charge of my department's Party organization suddenly decided to talk to me. I knew I now had to take my turn with respect to the issue of Party membership. By then I had worked a

long time in the Hindi Teaching Section, instead of doing the door-keeping job. The department leaders, a PLA officer and the Party general secretary, told me that the department would not only restore my full salary but also give me all my back pay that had been withheld for years. Of course the news filled me with gratitude. I decided to pay the Party membership dues with this returned money. Then a thick wad of banknotes worth 1500 *yuan* was handed to me by a comrade, a man of integrity, from our department. I immediately gave it to the Party general secretary of our department without counting it. That comrade told me another sum of 4000 to 5000 *yuan* would be returned to me later.

I can't remember whether the Party's branch committee of the department held a meeting to discuss the resumption of my Party membership. One day the leader of the PLA Team of MTP and the Party general secretary for the department summoned me to their office. The latter asked me, "Have you ever considered the nature of your problem?" Taken aback, I was tongue-tied. In terms of ideological faithfulness, I was weak in many aspects. In reference to my political background, I did not join any KMT or reactionary organizations in the past. So I should have said I had a clean record. At that point I was at a loss, before the PLA officer quickly switched to another topic to smooth over the embarrassment and wind up the talk. A little while later, an official in charge of the political propaganda or organization of the Party's branch committee, who just had been transferred from the Department of Chinese, told me the branch committee had decided to renew my Party membership but also to punish me with a two-year probation within the Party. I flared up. Just because I was against the tyrannical "empress," a temporary ruler of Beida, I was falsely charged, persecuted, put in custody, tormented at torture sessions and narrowly survived in my late years. When nothing offensive was found in my background, they disposed of me through a charge that had no evidence at all to back it up. How integrity was trampled upon! How justice was ignored! How disappointing this Party organization was! Seeing my rage, the official suddenly turned stern, remarking, "Would you like to delay the discussion of this issue

until the next branch committee meeting?" To be frank, I was extremely disillusioned. I had endured hard times, waited and hoped against hope, expecting the sun to rise again in my political life. When finally the day arrived, it was such a hope-dashing result. I was utterly tired of this business. Enough was enough. But it would never be possible for me to sign the "I have no objection" paper right after the decision of the Party's branch committee. If I put "objection" on it, I would ask for tons of trouble to come. I turned the issue over and over in my mind and finally told the official, "It's unnecessary to hold another meeting!" I picked up the pen and wrote with my signature "Basically, I have no objection!" I said to the official, "My word 'basically' should be clear to you." Then I thought, if I was on a two-year probation within the Party there would be no point of turning in the amount of 4000 to 5000 *yuan* yet to be returned to me as my Party's membership dues. Consequently I later got back the sum and kept it for myself.

Now I have told the story of the resumption of my Party membership.

Was I completely liberated?

I think I have to stop here in this chapter about "Complete Liberation."

My experience in the Cultural Revolution had come to an end, too.

Random Recollections of the Cow Shed is by and large over.

[1] The "iron rice bowl," a popular phrase for the planned economic system that was implemented in China from 1949 to 1978.

[2] A popular saying, meaning concentrating on one's own work.

[3] It "thwarted the enemy," a quotation of Mao Zedong popularly used in the Cultural Revolution; originally the quotation goes, "The Revolution plays havoc with the world, but it thwarts the enemy and train the people."

[4] "I am behind Sun Shan, who comes last on the list of the scores of the examinations," a popular saying that comes from *Guoting Notes*, written by Fan Gongcheng of the Song Dynasty. In the story Sun Shan leaves home to take the imperial examinations. He is entrusted with the son of one of his native villagers,

who is also an examinee. When Sun Shan comes back home and is asked by the father of his fellow examinee about the son's performance, Sun Shan answers, "Sun Shan bottoms the list of the examinees, but your son is behind Sun Shan."

拾玖 完全解放

上一节的标题是“半解放”，这一节是“完全解放”。我这样写都是毫无根据的。这两个词儿都不是科学的或法律用语，其间界限也不分明。这都让法学家或哲学家去探索吧。

仍然谈我的情况。回校以后，我有一股振奋的情绪。就在这一阵振奋中，我们都住进三十五楼。似乎是根据一种新精神，也许是一种新规定，每个系的办公室都设在学生宿舍中，大概是想接近学生，以利于学生的“上（大学）、管（理大学）、改（造大学）”吧。上、管、改的精义就是把老师、老知识分子置于学生的管理和改造之下，提倡初年级的学生编高年级的教材。如此等等，不一而足。

三十五楼共有四层。三四层住女生，一二层住男生。在二层中腾出若干间屋子，是系的党政办公室。这一些办公室与我无干。我被分配在一楼进口处左边的朝外有大玻璃窗子的极小的一间房子里，这里就是本楼的门房，我的差使就是当门房，第一个任务是看守门户，第二个任务是传呼电话，第三个任务是收发信件和报纸。第一个任务又难又不难。领导嘱咐我说：不要让闲杂人员进入楼内。本系的教职员都是“老同志”了，我都认识。高年级学生也认个八九不离十。新学生则并不清楚。我知道谁是闲杂人员呢？既然不认识，我无能为力，索性一概不管，听之任之。这不是又难又不难吗？

第二个任务，也是又难又不难。不难在于有电话我就接；没有电话，我就闲坐着。难在什么地方呢？据我统计，似乎女生的电话特别多，要我每次传呼都爬上三四楼，这倒是很好的许多专家都介绍过的“爬楼运动”；无奈一天爬上十次二十次，是任何体育锻炼专家也难以做到的。我爬了几次，觉得不行，就改为到门外楼下向上高呼。这办法有一定的效果。但是住在朝北房间里的女同学就不大容易听到。也颇引起一点麻烦。我的能力如此，有麻烦就让它有麻烦吧。

至于第三个任务，那是非常容易的。来了报纸，我就上楼送到办公室。来了信，我就收下，放在玻璃窗外的窗台上，让接信者自己挑取。

就在完成这三项任务的情况下，日子像流水似的过去。我每天8点从十三公寓走到三十五楼，12点回家；下午2点再去，6点回家，每天十

足八个小时，步行十几里路。这是很好的体育锻炼。我无忧无虑，身体健康。忘记了从什么时候起，又恢复了我的原工资。吃饭再也不用发愁了。此时，我既无教学工作，也没有科研任务。没有哪一个人敢给我写信，没有哪个人敢来拜访我。外来的干扰一点都没有，我真是十分欣赏这种“不可接触者”（印度的贱民）的生活，其乐也陶陶。

• 翻译《罗摩衍那》

但是，我是一个舞笔弄墨惯了的人，这种不动脑筋其乐陶陶的日子，我过不惯。当个门房，除了有电话有信件时外，也无事可干。一个人孤独地呆坐在大玻璃窗子内，瞪眼瞅着出出进进的人，久了也觉得无聊。“不为无益之事，何以遣有涯之生？”我想到了古人这两句话。我何不也找点“无益之事”来干一干呢？世上“无益之事”多得很。有的是在我处境中没有法子干的，比如打麻将等等。我习惯于舞笔弄墨久矣，想来想去，还是出不了这个圈子。在这个环境中，写文章倒是可以，但是无奈丝毫也没有写文章的心情何。最后我想到翻译。这一件事倒是可行的。我不想翻译原文短而容易的；因为看来门房这个职业可能成为“铁饭碗”，短时间是摆脱不掉的，原文长而又难的最好，这样可以避免经常要考虑挑选原文的麻烦。即使不会是一劳永逸，也可以一劳久逸。怎么能说翻译是“无益之事”呢？因为我想到，像我这种人的译品永远也不会有出版社肯出版的。翻译了而又不能出版，难道能说是有益吗？就根据我这一些考虑，最后我决定了翻译蜚声世界文坛的印度两大史诗之一的《罗摩衍那》。这一部史诗够长的了，精校本还有约两万颂，每颂译为四行（有一些颂更长），至少有八万多诗行。够我几年忙活的了。

我还真有点运气。我抱着有一搭无一搭的心情，向东语系图书室的管理员提出了请求，请他通过国际书店向印度去订购梵文精校本《罗摩衍那》。大家都知道，订购外国书本来是十分困难的事情。可我万万没有想到，过了不到两个月，八大本精装的梵文原著居然摆在我的眼前了。我真觉得这几本大书熠熠生光，这算是“文革”以来几年中我最大的喜事。我那早已干涸了的心灵，似乎又充满了绿色的生命。我那早已失掉了的笑容，此时又浮现在我脸上。

可是我当时的任务是看门，当门房。我哪里敢公然把原书拿到我的门房里去呢？我当时还是“分子”——不知道是什么“分子”——我头上还戴着“帽子”——也不知是些什么“帽子”——反正沉甸甸的，我能感觉得到。但是，“天无绝人之路”，我终于想出来了一个“妥善”的办法。《罗

摩衍那》原文是诗体，我坚持要把它译成诗，不是古体诗，但也不完全是白话诗。我一向认为诗必须有韵，我也要押韵。但也不是旧韵，而是今天口语的韵。归纳起来，我的译诗可以称之为“押韵的顺口溜”。就是“顺口溜”吧，有时候想找一个恰当的韵脚，也是不容易的。我于是就用晚上在家的时间，仔细阅读原文，把梵文诗句译成白话散文。第二天早晨，在到三十五楼去上班的路上，在上班以后看门、传呼电话、收发信件的空隙中，把散文改成诗，改成押韵而每句字数基本相同的诗。我往往把散文译文潦潦草草地写在纸片上，揣在口袋里。闲坐无事，就拿了出来，推敲、琢磨。我眼瞪虚空，心悬诗中。决不会有任何人——除非他是神仙——知道我是在干什么。自谓乐在其中，不知身在门房、头戴重冠了。偶一抬头向门外张望一眼——门两旁的海棠花正在怒放，其他的花也在盛开，姹紫嫣红，好一派大好春光。

• 一个小插曲

春光虽好，我自己的境遇却并没有多少改进。我安心当门房，“躲进门房成一统”；然而事实上却是办不到的。仍然有意想不到的干扰。

有一天，我正在向门外张望，忽然看到在门外专门供贴大字报之用的临时搭起的席棚上贴出了很多张用黄纸写成的大字报，下面有几十位东语系教员签的名，有的教员还在江西鲤鱼洲没有回来。内容是批判“五·一六”分子的。这样的批判一点也不新奇，我原来想不去管它。但是为好奇心所驱使，我走出了我那“成一统”的窄狭的门房，到门外去看了看大字报。我真是万万没有想到，这张大字报竟是对我来的：我成了“五·一六”的嫌疑分子。这真是从何说起呀！稍微对所谓“文化大革命”有常识的人，都会知道，当时盛传一时的所谓“五·一六”组织，是出身好的青年人组成的。我一非青年，二又出身不好，既非工人，也非贫下中农或“革命干部”，我哪里有资格参加这样的“革命”组织呢？我同“五·一六”是完全风马牛不相及，是驴唇对不上马嘴。这样的事情，我本来可以一笑置之的。但是这一次我却笑不起来。几年前我看到批判我的《春满燕园》时，我曾不自觉地哼了一声。这次我连哼都哼不起来了。这样滑天下之大稽的事情，我不知道，东语系的革委会和军工宣队是怎样考虑的。滑稽的事情还没有完，更滑稽的还在后面哩。全国上下大声嚷嚷了一阵“五·一六”，北大井冈山的一位头领公然承认自己是“五·一六”分子；可是最后却忽然销声匿迹——原来天地间根本没有一个什么“五·一六”组织。这真像是堂吉诃德大战风车，成为“文革”中众多笑话中最可笑的一个。

• 一幕闹剧

不管人世风云如何变幻，“文革”浪涛怎样激荡，时间还是慢慢地或者迅速地向前流驶。转瞬之间，“文革”好像高潮已过，有要结束的样子了。虽然说“乱是乱了敌人”，实际上主要是乱了自己，还是以不乱为好。现在是要拨乱恢复正常的秩序了，首先是要恢复党的组织。一个非党的工宣队员，居然主持党支部的工作，实在有点太“那个”了。

要想恢复党组织的活动，首先要恢复党员的组织生活。我不知道，是从什么时候起，又是根据什么法令，所有的党员（“四人帮”等当然除外）都失去了组织。现在每一个党员都要经过一定的手续，好像是要经过群众讨论和领导批准，才能恢复组织生活。这当然是一件大事。东语系大概是经过军工宣队的讨论（那一位非党的工宣队员当然会参加的），决定从全系党员中挑选出一个，当做标兵，演一出恢复组织生活的开场戏，期在一举通过，马到成功，为以后的人树立一个榜样。这样一个人选责任之大可以想见。用什么标准来挑选呢？首先要出身好，其次要党性强。具此二标准者，庶乎近之。大概是经过了周详的考虑，谨慎的筛选，我上面提到的那一位烈属兼贫下中农的姓马的党员中了标，他是我作为系主任兼导师精心选择留下当我的助教和接班人的。现在，我成了“资产阶级反动学术权威”，这正好成了他的党性的试金石。具备这两个条件，又有这样“亮相”的机会的，东语系并无第二人。谁敢说这不是天生的“佳选”呢？

记得有一天下午，我同东语系全系的留校师生被召到学一食堂里去开会，每人自带木板小凳。空荡荡的食堂里，饭桌被推到旁边去，腾出来的空地上，摆满了小木板凳子，我们就坐在上面。前面有几张大桌子，上面摆了不少的东西。我仔细一瞧，有毛料衣服和裤子，有收音机（当时收音机还不像今天这样多，算是珍贵稀有的东西），还有一些零零碎碎的东西。我跟在“革命群众”的后面，还摸不清是怎么回事，没有闲心去一件件地仔细瞅。我只觉得，这颇像一个旧品展销义卖会。可是在这些东西旁边，有几本用很粗糙的纸张油印成本的讲义，我最初还不知道是什么讲义；也不知道这样粗糙的道具为什么竟能同颇为漂亮的西装裤子摆在一起。对所有的这一些道具，我都不知道它们在今天第一个恢复党员组织生活的会上会起什么作用。我满腹疑团坐在那里，不知道葫芦里究竟要卖什么药。

人到齐了，时间到了。主席宣布开会。他先说明了开会的目的和做法，然后就让这位选中的标兵发言，或讲话，或“检讨”，反正是一个意

思。这位标兵站起来，走到前面，威仪俨然，义形于色，开始说话。说话的中心主题是：不做资产阶级学术权威的金童玉女。这里要解释一句：金童玉女是旧社会出殡时扎的殉葬的纸人。所谓“资产阶级学术权威”谁一听都知道指的就是我。此时，我恍然大悟：原来今天这一出戏是针对我来的。我有点吃惊，但又不太吃惊——惯了。只听我这位前“高足”、前“接班人”怒气冲冲地控诉起来，表情严肃，声调激昂，诉说自己中了资产阶级学术权威的糖衣炮弹，中了资产阶级思想的毒，在生活上追求享受，等等，等等。说到自己几乎要背叛了自己出身的阶级时，简直是声泪俱下。他用手指着桌子上陈列的东西，意思是说，这些东西就是无可辩驳的证据。于是怒从心上起，顺手拿起了桌子上摆的那一摞讲义——原来是梵文讲义——三下五除二，用两手撕了个粉碎，碎纸片蝴蝶般地飞落到地上。我心里想：下一个被撕的应该轮到那漂亮的毛料西服裤或者收音机了！想时迟，那时快，他竟戛然而止，没有再伸出手去，料子西装裤和收音机安全地躺在原地，依旧闪出了美丽的光彩。我吃了一惊，恐怕全场的人都吃了一惊。这个撕东西的行动，应该是今天大会的高潮，应该得到满屋的掌声，然而这些全落了空。我哭笑不得，全体与会者大概也是哭笑不得。全场是一片惊愕的寂静。

这一幕闹剧以失败收场了。

在散会后回三十五楼的路上，大家纷纷议论：为什么不撕可能最透露资产阶级享乐思想的西装裤子，而偏偏撕很难说就是代表资产阶级思想的梵文讲义呢？我自己也想了很多。这一位表演家到北大来已经十年多了，当学生时对我温顺如绵羊，在“文化大革命”中的所作所为，我在上面已经说了一点，那是远远不够的，他还有一些非常精彩、匪夷所思的表演。在一般政治性表态性的大标语上，按惯例从来没有人署名的。有之自北大始，北大有两个人是这样干的，恰恰都出在东语系，其中之一就是我说的这一位。这一个惊人的举动，在北大一时传为“美”谈或者笑谈。在我第一次混迹“革命群众”中参加学习的小组会上，我曾对他坦率地提过意见，我说，他既不像一个烈属，也不像一个贫农。他大概为此耿耿于怀。以后发生的这一些事情，难道与此没有联系吗？

这一幕闹剧以后东语系的党员是怎样逐渐恢复党组织生活的，因为与我基本无关，我没有去注意，今天更回忆不起来了。

• 我的恢复组织生活

时序推移，不知经过了多长的时间，北京大学恢复党组织生活的工

作已经要结束了。剩下的大概还只有两三个人了，我是其中之一。写一个榜的话，我不是孙山，就是还在孙山之下，俗话说“名落孙山”了。

忽然有一天，东语系的党组织找我谈话，我知道，这一下轮到我了。我此时早已调离了那个门房，参加印地语教研室的活动。系领导一个解放军的军官和总支书记告诉我，领导上决定不但发给我整个的工资，而且以前扣发的工资全部补给。我当然非常感动。我决意把补发的工资全部作为党费上缴给国家。东语系的一个非常正派的同志先递给我了一千五百元。我立即原封不动地交给了系总支。这位同志告诉我，还有四五千元以后给我。

我现在已经记不清楚，是否开过支部大会讨论我的恢复组织生活的问题。突然有一天，系里军宣队的头儿和系总支书记找我。总支书记问我：“你考虑过没有，自己的问题究竟何在？”我愕然不知所对。要说思想问题，我有不少的毛病。要说政治问题，我没有参加过国民党和任何反动组织，我只能说没有。但是，我一时很窘，半天没有说话。那个解放军颇为机灵，连忙用话岔开，结束了这一场不愉快的谈话。不久，总支的宣委或组委一个由中文系调来的干部来找我，告诉我，支部决议：恢复我的组织生活，但给我留党察看二年的处分。我勃然大怒。由于我反对了那位一度统治北大的“女皇”，我被诬陷，被迫害，被关押，被批斗；几乎把一条老命葬送上，临了仍然给扣上了莫须有的罪名。世界上可还有公道可讲！世界上可还有正义可说！这样的组织难道还不令人寒心！这位干部看到了我的表情，他脸上一下子也严肃起来：“我们总支再讨论一下，行不行？”他说。说老实话，我已经失望到了极点。我盼星星，盼月亮，盼着东天出太阳。太阳出来了，却是这样一个太阳。我不想再在这个问题上伤脑筋了，够了，够了，已经足够了。如果我在支部后面签上“同意”二字，那是绝对办不到的。如果我签上“不同意”三字，还有不知多少麻烦要找。我想来想去，告诉那位干部：“不必再开会了！”我提笔签上了“基本同意”四个字。我着重告诉他说：“你明白，‘基本’二字是什么意思！”继而又一想：“我戴着留党察看二年的帽子，我有什么资格把补发的工资上缴给国家呢？”结果预备上缴的那四五千块钱，我就自己留下。

我恢复组织生活的故事结束了。

我算不算是“完全解放”了呢？

“完全解放”这一节我只能写到这里了。

我的“文化大革命”到此结束了。

我的《牛棚杂忆》也就算是写完了。

20 ADDITIONAL THOUGHTS

But I must add something to my memoir.

I can't stop yet.

For the last seventeen years, since the end of the Cultural Revolution, I have been thinking about this so-called "Revolution." In the course of writing this book, I was able to think more carefully and continuously about some of the key issues. As a result, here are some additional thoughts and reflections.

What have I thought about?

First, have we learned any lesson from this disaster?

People, both at home and abroad, unanimously agree that the so-called "Proletarian Cultural Revolution" was not about "culture," nor was it a "revolution." It unmistakably was a "ten-year turmoil." All the Chinese people unquestionably agree on this conclusion. This unprecedented catastrophe (and, hopefully, the last one in history) caused tremendous economic and psychological disruption. The loss is immeasurable. Perhaps we can ignore the amount of pain engendered. Don't we often say knowledge, experience or lessons are not obtained without paying tuition? I absolutely agree. But, while our payment of tuition has been a fortune, what lesson have we learned?

Here's my answer: no, not in the least.

Personally, I have always thought that the Cultural Revolution, as a valuable "negative teacher," provides an extraordinarily good instructional opportunity. Many precious lessons can be drawn from this "negative teacher." The experiences during the Cultural Revolution can serve as points of departure for success in the future. They can help make a strong China.

Unfortunately, we have failed to take advantage of this remarkable educational opportunity. People say, "The Cultural

Revolution is over. We don't need to worry about it."

As a result, my concern raised an additional issue, "Is the Cultural Revolution over?"

We are materialists. The soul of materialism is seeking truth from fact. If we believe in and pursue that doctrine, we have to admit that the Cultural Revolution is not completely over. In terms of its process, we may define it as being over. But a closer look shows that, psychologically, the opposite is true. If you ask people who experienced the Cultural Revolution to speak candidly about the tragedy, particularly middle-aged and old intellectuals who were persecuted during that chaos, you will see them nursing grievances. In contrast youngsters of today have different perspectives. They are ignorant about the decade-long destruction; stories about it sound like exotic fairytales to them. These divergent perspectives worry me. Who can rest assured that these youngsters will not behave as "young revolutionaries" in a second Cultural Revolution, given their ignorance of the criminal deeds committed by those young men and women from the recent past? If you bring up this topic to the middle-aged and old intellectuals who were persecuted during those years of chaos, they, unmistakably, will become infuriated by memories of their victimization and vociferously voice their complaints. I cannot meet and talk to every one of these intellectuals, but I can be sure that an overwhelming majority of them share the same pent-up emotion.

Revolutionary veterans, who made great contributions to the founding of new China and, later, were persecuted in the Cultural Revolution, may have a different perspective and behave accordingly, given their broad-mindedness and tempered revolutionary will. I have little contact with government officials, so I can't give you any reliable account of their reaction. But this topic reminds me of one occurrence, which, insignificant but thought-provoking, deserves a mention. In Beijing's Friendship Hotel in 1978 (after the Chinese National Political Consultative Conference resumed its function), I stumbled across a government official who had joined the revolution in his earlier years and now was well-known in the field of literature and arts. We both

had been members of CNPCC's Department of Social Science before the Cultural Revolution and had not seen each other for more than ten years. The first sentences he uttered upon meeting me again were, "The ancient people say, 'A gentleman would rather die in honor than live in infamy.' But the Cultural Revolution has proved that 'a gentleman can both live and die in infamy.' " Then he laughed. I wondered whether he was laughing or weeping. Anyway, I could not laugh at all. Isn't his long-suppressed sadness crystal-clear?

He is not alone in worrying about how to preserve one's reputation. I'm with him in this regard. And I believe most Chinese intellectuals, the "gentlemen" in ancient terms, also share the same view. This adage, "A gentleman would rather die in honor than live in infamy," genuinely embodies a long sustained value system in Chinese history, which we Chinese intellectuals have embraced with a keener sentiment in comparison with our foreign counterparts.

I'm reminiscent of the Chinese intellectuals, a demographic population hardly defined as a class or a stratum, and of their history and present situation. In feudal society Chinese intellectuals ranked above farmers, workers and businessmen in social status, holding a rather privileged position that enjoyed high respect in the country. I do not live in the time of *The Scholars*, so I have no understanding of those intellectuals.^[1] But I have lived in contemporary China and observed intellectuals during the warlord wars and, later, the KMT's rule. Apart from other privileges, professors in those periods had handsome salaries and a high social position. So they all were proud and behaved conceitedly. Their attitude was understandable, of course, because personal behavior is associated with financial well-being. Most professors were arrogant. That is how the expression of "the professor's haughty manner" came about. By the time I became a professor, things had changed considerably; the KMT's rule had ended and inflation had skyrocketed to an alarming height. Professors' income plummeted. Nevertheless, a professor still wore the Kong Yiji's unlined long gown and his social position was not lowered.^[2]

Right after the founding of new China, I was very excited, like

most professors, believing I really was free of oppression and that a new page of life had turned. We were like small children, happy and naive. We thought "The Sky of the Liberated Area Is Clear and Shiny" and saw everything as rose-red and bright like the sun.^[3]

But the delightful circumstance soon was ruined when the first large political-and-ideology-reforming movement, the movements against the three evils and five evils, broke out.^[4] I was thrown into a "medium-sized basin," bathed and washed so that my body was cleaned of amounts of dirt. Then I felt my body was now spry and healthy. It was my first acquaintance with the benefits of ideological reform. In the years to follow, political movements came one after another, crushing me in desperate gasping for breath. I went through the movements of criticizing Wu Xun, *Early Spring*, Hu Feng and Hu Shih and purging counter-revolutionaries.^[5] The campaigns arrived in such close succession that I found it hard to adjust myself. This round of political developments culminated in the Anti-Rightist Movement in 1957. Those days, though I was not involved in the activities nor charged with any offense, were spent with nerves from morning till night. Personally, I did not object to those political movements at that time. During the Anti-Rightist Movement, I was busy attending sessions of criticism and reading critical papers. By the way, the "jet plane posture" had not been invented yet and sessions of criticism were a lot less tormenting than those torture sessions held during the Cultural Revolution. On the other hand, I was more and more skeptical of what was going on; why did people's actions contradict the "supreme directives" delivered in those days? Despite my doubts my belief in that most famous statement that the movement was based on "a sincere motive" rather than "a scheme" did not waiver.^[6]

After the Anti-Rightist Movement, the country continued to be politically convulsed by events like the "removing the rightist ideology of focusing on learning" campaign. After the Lushan Conference, the "left" leaning ran rampant around the country and a campaign was launched opposing rightist deviation.^[7] During the "three-year hard time," I, like other old intellectuals, though starving every day, never

nursed resentment, let alone uttering cynical remarks. The whole country generally displayed a fair amount of tolerance and obedience. Who could deny the fact that the Chinese and the intellectuals are the finest in the world?

The Cultural Revolution broke out in 1966 as an inevitable outgrowth of the political environments. Later, one instructor in my department who used to be a member of the "New Beida Commune," told me that I could have escaped from this disaster. But I was to blame for my folly for sticking my neck out. Consequently I suffered home-raid, beating, insult and torture, and was sent into the Cow Shed, from which I narrowly escaped the throttles of death. For a period of time I mused and regretted for my folly. But now I have gained an insight. The Cultural Revolution is a very rare "grand occasion" that happened only once in thousands of years. If, like a peacock, I had not voluntarily stepped into the spotlight, I would not have experienced the "feel" of the so-called "Revolution" and would not have understood the dimensions of the insanity it inflicted on the nation. That would be a shame that could hardly be scrubbed off.

In the Cow Shed I observed and mused a lot about what I witnessed. Gradually I got down to the question, "Why were so many intellectuals persecuted?" Undeniably, intellectuals have shortcomings and make mistakes. But who is flawless? At that time my political perception was minimal and shallow. I did not find fault with anybody, not even the one who launched the "Revolution." I simply turned my radar screen to myself in search for the sources of evil. Using a popular term of today, mine was a feeling of "original sin." The concept has been used in Christianity. Now, I have borrowed and used it here.

I have no idea whether other old intellectuals came to the same conclusion. I should admit this feeling of repentance was quite deep-seated in me. Before the liberation of 1949 I believed politics was dirty despite all its pretensions, so I resolved to keep away from it. I had little understanding of the CPC, but I realized that the KMT was short on promise and would be doomed sooner or later. As I explained

earlier, after the founding of new China, I began to be politically enlightened by the campaign for ideological reform. One of my hauls was realizing that all politics is not dirty. The politics of the CPC is a case in point. In the meantime, I judged myself as particularly selfish for living in reclusion, while learning and researching for the sake of gaining scholarly reputation, as the rest of the Chinese fought a bloody war against the Japanese invasion. I realized that the learning I acquired, if it could be called "learning," was despicable. For a long time I regarded myself as "a peach picker," who did not grow the peach tree but came to pluck peaches when they were ripe.

But what should I do?

I had many strange ideas. I even hoped that a new War of Resistance Against Japan would break out so I could have a second chance to perform meritorious deeds. I would surely plunge into battlefields and dedicate my efforts and even my life. I read many novels about the War of Resistance Against Japan and about revolutionary wars. I deeply admired the Communists and revolutionaries for their dedication in the face of death. I made a pledge to learn from them. Of course these were illusions, naive and ridiculous. But they were true reflections from the bottom of my heart at that time.

In terms of allegiance to the leader, I had firmly opposed such fealty in the past. In my early years, I witnessed KMT members' worship of their "leader" but abhorred it. After the September 18 Incident in 1931, I went to Nanjing, as a student of Tsinghua University, and saw this "leader," Chiang Kai-shek. He shamelessly lied to us again and again. As a result I became more and more disillusioned. Mr. Chen Yinque, one of my professors, also did not favor Chiang and wrote the line, "It is difficult to enjoy the beauty of the highest building at near sight," which demonstrated his disgust for this "leader." Later, when I went to Germany at the peak of the fascist rampage, I saw the Germans, a small population of them at least, greeting each other on streets with "Long live Hitler!" I thought it was ridiculous and mind-boggling. I used to know a German girl, less than

twenty years old and stunningly good-looking. She once said to me, "It would be my most glorious life achievement if I were able to give birth to a child with Hitler!" I was shocked, finding the occurrence totally inconceivable. A thought lying in the back of my mind was that we Chinese were intelligent and would not do stupid things like this!

I came back to China. Three years later new China was founded. In those early years I was very excited and joyous like many other old intellectuals, as I said previously. Each year we attended two grand rallies, the celebration of International Labor Day on May 1 and the National Day on October 1, both of which were held in Tian'anmen Square. On each celebration day we were up long before dawn and went and gathered at Shatan in downtown. Then we walked to the alleys around Dongdan and waited there for hours. The grand celebrations began at ten. We marched along in front of the Tian'anmen towers so the leader could review us.^[8] At that time the three decorated archways on the boulevard were not yet dismantled. East of those archways we could not see the leader on the tower. As soon as the parade passed the archways and the leader was in sight, loud chants of "long live" exploded from thousands of marching crowds. At first I was not used to chanting, no matter how excited I was. But, probably because I had a high IQ, I soon joined and chanted the slogan, too, loudly and fervently as if the words aired the feeling from the depths of my heart. I was totally trapped into worship for the leader.

I have narrated the process of my ideological transition, briefly but genuinely. Through one drop of water you can visualize the ocean, while one grain of sand can conjure up the cosmos. Other old intellectuals may have had the same experience as I, at least for major parts of it despite minor differences. The preceding examples show how they, and the young intellectuals even more, love our great country. For thousands of years, Chinese intellectuals traditionally have been patriots. In comparison with those of other nations, this characteristic of Chinese intellectuals is striking.

"Someone wakes up to a new understanding and foresees

happenings in the future." But I am a slow foreseer and seldom benefit from hints in dreams. By the time I was confined to the Cow Shed during the Cultural Revolution, I still believed in the legitimacy of that tragedy. A Western saying goes, "All that glisters is not gold." In the time of trouble I got to know some PLA men and workers who came to campus in order to "support the leftists." They were my idols. I staunchly embraced slogans like "The people of the whole country should learn from the PLA" and "The working class must come to power in all walks of life."^[9] I behaved strictly as I was instructed. But reality showed me that a number of military men and workers abused laws and rode roughshod over others. Some of these men were downright corrupt. I felt very disappointed, as if a basin of cold water had been dumped over my head, washing away the heat of my body. I woke up. The old saying "All gold is not pure and no man is perfect" made a comeback with a fresh meaning. But what puzzled me was that ignominious deeds were done by people I had admired. We believers in materialism should seek truth and reality and be honest. We should never curry favor with expressions of flattery and cover-ups of errors. Despite the fact that we intellectuals were far from perfect in comparison with people in other professions, should we have been dismissed as the "Stinking Number 9"?^[10]

I have rambled a great deal, but I mean to state clearly, first, that the persecution of intellectuals in the "Cultural Revolution" was absolutely unjustified and, second, that the sinister motive behind the practice is apparent, despite efforts and explanations to cover it up. For most intellectuals who suffered in the calamity, the "Cultural Revolution" is not over. Take another example of mine. On the one hand, I highly value the rare experience I happened to acquire in the Cow Shed. On the other hand, a contrary view occasionally comes to mind, when I'm now at the "prime of my career" and heaped with honors and praises, that "I should have committed suicide at the abyss of my life." The fact that I did not take my own life shows I'm not a man of integrity. Now I'm grappling with a guilty conscience and living a life eclipsed in infamy. It is a shame that I have this feeling. Here, I present it frankly to the reader as a true manifestation of my

mind. But I can't help raising the question, "Do I, Ji Xianlin, stand alone with this thought?"

That question brings me to a third issue, "Have Cultural Revolution victims vented their grievances?"

This question is not difficult to answer. On the basis of the stories I recounted before, the answer is definitely "no"!

To obtain a thorough understanding of the issue, I have to review history by adding something to my narrative about the students and scholars who returned from abroad in the early years of new China. At that time I resembled many other intellectuals whose stories I have told in some fashion previously. The overseas Chinese witnessed their social position taking a drastic turn for the better after the rebirth of the country and understood that their future was tightly locked in the national independence. Patriotic as they had always been, overseas Chinese were elated by events at home and wholly allegiant to the country. Risking dangers of all kinds, many young students returned home. Like most intellectuals already there, they saw everything as rosy, shining and full of promise; they resolved to throw themselves into the cause for the prosperity of China. Consequently some Chinese, who had been working or visiting as scholars in foreign countries, gave up their comfortable living and academic superiority and returned home, including Lao She, who eventually drowned himself in a lake during the Cultural Revolution.^[11] But when Lao She and other scholars returned, they all were high-spirited and strongly motivated by the bright prospects of a rejuvenated country and their own successful career. They were confident about their future.

However, China's politics soon reversed when "leftist fundamentalism" took sway. "Overseas relations" became excuses for false charges. Wasn't it normal that returned students and scholars had some "overseas contacts"? Even a little child knows this is self-evident. But those "leftist zealots" never let go of this part of returnees' dossiers. They conjured up wanton and groundless charges that returnees were secret agents and spies for foreigners, leaving the victims horrified and in despair. This situation deteriorated during the

Cultural Revolution when countless patriotic and innocent people were persecuted. Those who were killed or died of grief were, of course, the most victimized. But those who were alive also desperately searched for ways of fleeing the country. In the past they had gone out of their way to return home. Now they had to abandon the new lives they had set up. What a striking contrast! I personally know many cases of this sort. Anyone with integrity realizes that the country experienced an immeasurable loss. Enduring tremendous grief and parting with sorrow from their dear ones, these intellectuals took wing from the country. How could sons and daughters be willing to part from their parents? But they have been gone.

Have any of those who took their leave or those who stayed vented their grievances?

Years ago a sort of literature, "scar literature," emerged. But I think most of the writers of this literary genre are young people, who do not have many scars. But those with "scars" have not written anything about their suffering for one reason or the other, depending on individual circumstances. This reality is rather depressing. It conceals, I think, something harmful that jeopardizes the growth of the nation.

Don't we often hear calls for efforts to stabilize and unify the country? I'm totally for it. Without a stable and unified environment the country's economy will not grow steadily and the government will not function as it should. But we need stability and unity in genuine terms. Given the fact that many intellectuals, the old intellectuals in particular, are reluctant to speak about their grievances, real stability and unity are unlikely to be realized.

According to my observation, many intellectuals complain at times. Our grievances have not been vented and our living standards are quite low. Our dissatisfaction is understandable. But we are no less patriotic. We are best described by the saying, "A good farm animal does not need driving." Another phrase portraying us as "a good product with high and enduring quality and a low price" does not exaggerate the reality. But some people are not happy with these

statements. Recently I learned that one well-known person said, in comparison to the collapse of the former Soviet Union, "Chinese intellectuals are basically hair adhering to the skin of imperialism." This statement was believed to be gossip. But the existence of such a view among the people is not out of the question. Does the man who expressed this thought still maintain the capability of distinguishing right from wrong? Wasn't he conscience-stricken when he said these words? Occurrences like this disturb me all the time.

If people of this sort came to power in the future, intellectuals would be sure to buy the farm.

Here is the last issue I have been considering, "How could the Cultural Revolution happen?"

It is a complicated question which I'm unable to answer. Are there people that are capable of answering it? Yes, there are some. But they don't want to, nor do they seem happy to have the question answered by others. In my humble opinion, a true believer of materialism should not have this attitude. If a candid answer is presented to this key question, the people of the whole country, including intellectuals, will feel deeply indebted. They will be rid of their worries and able to let go of their grievances. They will join forces and be wholly devoted to the building-up of stability and unity and the construction of the socialist society in China. What a wonderful thing it would be!

Meanwhile if we do not explore this topic, foreigners will, as the ancient saying goes, "If the Confucian ethical code is not maintained at home, help will be enlisted from alien countries." Surely some foreign scholars are sincere in their scholarship. They have engaged in research, sought truth from reality and produced some serious scholarship. Clearly, no matter whether their research keeps to the point or not, it is much better to tell the truth than to lie. Nevertheless, some foreigners are malice-intended, distorting facts, cooking up rumors and slander, so as to muddy the waters. They distort facts and engage in slander, creating a big mess. Though "it is ridiculous for an ant to topple a giant tree," such happenings are certainly disappointing.

What should we do then? I think that answer should be obvious to all.

These are all the additional thoughts I have had so far.

So it is time for me to stop jabbering.

[1] *The Scholars*, a satirical fiction written by Wu Jingzi (1701-1754), a fiction writer during the Qing Dynasty, in which scholars of ancient Chinese society are relentlessly satirized for their dishonesty and depravity.

[2] Kong Yiji, the protagonist, the "scholar of scholars" for lack of practical skills, in Lu Xun's short story "Kong Yiji," the first story in *Call to Arms*, a collection of short stories published in 1923.

[3] "The Sky of the Liberated Area Is Clear and Shiny," the lyrics from a revolutionary song popularized in northwest areas of China controlled by the CPC during World War II.

[4] "The movement against the three evils and five evils," precisely the "Movement Against the Three Evils" (1951-1952) and the "Movement Against the Five Evils" (1952); the former attacked corruption, waste and bureaucracy within the Party, government, the military and grass-root organizations; the latter dealt with bribery, tax evasion, theft of state property, cheating on government contracts and stealing of economic information, as practiced by owners of private industrial and commercial enterprises.

[5] Wu Xun, the protagonist in the movie of *The Life of Wu Xun* produced in 1951. Mao Zedong published an essay entitled "Attention Should Be Paid to the Discussion on *The Life of Wu Xun*" on May 20, 1951; Wu Xun (1838-1896), a poor farmer in Tangyi, Shangdong, dedicated his whole life to the establishing of schools by making money through beggary and suffering hardship and humiliation; Hu Feng (1902-1985), Chinese poet, literary theorist, writer and translator, was criticized for his writing "On the Literary Developments of Recent Years" published in 1954 and was arrested in 1955 and sentenced to 14 years in prison; in 1980 his wrong was redressed; Hu Shih, [see note 4, Chapter 6](#).

[6] "A sincere motive" and "a scheme," Ji refers to Mao Zedong's well-known statement about the nature of the Anti-Rightist Movement during the time of its evolvement.

[7] The Lushan Conference, a conference held by the Political Bureau of the CPC in Lushan, Jiangxi, a summer resort, in the summer of 1959 with the agenda of discussing the economic developments of the country.

[8] Ji means Mao Zedong.

[9] "The people of the whole country should learn from the PLA" and "The working

class must come to power in all walks of life," two quotations of Mao Zedong widely cited in the Cultural Revolution.

[10] For "Stinking Number 9," see [note 15, Chapter 5](#).

[11] Lao She (1899-1966), the penname of Shu Qingchun, styled Sheyu, a noted Chinese writer who graduated from Beijing Normal School in 1918 and went to London in 1924. He taught at the College of the Orient in London. In 1930 he returned to China. After 1949 he became vice president of China's Association of Literature and Arts. During the Cultural Revolution he was persecuted and committed suicide by drowning himself in Lake Taiping in central Beijing. His masterpieces include the novel *The Rickshaw Boy* and the play *Teahouse*.

贰拾 余思或反思

但是，我必须还要啰唆上一阵子。

我不能就到此住笔。

“文化大革命”结束后十六七年以来，我一直在思考有关这一次所谓“革命”的一些问题。特别在我撰写《牛棚杂忆》的过程中，我考虑得更为集中，更为认真。这可以算是我自己的“余思”或者“反思”吧。

我思考了一些什么问题呢？

首先是：吸取了教训没有？

世人都认为，所谓“无产阶级文化大革命”，既无“文化”，也无“革命”，是一场不折不扣的货真价实的“十年浩劫”。这是全中国人民的共识，决没有再争论的必要。在这一场空前绝后（我但愿如此）的浩劫中，我们人民在精神和物质两个方面所受的损失可谓大矣。这一笔账实在没有法子算了。不算也罢。我们不是常说，寻求知识，得到经验或教训，都要付出学费吗？我完全同意这个看法。可是，我们付出的学费已经大到不能再大的程度，我们求得的知识，得到的经验或教训在哪里呢？

我的回答是：没有，一点也没有。

我个人一向认为，“十年浩劫”是总结教训的千载一时的好机会，是亿金难买的“反面教员”。从这一个“教员”那里，我们能够获得非常非常多的反面的教训；把教训一转化，就能成为正面的经验。无论是教训还是经验，对我们进一步建设我们伟大的祖国，都是非常有用的。

可是，我们没有这样干，空空错过了这一个恐怕难以再来的绝好机会。有什么人说：“文革”已经过去了，可以不必再管它了。

因此，我思考的其次一个问题是：“文革”过去了没有？

我们是唯物主义者，唯物主义的真髓是实事求是。如果真想实事求是的话，那就必须承认，“文革”并没有过去。虽然从表面上来看，似乎已经过去了；但是，如果细致地观察一下，情况恰恰相反。你问一问参加过“文革”，特别是在“文革”中受过迫害的中老年知识分子，如要他们

肯而且敢讲实话的话，你就会知道，他们还有一肚子气没有发泄出来。今天的青年人情况可能不同。他们对“文革”不了解，听讲“文革”，如听海外奇谈。我觉得值得忧虑的正是这一点。他们昧于前车之鉴，谁能保证，他们将来不会干出类似的事情来呢？至于中老年受过迫害的知识分子，一提“文革”，无不余怒未息，牢骚满腹。我不可能会见百分之百的这样的知识分子，但我敢保证，至少绝大部分人是这样子。

至于为创建新中国立过功而在“文革”中遭受迫害的老干部，他们觉悟高，又能宽洪大度，可能同知识分子不同。我接触的老干部不多，不敢乱说。但是，我想起了一件小而含义深远的事儿，不妨说上一说。记得是在1978年，全国政协恢复活动后，我在友谊宾馆碰到一位参加革命很久、在文艺界极负盛名的老干部，“文革”前，我们同是全国政协社会科学组的成员，十多年不见，他见了我劈头第一句话就是：“古人说：‘士可杀，不可辱。’”“文革”证明了：“士可杀亦可辱。””说罢，哈哈大笑。他是笑呢，还是哭？我却一点也笑不起来。在这位老干部心中，有多少郁积的痛苦，不是一清二楚了吗？

有这种想法的，决不止这个老干部一人。我个人就有这样的想法。而且，我相信，中国的知识分子，也就是古代的所谓“士”，绝大部分人都会有这种想法。“士可杀，不可辱”，这一句话表明了中国自古以来就有这种传统。我们比起外国知识分子来，在这方面更为敏感。

我不禁想起了中国知识分子这一类人，既不是阶级，也不是阶层，想起了他们的历史和现状。在封建社会里，士列在士农工商之首，一向是进可以攻，退可以守，在社会上有崇高的地位。予生也晚，《儒林外史》中那样的知识分子，我没有见到过。军阀混战时期和国民党统治时期的知识分子，我是见到过的。不说别的，专就当时的大学教授而言，薪俸优厚，社会地位高。他们无形中养成了一种高人一等的优越感。存在决定意识，这是必然的。他们一般都颇为神气，所谓“教授架子”者便是。到了我当教授的时候，情况大大改变。国民党统治已到末日，通货膨胀达到了惊人的程度。教授实际的收入少得可怜。但是，身上那一件孔乙己的大褂还是披着的，社会地位还是有的。

刚一解放，我同大部分教授一样，兴奋异常，觉得自己真是站起来了，自己获得了新生了。我们高兴得像小孩，幼稚得也像小孩。我们觉得“解放区的天是明朗的天”，我们看什么东西都红艳似玫瑰，光辉如太阳。

但是，好景不长。在第一个大型的政治运动三反五反思想改造运动中，我在“中盆”里洗了一个澡，真好像是洗下来了不多污浊的东西，觉得身轻体健，尝到了思想改造的甜头。可是后面跟着来的政治运动，一个紧接一个，好像是有点喘不过气来。批判武训，批判《早春二月》^[1]，批判胡风，批判胡适，再加上肃反等等，马不停蹄，应接不暇。到了1957年的反右斗争，达到了一个空前的高潮。我虽然没有被裹进去，没有戴什么帽子；但是时时处处，自己的精神都处在极度紧张的状态中，日子过得并不愉快。从我的思想深处来看，我当时是赞成这些运动的，丝毫也没有否定的意思。在反右期间，我天天忙于参加批判会——我顺便说一句，当时还没有发明“喷气式”，批判会不像“文革”中那么“好看”——忙于阅读批判的材料。但是，在我心里却逐渐升起了一片疑云：为什么人们的所作所为同在那前后发表的几篇“最高指示”，有些地方显得极不合拍呢？即使是这样，我对那一句最有名的话“是阳谋，不是阴谋”，并没有产生怀疑。

反右以后，仍然是马不停蹄，一个劲地搞运动，什么“拔白旗”等等。庐山会议以后，极“左”思想已经达到了顶点，却偏偏要来一个反右倾。三年困难时期，我自己同其他老知识分子一样，尽管天天饿肠辘辘，连半点不满意的想法都没有，更不用说说怪话了。连全国人民的精神面貌都是非常正常的，向上的。谁能说这样的人民、这样的知识分子不是世界上最优秀的呢？

1966年开始的所谓“无产阶级文化大革命”是形势发展的必然结果。事后连原新北大公社的东语系一个教员都告诉我说，我本来能够躲过这一场灾难的。但是，我偏偏发了牛劲，自己跳了出来，终于得到了报应：被抄家，被打，被骂，被批斗，被关进了牛棚，差一点连命都赔上。我当时确曾自怨自艾过。但是现在我却有了另一个想法。“文革”是一个千载难逢的“盛事”。如果我自己不跳出来，就决不可能亲自尝一尝这一场“革命”的滋味，决不可能了解这一场灾难究竟是什么样子。那将是绝对无法挽回的极大的憾事。

关在牛棚里的时候，我看了很多，也想了很多。我逐渐感到其中有问题：为什么一定要这样折磨知识分子？知识分子身上毛病不少，缺点很多，但是十全十美的人又在哪里呢？我当时认识不高，思考问题肤浅片面。我没有责怪任何人，连对发动这一场“革命”的人也毫无责怪之意。我只是一个劲地深挖自己的灵魂，用现在间或用的一个词儿来说，就是“原罪感”。这是用在基督教徒身上的一个词儿，这里不过借用一下

而已。

别的老知识分子有没有这个感觉，我不知道，它表现在我身上却是很具体的。解放前，我认为一切政治都是肮脏的，决心不介入。我并不了解共产党，只是觉得国民党有点糟糕，非垮台不行。解放以后，我上面说到我在思想改造运动中的收获，其中心就是知道了并不是所有的政治都是肮脏的，共产党就不是。同时又觉得自己非常自私自利：中国人民浴血抗战，我自己却躲在万里之外，搞自己的名山事业。我认为自己那一点“学问”，那一点知识，是非常可耻的，如果还算得上“学问”和知识的话。有很长一段时间，我称自己为“摘桃派”，坐享胜利的果实。

那么，怎么办呢？

我有很多奇思怪想。我甚至希望能再发生一次抗日战争，给我一个机会，让我来表现一下。我一定能奋力参战，连牺牲自己的性命，我都能做得到。我读了很多描绘抗日战争或革命战争的小说，对其中那一些共产党员和革命战士不怕牺牲的精神，我崇拜得五体投地。我自己发誓向他们学习。这些当然都是幻想，即使难免有点幼稚可笑，然而却是真诚的。这能够表现出我当时的精神状态。

谈到对领袖的崇拜，我从前是坚决反对的。我在国内时，看到国民党人对他们的“领袖”的崇拜，我总是嗤之以鼻。这位“领袖”，“九一八”事件后我作为清华大学的学生到南京请愿时见过，他满口谎言，欺骗了我们。后来越想越不是味儿。我的老师陈寅恪先生对此公也不感兴趣。他的诗句“看花愁近最高楼”，可以为证。后来到了德国，正是法西斯猖獗之日。我看到德国人，至少是一部分人，见面时竟对喊：“希特勒万岁！”觉得异常可笑，难以理解。我认识的一位不到二十岁的德国姑娘，美貌非凡。有一次她竟对我说：“如果我能同希特勒生一个孩子，那将是我毕生最大的光荣！”我听了真是大吃一惊，觉得实在是匪夷所思。我有一个潜台词：我们中国人聪明，决不会干这样的蠢事。

回国以后，仅仅隔了三年，中国就解放了。解放初期，我同其他一些老知识分子心情相同，我们那种兴奋、愉快，上面已经讲了一点。当时每年要举行两次游行庆祝，五一和十一，地点都在天安门。每次都是凌晨即起，从沙滩整队步行到东单一带的小胡同里等候，往往要等上几个小时。10点整，大会开始。我们的队伍也要走过天安门前，接受领袖的检阅。当时三座门还没有拆掉。在三座门东边时，根本看不到天安门城楼上的领导人。一转过三座门，看到领袖了，于是在数千人的队伍中

立即爆发出震天动地的“万岁”声。最初，不管我多么兴奋，但是“万岁”却是喊不惯，喊不出来的。但是，大概因为我在这方面智商特高，过了没有多久，我就喊得高昂、热情，仿佛是发自灵魂深处的最强音。我完完全全拜倒在领袖脚下了。

我在上面简短地但是真诚地讲了我自己思想转变的过程。一滴水中可以见大海，一粒沙中可以见宇宙。别的老知识分子可能同我差不多，至少是大同而小异。这充分证明了，中国老知识分子，年轻的更不必说了，是热爱我们伟大的祖国的。爱国主义是几千年来中国知识分子的传统。同其他国家的知识分子比较起来，这是中国知识分子的一个突出的特点。

“大梦谁先觉，平生我自知”，我在梦觉方面智商是相当低的。一直到了“十年浩劫”，我身陷囹圄，仍然是拥护这一场浩劫的。西谚说：“一切闪光的东西不都是金子。”在这期间，我接触到派到学校来支“左”的解放军和工人。原来这都是我膜拜的对象。“全国人民学习解放军”，“工人阶级必须领导一切”，我深信不疑，奉行唯谨。可是现在一经接触，逐渐发现他们中有的人政策观念奇低，而且作风霸道，个别的人甚至违法乱纪。我头上仿佛泼上了一盆凉水，顿时清醒过来。“金无足赤，人无完人”的道理，我是明白的。可是这样的作风竟然发生在我素所崇拜的人身上，我无论如何也没有想到。我们唯物主义者应该实事求是，光明磊落；花言巧语，文过饰非，是绝对不可取的。尽管我们知识分子身上毛病极多，同别人对比一下，难道我真就算是“臭老九”吗？

我在上面啰哩啰唆讲了一大篇，无非想说，“文革”整知识分子，是完全没有道理的，是怎样花言巧语也掩盖不了的。对广大的受过迫害的知识分子来说，“文革”并没有过去。再拿我自己来做个例子。我一方面“庆幸”我参加了“文化大革命”，被关进了牛棚，得以得到了极为难得的经验。但在另一方面，在我现在“飞黄腾达”到处听到的都是赞誉溢美之词之余，我心里还偶尔闪过一个念头：我当时应该自杀；没有自杀，说明我的人格不过硬，我现在是忍辱负重，苟且偷生。这种想法是非常不妙的。既然我有，我就直白地说了出来。可是我要问：有这种想法的难道就只有我季羨林一人吗？

这就联系到我思考的第三个问题：受害者舒愤懑了没有？

这个问题十分容易回答。根据我上面的叙述，回答只有两个字：没有！

要谈清楚这个问题，还要从回顾过去谈起。解放初期我和其他老知识分子的情况，我在上面已经写了一点，现在再补充一下。补充的主要是从海外归来的游子。远居海外的华侨，亲身感受到解放前后自己处境的剧烈变化。他们深知这一切都与祖国的解放有密不可分的联系，一向爱国的华侨，现在爱国热情蓬勃激荡，为此前所未有。华侨中青年人们纷纷冒万难回到了祖国。他们同国内的知识分子一样，看一切都是红艳如玫瑰，光辉似太阳，愿意为祖国的建设事业贡献自己的一切。此外，一些在国外工作和讲学的中国学人，也纷纷放弃了海外一切优厚的生活和研究条件，万里归来，其中就有后来在“文革”中自沉的老舍先生。他们个个意气风发，斗志昂扬，认为祖国前程似锦，自己的前途也布满了玫瑰花朵。

然而，曾几何时，情况变了，极“左”思潮笼罩一切，而“海外关系”竟成诬陷罗织的主要借口。海外归来的人，哪里能没有“海外关系”呢？这是三岁小儿都明白的常识。然而我们的一群“左老爷”，却抓住这一点不放，什么特务，什么间谍，这种极为可怕的帽子满天飞舞。弄得人人自危，个个心惊。到了“文化大革命”，更是恶性发展。多少爱国善良的人遭受了不白之冤！被迫害而死的不必说了。活着的也争先恐后地出走。前一个争先恐后地回国，后一个争先恐后地离开，对比何等地鲜明！我亲眼目睹的这种情况可谓多矣。这对我们祖国有多么大的危害，脑筋稍微清醒一点的人都会知道的。被迫出国的人，哪一个不是满腔悲愤，再加上满腔离愁，哪一个儿女愿意离开自己的父母！然而他们离开了。

留在国内的知识分子和被迫离开知识分子，哪一个人舒过愤懑呀？

若干年前，出现了一些所谓“伤痕文学”。然而据我看，写作者多半是年轻人。他们并没有多少“伤痕”。真正有“伤痕”的人，由于种种原因，由于每个人都不同的原因，并没有把自己的愤懑抒发出来。我认为，这不是一个正常的现象，而是其中蕴含着一些危险的东西，不利于我们祖国的胜利前进。

我们不是十分强调安定团结吗？我十分拥护这个提法。没有安定团结，我们的经济很难搞上去，我们的政治也很难发挥应有的作用。然而我们需要的是真正的安定团结，而不是虚假的安定团结。在许多知识分子，特别是老知识分子还有一肚子气的情况下，真正的安定团结从何而来呢？

根据我个人的观察，尽管许多知识分子的愤懑未舒，物质待遇还只能说是非常菲薄，有时难免说些怪话；但是他们的爱国之心未减，“不用扬鞭自奋蹄”。说这样的人是“物美价廉，经久耐用”，完全是符合实际情况的。然而却听说有人听了很不舒服。我最近还听说，有一位颇为著名的人物，根据苏联解体的教训，说什么：中国知识分子至今还是帝国主义皮上的毛。这话只是从道听途说中得来的。但是，可能性并非没有。说这种话的人，还有一点是非之心吗？还有一点“良知”吗？我深深感到忧虑。

如果这样的人再当政，知识分子无噍类矣。

我思考的最后一个问题是：“无产阶级文化大革命”为什么能发生？

兹事体大，我没有能力回答。有没有能回答的人呢？我认为，有的。可他们又偏偏不回答，好像也不喜欢别人回答。窃以为，这不是一个唯物主义者应抱的态度。如果把这个至关紧要的问题坦诚地、实事求是地回答出来，全国人民，其中当然包括知识分子，会衷心地感谢，他们会放下心中的包袱，轻装前进，表现出真正的安定团结，同心一志，共同戮力建设我们的社会主义社会，岂不猗欤休哉！

我们既不研究，“礼失而求诸野”，外国人就来研究。其中有善意的，抱着科学的实事求是的态度，说一些真话。不管是否说到点子上，反正真话总比谎话强。其中有恶意的，怀着其他的目的，歪曲事实，造谣诬蔑，把一池清水搅混。虽然说“蚍蜉撼大树，可笑不自量”，但是毕竟不是好事。

何去何从？我认为是非常清楚的。

我的思考到此为止。

我要啰唆的也啰唆完了。

[1] 《早春二月》由谢铁骊执导，根据柔石同名小说1964年拍成电影。公映后即与《北国江南》等影片被视为“宣扬资产阶级人性论”，遭到全国性批判。“文革”后恢复名誉。作者此处将《早春二月》与50年代初批判电影《武训传》并提，可能记忆有误。

21 AFTERWORD

From March 4, 1988, to April 5, 1989, my writing of this book was off and on until I finally finished the first draft. Early this spring I was seized by a whim and decided to transcribe it for a final draft. By June 3, three months later, the work was done. But the final draft is quite different from the first, almost totally rewritten.

Originally I laid down a rule for myself; in the course of writing, I would avoid making scathing remarks, suppress my anger and try to provide an objective account of reality. However, I am an emotional human being. As the writing went on, rage surged inside me and gradually ran out of control; tears welled up in my eyes and biting words kept appearing on the paper. I was not in a position to check my feelings. So I let the rest of the writing take its own course. Otherwise I would have told lies. Eventually I revised the writing and came up with a final draft that was studded with fewer harsh remarks and characterized by subdued fury. In fact I acted against my will by making such changes. But, to avoid stirring up trouble and offending some people, moderation was the only alternative left with me.

In the book I have mentioned many people. A careful reader will notice three different methods that I have used to narrate their stories. In some cases I did not give the names of the persons concerned. In others I only gave the last names of the persons, dropping the first names. In the rest I listed the whole names. Thus I protected some people's identities in one way or another. In the case of those whom I thought were considerably harmful to a socialist society, I revealed the full names so that the scum would be disgraced in history, in an effort to ring warning bells to forthcoming generations.

However, I do not mean to deliberately hurt any category of people. I vow that my accounts are presented with honesty. After the Cultural Revolution, I was restored to the position of department head. Later I was promoted and "rode high" in the national institutions

of power. Therefore I do not lack avenues for revenge.

I hope the people whom I touched upon directly or inadvertently in my memoir will understand that I have written with a good intention to present a true chapter of history. My friendship with them, established either before the Cultural Revolution or strengthened after it, should be maintained.

I calculate that the academic works I have produced in my life total about eight million words, including both original writings and translations; eighty percent of them were written after the Cultural Revolution. If I had "taken my own life against the people" by committing suicide in the Revolution, I would have been unable to be so academically fruitful.

Is this result something that deserves honor or contempt? I can't figure out the answer now. I will let this concern drop.

Completed on June 3, 1992

贰壹 后记

我从1988年3月4日起至1989年4月5日止，断断续续，写写停停，用了一年多的时间，为本书写了一本草稿。到了今年春天，我忽然心血来潮，决意把它抄出来。到今年6月3日，用了大约三个月的时间抄成定稿。草稿与定稿之间差别极大，几乎等于重写。

我原来为自己定下了一条守则：写的时候不要带刺儿，也不要带气儿，只是实事求是地完全客观地加以叙述。但是，我是一个有感情的活人，写着写着，不禁怒从心上起，泪自眼中流，刺儿也来了，气儿也来了。我没有办法，就这样吧。否则，我只能说谎了。定稿与草稿之间最大的差别就在于，定稿中的刺儿少了一点，气儿也减了一些。我实际上是不愿意这样干的，为了息事宁人，不得不尔。

我在书中提到的人物很不少的。细心的读者可以看出有三种情况：不提姓名，只提姓不提名，姓名皆提。前两种目的是为当事人讳，后一种只有一两个人，我认为这种人对社会主义社会危害极大，全名提出，让他永垂不朽，以警来者。

无论对哪一种人我都没有进行报复，事实俱在，此心可质天日！“文革”后，我恢复了系主任，后来又“升了官”，在国家权力机构中也“飞黄腾达”过。我并不缺少报复的能力。

我只希望被我有形无形提到的人对我加以谅解。我写的是历史事实。我们“文革”前的友谊，以及“文革”后的友谊，我们都要加以爱护。

现在统计了一下，我平生著译的约有八百万字，其中百分之七八十是“文革”以后的产品。如果“文革”中我真遂了“自绝于人民”的愿，这些东西当然产生不出来。

这对我是一件大幸呢？还是不幸？我现在真还回答不上来——由它去吧。

1992年6月3日写完

APPENDIX THE AUTOBIOGRAPHY OF JI XIANLIN

I was born on August 6, 1911, in the village of Guanzhuang, Qingping county (the city of Linqing today), Shandong, China. Our family was probably better off for some periods of time. But by the time when I was born, my grandparents died and my family was impoverished and reduced to the poor class. My father and his two brothers lived an orphaned, helpless life; later one of the brothers was given to a strange family and my father, along with the other brother, struggled to get by with scanty food and clothing and often found themselves gathering dry dates fallen from the trees to relieve hunger.

Before I turned six I had a tutor, Mr. Ma Jinggong. I can't remember what he taught me, probably a dozen of characters. At six I left home for Jinan to live with my uncle; my uncle went there to make a living earlier, driven in desperation, and finally established himself after going through tons of difficulties and setbacks. From then on I started to go to school formally. I first studied in a private tutor school and learned to read the classics like *A List of One Hundred Surnames*, *The Thousand-Character Essay*, *The Three-Character Classic*, and "The Four Books."^[1] When I started my primary school I impressed the teacher by knowing the character "mule" and was permitted to skip the first three grades.

At Xinyu Primary School I once won a third place in the top category of learning and a first place in the second category of learning. I was not among the best students and did not work hard with mediocre academic performances in the last three years of primary schooling. One thing deserves a note. I began learning English then. At that time the primary school did not offer English classes, so I learned English in the evening in my leisure time. I did not take English classes for long, so I only learned a smattering of grammar and vocabulary. I was often baffled with the question, "Why are the

words 'be' and 'have' both called verbs though neither of them means action?" Gradually I got to know it was due to a sloppy translation into Chinese.

I never thought, with this smattering of English, that I would benefit later by skipping half a grade of the middle school when applying to it. I knew the score about my capabilities and someone said I was too knowledgeable of myself. No matter what others' opinions are, one thing is for sure that I had no lofty ideals in my early years. At that time Shandong Provincial Number One Middle School was ranked the top in the province. Considering myself as dumb as a toad which should reject the desire for a taste of a swan, I didn't have the guts to apply to it. Instead I applied to the "poor" Zhengyi School. But this school gave an English entrance examination by requiring the applying students to translate the Chinese sentences into English, "Recently I've got a new book and already read a few pages. But I do not understand the meaning of some of the words." Though I did the complete translation, I pondered long over the word "already." As a result I was admitted, not into the first grade but the first and a half grade.

At the Zhengyi Middle School I was not a diligent student either, and my academic performance stuck around the last few places of the top category and the first few places of the second category, ranking in the upper middle tier. Located near Lake Daming of the city, our school was scenic. After school I would run to the lake shore behind, shrimping and angling for frogs, never bothering about what learning held in stock. But my uncle placed high expectations on me and had strict requirements. He personally taught me and let me read *The Kezhi Reader*, a collection of essays on the Confucian philosophy. He was not well educated but extremely intelligent and became knowledgeable through self-schooling on classics. He was good at composing poems and writing essays. He was also able to engrave seals. He had no son, so he treated me as his son with all his aspirations. He showered both discipline and affection on me and exerted great influence on the path I took. All that I have learned

stemmed from his guidance and care, which I will never forget. According to his requirements, in the afternoon right after school, I went to participate in an extracurricular study program of classical Chinese and learned to read *Zuo's Spring and Autumn*, *Intrigues of the Warring States*, *Records of the Grand Historian*, etc.^[2] Certainly we paid a separate payment to the tutors. In the evening I also had to learn English at the Shangshi English Society until ten before going home. Such life lasted for eight years. I did not feel any pressure, nor was I aware of any long-term significance from it. My main interest was still catching fish and shrimp. Now as I recall today, what a solid learning foundation I laid in those years!

In terms of our courses at the middle school, the curriculum includes Chinese, English, mathematics, physics, biology, geography, and history. In the course of Chinese we read books such as *Guwenguanzhi* and had to recite the essays from it.^[3] For English classes we read *Fifty Famous Stories Retold*, *One Thousand and One Nights*, *Tales from Shakespeare*, *Nesfield's English Grammar*, etc. In Chinese composition classes we wrote essays in classical Chinese. In English classes we also wrote essays. Out of school I read many old-style novels on my own, in addition to taking classes in the extracurricular learning programs, such as *Three Kingdoms*, *Journey to the West*, *The Creation of the Gods*, *Tales of the Tang Kingdoms*, *Stories of Yue Fei*, *The Legend of Ji Gong*, *Tales of Peng Gong*, *Three Heroes and Five Gallants*, etc.^[4] *The Story of the Stone* feels particularly flat on me. I also read other fictions, such as *The Western Chamber* and *The Plum in the Golden Vase*.^[5] I had no idea of what influence I had drawn from these books, but I was certainly not spurred to engage in robbing and womanizing.

After middle school I went on at Zhengyi for half a year of high school and then transferred in 1926 to the newly founded High School Affiliated with Shandong University. The president of Shandong University, Wang Shoupeng, once won the title of Number One of the Highest Imperial Examination in the early Qing Dynasty (1616-1911) and was currently head of the provincial department of education. He

advocated reading Confucian classics. I had two high school teachers who taught Confucian classics; one of them used to be a member of the Imperial Academy or a successful candidate in the Highest Imperial Examination, and another was styled "Big Qing Country," an old diehard. I have forgotten the names of both teachers. They did not bring textbooks to class but could thoroughly memorize them as well as the notes, when they taught *The Book of History* and *The Book of Changes*. It was even said that they could recite them backwards. My teacher of Chinese was Mr. Wang Kunyu, a classical literary writer of the School of Tongcheng who published a collection of essays and later taught as instructor at Shandong University.^[6] I was immensely influenced by him. I remember the assigned topic for my first essay was "A Response to *A Biography of Xu Wenchang*."^[7] To my surprise my composition won kudos from him as he noted, "Direct, precise, expressive and clear." Immediately I took a fancy to the Chinese classical prose. I managed to get and read *A Collection of Essays of Han Changli*, *A Collection of Essays by Liu Zongyuan*, as well as writings by Ouyang Xiu and Three Su's, etc.^[8] Speaking about English I had the language background obtained from the Shangshi English Society, so I was unrivaled by other students. Another point to make is that I took German lessons too.

As mentioned previously I took the final examinations in the first semester and won the first place of the top category with an average score of more than 95. So I got a prize from Number One Wang. He wrote me a couplet and gave me a fan as prizes, which definitely overwhelmed me with surprise. From then on I started to study hard. My motive, if it is an issue of concern, was not high-sounding, nothing more than saving my face. I simply wanted to keep myself from falling to the second place of the top category. That's it. In all three years of my high school I won six first places of the top category in all six examinations, a "Six-time Champion," which absolutely sated my vainglory.

Did my success change me from a person with no great aspirations? Not necessarily. I remained near-sighted and worldly

inclined and never resolved to accomplish meritorious deeds, achieve high ideals, engage in a lifelong scientific career and become somebody as a scholar. What I longed for was graduating from college and landing a dependable job, in the harsh circumstance of living, and leading a mediocre, eventless life through to my last day.

In 1929 I went to the Shandong Provincial Jinan High School, in which I studied for one year. This one year turns out to be a crucial stage in my life, particularly in terms of Chinese. There are a few nationally known writers, Hu Yepin, Dong Qiufang, Xia Laidi, Dong Meikan, etc. The former two used to be teachers of the courses I took. Mr. Hu fervently promoted modern literature and arts, that is, the proletarian literature and arts. Inadvertently I got to read some writings of Marxist theories on literature and arts, which were translated from Japanese. I once wrote an article "The Mission of Modern Literature and Arts," which, I remember, was completed by gathering notes from various writings. To my surprise Mr. Hu loved it and wanted to publish it in the journal that he edited. However, before my proletarian literature and arts dream was turned into reality, he was listed as a wanted man by the KMT reactionaries. He fled to Shanghai and was executed soon. His teaching successor was Mr. Dong Qiufang (with Dong Fen used as his pen name). By this time I shifted to the writing style of the vernacular, which received high praise from Mr. Dong. He considered me, along with another student Wang Lianbang, as the "Top Writers of the School." I was tremendously inspired. I've kept writing for fifty years and even would not put down my pen at an advanced age now. All the inspiration and encourage came from Mr. Dong, which I will never forget.

By now I had finished all courses of Confucian classics, and the Chinese class was also primarily in the vernacular. But I did not slight my learning of classical literary works. I continued to read extensively on a wide range of genres. I read many works by poets and tuned poem writers, Tao Yuanming, Du Fu, Li Bai, Wang Wei, Li Shangyin, Li Yu, Su Shi, Lu You, Jiang Kui and so on, which positively impacted my later works.

In 1930 I graduated from high school and went to Peking for college. Due to the reasons I discussed above, I was completely rid of the low self-esteem and became rather conceited. At that time getting enrolled into a prestigious university was very difficult since the admission rates were low. In order to increase the admission opportunity, my class of over eighty students each applied to seven to eight colleges. But I only applied to Tsinghua University and Peking University, which both admitted me. After a serious consideration I chose Tsinghua because I believed it offered more opportunities for going overseas for further studies. In deciding on the major I decided on the Department of Western Literature. This department had three specialized directions, English, German and French. A chosen language required four years of undergraduate study, which would be in the major of the student. In fact it was formality because students learned English from the primary school but learning German and French started from scratch, the alphabet. Most of the professors were foreigners, and, no matter which country the professor was from, every one spoke English in class. Even Chinese professors spoke English for most of the time. Most of the courses were also on English literature and all the texts were in English, such as *A European History of Literature*, *Classical European Literature*, *The Literature of the Middle Ages*, *Renaissance Literature*, *Literary Criticism*, *Shakespeare*, *British Romantic Poets*, *Contemporary Fictions*, *Introduction to Literature*, *The Literary and Artistic Psychology (Aesthetics)*, *A Western History*, *Freshman Chinese*, *Freshman and Sophomore English*, etc.

With a major in German I had three professors in four years, two German and one Chinese. Despite my gratitude toward them I have to be frank that they lacked passion for teaching. During this course of four years the Chinese professor only spoke Chinese in class, while the German professors spoke English, so German was never a language for instruction. Consequently, my four years of learning German left me with the limited language competence of reading as opposed to that of listening and speaking. My senior thesis was entitled "The Early Poems of Hölderlin" under the advice of Professor Ecke.

Among all courses I took, I benefited the most, not from those core courses, but from one elective and one audited course: "The Literary and Artistic Psychology" taught by Zhu Guangqian, and "Translated Works from Buddhist Classics" taught by Chen Yinke. These two courses have greatly impacted my later academic career. My research in comparative literature and theories of literature and arts are influenced by Professor Zhu, and my inspirations for studies in the history of Buddhism, Sanskrit and central Asian language of ancient times are certainly derivative of Professor Chen's instructions.

Moreover, I did not give up on my writing of essays at leisure time and continued to publish a few articles in some of the influential journals of the time. Those publications, to my surprise, brought me unexpected offshoots. In 1934 when I graduated from Tsinghua and applied for jobs, I was first not successful. Then I received the invitation with a job offer from Song Huanwu, principal of my alma mater, the Shandong Provincial Jinan High School, to return to the school and teach Chinese. Those few essays I had published turned me into a writer, and an unstated assumption by then was that a writer was able to teach Chinese. I felt on edge thinking, "How could I teach Chinese?" As the autumn was around the corner and there was still no sign of landing a job in sight, I decided to hack it through at all risks with the thought that "you trust me and then I would not turn you down." A college graduate of Western literature, I became a high school instructor of Chinese. With *A Comprehensive Chinese Dictionary* and a smattering of knowledge of the classics I started to teach. At the age of 23 I had a few students in my class, who were three or four years my senior, and had a background of private tutor schooling in my hometown. I was walking on thin ice.

I taught one year until 1935 when heaven gave me a good opportunity. Tsinghua University signed an agreement with Germany on a student exchange program. After I applied and took the examinations I was accepted. In the depths of the autumn that year I went to the University of Gottingen, Germany, and began my graduate study overseas. I majored in the study of India with a minor in English

linguistics and Slavic languages. I studied Sanskrit, Balinese, Russian, Slavic, Arabic, etc. I also took many other courses. The professors who taught me include Sieg, Waldschmidt and Braun.

It was in the deadlock of World War II. Germany was blockaded and no food could be transported into it with alarming shortages of food and clothing. About four or five years I sustained unbearable hunger, as my stomach groaned and airplanes rumbled overhead in bombing raids. I missed my country and family. "As the war has raged for six years, a letter from home is more valuable than hundreds of millions of *liang* of gold."^[9] In fact I had not received any letter from my family. In such adverse circumstances I pressed forward with my learning. In 1941 I passed my oral examination and dissertation defense and earned my Ph.D. with honor. The title of my dissertation is "The Grammatical Gender of Prescriptive Verbs Used in the Rhapsody of Praise in *Grand Events*."

During these hard times I was deeply touched by my German teachers' dedication to their teaching and their attitude toward Chinese students. Not only did they show no shade of discrimination against me, a foreign student with no local connections at all, but they loved and protected me with all their heart and guided me through my learning. When Professor Waldschmidt was enlisted in the military, Professor Sieg, in his advanced years, took over the teaching. Actually I was the only Ph.D. candidate that he needed to teach. He withheld nothing of his specialty in lecturing to me. He taught me *Rig Veda*, *Panini's Grammar*, Patanjali's *Mahabhasya* and *The Adventures of the Ten Princes*. In addition he insisted that he teach me the language of Tukhara, on which he was the top authority in the world, and he was a master of this abstruse language. At that time I was up to my neck in working and also suffered from the obsessive-compulsive disorder, both physically and mentally weary. But seeing the old man so warm-hearted I agreed to learn the language from him. Along with me in the study was a Belgian student, Dr. W. Couvreur, who later became a famous professor.

In the light of their work my German teachers are all models of

passion, seriousness, meticulousness and rigorousness. When writing articles they would repeatedly go through considerations, revisions and peer reviews before publication. German scholars are well-known for their "thoroughness" (Grundlichkeit), which profoundly impressed me. I have paled by comparison in my later work, due to the working circumstances, for which I feel ashamed as one of their students.

From 1937 I began teaching as an adjunct instructor of Chinese in the Department of Chinese at the University of Gottingen. The department was located on the second floor of an instructional building, a quiet place where nobody ventured around. The department library, famous in Europe, held a large collection of books, and many Sinologists came to do research. I had bumped into some of them, such as the well-known British scholar Arthur Waley and others. In this library I read a great deal of Chinese books, particularly in the areas of fictions and Buddhist Tripitaka, broadening my horizon of learning.

I had stayed at the University of Gottingen for ten years, until at the turn of the winter of 1945 I left there for Switzerland, in which I hung around for half a year. Toward the end of the spring of 1946, after almost a decade of living abroad, I returned to my country in the summer via France, Vietnam and Hong Kong.

My overseas graduate study, as well as the complete student life of mine, came to a close. I was thirty-five years old that year.

In the autumn of 1946 I came to Peking University, started to teach as professor and, at the same time, assumed the position of department head of Eastern Languages. I was recommended, by my teacher Chen Yinque, to Hu Shih, Fu Sinian and Tang Yongtong, for this position. By that time Peking University had regulations that returned Ph.D. holders from abroad should be granted the position of associate professor. Certainly I was not exceptional. Probably thanks to the articles I published in the journal of the Gottingen Institute of Sciences, I was soon notified by Mr. Tang that I was promoted to the position of professor. Since then it's been forty-two years and I have never left the university. During this period I worked thirty years as

department head and five years as deputy president of the university. In 1956 I was elected member of the China's Academy of Sciences. In the Cultural Revolution I was whisked away and denounced at torture sessions, which was certainly "complying with the current trend." Now at my late years I'm going on with teaching, researching and participating in social work, moving closer to but not quite there at the Babaoshan Cemetery. I have talked about some uneventful experiences of mine in the previous sections, which are not some heroic deeds to be touted about. Then I should stop here.

To my mind a few magazines and newspapers have solicited for my memoir for the purpose of letting me write about my experiences of teaching and research. What kinds of experience do I have to offer about my sixty years of learning and research? In general terms there are tons of them; but a specific recall gives no ghost of them to me. In a nutshell I may have some pedestrian discoveries to offer, but certainly not up to a caliber of a groundbreaker. No matter what pair of the mandarin ducks I have embroidered, I have done my best in accomplishing my mission, even though the tools of embroidery that I used for my work were far less phenomenal, those bronze and iron embroidery needles instead of the golden ones.

I remember a joke told by Lu Xun in one of his writings. A man loudly hawked his bedbug-eliminating formula in a fair. One buyer purchased from the seller a thickly wrapped wad of paper with the formula written inside. When he opened it, he found the formula written in two words, "Keep catching." Don't you claim the formula is wrong? Yes, it is correct. But it says nothing. My experience has asked me to condense the gist to two words, "Work hard." If you want to be more specific, I would say, "Seize the minute and seize the second and never slack up." It is true that inspiration strikes from time to time, but it is not inbred. Perspiration breeds inspiration.

The previous section highlights a generalization. In the following I will elaborate a few specific issues. I believe scientific research requires four accomplishments: (1) theory, (2) broad knowledge, (3) foreign languages, and (4) Chinese. Liu Zhiji (661-721) of the Tang

Dynasty (618-907) postulates that a historian should have talent, learning, and knowledge. Drawing on his idea I am blending it into my topic that theory relates to knowledge, broad knowledge to learning, and foreign languages and Chinese to talent. I will discuss them in detail in the following.

(1) Theory

Today speaking of theory often leads to a topic of Marxist theories. Such consideration is by no means incorrect. But a few notes must be relevant. First, Marxism is developing through history and should not be taken as the dogma. Second, Marxism should not be prescribed as something mysterious and daunting; it can be criticized and rebutted. Personally I believe the quintessence of Marxism is materialism and dialectics. The approach of materialism is based on the seeking of truth from facts. Seeing yellow as yellow is a materialist perspective; seeing yellow as black instead of yellow is an approach of metaphysics. Things are so simple and straightforward. Philosophers have their legitimate rights to explore and elaborate theories. We laymen should not necessarily feel bound with the same mission. With respect to dialectics a new perspective can be helpful. Issues should not be viewed in an isolated, stereotyped fashion; inter-relations of the multi-facets should be taken into account and laws of evolution should be analyzed. Such understanding of the developments of things, as elementary as that of kindergarteners, probably paints a picture closer to reality.

Apart from Marxism it is beneficial to read works written by philosophers, as well as their approaches of perceiving things, of the frequently derogated metaphysics of ancient times in the history of China and other countries. I have a strange idea that there is no pure materialistic philosopher to a one hundred percent degree, nor such a metaphysical philosopher, in society. It is like the impossibility of obtaining a vacuum because an absolute vacuum does not exist on the earth. One ancient Chinese saying goes like this, "The wisest man may outline one thousand schemes but at least one of them must be flawed," which just keeps to the point. Therefore the often disparaged

metaphysical philosophers have quite a few worthy ideas that we should study. We should never take the same simplistic and dogmatic approach as we did in the past and tag them with the label "metaphysics," without purification.

(2) Broad Knowledge

Probably no one is opposed to the idea of broad knowledge. It is because your research area can be very narrow and specific, but you cannot be far-sighted and your research cannot go to the depth of discovery unless you have laid a foundation with broad knowledge. It is common knowledge, unnecessary to be elaborated with proof. Here what I want to say is that we, workers of liberal arts and social sciences, should also be acquainted with science and technology and it would even be better to excel in one area of them. The current academic development is increasingly blurring the watersheds among disciplines, and marginal and cross disciplines are mushrooming. The conventional closing-up and keeping confined to one's own subject, as "Close neighbors do not contact each other though their cocks' crowing and dogs' barking can be heard," will certainly bring one to a dead end. In addition an open-arms embrace should be maintained in learning and research toward different schools of thought being currently popularized in the West, no matter how odd and absurd they appear to you, at least to keep contact and attain a general understanding, instead of indiscriminately accepting or rejecting them.

(3) Foreign Languages

The importance of foreign languages can never be over-emphasized. If a research note were presented here, I would be doing something like drawing a snake and then adding feet to it. I'm only stressing one point. Today's world situation has shown English is the most important foreign language and has become de facto a language of the world. We must have a good command of it, not only able to read and translate but also able to listen, speak and write. Today if one is only capable of writing papers in Chinese he or she will not be

able to go abroad and communicate with scholars of other countries. The inability to listen and speak English deprives one of opportunities for attending international conferences. With this urgent situation pressing on us we cannot but seriously take the issue into account.

(4) Chinese

Bringing up this topic may give rise to some considerations of the intention as invalid or absurd. "Am I unable to speak Chinese?" "Am I unable to write in Chinese?" Yes, you're able to speak and write in Chinese. But when looking closely you must admit the public command of Chinese is quite unsatisfactory. A glance over any newspapers of any day and magazines published will surely show misspelled words and faulty sentences. I more and more feel that it is not an easy job to write a correct, clear-cut and vivid essay. To achieve this goal will definitely take some painstaking commitment. I even believe it will be more difficult to take one step forward upon mastering the intermediate Chinese than to learn a new foreign language. Only when we see this reality can our command of Chinese be improved and our writing gradually be cleared of misspelling and erroneous sentence structures.

The four issues I talked about above are rehashed topics, hackneyed and unoriginal old sayings. However, doesn't greatness often stem from mediocrity? My ideas, pretty much like the joke of "keeping catching" in Lu Xun's writing that I mentioned earlier, look bland but are actually at once practical and feasible. I thought I should share my humble opinions with the reader instead of keeping a hoard of thoughts to myself. So I'm writing about it like no more than an old country loggerhead showing himself off.

In the following I will talk about guidelines for scientific research. Seventy years ago Hu Shih proposed, "Liberal postulate theories but rigorously proceed with evidence." I believe it is an irrefutable and universally correct idea, which holds up in the history of both sciences and social sciences. In the past prevailing periods of dogma and metaphysics, this guideline underwent years of endless denouncement.

I was totally confounded. Can any scholar get rid of postulating and proving with evidence? To be liberal means overstepping the boundary of the predecessor, challenging the authority, casting views beyond, sweeping stretched out waters of concern, seeing with the vision of innovation, hacking through untraveled paths, proposing one's own postulates, or even necessarily fantasizing and producing bizarre thoughts. Without such grit one would only slip into a conventional groove, be stuck in a rut, see in the eye of the near-sighted mouse, and rehash others' sentences, with no chance of breaking fresh ground and making advances in research. Isn't this point self-evident and does it need a further backup of evidence?

In a nutshell I would like to hammer home the message: (1) postulate ideas, and (2) be courageous. Success cannot be achieved without taking either of the two actions.

But, in postulating audacious theories it is also recommended to prove them with rigorous evidence. A postulate, once put forth by anyone, can never completely fit into real circumstances; it usually needs a process of revision. We all have such experience that we suddenly hit upon an idea, believably "a divine stroke" and "a spark of talent," and are overjoyed. However, it may not be reliable. Its validity counts on the backup of evidence. Searching for evidence is done with care and objectivity, and impatience is not to be accepted and rashness is even more a greasy mark to be wiped off. Efforts should be made in multi-dimensions and from different approaches so as to test the soundness of the postulate or examine the degree to which it is valid or the parts of it that are true while the rest is untrue. In achieving these goals one must seek truth from facts and eliminate any flare of selfishness and vestige of deviation from reality. Once one postulate is falsified by the evidence, it must be immediately discarded without delay no matter how wonderful and stimulating it first appears; if one part is incorrect, then that part should be discarded; if all parts are incorrect, then all of them should be discarded. This issue is concerned with academic integrity and should be treated with sincerity. Unfortunately there are still people who

hang on to their "wonderful" postulates with fabricated evidence and clipped papers; they retain those sections they consider useful to their purpose and ignore, or hide, those parts they find useless and unfavorable in their interest. All of the behaviors are "immoral" and, to my mind, should be eliminated. Meanwhile plagiarizing others' ideas and information without citation is the doing of a pickpocket and even more contemptible.

In summary I'm highlighting my points, (1) prove the postulate with evidence and (2) proceed with care. Work cannot be completed without either of them.

I just expounded the idea of "academic integrity," a phrase borrowed from Zhang Xuecheng.^[10] He explained that "academic integrity" was the "heart's thought." What I have talked also relates the "heart's thought" but is a little different from Zhang Xuecheng's definition, for an extension. The main thrust of my idea is not to deceive oneself and the reader. Behaving this way is upholding integrity, while behaving oppositely is lacking integrity. A writer should count on one's own writing. If one does not believe one's own writing as true but expects the reader to believe in it, isn't that behavior one of immorality? What I have said is not concocted and delivered at random. I have proof of the facts. I'm writing about these issues from an old man's perspective in an attempt to share them with young scholars.

Now I would like to turn to the topic of data collecting. In doing scientific research data collecting is a necessary step to take. It is obvious. But data collecting can be completed in a variety of ways. The most common one is to use index cards and write notes on them and then sort them out in categories and keep them in a file. This is not the only way. Mr. Chen Yinke wrote his notes at the top of a page of the book; he wrote a few of them today and the following day; the data was gathered to a huge amount until one day he could write one article, moving those notes from the book to his paper. One typical example is that his annotated notes on the book pages of *Biographies of the Eminent Monks: the Biography of Kumarajiva* are a few

times longer than the original writing. I myself have seldom used index cards and never written notes on the margin of the book. Instead I write my notes on a regular piece of paper. Sometimes I stumble into some useful material; I would pick up something at hand and write on it, such as a note of announcement, invitation card, an envelope, or a scrap of paper; I write on them and keep them in a classified file. I have noticed that some others also gather data this way. Mr. Xiang Da used to write notes on the cigarette box. Writing on a larger piece of paper has an advantage of recording all information needed, equivalent to Mr. Chen's use of the book page. The index card has limited space and cannot hold much note. After the data are gathered caution should be used in keeping them. The best way to do is to sort them out and place them into folders or manila envelopes. Otherwise something may be lost, even if it is a slip of paper, due to carelessness, which may be the most important information you need, and your writing will be impaired and you will have to scratch out your writing once again. It is needless to say that nothing should be brushed off, big or small, and efforts should not be spared even to drain the pond to get the fish. Nevertheless it is impossible to be one hundred percent complete in gathering materials. We should guard against the temptation of setting to write a long essay with a smidgen of data. Such writings obviously tend to produce unreliable conclusions. Another relevant concern is that attention should focus on the currency of the scholarship, keeping close track of the most recent publications and heatedly debated topics. Otherwise when one theory has already been published and you are still keeping your nose to the grindstone in formulating it, it will surely look ridiculous. We should be on the alert.

In the meantime I would like to talk about the usefulness of materials. In strict terms none of the materials is useless. It matters only to the kind of person and time concerned. The usefulness varies from time to time even to the same person. Probably we all have such experience. On the one hand, with one particular research topic in mind, you may think all materials applicable, such as critical points noted in books, archaeological findings from unearthed artifacts, and

discoveries drawn from social investigations. To amass these materials is not difficult, and periodically they leap into your eye. On the other hand, if you do not have this particular research topic at hand, all related materials appear like junk. But a person usually is not sure of what the next research topic is and at what time he or she will start to work on that topic. One ponders on numerous issues in a life; when topic A is on the agenda, one material relevant to topic B is useless to you; but the time may arise in the future for considering topic B, when you know you had run into that material in the past; but now you find yourself lost in mist and it is impossible to locate it. I've gone through the kind of vexation for countless times in life and have the empathy to understand others' too.

Then what should we do? The best way to do is not to confine yourself to one concern; consider a few at the same time and keep thinking about them and never let your mind grind to a halt; always turn something over in your mind. In this way you will have a large circumference of contacting and gathering useful materials and have fewer fishes slipping through your net. You will surely be able to collect a bountiful amount of data. Maintain an army for one thousand days in peace only to use it for one hour in the war. By the time of composing your essay you will do the job with ease.

Finally I will discuss the allocation of time. Time is life, which is a cliché, and time is a constant, equivalent to everyone. No one lives one second or two extra in a day. To us scholars, time is extremely precious. But circumstances vary from person to person. For some people it becomes an issue of utilizing "leftover bits." I have coined this strange term. Time is not seeable and touchable but comes as a whole. How can it be cut into "leftover bits"? This is a graphical expression. In an ordinary day of work we are not disturbed by visitors or distracting businesses. You can concentrate on your work and take it easy. If you want to relax more you may take sips on a cup of the Dragon Well tea and smoke three "Clouds" cigarettes, [\[11\]](#)grooving like a celestial being. You have all the time at your disposal with no concern over the issue of "leftover bits." But how

many of us could have such working serendipity of life? Doltish and undistinguished as I am, I've never been favored with such a stroke of fortune. Since the founding of new China I have had incalculable social activities and attended innumerable meetings; each day countless visitors came to see me, distracting and dismaying, leaving me with not knowing whether to laugh or cry. In retrospect I became one of the untouchable during the Cultural Revolution and, except being destined in the Cow Shed, scared away visitors at home too. However, the eight-volume translation of *Ramayana* was completed in this period. Is it true that one has to be untouchable or a Rightist in order to read and write? Once the upheaval was over my courtyard was switched back to a marketplace thronged with visitors. I had to attend meetings of all sorts, unable to free myself for a single minute from daily routines. I once read Mayakovsky's "A Meeting Addict" and Zhang Tianyi's *Mr. Hua Wei* and found the characters very amusing but did not expect myself to turn into one of them now.^[12] What a shame! However, one can figure out ways of wringing out time from a desperate situation. Since I do not have large chunks of time for research I will do my best to utilize the "leftover bits" of the time before and after meeting or even at the meeting by laying out the structure of or composing the essay. At meetings, speakers more often than not rambled away with tedious government slogans and banal, unrelated talks and gave no useful information. The speaker was not down to the earth and businesslike, disrespecting the audience and demoralizing himself; he did not mean what he spoke and repeatedly uttered hogwash like "this," "that," "ah," "oh," etc. It was a sheer waste of time on the audience. At this time I usually listened with one ear, or half an ear, to catch whatever useful information can be gleaned, while focusing my attention on composing my essay. Of course, I took advantage of traveling by air, train and bus and even riding my bicycle and strolling in cranking out the message and style of my essay. This is what I mean by using the "leftover bits" of time. As time went on I fell into a "pernicious habit"; whenever my bottom hit the seat in a meeting room and whiffs of hollow talk assailed me, I was delighted as thoughts of my paper topics started to gush out of my

head, "flares of talent" glittering continuously; streams of creativity sprang up and quickly delineated a layout in my mind shortly before a brief essay was whipped out amid the closing applause of the meeting. It even didn't hinder me from honoring the speaker with my share of applauding. It even didn't hinder me from honoring the speaker with my share of applauding. If, for days without a meeting, my brain would wind down almost to a standstill, a "gifted writer" presumably drained of "all talent." Then I would sigh with regret, wishing a meeting would soon be convened. What an incurable character!

I have talked and strayed on my autobiography of the past seventy years. Generally it is an uneventful one of an ordinary man without clashes and quakes. I have gained a haul of research experience from the idea of "keeping catching," matte and cheesy. Presumably if you see some pricy stuff it is the crazy commentary. An ancient saying goes like "Write with honesty." I have not lied, which puts my mind at rest and does not let others down.

Completed on October 26, 1988

The previous writing was completed in 1988. Now it's been ten years. In a life of one hundred years a decade is not a short period. Time strides ahead and tides shift. Today I'm not the one I used to be. The Press of the Party School of the Central Committee of CPC contacted me for the publication of my *Random Recollections of the Cow Shed* and requested I add an autobiography so that the reader can have an understanding of Ji Xianlin as a person. It suggested I submit the previous version of autobiography and expand a little. So I did accordingly and have finished it. I thought it was a good idea and accepted it.

With hindsight, I found a problem. The previous autobiography is written with introduction and conclusion. If a cut is made at the end of a wretched writing and replaced with a tacky addition, it will look like neither fish nor good red herring, not a complete work at all. After long musing I decided to keep the original but add the following. The combination of the two will also appear complete.

What did the year 1988 look like? By then the policy of reform

and opening up had been implemented for ten years and remarkable success had been achieved, the economy robust and people happy. The intellectuals, as a social population who had suffered in each political movement since the liberation, were particularly jubilant after the shackles binding their body were broken; they were rejuvenated; the academia and literature and arts were prosperous. I myself also felt breezes of the spring. Though I was already over the age of retirement, the university let me stay and I felt proud of myself and full of vigor, forgetting about my age and ambitious to achieve more on borrowed time. Despite the fact that I had quit from all administrative positions, my social work and activities showed no sign of decreasing; I was elected president or honorary president to lead seven or eight national academic organizations. As for becoming a member of a society or association, it was uncountable; I was chosen as advisor, in fact having never contributed any advice, to a hundred organizations or book writing committees; I was editor-in-chief of three or four series of up to a few thousand books; I was frequently interviewed by TV stations, photographed and type-recorded, which brought in visitors to pack my afternoon schedule to the full; every day I received letters of various kinds, raising surprisingly odd questions. Some young boy and girl students from border regions of the country wrote me letters that gave me a lot of joy, and, deep down inside, I truly appreciate their trust in me. A noted writer said in his article that I replied to each of his letters written to me. That caused me disaster. How could I reply to each letter? Even if I hadn't had any other business I could not have been able to do that. I had to let my assistant and students write my replies on my behalf. His overstatement later disappointed many male and female teenagers. I felt guilty but found myself not in a position to do otherwise.

Why am I writing about all of this? I've only one purpose, that is, letting readers know about my current life and work. If I have done anything inappropriate I would appreciate their consideration and understanding.

Speaking about my academic contributions some people say I

have treated myself cruelly. It's true that I'm close to ninety; though I still have a strong physique, I am losing my eyesight and hearing and walking a little haltingly. But I make sure that I wake up before dawn, switch on the first electric light in Langrunyuan and get down to my unfinished writing assignment, continuously and assiduously.^[13] Don't I know that taking a stroll to Yuanmingyuan or Summer Place or, even further away, hiking in the Fragrance Hills, is a more enjoyable experience? Do I have ambitions for more material gains and reputation? No, these are not what I desire. I know strolling is enjoyable. But I understand I do not live for taking a few more strolls. That should not be a goal to achieve in life. As for material gains and reputation they are rolling in each day unexpectedly; with a mediocre fame for writing, my royalties give me another steady income. In other words I enjoy an abundance of material gains and reputation, and a glut of them would load the dice against me. Then why am I persisting in reading and writing? I would not like to lie and preach at readers with the merits of serving the country and people. I'm doing what I want to do in an effort to obtain an inner tranquility; a one-day lapse without reading and writing would pummel me with twinges of guilt at night that I have lived one day in vain. Habit makes comfortable. I'm addicted to work and will not be able to rid of the habit until the next life.

According to my calculation, each of the past few years has seen far more of my production than any of my earlier years. The two longest and most arduous works were completed in my late years. One of them is the 0.8 million-word *A Trace of Cultural Exchange: A Chinese History of Cane Sugar*. The other one, also about hundreds of thousands of words long (it is hard to count due to some parts of it written in English), is *A Translation of a Play of the Smiling Bodhisattva's Conference*, which is originally written in the language of Qarasahr, Dialect A of Tukhara. As a writer of all subjects I write and publish in my areas of academic interest. Unfortunately some readers are confused in this regard, thanks to some reasons, and have sent their letters for me to various departments, such as the Department of Chinese, History, Philosophy, Western Languages, or even Sociology,

indicating their understanding of me. After the two major works of mine are published, I believe the confusion will be declining. But to me I've never been confused about my academic directions.

The above sweeping account is about my last ten years' life and can be considered as an "autobiography."

How have I reflected on the ten years of turmoil during this period? In reality I haven't forgotten about it since the day when I got to tear off its extremely delicate and graceful veil and view its extremely cruel and tragic nature. But I waited and kept waiting until in 1992 when I decided to write *Random Recollections of the Cow Shed*. In this year, 1998, the book has finally appeared. I'm at last satisfied and complacent, which I recounted in "Preface" and will not reiterate. I think I have finally done something worthy for the offspring of the Chinese nation. Now I have another expectation, hoping there will be some people interested in it as well.

Written on March 11, 1998

[1]*A List of One Hundred Surnames*, a classical rhyming poem composed in the early Song Dynasty; *The Thousand-Character Essay*, a literary text written by Zhou Xingsi (?-521) in the reign of Liang of the Northern and Southern Dynasties (420-589); *The Three-Character Classic*, a children's reading and rhyming poem believed to be written in the thirteenth century; "The Four Books," referring to *The Analects* of Confucius, *The Book of Mencius*, *The Doctrine of the Mean* and *The Great Learning*.

[2]*Intrigues of the Warring States*, a collection of essays collected and edited by Liu Xiang in the late Western Han Dynasty.

[3]*Guwenguanzhi*, an anthology of classical Chinese literary writings first published in 1695.

[4]*The Creation of the Gods*, a Chinese epic fantasy novel written by Xu Zhonglin in the Ming Dynasty; *Tales of the Tang Kingdoms*, a Chinese novel of the wars and warlords in the late Sui (581-618) and early Tang (618-907) Dynasties, written by unknown author and published in the Qing Dynasty; *Stories of Yue Fei*, a Chinese novel about Yue Fei (1103-1142), military general and patriotic hero in the Southern Song Dynasty (1127-1279), in his fighting against the north invasion of the state of Jin; *The Legend of Ji Gong*, a Chinese fiction about Ji Gong (1130-1209), a Buddhist formally named Li Xiuyuan in the Southern Song Dynasty, who redresses the wrongs of the weak and brings outlaws to justice; *Tales of Peng Gong*, a Chinese novel, written by Yang Yidian and published in 1892 in the Qing Dynasty, about the protagonist Peng Gong or Peng Peng's deeds of getting rid of bullies and bringing

peace to people; *Three Heroes and Five Gallants*, a Chinese fiction, written by Shi Yukun (1810-1871) and published in 1879 in the Qing Dynasty, about a plot in the Song Dynasty.

[5] *The Western Chamber*, a Chinese novel, written by the Yuan Dynasty (1206-1368) playwright Wang Shifu (1260-1316) on a Tang Dynasty lover story; *The Plum in the Golden Vase*, a Chinese novel, written by Lanling Xiaoxiao Sheng in the late Ming Dynasty.

[6] The School of Tongcheng, a group of writers from Tongcheng, Anhui, developing their particular literary style in the Qianlong's reign (1736-1796) of the Qing Dynasty.

[7] Xu Wenchang (1521-1593), named Wei, a literary writer in the Ming Dynasty.

[8] *A Collection of Essays of Han Changli*, essays written by Han Yu (768-824), with courtesy name of Tuizhi and publicly styled Han Changli, Chinese classical essayist and literary writer in the Tang Dynasty; Liu Zongyuan (773-819), with courtesy name of Zihou, Chinese literary writer and thinker in the Tang Dynasty; Ouyang Xiu (1007-1073), Chinese literary writer and historian in the Northern Song Dynasty (960-1127); Three Su's, referring to Su Xun (1009-1066), with courtesy name of Mingyun, and his two sons, Su Shi (1037-1101), with courtesy name of Zizhan and also called Dongpo, and Su Zhe (1039-1112), with courtesy name of Ziyou, all three of them being Chinese literary writers in the Northern Song Dynasty.

[9] *Liang*, a Chinese unit of weight, equivalent to 1.7637 ounces. The author writes this line of poem on the basis of the line of the poem, "The Spring of Hope," by Du Fu, Chinese poet of the Tang Dynasty (712-770), which goes, "As the war has raged for three months, a letter from home is more valuable than ten thousands *liang* of gold."

[10] Zhang Xuecheng (1738-1801), Chinese historian and literary writer in the Qing Dynasty.

[11] Dragon Well Tea, famous Chinese green tea produced in Zhejiang, China; "Clouds," a famous Chinese brand of tobacco.

[12] Zhang Tianyi (1906-1985), contemporary Chinese fiction writer. His short fiction *Mr. Hua Wei* was published in 1938.

[13] Langrunyuan, one of the faculty residential areas on campus at Peking University.

附录 自传

我于1911年8月6日生于山东省清平县（现并临清市）官庄。我们家大概也小康过。可是到了我出生的时候，祖父母双亡，家道中落，形同贫农。父亲亲兄弟三人，无怙无恃，孤苦伶仃，一个送了人，剩下的两个也是食不果腹，衣不蔽体，饿得到枣林里去拣落到地上的干枣来吃。

六岁以前，我有一个老师马景恭先生。他究竟教了我些什么，现在完全忘掉了，大概只不过几个字罢了。六岁离家，到济南去投奔叔父。他是在万般无奈的情况下逃到济南去谋生的，经过不知多少艰难险阻，终于立定了脚跟。从那时起，我才算开始上学。曾在私塾里念过一些时候，念的不外是《百家姓》、《千字文》、《三字经》、《四书》之类。以后接着上小学。转学的时候，因为认识一个“骡”字，老师垂青，从高小开始念起。

我在新育小学考过甲等第三名、乙等第一名，不是拔尖的学生，也不怎样努力念书。三年高小，平平常常。有一件事值得提出来谈一谈：我开始学英语。当时正规小学并没有英语课。我学英语是利用业余时间，上课是在晚上。学的时间不长，只不过学了一点语法、一些单词而已。我当时有一个怪问题：“有”和“是”都没有“动”的意思，为什么叫“动词”呢？后来才逐渐了解到，这只不过是一个译名不妥的问题。

我万万没有想到，就由于这一点英语知识，我在报考中学时沾了半年光。我这个人颇有点自知之明，有人说，我自知过了头。不管怎样，我幼无大志，却是肯定无疑的。当时山东中学的“拿摩温”是山东省立第一中学。我这个癞蛤蟆不敢吃天鹅肉，我连去报名的勇气都没有，我只报了一个“破”正谊。可这个学校考试时居然考了英语。出的题目是汉译英：“我新得了一本书，已经读了几页，可是有些字我不认得。”我翻出来了，只是为了不知道“已经”这个词儿的英文译法而苦恼了很长时间。结果我被录取，不是一年级，而是一年半级。

在正谊中学学习期间，我也并不努力，成绩徘徊在甲等后几名、乙等前几名之间，属于上中水平。我们的学校濒临大明湖，风景绝美。一下课，我就跑到校后湖畔去钓虾、钓蛤蟆，不知用功为何物。但是，叔父却对我期望极大，要求极严。他自己亲自给我讲课，选了一本《课侄选文》，大都是些理学的文章。他并没有受过什么系统教育，但是他绝

顶聪明，完全靠自学，经史子集都读了不少，能诗，善书，还能刻印章。他没有男孩子，一切希望都寄托在我身上。他严而慈，对我影响极大。我今天勉强学得了一些东西，都出于他之赐，我永远不会忘掉。根据他的要求，我在正谊下课以后，参加了一个古文学习班，读了《左传》、《战国策》、《史记》等书，当然对老师另给报酬。晚上，又要到尚实英文学社去学英文，一直到10点才回家。这样的日子，大概过了八年。我当时并没有感觉到有什么负担；但也不了解其深远意义，依然顽皮如故，摸鱼钓虾而已。现在回想起来，我今天这一点不管多么单薄的基础不是那时打下的吗？

至于我们的正式课程，国文、英、数、理、生、地、史都有。国文念《古文观止》一类的书，要求背诵。英文念《泰西五十轶事》、《天方夜谭》、《莎氏乐府本事》、《纳氏文法》等等。写国文作文全用文言，英文也写作文。课外，除了上补习班外，我读了大量的旧小说，什么《三国》、《西游》、《封神演义》、《说唐》、《说岳》、《济公传》、《彭公案》、《三侠五义》等等无不阅读。《红楼梦》我最不喜欢。连《西厢记》、《金瓶梅》一类的书，我也阅读。这些书对我有什么影响，我说不出，反正我并没有想去当强盗或偷女人。

初中毕业以后，在正谊念了半年高中。1926年转入新成立的山东大学附设高中。山东大学的校长是前清状元、当时的教育厅长王寿彭。他提倡读经。在高中教读经的有两位老师，一位是前清翰林或者进士，一位绰号“大清国”，是一个顽固的遗老。两位老师的姓名我都忘记了，只记住了绰号。他们上课，都不带课本，教《书经》和《易经》，都背得滚瓜烂熟，连注疏都在内，据说还能倒背。教国文的老师是王崑玉先生，是一位桐城派的古文作家，有自己的文集。后来到山东大学去当讲师了。他对我的影响极大。记得第一篇作文题目是《读〈徐文长传〉书后》。完全出我意料，这篇作文受到他的高度赞扬，批语是“亦简劲，亦畅达”。我在吃惊之余，对古文产生了浓厚的兴趣，弄到了《韩昌黎集》、《柳宗元集》，以及欧阳修、三苏等的文集，想认真钻研一番。谈到英文，由于有尚实英文学社的底子，别的同学很难同我竞争。还有一件值得一提的事情是，我也学了德文。

由于上面提到的那些，我在第一学期考了一个甲等第一名，而且平均分数超过九十五分，因此受到了王状元的嘉奖。他亲笔写了一副对联和一个扇面奖给我，这当然更出我意料。我从此才有意识地努力学习。要追究动机，那并不堂皇，无非是想保持自己的面子，决不能从甲等第

一名落到第二名，如此而已。反正我在高中学习三年中，六次考试，考了六个甲等第一名，成了“六连贯”，自己的虚荣心得到了充分的满足。

这是不是就改变了我那幼无大志的情况呢？也并没有。我照样是鼠目寸光，胸无大志，我根本没有发下宏愿，立下大志，终身从事科学研究，成为什么学者。我梦寐以求的只不过是毕业后考上大学，在当时谋生极为困难的条件下，抢到一只饭碗，无灾无难，平平庸庸地度过一生而已。

1929年，我转入新成立的山东省立济南高中，学习了一年，这在我一生中是一个重要的阶段。特别是国文方面，这里有几个全国闻名的作家：胡也频、董秋芳、夏莱蒂、董每戡等等。前两位是我的业师。胡先生不遗余力地宣传现代文艺，也就是普罗文学。我也迷离模糊，读了一些从日文译过来的马克思主义文艺理论。我曾写过一篇《现代文艺的使命》，大概是东抄西抄，勉强成篇。不意竟受到胡先生垂青，想在他筹办的杂志上发表。不幸他被国民党反动派通缉，仓促逃往上海，不久遇难。我的普罗文学梦也随之消逝。接他工作的是董秋芳（冬芬）先生。我此时改用白话写作文，大得董先生赞扬，认为我同王联榜是“全校之冠”。这当然给了我极大的鼓励。我之所以五十年来舞笔弄墨不辍，至今将近耄耋之年，仍然不能放下笔，全出于董老师之赐，我毕生难忘。

在这里，虽然已经没有经学课程，国文课本也以白话为主。我自己却没有放松对中国旧籍的钻研。我阅读的范围仍然很广，方面仍然很杂。陶渊明、杜甫、李白、王维、李义山、李后主、苏轼、陆游、姜白石等等诗人、词人的作品，我都读了不少。这对我以后的工作起了积极的影响。

1930年，我高中毕业，到北平来考大学。由于上面说过的一些原因，当年报考中学时那种自卑心理一扫而光，有点接近狂傲了。当时考一个名牌大学，十分困难，录取的百分比很低。为了得到更多的录取机会，我那八十多位同班毕业生，每人几乎都报七八个大学。我却只报了北大和清华。结果我两个大学都考上了。经过一番深思熟虑，我选了清华，因为，我想，清华出国机会多。选系时，我选了西洋系。这个系分三个专修方向（specialized）：英文、德文、法文。只要选某种语言一至四年，就算是专修某种语言。其实这只是一个形式，因为英文是从小学就学起的，而德文和法文则是从字母学起。教授中外籍人士居多，不管是哪国人，上课都讲英语，连中国教授也多半讲英语。课程也以英国文学为主，课本都是英文的，有“欧洲文学史”、“欧洲古典文学”、“中世

纪文学”、“文艺复兴文学”、“文艺批评”、“莎士比亚”、“英国浪漫诗人”、“近代长篇小说”、“文学概论”、“文艺心理学（美学）”、“西洋通史”、“大一国文”、“一二年级英语”等等。

我的专修方向是德文。四年之内，共有三个教授授课，两位德国人，一位中国人。尽管我对这些老师都怀念而且感激，但是，我仍然要说，他们授课相当马虎。四年之内，在课堂上，中国老师只说汉语，德国老师只说英语，从来不用德语讲课。结果是，学了四年德文，我们只能看书，而不能听和说。我的学士论文是*The Early Poems of Hölderlin*，指导教授是Ecke（艾克）。

在所有的课程中，我受益最大的不是正课，而是一门选修课——朱光潜先生的“文艺心理学”和一门旁听课：陈寅恪先生的“佛经翻译文学”。这两门课对我以后的发展有深远影响，可以说是一直影响到现在。我搞一点比较文学和文艺理论，显然是受了朱先生的熏陶。而搞佛教史、佛教梵语和中亚古代语言，则同陈先生的影响是分不开的。

顺便说一句，我在大学在课余仍然继续写作散文，发表在当时颇有权威性的报刊上。我可万万没有想到，那样几篇散文竟给我带来了好处。1934年，清华毕业，找工作碰了钉子。母校山东济南高中的校长宋还吾先生邀我回母校任国文教员。我那几篇散文就把我制成了作家，而当时的逻辑是，只要是作家就能教国文。我可是在心里直打鼓：我怎么能教国文呢？但是，快到秋天了，饭碗还没有拿到手，我于是横下了一条心：你敢请我，我就敢去！我这个西洋文学系的毕业生一变而为国文教员。我就靠一部《辞源》和过去读的那一些旧书，堂而皇之当起国文教员来。我只有二十三岁，班上有不少学生比我年龄大三四岁，而且在家乡读过私塾。我实在是如履薄冰。

教了一年书，到了1935年，上天又赐给一个良机。清华大学与德国签订了交换研究生的协定。我报名应考，被录取。这一年的深秋，我到了德国哥廷根大学，开始了国外的学习生活。我选的主系是印度学，两个副系是英国语言学和斯拉夫语言学。我学习了梵文、巴利文、俄文、南斯拉夫文、阿拉伯文等等，还选了不少的课。教授是Sieg、Waldschmidt、Braun等等。

这时第二次世界大战正在剧烈进行。德国被封锁，什么东西也输入不进来，要吃没吃，要穿没穿。大概有四五年时间，我忍受了空前的饥饿，终日饥肠辘辘，天上还有飞机轰炸。我怀念祖国和家庭。“烽火连

六年，家书抵亿金。”实际上我一封家书都收不到。就在这样十分艰难困苦的条件下，我苦读不辍。1941年，通过论文答辩和口试，以全优成绩，获得哲学博士学位。我的博士论文是：《〈大事〉中伽陀部分限定动词的变化》。

在这一段异常困苦的期间，最使我感动的是德国老师的工作态度和对待中国学生的态度。我是一个素昧平生的异邦青年。他们不但没有丝毫歧视之意，而且爱护备至，循循善诱。Waldschmidt教授被征从军。Sieg教授以耄耋之年，毅然出来代课。其实我是唯一的博士生，他教的对象也几乎就是我一个人。他把他的看家本领都毫无保留地要传给我。他给我讲了《梨俱吠陀》、《波你尼语法》、Patanjali的《大疏》、《十王子传》等。他还一定坚持要教我吐火罗文。他是这个语言的最高权威，是他把这本天书读通了的。我当时工作极多，又患神经衰弱，身心负担都很重。可是看到这位老人那样热心，我无论如何不能让老人伤心，便遵命学了起来。同学的还有比利时W. Couvreur博士，后来成了名教授。

谈到工作态度，我的德国老师都是楷模。他们的学风都是异常地认真、细致、谨严。他们写文章，都是再三斟酌，多方讨论，然后才发表。德国学者的“彻底性”（Grundlichkeit）是名震寰宇的。对此我有深切的感受。可惜后来由于环境关系，我没能完全做到，真有点愧对我的德国老师了。

从1937年起，我兼任哥廷根大学汉学系讲师。这个系设在一座大楼的二层上，几乎没有人到这座大楼来，因此非常清静。系的图书室规模相当大，在欧洲颇有一些名气。许多著名的汉学家到这里来看书，我就碰到不少，其中最著名的有英国的Arthur Waley等。我在这里也读了不少的中国书，特别是笔记小说以及佛教大藏经，扩大了我在这方面的知识面。

我在哥廷根呆了整整十个年头。1945年秋冬之交，我离开这里到瑞士去，住了将近半年。1946年春末，取道法国、越南、香港，夏天回到了别离将近十一年的祖国。

我的留学生活，也可以说是我的整个学生生活就这样结束了。这一年我三十五岁。

1946年秋天，我到北京大学来任教授，兼东方语言文学系主任。是我的老师陈寅恪先生把我介绍给胡适、傅斯年、汤用彤三位先生的。按

当时北大的规定：在国外获得博士学位回国的，只能任副教授。对我当然也要照此办理。也许是我那几篇在哥廷根科学院院刊上发表的论文起了作用。我到校后没有多久，汤先生就通知我，我已定为教授。从那时到现在时光已经过去了四十二年，我一直没有离开北大过。期间我担任系主任三十来年，担任副校长五年。1956年，我当选中国科学院学部委员。“十年浩劫”中靠边站，挨批斗，符合当时的“潮流”。现在年近耄耋，仍然搞教学、科研工作，从事社会活动，看来离八宝山还有一段距离。以上这一切都是平平常常的经历，没有什么英雄业绩，我就不再啰唆了。

我体会，一些报刊之所以要我写自传的原因，是想让我写点什么治学经验之类的东西。那么，在长达六十年的学习和科研活动中，我究竟有些什么经验可谈呢？粗粗一想，好像很多；仔细考虑，无影无踪。总之是卑之无甚高论。不管好坏，鸳鸯我总算绣了一些，至于金针则确乎没有，至多是铜针、铁针而已。

我记得，鲁迅先生在一篇文章中讲了一个笑话：一个江湖郎中在市集上大声吆喝，叫卖治臭虫的妙方。有人出钱买了一个纸卷，层层用纸严密裹住。打开一看，妙方只有两个字：勤捉。你说它不对吗？不行，它是完全对的。但是说了等于不说。我的经验压缩成两个字是勤奋。再多说两句就是：争分夺秒，念念不忘。灵感这东西不能说没有，但是，它不是从天上掉下来的，而是勤奋出灵感。

上面讲的是精神方面的东西，现在谈一点具体的东西。我认为，要想从事科学研究工作，应该在四个方面下工夫：一，理论；二，知识面；三，外语；四，汉语。唐代刘知几主张，治史学要有才、学、识。我现在勉强套用一下，理论属识，知识面属学，外语和汉语属才，我在下面分别谈一谈。

一、理论

现在一讲理论，我们往往想到马克思主义。这样想，不能说不正确。但是，必须注意几点。一，马克思主义随时代而发展，决非僵化不变的教条。二，不要把马克思主义说得太神妙，令人望而生畏，对它可以批评，也可以反驳。我个人认为，马克思主义的精髓就是唯物主义和辩证法。唯物主义就是实事求是。把黄的说成是黄的，是唯物主义。把黄的说成是黑的，是唯心主义。事情就是如此简单明了。哲学家们有权力去作深奥的阐述，我辈外行，大可不必。至于辩证法，也可以作如是

观。看问题不要孤立，不要僵死，要注意多方面的联系，在事物运动中把握规律，如此而已。我这种幼儿园水平的理解，也许更接近事实真相。

除了马克思主义以外，古今中外一些所谓唯心主义哲学家的著作，他们的思维方式和推理方式，也要认真学习。我有一个奇怪的想法：百分之百的唯物主义哲学家和百分之百的唯心主义哲学家，都是没有的。这就是和真空一样，绝对的真空在地球上是没有的。中国古语说：“智者千虑，必有一失。”就是这个意思。因此，所谓唯心主义哲学家也有不少东西值得我们学习的。我们千万不要像过去那样把十分复杂的问题简单化和教条化，把唯心主义的标签一贴，就“奥伏赫变”。

二、知识面

要求知识面广，大概没有人反对。因为，不管你探究的范围多么窄狭，多么专门，只有在知识广博的基础上，你的眼光才能放远，你的研究才能深入。这样说已经近于常识，不必再做过多的论证了。我想在这里强调一点，这就是，我们从事人文科学和社会科学研究的人，应该学一点科学技术知识，能够精通一门自然科学，那就更好。今天学术发展的总趋势是，学科界限越来越混同起来，边缘学科和交叉学科越来越多。再像过去那样，死守学科阵地，鸡犬之声相闻，老死不相往来，已经完全不合时宜了。此外，对西方当前流行的各种学术流派，不管你认为多么离奇荒诞，也必须加以研究，至少也应该了解其轮廓，不能简单地盲从或拒绝。

三、外语

外语的重要性，尽人皆知。若再详细论证，恐成蛇足。我在这里只想强调一点：从今天的世界情势来看，外语中最重要的是英语，它已经成为名副其实的世界语。这种语言，我们必须熟练掌握，不但要能读，能译，而且要能听，能说，能写。今天写学术论文，如只用汉语，则不能出国门一步，不能同世界各国的同行交流。如不能听说英语，则无法参加国际学术会议。情况就是如此地咄咄逼人，我们不能不认真严肃地加以考虑。

四、汉语

我在这里提出汉语来，也许有人认为是非常异议可怪之论。“我还能说汉语吗？”“我还能写汉文吗？”是的，你能说，也能写。然而仔细

一观察，我们就不能不承认，我们今天的汉语水平是非常成问题的。每天出版的报章杂志，只要稍一注意，就能发现别字、病句。我现在越来越感到，真要想写一篇准确、鲜明、生动的文章，决非轻而易举。要能做到这一步，还必须认真下点工夫。我甚至想到，汉语掌握到一定程度，想再前进一步，比学习外语还难。只有承认这一个事实，我们的汉语水平才能提高，别字、病句才能减少。

我在上面讲了四个方面的要求。其实这些话都属于老生常谈，都平淡无奇。然而真理不往往就寓于平淡无奇之中吗？这同我在上面引鲁迅先生讲的笑话中的“勤捉”一样，看似平淡，实则最切实可行，而且立竿见影。我想到这样平凡的真理，不敢自秘，便写了出来，其意不过如野叟献曝而已。

我现在想谈一点关于进行科学研究指导方针的想法。六七十年前胡适先生提出来的“大胆的假设，小心的求证”，我认为是不刊之论，是放之四海而皆准的方针。古今中外，无论是社会科学，还是自然科学，概莫能外。在那一段教条主义猖獗、形而上学飞扬跋扈的时期内，这个方针曾受到多年连续不断的批判。我当时就百思不得其解。试问哪一个学者能离开假设与求证呢？所谓大胆，就是不为过去的先人之见所限，不为权威所囿，能够放开眼光，敞开胸怀，独具只眼，另辟蹊径，提出自己的假设，甚至胡思乱想，想入非非，亦无不可。如果连这一点胆量都不敢有，那只有循规蹈矩，墨守成法，鼠目寸光，拾人牙慧，个人决不会有创造，学术决不会进步。这一点难道还不明白，还要进行烦琐的论证吗？

总之，我要说，一要假设，二要大胆，缺一不可。

但是，在提倡大胆的假设的同时，必须大力提倡小心的求证。一个人的假设，决不会一提出来就完全符合实际情况，有一个随时修改的过程。我们都有这样一个经验：在想到一个假设时，自己往往诧为“神来之笔”，是“天才火花”的闪烁，而狂欢不已。可是这一切都并不是完全可靠的。假设能不能成立，完全依靠求证。求证要小心，要客观，决不允许厌烦，更不允许马虎。要从多层次、多角度上来求证，从而考验自己的假设是否正确，或者正确到什么程度，哪一部分正确，哪一部分又不正确。所有这一切都必须实事求是，容不得丝毫私心杂念，一以证据为准。证据否定掉的，不管当时显得多么神奇，多么动人，都必须毅然毫不吝惜地加以扬弃。部分不正确的，扬弃部分。全部不正确的，扬弃全部。事关学术良心，决不能含糊。可惜到现在还有某一些人，为了维护

自己“奇妙”的假设，不惜歪曲证据，剪裁证据。对自己的假设有用的材料，他就用；没有用的、不利的，他就视而不见，或者见而掩盖。这都是“缺德”（史德也）的行为，我期期以为不可。至于剽窃别人的看法或者资料，而不加以说明，那是小偷行为，斯下矣。

总之，我要说，一要求证，二要小心，缺一不可。

我刚才讲的“史德”，是借用章学诚的说法。他把“史德”解释成“心术”。我在这里讲的也与“心术”有关，但与章学诚的“心术”又略有所不同，有点引申的意味。我的中心想法是不要骗自己，不要骗读者。做到这一步，是有德，否则就是缺德。写什么东西，自己首先要相信。自己不相信而写出来要读者相信，不是缺德又是什么呢？自己不懂而写出来要读者懂，不是缺德又是什么呢？我这些话决非无中生有，无的放矢。我都有事实根据。我以垂暮之年，写了出来，愿与青年学者们共勉之。

现在再谈一谈关于搜集资料的问题。进行科学研究，必须搜集资料，这是不易之理。但是，搜集资料并没有什么一定之规。最常见的办法是使用卡片，把自己认为有用的资料抄在上面，然后分门别类，加以排比。可这也不是唯一的办法。陈寅恪先生把有关资料用眉批的办法，今天写上一点，明天写上一点，积之既久，资料多到能够写成一篇了，就从眉批移到纸上，就是一篇完整文章。比如，他对《高僧传鸠摩罗什传》的眉批，竟比原文还要多几倍，是一个典型的例子。我自己既很少写卡片，也从来不用眉批，而是用比较大张的纸，把材料写上。有时候随便看书，忽然发现有用的材料，往往顺手拿一些手边能拿到的东西，比如通知、请柬、信封、小纸片之类，把材料写上，再分类保存。我看到别人也有这个情况，向达先生有时就把材料写在香烟盒上。用比较大张的纸有一个好处，能把有关的材料都写在上面，约略等于陈先生的眉批。卡片面积太小，这样做是办不到的。材料抄好以后，要十分认真细心地加以保存，最好分门别类装入纸夹或纸袋。否则，如果一时粗心大意丢上张把小纸片，上面记的可能是最重要的材料，这样会影响你整篇文章的质量，不得不黽勉从事。至于搜集资料要巨细无遗，要有竭泽而渔的精神，这是不言自喻的。但是，要达到百分之百的完整的程度，那也是做不到的。不过我们千万要警惕，不能随便搜集到一点资料，就动手写长篇论文。这样写成的文章，其结论之不可靠是显而易见的。与此有联系的就是要注意文献目录，只要与你要写的文章有关的论文和专著的目录，你必须清楚。否则，人家已经有了结论，而你还在卖劲地论证，必然贻笑方家，不可不慎。

我想顺便谈一谈材料有用无用的问题。严格讲起来，天下没有无用的材料，问题是对谁来说，在什么时候说。就是对同一个人，也有个时机问题。大概我们都有这样的经验：只要你脑海里有一个问题，一切资料，书本上的、考古发掘的、社会调查的等等，都能对你有用。搜集这样的资料也并不困难，有时候资料简直是自己跃入你的眼中。反之，如果你脑海里没有这个问题，则所有这样的资料对你都是无用的。但是，一个人脑海里思考什么问题，什么时候思考什么问题，有时候自己也掌握不了。一个人一生中不知要思考多少问题。当你思考甲问题时，乙问题的资料对你没有用。可是说不定什么时候你会思考起乙问题来。你可能回忆起以前看书时曾碰到过这方面的资料，现在再想去查找，可就“云深不知处”了。这样的经验我一生不知碰到多少次了，想别人也必然相同。

那么怎么办呢？最好脑海里思考问题，不要单打一，同时要思考几个，而且要念念不忘，永远不让自己的脑子停摆，永远在思考着什么。这样一来，你搜集面就会大得多，漏网之鱼也就少得多。材料当然也就积累得多，养兵千日，用兵一时；一旦用起来，你就左右逢源了。

最后还要谈一谈时间的利用问题。时间就是生命，这是大家都知道的道理。而且时间是一个常数，对谁都一样，谁每天也不会多出一秒半秒。对我们研究学问的人来说，时间尤其珍贵，更要争分夺秒。但是各人的处境不同，对某一些人来说就有一个怎样利用时间的“边角废料”的问题。这个怪名词是我杜撰出来的。时间摸不着看不见，但确实是一个整体，哪里会有什么“边角废料”呢？这只是一个形象的说法。平常我们做工作，如果一整天没有人和事来干扰，你可以从容濡笔，悠然怡然，再佐以龙井一杯、云烟三支，神情宛如神仙，整个时间都是你的，那就根本不存在什么“边角废料”问题。但是有多少人能有这种神仙福气呢？鲁钝如不佞者几十年来就做不到。建国以来，我搞了不知多少社会活动，参加了不知多少会，每天不知有多少人来找，心烦意乱，啼笑皆非。回想“十年浩劫”期间，我成了“不可接触者”，除了蹲牛棚外，在家里也是门可罗雀。《罗摩衍那》译文八巨册就是那时候的产物。难道为了读书写文章就非变成“不可接触者”或者右派不行吗？浩劫一过，我又是门庭若市，而且参加各种各样的会，终日马不停蹄。我从前读过马雅可夫斯基的《开会迷》和张天翼的《华威先生》，觉得异常可笑，岂意自己现在就成了那一类人物，岂不大可哀哉！但是，人在无可奈何的情况下是能够想出办法来的。现在我既然没有完整的时间，就挖空心思利

用时间的“边角废料”。在会前、会后，甚至在会中，构思或动笔写文章。有不少会，讲话空话废话居多，传递的信息量却不大，态度欠端，话风不正，哼哼哈哈，不知所云，又佐之以“这个”、“那个”，间之以“噯”、“啊”，白白浪费精力，效果却是很少。在这时候，我往往只用一个耳朵或半个耳朵去听，就能兜住发言的全部信息量，而把剩下的一个耳朵或一个半耳朵全部关闭，把精力集中到脑海里，构思，写文章。当然，在飞机上、火车上、汽车上，甚至自行车上，特别是在步行的时候，我脑海里更是思考不停。这就是我所说的利用时间的“边角废料”。积之既久，养成“恶”习，只要在会场一坐，一闻会味，心花怒放，奇思妙想，联翩飞来；“天才火花”，闪烁不停；此时文思如万斛泉涌，在鼓掌声中，一篇短文即可写成，还耽误不了鼓掌。倘多日不开会，则脑海活动，似将停止，“江郎”仿佛“才尽”。此时我反而期望开会了。这真叫做没有法子。

我在上面拉杂地写了自己七十年的自传。总起来看，没有大激荡，没有大震动，是一个平凡人的平凡的经历。我谈的治学经验，也都属于“勤捉”之类，卑之无甚高论。比较有点价值的也许是那些近乎怪话的意见。古人云：“修辞立其诚。”我没有说谎话，只有这一点是可以告慰自己，也算是对得起别人的。

1988年10月26日写完

上面的自传是1988年写成的，到现在已经整整十年了。在人生百年中，十年是一个不短的期间。时移世异，人事沧桑，今天的我已经非复当年之我了。现在中央党校出版社要出版我的《牛棚杂忆》，希望能附上我的一篇自传，使读者能了解牛棚里的季羨林究竟是何许人，并且建议就用上面这一篇，再加上点延续，一直写到今天。这个建议是合情合理的，我准备采纳。

但是，仔细一琢磨，却有了困难。上面这一篇是有头有尾的。如果在尾巴砍上一刀，狗尾续貂，难免不伦不类，不像是一篇完整的文章。考虑再三，决定保留上篇的完整性，再补上一个下篇，看上去，同样是完整的。

1988年是一个什么样的年头呢？改革开放的政策已经实行了十年，取得了异乎寻常的成功。经济繁荣，人民欢乐，知识分子这一个解放后历届政治运动都处在挨整的地位上的社会群体，现在身上的枷锁砸掉了，身心都感到异常的欢悦，精神又振奋了起来，学术界和文艺界真是一派大好形势。我自己当然也感觉到了这种盎然的春意。虽然早已过了

退休的年龄；但是，学校决定我不退休，我感到很光荣，干劲倍增。不似少年，胜似少年，怡怡然忘记了老之已至。我虽然已经没有正式的行政工作，但是社会工作和社会活动，却是有增无减。全国性的学术团体中我被选为主席、会长或名誉主席、会长的有七八个之多。至于理事之类，数目更多。不顾不问的顾问，一个团体的或一部书的，总有几十上百个，确实数目，只有天老爷知道，我个人是搞不清楚的。大型丛书，上千册的，上百册的，由我担任主编的，也有三四部。至于电视采访，照像录音，也是常事。几乎每天下午都是宾客盈门。每天接到各式各样的来信也有多封。里面的请求千奇百怪。一些僻远省份青年学生的来信，确实给我带来很大的快乐。我从内心里感谢这一些天真无邪的青年男女学生对我的信任。一位著名的作家，在自己的文章里提到我，说我每信必复。这却给我带来了灾难。我哪里能做到每信必复呢？即使我什么事情都不干，也是做不到的。我只能让我的助手和学生代复，这难免给一些男女大孩子带来了失望。我内疚于心，然而却无能为力。

我写这些事情干什么呢？目的只有一个，那就是，告诉读者我现在生活和工作的真实的情况；如果我有不周到的地方，请他们体贴原谅。

在学术工作方面，有人说，我对自己太残酷。已经到了望九之年，虽然大体上说来，我的身体还算是硬朗的，但是眼睛和耳朵都已不太灵光，走路有点“飘”；可我仍然是不明即起，亮起了朗润园里的第一盏灯，伏案读写，孜孜不倦。难道我不知道，到圆明园或颐和园去溜弯，再远一点，到香山去爬山，不比现在这样更轻松愉快吗？难道我在名利方面还有什么野心吗？都不是的。我知道溜弯舒服；但我认为人活着不是为了多溜几年弯。那不是追求的目的。至于名利，我现在不虞之誉纷至沓来；利的方面，爬格子爬出了点名堂，稿费也是纷至沓来。可以说，在名利两个方面我都够用了，再多了，反而会成为累赘。那么，我这样干的目的是为了什么呢？我不愿说谎话，讲些为国为民的大道理。我只能说，这样做能使自己心里平静。如果有一天我没能读写文章，清夜自思，便感内疚，认为是白白浪费一天。习惯成自然，工作对我来说已经成了痼疾，想要改正，只有等待来生了。

计算一下，最近几年来，我每年写的文章，数目远远超过过去的任何一年。我平生最长最艰巨的两部书，都是在耄耋之年完成的。一部是长达八十万字的《糖史》，一部是也长达数十万字（因为部分用英文写成的，字数难以准确统计）的吐火罗文A方言（焉耆文）的《弥勒会见记剧本》的译释。我虽然是个杂家，但是杂中还是有重点的。可惜，由

于一些原因，不明真相的人往往不明白我干的究竟是哪一行。外面来的信，有的寄到中文系，有的寄到历史系，有的寄到哲学系，有的寄到西语系，有的甚至寄到社会学系。从中可以看出人们对我的了解。两部大书一出，估计可以减少点混乱。对我来说，这种混乱一点影响也没有的。

以上是我最近十年来生活的综述，也可以算是“自传”吧。

在这期间，我是怎样考虑“十年浩劫”的呢？实际上，从我脑筋开了窍认识到这一场在极端绚丽的面纱下蒙着的极端残酷的悲剧那一天起，我就没有把它忘记。但是，我期待着，期待着，一直到1992年《牛棚杂忆》产生，我的期待结束。到了今年1998年，《牛棚杂忆》终于出版问世。我的心情才比较得到了点宁静。这一切我已经在“自序”中比较详尽地介绍了，这里不再重复。我觉得，我总算为中华民族的后世子孙做了一件好事。我又有了新的期待，我期待还能有问津者。

1998年3月11日

安阳

李 济 著

外语教学与研究出版社
FOREIGN LANGUAGE TEACHING AND RESEARCH PRESS

殷墟，即安阳，是商朝后期的都城。这里出土了大量的甲骨文，为研究商朝历史提供了宝贵的资料。李济先生在《安阳》一书中，详细探讨了殷墟的考古发现及其对中国古代史的影响。

殷墟的考古发现，不仅证实了商朝的存在，还揭示了商朝的社会结构、宗教信仰和文字系统。甲骨文的发现，使得商朝的历史不再仅仅是传说，而是有了确凿的文献证据。

李济先生在书中指出，殷墟的考古发现，是中国考古学史上的一座里程碑。它不仅改变了人们对商朝的认识，也为研究中国古代史提供了新的视角和方法。

《安阳》一书，是李济先生多年研究的心血结晶。它不仅是一本学术著作，也是一本可读性很强的科普读物。通过阅读这本书，读者可以深入了解殷墟的考古发现，以及这些发现对中国古代史的重要意义。

李济先生是中国考古学的重要奠基人之一。他的《安阳》一书，不仅在中国考古学界产生了深远影响，也在国际上享有盛誉。这本书的出版，对于推动中国考古学的发展，以及向世界介绍中国考古学的成果，都具有重要的意义。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China—A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? —Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

目录

Foreword

序言

Preface

自序

1. Oracle Bone Inscriptions

壹．甲骨文：最初的发现及学术界的初步接触

2. Exploratory Period

贰．探索阶段：甲骨文的搜集、考释和古文字学研究

3. Field Method

叁．20世纪初期在中国的西方地质学家、古生物学家和考古学家演示的田野方法

4. Early Period

肆．安阳有计划发掘的初期

5. The Royal Tombs

伍．王墓群的发现及系统发掘

6. Last Three Seasons of Field Work

陆．二战前小屯的最后三次田野发掘

7. Wartime Efforts

柒．战时继续安阳研究

8. Postwar Academic Working Conditions

捌．战后的学术工作情况及安阳发现物的研究

9. Prehistoric Remains

玖．史前遗物和有关古代中国的传说

10. Architecture

拾．建筑：建筑遗迹和地上建筑物复原之设想

11. The Economy

拾壹．经济：农业和制造业

12. Decorative Art

拾贰．殷商的装饰艺术

13. Genealogy, Chên-jên

拾叁．谱系、贞人和亲族关系

14. Worship of Ancestors

拾肆．祖先及神灵崇拜

15. Notes on the Physical Anthropology

拾伍．关于殷商人的体质人类学评述

Appendix 附录

Bibliography 参考文献

NOTES 注释

- (30) Underground ditches discovered at Hsiao-t'un, probably for
irrigation purposes 小屯发现的地下沟渠，推测为灌溉用
- (31) Incised gray pottery 带刻纹的灰陶器皿
- (32) Carved designs of white pottery 白陶上的装饰图案
- (33) Glazed pottery with incised or imprinted décor
带刻纹或印纹的陶片
- (34) Pottery article of unknown use with animal-head handle

帶兽头把手的用途不明的陶器

(35) Clay human figure 陶人俑

(36) Hairpins with bird-shaped heads 鸟头笄

(37) Ssũ handle with carving of dragon 刻龙纹的四柄

(38) Ssũ handle with carvings of three birds on top of each other
三鸟重叠纹的柄

(39) Carved bone plates 刻纹的骨版

(40) Carved bone tubes 刻纹的骨管

(41) Carved bone ocarina, three faces 刻纹的骨埙，三面

(42) Carved bone handle with five animal masks on top of each other
刻有五个连续兽面的骨器柄

(43) Stone torso from Hsiao-t'un: front view

小屯出土的石雕人体残像（正面）388

(44) Stone torso from Hsiao-t'un: side views

小屯出土的石雕人体残像（侧面）388

(45) Carved stone tigers 石刻虎形

(46) Double-faced monster with elephantine nose:

top, lateral and frontal views 象鼻双面怪兽：顶部、侧面、正面

(47) The so-called t'ao-t'ieh mask carved in stone 石刻饕餮面形

(48) Carved human figure in jade 玉刻人头形

(49) Animal masks found on ku-beaker 觚上的动物纹饰

(50) Animal masks found on chüeh-cup 爵上的动物纹饰

(51) Decorative elements evolving through the Painted Pottery,
Black Pottery, and Yin-Shang cultures

彩陶文化、黑陶文化与殷商文化的纹饰演变

(52) Genealogical table of the royal house of the Shang dynasty

商代王室世系图

(53) Reconstruction of drum found in HPKM 1217: lateral and top views

HPKM(1217) 出土的鼓的复原图：鼓身、上部

(54) Sacrificial pit with ten skulls found in Hou-chia-chuang

侯家庄埋有10具头骨的殉葬坑

(55) Sacrificial pit with the largest number of skulls found in

Hou-chia-chuang 侯家庄埋头骨最多的殉葬坑

(56) Classic Mongoloid type of human skull found in Hou-chia-chuang

侯家庄出土的古典的类蒙古人种的头骨

(57) Oceanic Negroid type of human skull found in Hou-chia-chuang

侯家庄出土的太平洋类黑人种的头骨

(58) Caucasoid type of human skull found in Hou-chia-chuang

侯家庄出土的类高加索人种的头骨

(59) Eskimoid type of human skull found in Hou-chia-chuang

侯家庄出土的类爱斯基摩人种的头骨

(60) Representative of group of small skulls, unidentified

出土处未明的小型头骨组的个例

(61) Three enemies from the Ordos region and eastern Mongolia

来自河套地区与蒙古东部的三股敌人

Foreword

The Anyang excavation was, from its inception, directed toward the recovery of the early written history of China. It was never conceived as a search for works of art or buried treasure. Hence the

story of Anyang properly begins with the discovery that "dragon bones" were inscribed with archaic Chinese characters. Dr. Li Chi therefore describes the various accounts of how this discovery was made and introduces us to the principal characters of the drama. Once it was recognized that the so-called "dragon bones" were the shells of tortoises, or occasionally the scapula of cattle, on which diviners had written questions directed to the gods, these precious objects became known as "oracle bones" and there was a great rush to find more inscribed specimens and translate their inscriptions into modern Chinese.

For centuries Chinese scholarship had concentrated on subtle analysis of ancient texts; thus a number of specialists were eager to learn the questions asked on the oracle bones so that they could speculate about the possible answers. Proper interpretation of these inscriptions required that the bones be discovered in association with the total archaeological record of ancient sites by qualified scholars. This raised a serious problem because the Chinese scholar's proper domain was his study and to engage in manual labor was considered an activity unworthy of his learning. The social and physical adjustments necessary to make the Anyang expedition a possibility demanded a revolution in Chinese society as well as in scholarship. Fortunately China was ready for such a revolution for there was a new atmosphere of social and intellectual change without which the investigation at Anyang would not have been possible. Thus the Anyang project was born of social revolution and was to its very end dependent on the ever-changing political situation.

Dr. Li, the key figure throughout the Anyang adventure, was well prepared for this heroic task. Having acquired a classical Chinese education, Dr. Li went to Harvard where he earned his Ph.D. in archaeology.^[1] Meanwhile, foreign archaeologists had been very active in China but their energies were directed mainly toward the discovery of early man and the study of Chinese culture from the paleolithic through the neolithic periods. On returning to China, Dr. Li became acquainted with these eminent foreign scholars who were

already busily at work unraveling the record of China's past. Although Dr. Li's earliest field work was also in search of neolithic materials, he soon became involved in the activities of the Academia Sinica's Institute of History and Philology which took a characteristically Chinese approach, that is, the search for, and the decipherment of, the early written records of China.

From the beginning the task of the Institute of History and Philology was the blending of Chinese literary scholarship with the careful field methods of archaeology. The institute chose wisely when they selected Dr. Li to lead the Anyang excavation, for he was trained in both techniques. This was the proper combination to investigate the still-legendary early Bronze Age of China and place it in its proper perspective within the realm of Chinese written history. Today Dr. Li is the person best qualified to record the events that led up to the Anyang excavation, describe the work at Anyang, and finally summarize the knowledge obtained by a team of scholars from the wealth of material recovered from the "Waste of Yin," in the general area of Anyang.

In the first two chapters, Dr. Li sets the stage by introducing us to the principle characters involved in first part of this modern archaeological drama, explaining in considerable detail the role of each from the first recognition that "dragon bones" used in Chinese medicine were actually documents that would illuminate the early Bronze Age and bring the Shang dynasty into the realm of written history.

In the third and fourth chapters Dr. Li explains the situation in Chinese archaeology during the early years of the twentieth century and describes the contributions of the prominent foreigners. This leads into the planning of the Anyang expedition, the troubles of financing the work, the early association with the Freer Gallery, and the ultimate divergence between the Gallery and the Institute.

With the fifth chapter he begins the narrative of the excavations and describes the principal finds. The work at Anyang is traced year by year until all work in the field was brought to a halt in 1937 by the

Japanese invasion. The succeeding chapters deal with the flight of the Institute of History and Philology before the advancing armies of the Japanese. They made the long, difficult trip to west China with their precious excavated material and such parts of their library and technical apparatus as could be moved at that time. Even in west China they were not able to establish a permanent base, for they had to move again with the tide of war. These seemingly insurmountable difficulties did not dampen the general enthusiasm for research because, as soon as the institute set up a temporary base, they resumed their analysis of the material and even succeeded in publishing some preliminary results. With the end of World War II the institute returned to its original quarters in east China, but, while the end of World War II brought peace to much of the world, it did not bring peace to China. The revolution, intellectual and physical, that had made Anyang possible continued to escalate, and so the institute was soon...in Taiwan where a new base was set up, new recruits were gathered, and work was resumed.

The final chapters present a summary of the findings of the Anyang expedition with a description of some of the major publications that have come out of this monumental project. From the very beginning the Anyang project, like all archaeology in China, was closely related to politics and the political situation. It is very much to the credit of Dr. Li that he has never permitted political considerations either to permanently halt the project, or to color his findings as a scholar. As the pioneer Bronze Age excavation in China, Anyang has served as a model and inspiration to those who have continued Chinese archaeological exploration.

序言

安阳发掘从一开始，其目的就是重新发现古代中国有文字记载的历史，而不是寻找艺术珍品或宝藏。因而安阳的故事也就是从发现“龙骨”上刻有中国古文字真正开始的。由此李济博士叙述了此发现如何获致的种种方面，并介绍了参与此事的一些主要人物。这些所谓的“龙骨”一旦被认定是由占卜者刻写了问卜于神的卜辞的龟壳或牛肩胛骨，这些珍品就以“甲骨”闻名，一股寻求更多的有字甲骨、将刻字译成现代文的热潮也随之兴起。

几个世纪以来，中国的学问一直专注于对古典著作的精细考证，因此，许多学者渴望了解甲骨卜问的内容，推测可能的答案。要恰当地解释这些字的含义，需要将甲骨的发现与合格的学者所作的古代遗址考古发掘的全部记录联系起来。这就提出了一个严肃的问题，因为中国学者应该是呆在书斋中的，从事体力劳动被视为与做学问不相称。因此，要使安阳考察成为可能，社会和物质都必须作出调整，这要求中国学术界和社会来一次革命。有幸的是，中国已为此作好了准备，若无这种社会和思想变革的新风气，安阳发掘是不可能实现的。因此，安阳考察计划产生于社会变革，亦自始至终受制于不断变化的政治形势。

贯穿安阳发掘始终的关键人物李济博士为完成这项光荣任务作好了准备。李先生在中国接受古典式教育后，又到哈佛大学深造并获人类学博士。^[1]当时外国考古学者在中国很活跃，但他们的精力主要集中在寻找远古人类和研究从旧石器到新石器时代的中国文化上。李济回国后，结识了这些正忙于破解中国历史档案的杰出外国学者。李先生从事田野工作之初也是在探寻新石器时代的资料，但他很快就投入到中央研究院历史语言研究所的活动中。后者走的是一条典型的中国式的道路，即寻找、考释中国早期的文字记录。

历史语言研究所的任务从一开始就是把中国文献研究和细致的田野考古方法结合起来。史语所选择李济指导安阳发掘是明智的，因为他同时受过这两方面的训练。这两种方法的结合，不管是对研究仍处于传说中的中国早期青铜时代，还是为确立其在信史中的适当地位，都是恰如其分的。如今，要记录安阳发掘的起因、描述安阳考古发掘的过程，并最终对考古学者从安阳殷墟发现的宝贵资料中所获的知识进行总结，李济是最合适的人。

在前两章中，李济向我们介绍了现代考古故事第一幕中的主要角色，设定了故事的开场，翔实地记叙了每个人的作用——是他们最早识得，中医里用的“龙骨”其实是照亮早期青铜时代、将商朝引入信史的文獻。

三、四章中，李先生说明了20世纪初期中国考古学的情况，记叙了几位著名的外国人的贡献。接下来是安阳发掘计划的制订，财政上的困难，史语所与弗利尔艺术馆的最初合作以及最后的分道扬镳。

自第五章起，李济开始记叙安阳的历次发掘及主要的发掘成果。作者对安阳的工作作了逐年回顾，直至发掘于1937年因日本侵略而被迫停止。后续的几章介绍了史语所面对日军的进犯不断撤退的窘境。他们携带着发掘的珍贵资料以及当时能搬运的图书和技术器械，向中国西部进行了漫长而艰难的跋涉。甚至于此也不能安身，随战争形势的发展，他们还得搬迁。这些看似不可克服的困难并未挫伤他们对学术研究的热情。史语所临时住址一经安顿，他们又立刻开始对资料的分析研究，甚至还成功地出版了一些初步的研究成果。随着第二次世界大战的结束，史语所返回了华东地区的原址。然而，二战的结束虽然给世界许多地方带去了和平，但未将和平带给中国。曾促使安阳发掘成为可能的那场思想和物质的革命继续升级，史语所很快迁往台湾，并在那里建立了新址，吸收了人员，恢复了工作。

最后几章概述了安阳考察的种种成果，并介绍了一些诞生于这一里程碑式的项目的主要著作。同中国一切考古活动一样，安阳发掘从一开始就是与政治和政治形势紧密相连的。但李济从未允许因政治顾虑永远停止这个项目，或因此影响他作为一个学者的种种发现，这是非常值得称赞的。作为中国青铜时代发掘的先行者，安阳为那些继续从事中国考古探索的人树立了典范，并给他们以鼓舞。

米勒德·B. 罗杰斯

华盛顿大学文学院

Preface

The archaeological materials recovered from the Anyang excavations by the Institute of History and Philology, Academia Sinica, in the period between 1928 and 1937, published in several series of *Archaeologia Sinica* since wartime, have laid a new foundation for the study of ancient China. They are important for a number of reasons; the following three may be considered primary.

In the first place, when oracle bone inscriptions became known to the antiquarians at the end of last century, they were considered as mere curiosities and left in the hands of peddlers and curio-dealers. The learned world at large was more or less skeptical about the academic value of these written inscriptions. In fact one of the leading paleographers in the early Republican era openly charged that these new curiosities were mere forgeries, in spite of the publication of many scholarly investigations and inquiries about the nature and contents of the inscriptions by a few serious students. When the Archaeological Section of the Institute of History and Philology started digging at Hsiao-t'un (known as the Waste of Yin, or Yin-hsü) in Anyang in 1928, and found the inscribed oracle bones through scientific excavation, the fact that oracle bone inscriptions actually existed in the Yin-Shang time was settled beyond dispute. From then on, Chinese paleography advanced on a new basis. Hsü Shen, the compiler of the *Shuo-wen* dictionary during the Eastern Han dynasty, was no longer considered as the final authority in the definition of all Chinese written characters as he had been for almost two millennia.

Second, what was totally new to historians of the old school was the discovery of many prehistoric sites through modern archaeology. Field archaeologists digging the Hsiao-t'un site systematically recorded, season after season, all the artifacts whether associated with the inscribed oracle bones or not, including of course all the potteries and the pot-sherds. From a total of nearly a quarter million sherds, nearly fifteen hundred complete specimens could be restored. From

this group of ceramic materials the author has been able to compile a corpus of the Yin-hsü pottery on the basis of their shapes and stratified typology. And this pottery corpus, completed during wartime and published in *Archaeologia Sinica* in 1954, has provided the most substantial link of the earliest written history with newly discovered prehistoric cultures—both the Lungshan and the Yangshao types. The turning point occurred in the course of the Anyang excavations, when the field archaeologists working on the site of Hsiao-t'un discovered that beneath the main cultural stratum of Yin-Shang period, as dated by inscribed oracle bones, there is another cultural deposit of prehistorical remains, similar in contents to the prehistoric Lungshan culture widely distributed in Shantung and the eastern seacoast.

Equally significant is the fact that the pottery corpus has provided important background material for the study of ritual bronzes in many burials at Hsiao-t'un and the royal tombs of Hou-chia-chuang. Two characteristics of the ritual bronzes from the various tombs deserve special notice. On the one hand, most of these ritual vessels are obviously the forerunners of what were used in the early Chou dynasty, such as the *ting*, *li*, *ku*, *chia*, *chüeh*, *yü*, *p'an*, and so on. The other aspect is perhaps even more interesting, namely, most of the shapes of these ritual bronzes find their prototypes in the pottery either contemporary with the bronzes or in the prehistorical deposit underneath. So these metallic finds from the burials in these two localities actually have provided definite ancestral types of the better-known Chou vessels; and in addition the establishment of a strong linkage with possible prehistorical utensils for ritual purposes may be clearly shown in the external forms of the neolithic pottery which the Anyang ritual bronzes closely followed.

The Anyang discoveries are important in many other respects, cultural and social as well as geographical. This book covers the contents of these discoveries only in a general way. In preparing the text of this book, the author has been assisted by many friends. He must mention first and foremost the debt he owes to his colleagues and fellow workers of the institute; all of them have assisted him in

one way or another, in checking source materials, re-examining the archaeological finds, and tracing bibliographical sources. Among his American friends, Mrs. Wilma Fairbank, who has for more than ten years read all his English texts published in the new series of *Archaeologia Sinica*, has once more given her time to read the manuscripts of this book with many valuable suggestions for making the language more readable. Professor Millard Rogers, an old friend of the author, has not only improved the text but has also contributed a Foreword which the author deeply appreciates.

Miss Shih-heng Chia has assisted the author in more than one way; from the beginning she helped him gather the source materials, compile the bibliography, type the notes and the text, and finally read with care all the galley proofs; to her patient and skillful assistance, he is particularly grateful. The author's thanks are also due to Mr. Y. N. Kung who helped to secure all the photographic works. The author is also grateful to the authority of the Institute of History and Philology for giving him special permission to make use of a number of unpublished photographs.

LI CHI

自序

1928年至1937年间由中央研究院历史语言研究所从安阳发掘中获得的考古资料，自抗战以来便结集成《中国考古报告集》出版了几期，为研究中国古代史奠定了新的基础。这批材料之所以重要有许多原因，以下三点或可认为是最重要的：

第一，当上个世纪末古物家开始知晓甲骨文时，刻字甲骨只被当作古董在小贩和古董商手中流传。学术界普遍对这些契刻文字的学术价值有些怀疑。实际上民国初期最著名的一位古文字学家就公开宣称这些古玩是伪造的，尽管一些严肃的学者已对甲骨文的性质及内容作了诸多调查和探究，并发表了相关文章。1928年，史语所考古组在安阳小屯（人们熟知的殷墟）展开发掘，并通过科学发掘发现了刻字甲骨，甲骨文确实存在于殷商时期这一事实也就无可置疑了。自此，中国古文字研究发展有了新的基础。东汉时期编纂《说文》的许慎近两千年来在中国文字解释方面的权威性开始发生动摇。

第二，现代考古发现的许多史前遗址，对旧派史学家而言，是全新的。田野考古工作者逐次系统记录了所有的出土物品，无论其是否与刻字甲骨有关。这其中当然包括了全部陶器和陶片。基于近25万片陶片，约可复原1500件完整的标本。笔者依据这批陶器资料、按器形及出土地层的类型所编纂的《殷墟陶器图录》，脱稿于战时，于1954年在《中国考古报告集》上发表。这一批陶器将新发现的史前仰韶、龙山文化与最早有文字记载的历史有力地联系起来。这一转折点出现在安阳发掘过程中，在小屯遗址工作的考古学者发现，在根据甲骨文推测出年代的殷商文化层下面，有另一史前文化遗迹，其包涵的内容与广泛分布于山东及东部沿海一带的史前龙山文化极为相似。

同样重要的是，这一陶器群为研究小屯墓葬和侯家庄王墓群出土的青铜礼器提供了重要的背景资料。墓葬中出土的青铜礼器呈现出两个特别值得注意的特征：其一，大部分礼器的器形明显为西周初期使用的礼器所承袭，如鼎、鬲、觚、斝、爵、盂、盘等；其二，更有趣的是，大部分器形在其同时代的或位于其下的史前文化层的陶器中找到了原型。所以，两处墓葬出土的这批青铜器实际上是更为人熟知的周朝器皿的祖型。此外，出现于安阳青铜礼器之前的新石器时代陶器的器形，清楚地显示了这些青铜器与可能在史前用于祭祀的陶器大有关联。

安阳发掘在文化、社会、地理等许多其他方面也有重要意义。本书只将这些内容作概括介绍。本书撰写过程中，笔者曾得许多朋友鼎力协助。首先我应感谢史语所的同事们，无论在核对原始材料、复查出土物，还是在查找文献出处方面，他们都给予过我许多帮助。在美国朋友中，费正清夫人费慰梅十多年来一直坚持阅读笔者在《中国考古报告集新编》上发表的所有英文文章，她再次抽出时间来阅读了本书全部原稿，并为使本书语言晓畅易读提出了许多宝贵意见。笔者的老朋友米勒·德·罗杰斯教授不仅对原文加以润色，还为本书贡献了一篇序言。对此，笔者深表感谢。

贾士蘅女士也给予了笔者多方面的帮助，开始曾帮助笔者搜集原始资料，编纂参考书目，录入正文和注释，最后又仔细审核全部校样。笔者非常感谢她耐心而又熟练的帮助。对摄制全部图片的宫雁南先生也应致以感谢。史语所的领导特许我使用了不少尚未发表的照片。对此，笔者也深表感谢。

1. Oracle Bone Inscriptions

Their First Appearance and Initial Reception in the Learned World

The oracle bone inscriptions of the Shang dynasty were known to learned circles in China and to a few European and American scholars for almost thirty years before scientific digging was started at Anyang by the Institute of History and Philology of the Academia Sinica in 1927.^[2] How did it happen that the learned world in old China came to recognize the importance of this new discovery, which revolutionized Chinese paleography and paved the way to the development of archaeological science in the land of Cathay?

It is definitely known to field archaeologists that the "Waste of Yin" was used as a graveyard at least as early as the Sui dynasty,^[3] if not earlier. There is evidence indicating that when the Sui people dug holes in this place for burying their dead, they frequently found inscribed oracle bones hidden underneath. If at that time some scholars, as cultivated as the paleographers of the nineteenth century, had come upon this hidden treasure, oracle bone inscriptions might have become known to Chinese scholars thirteen centuries earlier! This assumption is based on the fact that modern excavations of Sui tombs have uncovered more than once, in the stratum overlying these tombs, many fragments of inscribed oracle bones. I mention this interesting underground stratification to show only one fundamental point: that is, in intellectual development there are definite stages which follow each other in a certain order. That the oracle bone inscriptions were recognized at the end of the nineteenth century as a significant discovery which academicians continue to cultivate was not merely accidental. There was a long intellectual history preparatory for what took place in 1899 (1898?). It is important to take into consideration the intellectual history of the Manchu (Ch'ing)

dynasty, which provided and nourished scholars to a mature stage ready to appreciate and acknowledge the importance of oracle bone inscriptions.

Two branches of classical learning cultivated in the Manchu dynasty are closely related to the maturity of this intellectual stage. I should first like to mention the intense cultivation of textual criticism. Its origin can be traced back to a period as early as the Northern Sung dynasty, but its full development did not take place until the beginning of the seventeenth century. Ku Yen-wu (1613-1682) was the first master of this particular branch of learning. He was followed in the early period of the Manchu dynasty by a school of other eminent scholars who developed the spirit of pursuing knowledge for its own sake—a spirit that Liang Ch'i-ch'ao, one of the leaders of the Kuang Hsü Reform Movement and a pioneer in the literary revolution of modern China, succinctly summarized by saying, "The current motifs and chief elements of learning of the Ch'ing dynasty in the main are similar to the Renaissance Movement in Europe during the fourteenth-sixteenth centuries."^[4] Besides Ku Yen-wu, Liang also mentioned as the co-founder of this movement Yen Jo-chü (1636-1704), the man who successfully proved that a large portion of the *Shu-ching* (Book of Documents), which had been regarded for more than a thousand years as sacred as the Old Testament in the West, is a forgery fabricated by later pretentious classicists. The success of Yen Jo-chü helped to promote *k'ao chü hsüeh* (or classic textual criticism) as the main stem of classical scholarship. Subsequently we find Tai Chen (1723-1777)^[5] as the leader of this school; he was followed by a long list of illustrious scholars such as Tuan Yü-ts'ai (1735-1815), Wang Nien-sun (1744-1832), Wang Yin-chih (1766-1834), and Wu Ta-ch'eng (1835-1902). The trend of this new movement was directed in the main to the re-examination of all the other classics. Gradually this scholastic initiative was extended to all the important ancient texts, reaching its climax in the Ch'ien Lung to the Tao Kuang eras.

An accompanying development in this period took place in antiquarianism or the science of paleography (*chin shih hsüeh*) which,

as everybody knows, was in China initiated as early as the Northern Sung dynasty. Although it was almost completely neglected during the following dynasties, Yüan and Ming, toward the beginning of the seventeenth century, in China's Renaissance Movement, this branch of learning was also reborn. The study of ancient bronze and stone inscriptions constituted a necessary discipline in the training of *chiao k'an hsiueh* (a more advanced branch of textual criticism) that required not only a close familiarity with all ancient classical texts, but also a profound knowledge of the history of all the ancient Chinese characters. Liang Ch'i-ch'ao, in the monograph cited above, said regarding the significance of the paleographers' study of ancient bronze and stone inscriptions: "What they achieved represents the opinion of collective scholastic efforts. ... These achievements started a revolution in the ancient learning of Chinese paleography." Previously, Liang said in addition, Chinese paleography started and ended with Hsü Shen's *Shuo-wen* dictionary, which, like the ancient classics, had been taken by all educated men as the only authoritative interpretation of the origins and meanings of Chinese written words. With the beginning investigations of ancient bronze inscriptions, paleographers started to cast doubt on *Shuo-wen*'s authority. And many antiquarians discovered that *chin shih hsiueh* could provide a more correct interpretation of many ancient texts.

According to Yung Keng, the catalogue of studies of inscriptions that Yeh Ming compiled in 1910 listed 492 titles.^[6] Although the catalogue is considered to be full of mistakes, nevertheless it indicates the enormous amount of intellectual effort that scholars of the Ch'ing dynasty applied to this particular field of learning. As to what these scholars have contributed to the advancement of paleography, one example may be sufficient to illustrate their distinguished service.

The name of Wu Ta-ch'eng is well known as his antiquarian investigations attracted the attention of Western Sinologues very early. Among his numerous contributions, his studies of antique jades are especially famous. When Berthold Laufer, one of the pioneers devoted to the pursuit of Chinese learning in North America,

published his well-known monograph on jade in 1912, he said in the introductory chapter: "I was forced to reproduce the material of Wu almost in its entirety, owing to its great archaeological importance." Laufer continued: "Wu Ta-ch'eng is not bound by the fetters of the past and not hampered by the accepted school traditions. With fair and open mind, he criticized the errors of the commentators to the *Chou-li*, the *Ku-yü t'u-p'u*, and many others, and his common sense leads him to new and remarkable results not anticipated by any of his predecessors. ..."[7]

Wu Ta-ch'eng's *Ku-yü t'u-k'ao* (Studies of Ancient Jade) was first published in 1889. Five years earlier Wu published an even more important work, *Shuo-wen ku-chou pu* (Supplements to the Ancient Seal Characters of the Shuo-wen Dictionary), which may be said to be the first systematic effort made by a Chinese classical scholar of the Ch'ing dynasty to point out, on the basis of his study of ancient bronze and stone inscriptions, the errors of Hsü Shen's dictionary. An appendix volume, *Tzŭ-shuo* (Ancient Chinese Characters), published together with *Shuo-wen ku-chou pu*, studies about three dozen written characters, found mainly in the bronze inscriptions, which the author shows to be definitely different from, and even contradictory to, the definitions and interpretations of the *Shuo-wen* dictionary. These differences were mainly attributed to erroneous interpretations or wrong identifications of pre-Ch'in scripts. In other words, the evidence provided by bronze inscriptions proved definitely that Hsü Shen's *Shuo-wen* dictionary was by no means a faultless authority. Detailed instances seem unnecessary here; those who are interested may consult Wu's original work. What I wish to note here is the general tendency of scholarly work in academic circles toward the end of the nineteenth century. At this time, on the basis of the accumulated achievements of textual criticism and the study of stone and bronze inscriptions, cultivated in general among the intellectuals and the literati and encouraged by imperial sanctions of the Ch'ien Lung and Chia Ch'ing eras (1736-1820), Chinese epigraphy had already advanced to a stage ready for new source materials and new ideas which were eagerly looked for and studied. The fetters and shackles

on Chinese literati set by the *Shuo-wen* dictionary for more than a millennium were at this moment completely loosened and even shattered.

So, when the oracle bone inscriptions were accidentally noticed by scholars nourished in this tradition, such as Wang I-yung (Fig. 1), the Dean of Hanlin College, whose attention was at once attracted, steps were immediately taken to collect the strange, previously unknown inscriptions. The exact circumstances in which Wang I-yung, an eminent scholar and statesman, discovered inscribed oracle bones still remain obscure. Even the exact year of his discovery cannot be stated definitely.^[8] What is not disputed is that he started his collection of inscriptions before the climax of the Boxer Movement, which took place in 1900. A widely circulated story concerning Wang I-yung's epoch-making discovery begins with a case of malaria which occurred among his family. The medical prescription of the attending physician included an ingredient of "decayed tortoise shell." The master of the family was evidently also a medical connoisseur, so, when the medicines were brought back from the store, he examined all the ingredients personally. To his great astonishment, he found on the decayed tortoise shells ancient Chinese characters, which, although unknown to him, he found fascinating. He immediately ordered his servant to purchase all the decayed tortoise shells in the store where the original dosage had been purchased.

To what extent this story is true nobody has so far been able to confirm. What is generally known is that Wang I-yung was the first scholar to collect inscribed oracle bones.

1 Wang I-yung 王懿荣

Our main source of information concerning the earliest discoveries of oracle bones is Tung Tso-pin, whose subsequent role in the Anyang excavations will be narrated in the following chapters. In 1928 when Tung was sent to the Hsiao-t'un area to investigate Anyang as a possible archaeological site, he took extensive notes, based primarily upon conversations with Hsiao-t'un villagers, concerning the early history of the oracle bone discoveries. From his report to the sponsoring Institute of History and Philology, he extracted a condensed chronological account, listing events concerning the

discovery, collection, and study of oracle bone inscriptions, which was published in 1930 as *Chia-ku nien-piao* (Oracle Bone Chronicles). In the course of the ensuing excavations, Tung continued his investigations of the previous history of oracle bone discoveries, studying written accounts and interviewing early participants. In his revised edition of *Chia-ku nien-piao*, published in 1937, Tung included these new data, even though diverse in origin and sometimes contradictory.^[9] As the earliest entries listed in Tung's Chronicles have implications for subsequent events in oracle bone scholarship, and for the relationships (often obscure) among the various participants, I would like here to translate or summarize, and briefly comment upon, Tung's five entries for the first year, 1899. The following account is based upon the 1937 edition of Tung's Chronicles.

1. Tung's first entry for 1899 is as follows:

Formerly, long before this year [1899], in the farming land on the bank of the Huan River, north of the village of Hsiao-t'un, located in the Anyang district of Honan province, oracle bones (*chia ku*) were frequently found. The villagers treated them as things of medical value, so collected them and sold them to drugstores; they were generally known as dragon bones (*lung ku*). Li Ch'eng, a barber and a native of the village, made a business of dealing in dragon bones; he is now dead. The so-called dragon bones, are, in fact, largely oracle bones; and according to the folklore prevailing in Hsiao-t'un village, the majority of these bones bear inscriptions. The villagers sold them either retail or wholesale. In retail dealings, the dragon bones were first ground into a powder known by its native name as "knife points medicine" (*tao chien yo*), which Chinese medical practitioners considered effective in healing cuts and surgical wounds. The buyers in the wholesale market were usually managers of Chinese drugstores. The price charged was six cash per catty. The inscribed pieces at that time had no market value, and were considered worthless; so it was the usual practice among the sellers to polish off those inscriptions, before the dragon bones were brought to the market.

2. The second entry for 1899 is based upon an article by an author with the pen-name Hsi Weng, whose account, according to Tung Tso-pin, is incorrect in dating the event as happening one year earlier. The second entry:

In this year, Liu T'ieh-yün of Tan-t'u was visiting in the capital [Peking] as a house guest of Wang I-yung. The host of Liu T'ieh-yün was attacked by malarial

fever. The doctor's prescriptions included an ingredient of decayed tortoise shell purchased at the drugstore Ta-jen-t'ang [name of the store] in Ts'ai-shih-k'ou [street name]. On the tortoise shells Liu T'ieh-yün saw seal characters (*chuan wen*), which he picked out and showed to his host; both of them were somewhat astonished at this discovery. Wang, a student of bronze inscriptions, immediately realized that these tortoise shells must be ancient. He went to the drugstore, to inquire about the source of supply of these ingredients. The manager told him that they came from T'ang-yin and Anyang of Honan province. ... They were sold at a very low price. ... Liu T'ieh-yün went to the drugstores in the city and purchased them all.

This account differs in some detail from the previously mentioned episode concerning malaria in Wang I-yung's family. Tung includes it in his Chronicles since nobody is certain about what happened at the very beginning. This is the first mention of Liu T'ieh-yün (Fig. 2) whose subsequent importance to oracle bone scholarship will be discussed further on.

3. A third event, also recorded for 1899 in the revised Chronicles, is more or less general in nature, and is based upon Tung's conversations with Hsiao-t'un villagers. The Chronicles merely mention that a curio dealer by the name of Fan Wei-ch'ing traveled for the great collector Tuan Fang, a Manchu mandarin of culture and of experience in European contact. Fan roamed about with eyes wide open for any antiquity that might interest his lord. He stopped at Changte (Anyang) and found pieces of inscribed oracle bones, which Fan's sharp eyes realized as a source of great fortune. The story is still current that Viceroy Tuan Fang was so pleased with these new curiosities that he paid the dealer two and a half taels of silver per character for the inscribed bones. These rich rewards encouraged dealer Fan to take more field trips. Like the first two episodes, this story cannot be either confirmed or denied. At any rate Tuan Fang's collection, the story of which circulated only among curio dealers and peddlers, had no actual academic influence.

2 Liu T'ieh-yün 刘铁云

4. According to Tung's fourth entry for this year, this same dealer, Fan Wei-ch'ing sold twelve tortoise shells to Wang I-yung, at a price of two taels per piece. Tung Tso-pin obtained this information from the unpublished lecture notes of James M. Menzies, a Presbyterian missionary, whose activity in collecting oracle bones during the 1920s will be discussed further. Menzies' own source for the information was the dealer Fan himself.

5. The final entry for 1899 in Tung's Chronicles is based upon two

sources. The first is Liu T'ieh-yün.^[10] The second is Lo Chên-yü's diary of a trip he made in 1914-1915,^[11] which included a visit to the village of Hsiao-t'un. Tung's brief statement of his fifth entry for the year is as follows:

According to Liu T'ieh-yün's Preface to *T'ieh-yün ts'ang-kuei* [1903], tortoise shells were taken out of the soil in the year Chi Hai [1899] in the T'ang-yin district of Honan from the site of the ancient Yu-li. [...] Fan, a dealer [...], wanted to monopolize the trade, so he kept the real provenance as a trade secret, on which Lo commented in his diary: "Thus was Liu cheated by the dealer as to the place of origin of these inscribed shells."

Lo Chên-yü (Fig. 3), as will be discussed below, is known as the man who discovered the provenance of the oracle bones and as the author of numerous distinguished paleographic studies.

The above five entries concerning the first knowledge of oracle bone inscriptions in Chinese learned circles represent the studied summary of Tung Tso-pin, who devoted his life to advancing scientific knowledge of the nature of these ancient inscriptions.

Although many points remain obscure, it is clear that Wang I-yung must be considered as the first man to recognize the scholarly value of the ancient characters inscribed on tortoise shells known as oracle bones. The biographical note on Wang I-yung in the *History of the Ch'ing Dynasty* includes the following comments: "I-yung's learning is wide; he is fond of bronze and stone inscriptions. Both Weng T'ung-ho and P'an Tsu-yin were profoundly impressed by the scope and depth of his classical and paleographical knowledge."^[12] When the Boxer Movement reached its critical year, 1900, Wang I-yung committed suicide. It is generally accepted that the larger part of his collection of inscribed oracle bones passed into the hands of Liu T'ieh-yün, who had also, according to most specialists, purchased inscribed bones from the dealer Fan.

商遺先生冊有九歲所攝景

3 Lo Chên-yü 罗振玉

Liu Tieh-yün's diary, published in 1936, contains some additional information, probably not available to Tung Tso-pin when he revised

his *Chronicles*, concerning both Liu's own early collecting activity and that of Wang I-yung.^[13] One entry in the diary, for the twentieth day of the tenth month in the year Hsin Ch'ou (1901), reads as follows: "The dealer Chao Chih-chai sent me tortoise shells; there are some larger ones. In the evening I counted them; they amount to 1,300 pieces. What a rich collection!" From this entry Ch'en Meng-chia deduced that Liu T'ieh-yün had his own collection as early as 1901.^[14]

If Wang I-yung may be taken as the Charles Darwin of the new branch of Chinese paleography, Liu T'ieh-yün must rank, by common consent, as the Thomas Huxley. Liu is Wang I-yung's most important successor for two reasons. He not only continued the effort to collect the oracle bones (Ch'en Meng-chia estimated that his collection numbered 5,588 pieces as a minimum),^[15] but he was actually the first man with the foresight to lithograph and publish the ink-squeezes of these totally unknown inscriptions.^[16] In his six volumes, published in 1903, Liu reproduced 1,058 fragments of tortoise shell inscriptions, with Forewords and Preface by Lo Chên-yü, Wu Ch'ang-shou, and Liu T'ieh-yün himself—the earliest published documents discussing the nature and contents of the inscribed oracle bones.

One year later, the thirtieth year of the Kuang Hsü era, another eminent scholar, Sun I-jang, completed his first study of the inscriptions, but the manuscripts were not published till 1917.^[17] This scholar was perhaps one of the most learned men of the final period of the Manchu dynasty. He was the distinguished editor of the last of the thirteen classics, *Chou-li*, about which he compiled and critically edited all the past comments, notes, and annotations, a gigantic task completed in 1899. When he first read Liu's *T'ieh-yün ts'ang-kuei* and saw the reproduced ink-squeezes, he remarked: "Unexpectedly, in my declining years, I am able to see these marvelous antique traces of ancient inscriptions which have fascinated me so much that I could not stop reading and studying uninterruptedly for two months, with notes and comments from time to time, till at last, I found some way to understand the meanings of these ancient documents!"

壹．甲骨文：最初的发现及学术界的初步接触

中央研究院历史语言研究所于1928年^[2]在安阳开始科学发掘，在此前的近三十年间，商朝的甲骨文已为中国的学术圈和一些欧美学者所知晓。这项新发现革新了中国古文字学，在华夏大地上为发展考古科学铺平了道路，而它的重要性又是如何为旧中国的读书人所认识的呢？

田野考古学者确知，至少早在隋朝，“殷墟”就已被作为墓地使用。^[3]证据表明，当隋朝人在此掘坑埋葬死者时，他们就常发现埋藏在地下的刻字甲骨。如果那时候是一批受到过19世纪的古文字学家那样熏陶的学者发现了这些埋藏的珍品，甲骨文可能早在13个世纪前就已为中国学界所知了！这一假设是基于一个事实提出的：现代发掘隋墓的过程中，不止一次在覆盖这些隋墓的土层中发现许多刻字甲骨的碎片。我提及这一有趣的地层，仅想表明一个基本观点：在思想的发展历程中，必定存在着遵循某种前后次序出现的不同阶段。19世纪末，甲骨文被公认为一个重大发现，如今学术界仍在继续研究。这一地位的确立并非偶然。此前漫长的思想发展的历史为1899年（或是1898年）发生的事作好了准备。将清朝的思想史纳入考虑很重要，正是这样一段历史创造并培养成熟了一批能够理解并肯定甲骨文重要性的学者。

清朝经学的两个学派与这一阶段思想的成熟密切相关。我想首先谈谈考据学的精进。这种研究早在北宋时就开始了，但直到17世纪初才得以全面发展。顾炎武（1613—1682）是这个学派的第一位大师。在他之后，清朝初年出现了一个由其他杰出学者组成的学派，他们发扬了为求知而求知的精神。戊戌变法的领导人之一、近代中国文学革命的先驱梁启超把这种精神简要地总结为：“‘清代思潮’……其动机及其内容，皆与欧洲之‘文艺复兴’绝相类”^[4]。除顾炎武外，梁还提到了这一运动的另一奠基人阎若璩（1636—1704）。阎成功证明了，一千多年里在人们看来像西方人眼中的《圣经·旧约》一样神圣的《书经》，大部分是后世自命不凡的经学家伪造的。阎若璩的成功推动了考据学作为经学主要分支地位的确立。后来，戴震（1723—1777）^[5]成为这一学派的领导人，其后又涌现出一大批杰出的学者，如段玉裁（1735—1815）、王念孙（1744—1832）、王引之（1766—1834）和吴大澂（1835—

1902)。新运动的主要目的是重新审视其他一切经典。这一学术活动逐步扩大到涉及所有重要的古代文献，在乾隆至道光年间发展到顶峰。

与考证学同时发展起来的是古物研究或古文字学（金石学）。众所周知，金石学早在北宋时就开始了，虽然在之后的元明两朝几乎完全被忽略，但到17世纪初中国的“文艺复兴”时期，这门学问又得到了重生。金石学是学习校勘学——考据学中更高深的一支——的必修课。校勘学要求研究者非常熟悉所有古代典籍，同时还要有渊博的中国古文字史的知识。梁启超在上面援引的《清代学术概论》一书中对古文字学家金石研究的意义作了如下评价：“其所考证，多一时师友互相赏析所得……自金文学兴而小学起一革命。”此前，梁启超还说过，中国的古文字学和许慎的《说文》相始终。同古代经籍一样，《说文》曾一直被所有读书人奉为解释汉字起源和意义的唯一权威。随着金文研究的出现，古文字学家开始对《说文》的权威性产生了怀疑。而且，许多古器物学家发现，金石学能对许多古代文献作出更准确的解释。

据容庚说，1910年叶铭在其编纂的铭文研究目录中列出了492部著作。^[6]尽管该目录被认为错误百出，但它表明清朝学者在这门学问上付出了极大努力。至于这些学者对古文字研究发展的贡献，仅举一例就足以说明他们功劳卓著。

吴大澂的名字已为大家熟知，因为他对古物的研究很早就引起了西方汉学家的注意。他学术贡献无数，其中以对古玉的研究甚为著名。伯特霍尔德·劳佛是北美研究中国学术的一位先行者，于1912年出版了一部著名的玉石研究专著，他在序言中说：“由于吴的材料具有巨大的考古价值，我不得不全部加以复述。”他接着说：“吴大澂没有被旧的桎梏所束缚，也没有被他接受过的学术传统所阻碍。他以公正、开放的态度，批判了《周礼》、《古玉图谱》和许多其他著作的注解谬误。他依赖自己的直觉判断力获得了他的先辈们预想不到的新的非凡成就……”^[7]

吴大澂的《古玉图考》于1889年首次出版。在这五年之前，吴还出版了一部更为重要的著作——《说文古籀补》。这部专著可谓是第一年由清代经学家在金石文字研究的基础上系统指出《说文》错误的著作。附卷《字说》也和《说文古籀补》同时出版。《字说》研究了主要在金文中发现的约36个字，作者对这些字的看法与《说文》上的定义与解读全然不同，有的甚至截然相反。这两者的分歧主要是由于对先秦文献的误读或误勘引起的。换句话说，金文提供的证据无疑证明，许慎的《说文》绝非一部完美无缺的权威著作。此处具体实例不必详叙，有兴趣者

可参读吴的原著。在此我讨论的是19世纪末学术界中学者研究的普遍倾向。此时，在考据学和金石文字研究的基础上，由于当时文风的影响和乾嘉时期（1736—1820）皇室的支持，中国古文字学已发展到了一个急需寻找和研究新资料、新观点的阶段。千余年来《说文》加在中国文人身上的桎梏至此已完全松弛乃至碎裂。

所以，受此传统浸淫的翰林院编修王懿荣（图1）偶然发现甲骨文时，其注意力马上就被吸引了，他立刻采取行动，开始收集这种奇异的、从前无人知道的文字。关于这位杰出的学者和政治家发现刻字甲骨的确切情况仍不清楚，甚至他发现甲骨的确切年代也说不准。^[8]但无可争议的是，他的收集活动开始于1900年义和团运动发展到高潮以前。一个广为流传的故事是，王懿荣这一划时代的发现始于家中发生的一场疟疾。大夫开出的药方中有味药叫“陈龟版”，这位一家之主显然也是位中医内行，药买回去后，他亲自察看了每一味药。让他十分惊异的是，他发现“陈龟版”上竟然还有古字。这些字他虽不认识，但立刻被吸引住了，便立即命仆人去原来抓药的铺子买下所有的“陈龟版”。

这个故事的真实程度如何，至今已无人能确定。但人们都知道，王懿荣是第一个收集刻字甲骨的学者。

我们关于甲骨文的最早发现的资料主要来源于董作宾。后来他在安阳发掘中所起的作用将在后几章中叙述。1928年，董作宾被派往可能作为考古遗址的安阳小屯进行调查，他主要根据与小屯村村民的谈话，记录了大量关于甲骨发现早期的史料。他根据写给主持单位历史语言研究所的报告，按年代顺序简要地把甲骨文发现、收集和 research 的相关事件罗列成表，于1930年以《甲骨年表》为名出版。在随后的安阳发掘过程中，董作宾继续调查甲骨早期发现的情况，研究文字记载，并采访了早期的参与者。在1937年出版的《甲骨年表》修订本中，董把一些与原来有本质不同，甚至截然相反的新资料都补充进去了。^[9]因列入董作宾《年表》的最早几条记事已涉及甲骨学上的后续事件以及各参与者之间的关系——虽然通常很模糊，在这里我拟翻译或者说概述董《年表》中第一年，即1899年的五条记事，并加以简评。下面的叙述依据董1937年版的《年表》。

1. 董写的1899第一条记事为：

先是，远在本年以前，河南省安阳县小屯村北地滨洹河之农田中，即常有甲骨发现，小屯村人以为药材，捡拾之，售于药店谓之“龙骨”。村人有李成者，终其身，即以售“龙骨”为业，今已老死。所谓“龙骨”，多半皆为甲骨文字。售法有

零有整，零售粉骨为细面，名曰“刀尖药”，可以医治创伤，每年赶“春会”出售。整批则售于药材店，每斤价制钱六文。有字者，多被刮去。

2. 1899年的第二条记事是根据一位笔名“汐翁”的作者所著的一篇文章写成的。董作宾指出，该文中所叙事件的年代有误，实际时间应比记录的晚一年。第二条记事为：

是年，丹徒刘鸢铁云客游京师，寓福山王懿荣正儒私第。正儒病瘵，服用龟版，购自菜市口达仁堂。铁云见龟版有契刻篆文，以示正儒，相与惊讶。正儒故治金文，知为古物，至药肆询其来历，言河南汤阴安阳，……取价至廉，……铁云遍历诸肆，择其文字较明者购以归。

这条记事与前面提到的王懿荣家闹疟疾一事的细节有些不同。董作宾把此事也记入《年表》中，因为无人能断定最初的情况。这是第一次提到刘铁云（图2）。他后来对甲骨学的重要贡献后面还将进一步介绍。

3. 修订版《年表》中记录的1899年的第三条记事并无多少特别之处，它是根据董作宾与小屯村民的谈话记录的。《年表》中仅提到一个名叫范维卿的古玩商人为大收藏家端方游走。端方是一个有文化修养并与欧洲人有交往的清朝大臣。范四处游走，寻找可能取悦主人的任何古玩。他在彰德（安阳）停留时发现了几块刻字甲骨，于是他敏锐地意识到这是一条财源。现在仍流传着这样的故事：总督端方对这批新的古玩极为满意，以至按每字二两半银子的高价从这位古玩商那里购买。如此优厚的报酬刺激范更频繁地走访田间。与前两段记事一样，这个故事既不能得到证实，也不能加以否定。总之，关于端方收集甲骨的故事只在古董商和小贩中流传，没有实际的学术影响。

4. 董作宾关于这一年的第四条记事记载，这位古董商范维卿又以每块二两银子的价格卖给王懿荣12块龟甲。董是从明义士未出版的讲稿中获得这一消息的。明义士是一名长老会的传教士，关于20世纪20年代他在中国收集甲骨的活动下面将会谈到。明义士的消息则来自范维卿本人。

5. 董作宾的《年表》中1899年的最后一条记事有两个来源：一是刘铁云^[10]；二是罗振玉1914—1915年的旅行日记^[11]，其中有他亲访小屯的记录。董对这一年的第五条记事可简述如下：

刘鸢《铁云藏龟》自序云：“龟版己亥岁出土，在河南汤阴县属之古牖里城。……”盖范等估人，……希图专利，不肯告人以真实出土之地，刘氏所记，乃受其欺。上虞罗振玉叔言《五十日梦痕录》言之甚详。

罗振玉（图3）以考证甲骨的出土地点和撰写多部古文字研究的杰出著作而闻名，后面将对其进行介绍。

上面关于中国学术界初识甲骨文五条记事是董作宾研究的一个概述。他终其一生都致力于推进对这些古代文字性质的科学认识。

尽管尚存若干有待查明之处，但可以明确的是，王懿荣应算是第一个认识到这些刻于以甲骨著称的龟甲之上的古代文字具有学术价值的人。《清史稿》对王懿荣的介绍中有这样一段评介：“懿荣泛涉书史，嗜金石，翁同龢、潘祖荫并称其博学。”^[12]在义和团运动最激烈的1900年，王懿荣自尽。人们普遍认为他收集的刻字甲骨大部分转入刘铁云之手。不少专家认为，刘铁云也从古董商人范维卿那里买过刻字甲骨。

1936年出版的刘铁云日记中有一些关于他自己和王懿荣早期收集甲骨的补充资料。^[13]这部分资料董作宾在校订年表时可能未及得见。辛丑年（1901）十月二十刘氏日记记古董商人赵执斋送龟版来，云：“龟版颇有大家者，晚点龟骨共千三百件，可谓富矣！”陈梦家据此推论刘铁云早在1901年已有自己的收藏。^[14]

如果可以把王懿荣比作中国古文字学这个新学科中的达尔文，那么大家应会同意将刘铁云比作托马斯·赫胥黎。刘铁云是继王懿荣之后最重要的收藏者，原因有二。他不仅继续努力搜集甲骨（陈梦家估计他的收藏量至少有5588块）^[15]，而且他还是第一个有远见将这些完全不为人知的古字进行墨拓印刷并交付出版的人。^[16]1903年出版的六卷集《铁云藏龟》共翻印了1058块甲骨片，并附有罗振玉、吴昌绶及刘本人撰写的前言及序。这是第一部讨论刻字甲骨性质及内容的出版物。

一年后，即光绪三十年，另一位杰出的学者孙诒让完成了他的第一本甲骨文研究著作，但书稿直到1917年才得出版。^[17]孙恐怕是清末最有学问的人之一。他是“十三经”之《周礼》的出色注疏者。他对过去的所有注疏和评语进行了批判性的校订并加以汇编，终于1899年完成这一宏大工程。他第一次读到刘的《铁云藏龟》、看到复制的拓片时，说：“不意衰年睹兹奇迹，爱玩不已。辄穷两月力校读之，以前后复重者参互采绎，乃略通其文字。”

2. Exploratory Period

Collection, Deciphering, and Paleographic Studies of the Inscribed Oracle Bones

I have, in the introductory chapter, summarized in a general way the circumstances in which the inscribed oracle bones first caught the attention of learned circles, especially among those who had attained a profound knowledge of paleography. The three scholars whose contributions were fundamental in building up this new branch of learning were, first, Wang I-yung, almost unanimously acknowledged as the man who initially recognized the importance of these newly discovered inscriptions; second, Liu T'ieh-yün, who not only continued the collection work of Wang, but, equally important, was the first man within the narrow pioneering circle who had the courage to lithograph and publish the ink-squeezes of those inscriptions, which spread the knowledge of these ancient and unknown inscriptions to a large group of scholars; and third, the eminent scholar Sun I-jang, whose *Ch'i-wen chü-li* represents the pioneering effort to make a scholarly inquiry into the structure and meanings of these inscriptions. The works of these three pioneers substantially supplemented one another, and together they laid a firm foundation for this new branch of Chinese paleography.

If these three had had no fellow workers or successors, the foundation they laid could have simply disappeared, like many early Chinese inventions and discoveries, being regarded as something occult, undeserving of serious attention in academic circles, a viewpoint to which some schools of Chinese epigraphy still held fast up to the time when scientific excavations had already started.^[18] Fortunately both for the learned world in general and for Chinese paleography in particular, the publication of *T'ieh-yün ts'ang-kuei* successfully awakened classical scholars.

There followed a period of widespread efforts by many scholars to collect, to decipher, and to interpret these inscribed characters on the oracle bones. Here I think it is appropriate to give a general account of the various activities that took place between 1900 and 1928, when official excavations began. These can be considered under the following headings: (1) diggings; (2) collecting activities; and (3) publications and epigraphical works.

● Private Diggings up to 1928

Our primary source of information here, as for so much of what took place in this period, is Tung Tso-pin, who both in his *Fifty Years of Studies in Oracle Inscriptions*^[19] and especially in the revised edition of his *Chronicles* has given a detailed summary of these events.

Information gathered in Anyang convinced Tung that there had been at least nine private diggings for *tzŭ-ku-t'ou* (a local term for inscribed oracle bones) by the natives in and around Hsiao-t'un village, beginning with the twenty-fifth year of the Kuang Hsü era (1899-1900), the year when this worthless dragon bone gained a high value in the curio market. But the details of what Tung termed "the first digging" were however not given. The account merely mentions that after Wang I-yung's discovery, Fan Wei-ch'ing, a curio dealer from Shantung, went to Anyang searching for oracle bones and he paid two and one-half taels of silver per inscribed character, which according to the villagers was the prize Tuan Fang offered. Concerning the second private digging, which took place in 1904, Tung's account gives more details. As the demand for *tzŭ-ku-t'ou* suddenly increased after Liu T'ieh-yün's lithographic reproduction of the ink-squeezes of the inscriptions, to meet the pressing market the villagers started digging in the northern part of a farm along the bank of the Huan River in 1904. The villagers still remembered, when scientific excavations started, that Chu K'un, one of the landlords who owned a portion of the village farms, had organized a big digging team and all the diggers stayed in a temporary camp specially erected for the participants. They kept on with this activity until a fight for the right of treasure hunting broke out between them and a rival party also organized by

the villagers. A suit followed the fight, and the magistrate of the district stopped it by forbidding further digging.

It is impossible to say how many pieces of the inscribed bones were found during the second digging. Tung's memoir merely mentions that these new-found treasures were sold to a number of collectors, including Lo Chên-yü, Huang Chün, Hsü Fang, Frank H. Chalfant, Samuel Couling, and L. C. Hopkins.

Five years later, in 1909, the first year of the last emperor of the Manchu dynasty, the Hsüan Tung era, when Chang Hsüeh-hsien, a rich villager who owned a great deal of land, was digging for sweet potatoes on his own farm right in front of the village, he discovered fragments of scapula in the shape of a horseshoe^[20], which also bore inscriptions. It is said Chang reaped a rich harvest of oracle bones by digging potatoes.

The fourth digging did not take place till eleven years later, when in 1920 drought covered five provinces in north China and the villagers, pressed by hunger, were again forced to dig oracle bones. A large crowd, many participants being from neighboring villages, concentrated at the northern part of Hsiao-t'un, beside the Huan River, which the villagers knew to be the most productive site for hidden treasures.

The fifth digging occurred in 1923; it also took place on Chang Hsüeh-hsien's farm. Tung's memoir simply mentions the fact that two large inscribed bone plates (scapula?) were obtained from this digging. In the following year, 1924, some villagers were building a wall of stamped earth, which required digging the needed material from the loess soils. In these diggings the villagers once more uncovered some *tzŭ-ku-t'ou*, which, according to village oral traditions, included some huge pieces. Most of the diggings of this year and the preceding year were sold to Mr. James M. Menzies who was stationed at Changte as a missionary.

Tung records that the seventh private digging took place in 1925. No name of any villager is mentioned. He simply records that the

villagers were gathered in a large crowd and were engaged to dig in front of the village settlement by the side of the village road. Several baskets of *chia ku* were obtained. Some scapula (Tung's term) seemed to be more than a foot (?) long. It is thought that all of these were sold to curio dealers from Shanghai.

The eighth private digging, which took place in 1926, is of some social and political interest for the early Republican era. The story is that Chang Hsüeh-hsien, being a landowner and considered rich, was captured, kept a prisoner, and held by bandits for ransom. The villagers took this opportunity to negotiate with his family on the proposition of digging in Chang's vegetable garden. It was agreed that any worthy treasures uncovered were to be equally divided between the diggers and the owner. When the digging started, participants, numbered by several tens, were divided into three teams, all working in the same place and at the same time, each occupying an angle of a triangular piece of the same lot. They proceeded without any definite plan; naturally each team was eager to touch upon the hidden treasure first. But the search came to a dramatic end when the three parties reached a considerable depth, all concentrated toward the same hidden spot, so that they came in contact with one another. Suddenly the overlapping soil lumps collapsed, as occasionally happens in a mining shaft. The collapsed lumps buried alive four diggers, who were, however, rescued by members of the digging party. Thus the digging stopped. According to the oral tradition of this village, their findings were quite abundant; they were all bought by Mr. Menzies.

The ninth and the last private digging, before scientific archaeology started, took place in the spring of 1928 at the time of the northern expedition of the Nationalist army. There was some fighting in the Anyang area. One army was stationed on the southern bank of the Huan River. In the fighting period, the Hsiao-t'un village people could not till their land, and so, when the battle stopped in April, the villagers again gathered together to dig *tzŭ-ku-t'ou*. The crowd was a large one; they concentrated their effort by the roadside in front of the village threshing floor. The inscribed oracle bones dug out in this

season were all sold to merchants from Shanghai and K'aifeng as recorded in Tung's Chronicles.

● Collecting Activities

As has been discussed in chapter 1, the principal early collectors of inscribed oracle bones were Liu T'ieh-yün, who took over the major part of Wang I-yung's collection; Tuan Fang, the well-known collector of ancient bronzes, whose collection, whatever its origin or extent, was of no real scholarly influence; and Lo Chên-yü, who discovered the true provenance of these ancient scripts at Changte Fu.

In the years following the publication of *T'ieh-yün ts'ang-kuei* there were probably dozens of collectors, both Chinese and foreign, who actively supported, and keenly competed in, the business of collecting the inscribed oracle bones. According to James M. Menzies, foreign scholars started collecting the oracle bone inscriptions as early as 1904.^[21] The Reverend Frank H. Chalfant was probably the first foreign scholar to be involved in this activity, purchasing four hundred pieces for the Royal Asiatic Society in Shanghai. He was followed by the Reverend Samuel Couling and the Reverend Paul Bergen. Their purchases were later sold to several museums: the Carnegie Museum of Pittsburgh, the Royal Scottish Museum of Edinburgh, and the British Museum of London. Later, Mr. L. C. Hopkins of Great Britain also joined the collecting team; and soon afterwards Dr. Wilhelm of Ts'ingtao also participated, according to Tung's Chronicles. Meanwhile, in Japan, there developed an even greater enthusiasm for the collection and study of oracle bone inscriptions.^[22] Concerning the various collections of this period, it is obvious that Tung's Chronicles are not as all-inclusive as his reports on private diggings. This is understandable since actual dealings were mostly in the hands of curio dealers, who, like most museum curators, prefer secret transactions. Still in Tung's Chronicles we do find quite a few important items relating to oracle bone collections on record. They are:

A. 1904-1905. Dealer Fan sold more than one thousand pieces to Tuan Fang, six hundred pieces to Huang Chün, and one thousand

pieces to Hsü Fang. In the same year, Samuel Couling purchased many fragments, and Paul Bergen got more than seventy pieces which he presented to the White Wright Institute of Tsinan, but most of these latter are forgeries. L. C. Hopkins also collected eight hundred pieces this year. Dr. Wilhelm of Ts'ingtao gathered about seventy pieces and the Museum für Völkerkunde obtained more than seven hundred pieces. It is also recorded that the Anglo-Chinese College in Tientsin received a number of these inscribed bones as a gift from Wang I-yung's family.

B. 1909-1910. Japanese scholars also started collecting, led by Mr. Taisuke Hayashi who bought six hundred pieces this year; other Japanese collectors obtained more than three thousand pieces.

C. 1910-1911. Liu T'ieh-yün died in exile; his collection, according to Tung's Chronicles, passed into a number of hands: including Lo Chên-yü, Mrs. Hardoon, Yeh Yü-sheng, Central University, and Ch'en Chung-fan. The collection was evidently sold out or given away in piecemeal fashion since the Chronicles record that as late as 1926 Shang Ch'eng-tzu obtained twenty-five hundred pieces from Liu T'ieh-yün's original collection.

D. 1914. James M. Menzies started collecting.

E. 1918. The Japanese pioneer working on oracle bone inscriptions, Mr. Taisuke Hayashi, arrived at Anyang and purchased twenty pieces.

F. 1919. Imitation pieces of oracle bone inscriptions appeared in great quantity in the curio market.

G. 1922. Peking Government University received a gift of 463 fragments of oracle bone inscriptions from Ta-ku-chai, a curio shop in Peking.

H. 1927. James M. Menzies purchased a large collection.

This collecting activity encouraged intense competition in the curio market in Peking, Shanghai, and Wei Hsien in Shantung province as well as Changte Fu in Honan. Since most dealings were

secretive in nature, and in the hands of avaricious dealers and rich but ignorant collectors, the result was the appearance of an enormous quantity of imitation pieces. These spurious antiquities were produced in many places. Anyang, Peking, Wei Hsien, Shanghai, and so on. These forgeries, in the beginning at any rate, did probably earn the dealers quite a fortune. The author himself, in the years since the excavation started, has personally observed some of the forgeries in a number of well-known museums in both Europe and America.^[23] And Tung Tso-pin, who made a special investigation of such forgery, actually made an effort to cultivate friendship with this talented group of men, and succeeded in winning an intimate acquaintance with one of the forgers, Lan Pao-kuang of Anyang, who, Tung said, was a real genius. He was an opium smoker, and only in the inspired moment would he show his craftsmanship by taking some uninscribed pieces found at Hsiao-t'un and producing a duplicate in exact detail. Tung told me further that Lan was a forger because he really enjoyed such work. As a matter of fact, he was a poor businessman. He sold all those imitation pieces for very small sums of money.

The appearance of the forgeries greatly disturbed the curio market, with two important results. On the one hand, the conservative school, who observed the authority of Hsü Shen's *Shuo-wen* dictionary with reverence and religious faith based upon a tradition of over a millennium, naturally took these forgeries as definite evidence to prove that all the so-called *chia ku wen* (oracle bone inscriptions) were pseudo-classic inscriptions, fabricated by a number of pretenders to scholarship to deceive the public at large. On the other hand, a few far-sighted scholars who were better informed and had examined the genuine pieces were pushed to work harder in order to find criteria by which to differentiate the genuine inscriptions from the forgeries. A pioneer in this field was the author of "Oracle Records from the Waste of Yin," Mr. James Mellon Menzies, the Canadian missionary. Menzies was first sent to Changte Fu in 1914, and, after World War I, was again stationed there from 1921 to 1927. He was thus in a position to learn, *in situ*, about the unearthing of oracle bones by the native diggers on his frequent visits to Hsiao-t'un.^[24] This fortunate

combination of an appropriate appointment and an inborn instinct for archaeology prepared the way for his special contribution to the oracle bone studies among the small community of foreign scholars.

At the same time, Chinese collectors developed a more discriminating and critical power to differentiate genuine pieces from the fabricated inscriptions.

To conclude our discussion of collecting activities, it can be said that from a commercial point of view, European and American collectors were more archaeologically conscious, and so were willing to pay a relatively high price for these new curiosities.^[25] The Chinese scholars, however, were the ones who first became aware of the cultural value of these inscriptions; the second generation of *chia ku hsüeh*, as we will see in the following discussion, includes a number of scholars whose works have won international academic admiration because of their high standards of scholarship and erudition.

● Publications and Epigraphical Works

Regarding books and articles, ink-squeeze reproductions, copying of original characters, and research works on the oracle bone inscriptions, Tung's Chronicles list 110 titles in Chinese, Japanese, and European languages published up to September 1928. These titles included 36 books: 30 by Chinese authors, 4 by Japanese, and the remaining 2 by an American and a Canadian, respectively. Among the 74 articles published, 41 were by Chinese and 9 by Japanese Sinologues, while in English no less than 19 articles appeared. There were 3 articles in German periodicals and 2 in French, of which one was a Chinese contribution, and the other was from the hand of the great French Sinologue Edouard Chavannes, who in 1911 wrote a summary review of Lo Chên-yü's *Yin-shang chên-pu wen-tzũ k'ao*, published in Peking in the previous year. This lengthy note introduced both the book and the author to Western students of Sinology.^[26] The Reverend Frank H. Chalfant's "Early Chinese Writings," published in 1906-1907, was the earliest foreign-language study of the ancient inscriptions.^[27]

The other articles in English, which were published mostly in the *Journal of the Royal Asiatic Society of Great Britain and Ireland*, were contributed by one single author, L. C. Hopkins, whose "Pictographic Reconnaissance," ran seven articles in this journal up to 1927. Meanwhile, in America, Germany, and Japan, Sinologues of this period also showed considerable interest in the studies as well as in collections of these newly discovered Chinese written records.

It was, however, in Japan that the new interest in the study developed most rapidly and intensively, although the published articles were not numerous. The work of Japanese scholars, including Taisuke Hayashi and Naito Torajiro, also had a great influence upon Chinese epigraphical studies. Tung's *Chronicles* record that in 1910 Taisuke mailed Lo Chên-yü his essay on *chia ku wen*. This penetrating essay, Lo remarked in a number of places, helped to make up what he had neglected in his Foreword to Liu's *T'ieh-yün ts'ang-kuei*. It must be noted that both Lo Chên-yü and Wang Kuo-wei—the two most distinguished Chinese figures of this period who contributed abundantly to and exerted the widest influence in the Chinese world of learning—both stayed in Japan for some time. Lo went to Japan soon after the revolution of 1911, while Wang was there for only a short stay. The Japanese contact, it seems to me, must have given to both men a tremendous stimulus, stirring up in them new ideas of approach, awakening in them an interest, historical as well as archaeological, hitherto deeply hidden in their subconscious. I do not pretend to give this as the underlying motive for their devotion to this study, which had been developed into an established branch of Chinese paleography; in their time there might have been other factors that served as a driving power to make these two scholars spend their lifetimes in this way.

Before turning to the research of these two pioneers, I would like to begin our summary of work by Chinese scholars with a more detailed discussion of the previously mentioned contributions of Sun I-jang. Sun first became acquainted with the oracle bone inscriptions by reading Liu T'ieh-yün's *T'ieh-yün ts'ang-kuei*. As early as 1904, only a

year after the publication of Liu's work, Sun started examining, on the basis of his profound knowledge of bronze inscriptions, the individual characters of the oracle bone inscriptions. He labored continuously for two months, and his accumulated notes resulted in his study *Ch'i-wen chü-li* (Examples of Oracle Bone Inscriptions), although this study was not published until 1917. This pioneering effort to make a scholarly inquiry into the structure and meanings of the oracle bone inscriptions was organized according to the functional implications of individual characters: the calendar system, methods of divinatory queries, events divined for, ghosts and spirits, and so on. There is one section on officialdom, another on various states. The section on, *wen-tzŭ* (written words) is the longest, constituting almost 50 percent of the complete work.^[28]

In 1905-1906 Sun I-jang wrote another book, *Ming yüan* (Origin, or Evolution, of Names), which he published at his own expense in 1906.^[29] In this book Sun announced that his task was to trace the ancient Chinese scripts as they appeared in bronze inscriptions, oracle bone records, on stone drums of the Chou dynasty and petroglyphs of Kueichou province (considered at his time to be the Miao people's ancient scripts) and to compare them with the basic characters of *ku chow wen* which Hsü Shen found still current at his time. By these comparative studies, Sun aimed at finding out the origins and evolutionary changes of the more important words among nine thousand characters in Hsü Shen's dictionary.

It is remarkable to note that he dwelt specially on the origin of the numerals and traced with a great deal of accuracy the various numbers as they appeared and were still used in Chinese languages. Then he proceeded to discuss the original meaning of *hsiang hsing* characters, illustrated by a long list of names of animals and plants classified within the *hsiang hsing* category, such as the Chinese characters for horse (*ma*), ox (*niu*), sheep (*yang*), and so on. In discussing each example, the author usually cited bronze inscriptions and others from pre-Ch'in scripts together with any that had been found in the oracle bone inscriptions. In concluding each discussion he

only commented whether it agreed with or differed from what was said in Hsü Shen's dictionary.

We shall have occasion to refer again to the works of Sun I-jang, but I would now like to turn to the next important scholar, Lo Chên-yü. Tung Tso-pin's revised *Chronicles* record that in 1902-1903 Lo first came into contact with the inscribed oracle bones at the home of Liu T'ieh-yün.^[30] The ink-squeezes of the oracle bone inscriptions impressed him so much that he remarked, at his first sight of these scripts: "Since the time of the Han dynasty, the most eminent epigraphers like Chang Ch'ang, Tu Yeh, Yang Hsung, and Hsü Shen never had such an opportunity to see these!"^[31] So, it is clear that he was first introduced by Liu T'ieh-yün to this new learning.

Lo was so impressed by this discovery that he considered himself bound to circulate it, publicize it, and make it a permanent addition to the knowledge of ancient Chinese languages. The Chinese written language, he realized, after three millennia of history, had suffered too many changes, mutations, and erroneous interpretations. The language had in fact changed beyond any possible recognition of its original nature and of those characteristics that were in usage before the time of Ch'in Shih-huang-ti (the first emperor), who, as everybody knows, burned all the books in the thirty-fourth year of his reign (217 B.C.), only six years (221 B.C.)^[32] after the first unification of China. It is also a well-known historical fact that the first emperor issued the imperial command to standardize units of measurements, means of communication, and above all the written language in the first year of the unification. This command was soon followed by the famous imperial edict to bury alive all men of letters of this Confucian school (*ju*), and to burn all written documents except books dealing with magical practice, medical art, and tree plantings. It is also well known that the efforts to revive ancient learning in the earlier part of the following Han dynasty were in the beginning mixed in character; an effective search for ancient books started only after Han Wu-ti (140-86 B.C.) ascended the imperial throne. Emperor Wu issued an imperial edict to search for old books. At this time Chinese written characters,

for a number of reasons, had already changed so much that they were radically different from what had been current in pre-Ch'in times.

There is no need to go further into the history of such changes, but it is important to bear in mind that these changes did take place in order to appreciate the importance of scholarly contributions after the recovery of the oracle bone inscriptions, especially those following the pioneering efforts of Wang I-yung, Liu T'ieh-yün, and Sun I-jang.

Inspired by the above-mentioned essay by Taisuke Hayashi, Lo Chên-yü decided to devote his leisure time to going over all the ink-squeezes of the oracle bone inscriptions in his keeping, and also those from the dealers who had been in Honan. He succeeded in seeing thousands of fragments of the inscribed tortoise shells and bones. Out of these collections he selected some seven hundred pieces distinguished by special characteristics, and with tireless efforts he devoted himself to the minute examination of the genuine specimens as well as the ink-squeezes. Finally he achieved two important results.

First, he was able to locate the exact place, namely the village Hsiao-t'un, on the outskirts of Anyang, where the oracle bones were being unearthed. Before Lo's time the curio dealers all kept the provenance a trade secret, but after diligent inquiry, cross-examination, and systematic searches, Lo finally discovered the place of origin of the ancient scripts. As mentioned in chapter 1, Lo visited Changte Fu in 1915, keeping a diary account of his trip.

Second, by studying the genuine records, he also succeeded in discovering a list of names of the royal ancestors of the Shang dynasty, and thus began to understand that all these records were relics from the Yin-Shang dynasty. With these newly reached basic ideas in mind, he devoted three months' time to write the article *Yin-shang chên-pu wen-tzŭ k'ao* (On the Oracle Bone Inscriptions of the Yin-Shang Period), with a threefold purpose: "to correct historian's errors," "to trace the source of ancient Chinese written characters," and "to find out the methods of divination of the ancient Chinese," a statement which he made with some justifiable pride. In this article, Lo concludes: "I have solved the questions and doubts, which Taisuke's

original contribution raised and left unanswered." This article, completed in 1910, was published under the imprint of Yü-chien-chai in the same year. In Tung's Chronicles, the subtitles of Lo's important paper are as follows:

I. Historical Studies (K'ao Shih)

1. Capital city of the Yin
2. Names and post-mortem honorific titles of the kings

II. Correcting Names (Chêng Ming)

1. Identification of seal characters (*chou wen*) and ancient characters (*ku wen*)
2. Pictographic characters (*hsiang hsing tzŭ*) are not limited by the number of strokes
3. Comparative studies with bronze inscriptions
4. Correcting errors of the *Shuo-wen* dictionary

III. Methods of Divination (Pu Fa)

1. On making a query (*chên*)
2. On inscription or incision (*ch'i*)
3. On burning or scorching (*cho*)
4. On applying ink (*chih mo*)
5. On omens or crack signs (*chao ch'e*)
6. On divination records (*pu-tz'ŭ*)
7. On storage by burying (*mai ts'ang*)
8. On scapulimancy (*ku pu*)

IV. Additional Discussions (Yü Lun)^[33]

The essay is published with a Preface and a Postscript.

It is to be noted that in Lo's Preface to this, his first important article on oracle bone inscriptions, he acknowledged several facts which are of historical importance in tracing the complicated early development of this branch of Chinese paleography, especially the mutual relations among Liu T'ieh-yün, Sun I-jang, and Lo Chên-yü. Lo's introductory remarks include some definite admissions: "My dear

friend Sun I-jang (Sun Chung-yung) also investigated these inscriptions; his manuscripts were sent to me. It is regrettable to have to say that, in his study, he is unable to penetrate the mystery of these inscriptions. ..." In the same Preface, Lo also admitted that the Foreword he wrote for Liu T'ieh-yün's *T'ieh-yün ts'ang-kuei* was hasty and by no means thorough. It is rather amusing to note that Lo found only shortcomings in Sun's original work, manuscripts of which, according to Lo's own statement, he had received from Sun I-jang before the latter's death. Further, Lo does not even mention Sun I-jang's second important work, the above-cited *Ming yüan*, which traced the evolution of a number of Chinese characters. Lo must have been familiar with this remarkable and original treatise.

It is therefore at least interesting to compare the contents of Lo's *Yin-shang chên-pu wen-tzŭ k'ao* with Sun's two earlier writings. There is hardly any doubt that, as far as the method of approach is concerned, Lo differs very little from his senior worker, who, for comparative purposes, made extensive use of his profound knowledge of bronze inscriptions, with which he compared the oracle bone inscriptions in great detail, and naturally not without fruitful results. After the example of Sun, Lo Chên-yü also took up some concrete examples of pictographs which represented animals to illustrate the *hsiang hsing tzŭ* in various stages, found in both bronze inscriptions and the oracle bone inscriptions. The examples given by Lo include the pictographs for sheep, horse, deer, pig, dog, and dragon. It is important to remember that in Sun's *Ming yüan* the list of pictographs chosen for special study also included horse, ox, sheep, pig, dog, tiger, deer, *k'uei* dragon, etc. It may be true that Lo approached the problem from a different angle; he aimed to show that the oracle bone pictographs were in a rapidly changing period and the pictorial stages were by no means standardized in a fixed form. But the examples he chose for illustrations clearly indicate that if Lo in his essay does show some new ideas and cover some new ground, it only means that he was taking advantage of his senior's unpublished materials as well as benefiting from the methods Sun I-jang developed in his pioneer study, *Ming yüan*.^[34]

Lo Chên-yü, nevertheless, is a very important man, considering the various contributions he made to reinforce the firm foundation first laid by the three pioneers. He enjoyed good luck in the early days of collecting and studying the newly discovered epigraphical source materials. Through this opportunity as well as through his devotion to continuous research in the comparative studies of pre-Ch'in inscriptions, he came to a better understanding of oracle bone inscriptions, and produced the monumental publication, *Yin-hsü shu-ch'i ch'ien-pien* (Yin-hsü Oracle Bone Inscriptions, First Part) in the second year after the 1911 revolution. The four volumes of this work consisted of 2,229 ink-squeezes of oracle bone inscriptions, carefully selected by Lo himself out of his total collection of tens of thousands of fragments which included many new purchases in addition to Liu T'ieh-yün's major portion. These volumes were printed in collotype and published in Japan, on the finest paper. Three years later (1915) two volumes were added, known as *Yin-hsü shu-ch'i hou-pien*; these also were printed and published in Japan. One year before the publication of the *hou-pien*, Lo also completed and published an annotating volume with the title *Yin-hsü shu-ch'i k'ao-shih*, which was a translation of the inscriptions reproduced in *ch'ien-pien* into modern versions with explanatory notes. The manuscripts of this annotating volume were hand-copied by Lo's junior colleague, Professor Wang Kuo-wei, whose copy was lithographed and published. The annotating volume was divided into eight sections: (1) Capital Cities, (2) Kings, (3) Personal Names, (4) Geographical Terms, (5) Written Words, (6) Divination Records, (7) Ritual System, (8) Methods of Divination. It is prefaced by Lo Chên-yü, the author himself, with a Postscript by Wang Kuo-wei.^[35] After another twelve years, a revised edition of the annotatory volume was published by the Oriental Society but without mention of the publisher or the place of publication. This new edition was one of the most noteworthy books on the oracle bone studies of this period. In this edition the annotation included a great many new investigations, of which the most valuable contributions were from Professor Wang Kuo-wei, who, as noted already, hand-copied Lo Chên-yü's first edition of annotations and transcriptions.

The contributions of Wang Kuo-wei, from a purely epigraphical viewpoint, are unanimously considered much more important for this period than Lo Chên-yü's summary notes, although Wang probably, in the early stage, received substantial help from Lo, his senior worker. Wang's work, however, depended upon the original materials which were collotyped in *Yin-hsü shu-ch'i ch'ien-pien*, which faithfully reproduced ink-squeezes of the oracle bone inscriptions from Lo's own collection.

Lo's own investigations and intelligent annotations of these carefully chosen materials were widely commented on by men of learning including some of the foremost Sinologues, and naturally exercised tremendous influence among the epigraphists of both the conservative and the liberal schools in the author's home land. The first edition of the annotatory volume included a list of deciphered characters, amounting to 485 individual words. In the revised edition of this volume, the list, according to Tung Tso-pin, expanded to 570.^[36] This number constituted nearly 50 percent of the total number of individual characters inscribed in the oracle bones known at that time. Most of the deciphered characters on Lo's list included words referring to numerals, celestial stems, earthly branches, directions, animals, plants, geographical terms, utensils, and general terms concerning daily behavior, such as "come and go," "up and down," "walk and travel," "hunting and fishing," and so on. So they have tentatively served the basic needs of reading intelligently the contents of these ancient inscriptions. In the last section of his annotatory volume, Lo transcribed 707 items of the actual inscriptions, which according to Lo's standard, are intact and intelligible.^[37] Lo organized these contents according to the types of events for which queries were made through divination. Lo's eight divisions are as follows:

Types of Entries

(104) Sacrifice (*ch'i*)

(115) Pray (*kao*)

(11c) Sacrifice (*hsiang*)

(123) Going and Coming

(128) Hunting and Fishing

~~65~~ War Expeditions
~~03~~ Harvesting
~~77~~ Weather
~~70~~ Total entries

The 707 entries that Lo in his *K'ao-shih* rendered into modern readings were originally sectioned on types of events recorded in these readable inscriptions. It is obvious that these events were concerned mainly with sacrifice (a-c), king's journey (d), hunting and fishing, weather and harvesting; and also, warfare. These entries can be regrouped and calculated on a percentage basis:

~~Percentage Classification~~

~~1550~~ Official Offerings
~~1235~~ King's Journey
~~1181~~ Hunting and Fishing
~~0810~~ Weather and Harvesting
~~059~~ War Expeditions
~~707~~ Total entries

The new edition of *K'ao-shih* published in 1927 considerably enlarged the list of deciphered vocabulary; it also augmented the number of readable items of inscribed records from *Yin-hsü shu-ch'i*. The number of deciphered words reached 671, while readable records amounted to 1,094 items which Lo divided into nine groups; the added group was named "Miscellaneous," while the other eight groups retained their original names. If they are calculated according to the above regroupings on a percentage basis, the following table shows the results:

~~Percentage of Total Entries~~

~~1756~~ Official Offerings (a-c)
~~1766~~ King's Journey (d)
~~1107~~ Hunting and Fishing (e)
~~1209~~ Weather and Harvesting (g-h)

~~638~~War Expeditions (f)

~~713~~Miscellaneous (i)

~~720~~7 entries

Although the two percentage lists of events do show some differences, the extent of variation is relatively limited. The performance of sacrificial offerings to ancestors and other spirits no doubt constituted the major state event about which the Shang people had to consult the oracles and find an answer, while the other three groups—royal travels, hunting and fishing, harvesting and weather forecasts—were undoubtedly of equal importance; these four groups were probably the main occupations of a king's daily life. The war records, which constituted more than 5 percent of the readable records, represented state events also doubtlessly equal in importance to sacrificial performance; but their occurrences were naturally less frequent. There will be occasions later to discuss this group of records in more detail.

What has to be pointed out here particularly is the fact that Lo Chên-yü, with the help of Wang Kuo-wei, in these published volumes had succeeded in strengthening the foundation for a renewed study of Chinese epigraphy by demonstrating the evolutionary stages of Chinese written characters from the Yin-Shang period down to the late Han dynasty when Hsü Shen produced his *Shuo-wen* dictionary. In this gigantic task, they also accomplished some other important archaeological achievements in their study of the methods of divination, identification of the locations of the various capitals which the Shang dynasty occupied, and, above all, reconstruction of the genealogical tree of the royal family way back to the predynastic time. The re-establishment of the succession of dynastic kings and predynastic royal ancestors was mainly the work of Wang Kuo-wei, whose research covered readings of all the related records as well as the readable oracle bone entries. He was also the first scholar to succeed in piecing together the fragmentary ink-squeezes published in various reproductions into some complete documents, in which the

ancestors were mentioned according to the order of succession when occasion for joint worship of all ancestors was to take place. Professor Wang, in two special articles published in 1917, built the genealogical tree of the Shang rulers, which he compared with three other important documents relating to the same matter.^[38] Wang concluded:

According to Ssŭ-Ma Ch'ien's account, the Shang dynasty has thirty-one emperors (*t'i*), ranking in seventeen generations. ... What the oracle bone records have shown and proved is that the number of emperors as well as the generations in Ssŭ-Ma Ch'ien's record are the nearest to the correct list. The other two documents have both misrecorded the number of generations.

The articles mentioned above represent the cream of his applied effort in his ingenious paleographic work in the course of his historical as well as epigraphical researches. To this day, his classical contributions have remained without any fundamental change. When Tung Tso-pin wrote his *Chia-ku-hsüeh wu-shih-nien*^[39] in 1944, thirty-seven years later, Tung's list of Shang kings and their ancestors remained almost the same as those Wang first identified in 1917.

Wang's contributions to this new study started in 1915 and continued more than ten years till the time, after the example of Wang I-yung in 1900, that he terminated his life by drowning in the artificial lake of the Summer Palace built by the Empress Dowager Tz'ŭ-hsi. At that time, 1926, he had been teaching in the Research Institute of National Learning at Ts'inghua College.

Contemporaneously, there were at least half a dozen Chinese epigraphists who contributed to the advancement of this study. Among the Chinese contributions, two dictionaries deserve special notice. Wang Hsiang's *Fu-shih yin-ch'ï lei-ts'uan*, published in 1921, included 873 deciphered characters; Shang Ch'eng-tzu's *Yin-hsü wen-tzŭ lei-pien*, published in 1923, included 789 deciphered characters. These dictionaries served an important purpose, not only in teaching beginners to approach ancient scripts but also in spreading this new knowledge to an enlarged circle among the Chinese intelligentsia.

Before concluding this chapter, something should be said about the attitude of Chang T'ai-yen (Ping-lin). Tung gives a vivid account of

what he called the archenemy who stood in the way of developing the study of these newly discovered materials. And Chang T'ai-yen is important, because he was considered the most prominent epigraphist of his time and he was politically a revolutionary. Tung's account of Chang T'ai-yen's attitude toward the oracle bone inscriptions reads:

Chang T'ai-yen was one of those scholars who were skeptical of the oracle inscriptions and criticized any study of them. He maintained oracle inscriptions were not mentioned in the old documents and therefore the inscribed bones must be products of forgers of much later periods. It is most improbable, he argued, that shells and bones could have remained in the earth for three thousand years without decaying. Therefore Chang maintained that Lo Chên-yü who believed in those inscriptions, must be thoroughly condemned. ^[40]

It is said that Chang's idea remained unchanged even after scientific excavation at Anyang confirmed the existence of these newly discovered precious documents. There is a graceful note on Chang T'ai-yen's innermost feeling toward these ancient relics which bear the Yin inscription related in this anecdote: "On one of Chang's birthdays, his chief disciple Huang Chi-kang sent him a birthday gift, oblong in shape and wrapped in red paper, which appeared to be box of edible delicacies; afterwards, when the old man tore off the wrappings, he found the four volumes of *Yin-hsü shu-ch'i ch'ien-pien* by Lo Chên-yü. ..."

The anecdote ends by merely mentioning that this birthday gift from his beloved disciple was not cast away; but the volumes found a place on the old man's bed, beside his pillow—evidently he actually read some of these condemned pseudo-inscriptions!

貳．探索阶段：甲骨文的搜集、考释和古文字学研究

我已在开篇的章节里概述了有字甲骨最初在学术界，尤其是在那些有精深的古文字知识的学者中间，引起注意的情况。有三位学者为这一新学科的创立作出了根本性的贡献。第一个是王懿荣，大家一致认为是他最早认识到这些新发现的刻字甲骨的重要性。第二个是刘铁云，他不仅继续了王的搜集工作，同样重要的是，在少有的几个先行者中，他第一个勇敢地将甲骨文拓印成书出版，使这些不为人知的古文字的知识得以在学者中广泛传播。第三个是经学大师孙诒让，他的《契文举例》是对刻字的结构和意义进行学术探讨的开创性著作。这三位开拓者的成果互为补充，共同为中国古文字学这一新学科奠定了坚实的基础。

若这三个人没有同行和继承者，那么他们奠定的基础可能会像中国古代不少创造发现一样，被学术界看作玄奥而得不到真正的重视，最后销声匿迹。中国金石学的一些学派在科学发掘已开始之时仍固执地坚持着这种看法。^[18]幸运的是，不论对中国学术界还是对古文字学而言，《铁云藏龟》的出版成功地唤醒了经学学者。

随后迎来了一个众多学者广泛搜集、辨认、考释甲骨文字的时期。在此，我想应当对1900年至1928年间正式发掘前的各种活动作一概述。这些活动可归为以下几类：(1) 私人挖掘，(2) 搜集活动，(3) 著录及出版。

● 1928年以前的私人挖掘

关于这段时间里的挖掘活动，此处我们主要的信息来源是董作宾。他在《甲骨学五十年》^[19]，特别是在《甲骨年表》修订本中，都对这些事件作了详细的总结。

从安阳收集到的资料使董作宾相信，小屯及其附近村庄的人至少挖掘过九次“字骨头”（当地对刻字甲骨的称呼）。这种活动开始于光绪二十五年（1899—1900）。也就在这一年，原本分文不值的“龙骨”在古玩市场上身价倍涨。但董作宾并没有记载所谓的首次挖掘的细节。书中仅提到，在王懿荣发现甲骨后，山东古董商人范维卿到安阳搜集甲骨，并

以每字二两半银子的高价收买。据小屯村民讲，这是端方开出的价格。第二次私人挖掘发生在1904年，董对这次活动记述较详。刘铁云的《铁云藏龟》拓印出版后，对字骨头的需求陡然增加。为满足市场上的急需，1904年村民们开始在洹河岸边一块农田的北部进行挖掘。村民们仍记得，在科学发掘开始前，一个拥有本村部分土地的名叫朱坤的地主已组织起了一个庞大的挖掘队，所有队员都住在专门搭建的临时帐篷里。直到他们与另一支由村民组织的挖掘队之间爆发了一场争夺挖宝权的争斗，这次挖掘才停止。争斗引发了一场官司，县令随即下令禁止进一步发掘，此案才得以了结。

第二次挖掘究竟获得了多少块字骨无法确定。董的报告中只提到，这些新发掘的珍品卖给了包括罗振玉、黄濬、徐枋、方法敛、库寿龄和金璋在内的许多收藏家。

五年以后，即1909年，宣统（清朝最后一个皇帝）元年，小屯村一位田产富裕的村民张学献在自家门口挖红薯，发现了很多刻字的“马蹄儿”和“骨条”^[20]。据说，张学献通过挖红薯收获了一大批有字甲骨。

第四次挖掘发生在11年后的1920年。这一年，华北五省大旱成灾，村民们迫于饥荒再次挖掘甲骨。大批挖掘者，包括许多邻村村民，都聚集到小屯村北的洹河河畔，因为他们已知这里是藏有宝藏最多的地方。

第五次挖掘是在1923年，地点在张学献家菜园内。董只简单记述了此次挖掘得两块刻字大骨版（牛肩胛骨？）。在随后的1924年，小屯村人为筑墙取土时，再次挖出一些字骨头。据村民口传，其中有大片的字骨。这两年挖掘出的大部分字骨都卖给了以传教士身份驻在安阳的明义士。

董作宾记载，第七次挖掘发生在1925年，但他未提及任何具体村民，只简要记述了一大批村民聚集在小屯村前大路旁挖掘，得甲骨数筐。其中有的胛骨（董的叫法）长至一英尺有余（？）。他猜测这些甲骨全卖给了来自上海的古董商人。

第八次私人挖掘发生在1926年。这次挖掘与民国早期这一地区的社会和政治因素有关。据说是富有的地主张学献被土匪绑票囚禁起来，索要大量赎金。村人乘机与张家商谈，提议在张家菜园进行挖掘。经协商双方同意：凡挖出有价值的珍宝由挖掘者和地主平分。于是，挖掘就此开始了。几十人分成三组，成鼎足状；每组各占据一个角同时开始挖掘同一块地。挖掘并无确定的计划。自然每组都急于先挖到宝藏。但这次

寻宝却以非常戏剧化的方式结束：三组人挖到了一定深度，并开始朝着同一个藏宝地点进发，于是三组之间已能在地下相互联系。突然，像矿井里偶有发生的塌方一样，上层虚土下陷，埋住四人。幸而同伴急救，四人保住了性命。此次挖掘也因此停止了。据小屯村民相传，此次挖掘收获颇丰，所得的甲骨都被明义士买走。

科学发掘殷墟前的第九次，即最后一次私人挖掘，是在1928年春。此时正值北伐时期。安阳地区亦受战火波及。一支军队驻扎在洹水南岸。战时小屯村民无法耕种土地，因此到4月战事结束时，村民又聚集在一起挖掘字骨头。此次参与者甚众，都集中在路旁的打谷场进行挖掘。据董作宾的《年表》记载，这次挖出的有字甲骨全部卖给了上海、开封的商人。

● 搜集活动

第一章已谈到，早期有字甲骨的主要搜集者有：刘铁云，他接收了王懿荣搜集的大部分甲骨；著名的青铜器收藏者端方，他搜集的甲骨，不论其来源或范围，都没有真正的学术影响；罗振玉，他发现了这些古文字真正出土地在彰德府。

在《铁云藏龟》出版后的几年里，有中外搜集者约几十人积极支持、竞相参与有字甲骨的搜集。据明义士讲，早在1904年已有外国学者开始甲骨搜集。^[21]牧师方法敛大概是第一个参与甲骨搜集活动的外国人，他为上海皇家亚洲文会的博物馆购买了400片甲骨。在他之后有牧师库寿龄和伯根。尔后，他们将购得的甲骨卖给了几家博物馆：美国匹兹堡的卡内基博物馆、爱丁堡的皇家苏格兰博物馆和伦敦的大英博物馆。后来，英国的金璋也加入了搜集甲骨的行列。据董的《年表》记载，不久青岛的卫礼贤也参与了甲骨的搜集。同时，在日本甚至掀起了一场更大规模的搜集和研究甲骨文的热潮。^[22]关于这期间各方面的搜集活动，显然董的《年表》并未像记载私人挖掘活动一样，全部加以囊括。这可以理解，因为实际买卖甲骨的交易多经古董商之手进行，这些人像大部分博物馆馆长一样，更喜欢秘密交易。虽然如此，在董的《年表》中，我们仍然能见到若干条关于甲骨搜集的重要记录，如：

A. 1904—1905年，范售卖与端方甲骨1000余片、黄濬600片、徐枋1000片。同年，库寿龄也购买了许多甲骨残片；柏根买到70多片，并转赠济南广智院，但其中大部分是赝品。这一年，金璋搜集甲骨800

片，青岛卫礼贤得70余片，德国柏林民俗博物院得700余片。另外还记载了天津新学书院接受王懿荣后代馈赠甲骨若干。

B. 1909—1910年，在林泰辅购买600多片甲骨的影响下，日本学者也开始争相收集。其他日本学者获得甲骨共达3000余片之多。

C. 1910—1911年，刘铁云在流放中死去。据董的《年表》记载，刘所收集的甲骨散落在多人手中，其中包括罗振玉、哈同夫人、叶玉森、陈钟凡及中央大学。显然，刘所收集的甲骨都是零星地被卖掉或送掉的。董的《年表》还记载，直到1926年商承祚还从刘氏的原初收藏中获得了2500片。

D. 1914年，明义士开始搜集甲骨。

E. 1918年，日本研究甲骨文的先行者林泰辅亲赴安阳购得甲骨20片。

F. 1919年，古董市场上出现大量甲骨赝品。

G. 1922年，北京达古斋古玩商店以所藏甲骨赠与国立北京大学（研究所国学门），共463片。

H. 1927年，明义士购买了一大批甲骨。

搜集活动使北京、上海、山东潍县、河南彰德府的古玩市场上出现了疯狂的抢购。因为大部分交易都是秘而不宣的，且又都是在贪婪的古董商与财大气粗但却愚昧无知的收藏者之间进行的，其结果就是，大量的赝品流入市场。这些赝品是在安阳、北京、潍县、上海等地生产的。不管怎样，一开始确有古董商人靠贩卖这些伪造品赚了大笔钱。在科学发掘开始以后的几年中，笔者就在欧美很多有名的博物馆里看到一些这样的赝品。^[23]董作宾对甲骨造假进行了专门调查，还为跟这群很有天赋的人交上朋友颇费了些工夫。后来，他成功地结识了一个伪造者，即安阳人蓝葆光。董说他是个“真正的天才”。他吸食鸦片，而且只在吸过鸦片兴奋时才表演他的技艺；他在小屯找到的无字骨头上刻字，遂得与真品几无二致的甲骨。董曾告诉笔者，蓝葆光成为伪造者是因为他确实喜欢做这件事。实际上，他是个穷商人，出售这些伪造品也只得很少的钱。

伪造甲骨的出现极大地扰乱了古玩市场，引起了两个重要后果。一方面，由于保守派沿袭千多年来的传统，对许慎《说文》的权威性怀有极虔诚的尊崇，便自然而然地以这些伪造品为确证，认定这些所谓的甲

骨文全都是冒牌学者为欺骗大众仿古制作出来的。另一方面，一些学者远见卓识，信息掌握丰富，并研究过真正的甲骨片，他们受到了激发，为探明真伪甲骨的区分标准而更加发奋工作。这方面的一位先行者是《甲骨研究》一文的作者加拿大传教士明义士。1914年，明义士第一次被派往彰德府，一战后，他再次留驻彰德，从1921年一直到1927年。他常常到小屯去探访，因此能够就地了解当地人挖掘甲骨的情况。^[24]职务带来的地利与考古的天赋幸运地结合在一起，为明义士创造了极好的条件，最终，在为数不多的外国学者中，他为甲骨研究作出了特殊贡献。

同时，中国的收藏家们也增长了对甲骨片真伪的区分和鉴别能力。

总结以上关于甲骨搜集活动的讨论，可以说，从商业角度讲，欧美搜集者更具考古意识，因此愿支付较高的价钱来购买这些新奇古董。^[25]但最先意识到这些甲骨文的文化价值的是中国学者。第二代甲骨学研究者中包括一大批优秀学者，他们的著作以高水平的学术研究和广博的学识赢得了国际学术界的尊敬。我们将在下面加以介绍。

● 甲骨的著录和出版

董的《年表》列举了截止1928年9月用汉文、日文和西文所著的甲骨文字的墨拓摹本及甲骨研究的文章、书籍共110种。其中书籍36本，30本是中国学者写的，4本是日本学者写的，其余两本分别为美国人和加拿大人所著。在发表的74篇论文中，41篇出自中国学者之手，9篇出自日本汉学家，还有至少19篇是用英文写成的。刊登在德文杂志上的有三篇；法文杂志上有两篇，其中一篇是中国人写的，另一篇是法国著名汉学家沙畹写的。沙畹于1911年为罗振玉的《殷商贞卜文字考》一书撰写了书评简介，该书于此前一年在北京出版。这一长篇书评向西方汉学界介绍了这本书的内容和作者。^[26]牧师方法敛的《中国原始文字考》于1906—1907年间出版，是最早用外文写的研究中国古文字的著作。^[27]

用英文写的其余文章，大部分在《英国皇家亚洲文会》杂志上发表，这些文章为同一个作者——金璋所著。他撰写的《象形文字的研究》，到1927年止，已在这本杂志上连载了七篇。同时，这一时期美国、德国、日本的汉学家也对这种新发现的中国古文字的搜集和研究表现出了浓厚的兴趣。

然而，对这项研究的兴趣发展得最迅速最浓厚的是在日本，虽然发表的论文并不多。包括林泰辅和内藤虎次郎在内的日本学者的著作同样对中国铭文研究产生了很大影响。据董的《年表》记载，1910年林泰辅将自己一篇研究甲骨文的论文寄给了罗振玉。罗评价这篇洞见深刻的文章在很多地方都“足以补向序之疏略”，即罗为《铁云藏龟》写的序。应该注意到，罗振玉和王国维，这一时期两位最顶尖的、对中国学术作出重大贡献并产生广泛影响的中国学者，都在日本侨居过一段时间。辛亥革命后不久，罗就到了日本，而王仅在日本住过很短一段时间。在我看来，同日本人的接触对他们二人启发极大，激发了他们探讨新观点的热情，唤醒了一直深埋在他们潜意识中对历史和考古的兴趣。我不能妄称这就是他们献身于该研究的根本动力——甲骨文字研究当时已成为了中国古文字学的一个分支。他们还可能受到所处时代其他因素的驱使，从而选择终生从事甲骨研究。

在专论罗、王两位先行者的研究之前，我想详细谈谈前面提到的孙诒让作出的贡献，并以此为开端对中国学者的工作作一总结。孙是通过读刘鹗的《铁云藏龟》首次知晓甲骨文的。早在1904年，即刘的著作出版一年后，孙便凭借他对金文的渊博知识对甲骨文字进行逐个考察。他连续研读了两个月，积累了许多研究笔记。这便是《契文举例》一书的底稿，但该书直到1917年才出版。这部最早探讨甲骨文字结构和意义的学术著作，是以单个字的功能含义来组织的。该书分历法、贞卜、卜事、鬼神、卜人、官氏、方国等篇。其中关于文字的部分最长，几乎占到全书篇幅的50%。^[28]

1905年至1906年，孙诒让完成了另一部著作《名原》，并于1906年自费出版。^[29]书中孙说明了他的目的是探源以金文、甲骨文、周朝石鼓文和贵州省岩刻文（当时推测为苗族的古代文字）的形式出现的古代汉字，并将它们与许慎时期仍通用的古籀文相比较。通过比较研究，孙旨在探明《说文》九千余字中较重要者的起源及演变。

值得注意的是，孙特别详述了数字的起源，并十分精确地追溯了在中国语言里出现过并仍继续使用的各类数字。他继而论证了象形字的本义，并列举了一长串表示动植物名称的象形字，如马、牛、羊等，加以图示说明。在对每个字进行考释时，除了依据在甲骨文中能找到的字之外，他还常常引证金文和其他先秦古文字，最后还评注这与《说文》的解释是否相符。

我们以后还会提到孙诒让的著作，但现在要介绍另一个重要的学者

罗振玉。据董的修订版《年表》记载，1902年至1903年，罗在刘铁云家中首次接触有字甲骨。^[30]第一次见到墨拓版的甲骨文时，罗振玉就对这种文字惊叹不已，他说：“自汉以来小学家若张（张敞）、杜（杜业）、扬（扬雄）、许（许慎）诸儒所不得见。”^[31]因此，他显然是通过刘铁云的介绍才第一次知道这门新学问的。

这一发现给罗极大震撼，他认为自己有义务去传播、普及它，使之成为中国古文字的新知，永久留存下来。他认识到，中国文字在三千多年的历史中，经历了许多变化，也遭受了种种误读。实际上这门语言较先秦时代使用的文字而言，其原初的性质及特征已变得不复辨认。众所周知，中国历史上第一位皇帝秦始皇在他统治的第三十四年（公元前213年），即他统一六国（公元前221）后的第八年^[32]，焚毁了所有书籍。同样著名的是，在完成大一统的第一年他即下诏要“一法度衡石丈尺”、“车同轨”，最重要的是，“书同文字”。随之而来的是臭名昭著的焚书坑儒的诏令，焚烧除卜筮、医药、种树以外的其他所有书籍。紧接着，汉朝初年兴起了复兴古学的运动，它一开始带有混合的性质，也同样著名。对古籍进行卓有成效的搜集始于汉武帝（公元前140—前86年）即位后。汉武帝颁布了搜集古籍的诏令。此时，由于种种原因，汉字已发生了巨大变化，完全不同于先秦时通用的文字了。

对上述变化的历史不必再作进一步探讨，重要的是，要记住这些变化的确发生了，由此才能认识在甲骨文发现后，特别是继先驱者王懿荣、刘铁云、孙诒让之后，这些学术贡献的重要性。

之前提到，林泰辅寄来的《以所作甲骨论著》给予罗振玉极大激励，罗“乃以退食余晷，尽发所藏墨拓，又从估人之来自中州者，博观龟甲兽骨数千枚，选其尤殊者七百”，孜孜不倦地对甲骨和拓片进行了仔细的研究，最后取得了两项重要成果。

第一，他确定了甲骨的确切出土地，即安阳市郊小屯村。此前，古董商把甲骨真正出土处当作商业秘密而隐瞒着。但罗振玉经过细致调查、仔细询问和系统研究后，终于找到了甲骨原初的埋藏地。第一章中已讲到，1915年罗振玉走访了彰德府，并记录了旅行日记。

第二，通过研究真正的甲骨文，罗振玉“又于刻辞中得殷帝王名谥十余，乃恍然悟此卜辞者，实为殷室王朝之遗物”。以这些新观点为基础，他用了三个月的时间写成了《殷商贞卜文字考》。他自豪地声称写此书目的有三：“正史家之违失”、“考小学之源流”、“求古代之卜法”，他的

自豪不无道理。他在文中总结道：“凡林君之所未达，至是乃一一剖析明白。”此文成于1910年，同年由玉简斋石印出版。据董《年表》 记载，罗振玉这部重要著作的目次如下：

考史第一

- 一 殷之都城
- 二 殷帝王之名谥

正名第二

- 一 籀文印古文
- 二 古象形字因形示意不拘笔画
- 三 与金文相发明
- 四 纠正许书之违失

卜法第三

- 一曰贞
- 二曰契
- 三曰灼
- 四曰致墨
- 五曰兆坼
- 六曰卜辞
- 七曰埋藏
- 八曰骨卜

余说第四^[33]

此文刊印时还附《自序》和《又识》。

值得注意的是，罗在他的第一部关于甲骨文的重要著述的序言中，在追溯中国古文字的这一学科早期复杂的发展历程时，指出了几个具有重要历史意义的事实，特别是刘铁云、孙诒让和罗振玉之间的相互关系。罗在评介中也明确承认：“亡友孙仲容征君亦考究其文字，以手稿见寄，惜亦未能洞析奥隐……”同样是在这篇序言中，罗还承认他为刘的《铁云藏龟》撰的序言为匆忙写就，并不全面。十分有意思的是，罗从孙的原作中发现的仅仅是其缺陷，而据罗称，孙诒让的手稿还是孙去世前寄给他的。而且，罗对于孙诒让的第二部重要著作，上面提到的、追

溯了许多汉字演变的《名原》，只字未提。但罗一定对这部极具原创性的惊世之作非常熟悉。

因此，将罗振玉的《殷商贞卜文字考》的内容与孙的两部早期著作作一比较至少是有趣的。就研究方法而论，罗与他前辈无甚差别，这一点几无疑议。孙以比较研究为目的，充分利用他渊博的金文知识，与甲骨文进行了仔细比较，自然获得了丰硕的成果。罗振玉效仿孙诒让的做法，以代表动物的象形文字为实例，分析了金文和甲骨文中发现的各阶段的象形字。罗列举了表示羊、马、鹿、猪、狗、龙等的象形字。不要忘了，孙在《名原》中选取加以专门研究的象形字也有马、牛、羊、猪、狗、虎、鹿和夔龙等。或许罗是从不同角度探讨的，意欲说明甲骨文中的象形文字曾经历过一个快速变化的时期，也绝没有一个定式加以规范。但罗选择的例证清楚表明，即使罗在自己的文章中的确说明了一些新观点，涉及到一些新领域，那也只能说明他利用了前辈未出版的材料，并受益于孙诒让的早期著作《名原》的研究方法。^[34]

尽管如此，罗振玉仍是位非常重要的人物，他为夯实三位先驱者奠定的基础作出了多方面的贡献。在早期收集和研究新发现的契刻文字的原始资料方面，他是非常幸运的。他充分利用这个良机，潜心研读，将其与先秦文字进行对比，对甲骨文有了更深的理解。在辛亥革命的次年，他出版了具有里程碑意义的名作《殷虚书契前编》。这部四卷本的著作包含2229幅甲骨拓片，全都是罗从他收藏的数万片的甲骨中亲自精选的。这几万片甲骨中大部分是从刘铁云处得到的，还有部分是他新购得的。这部著作以珂罗版用最好的纸在日本出版。三年后，1915年，又在日本印刷、出版了《殷虚书契后编》两卷。此一年前，注释卷《殷虚书契考释》完稿并出版。该书将《前编》中复制的甲骨文译成了现代文，并加以注解。其原稿是罗的年轻同事王国维教授手抄的，抄写本石印出版。全书分八章：(1) 都邑；(2) 帝王；(3) 人名；(4) 地名；(5) 文字；(6) 卜辞；(7) 礼制；(8) 卜法。前有罗振玉的自序，后附王国维的后记。^[35]十二年以后，该书修订本由东方学会出版，但未署出版者及出版地名。修订本是这一时期甲骨文研究最引人注目的著作之一。该书的注解中包括了许多新的研究，其中最有价值的出自王国维，上面已提到，他手抄了罗振玉第一版的注解和转录。

从纯文字学的角度看，大家公认这时期王国维所作贡献比罗振玉的概要注释要重要得多，虽然王一开始很可能从这位年长的同事处得到过许多实质性的帮助。然而，王国维的工作所依据的是珂罗版的《殷虚书

契前编》这一原始材料，而该书忠实地墨拓复制了罗收藏的甲骨文字。

罗本人对精选材料的研究和高明的考释，在学者中间广为讨论，其中还包括一些一流的汉学家，当然这对中国保守派和开明派的金石学者都产生了巨大影响。《考释》的第一版共考释了485个字。在修订本中，据董作宾讲，考释的字增到571个^[36]，几乎占此时期已知的甲骨文字总数的50%。罗考释的文字大部分为数字、天干地支、方位、动植物、地名、用具和关于日常生活的一般字，如入、出、上、下、步、行、狩、渔等等。因此，这暂时满足了读懂这些古文的基本需要。《考释》的最后一部分刊印了707条卜辞，以罗振玉的标准看，卜辞完整且清晰。^[37]罗根据卜问内容的类别将其组织起来。卦辞共分八类：

卜问类

80祭

15告

4享

12出入

428猎和捕鱼

8征伐

81收获

17天气

总数

《考释》中由罗译成现代文的这707条卜辞原本是按可判读的文字所记录的事件类别分节的。显然，其中大部分与祭祀(a-c)、王的旅行(d)、渔猎、天气和收获及战争有关。这些条目可以重新分类，得各类占百分比如下：

重释类

89祭

123旅行

888猎和捕鱼

988气和收获

85征伐

总数

1927年出版的《考释》增订本大大增加了考释文字的数量，扩大了《殷虚书契》中著录的可辨读的卜辞条目。考释的字数达671个，同时可判读的卦辞条数达1094条。罗振玉将后者分成九组，增加一组为“杂类”，其余八组仍保留原名称。若按上面的重新分类计算，所得各项占百分比的结果见下表：

百分比

57.3% 祭祀 (a-c)

27.5% 王的旅行 (d)

30.2% 打猎和捕鱼 (e)

42.6% 天气和收获 (g-h)

5.5% 征伐 (f)

6.7% 杂类 (i)

2.2% 其他

虽两组事件显示的百分比有些不同，但差别不大。祭祀祖先和神灵的活动无疑是国家的头等大事，商人须问卜以求其答案。其他三组——王的旅行、打猎和捕鱼、收成和天气预测——无疑也同样重要。大概这四组活动占据了商王的日常生活。占可读记录的5%多的战争，无疑也是和祭祀活动同等重要的国家大事，只是战事当然不像祭祀那么频繁。这类记载后面还有机会更详细论述。

这里特别需要指出的是，罗振玉在王国维的协助下出版了这些著作，说明了从殷商直到后汉许慎的《说文》问世前这个时期中国文字的发展变化，成功地巩固了新的中国金石学研究的基础。在这部巨著中，他们还在探究占卜方法和商朝都城所在地等方面取得了重大的考古成就；最重要的是，他们将商王室世系图谱的重建追溯到了前商时代。重建商王及其前商时代祖先的即位顺序主要是王国维的功劳。王对所有可判读的卜辞及相关记录都悉数加以研读。他还是将不同出版物上的墨拓甲骨片成功“缀合”成完整文献的第一人。在描写祭祀列位先王的仪式时，文献便会按他们的即位顺序加以罗列。王国维教授在1917年发表的两篇专论性的文章中建立了商王世系图，并以此与关于这一主题的另外三部重要著作作了比较。^[38]王总结道：

据《殷本纪》则商三十一帝，共十七世。……今由卜辞证之，则以《殷本纪》所记为近。

其他两种文献记载的世数都不准确。

上面提到的论著代表了王国维在历史学和金石学的研究过程中为古文字研究作出的最重要的独创性的贡献。直到现在，他的经典贡献根本上还未曾有改变。37年后的1954年，董作宾在写作《甲骨学五十年》^[39]时，列出的商朝先公先王的名称、世系几乎仍和王国维1917年第一次考订的一模一样。

王国维于1915年开始投身这门新学问的研究，并持续了十多年。后来他仿效1900年死去的王懿荣，自沉于慈禧太后建造的颐和园昆明湖中。这一年是1926年，此时他正在清华大学国学研究院任教。

同一时代至少有五、六位中国金石学家对这门学问的进步作出了贡献。在中国学者的贡献中，有两本字典值得特别注意：王襄的《簠室殷契类纂》（1921）收录已识别文字873个；商承祚的《殷虚文字类编》（1923）收录已识别文字789个。这些字典意义重大，既把初学者引入甲骨学之门，又使这门新学问在中国知识界得到了更广泛的传播。

在结束这一章前，应谈谈章太炎（炳麟）的态度。董作宾生动地记述了这位被他称为阻碍这些新发现资料研究发展的“大敌”。章太炎是一位非常重要的人物，因为他被认为是当时最卓越的金石学家，同时在政治上是个革命派。关于章太炎对甲骨文的态度董记述如下：

章太炎是我国学术界惟一不相信而且反对研究甲骨文的人。他的证据是流传之人不可信，因为罗振玉“非贞信之人”。第二是龟甲刻文不见于经史。第三是龟甲乃“速朽之物”，不能长久。第四是龟甲文容易作伪。^[40]

据说，在安阳科学发掘证实这些新发现的珍贵文献确实存在后，章仍然固执己见。有一桩轶事颇有风度地记述了章太炎对这种刻有殷代文字的古代遗存的内心感受：据说，章太炎作44岁生日时，学生黄季刚送来一包礼物，呈长方形，外用红纸包扎，很像一盒子点心。后来，老先生拆开红纸，发现里面是罗振玉的四卷本《殷虚书契前编》……

故事仅在结尾处提到，这份得意门生送来的礼物并没被扔掉，而是放在了老人的床头枕边——看来他还真是看了那些伪造的文字。

3. Field Method

As Demonstrated by Western Geologists, Paleontologists, and Archaeologists in China in the Early Twentieth Century

This chapter is designed to give a general explanation of how Western learning in conjunction with traditional Chinese cultivation of antiquarian study confluently gave birth to archaeology in modern China.

It has often been questioned why, in the long tradition of Chinese culture, in which learning in general and antiquity as a special branch of study have enjoyed such a long history, investigation of the past never extended beyond the limits of book reading and treasure hunting. This pointed question undoubtedly deserves a certain amount of discussion. But if we go into the query at length, we may have to say a great deal about the traditional methods of learning, involving epistemology, philosophy, problems of value, and so on. This is definitely not the place to deal with all these big questions, although they are certainly in one way or another related to the query raised above. There is, however, a relatively simple answer, which can at least summarize Chinese traditional attitudes toward what is considered learning, and which may be helpful to those looking for a detailed explanation of the nature of the problem. Let us quote Mencius, in *T'eng-wen-kung*: "There is the saying, 'Some labour with their minds, and some labour with their strength. Those who labour with their minds govern others; those who labour with their strength are governed by others. ...'"^[41] Adherence to this maxim, and others like it, led to the following results:

1. Beginning with the Sung dynasty, every schoolboy's mentality had been molded by the sayings of Confucius and Mencius, which he has committed himself to memorize.

2. Once patternized, it becomes difficult to deviate from the standard.

3. There is a certain amount of self-satisfaction which all mental workers find in these sayings of Mencius quoted above—an egoism, that only modern psychology could adequately explain.

The general result of this education, as might be expected, is not only to accept the saying of Mencius as a general truth with regard to all social arrangements, but also to accept it as a standard for intellectual pursuits. To labor with the mind was gradually limited to book readings, especially after the invention of printing (which, as everybody knows, took place at least earlier than the Northern Sung dynasty).

On the other hand, if we take a look at the development of archaeology in the West, we find that at the close of the nineteenth century, anthropology had already developed into a special department of research, and archaeology under its influence also had gained status in the highly specialized prehistoric research inaugurated by the French prehistorian Jacques Boucher de Perthes (1788-1868), who started his search for evidences of human industry on the banks of the Somme as early as 1830,^[42] nearly thirty years before the publication of Charles Darwin's *Origin of Species*. Yet as late as 1899, when D. G. Hogarth, director of the British School at Athens, still held the belief that archaeology of material evidences alone was the "Lesser Archaeology," the prevailing opinion was that only those finds which could be illuminated by literary documents, for example, those of Mariette, Layard, Newton, or Schliemann, constructed the "Greater Archaeology."^[43]

From the beginning of this century, field workers in geology, paleontology, and archaeology spread across the world and field data gained importance by leaps and bounds. Old China, for centuries a hunting spot for European imperialism, was forced to open her door widely for whatever the "superior white power" liked to do, including field work in science. Geologists, geographers, and paleontologists as well as fortune hunters rushed to the Far East, particularly China.

Among them were, as always, some real workers, a number of them true scientists, but, like political adventurers, they came and went freely without leaving the slightest trace on Chinese soil. Neither did they care, except, perhaps, for some missionary workers.

It was only after the revolution of 1911 that educated Chinese began to wake up. As it had in Europe, the "field method" as a way of learning established its influence on the Chinese mentality. The dual division of human labor set up by Mencius was "gone with the wind," together with the required reading of the "Four Books."^[44]

The revolution gave rise to fundamental changes not only in the politics and social structure of Eastern Asia, but, even more importantly, in the mentality of the educated class, who gradually changed their outlook on life.

It was in the early Republican era, in 1916, that the Geological Survey under government order was first organized in Peking, as an agency of the Ministry of Agriculture and Commerce. This institution in its initial stage was fortunately in the hands of a well-known geologist educated in England, who combined mental vigor with a genius for scientific organization. Above all, he was dedicated to the promotion of Western science in his country; his name in English was V. K. Ting.^[45]

With the Geological Survey as a center of his scientific activity, naturally Ting's first task was, as a matter of government policy and also for practical needs, to find mining deposits—of iron, coal, and other important minerals. To fulfill this official function, the newly established official organ certainly had plenty to do. Even more important to mention for our purposes, the surveying work was gradually extended to paleontology and still later to prehistoric archaeology. By this time university curricula already included departments of geology and paleontology so that university students also got acquainted with "field work" as a method of acquiring first-hand scientific knowledge. When Professor Wang Kuo-wei was asked (1925-1926) to give a course on Chinese paleogeography in the Ts'inghua Research Institute of National Learning, he divided the course data

into two major groups, which he called "book data" and "underground data." This may be taken as definite evidence that the influence of the field method of geological research had already reached the traditional scholars.

Since field method in Western science developed almost a century before its influence reached China, both the nature of problems investigated and techniques of operation had undergone, during the century, evolutionary changes. In fact the idea of "Evolution" itself, in scientific terms, became definite only within that century even in the West. But historically speaking, this basic idea, through the famous translation of Yen Fu, reached China earlier than other scientific conceptions and made a deeper impression on Chinese mentality than did any missionary attempts to introduce the West to China.^[46]

So by the time the Geological Survey was first set up, the psychological attitude of the Chinese intelligentsia had already encompassed the idea of science in general, and the theory of evolution was already deep in their consciousness. Whatever difficulties the Geological Survey had to face were more or less matters of practical politics rather than ideology.

The Geological Survey in its early history achieved several important administrative results. The most important of these was the training of a number of field surveyors, who, in addition to the fundamental knowledge of geology and related sciences, had also to acquire the modern method of land surveying. Each surveyor had to possess the physical capacity to carry his own instruments and to walk on foot no matter how long the journey might be. This was of course a definite break with the traditional training of "scholars" in old China, who labored with their minds only.

It took quite a few years for V. K. Ting, the founder of the Survey, to accomplish the initial program. When the training of the first batch of surveyors was completed, he began to send them to the field for practical work. The author knew personally several of these first surveyors. They were all well-disciplined and hard workers; later on, each of them was assigned to a definite region for specialization. In

surveying, as well as in geology and paleontology, most of them have rendered useful national service. To this group of pioneers, the field of not only geology but Western science in general in modern China owes a great debt indeed.

In the execution of this initial program, V. K. Ting was able to gain substantial support from a number of foreign scientists; some of them actually came to China and worked. The author would like to mention five whose reputation is international and who worked in north China and helped the Geological Survey directly or indirectly, in the formative stage: A. W. Grabau (American), J. G. Andersson (Swedish), Davidson Black (Canadian), J. F. Weidenreich (German), and Pierre Teilhard de Chardin (French).

The first two, A. W. Grabau and J. G. Andersson, are directly associated with the scientific work of the Survey; the next two, Davidson Black and J. F. Weidenreich, were directors of the Cenozoic Laboratory, also connected with the Survey. The last, Father Teilhard de Chardin, when he was in China, was working in a Catholic mission which was concerned more with science than with religion; so Pierre Teilhard is better known to the Chinese people as a paleontologist and archaeologist than as a priest.

In the early Republican era, especially between, say, 1915 and 1925, Peking was a city of new ideas, political and social as well as intellectual. Most of the scientists in the above list were in Peking and doing actual scientific research. Among them, Professor A. W. Grabau was commonly acknowledged to be the leader of the group by both leading Chinese scientists and the learned in the foreign community. His special task was to help the Survey publish scientific papers, especially *Paleontologia Sinica*. His official position was Professor of Geology at the National Peking Government University, and also, at the same time, he served as chief paleontologist of the Survey.^[47]

The publication of *Paleontologia Sinica* helped to provide the capital of China with both a new branch of knowledge and a new method to acquire such knowledge. In this respect, it can be considered an altogether new feature as compared with traditional

Chinese culture.

Most of these volumes were published in European languages, mainly English. The elementary idea of this publication, under the auspices of the Survey, was to bring scientific knowledge about its various finds to the attention of specialists and the scientific public. As far as educated circles in China were concerned, only a few specially trained individuals could be benefited. But there is another aspect of the influence of these serial publications to be taken into consideration. They provided a model for the presentation of scientific data, as well as for methods of collection and preservation, in addition to accurate descriptions and cautious deductions—all these are of course familiar to scientific readers. In the course of time, when the younger generation of Chinese had mastered a European language and been initiated into modern science, they gradually looked toward these publications as a standard and a yardstick for measuring the value of various scientific activities in many branches of related research, especially in the fields of biology and archaeology. From a historical viewpoint, this development is important in the sense that there is no such model in traditional China. But it has remained a problem how to translate this model into the Chinese language, so that the average man in China, if he were interested, could easily understand and locate the source materials.

Let us take up the problem in a practical way. I propose to illustrate the nature of the problem by some analysis of the influence of the achievements of the five eminent scientists mentioned above.

Foremost among the five was A. W. Grabau, who worked the longest time and ended his life in Peking. He was the man who did the teaching in the university as well as editing the serial publications of *Paleontologia Sinica*.

It would be rather pretentious for me to comment upon Grabau's contributions to the science of geology and paleontology. Still, it may be said that his well-known theory of the polar drift, and the uplift of the Himalayan Mountains and the Tibetan Plateau in the Miocene period, which Grabau considered a phenomenon of crustal movement

important and critical for the development of human origins, although it is now almost forgotten by the public, created a deep impression in scientific circles. The Natural History Museum of New York City sent several expeditions to Central Asia and Mongolia to hunt for man's ancestors on the basis of this theory. Although these expeditions did not achieve what they aimed at, there were many lateral results that were unexpected but nevertheless interesting and important, for instance, the discovery of dinosaur's eggs. Meantime, parallel endeavors undertaken by other groups of natural scientists made the amazing discovery of *Sinanthropus Pekinensis* near the ancient capital of China.

Grabau's scientific influence in educational circles, it seems to me, was much more important in his lifetime. He possessed a charming and fascinating personality, agreeable and attractive to all scientists gathered at that time in the city of Peking. Whether one liked his theories or not, it seemed to everybody a pleasure and a privilege to talk with the Grand Old Man. The first generation of Chinese geologists attached themselves to him affectionately, and the younger generation, most of whom were his disciples, loved and respected him. The author, merely an anthropologist by training and an archaeologist through opportunity, met Dr. Grabau only about a dozen times at most, yet the personality of this old man remains to this day an unforgettable impression. This point is important, because it is closely related to the growth of scientific mentality in the formative period of Chinese science, and his influence was naturally carried by his Chinese friends and Chinese pupils to a large learning circle(s), at a time when science was becoming immensely popular.

Dr. J. G. Andersson came to China in the early Republican era; he was engaged by the government to give practical advice on surveying China's mineral deposits. The story is still told that at that time all the big powers who had extraterritorial interests in China wanted to send their scientists to China with the idea of getting first-hand knowledge of China's mineral resources—especially coal and iron. The competition among the big powers for this job was very keen. The

Chinese government, however, decided to choose an expert adviser from none of them, but gave the job to J. G. Andersson, a Swede, from a nation considered one of the few European countries without any imperialistic ambitions. The choice was made probably at the suggestion of Dr. V. K. Ting, director of the Geological Survey.

This was indeed a fortunate choice. J. G. Andersson came to China before A. W. Grabau. In the beginning, his work was entirely in the field, traveling in north China where mineral deposits were prospective. J. G. Andersson was however, not a narrow-minded technical expert. He had a broad intellectual background, and during his travels he always kept his eye open for anything of scientific interest. For this reason, his discoveries in his early wandering journey were numerous and of various natures. In *Children of the Yellow Earth*, a book for popular consumption in 1934, he had this to say in the Foreword:

By a series of fortunate circumstances I was on several occasions the pioneer. In 1914 I was the first to stumble upon the organic origin of a stromatolite ore. In 1918 I discovered collenia nodules and recognized their connection with similar "fossils" in the pre-Cambrian area of North America. In the same year we discovered the first Hipparion field in China made known to science. In 1919 we found the beaver fauna at Ertemte in Mongolia. 1921 was a red-letter year: the Neolithic dwelling-site at Yang Shao Ts'un, the Eocene mammals on the Yellow River, the Sha Kuo T'un cave deposit in Fengtien and still the more remarkable cave discovery at Chou K'ou Tien, which became world famous by the work of those who followed after us.^[48]

Andersson's discoveries included many other items. Although most of these were geological and paleontological, what attracted him most seems to have been archaeological findings.

These archaeological discoveries are no doubt of great importance. What the author wishes to point out here is that Dr. Andersson was in fact the first Western scientist to demonstrate, by actual achievements, the effectiveness of the field method in the investigation of Chinese antiquity. As he stated himself, in these scientific travels he was frequently accompanied by well-trained junior assistants and a troop of untrained but intelligent workers. All

his disciples followed the master faithfully and naturally also learned his method of working.

J. G. Andersson's scientific work started before the formal establishment of the Geological Survey in 1916. After this new, official organization began its field work under the able direction of Dr. V. K. Ting, Andersson's field collections were naturally encouraged and gained more publicity in scientific circles. He also received more substantial help financially, and obtained more trained assistants. An increasingly larger team of specialists could appreciate the merits of his various discoveries and evaluate the more abstract theoretical problems which Andersson had always kept in mind.

Among the various scientific achievements of this distinguished Swedish geologist, his archaeological discoveries in north China are perhaps best known to the general public. There are a number of reasons for the special reputation which he gained, and which he certainly deserved. The prehistoric site he excavated at Yangshao in 1921 is remarkable because it is historically the first one uncovered in China. Before this discovery, only speculations about ancient China flourished, derived either from legendary accounts or from fantastic imagination. Second, the excavated materials of Yangshao Culture indicated an advanced agricultural society, containing elements related not only to the traditional legendary accounts but, what is altogether novel, to central and western Asiatic prehistory. Third, the location of the Yangshao site is almost in the center of the Yellow River plain where the early history of China developed. So, this discovery immediately attracted worldwide attention, including that of many conservative Chinese historians. The title of Andersson's first paper in Chinese and English, "An Early Chinese Culture," of course induced even the archaeologically uninitiated to pay some attention.

[49] A further reason for the popular attention attached to this discovery was that similar to the appearance of oracle bone inscriptions in 1898-1899: the time and the learning atmosphere in Peking in 1921 were just ready to accept such a discovery. Although there was no archaeological curriculum in the university, traditional

antiquarian study under the influence of the May 4th Movement of 1919, the student movement which initiated the intellectual modernization of China, had already advanced to a stage where scholars had full cognizance of the need for field work in the investigation of China's ancient past.

The detailed story of this first discovery of Chinese prehistory has already been told by Dr. Andersson himself in his *Children of the Yellow Earth*, in which a complete chapter is devoted to "We Discover the First Prehistoric Villages" (1934). Certain essential points in this chapter relate especially to the development of field methods in China's study of antiquity:

1. In 1920, Andersson sent his collector Liu Chang-shan to Loyang and the adjacent region to collect fossil vertebrates. Liu returned in December with a collection which included, in addition to the fossils, a large package of stone implements, consisting of several hundreds of stone axes, knives, and other artifacts. Liu told Andersson that all the stone artifacts were purchased from "the inhabitants of a single village," namely, Yangshao Ts'un. This led Andersson to investigate the site personally.

2. Yangshao Ts'un is a village in Mien-ch'ih Hsien. In 1921 Andersson went to Mien-ch'ih Hsien to further his investigation. He arrived on April 18, and then went to Yangshao Ts'un, six miles north of the district. The following account is Andersson's description of the site discovered in the village of Yangshao Ts'un.

About a km. south of village of Yang Shao Ts'un I had to traverse a great ravine, a real miniature canyon, which was subsequently a very notable feature of our topographical survey of the district. When I had reached the northern side of the ravine I saw in the side of a gully a very interesting section. At the bottom, the red Tertiary clay was exposed and it is with a distinct contact overlaid by a peculiar loose soil, full of ashes and containing fragments of pottery. It seemed not improbable that this might be the deposit from which the stone age implements had been derived. After some minutes' search, I found at the very bottom of the deposit a small piece of fine red ware with black painting on a beautifully polished surface... it therefore seemed to me inconceivable that such clay vessels could be found together with stone implements.

Somewhat dejected I felt that I had followed a track which would only lead me astray, and I thought it safer to return to my geological-paleontological research. ...

Meanwhile I lay in the evenings and reflected on the Yang Shao Ts'un riddle. ...

I decided to devote a whole day to a search in these ravine walls. ... After a few hours' search, I extracted from the untouched ashy soil a fine example of the stone adze... "*pen*." ... During the course of the day I made other interesting discoveries and it soon became clear that we here had to do with a deposit of unusual magnitude, rich in artifacts, especially fragments of pots, including the fine, polished polychrome ware to which I have referred above. ...^[50]

3. Andersson, when by a lucky chance he stumbled across the Yangshao prehistoric site, could not at the time of discovery recognize its real significance. This recognition came only on a subsequent trip to Peking where in the library of the Geological Survey he found the report by R. Pumpelly of the American geologist's 1903-1904 expedition to Anau in Russian Turkestan.^[51] From these reports, Andersson began to realize that painted pottery could have existed in protohistoric time. Then his enthusiasm for the puzzling discovery was greatly enhanced and he was able, with the enlightened encouragement of the director of the Geological Survey, to get the permission of the Chinese government, and the assistance of some trained geologists, to organize a digging party in the autumn of the same year (1921); the field work started toward the end of October. The results of the excavation are very well known through various reports, both technical and popular.

This epoch-making scientific endeavor in China marked the beginning of field archaeology in one of the oldest countries in Eurasia; it was almost half a century after French anthropologists had revealed painted pottery in Susa of Mesopotamia. But in Eastern Asia, which Western historians usually considered as an outskirts of Indo-European civilization, these findings once more reminded historians that East and West were not as separated as most people believed.

To return to the actual findings of Andersson's excavation at the prehistoric site of Yangshao Ts'un, the artifacts excavated were divisible into several groups. It was, however, the ceramic finds that

excited world-wide interest. In this group of pot-sherds, the most striking ones are the painted pots as pointed out above. Later, these finds were sent to Sweden for special investigation, on which Dr. T. G. Arne issued a monographic report published by the Survey in 1925.^[52] In Dr. Arne's report, all the painted pot-sherds are beautifully illustrated by color plates; some are reconstructed and the painted designs and other technical details are all given careful analysis; and when possible the sherds are compared with similar finds from other regions, especially those of Anau in Russian Turkestan. It is perhaps unnecessary to remind the reader that by this time, M. de Morgan's well-known discovery of Susa had been known to Western archaeologists for over thirty years.^[53]

As far as archaeology in China is concerned the other type of Yangshao ceramics were even more interesting, and no less exciting in the light of the ancient history of China. I mean, of course, what is considered the more common type, known as the coarse gray ware. In this group, it was found that many kinds of tripods could be reconstructed, which have been classified as the *ting* or *li* type, corresponding in shape and structure to ancient Chinese bronzes of these shapes that had been recorded and described in the literature from the Chou dynasty onward for over two thousand years. The unearthing of clay-made *ting* and *li* convinced the conservative school among Chinese historians and antiquarians that field archaeology indeed held a key to the study of Chinese antiquities. In due course, I shall discuss the Yangshao discovery and its influence again. Here, however, it is more important to go on with the beneficial influence of some other foreign scientists who also worked in China at this time.

Next I should like to discuss Professor Davidson Black, who was a Canadian and was appointed Professor of Anatomy when the Peking Union Medical College (P.U.M.C.) was founded by the Rockefeller Foundation. Black's scientific work was mainly concerned with the investigation of the physical characteristics of the Chinese people. The anatomy department of P.U.M.C., like all other medical schools, started to accumulate skeletal materials of all dissected bodies as soon

as the teaching of anatomy began such dissection, and the skeletal materials were deposited in the department in storage. When J. G. Andersson obtained permission to excavate at Yangshao Ts'un, he assigned the task of grave-digging to another geologist and paleontologist, Dr. Otto Zdansky, and at the same time he also invited Professor Davidson Black to visit the dig. According to Andersson, Black in "most important respects assisted in the investigation of the burial ground."

Later on, Andersson asked Professor Black to prepare a monographic study of these skeletal materials on which the latter cooperated enthusiastically.^[54] Dr. Black compared in his professional way the prehistoric skeletons with the department's collection of those of the north China population, and also with some non-Chinese human bones; he applied extensively the biometric techniques developed in Karl Pearson's laboratory in London. After a thorough analysis of the available and related materials, he came to the important conclusion that these prehistoric inhabitants of neolithic time showed an assemblage of physical characteristics in no respect markedly different from those of the present-day northern Chinese, except that some of the Kansu skeletons of the prehistoric period seemed to indicate some slight deviation.

Black's study of the physical traits of the northern Chinese remains, up to the present day, one of most frequently quoted papers on the physical anthropology of the Chinese, both because its quality is high, and because, as so often happens, anthropologists interested in this problem are comparatively rare.

Black's reputation, however, does not rest on this monograph alone. As is well known, he was the first scientist to study the remains of *Sinanthropus*, and he died in his laboratory while working on the Chou-k'ou-tien fossil man on March 15, 1934.

Peking man, the popular name of *Sinanthropus*, was discovered in the neighborhood of the city of Peking at Chou-k'ou-tien, also as a result of Dr. J. G. Andersson's wide interest in fossil collecting. Let us again read what Andersson says about the early part of the Chou-k'ou-

tien exploration:

One day in February 1918 I met in Peking, J. McGregor Gibb, Professor of Chemistry at the mission university which at that time bore the somewhat pretentious title of Peking University^[55]. He knew that I was interested in fossils and consequently he told me that he had just been out at Chou K'ou Tien, about 50 km. southwest of Peking, a place which I have already described on a couple of occasions during my story.

...Professor Gibb had himself visited the place and had brought back to Peking various fragments of the bone-bearing clay. ...

Gibb's description was so alluring that I visited the spot on the 22nd-23rd March in the same year.^[56]

After he visited Chou-k'ou-tien, Andersson planned a systematic exploration. Eight years later in 1926, when the grandfather of the present King of Sweden, as Crown Prince, paid a visit to the capital of China, the discovery of the first indication of *Sinanthropus* was announced. At an academic reception for the royal visit, a number of eminent scholars gathered and read their learned papers—chiefly on archaeology. The well-known scholar Liang Ch'i-ch'ao was among them, but the remaining members of the audience were either foreign scholars or English-speaking Chinese professors. It was on this day that J. G. Andersson, on behalf of Professor C. Wiman, announced the latest result of the research work on the fossils collected at Chou-k'ou-tien by Zdansky as "the most important result of the whole of the Swedish work in China,"^[57] namely some hominid teeth.

The day of this meeting was October 22, 1926.

What followed was an internationally known scientific enterprise. Most important for China was the fact that, when scientists agree to cooperate, fruitful results seem to be a matter of course. The excavation at Chou-k'ou-tien was an example of truly international cooperation. Included were a number of distinguished scientists from America, Canada, Sweden, France, Great Britain, and Germany as well as the native Chinese. The organization was under the guiding hand of Dr. V. K. Ting who, with his experience and ingenuity, served as the honorary director of the Cenozoic Laboratory, of which the director was Professor Davidson Black. Dr. Black's scientific work was assisted

by a Swedish scientist, Dr. Birger Bohlin, who was invited to start excavation at Chou-k'ou-tien, mainly with the aim of looking for fossil Hominidae. The Rockefeller Foundation financed the projected undertaking.

The scientific work carried at Chou-k'ou-tien lasted a long time. This gigantic task taught the budding generation of scientists in China several lessons of practical importance. While Dr. V. K. Ting helped to complete the initial stage of the Cenozoic Laboratory, it was the genius of its director, Professor Davidson Black, that guided the operation both in the difficult task of excavating rocky caves at Chou-k'ou-tien, and in systematically distributing the collection to competent scientists for specific studies. Above all, Professor Black himself took up the heavy task of investigating the fossil Hominidae among the accumulated fossils from the limestone cave deposits at Chou-k'ou-tien.

After hewing and moving three thousand cubic meters of the cave deposits, Dr. Bohlin, a disciple trained by Professor C. Wiman from Sweden, on October 16, 1927, found a hominid tooth and personally handed this precious discovery to Dr. Black in P.U.M.C. three days later. This tooth was identified as the lower molar on the left side; although somewhat worn, it was well preserved and complete with root. On the basis of this study, Davidson Black not only confirmed Wiman's identification; he went a step further in his ingenious speculation, and created a new hominid genus by naming it *Sinanthropus*, with the name of the species as *Pekinensis*.^[58]

Continuing the field work, Bohlin was assisted in the next season by Dr. C. C. Young and W. C. Pei, both of whom played an important role in the Chou-k'ou-tien excavation.

To sum up, the scientific work carried out at Chou-k'ou-tien and in the Cenozoic Laboratory in Peking provided a tremendous stimulus to the younger generation of Chinese scientific researchers. Soon after, Young and Pei took up the field work at Chou-k'ou-tien following the departure of Dr. Bohlin. They were the discoverers of the first Peking Man's skull on December 2, 1929; this discovery was considered by

many as the crowning achievement, fully justifying the enormous amount of money the Rockefeller Foundation had invested.

Dr. Black, after working continuously on the important discovery for half a dozen years, died of hard work in his own laboratory in P.U.M.C. as stated above. The necessity of finding a successor created a difficult problem. I have been informed that through V. K. Ting's recommendation, an international committee was organized, with Professor Elliot Smith as chairman, to select Black's successor. Dr. Franz Weidenreich was unanimously agreed upon by members of the selection committee, and received the appointment as director of the Cenozoic Laboratory to continue the important research.

If Davidson Black showed by his brilliant achievements his penetrating power in analyzing the fossil remains of Chou-k'ou-tien, Weidenreich, who succeeded him so competently, demonstrated a German thoroughness, which, in the eyes of the trained scientists of Oriental circles, had seldom been equaled by scientists of other nations. The successive volumes published in series D, *Paleontologia Sinica*, have fully proved these characteristics of German science. Weidenreich's scientific reports on *Sinanthropus* were not only masterpieces of anthropological reporting, they were also exemplary models of clarity and of minute, detailed examination both exhaustive and pointed. For Chinese workers, there is nothing in any European language concerning studies of human fossils comparable to these monographic reports on *Sinanthropus*.

As everybody knows, the valuable collection of Peking Man fossils were lost during World War II, and various efforts made to recover these important scientific specimens have all failed. Fortunately for the study of the early history of Hominidae, the complete reports by Davidson Black and Franz Weidenreich are available in most libraries all over the world.

The influence of the Chou-k'ou-tien excavation in China can hardly be exaggerated. In spite of many political changes, Chou-k'ou-tien has remained important to scientific workers to the present day.

Last, but certainly not least, the scientific work of the French paleontologist Pierre Teilhard de Chardin illustrated, for the budding generation of Western trained scientists in China, a number of characteristics typical of French mentality. It has been commonly agreed that the highly specialized study of man's remote past is a French science, in which French archaeologists have led the world for nearly a century. Father Teilhard, when he arrived at China in the early 1930s, had already acquired considerable experience in Western Europe. He was in fact associated with the ill-fated work on the notorious *Eoanthropus*, which was proved to be a forgery.^[59] I believe it was for this reason that on October 22, 1926, when J. G. Andersson announced the discovery of the hominid tooth at Chou-k'ou-tien, Teilhard was the only person in the audience who cast some doubt and thought that the fossil specimen as illustrated by the lantern slides might prove to be the tooth of "a beast of prey." He wrote a note to Dr. Andersson stating his skepticism of Wiman's identification.

If later finds proved that Teilhard had misjudged—as he himself of course agreed—it only serves to indicate how open-minded a first rate scientist can and should be!

Teilhard's main scientific work in China was widespread both in subject and in geographic region. His field work and studies covered many kinds of scientific tasks, including paleontology, pre-historic archaeology, geological stratification, glaciology, and so on.

Pierre Teilhard came to the Far East at the invitation of Father Emile Licent, founder of the Huang-Ho-Pai-Ho Museum in Tientsin. Father Licent in 1920, through his exploration in northwestern China, had discovered at Ch'ing-yang Fu in eastern Kansu province a rich deposit of the Hipparion Fauna. Removing the loess which covered the Hipparion clay, Licent found at the bottom of the loess formation pieces of quartz which appeared to him to have been modified by human hand. In 1922 Licent, acting on information from other Catholic priests working in Mongolia, went to Sjara-Osso-Gol. There he found another bone deposit which looked so promising that he decided to invite Teilhard de Chardin from Paris to join the scientific

investigation of these deposits in northwestern China and the Ordos region of Inner Mongolia.

The archaeological explorations of the two Catholic fathers—at Ninghsia Fu, Shui-tung-kou, and Sjara-Osso-Gol, where they discovered old stone cultural deposits including many hundreds of kgs. of stone implements, mixed with charcoal—are well known to European prehistorians, as the results of their diggings were published in French. The stone implements from these paleolithic sites at Sjara-Osso-Gol are mostly made of red quartzite and silicious limestone, which are said to be commonly found in the rubble deposited in gravels of the cultural stratum. Some of the implements—scrapers, drills, and blades—are of considerable size, reaching 17cm. in length.

The main conclusion of their study of these important discoveries and associated fauna was that this culture belongs to the Pleistocene period, during which the loess deposits were formed.

These French scientists worked in splendid isolation, communicating only with their fellow workers in Paris, and their publications appeared only in French. The author had the fortune to meet Teilhard de Chardin in 1924-1925 at the home of Dr. V. K. Ting. Later on, when the Catholic scientist joined the newly organized Geological Society of China, we met more frequently. At that time Pierre Teilhard became known to geological and paleontological circles in Peking and Tientsin, and came to be considered the "youngest and the most brilliant 'paleontologist' " in north China, a comment made by A. W. Grabau when Teilhard received the Grabau Medal.

Pierre Teilhard was invited to be a regular member of the Cenozoic Laboratory and frequently visited Chou-k'ou-tien when the excavation was in progress. Dr. C. C. Young was his closest co-worker in China. For instance, they jointly made a study of the fauna discovered from the Anyang excavations. Teilhard's whole interest seemed to be concentrated on "Early Man in China," which he investigated from both a geological and a paleontological angle in addition to his excellent research on prehistoric artifacts. While he

was still in Peking, he wrote a memoir with this title, published by the Institute de Géobiologie (Peking), in 1941.

Teilhard's influence on the spread of science in China was indeed many-sided. He seldom talked. What was exemplary was the manner in which he did his scientific research. When the author was in charge of the Anyang excavation, Pierre Teilhard and Dr. C. C. Young paid us a visit. They spent a few hours on the spot, carefully examining our method of working and recording. While he was there, he happened to pick up a fragment of animal tooth tinged with green color, and commented, "This is a tiger tooth, evidently buried together with some bronze." Then he examined the stone implements recovered from the excavation. He took a long look at the sample of "what is called a green stone axe" without saying a word. When his opinion was asked, he remarked: "This kind of stone axe seems to be very widely spread in north China. Wherever it is found in north China, it is petrologically the same and of the same shape!" Pierre Teilhard was a field scientist; although a man of few words he was both charming and dignified; whenever he did speak, his words indicated a profound knowledge. He had a quick mind, and, above all, he was always inspiring and could on occasion be witty and full of humor.

His personality touched Chinese men of science deeply, although only a few had the privilege of knowing him. His *Early Man in China* was indeed a classic among all the popular books of science published in this period in China.

I have given a somewhat detailed description of five eminent men of science and some of their closest associates. This does not mean that there were no other scientific visitors working in this area when China began to take Western learning, particularly science, seriously, and to demonstrate a conscious wish to incorporate the teaching of science into the Chinese educational system. In geological science, there were men like Otto Zdansky and Walter Granger; in geography, Sven Hedin; in archaeology, N. C. Nelson, Henri Breuil, and so on, who all made contributions to the building up of modern science in China. But the service of Grabau, Andersson, Black, Weidenrich, and

Teilhard de Chardin is distinguished from that of others by their close contact with Chinese minds. This contact was naturally much more contagious than written reports; consequently the cumulative effects soon become overwhelming and irresistible.

叁．20世纪初期在中国的西方地质学家、古生物学家和考古学家演示的田野方法

本章旨在简要介绍西学怎样与传统的中国古物研究思想相结合从而催生了现代中国考古学。

人们常提出这样一个问题：中国文化传统悠久，不论是一般的学问还是研究古物的专门学问都有一段很长的历史，但为什么对古代的研究从未超出研读典籍和猎奇古玩的范畴呢？这的确值得讨论。但要详尽地探讨这一问题，我们可能要谈许多关于传统的治学方法，包括认识论、哲学、价值观等问题。它们虽在某些方面和上面提出的问题有这样那样的联系，但在这里显然不适合讨论这些重大问题。然而，有一个较简单的答案，不仅能概括中国人对待学问的传统态度，对那些想要对这一问题的本质作出详细解释的人也会有所裨益。让我们引用《孟子·滕文公》中的一段话：“故曰：‘或劳心，或劳力，劳心者治人，劳力者治于人……’”^[41]信奉这条格言或类似说法便会导致以下后果：

1. 从宋朝开始，每个学童的心智都被必须要牢记的孔孟说教所束缚。
2. 一旦定型，越出旧轨是极难的。
3. 所有的脑力劳动者在上引的孟子的格言中找到了一定程度的自我满足，这种自我主义只有现代心理学家才能充分解释。

可以想见，这种教育的普遍结果是，人们不仅把孟子的话当成了一切社会分工的普遍真理，还将它作为智力追求的唯一标准。脑力劳动逐渐地局限在啃书本上，尤其是印刷术发明之后——众所周知，印刷术的发明至少是在北宋前。

另一方面，如果我们看一看西方考古学的发展，就会发现19世纪末人类学已发展成为一门专门的学科；在其影响下，考古学也在由法国学者布歇（1788—1868）开创的高度专门化的史前研究中占有了一定地位。早在1830年，布歇就开始在索姆河畔寻找人类使用工具进行加工的证据，^[42]这比达尔文的《物种起源》的出版早了近30年。然而直到1899年，雅典的不列颠学院主任霍格思仍坚信物质证据的考古仅是“小考古学”；当时普遍的看法是，只有那些被文献所阐明的发现，如马瑞

特、莱亚德、牛顿或施利曼的发现，才是“大考古学”。^[43]

从20世纪初开始，地质学、古生物学、考古学的田野工作者足迹遍布世界各地，田野数据的重要性迅速提高。几个世纪以来，作为欧洲帝国主义逐鹿场的旧中国，被迫大开门户，任“高等白人势力”为所欲为，其中也包括科学田野工作。地质学家、地理学家、古生物学家和淘金者一起涌向远东，尤其是中国。他们中间也不乏一些真正的工作者，还有不少严肃的科学家，但是，这些人像政治冒险家一样来去自由，未在中国大地上留下任何痕迹。除了一些传教士外，其他人对此也并不在乎。

直到辛亥革命后，中国的知识分子才开始觉醒。就像欧洲曾经发生的情况一样，“田野方法”作为一种治学方法在中国人的思想中确立了影响。孟子的“劳心者”与“劳力者”之分也同必读物“四书”一起“随风而去”了。^[44]

革命不仅引起了东亚政治和社会结构的根本变化，更重要的是，它革新了知识分子的思想，逐渐改变了他们的人生观。

就在民国初期，1916年，农商部奉政府之命在北京组建了地质调查所。幸运的是，在起步阶段带领地质调查所的是一位在英国受过教育的著名地质学家，他思想活跃又有科学组织天才，更重要的是，他一心一意在祖国提倡西方科学。他就是丁文江。^[45]

以地质调查所为科学活动中心，丁的首要任务是寻找铁、煤及其他矿物的矿藏。这既是政策要求，也是出于实际的需要。为履行这项公职，这个新立的机构自然有许多事情要做。但对我们来说，更重要的是，调查工作逐渐扩大到古生物学，继而扩展到了史前考古领域。此时，大学的课程中已涵盖了地理学和古生物学，学生们也由此了解到“田野工作”是获取第一手科学知识的一种方法。1925至1926年，王国维教授应邀到清华国学研究院教授中国古文字学，他把讲授的内容分为“书本资料”和“地下资料”两大部分。这无疑证明地质研究采用的田野方法已影响到了传统学者。

西方科学中的田野方法在影响到中国之前，已经历了约一个世纪的发展，而在此期间待研究问题的本质及操作方法都有进化。实际上，即使是在西方，“进化”作为一个科学术语，其本身涵义也是在这个世纪才得以明确。但从历史的角度看，基本的进化思想通过严复的翻译比其他科学概念更早传入中国，并对中国人的思想产生了比任何企图向中国介绍西方的传教活动更深刻的影响。^[46]

所以，当地质调查所初建时，中国知识分子已普遍接受了科学的观念，进化的理论也已深入人心。因此，地质调查要面临的所有问题几乎都是现实的政治方面的，而不是意识形态方面的。

地质调查所在早期取得了几项重要的行政成果。其中最主要的是培养了一大批田野调查人员。除了地质学及相关学科的基本知识外，他们还需掌握现代的土地调查方法。每个调查人员必须有足够体力，无论多远路程都需要携带仪器徒步行走。当然，这与旧中国只对学者进行脑力训练的传统方法完全决裂了。

地质调查所的创始人丁文江用了好几年的时间才完成这项初期任务。第一批调查者的训练完成后，他开始将这些人派往田野开展实际工作。笔者认识几个首批的调查人员，他们都是训练有素且工作勤奋的人，后来他们都被分配到特定地区进行专门的调查研究。在地质学和古生物学的调查方面，大部分成员都为国家作出了有益的贡献。不仅是地质学界，整个现代中国从事西方科学研究的学者都应感谢这一批先行者。

在执行这项初期任务过程中，丁文江获得了一批外国科学家的实际帮助。其中一些还来到中国进行实地工作。笔者打算谈谈五位享誉国际的科学家，他们曾在华北工作，并在地质调查所成型时期提供过直接或间接的帮助，他们是：葛利普（美）、安特生（瑞典）、步达生（加）、魏敦瑞（德）和德日进（法）。

前两位，葛利普和安特生，直接参加了调查所的科学工作，接下来的两位，步达生和魏敦瑞，曾任新生代研究室的主任，也与调查所有交往。最后一位，德日进神甫，在华期间在一个天主教会工作。这一机构比起宗教来更关心科学。所以，德日进对中国人而言更多的是以古生物学家和考古学家，而不是以传教士著称。

民国初期，特别是1915至1925年期间，北京成为了一个新的政治、社会和学术观念的汇集地。上面提到的科学家大部分在北京从事科学研究。其中，葛利普教授无论是在中国的顶级科学家中间，还是外国学术团体中间，都是公认的领导者。他的专门职责是协助地质调查所出版科学论著，尤其是《中国古生物志》。他的正式职务是国立北京大学地质学教授，同时他兼任地质调查所的首席古生物学家。^[47]

《中国古生物志》的出版为首都带来了一个新学科，也提供了一种获得这种知识的新方法。就这方面而言，这与中国传统文化相比是个全

新的事物。

《中国古生物志》大部分文章用欧洲语言，主要是英文，出版。这部由地质调查所主办的刊物的基本理念是，向专家和科学界传播各种发现相关的科学知识。就中国的知识界而言，只有少数受过专门训练的个人才能从中获益。然而，也应从另一角度看该系列刊物的影响。除精确描述和慎重推论外，它还为科学资料的呈现及其收集和保存方法提供了一个范式。以上这些对于科学著作的读者来说都很熟悉。这期间，中国青年一代掌握了一门欧洲语言、初步接受了现代科学教育，他们逐渐把这些出版物当作衡量相关学科各种科研活动价值的标准，在生物学和考古学方面尤其如此。从历史观点看，这种发展的重要意义在于中国的传统教育中从来没有这种样板。但仍然存在一个问题：怎样将这些文章译成汉语，使对此感兴趣的普通中国人能够轻易读懂并找到原始资料出处。

让我们具体地讨论一下这个问题。我想通过分析上述五位杰出科学家取得成就的影响，来说明这个问题的实质。

五人中最重要的是葛利普，他在中国工作的时间最长，最后在北京离世。他任教于大学，并编纂了《中国古生物志》。

我没有资格评论葛利普对地质学和古生物学的贡献。但我们仍可以说，他著名的极地漂移理论、中新世时期喜马拉雅山和西藏高原隆起的论断——在他看来这一地壳运动现象对人类的起源具有重要的决定性意义，虽然几乎已被人们遗忘了，但都曾在科学界产生过深刻的影响。基于这一理论，纽约市自然历史博物馆曾派出多支探险队到中亚和蒙古寻找人类的祖先。探险行动虽未达到预期目的，但却获得了不少出乎意料而又富有趣味的重要附带成果，如恐龙蛋的发现。与此同时，另几批自然科学家也在行动，并在这座中国古都附近发现了举世震惊的北京人。

在我看来，葛利普一生中在教育界所发挥的科学影响更为重要。他极富个人魅力，当时聚集在北京的所有科学家都喜欢他，被他吸引。不论是否赞成他的理论，对每个人来说，与这位前辈交谈都是一种愉快和荣幸。中国第一代地质学家和他有着非常亲密的联系，年轻一代多是他的学生，都爱戴他、尊敬他。笔者本人原是接受人类学训练的，通过偶然的机会才成为考古学者，与葛利普博士最多见过十几次面，但这位老人的性格给我的印象至今不能忘怀。这点很重要，因为它与中国科学形成时期知识分子的成长有密切关联。在科学思想在中国广泛普及的时

代，他的影响通过他的中国朋友和学生在更大的学术圈中传播开来。

安特生于民国初年来到中国。他受政府聘请来担任中国矿藏调查的顾问。据说，当时凡在中国有治外法权的大国都力图把他们的科学家派到中国，以获取中国矿藏资源，特别是煤矿和铁矿方面的，第一手资料。列强之间对这一职位的竞争很激烈。但中国政府决定不从他们中间选择专家顾问，而任用了瑞典人安特生。瑞典被认为是欧洲少数几个没有帝国主义野心的国家之一。这个决策大概是根据地质调查所所长丁文江的建议作出的。

这真是个幸运的决定。安特生比葛利普先到中国。开始，他的工作完全是在华北地区可能有矿藏的地方进行野外考察。但安特生不是一个目光狭窄的专家，他知识渊博，旅行时留意观察一切有科学价值的事物。因此，他在四处漫游初期就有大量性质各异的发现。他在《黄土的儿女》这部风靡1934年的著作前言中写道：

一系列幸运的外部条件使我在多个方面成为了开拓者。1914年，我第一个偶然发现了叠层石矿石的有机起源。1918年，我发现了聚环藻团块，并认定它与北美前寒武纪地区类似的“化石”有联系。同年，我们在中国发现了在科学界很有名的第一个三趾马区。1919年，我们在蒙古的二登图发现了海狸群。1921年是尤为重要的一年，这一年，发现了仰韶村新石器时代居民遗址、黄河边的始新世哺乳动物、奉天沙锅屯洞穴堆积和更为惊人的周口店洞穴，后者由于后继者的工作变得举世闻名。^[48]

安特生还有许多其他发现。虽然其中大部分是地质学和古生物学方面的，但最吸引他的似乎是考古学的发现。

这些考古发现无疑意义重大。笔者在此想要指出的是，实际上，安特生是第一位通过切实的成就证明在中国古物调查中田野方法的有效性的西方科学家。正如他自己所说，在这些科学旅行中，伴随他的常是训练有素的青年助手和一批虽未经过训练但很有才智的工人。他的学生都忠实地追随着他，自然也学到了他的工作方法。

安特生的科学工作开始于1916年地质调查所正式成立前。这个新的官方机构在丁文江的有力领导下开始田野工作后，安特生的田野收集自然受到了鼓励，也引起了科学界的更多关注。在经费上他也得到了更多的帮助，并有了更多受过训练的助手。这支日渐壮大的专业团队能够理解他的各类发现的意义，并能认识到安特生一直思考的抽象理论问题的价值。

这位杰出的瑞典地质学家科学成就众多，其中他在华北的考古发现

或许对公众而言最为著名。他获得这份殊荣有许多原因，当然也是实至名归。1921年他在仰韶村发掘的史前遗址非同寻常，因为它是在中国发现的第一个史前遗址。在此以前，四处流传的只有对上古中国的推测，它们或出自传说的记载，或出自怪诞的想象。第二，仰韶文化出土的物品表明这是一个先进的农业社会，其中不仅包含了与传说记载相关的元素，新奇的是，它还包括了与中亚和西亚史前史相关的元素。第三，仰韶村遗址的位置几乎位于黄河平原的中心，这里正是中国历史萌芽的地方。因此，这一发现立刻引起了世界的关注，也包括许多保守的中国史学家。安特生的第一篇论文《中华远古之文化》^[49]，是用中英文写成的。这部著作甚至引起了对考古学没有研究的人的注意。这一发现广受关注的另一个原因与1898至1899年间甲骨文的出现类似：1921年的北京在时间上和学术环境上都为接受这一发现作好了准备。虽然当时大学里没有考古学这门课，但1919年五四运动开启了中国思想的现代化进程。受这一学生运动影响，传统的古物研究已发展到了一个新的阶段，学者们已充分认识到，要研究远古中国，田野工作必不可少。

中国史前史首次发现的详细情况，安特生在《黄土的儿女》（1934）一书中用了一整章“我们发现了第一个史前村落”作了专门叙述。这一章中，有几个要点特别涉及用田野方法研究中国古物：

1. 1920年，安特生派采集员刘长山去洛阳一带收集脊椎动物化石。刘于12月返回，带回的收集物除化石外，还有一大包石器，包括几百个石斧、石刀和其他石器。刘告诉安特生，这些石器都是从“一个村的居民”那里买来的，此村即仰韶村。这促使安特生亲自到现场进行调查。

2. 仰韶村在渑池县。1921年，安特生前往渑池县进一步调查。他于4月18日抵达县城后，随即去了城北六英里的仰韶村。下面是安特生对仰韶村遗址发现的描述：

往村南走了约一公里，要过一道沟，一个真正的小峡谷。这种沟是我们在后来对该区域的地形调查中发现的一个显著特征。我到沟北面后，在一条沟渠壁上看到了非常有意思的一段。沟底红色的第三纪泥土显露着，上面清晰地覆盖着一层满是灰土和陶片的特殊松土。可以肯定这是石器时代的土层。搜索了几分钟后，我在土层的最底层发现了一小块红陶片，在它精美打磨的表面上有黑色的彩绘……这类陶器与石器竟在一起发现了，在我看来真是不可思议。

我感到我走上了一条歧途，这让人有些沮丧，我想还是回到我的地质古生物研究上较为稳妥……

同时，我夜里躺在床上还思考着仰韶村之谜……

我决定用一天的时间去探索这些沟壁.....考查了几个小时后，我从没有动过的灰土中取出一件精致的石斧，.....。.....这天我还有一些其他有趣的发现。很快，我就意识到我们在这里看到的是一个非同寻常的土层，其中有丰富的遗物，尤其是容器碎片，包括我上面提到的精美的磨光彩陶.....[50]

3. 安特生在偶然中幸运地发现仰韶史前遗址时，并未立即认识到其真正的意义。直到后来他到了北京，在地质调查所图书馆读到彭北莱就1903至1904年美国地质学家在俄属土耳其斯坦安诺的考察所写的报告[51]后，安特生才认识到其重要性。从这些报告中，安特生意识到，彩陶可能存在于原史时代，于是对这个令人迷惘的发现热情大增。在地质调查所所长开明的鼓励下，他得到了中国政府的允许和一些训练有素的地质学家的帮助，得以在同年（1921年）秋组织起一支发掘队，于10月底开始田野发掘。发掘成果通过各种专业性和通俗性的报道，得到了广泛传播。

在中国实施的这一划时代的科学行动，标志着田野考古在欧亚大陆上这个最古老的国家开始了。这比法国人类学家在美索不达米亚苏萨地区发现彩陶大约晚了半个世纪。西方历史学家通常认为东亚处于印欧文明的边缘，这些发现物再次提醒他们，东西方并不像大多数人想的那样是割裂开的。

回到安特生在仰韶村史前遗址发掘出的遗物上。出土的遗物有好几类，但引起全世界关注的是陶器类。这组陶片中最引人注目的是上面提到的彩陶。后来，这些物品被送到瑞典进行专门研究。1925年，地质调查所出版了阿尔纳编纂的关于这方面研究的专题报告。[52]在阿尔纳的报告中，所有的彩陶片都以漂亮的彩色图版展现；一些器物得以复原，彩绘图案和其他技术细节都经过精心的分析。必要时，这些陶片还与其他地区的类似出土物相比，特别是俄属土耳其斯坦安诺的陶片。也许无需再提醒读者，摩尔冈在苏萨的著名发现为西方考古学家所知已有三十余年了。[53]

就中国考古学来说，另一类仰韶陶片还更有趣；并且从中国古代史的角度来看，也同样激动人心。当然我指的是那些被认为更加普通的灰色粗陶。我们发现，这一组里不少鼎、鬲类的三足陶器可以复原，其形制和结构与自周朝以来两千多年中文献记载和描述的中国古代青铜器一致。陶鼎、陶鬲的出土，使中国历史学家和古物学家中的守旧派认识到，田野考古确是研究中国古物的关键。我将在适当的时候再讨论仰韶发现物及其影响。在这里，更重要的是继续介绍这一时期在中国工作的

其他几位外国科学家的积极影响。

下面我谈谈步达生教授。步达生是加拿大人，在洛克菲勒基金会建立北京协和医学院时，被聘为解剖学教授。步达生主要的科学工作是研究中国人的体质特征。协和的解剖系与其他医学院一样，在最初设立解剖课程的时候，就开始积累解剖的人体骸骨资料，并存放在系属的仓库里。当安特生得到仰韶村发掘的许可时，他把掘墓的工作交给另一位地质学家兼古生物学家师丹斯基，同时他邀请步达生参观发掘。据安特生说，步达生“为墓葬调查提供了很多重要的帮助”。

后来安特生请步达生教授基于这些骸骨资料研究准备一篇专题报告，得到了步达生的热情配合。^[54]步达生用专业的方法将史前的骨架不仅与系里收集的华北人的骨架加以比较，还与一些非中国人的骨架作了比较。他广泛地应用了伦敦卡尔·皮尔逊实验室创造的生物统计学技术。在对可用的有关材料进行全面仔细的分析后，他得出了一个重要的结论：这些新石器时代史前居民的总体体质特征与现代华北人的特征基本相同，只是一些史前甘肃人骨架与整体显示出微小差别。

步达生关于华北人遗骸体质特征的研究，至今仍是中国人的体质人类学研究方面被引用得最频繁的论文之一，一方面因为它的质量高，另一方面，还因为通常对此问题感兴趣的人类学家较少。

步达生的声誉不仅仅是靠这篇专论赢得的。大家都知道，他还是第一位研究中国猿人遗骸的科学家。他于1934年3月15日离世，当时他正在实验室研究周口店的人类化石。

北京市附近的周口店北京人（中国猿人的俗称）的发现，也得益于安特生对化石收集的广泛兴趣。让我们再读一下安特生关于周口店早期考察的记载：

1918年2月的一天，我在北京遇见来自一所当时简称首都大学的教会学校^[55]的化学教授吉布。他知道我对化石感兴趣，就对我讲他刚从位于北京西南50公里的周口店回来。这个地方我在书中已作过几次描述。

……吉布教授曾亲往周口店，并将各种带骨头的土块带回北京……

吉布的叙述太诱人了，因此，我在同年的3月22日、23日探访了这个地方。

^[56]

探访过周口店后，安特生拟定了一个系统的考察计划。八年后的1926年，当现任的瑞典国王的祖父以王储的身份访问中国首都时，公布了中国首次发现猿人遗迹的消息。在为王室来访举办的学者招待会上，

众多杰出的学者济济一堂，宣读了他们撰写的论文——主要是关于考古的。著名的学者梁启超也出席了这个会，其余的不是外国学者，就是懂英语的中国教授。就在这一天，安特生代表韦曼教授宣布，对师丹斯基在周口店收集的化石（即几颗荷谟形牙齿）研究的最新结果是“瑞典人在中国的全部工作中最重要的成果”^[57]。

这个招待会是1926年10月22日举行的。

接下来开展了一项举世闻名的科学事业。实际上，对中国而言最重要的是，只要科学家们同意合作，取得丰硕成果似乎是水到渠成的事。周口店发掘是一例真正的国际合作项目。参加发掘的除中国人外，还有来自美国、加拿大、瑞典、法国、英国和德国的许多著名科学家。这个组织在既有经验又富创造力的丁文江的领导下工作。丁文江是新生代研究室的名誉主任，主任是步达生教授。协助步达生科学工作的是一位瑞典籍科学家，步林博士。周口店开始发掘时步林受邀参加，他的主要目的是寻找荷谟形科——人形科——的化石。洛克菲勒基金会资助了这项筹划中的事业。

在周口店进行的科学工作持续了很长时间。这项巨大的工程为中国的年轻一代科学家上了几堂颇具现实意义的课。虽然初期是丁文江协力建立了新生代研究室，但其运行管理全仗这位实验室主任步达生教授的才智，他一方面指导周口店洞穴发掘的艰巨工作，一方面系统地把收集物分配给有能力的科学家进行专门研究。最重要的是，在周口店石灰岩洞穴里沉积的化石群中，步达生教授亲自担起了原始人类化石研究的重任。

1927年10月16日，受教于瑞典人韦曼教授的步林博士凿开洞穴内三千立方米的沉积物，移开后发现了一颗荷谟形牙齿，并在三天后将这一珍贵的发现物亲手交给了协和医学院的步达生教授。这枚牙齿被鉴定为左侧下臼齿，虽有所磨损，但仍保存完好，并带有牙根。在这一研究的基础上，步达生不仅确证了韦曼的鉴定，而且进一步作出了独创性的推论，提出了一个新的人属，并将它命名为中国猿人，类名北京人。^[58]

步林继续进行田野工作，协助他的是杨钟健和裴文中，他们二人在周口店的发掘中起了重要作用。

总之，在周口店和北京新生代实验室进行的科学工作，给中国年轻一代的科研者极大的鼓舞。不久，在步林离开后，杨和裴承担起周口店的田野工作。他们是1929年12月2日第一具北京人头盖骨的发现者。许

多人认为这个发现代表了田野发掘的最高成就，也充分证明洛克菲勒基金会巨额投资的价值。

步达生对这一重要发现的研究持续了六年，如前所述，他后来因劳累过度在协和医学院他自己的实验室里去世。必须要选出一名接替者，这一时成了难题。据我所知，经丁文江建议，一个国际性的委员会成立了，艾略特·史密斯教授任主席，目的是选出步达生的接替者。最后选拔委员会成员一致同意任命魏敦瑞为新生代研究室主任，继续这项重要的研究。

如果说步达生在周口店人类化石的研究中，通过其卓越的成就显示了他非凡的洞察力；那么，他有力的继承者魏敦瑞则显示出了德国人一丝不苟的精神。在受到训练的东方学科学家看来，别国的科学家在这方面很少能与德国人相媲美。《中国古生物志》丁种相继出版的各卷充分证明了德国科学的这些品质。魏敦瑞关于北京人的科学报告不仅是人类学论著的杰作，而且其条理之清晰、论证之精确、调查之详尽敏锐，堪称典范。对中国学者来说，用欧洲语言写的关于人类化石的研究报告没有哪部可与这些关于北京人的专著相媲美。

众所周知，珍贵的北京人化石收藏在第二次世界大战中遗失，为寻回这些重要的科学标本所作的努力都失败了。幸运的是，步达生和魏敦瑞撰写的完整报告在世界上大多数图书馆里都可读到，可供研究荷谟形科的早期历史之用。

周口店发掘在中国的影响之大，再怎么强调都不为过。尽管经过了许多政治变化，但对现在的科学工作者来说，周口店的发掘仍具有重要意义。

最后，同样重要的是法国古生物学家德日进。他的科学工作向受过西方训练的年轻一代中国科学家展现了许多法国知识分子的典型特征。世所公认，远古人类历史的专门研究就是一门法国人的学问。在近一个世纪里，法国考古学家在这方面的研究一直处于世界领先地位。当20世纪30年代初德日进神甫来中国时，他在西欧已有了不少经验。实际上他和被证明为伪造的声名狼藉的晓人的倒霉工作有些牵连。^[59]我相信正是由于这个原因，当1926年10月22日安特生宣布周口店的荷谟形牙齿的发现时，德日进是听众中唯一提出质疑并认为幻灯片显示的化石标本可能是某种“食肉类动物”牙齿的人。他给安特生写了张便条，说明了他对韦曼的鉴定结果的怀疑。

尽管后来的发现证实德日进的判断错了——他自己当然也表示自己错了，但这只能表明一位顶级科学家胸怀可以也应该多么宽广！

德日进在中国主要的科学工作涉及的学科和地区都很广。他的田野工作和科学研究，涵盖古生物学、史前考古学、地质层、冰川学等许多学科。

德日进应天津北疆博物馆创始人桑志华神甫的邀请来到远东。1920年，桑志华在中国西北考察时于甘肃省东部庆阳府发现了三趾马属动物群的丰富堆积。清理了覆盖在上面的黄土后，桑志华在黄土层底部发现了经人类加工过的石英片。1922年，桑志华接到在蒙古工作的其他天主教会牧师的通知，前往萨拉乌苏河，在那里发现了另一个骨骸堆积。他认为这很有研究价值，于是决定邀请巴黎的德日进前来参与中国西北和内蒙古河套地区堆积的科学调查。

这两位天主教神甫在宁夏水洞沟和萨拉乌苏河进行考古调查，在此他们发现了旧石器文化堆积，其中含有与炭屑混合的几百公斤石器。欧洲的史前学家对此很熟悉，因为发掘的成果是用法文发表的。在萨拉乌苏河旧石器时代遗址出土的石器大部分是由红色石英岩和含有硅的石灰石制成的。据说在该文化层的碎石堆中这些遗物很常见。一些石器，如刮削器、钻、石片，都相当大，有的长达17厘米。

他们对这些重要发现及有关动物遗骸的主要研究结论是，这种文化属于黄土堆积形成时的更新世。

这些法国科学家在高度与世隔绝的状态下工作，仅与在巴黎的同事联系，他们的论著也仅以法文出版。笔者有幸于1924年至1925年间在丁文江家里结识了德日进。后来，这位天主教科学家加入了新组织起来的中国地质学会后，我们时常见面。那时，德日进在京津地质学和古生物学界已经闻名，并被称为华北地区“最年轻最有才干的‘古生物学家’”——这是德日进接受葛利普奖章时，葛利普对他的评语。

德日进应邀成为新生代研究室的正式成员，在周口店发掘中还经常去到现场。杨钟健是他在国内最密切的合作者。他们曾合作研究安阳发掘出土的动物遗骸。除对史前遗物的出色研究外，德日进的主要兴趣似乎集中在“中国原人”上，并从地质学和古生物学的角度加以调查。他在北京时还以此为题写了一部研究专集，于1941年由北京的地质生物学研究所出版。

德日进对科学在中国的传播的确产生了多方面的影响。他不喜言谈，但他对待科学研究的态度堪为楷模。笔者负责安阳发掘时，德日进和杨钟健曾来看望我们。他们在工地上待了几个小时，仔细查看了我们的工作方法和记录。他来访时碰巧拾到一块泛绿的动物牙齿，他说：“这是颗虎牙，明显是和青铜器埋在一起的。”接着，他又查看了出土的石器，默默地对着“被称作绿石斧”的标本注视了好大一会儿。当问及他对此的看法时，他说：“这类石斧好像在华北分布很广，但不论具体发现于何处，其岩石类型及其形状都是相同的。”德日进是位田野科学家。他虽然沉默寡言，但却不失魅力与威严。他每次开口，言语中总是蕴涵着渊博的知识。他思路敏捷，最重要的是，他总能给人以启发，还不时表现出机智幽默的一面。

虽然有幸结识他的只有少数几个人，但他的品格深深地打动着中国的科学工作者。他的《中国原人》确实是这期间中国出版的所有科学名著中的一部经典之作。

我已较为详细地叙述了五位杰出的科学家和他们的亲密助手。这并不是说当中国开始接受西方学术，特别是西方科学时，开始表现出将科学教育融入中国教育制度这一意愿时，没有其他远道而来的科学家从事该领域的工作了。在地质学方面，有师丹斯基、谷兰阶等人；在地理学方面，有斯文赫定等人；在考古学方面，有尼尔逊、步日耶等人。他们也都为建立中国现代科学作出了贡献。但因为葛利普、安特生、步达生、魏敦端和德日进与中国知识界有更多的接触，他们的工作便在众人中间脱颖而出。这种接触当然比书面报告更具感染力，长此以往，自然造成了势不可挡的强大影响。

4. Early Period

of Planned Digging in Anyang

In the first three chapters, the historical background that led to the development of modern archaeology in China has been related, with special reference to the discovery of the oracle bone inscriptions by antiquarians educated in China's traditional disciplines and to the exemplary influence exerted by European scientists who did actual field work in China. At the time that these two sets of research activities converged, the new generation of the Chinese renaissance found modern archaeology quite acceptable.

Fu Ssŭ-nien was appointed acting director of the Institute of History and Philology of the National Academy in May 1928, when he was also dean of the School of Arts of Chungshan University in Canton. Fu had been one of the leading spirits in the May 4th Movement, deeply learned in all the Chinese classical studies, but alertly critical, and revolutionary against the old educational system. After the May 4th Movement he went to Europe (1919-1926), studying in both England and Germany, not aiming at a degree, but devouring and absorbing Western ideas that interested him. He returned to China in 1927, the year that the Nationalists established Nanking as the capital of China. Chungshan University was at that time a center of learning which attracted all the younger men with new ideas.

When Fu was given the task of creating a research institute in history and philology, his quick-witted mind created a slogan frequently quoted by contemporary scholars. A free translation would be:

Up to the very top of the blue heaven

Down to the bottom of the yellow spring,

Move (your) hands, move (your) feet,

This slogan in the original Chinese is couched in two phrases of seven characters each, like a poetic couplet. The first phrase is a quotation from the well-known poem of Po Chü-i, "The Ever Lasting Wrong," and the second was coined to lay emphasis on "Labor with Strength," that is, "walking and moving to search for source materials." Fu's long study in Western Europe had shown him that what was deficient in Chinese traditional education was the artificial division between body and mind. He was convinced that unless this barrier was torn down, there was no hope of achieving a new way to obtain scientific knowledge. In his early days in Europe, he had registered in a department of psychology, but he did not stay with it to become a specialist. This introductory training, however, was evidently sufficient to provide him with an understanding of the intricate relationship between man's body and man's mind, and impressed on his adolescent consciousness the basic idea that the root of the human soul is deeply buried in the whole frame of his bodily structure which modern medical science is devoted to examining in detail, while modern psychology specializes in studying the mental aspect.

Fu was a noted man of letters before he went to Europe. After the European contact in the period following World War I, he exemplified those Chinese scholars who had considered the problem of cultural differences between the East and the West and had made concrete recommendations to amalgamate the twin systems. He created his slogan and expounded it in detail in the Foreword to the first issue of the *Bulletin of the Institute of History and Philology*, published while he was still in Canton and the institute was still in a preparatory stage.^[60] The slogan worked, for Fu possessed, in addition to his profound classical learning, a penetrating knowledge of Western science. He was also one of the ablest administrators among scholars of his generation.

Fu's slogan, it must be emphasized, did not stop with words. It has actually been the fundamental policy governing the research work carried on for over forty years by the institute he founded.

While the institute was still in the preparatory stage, the acting

director sent Tung Tso-pin to Anyang for a preliminary investigation of the site long noted for its production of the inscribed oracle bones. At this time (1928), many epigraphists, among whom Lo Chên-yü was the leader, believed that thirty years' continued search for the *chia-ku-wen* had recovered all the buried treasure. Further searches were bound to fail and it would be foolish to attempt them.

Fu, one of the few gifted with an understanding of modern archaeology and scientific technology, did not take that current notion for granted. Tung Tso-pin was not a university graduate; he was, in 1928, just over thirty years old and a natural follower of the May 4th Movement, full of new ideas and eager to search for materials for his own study. Director Fu sent him to Anyang for a preliminary investigation for two simple reasons: Tung was a native of Honan, which would facilitate his work in a number of ways, and he was intellectually alert, although not an antiquarian even in the traditional sense.

In fact, neither of the two scholars—Director Fu, who initiated the idea of field operations at Anyang, nor Tung Tso-pin, who was sent there because he was a native of Honan with an inborn intelligence and receptive mind—had any experience in modern archaeology. Tung stated in his report that his job had been to look at the site and find out whether there were still some oracle bones worth digging, or whether the site was really exhausted as Lo Chên-yü and his cohorts believed.

For this purpose, prior to his first official visit to the site, Tung made an unofficial, personal visit to reconnoiter conditions there. After he arrived at Anyang on August 12, 1928, he first visited a number of the local gentry, among whom were the director of the middle school of Changte, the owners of several antiquities shops, and the man noted for his forgeries of the unknown inscriptions—Lan Pao-kuang. In these visits, Tung obtained a great deal of information about general conditions and about local opinions current in the city concerning the oracle bones. On the next day, he paid a personal visit to the village of Hsiao-t'un, accompanied by a guide. There, many

villagers showed him tiny fragments of inscribed bones for sale; he purchased more than one hundred such broken fragments at the price of three silver dollars. The villagers told Tung that in the past when curio dealers came to the village to buy they did not care for these small fragments which the local folk, however, picked up and stored at home. So at the time of Tung's first visit to Hsiao-t'un, almost every home in the village had some "tzŭ-ku-t'ou" in its keeping. Occasionally there appeared some larger pieces for which the owner would ask a price of four to five dollars per piece, which Tung then considered exorbitant.

Meanwhile Tung hired a young boy from the village who guided him to a place where oracle bones had been dug out. The place located by the youthful guide was a mound of heaped-up sand which at first impressed Tung as contradictory to what Lo Chên-yü had described in his 1915 visit. Both Lo's diary account and the information Tung got from the director of the middle school in the city agreed that the localities where oracle bones might be hidden were to be found on the cultivated cotton farms. The sandy mound by the side of the Huan River was nonproductive land for farming. But while examining a particular spot on the western side of the sandy mound and near the cotton field, Tung discovered several newly refilled holes which had obviously been dug recently, and by the side of one of the three refilled pits, he picked up a fragment of oracle bone without inscriptions. This piece of evidence gathered at the spot, together with what the villagers had offered for sale and the information Tung had collected in the city, led him to the important conclusion that the hidden treasure of inscribed oracle bones at Hsiao-t'un had not, as Lo Chên-yü and his followers maintained, been completely exhausted. Tung believed, after his first preparatory visit to Hsiao-t'un, that the site was still worth digging. So he reported, and he also planned a preliminary excavation.

After reading the report of Tung's first preparatory Anyang trip, Director Fu Ssŭ-nien, without the least hesitation, took the immediate steps needed to begin a preliminary digging at Hsiao-t'un. This new

venture, although not enormously expensive, had no budget. After considerable negotiation with the headquarters of the National Academy, Fu Ssŭ-nien succeeded in getting the necessary support: a sum of one thousand dollars in Chinese National Currency, at that time by no means a small sum. Even with this amount of money, the field workers had to pay for all their equipment, including surveying and photographic instruments and other necessary materials. In due time Tung was able to organize a band of workers, partly voluntary and partly paid, including six principal members who in one capacity or another cooperated with him in accomplishing the first official season (October 7-31, 1928).^[61] This preliminary digging conducted by Tung Tso-pin in October 1928 has always been referred to as the first season of the Anyang excavations.

Tung arrived at Anyang on October 7, 1928, armed with the necessary official documents from the central government in Nanking and the provincial government at K'aifeng. The provincial government of Honan had selected two officials to accompany Tung Tso-pin to the Anyang district in order to facilitate his work. The full report of Tung's first official trip to Anyang was printed by lithograph in K'aifeng in the winter and later reprinted as the first article in the four issues of *Preliminary Reports of Excavations at Anyang* (1929 Dec.-1933 June).^[62] Tung's report after the first official trip not only concluded the antiquarian period of armchair studies of old curiosities, but, what is more important, paved the way for systematic excavation of these famous ruins.

It is of great interest and historical importance to note some of the concrete results of this first trial digging and also some of the opinions expressed by the participants. Let us see first what was done in the experimental exploration of this famous site. The main points are:

1. The party carried out the first surveying work.

2. Three locations were selected for actual digging. Two (Sections I and II) were on a farm northeast of the village of Hsiao-t'un, near the west bank of the Huan River which partly surrounds the farming

area of this village. Another locality (Section III) was within the village itself. (see Fig. 4)

3. Of the 784 pieces of inscribed oracle bones dug out, 555 were tortoise shells and 229 were scapular bones of cattle. In addition, there were more than a thousand fragments of uninscribed bones.

4. Besides the oracle bones, the other finds included:

~~B~~red bone implements

~~A~~animal bones

~~B~~human skeletons

~~S~~hell and cowry fragments

~~S~~tones or jades

~~B~~ronze fragments

~~I~~ron fragments

~~#~~potteries

5. The scope and extension of the excavation, according to the preliminary surveying work, might cover the whole area of the farmland north and northeast of the village and the village site itself; it might be extended far to the south.

6. The Waste of Yin seemed to have been formed after the region suffered some big flood, originating, according to Tung's interpretation, from the Yellow River, which at that time followed a course quite close to Hsiao-t'un.

7. The inscribed oracle bones were excavated from the following pits in the three localities where trial diggings were made:

~~B~~ection I

~~B~~ests 26, B3

~~B~~ests 35, B6, 37

Tung hand-copied the 392 pieces of oracle bones with inscriptions: he also made a number of comments, which were reprinted with his general report in the *Preliminary Reports of*

4 First sketch map by Tung Tso-pin 董作宾绘的第一幅草图

After the preliminary diggings led by Tung Tso-pin, the author played the leading role in the Anyang excavations, which lasted in the field for nearly nine years. Accordingly, the following account must be

partly autobiographical.

I did not meet Fu Ssŭ-nien until 1928, when he had already made a national reputation after the May 4th Movement. I was studying in the United States between 1918 and 1923, and was deeply absorbed in several branches of social science—psychology, sociology, and anthropology. Returning home after five years of study, I accepted a teaching position at the newly established Nankai University in Tientsin where I worked for two years (1923-1925).

As I had lived in Peking since the Manchu days, when I taught in Tientsin I constantly traveled between the two cities—Peking and Tientsin. Since anthropology was quite a novel subject at that time in the university curriculum, a number of men of learning in these two cities became somewhat curious about me, and I was frequently invited to attend learned meetings and social occasions in both cities. After a short period of initiation, I gained the friendship of many specialists whom I had admired for a long time. I was soon introduced to Dr. V. K. Ting (Ting Wen-chiang), Dr. W. H. Weng (Weng Wen-hao), and Dr. Hu Shih, and was also inducted into membership in the Geological Society of China. As a member of this learned society, I naturally had every opportunity to get acquainted not only with many geologists but also with a number of visiting scientists—geographers, paleontologists, archaeologists, and so forth.

V. K. Ting, no longer heading the Geological Survey at this time, was managing a coal mining company with headquarters in Tientsin. His keen interest in anthropology led him to interest himself in my work and he advised me to miss no opportunity to go to the field for data collecting. When the discovery of the Hsin-cheng bronzes was reported in the newspapers, he urged me to go to Hsin-cheng to dig, and obtained two hundred dollars in China National Currency for field expenses.^[63]

So I did; but the results of the dig were not very encouraging, and I recovered only some human skeletal materials, since the bronzes and jades had all been plundered previously. This initial experience did not draw me seriously to the science of archaeology; however, it

taught me the lesson that in doing such works, one certainly has to pay a great deal of attention to current political and social conditions.

In 1924-1925, my second year of teaching in Nankai, I met Mr. Carl Whiting Bishop in Peking, who represented the Freer Gallery of Art there, and was looking for an opportunity to do some scientific excavations in China. Soon we became friends. Mr. Bishop wrote to me in this academic year and inquired whether I might consider joining his field team to do some archaeological excavation. After careful consideration and advice from friends, I responded to Mr. Bishop's offer by suggesting two conditions that seemed to me important: first, that field excavations, if I were to engage in them without misgivings, should be done in cooperation with a Chinese learned body and under its auspices; and second, that I be excused from any obligation to export the artifacts from such digging—my hint being that studies of such finds should be done in China.^[64]

For a long time I had no answer from Mr. Bishop. Later, when I happened to meet him again on a social occasion, he was very cordial and approached me courteously to talk again about his proposition. In this informal conversation he told me that the Freer Gallery of Art would not ask me to do anything I might consider unpatriotic. Since political and social conditions were changing so rapidly, why not work together on an experimental basis? Mr. Bishop was one of the few Americans in Peking who impressed me as friendly and sincere. Since his offer fitted in with my idea of academic research, I agreed to take up the job "on an experimental basis." This happened in the spring of 1925, when J. G. Andersson's prehistoric discoveries were already the talk of the academic circles in Peking and Tientsin.

Earlier in the same year, Ts'inghua College founded a research center for what was known at that time as "national learning," a term for which the modern English equivalent is "Chinese Studies." I had the honor to be invited by the newly established Ts'inghua Research Institute of National Learning to serve as an instructor, in company with a faculty composed of such eminent scholars as Liang Ch'i-ch'ao, Wang Kuo-wei, Chen Yin-k'o, and Chao Yüan-ren. My specific duty

was to teach anthropology. It was about this same time that the Freer Gallery of Art, through its field representative Mr. Bishop, also agreed to employ me as a member of its field team in China with the understanding mentioned above.

In the winter of 1925, the Freer Gallery of Art and the Ts'inghua Research Institute jointly dispatched me to do some field work, giving me the power to choose whatever place I wished. The senior member of the Ts'inghua faculty, Professor Liang Ch'i-ch'ao, was a great enthusiast for field archaeology and offered to introduce me to Yen Hsi-shan, the model governor of Shansi province, where the political administration was the best known, and peace and order had long prevailed. I chose Shansi for my first archaeological trip after careful consultation with friends familiar with China's current political and social conditions.

It was indeed a great fortune for me when the geologist F. L. Yüan (Yüan Fu-li), who had accompanied J. G. Andersson in his Yangshao diggings, on hearing about my proposed archaeological trip to Shansi, volunteered to accompany me. Both the Geological Survey and the Freer Gallery of Art consented. Yüan and I left for Shansi in the winter of 1925-1926. We settled our course of reconnaissance on the way. At that time, neither the politicians nor the general public knew anything about science, not to mention scientific archaeology. So, on this first trip, I had to spend much time negotiating with administrators and local people. Whatever social and political advantages I enjoyed were, in most cases, given to me either by my senior colleague or by sheer personal luck.

Yüan and I decided, after reaching Taiyüan, to go south and explore the archaeological possibilities mainly along the Fên River valley north to the Yellow River, which serves as the southern border of Shansi province. There was already a paved road, and mules, camel-chairs, rickshas, and mule-carts were the available means of transportation. We decided to start the detailed reconnaissance from P'ing-yang Fu (or Lin-fên Hsien) southward. At this place, a mule for each of us was hired to transport the luggage, the surveying and

photographic equipment, as well as the human burden. Shansi pack mules are famous for their endurance; they can keep up a steady rate of traveling twenty-five miles a day carrying over three hundred pounds even if the journey covers the ascent and descent of mountainous regions. This was exactly what we needed.

On mule-back, Yüan and I wandered from Lin-fên southward for about a month's time. In the course of our daily observations, the chief discoveries were three prehistoric sites with painted pottery, in addition to many historic sites of great archaeological value. Having reported the details and especially the new discoveries to the Ts'inghua Research Institute and the Freer Gallery of Art in Washington, D.C., I was asked to return to Shansi again for some digging. Both the Freer and Ts'inghua agreed to let me choose the first site for excavation. As Mr. Yüan's service was greatly appreciated by the two cooperating institutions, the two of us again went to Shansi in the autumn of 1926. After the necessary official papers and letters of introduction had been obtained, F. L. Yüan and I agreed to choose for our first dig Hsi-yin Ts'un, located at Hsia Hsien, one of the three prehistoric sites with painted pottery discovered during our reconnaissance trip. We made this choice for the following reasons:

1. A prehistoric site contains nothing metallic, so suspicions of treasure-hunting might be avoided.

2. Any burials that might be uncovered would relate to unknown tombs of the past, and therefore attract little attention, so that public opinion against grave digging would be reduced to the minimum.

3. The discovery of Yangshao Culture had already demonstrated beyond a doubt the importance of this prehistoric culture.

In addition, my fellow worker, Mr. Yüan, the geologist, had acquired a great deal of field experience in the excavation of the Yangshao site, which he had surveyed.

There is no need for me to go any further with the story of my first excavation of the prehistoric site at Hsi-yin Ts'un, since the work has been reported in both Chinese and English. Of the artifacts

collected at this site, the best known is an artificially cut silk cocoon which was identified by a specialist at the Smithsonian Institution as *Bombyx Mori*.^[65]

The excavation of the Hsi-yin Ts'un prehistoric site, although it attracted little attention at a time when political revolution was in progress in China, achieved for me a personal reputation as the first archaeologist in China whose method of working was modern, and whose scope of interest extended far beyond historical time. The director of the Freer Gallery of Art, after learning what I had done, indicated through Mr. Bishop his wish to have an interview with me and invited me to Washington, D.C.

I went to Washington in the summer of 1928 and had a very pleasant interview with Director John E. Lodge. After some talk, he promised to continue his support of further cooperative efforts between a Chinese institute of learning and the Freer Gallery of Art in any new project in Chinese archaeology.

I returned to China via Europe, Egypt, and India. When I arrived at Hong Kong for the first time in my life, I was very anxious to pay a visit to the city of Canton, where I had never been before. In 1928 this city was the center of all sorts of revolutionary activities. According to the sailing schedule of the P. and O. boat which I was taking to Shanghai, the stop at Hong Kong harbor was to last three days, so I figured that I could easily pay a short visit to Canton within the time limit. This I did.

Once in Canton, I was soon taken to see Fu Ssŭ-nien, who was, at the time, looking forward to meeting me. The first thing he asked was whether I would like to take charge of the Archaeological Section in the Institute of History and Philology, which he was organizing. He told me what Tung Tso-pin had found in Anyang; I also informed him of my engagement with the Freer. There seemed to exist little difference of opinion, since the director of the Freer Gallery of Art had just approved such cooperation on an experimental basis.

So I started planning for the program of the Archaeological

Section of the Institute of History and Philology of the Academia Sinica in the winter of 1928-1929. Naturally, this necessitated that I learn as much as possible about the site of the Waste of Yin in Anyang. My immediate task, after returning home to Peking, was to take a trip to K'aifeng to confer with Tung Tso-pin, whom I had never met before. He had, of course, already been informed by Director Fu Ssŭ-nien of my appointment. In K'aifeng I learned all that Tung could tell me about the current conditions of Hsiao-t'un site, and the results of his trial digging. My impression remains vivid to this day of my first conference with this charming and admirable colleague. He possessed an alert and witty mind, full of practical wisdom. His main academic interest and recent success both seemed to have convinced him that there were still hidden oracle bones worth digging.

After the informal K'aifeng conference, Tung and I agreed to go to Anyang after the Chinese New Year for another trial digging. We also reached an understanding that Tung was to study the written records while I was to take care of all other artifacts. This understanding has proved, in the course of time, important for our personal relationship as well as for teamwork. For Tung, as the first pioneer to explore this site, deserved the opportunity to study the most important group of scientific discoveries and the inscribed oracle bones were the key-finds of the collections from the Anyang excavations. Furthermore, Tung's qualifications for the epigraphic investigation was beyond any question.

On the basis of my personal contact with Tung Tso-pin and his written reports, I was provided with a general knowledge of the current condition of the site. And, on the basis of this general understanding, it seemed to me that:

1. The site at Hsiao-t'un was evidently the last capital of the Yin-Shang dynasty.

2. Although the size and scope of the remains were uncertain, an area where inscribed oracle bones were unearthed must have been an important center of the capital site.

3. Together with the inscribed oracle bones, there might well be many other kinds of artifacts found in the underground deposits. These might have coexisted with the inscribed oracle bones, or be even earlier, or possibly later, depending of course upon a number of depository conditions.

I planned the program for the spring of 1929, the second season at Hsiao-t'un and the first time that I took charge of the field work in Anyang, with these three hypotheses in mind. Since the Freer Gallery of Art had agreed to support my field work under the auspices of a Chinese institute of learning, there was no financial problem. The concrete work which I, after consultation with Tung Tso-pin, decided to adopt consisted of the following procedures:

1. To employ a competent surveyor to survey the site, so that a detailed topographical map with Hsiao-t'un Ts'un as the center might be accurately drawn.

2. To continue trial diggings by means of trenching at a number of localities within the site, the main purpose being to obtain a clear understanding of the stratification under the surface, and find out the true nature of the deposit where oracle bones might remain still intact.

3. To keep systematic records and registration of every artifact which might be dug out, with its exact location, nature of the surrounding deposit and stratification, and also the exact time of its appearance.

4. To have every participant in charge keep a personal diary of what he observed and what occurred in the field.

In the spring season of 1929, the excavation was carried through as planned. In Hsiao-t'un village more oracle bones (685 fragments) were found. The investigation of the underground conditions was made in three different localities: (1) south of the village; (2) in the village yard; and (3) in a wheat and cotton farm north of the village settlement. We concluded the season by packing a great number of excavated artifacts in cases and transporting them to Peking for study.

At this time the Institute of History and Philology had already moved its headquarters to Peking. Director Fu Ssŭ-nien decided to issue a preliminary report for the general public; the first paper I contributed was an analysis of underground conditions.^[66] In this paper I drew one important conclusion, based upon the observations and excavations made during the spring diggings, namely that the underground deposits are divisible into three main strata: (1) the main cultural deposits from the Yin-Shang period, overlaid by (2) the scattered but nevertheless numerous tombs of the Sui-T'ang dynasties (A.D. 589-906)^[67]; these cemeteries being again covered by (3) a surface layer of modern deposits. We also discovered a number of underground caves and caches, filled mostly with remains of the Yin-Shang time composed of pot-sherds, stone implements, and animal bones, occasionally some broken pieces or even fragments of jade, and so on. These finds were duly registered and were all carried back to the headquarters in Peking for study. Still the most important group among the artifacts uncovered during this season are the inscribed oracle bones, which were found in the locality within the village settlements, very near the place where Tung Tso-pin had found similar relics during the previous season.

During this second expedition to Anyang a topographical survey of this important site, with Hsiao-t'un as the center, was begun. As nobody could say anything definite about the size of the site, we temporarily limited the surveying work to the region within which oracle bones had either been found by excavation or were said to have been turned up according to village tradition. This first topographical map, surveyed by Mr. Chang Wei-jan, was completed in the autumn of 1929, during the third season of the Anyang expedition (see Fig. 5). Another item of the field work, which I initiated in the second season, was to keep a systematic record of the ceramic collection, an arduous task that was continued uninterruptedly for the ensuing fourteen seasons of the Anyang excavations, but, as might be expected, with several revolutionary changes in both the method of recording and the criteria of classifications.

5 Topographical map of Hsiao-t'un and its immediate vicinity 小屯及邻近地区地形图

To what extent the present surface condition of the cotton and wheat farm northeast of Hsiao-t'un village represented what had appeared in the Yin-Shang dynasty, nobody could guess. But the present surface topography was the task of the field worker to map out accurately.

After my party started its field work, we had the first impression that the village was located on a more or less flat piece of land, with the wheat and cotton farms to its northeast, about 180,000 square meters in size, rising gradually toward the north and the east. An accurate survey revealed that the surface rose some 3-4 meters higher. The highest points were in one place near the bank of the Huan River to the east. Near the river bank to the north, there is another raised area, which is also 2-3 meters higher than the village settlement; but it is separated from the eastern higher surface by a strip of depression. This depressed surface may have served, during the rainy season, to convey flood waters toward the Huan River. West of the northern mounds, there existed in 1929 an elongated, deep-sunken channel. This channel like depression from Hua-yüan-chuang runs almost directly to the Huan River on the north and serves as a boundary line of the cotton and wheat farms of Hsiao-t'un village. The villagers called it a "water ditch." This water ditch seemed also to have been a western boundary line of the oracle treasure deposits according to the village tradition. All tzŭ-ku-t'ou, according to those who knew the locations of the deposits, were found in localities east of the "water ditch." After the survey we found that the lowest level of the ditch depression was in fact not much lower than the ground level of the village settlement at Hsiao-t'un.

The two mounds which rose nearly two or three meters above the village settlement and the water ditch on the western border of the wheat and cotton farm at the northwest were the general surface appearance at the time of my first visit. These preliminary observations helped me also in planning the third season's work, which started October 1929. Another digging party, organized and backed by the Honan provincial government under the inspiration of the old treasure-hunting tradition, interfered with our third season's works for three weeks. This political interference was soon settled, but the treasure-hunting tradition dies hard. For this reason some of us moved actively to request the central government to pass an Antiquities Protection Law with provisions for the protection of sites and monuments of historical value, including rules regulating export

of national treasures and conditions governing scientific excavations. The first article of the law, proposed and later adopted, was for the government to declare that all underground antiquities are national treasures, which no private individual or party, has any right to dig. After several years of general discussion, the law was finally passed by the Legislative Yüan (June, 1930). Included in this law were rules regulating official excavations, which were however supplemented much later. It is interesting to note that certificate number one with official permission to excavate was issued jointly by the Ministry of Interior and the Ministry of Education in the spring of 1935 to Academia Sinica, when the Anyang excavation was in its eleventh season.^[68]

The implications of this law had an important bearing on the progress of the field work in Anyang, for the field archaeologist had to face, in addition to complicated technological problems, certain formidable nontechnical, social and political barriers in a tradition-bound country such as China during the period of our excavation.

Having pacified the rival party from the provincial government by means of administrative arguments as well as rapprochement, we resumed excavation on November 15, 1929. In the beginning of the season, my plan for the field had been to scrape the entire surface of the site by what I termed "carpet rolling" method. But when I was interrupted by the rival party organized with local official backing, I was forced to adopt a method of approach that would be more adjustable as circumstances might require. So I started anew and planned more systematic trenchings over the wheat and cotton farmland northeast of Hsiao-t'un village.

Near the western half of this land, I planned one long vertical trench, running N.S., and six parallel horizontal trenches running E.W., in order to explore the distribution of the main deposits in the whole site underneath the farmland. As for the portion within the village, the underground conditions had already been examined on a preliminary basis in the preceding spring season.

The findings of the third season, despite the interruption of the

field work for more than three weeks, were more encouraging than originally expected. The results fully justified the basic idea that the important centers of the Yin-Shang cultural remains lay somewhere underneath the cotton-wheat farms northeast of the village between the water ditch northwest of the village and the Huan River valley on the eastern and northern border.

While the vertical trenches in the north-south direction had exposed important underground sections of general deposits, the six parallel trenchings, fifteen meters apart cut across mainly from the vertical trenching eastward, had definitely hit the core. Between trench H13 and trench H13.5, near the vertical north-south cut, we discovered an almost intact deposit, which in fact turned out to be the most important deposit of the Yin-Shang Culture. Later on, this locality was known as the Ta-lien-k'eng, or "Ta-lien pit."

The details of the first discovery and of the gradual extension of this dig were reported in a special article in *PREA*.^[69] Let me summarize the important new discoveries and also their bearings on the course of the field events in our archaeological work on the site. It must be understood clearly that the accomplishment of the third season's work was by no means limited to the discovery of the Ta-lien-k'eng alone. The following summary therefore includes the fruitful results of the whole season.

What to the working team seemed to be of primary importance was the exposure of a definite stratification series portraying the underground condition. This became significant after a study comparing a stratified section over a burial of the Sui dynasty with the intact layers of the Ta-lien-k'eng revealed these main points: above the Yin-Shang cultural deposit there was a sort of protective layer, brownish to black in color, hard to break, and sometimes varying in thickness from one to two meters thick. This protective layer was usually barren of any cultural content, containing not even fragmentary pot-sherds. In the case of the Sui-T'ang burials, however, which were sometimes found at a depth of more than three meters, the overlying soil usually showed a stratification completely deficient

in the protective layer as described above.

Even more interesting were, of course, the objects and artifacts discovered during this season. Since I personally supervised the digging of the Ta-lien-k'eng, I am able to describe from my own experience the various stages of the gradual exposure of this important deposit.

The Ta-lien-k'eng was located about fifty meters southwest of the raised mound near the west bank of the Huan River; its exposure was the result of the trenching of horizontal trench thirteen (H13) and its extension northwards, immediately after the underground stratum, indicated signs of an intact deposit. The following field records (registered from the surface layer downward) serve as an example to illustrate the method of field registration:

1. The top layer, 0-0.40m.; soil mixed; one net sinker found.
2. Second layer, 0.40-0.87m.; soil yellowish-black; a stone knife the only find.
3. Third layer, 0.87-1.40m.; soil turned brown; no artifacts.
4. Fourth layer, 1.40-1.85m.; soil color same as above, but more compact and hard to break; mixed with rubbish of casting, and a specimen of one cowry shell.
5. Fifth layer, 1.85-2.10m.; soil gradually blackened, very hard; a few pot-sherds, some casting rubbish, a piece of carved sandstone.
6. Sixth layer, 2.10-2.40m.; soil very black and harder; in northeast corner, mixed with patches of yellow sand and sediments containing many fragments of burned clay and casting rubbish.
7. Seventh layer, 2.40-2.65m.; soil condition continued as (6), but below 2.65m., the northeast corner, changed to grayish ashy color and became less hard; more pot-sherds, and fragments of inscribed oracle bones began to appear; fragments of human skull also found.
8. Eighth layer, 2.65-2.80m.; soil color grayish-yellow, with deeper chrome at northeast corner; many kinds of pot-sherds, string-

impressed in red and black; also some with square shaped relief in black and red; and other varieties of pottery sherds. Many of the sherds carried incised ornaments. Other artifacts: inscribed bones, shells, stone knives and pebbles, deer horns, human skeleton fragments, casting molds, also stone axes and other fragments of stone mixed within the remains.

9. Ninth layer, 2.80-2.95m.; soil completely gray in color; potsherds as above; in addition, inscribed oracle bones, carved bone artifacts, carved stone artifacts, carved ivories—many specimens.

10. Tenth layer, 2.95-3.20m.; soil color still grayish-yellow, but near the bottom of this layer at the depth of 3.10m. the yellow soil appeared; and south of this loessic soil, a heap of black charcoal was found, mixed with pot-sherds of the gray, red, and black varieties, bearing incised and string impressions; also skulls, casting molds, pebbles, bone awls, stone implements, oracle bones with or without inscriptions and lapis lazuli, etc.

11. Eleventh layer, 3.20-3.30m.; mixed yellow and black soil, artifacts rare. Below the depth of 3.30m., the floor of the upper portion seemed to have been reached except in the southeastern corner^[70] where a semicircle of black soil remained.

It is a critical observation that below the eleventh layer, at a depth of 3.30 meters below the present surface, a floor space covered by a layer of black earth over clean sandy yellow soil seemed to be untouched by any later intrusion. This floor space evidently might have served as the floor of a dwelling place, or of a storage pit. What was more exciting was the fact that below this floor, at the 3.30 meter level, still another underground deposit appeared in a deeper circular pit that went down more than three meters further below the bottom of the Ta-lien-k'eng. At the bottom of this lower circular pit—whose diameter was nearly two meters—were found heaps of oracle bones, and some nearly complete inscribed shells whose importance was set forth by Tung Tso-pin later in a special article.^[71]

From this circular pit and another rectangular pit near its western

side—these twin pits constituting the subterranean cache underneath the superlayer of the Ta-lien-k'eng—we discovered hidden treasures which were the richest harvest of the season's work. Most of the discoveries had been unknown before. These new discoveries at the Ta-lien-k'eng together with the deposits of the twin lower pits proved one definitive point: that is, that the following artifacts were definitely contemporaneous with the inscribed oracle bones: (1) uninscribed oracle bones as well as nearly complete specimens of inscribed tortoise shells; (2) many kinds of animal bones; (3) many types of pottery: white, glazed, red, and gray; (4) carved bones and stones; (5) carved ivories; (6) deep storage pits which might sink down below the surface more than ten meters; (7) coexistence of stone and bronze tools; (8) molds for casting bronzes; and (9) other associated finds.

The importance of these associated finds, individually and as a group, was widely realized as soon as the underground conditions were made known. This recognition was advantageous to our continuing efforts in the Anyang excavations.

Among these new discoveries, the glazed pottery, white pottery, and bronze molds attracted international attention and gave rise to worldwide discussion. But it was the unique find of painted pottery sherds, never duplicated in later diggings, which aroused a hot debate among Chinese historians and archaeologists. The point at issue, to be brief, was the relationship between the neolithic Yangshao Culture and the Bronze Age Yin-Shang Culture as revealed in the deposit at Hsiao-t'un. The discussion lasted a number of years, since it involved the fundamental question concerning the origin of early Chinese culture.^[72]

The Anyang excavation stopped for a year in 1930, when the Archaeological Section of the Institute of History and Philology extended its field activity to the Shantung province. At a place near the provincial capital Tsinan, a new phase of neolithic culture—the Black Pottery Lungshan Culture—had been discovered by Gin-ding Wu (Wu Chin-ting), a graduate student of mine from the Ts'inghua Research Institute of National Learning. The field staff of the

Archaeological Section was sent to Tsinan and excavated the site of Ch'êng-tzŭ-yai for a season. The Black Pottery Culture here discovered for the first time in north China stirred deeply not only those scholars whose special interest was in ancient China but also the new generation of field archaeologists, especially those who had been paying close attention to the discoveries and circumstances of excavation at Anyang.

Meanwhile, there were other occurrences in 1930 that affected both the organization of the field work and the program of planned digging of the Hsiao-t'un site. What concerned me particularly was the failure of the Institute of History and Philology and the Freer Gallery of Art to reach an agreement on continuing archaeological excavation in north China. When this regrettable cessation of the cooperative undertaking happened, my position became obviously untenable. So I resigned my Freer Gallery job, after the completion of all the field work assigned to me. I had worked, from 1925 to 1930, for five continuous years with the understanding described above and in the hope that some agreement might be reached between a national institute of China with the Freer Gallery of Art of Washington, D.C., to promote archaeological science as well as Sino-American friendship in academic works. This failure naturally disheartened me greatly.

A number of friends who appreciated my field work extended their help by asking the China Foundation for some financial assistance for the Anyang excavation, which was soon achieved. Beginning in the autumn of 1930, I received the China Foundation appointment as Research Professor in Chinese Archaeology, a chair endowed specially to the Institute of History and Philology of the Academia Sinica. In addition, an annual sum of ten thousand silver dollars for three years was granted to the institute for field expenses.

So the fourth season of the Anyang excavation opened in the spring of 1931; it was already more than a year after the Archaeological Section had stopped field work at Hsiao-t'un in the winter of 1929. The field party for the fourth season of digging was organized on a new basis and included a larger number of

archaeologists. I went to the field also with a more advanced understanding of the nature of the site as well as a number of new ideas; and many new and better-trained assistants were on my staff.

Beginning in this fourth season, the site, which we had surveyed in 1929, was divided into five subareas, each of which was excavated under the supervision of a trained and experienced archaeologist who was assisted by a number of junior assistants and many trained diggers. Most of the staff members had greatly benefited from their participation in the excavation of Ch'êng-tzŭ-yai, where the uncovered artifacts had included interesting specimens of oracle bones which had been used in scapulimancy, but bore no inscriptions. Surrounding the site at Ch'êng-tzŭ-yai, a ruined wall had been found, which was built of pounded earth. A careful examination of the pounded earth reminded those with experience in the Anyang diggings of the amazing similarity to strata found at Hsiao-t'un in the first three seasons, which at the time had been interpreted both by Tung Tso-pin and Chang Wei-jan as layers of flood sediments.

So the excavation of the Ch'êng-tzŭ-yai site provided some radical new ideas for major reinterpretations of our past problems at Anyang, thus making a very important contribution to the advancement of the field work there. I had been personally greatly encouraged both by the China Foundation appointment and by the discovery of the Lungshan Culture at Ch'êng-tzŭ-yai, for whose excavation I had been mainly responsible.

With the additional knowledge gained in the Shantung field work, I began to speculate that scapulimancy not only existed in north China in prehistoric times but was also widespread. And, since legendary accounts about the early history of the Shang dynasty do mention the fact that the dynasty moved its capital five times after the founding—the locations of these capitals had been a favorite theme for students of the ancient history of China—it seemed possible to me that the newly discovered Lungshan Culture might have been the immediate predecessor of the Shang civilization. At least, scapulimancy definitely provided a link between the Shang civilization and that of the

preceding prehistoric culture in north China.

With all these new ideas in my mind and a reinforced staff, I was encouraged to plan expanded field work in Anyang for the fourth season. The important decision, taken after detailed discussion with members of the Archaeological Section and the director, was to excavate the Hsiao-t'un site in its totality by the carpet-rolling method. I felt confident that we had found the key and by mapping the pounded earth areas would be able to trace the architectural foundations of the Yin-Shang dynasty in the Waste of Yin.

The field staff included the old staff members (those who had participated in the first three seasons)—Tung Tso-pin, Kuo Pao-chün, Wang Hsiang, and Li Chi—as well as new members—Liang Ssŭ-yung, Li Kuang-yü, Wu Gin-ding (Chin-ting), and Liu Yü-hsia. Beginning in this season, Mr. Shih Chang-ju and Mr. Liu Yao also joined the Anyang field work as student workers.

One method of tackling the site (looking particularly for undisturbed pounded earth area) in the fourth season was outlined by Shih Chang-ju in his *Archaeological Chronology* published in 1952 (see also Fig. 6).^[73]

6 Subareas of excavation in Hsiao-t'un 小屯发掘的各区

In this season, the site was redivided into five subareas, A, B, C, D, E.

The locations of the five subareas are as follows:

Subarea A, west of the vertical trench of 1929 (3rd season),

Subarea B, east of the vertical trench between horizontal trenches 11 and 14,

Subarea C, south of horizontal trench 11,

Subarea D, east of the Ta-lien-k'eng,

Subarea E, north of the horizontal trench 14.

At the conclusion of the season's work, it was found out that Subarea A had been disturbed the most; between H13 and H14 frequent diggings had been carried out in the past. Subarea B, by contrast, had reserved a great deal of pounded earth surface, which had not been found in the Subarea A. Experience in excavating this subarea convinced all field workers that our earlier interpretation of the pounded earth as flood sediments had been wrong. In Subarea C, a location which villagers in the past had never cared to dig, we also found extensive evidence of pounded earth, similar to what had been

found in the Subarea B; the same was true of the Subarea D.

Subarea E was somewhat different. In this locality two untouched, under-ground storage caves were uncovered, which we denominated respectively as E16 and E10. E16 was filled with both bronze weapons and inscribed oracle bones, while in E10 heaps of large animal bones were stored. A whale's scapula and vertebrae and, even more interesting, the lower jaw of an elephant, were found in this group of remains. Shih's summary for this season stated:

The excavated area is more than fourteen hundred square meters. ... With the exception of the exposure of a large area of pounded earth, the discoveries included a large number of circular caches, twenty-five huge underground dwelling spaces, eighteen burials. The storage pits were carved out and reshaped with plastered walls; in the building corners of these sunken pits, there were foothold cavities in the vertical rows. In the storage cells of E16 were found some very valuable artifacts: bronze spearheads, bronze halberts, molds for bronze casting, carved bones, together with pot-sherds and a great number of inscribed oracle bones (781 pieces). There was also a number of burials of the Sui-T'ang dynasties... found in this season all over the excavated area.

The new planning introduced in the fourth season proved not only workable but also successful in that both the findings and the carpet-rolling method proved their soundness by the substantial results of two months' hard work. At the end of this season, my colleagues and I decided that whatever financial difficulties we might have to meet with, the new idea of tracing architectural foundations of the Yin-Shang dynasty should be followed till we could gain some solid basis for a reconstruction of the architecture of this almost forgotten dynasty. The guideline of this basic work, already proved sound, was to make a thorough study of the extensive areas of pounded earth already discovered and to continue to trace this extension. This new procedure, that is, the tracing of the pounded earth, proved to be time-consuming: it needed not only patience and technical experience, but also a great deal of imaginative power to appreciate the significance of this protracted project, which, after a long period of work, proved its lasting value.

Meanwhile, the fourth season field party, besides conducting the

excavations at the Hsiao-t'un village site, found excess energy to explore other promising sites nearby in the Huan River valley. Liang Ssŭ-yung and Wu Gin-ding together with Liu Yao started digging at Hou-kang, a mound very near to the railway. Wu and Li Kuang-yü also carried some field work in Ssŭ-p'an-mo, west of Hsiao-t'un. The excavation at Hou-kang under Liang continued during several seasons and proved to be very important; it showed for the first time a stratified series of the painted pottery, black pottery, and the Anyang Culture deposits laid down in definite sequence. In succeeding seasons, the exploratory digs were made as far west as T'ung-lo-chai, where a pure Black Pottery Culture site was discovered. But more important findings—important in being more closely related to the Hsiao-t'un Yin-Shang Culture—were made in the ninth season (1934) of our Anyang digging in the village of Hou-chia-chuang. Here, on the other (north) bank of the Huan River from Hsiao-t'un, for the first time in the course of the Anyang excavations inscribed oracle bones were found elsewhere than Hsiao-t'un.

However, in the immediate ensuing seasons of the Anyang field work—from the fifth to the ninth—the main excavations were still concentrated at Hsiao-t'un, with tracing the architectural foundations of the Yin-Shang dynasty as the main purpose of our project. The five successive seasons were carried through between October 1931 and March 1934; the personnel of the field party and the man in charge also changed from time to time:

Season Staff

Season 1 October 1931, 1932 Yü-hsia Wang Hsiang

Season 2 March 1932, 1933 Gin-ding

Liu Yü-hsia Wang Hsiang

Chou Yin-hsüeh Li Kuang-yü

Season 3 May 1932, 1933

Season 4 June 1933, 1934

Shih Chang-ju Li Kuang-yü

Season 5 April 1934

In the fifth season, a more definite area with pounded earth appeared in Subareas B and E. A terrace, composed of more or less pure clean yellow soil, was uncovered in the E. The discovery of this terrace, square in cross-section and oriented to magnetic north but undercut by later intrusion, seemed to me at that time very important, so I went to the field to take charge in the ensuing sixth season. In that season, a further important discovery concerning architectural engineering was made, namely that rows of untrimmed boulder-stone of moderate size were regularly arranged along the borders of the regular-shaped foundation surfaces, occurred very frequently.^[74]

This discovery made us realize that similar boulders varying in size, which had been frequently met with in past seasons, might also have served some architectural purpose. In this way, the tracing work naturally grew more and more meaningful.

From the seventh season to the ninth season, the field work was led alternatively by Tung Tso-pin and Kuo Pao-chün. The main purpose of the field operation was still to continue tracing the architectural foundations, and also to investigate other underground structures. Efforts in these seasons were more concentrated on an intensive study of the various stages of development of the "pounded earth methods," since it was evident that mastery of the technique was the basic training for civil engineers of the Yin-Shang period. In this study, our field men learned a good deal of the technology of the civil engineer, as practiced in China more than three thousand years ago.

肆．安阳有计划发掘的初期

前三章记叙了促使中国现代考古学发展的历史背景，并特别提及了受中国传统方法教育的古物家之发现甲骨文，和在中国实际从事田野工作的欧洲科学家之模范性作用。此时，这两种研究活动交汇在一起，现代考古学在中国的革新一代中间应运而生。

1928年5月，傅斯年被任命为中央研究院历史语言研究所代理所长，当时他还是广州中山大学文学院院长。傅曾是五四运动领导人之一。他在中国古籍研究方面造诣极深，但同时又对旧的教育制度持警觉的批判和革新态度。五四运动后，他于1919年至1926年间远赴欧洲，到英德求学，不为获得学位，只是尽情地汲取感兴趣的西方思想。1927年，他回到中国。这一年，国民党在南京建都。彼时的中山大学是以新思想吸引青年人的学术中心。

当傅斯年接到创建一个历史语言研究机构的任务时，他那敏捷机智的头脑提出了一个后来常被同时代学者引用的口号：

上穷碧落下黄泉，

动手动脚找东西。

这一口号是一个七言古诗的对句。第一句引自白居易的名诗《长恨歌》，第二句是强调体力劳动，即四处走动去寻找资料。在西欧的长期学习使他认识到，中国传统教育的不足就在于人为地把身体与头脑区分开。他确信，若不把这种障碍扫除，就无望得到获取科学知识的新方法。初到欧洲时，他在心理学系注册了，但并没有一直攻读成为心理学专家。然而，初步的训练显然足以使他理解身体与头脑之间的复杂关系，在他年轻的头脑中烙下了一个基本观点——人类灵魂的根源深埋于整个人体结构内。现代医学致力于细致考察人的身体，而现代心理学则专门研究人的精神。

傅斯年去欧洲前是位著名文人。第一次世界大战后，他在欧洲有一段短暂的留学时光。由此，他认识到东西方文化间的不同，提出具体建议将这两种文化体系结合起来，在中国学者中树立起典范。他提出了上面的口号，并在《历史语言研究所集刊》创刊号的前言中对此作了详细解释。此刊出版时，他仍在广州，研究所也尚处在筹建阶段。^[60]傅的口号起了作用，因为他不仅有深厚的国学功底，还具备深入的西方科学知

识。在同时代的学者中，他还是最有行政管理能力的人之一。

必须强调的是，傅的口号不是停留在言语上，它实际上是指导这个由他创建的研究所的研究工作的基本方针。

当研究所尚处于筹备阶段时，这位代理所长就派董作宾到安阳对这一早已闻名的刻字甲骨出土地进行初步调查。此时（1928年），以罗振玉为首的大部分金石学家认为，经过三十年对甲骨文的连续搜集，埋藏的珍品已发掘殆尽，进一步的搜寻必是徒劳，这样的尝试也是愚蠢的。

傅斯年是为数不多的了解现代考古学和科学技术的天才之一。他并不盲从当时流行的看法。董作宾不是大学毕业生。1928年，他三十岁刚出头，自然是五四运动的追随者。他富有新思想，并急切地想为自己的研究搜集资料。傅所长派董赴安阳进行初步调查有两个简单原因：董是河南本地人，这在许多方面都有利于他的工作；他虽然算不上传统意义上的古物学家，但却头脑灵活。

实际上这两位学者——无论是倡导在安阳进行田野工作的傅所长，还是因籍贯以及天生的才智和开放的头脑被派往安阳的董作宾——对现代考古学都没有任何经验。董在他的报告中说，他的工作是考察遗址以查明是有一些甲骨还值得发掘，还是像罗振玉及其追随者说的那样已被挖尽。

为此，在第一次正式去遗址之前，董作宾作了一个非正式的个人访问，对那里的情况进行了摸底。1928年8月12日到达安阳后，他先拜访了一些本地士绅，他们中间有彰德府中学的校长、几个古玩店的老板、和以伪造这种情况不详的文字而出名的蓝葆光。通过访问，董获得了大量关于甲骨的一般情况和本地对甲骨的时兴看法的信息。第二天，在一个向导陪同下，董亲访小屯村。在那里许多村民给他看了欲出售的小块有字甲骨，他用三个银元买了100多块。村民告诉董作宾说，过去古董商到村里收购时看不上这些小碎片，于是他们就捡起来存放在家里。所以，当董第一次访问时，村中几乎每家都保存着一些“字骨头”。偶尔见到一些大块甲骨，卖主索价每块四至五个银元，董作宾认为价格过高。

与此同时，董在小屯村里雇了一个青年人为向导，领着他到了一个挖出甲骨的地方。这个青年人指的是一块凸起的沙堆。董的第一个印象是，这个沙堆与罗振玉1915年访问时描述的相反。罗日记中写的和董从市中学校长那里得到的情报都一致指向，甲骨可能埋藏在棉花地里。洹河边的沙堆并不适宜农耕生产。但在对沙堆西边靠近棉田的某处进行考

察时，董发现了几个新填上的坑，很显然是最近挖的。在其中一个新填的坑旁边，他捡到一片无字甲骨。基于在此处捡到这片甲骨的证据，综合村民们售卖的小片甲骨以及从城里收集来的情况，董得出一个重要结论：小屯埋藏的有字甲骨不像罗振玉及其追随者讲的那样已被挖尽。第一次初访小屯后，董作宾相信此遗址仍值得发掘。所以，他立即写了报告，并拟定了试发掘计划。

读了董作宾初访安阳的报告后，傅所长毫不犹豫，马上采取必要措施，准备在小屯进行初步发掘。这项新的计划虽不用花大量经费，但没有预算。经过和中央研究院总办事处多次磋商，傅斯年终于获得了必要的支持：1000银元。这在当时绝不是个小数目。虽然有了这笔经费，野外工作者还得自行购置全部设备，包括测量仪器和摄影工具及其他必需材料。董及时组建起一支工作队，队员有的是志愿人员，有的是雇佣的。组中有六个主要成员，他们各有所长，协助董共同完成了第一次正式发掘的任务（1928年10月7日—31日）^[61]。1928年10月董作宾主持的这次试发掘，通常被称为安阳的第一次发掘。

1928年10月7日，董作宾带着南京中央政府和开封省政府的官方证件到达安阳。河南省政府为便利董的工作，选派两名公职人员随同他到安阳。董的第一次安阳正式调查的完整报告于当年冬季在开封石印出版，后又在四卷本的《安阳发掘报告》（1929年12月—1933年6月）上作为第一篇文章重新刊载。^[62]董第一次的正式调查报告不仅结束了安乐椅上研究古玩的古物学时代，更重要的是，它为系统发掘这一著名遗址铺平了道路。

摘录一些第一次试发掘的实际成果以及一些参加者的看法是极有益的，而且具有历史意义。首先，我们看一看在这座著名遗址的试验性考察中做了些什么。主要有：

1. 发掘团开展了第一次测量工作；

2. 选择了三个实际发掘地点，两个（第I、II区）在小屯村东北洹河西岸的一块农田里——洹河有一段围绕着该村的农田，另一处（第III区）就在村子里。（图4）

3. 出土了共784片有字甲骨，其中555片是龟壳，229片为牛肩胛骨。此外还有千余片无字骨头。

4. 除了甲骨，其他出土物包括：

穿孔骨器

动物骨骼

人骨架

蚌片和贝的碎片

砗或玉

青铜碎片

铁片

陶片

5. 根据初步调查工作显示，实际发掘区域和涉及到的范围，可能覆盖了村北和村东北的整片农田和村址本身，也可能延伸至村南。

6. 殷墟似形成于这个地区遭遇了几次大洪水之后。根据董作宾的解释，洪水源于黄河，那时黄河河道离小屯还很近。

7. 从以下三个试掘地点的坑里出土了刻字甲骨：

Ⅰ号坑

Ⅱ区 33号坑

Ⅲ区 36、37号坑

董手抄有字甲骨392片，并作了不少考释，这与他的总体报告一起发表于《安阳发掘报告》上。

在董作宾领导的试发掘后，笔者担起了安阳发掘中的领导工作，这一田野发掘一直持续了九年。因此，下面的叙述有些带有自传性。

我直到1928年才见到傅斯年，彼时他已因五四运动成了国内的名人。1918年至1923年，我在美国留学，潜心攻读几门社会科学——心理学、社会学和人类学。五年后，我回国接受了天津新成立的南开大学的教职，并在那里工作了两年（1923—1925）。

因清朝年间以来我就住在北京，所以在天津任教时，经常来往于京津两地。在那时的大学所设课程中，人类学是个十分新颖的学科，因而这两个城市的一些学术界人士对我产生了几分好奇，常邀请我参加两市的一些学术会议和社交活动。不久以后，我就与许多我仰慕已久的专家建立了友谊。很快，我就被介绍给丁文江、翁文灏和胡适，并成为了中国地质学会的成员。作为这个学会的一员，我自然有充分的机会认识许

多地质学家和包括地理学家、古生物学家和考古学家在内的许多外国科学家。

丁文江这时已不在地质调查所担任领导，他在管理一个总部设在天津的煤矿公司。他对人类学的浓厚兴趣使他对我的工作很关心，他建议我不要错失任何到田野收集资料的机会。当新郑发现青铜器的消息在报纸上公布后，他鼓励我去新郑发掘，并资助200银元作田野考察之用。

[63]

于是我亲赴新郑发掘，但发掘的结果并不怎么令人满意。我仅发现一些人骨，青铜器和玉器早已被全部掠走。这最初的发掘经历没能真正把我吸引到考古科学上去，但它却给了我一个教训：做这种工作一定要非常注意现时的政治和社会状况。

1924年至1925年是我在南开教学的第二年，我在北京见到了代表弗利尔艺术馆驻京的毕士博，他正在寻找机会在中国搞些科学发掘。很快我们成了朋友。在这一学年，毕士博写信问我是否愿意参加他们的田野队从事考古发掘。经认真考虑和征求朋友的意见后，我答应了他的要求，并提出两个我认为非常重要的条件：第一，如果我决意加入田野发掘活动，该活动应与一个中国学术团体合作，并在它的主持下进行工作；第二，我没有任何义务向国外输出发掘所得的遗物，即暗示这些发现物应在中国研究。 [64]

很长时间我没有得到答复。后来，我在一个社交场合与毕士博巧遇，他很热情，礼貌地走过来再次谈起他的意见。在这次非正式的交谈中，他告诉我弗利尔艺术馆不会要求我做我认为是不爱国的任何事。政治和社会状况如此瞬息万变，为什么不试着合作看看呢？毕士博在我印象中是北京为数不多的几个友好真诚的美国人之一。因为他的建议与我对学术研究的看法相契合，我同意“试着”接受这项工作。这件事发生在1925年春天，此时安特生的史前发现已成为北京、天津学术界的热门话题。

同年年初，清华学校设立了一个研究“国学”的中心。“国学”相当于现代英语中的“汉学研究”。我荣幸地被新创立的清华国学研究院聘请为讲师，与梁启超、王国维、陈寅恪、赵元任等著名学者一起工作。我专门讲授人类学。大约与此同时，弗利尔艺术馆通过它的田野发掘代表毕士博表示，理解我上面提到的条件，并同意聘任我为他们在中国的田野发掘队队员。

1925年冬，弗利尔艺术馆和清华研究院共同派遣我搞些田野发掘，并让我自主选择发掘地点。清华大学的资深教授梁启超对田野考古非常热心，他主动把我推荐给“模范省”山西的省长阎锡山，那里的政治管理最为闻名，社会长治久安。我和熟悉中国当下政治和社会状况的朋友认真商量后，选择了山西省为第一个考古发掘地点。

曾参与安特生在仰韶发掘的地质学家袁复礼，听到我打算去山西考古时，主动提出与我同行，这对我来说真是莫大的幸运。地质调查所和弗利尔艺术馆也都赞同。袁和我在1925年与1926年相交的冬天离开北京去山西。我们在途中拟定了考察的路线。在那时，政治家和一般民众都还不了解科学，更不要说科学考古了。所以，在第一次旅行中，我不得不花大量时间与行政官员和当地居民协商。我享有的任何有利的社会或政治条件，几乎都是通过我的前辈同事或全凭幸运获得的。

我和袁决定，到太原后便南下，主要在山西省南边界黄河以北沿汾河流域探寻进行考古发掘的可能性。这里已有一条铺平的公路，可利用的交通工具骡子、骆驼椅、人力车和骡车等。我们从平阳府（临汾县）折向南，开始仔细勘查。在这里，我们一人雇了一头骡子驮运行李、测量照相仪器和人。山西运输的骡子以耐力著称，能负重300多磅以每天25英里的稳定速度行走，即使在有上下坡的山区行走也不在话下。这正是我们所需要的。

我和袁骑骡子从临汾出发，向南漫行约一个月。在日常观察中，主要发现三个有彩陶的史前遗址，另有许多有重大考古价值的历史遗址。我把考察的详细情况，特别是新的发现，向清华研究院及华盛顿弗利尔艺术馆作了汇报后，又奉命到山西搞发掘工作。清华研究院和弗利尔艺术馆都同意由我选择第一个发掘地点。因两个合作机构都很满意袁先生的帮助，所以我们于1926年秋再次前往山西。拿到必要的官方证件和介绍信后，我和袁都同意选择西阴村作为第一个发掘点。西阴村位于夏县，是我们考察时发现的三个有彩陶的史前遗址之一。我们选择这里有以下几个原因：

1. 史前遗址不含任何金属品，可以避免挖宝的怀疑。

2. 发掘的是过去不知名的埋葬，所以几乎不会引人注意，可以将公众反对挖墓的意见降到最低。

3. 仰韶文化的发现无疑已证明了史前文化的重要性。

另外，我的同事地质学家袁先生已在他调查过的仰韶遗址中获得了许多田野发掘经验。

第一次发掘西阴村史前遗址的情况不必再进一步介绍，因为这已用英文和中文报道过了。在该遗址收集的遗物中，最著名的是一只人工切割的蚕茧，经史密森研究院一位专家鉴定为家蚕的茧。^[65]

西阴村史前遗址的发掘，在政治革命席卷的中国虽未引起特别注意，却成就了我个人的名声——使用现代工作方法、兴趣超越历史时代界限的第一个中国考古学家。弗利尔艺术馆馆长知道了我的事迹后，通过毕士博表示希望会见我，并邀请我去华盛顿。

1928年夏我去华盛顿，与洛奇馆长进行了一次愉快的会面。交谈后，他答应继续支持中国学术机构与弗利尔艺术馆之间更进一步合作开展新的考古项目。

我经欧洲、埃及和印度返回中国。我有生第一次来到香港，又急于游览过去从未到过的广州。1928年的广州是各种革命活动的中心。根据我要搭乘去上海的半岛—东方公司邮轮的船期表，我在香港要停留三天，因此我想，利用这段时间观光一下广州应该不是难事。于是，我就去了。

一到广州，我就被领去见傅斯年，那时他也正期望能与我一见。见面后他问我的第一件事就是，是否愿意担任他正在筹建的历史语言研究所考古组的负责人。他告诉我董作宾在安阳的发现，我也对他讲了我与弗利尔艺术馆的协定。看来没有多大的意见分歧，因为弗利尔艺术馆馆长刚同意了尝试性地进行这类合作。

这样，1928年至1929年冬我就开始拟定中央研究院历史语言研究所考古组的计划。这自然要求我尽量多地去了解安阳殷墟遗址。回到北京后，我的当务之急就是赴开封与从未见过面的董作宾商谈。关于任命我的事，傅斯年所长当然已通知了他。在开封，董作宾将他所获知的所有关于小屯遗址现状的信息以及他试掘的结果都告诉了我。直到现在，与这位既富有魅力又令人敬佩的同事第一次会面时的情景仍历历在目。他不仅头脑敏锐机智，同时富有现实的智慧。他的主要学术兴趣和最近的成就似乎都在向他证明，这里仍有埋藏的甲骨值得发掘。

在开封与董作宾简单地会面后，我俩都同意春节后到安阳再搞一次试掘。我们还达成一项共识：董研究契刻文字，而我负责所有其他遗

物。实践证明，这一共识对我们的个人关系与团队工作都非常重要。作为考察该遗址的第一人，董作宾应该得到研究最重要的科学发现物的机会，而有字甲骨则是安阳发掘的珍品。另外，董研究铭文的能力是毋庸置疑的。

基于与董作宾的个人接触以及他的书面报告，我获得了有关遗址现状的大致情况。基于这种大致的了解，我认为：

1. 小屯遗址明显是殷商的最后一个都城。

2. 虽遗址的面积和范围未确定，但有字甲骨出土的地方一定是都城遗址的一个重要中心。

3. 在地下堆积中，可能会发现与有字甲骨埋藏在一起的其他类遗物。这些遗物存在的时代可能与有字甲骨相同，也可能较甲骨的存在早一些或晚一些，这当然要视埋藏处的各种情况而定。

根据这三个假设，我制定了1929年春的第二次小屯发掘，也是首次由我负责的安阳田野工作的计划。因为弗利尔艺术馆已经同意支持我在中国学术机构领导下的田野工作，所以没有经费方面的问题。与董作宾商量后，我决定具体工作采取以下步骤：

1. 聘用一个得力的测量员对遗址进行测绘，以便准确绘出以小屯为中心的详细精准的地形图。

2. 继续在遗址内若干地点以挖探沟的方法进行试掘，主要目的是了解清楚地表下的地层情况，以探明可能藏有未被触动过的甲骨的堆积的真正特征。

3. 系统地记录和登记发掘出的每件遗物及其确切出土地点、时间和周围堆积的特征和分层。

4. 每个参加发掘的工作人员每天记日记，记录个人观察到的及田野工作中发生的情况。

1929年春，发掘按计划进行。在小屯村发现了更多的甲骨（685片）。分别对以下三地进行了地下情况的调查：(1)村南；(2)村中院子；(3)村北麦地和棉田。这次发掘结束后，我们把大量出土物装箱运往北京研究。此时，历史语言研究所已将所址迁至北京。傅斯年所长决定向公众发布初步发掘报告。我写的第一篇文章是《小屯地面下情形分析初步》。^[66]在这篇论文中，我根据春天的发掘和观察得出一条重要结

论，即地下堆积可分三层：(1) 殷商时期的主要文化堆积；(2) 覆盖其上的是分散但数目众多的隋唐时期（公元589—906年）的墓葬^[67]；(3) 覆盖这些墓葬的是现代堆积层。我们还发现许多地下窖穴，其中填塞的主要是殷商遗物，有陶片、石器、动物骨骼，偶有些断裂的玉块或玉片等。这些遗物及时登记后便全数运回北京所址进行研究。在这次发现的遗物中，最重要的一批仍是有字甲骨。这是在村内发掘点出土的，距董作宾前一次发现甲骨残片的地点很近。

在第二次考察安阳期间，这一处以小屯为中心的重要遗址的地形测绘工作开始了。因为无人确知遗址的大小，所以我们暂时将测量工作局限在发掘出甲骨或传说过去挖出过甲骨的区域内。第一张地形图是由张蔚然测绘的，完成于1929年秋季第三次安阳发掘时（图5）。我领导的第二次田野发掘的另一项任务是系统记录收集到的陶器。在连续十四次安阳发掘中，这一艰巨任务从未间断地坚持了下来，但正如预料中的那样，记录方法和分类标准都经历了革命性的变化。

没人能推测出小屯村东北麦地棉田现在的表面情况在多大程度上反映了殷商时期的面貌。然而，准确地绘出现在的地表图是田野工作者的任务。

发掘团开展田野工作后，我们的第一印象是小屯村坐落于一块相对平坦的土地上，村东北有片面积约为180,000平方米的麦棉田，向北向东逐渐抬高。精确的测量表明，地面升高了约三四米。最高处是东边靠近洹河岸的一个地方。北边临洹河岸处，有一块比村子高出两三米的台地，但一块凹地把它与东边的高地分开了。这块凹地的作用可能是雨季时把洪水泄入洹河。北岗西面在1929年有条长长的深沟，此沟从花园庄几乎直通北面的洹河，同时也像是小屯村麦棉田的分界线。村民称之为“水沟”。根据小屯村民的传说，此沟似乎也是甲骨珍品堆积的西部界线。据了解堆积地点的人说，所有字骨头都是在水沟以东发现的。测量以后，我们发现水沟最低处实际上并不比小屯村的地面低多少。

比村子地面约高出两三米的两个土岗和村东北麦棉地西部边界的水沟是我初访小屯村时地表大体的景象。这些初步观察对我制定1929年10月开始的第三次发掘计划也很有帮助。受到挖宝的旧风气的影响，河南省政府组织支持了另一支发掘队，使我们第三次发掘中断了三个星期。虽然这场政治干扰很快就解决了，但挖宝的传统观念顽固得很。为此我们当中一些人积极奔走，请求中央政府制定一个《古物保存法》，用法律条款来保护有历史价值的遗址和遗迹，并约束国家文物出口的行为和

管理科学发掘。这部法律中第一条被提议并采纳的规定是：政府明确宣布所有地下古物都是国家的财产，任何个人和私家团体无权发掘。经过几年的广泛讨论，立法院终于在1930年6月通过了这部法。《古物保护法》中还包括管理正式发掘的规则，不过是在很长一段时间后才补充的。有趣的是，内务部和教育部到1935年春才向中央研究院联合发布了批准发掘的第一号许可，而当时安阳发掘已进行到第十一次了。^[68]

这个保护法的影响对安阳田野工作的进展有重大意义，因为在我们发掘期间，在中国这样一个受传统束缚的国家，田野考古工作者面临的除了复杂的技术问题外，还有一些非技术性的、社会和政治方面的艰难障碍。

通过行政磋商和建立友好关系，我们平息了省政府的对抗发掘，并于1929年11月15日恢复发掘。这一次发掘开始时，我的田野计划原本是采用我称之为“卷地毯”的方法，对整个遗址的地表情况进行全面揭露。由于省政府支持的发掘队的干扰，我只好采用可以根据环境要求加以调整的方法。于是，我又重新开始制定了更系统的发掘计划，在小屯村东北麦棉田里开“探沟”。

在这块地的西半部，我计划挖一条南北向的长纵沟和六条平行的东西向的横沟，以探索农田下整个遗址主要堆积的分布情况。至于村中的地下情况，在春季发掘时已进行了初步考察。

尽管第三次田野工作中断了三个多星期，但这次的发现比原预想的更鼓舞人心。结果充分证明了一个基本思想，殷商文化遗迹的重要中心区在村东北麦棉地下某处，位于村西北的深沟与东、北部的洹河谷边界之间。

南北向的纵沟揭露了地下一般堆积的重要剖面，六条平行探沟相距各15米，从西向东而开与纵沟交叉，必定经过了核心区域。在沟H13和H13.5之间，靠近纵沟处，我们发现一个几乎未曾动过的堆积，这后来被证明是殷商文化最重要的堆积。此处就是后来有名的“大连坑”。

此次发掘的首次发现和逐步推进的细节，已有专论在《安阳发掘报告》上发表。^[69]我在这里总结一下在这处遗址上的考古工作的重要新发现及其对田野工作的影响。必须明确，第三次发掘的成就绝不只是发现了“大连坑”。下面的总结涵盖了整个这次发掘的丰硕成果。

对我们工作队来说，头等重要的是弄清楚地下的分层顺序。在比较

隋墓之上的地层断面和“大连坑”的未触动的地层得出以下主要结论后，这就显得很重要。殷商文化堆积之上有一保护层，土色从褐到黑，质坚固，厚度一到两米不等。这一层中常常是没有任何文化遗物的，甚至连陶片也没有。至于说在三米多深处发现的隋唐墓，其上的回填土层次中则完全没有保护层的存在。

更为有趣的当然是这次发现的物品和器物。因我亲自指导“大连坑”的发掘，所以我能以亲身经历来叙述依次揭露这一重要堆积各阶段的情况。

“大连坑”位于洹河西岸高地西南约50米处。它是由于开凿横沟H13暴露出来的。其向北扩展的部分表土一揭去，即表明此处的堆积未被扰过。以下的田野记录（从表层依次向下）可作为示例，说明田野登记的方法：

1. 表层，0—0.40米，混合土，内有一网砸。

2. 第二层，0.40—0.87米，黄黑色土，仅出土一石刀。

3. 第三层，0.87—1.40米，土色变褐，无任何器物。

4. 第四层，1.40—1.85米，土色同上，但土质坚硬较难挖，夹杂炼渣和贝一枚。

5. 第五层，1.85—2.10米，土色渐黑，质坚硬，发现几块陶片、一些炼渣和一块雕刻花纹的砂石。

6. 第六层，2.10—2.40米，土色深黑，质地越发坚硬，在东北角有夹杂黄沙的淤土、许多烧土块，并有炼渣。

7. 第七层，2.40—2.65米，土色、质同上；但在东北角2.65米深以下，土色变浅灰，质稍松软；开始发现较多陶片和有字甲骨碎片，以及人头盖骨碎片。

8. 第八层，2.65—2.80米，土色灰黄，东北角的土呈深黄色；有红、黑色绳纹陶，带黑、红色浮雕方格及其他多种类型的陶片。许多陶片上刻有纹饰。其他遗物包括：刻字甲骨、蚌片、石刀、砾石、鹿角、人骨碎片、陶范、石斧、碎石等。

9. 第九层，2.80—2.95米，土色全灰，陶片同上；另有刻字甲骨、刻纹骨器石器、象牙雕器等，出土物极多。

10. 第十层，2.95—3.20米，土色仍呈灰黄，但在接近该层底部3.10米处出现黄土；黄土南边发现一堆黑炭，混有灰陶、红陶和黑陶等陶片，陶片上有刻纹和绳纹；另发现人头盖骨、陶范、砾石、骨锥、石制工具、有字或无字的卜骨及绿松石等。

11. 第十一层，3.20—3.30米，黑土与黄土混合在一起，出土物很少。3.3米深处以下，除西南角^[70]有半圆形黑土遗迹外，其余部分的上半部似已到底。

第十一层以下，即距现在地面3.30米以下，有一个位于干净的黄色沙土之上的、被一层黑土覆盖着的层面，看来未受后来的侵扰，这一观察结果甚为关键。这显然曾是居住址或贮藏穴的地面。更加振奋人心的是，在这一层面以下3.30米处，一个深陷的圆穴中，还发现了一处地下堆积。这个圆穴比“大连坑”底部还要深3米多。在这直径近2米的圆穴底部，发现了成堆的甲骨，其中有些是完整的刻字甲骨，后来董作宾在一篇专论中阐明了它们的重要性。^[71]

在这个圆穴及其西侧的另一长方形窖——“大连坑”下的一对地下窖穴——中，我们发现了这次发掘最丰富的埋藏珍品。其中多数过去无人知晓。“大连坑”及其下面两个窖穴中堆积的新发现共同确凿地证明了一点，下列出土的遗物和有字甲骨显然是同一时代的：(1) 无字甲骨和几乎完整的刻字龟版；(2) 各类动物骨头；(3) 多种类型的陶器：白陶、釉陶、红陶和灰陶；(4) 雕刻的骨器和石器；(5) 象牙雕刻；(6) 距地面约10余米深的储藏窖；(7) 石制工具和青铜工具共存；(8) 铸青铜器的范；(9) 其他相关出土物。

地下情况一弄清，这些单件或成批的相关出土物的重要性立即得到了广泛认识。这对我们继续在安阳发掘是有益的。

在这些新发现中，釉陶、白陶和铜范引起了国际上的注意和世界范围内的讨论。然而，在中国的历史学家和考古学家中引起激烈争论的是彩陶片，它的发现是独一无二的，尔后的发掘中再未见到与此相同的。简言之，争论的焦点是在小屯堆积中揭露的新石器时代仰韶文化与青铜时代殷商文化之间的关系。讨论持续了多年，因它涉及中国早期文化起源这一基本问题。^[72]

1930年，历史语言研究所考古组的田野考古延伸至山东省，安阳发掘停止了一年。在靠近山东省城济南的一个地方，我在清华国学研究院指导的毕业生吴金鼎发现了一处新的新石器文化——黑陶龙山文化。考

古组的田野工作人员被派往济南，对城子崖遗址进行了一次发掘。华北首次发现的黑陶文化，不仅深深地激励了对古代中国有浓厚兴趣的学者，也鼓舞了新一代的田野考古学家，特别是那些一直密切关注安阳出土物及发掘情况的人。

同时，1930年也发生了另一些影响田野工作的组织和小屯遗址发掘原定计划的事。使我尤感忧虑的是历史语言研究所和弗利尔艺术馆未能就在华北继续进行考古发掘这一问题上达成协议。当这项合作事业不幸停滞时，很明显我的立场也站不住脚了。所以，在完成了分派给我的所有田野工作后，我辞去了弗利尔艺术馆的工作。从1925年至1930年，基于前面叙述的条件，我连续工作了五年，并希望在中国的国家级研究机构和华盛顿弗利尔艺术馆之间可以达成一种共识，以促进考古科学的发展，增强中美在学术研究中的友谊。这次失败自然使我非常沮丧。

一些肯定我田野工作的朋友向我伸出援助之手，积极请求中华教育文化基金会给予经费资助安阳发掘。这不久就实现了。1930年秋，中华教育文化基金会聘任我为中国考古学研究教授，这是一个特意为历史语言研究所设置的讲席。另外，基金会连续三年每年拨一万银元作为研究所的田野工作费用。

于是，1931年春开始了第四次安阳发掘，距考古组1929年冬停止在小屯的田野工作已经一年多了。第四次田野发掘队是在新的基础上组织起来的，包括了很多的考古工作者。带着一些新观点和对遗址性质更进一步的了解，我又走向田野，而且我们还有了许多经过良好训练的新助手。

第四次发掘一开始，我们就在1929年测量的遗址上分了五个区，每区由一个受过训练的、有经验的考古工作者指导进行发掘，协助他的是几名年轻的助手和受过训练的发掘工人。大多数队员在参加城子崖发掘中收获很大，那里出土的遗物包括有趣的卜骨标本，这些卜骨是用肩胛骨做的，但没刻字。城子崖遗址周围有一圈已坍塌的墙，此墙是用夯土建的。仔细察看夯土后，大家回忆起，前三次在小屯发掘中也出现了与之惊人相似的地层，当时董作宾和张蔚然把它解释为洪水沉淀层。

所以，城子崖遗址的发掘为重新解释过去我们在安阳遇到的问题提供了一些全新的观念，由此对安阳田野工作的推进作出了非常重要的贡献。就我个人而言，中华教育文化基金会的聘任和城子崖龙山文化的发现使我受到极大的鼓励，城子崖的发掘也是我主要负责的。

在山东田野工作中获得的新经验使我开始设想，用肩胛骨占卜不仅存在于史前时期的华北，其范围更为广泛。关于商朝早期历史的传说，确实提到过商朝建立后曾五次迁都，这些都城的具体位置是研究中国古史的学者非常感兴趣的问题。我认为新发现的龙山文化有可能是商文明的直接前身。至少，用肩胛骨占卜明确说明了商文明与早于它的华北史前文化之间的关系。

有了这些新的认识，又有了加强的队伍，使我更有信心安排更大规模的第四次安阳田野发掘。我与考古组的成员及所长认真商议后，决定采用“卷地毯”的方法全面发掘小屯遗址。我确信已找到了关键所在，通过绘制夯土地区图的方法，可以探索到殷墟中殷商王朝的建筑基础。

田野工作人员有老队员（前三次发掘参加者）——董作宾、郭宝钧、王湘和李济，还有新队员——梁思永、李光宇、吴金鼎和刘屿霞。从这次发掘开始，石璋如和刘耀作为学员也参与了安阳田野工作。

这次探寻遗址（特别是寻找未被扰动过的夯土地区）的方法之一，石璋如已在他1952年出版的《考古年表》中作了介绍（也可参看图6）。^[73]

这次发掘将遗址分为五个区，即A、B、C、D、E。

五个区的具体位置如下：

A区，在1929年（第三次发掘时）挖的纵沟的西面；

B区，在纵沟东面，横沟十一与十四之间；

C区，位于横沟十一的南面；

D区，在“大连坑”的东面；

E区，位于横沟十四的北面。

这次发掘结束时，发现A区被扰乱得最为厉害，横沟H13与H14之间的地区过去多次被挖掘。相比起来，B区却保存了大量夯土面，这在A区不曾见到。该区的发掘经历使所有田野工作者相信，我们早期把夯土解释为洪水沉积层是错误的。C区是过去村民从不屑去挖掘的，我们在这里也发现了大量夯土的痕迹，与B区发现的相同；D区也是如此。

E区有所不同，在此我们发现了两个未被扰动过的地下贮藏窖，我们将其分别命名为E16和E10。E16中填满了青铜武器和有字卜骨。E10

中有大量动物骨头，包括一头鲸的肩胛骨和脊椎骨，更有意思的是，在这批遗物中还发现一块象的下颚骨。石璋如在总结这次发掘时写道：

占地约1400余平方米。……有版筑土多处，长方窖、圆窖、大灰坑等二十五处；墓葬等十八处。窖壁不但整齐光滑，而且有相对之脚窝。E16圆井为本次的重要发现。遗物有戈、矛、铜范、花骨、白陶……及有字甲骨781片。亦发现隋唐墓葬遍布发掘区域。

第四次发掘的新方法被证明不仅可行而且是成功的。两个月的艰苦工作取得的丰硕成果证明，出土的物品和“卷地毯”的方法都是可靠的。这次发掘结束时，我与同事们下定决心：无论在经费上遇到什么困难，探寻殷商王朝建筑基础的新念头一定要坚持下去，直到为这个几乎被人们遗忘的朝代的建筑复原奠定坚实的基础。这项基础工作的指导方针是，对已发现的大面积夯土区进行全面研究，并继续探寻其扩展部分。这一基本方针被证明是正确的。探寻夯土这一新过程是非常耗时的：这不仅需要耐心和一定的技术经验，而且也要有极丰富的想象力来认识这项长期计划的意义——长期的努力证明了它的不朽价值。

这次除在小屯村进行发掘外，同时，发掘团还派人去考察洹河河谷其他有望进行考古发掘的遗址。梁思永、吴金鼎和刘耀共同在后岗——紧邻铁路的一个土丘——开始了发掘。吴和李仍负责小屯以西四盘磨的田野发掘。在梁思永领导下，后岗发掘持续了多次，并证明是非常重要的。它第一次揭露了彩陶、黑陶和安阳文化的土层是以一定的顺序叠压着的。在以后几次发掘中，试掘曾远至西边的同乐寨，并在那里发现了纯粹的黑陶文化遗址。更重要的发现是在第九次发掘（1934年）期间对安阳侯家庄的发掘中出现的，其重要性在于它与小屯殷商文化关系密切。它位于小屯对岸的洹河北面。在安阳发掘的过程中，这里是小屯村以外第一次发现刻字甲骨的地方。

然而，接下来的第五至九次发掘仍主要集中在小屯，发掘的宗旨仍是探寻殷商王朝的建筑基础。这五次连续发掘从1931年10月持续到1934年3月底；田野工作队的成员和领导人也经常变动：

田野职员

~~董作宾~~ 1月10日至2月19日

~~董作宾~~ 4月1日至5月20日

王 湘 周英学 李光宇

~~董作宾~~ 10月1日至12月15日

~~董作宾~~ 10月20日至11月25日

第五次发掘时在B区和E区发现了更明显的夯土层。E区发现的一个夯土层是由纯黄土垒成的台基。这个台基横断面呈方形，朝向极北，但下方遭到后来的破坏。当时我认为这很重要，所以我到田野里主持了随后的第六次发掘。这次发掘中又一个重要发现是有关建筑工程的，即发现几排未加工的大小适度的孤石沿夯土边缘规则地排列着。这种遗迹经常发现。^[74]

这一发现使我们意识到，在前几次发掘中常遇到类似的大小不同的孤石可能也是建筑上用的。这样看来，探寻工作自然越来越有意义。

从第七至第九次，董作宾与郭宝钧两人轮流领导田野发掘。田野工作的主要目的仍是继续探寻建筑基础，同时也考察其他地下构造。这几次发掘更专注于对“版筑法”（即夯土筑法）不同发展阶段的深入研究。很明显，掌握这门技术对殷商时期土木工程师来说是最基本的要求。在研究中，我们的田野人员学到了许多3000余年前中国已应用的土木工程技术。

5. The Royal Tombs

Their Discovery and Systematic Excavation

There seems to be little question that the custom of elaborate burial of the rich and powerful was universal all over the ancient world, and that it was based on the belief in another world where man could continue to live on after his death in a way not altogether different from his life on earth. Though this practice was shaped in many different ways according to the mores and folkways that happened to dominate a particular region, its foundation remained the same: namely, the persistent human desire for and faith in a post-mortem existence.

As to when the idea of burying the dead started, it seems that no archaeologist has yet been able to provide a definite answer. It is definite, however, that in the neolithic period, interment was already commonplace, as was the custom of entombing burial goods with the dead body to accompany it to the other world.

Prehistoric investigations also indicate that the practice of elaborate burials certainly developed after man's exploitation of metals and the development of the caste system and of slavery. Of course the stages of social and political organization differed in various regions at various times, but the basic idea persisted: it was the duty of the heir to provide those luxuries and necessities which the deceased might need in his existence as a spirit or ghost or whatever other shape he might assume.

In the case of China, J. G. Andersson's discovery of neolithic burials has already been referred to in chapter 3. Nils Palmgren, in his monograph on Kansu mortuary urns, has given a detailed description of all the buried painted pottery vessels found in the prehistoric graves in Kansu province.^[75] These potteries, whether excavated or purchased, provided the earliest evidence found by archaeologists that

the neolithic Chinese, like neolithic peoples in other parts of world, believed in the dual existence of man. Later investigations have fully confirmed the dualistic faith of neolithic China. Neolithic sites in Honan, Shansi, and Kansu, more scientifically excavated, have exposed both a living quarter and a separate quarter for a cemetery among the ruins.^[76] The burial goods from these neolithic sites are mainly pottery, animal bones, and stone implements. They vary a great deal from grave to grave in both quality and quantity. Whether the variation is an indication of wealth or power or both is not at all clear. But it is significant that such differentiation already existed in prehistoric China; the range of such variation widens in the course of time till the Bronze Age, when huge tombs, palatial in size and luxury, began to be built.

The custom of elaborate burials was criticized as early as pre-Ch'in China, and vehemently condemned and ridiculed by many schools of philosophy, especially by the Moists and Taoists. Mo-tzŭ and Chuang-tzŭ's attacks on elaborate burials are both well known. This tradition, however, was preserved by Confucian emphasis on "Li," translated as "ritualism" by some, "propriety" by others. In the original Chinese sense, the term "Li" connotes, of course, a great deal more than either "ritualism" or "propriety." It is a sort of Confucian canonization of the current moral code about manners and customs prevailing in ancient China. The origin of "Li" as a code is usually attributed to Chou Kung, the famous brother of the founder of the Chou dynasty, Chou Wu Wang, an idol of the Confucian school and worshiped as one of the saints in traditional Confucianism.

In the first nine seasons of excavation of the Anyang sites, none of the burials located in Hsiao-t'un could in any respect be considered "elaborate," although a number of them, untouched by tomb robbers, contained beautiful bronzes, especially of the *ku* and *chiieh* types. It was in the adjacent regions of the Waste of Yin that the field teams first came upon tombs of huge size—when in the eighth season (1933) they were doing some further excavation at Hou-kang, where Liang Ssŭ-yung discovered a stratified sequence of the Yangshao, the

Lungshan, and the historical Yin-Shang cultures.^[77] The first big tomb found in Hou-kang had been almost completely sacked when our archaeologists reopened it. This work, nevertheless, served as the earliest evidence to indicate that systematic searches might locate tombs of large size, even royal cemeteries. The field workers in Anyang after 1931 were all well acquainted with the textures and appearance of "the pounded earth," which they came across frequently. When the opening of the Hou-kang tomb confirmed that the same technique of pisé (pounded earth) engineering was used in building large tombs, naturally a guideline was provided. The Anyang field team, therefore, by hard labor and accumulated experience, found a key for their search for cemetery sites of the Yin-Shang dynasty in the neighboring regions.

Meanwhile, the treasure-hunting tradition persisted in spite of the promulgation of the Antiquities Protection Law by the central government. In Anyang, although the Academia Sinica excavations under the legal protection provided by the local government progressed without hindrance, illegal treasure-hunting and tomb-robbings took place whenever possible. This treasure-hunting tradition is shared by the East and West alike regardless of religion or law; so wherever buried treasure was located, hunters rushed like a crowd rushing for gold.

Anyang had been noted for ancient bronzes as early as the Northern Sung dynasty.^[78] Once the scientific digging started, several foreign newspapers became interested; among them, the *Illustrated London News* gave much space to our Anyang discoveries, which immediately attracted worldwide attention.^[79] One of the evil effects of such publicity was the encouragement of private diggings, which immediately became contagious even among the missionaries in China. Lawless plundering activities flourished everywhere in north China, and in Anyang as soon as the season for our official excavations closed, illegal treasure-hunting immediately became active. It was through these plundering activities that the royal cemetery at Hou-chia-chuang was first made known. The details of this discovery were

of course entirely lost. Every visitor to the Nezu Art Museum in Tokyo must have been deeply impressed by three huge strangely shaped *ho* wine ewers, with heights of 71.2cm., 72.1cm., and 73.2cm., respectively. They are all said to come from Anyang, although Seiichi Mizuno did not mention them in his catalogue of Yin-hsü bronzes.^[80] The story circulated in Anyang amounts to this:

The time may have been as early as 1933; private diggings near the village Hou-chia-chuang resulted in a rich harvest of huge bronzes and other treasures. Especially notorious were the three bronzes—of unknown shape but unusual size—that were immediately sold in the curio market, which of course made the chief digger suddenly rich. Although the definite conditions were unknown, those who shared the spoils naturally could not keep their mouths as closed as the chief plunderer. So, news of his ill-gotten wealth very soon became widely known not only in the adjacent villages, but also circulated in Anyang city. Some of the Academia Sinica employees within a short period learned a great deal about this "lucky digging." The younger archaeologists of our expedition immediately got busy and naturally reported to the leader in charge of the excavation. The time was October 1934, when the tenth expedition to Anyang was just getting ready to start work under the leadership of Liang Ssŭ-yung.

In the tenth season, the original plan had been to continue tracing the building foundations of the Yin-Shang period, as in the previous three seasons, with further explorations of adjacent regions in the Huan River valley. When Liang Ssŭ-yung heard the story of the recent plundering of a Bronze Age tomb and learned the approximate location near the village of Hou-chia-chuang, he took immediate steps to move his men, and to concentrate all the efforts of the field team under his command to find out whether a real cemetery site might be discovered. This was indeed a momentous decision!

In this season, Liang was assisted by five experienced younger archae-ologists: Shih Chang-ju, Liu Yao, Ch'i Yen-p'ei, Hu Fu-lin, and Yin Huan-chang—all well trained in field techniques, and full of enthusiasm for trying to find the exact location of the cemetery. They

successfully located the cemetery site and, choosing a slightly raised mound northwest of the village settlement of Hou-chia-chuang, known locally as Hsi-pei-kang (meaning "northwest mound"), the field team started a trial digging, and exposed a number of huge tombs. This encouraging revelation induced Liang to concentrate all the available money and manpower to explore the entire dimension of this remarkable site. In three months' time (Oct. 3-Dec. 30), the excavated area covered more than three thousand square meters of land surface. A modern village road divided the site into two sections more than one hundred meters apart. The subarea on the west side of the road was named the western section, and that on the eastern side of the road the eastern section. Later on, the underground distribution of the excavated burials proved to fall handily into this dual division.

At the close of the first season's work at the Hou-chia-chuang cemetery, the results were more encouraging than had been expected. The important discoveries were these: (1) four huge tombs, all located in the western section; sixty-three burials of ordinary size, all located in the eastern section; (2) buried bodies, in a number of different postures (prone, face-up, contracted, skulls only, etc.); (3) many well-preserved bronzes from the small graves; (4) carved stone artifacts from huge tombs, some as high as 36cm.; and (5) numerous jade ornaments, carved bones, and white potteries. The artifacts, as a whole, were better made and better preserved than those from Hsiao-t'un; but all were clearly part of the Yin-Shang Culture, corresponding in time with the inscribed oracle bone period; there existed little doubt in the mind of the excavators that the huge tombs of the western section, which were only partly uncovered at the close of the tenth season, were unquestionably some royal burials of the most powerful group of the ruling Yin-Shang dynasty.

In planning for the second season's field work at the Hsi-pei-kang cemetery of Hou-chia-chuang (the eleventh season of our Anyang excavation), Liang showed his unusual farsightedness and perspective, as well as a powerful grasp of practical details. I fully supported his project for the Hou-chia-chuang field work, but it also created some

financial difficulties. The budget requested a sum between twenty thousand and thirty thousand silver dollars, which was far beyond the limit of the regular allowance to the research institute. At that time, I was also acting for Director Fu Ssŭ-nien, besides my duty as Chief of the Archaeological Section. Luckily, however, Dr. V. K. Ting was the Director General of the Academia Sinica. Ting, with his broad learning, had in the past always shown a great deal of interest in field archaeology and was now in a position to help by practical means the realization of Liang's brilliant project. He made the timely proposal of inviting the National Central Museum to participate in this undertaking. The idea was that the National Central Museum would share a part of the field expense of the Hou-chia-chuang excavation with the understanding that the artifacts, after the completion of our studies, were to be permanently deposited in the museum, which was at that time erecting its building in the capital on a magnificent scale with an endowment from the British Indemnity Fund.

This eleventh Anyang expedition, in the spring of 1935, can be taken in retrospect as the climax of our field work. The financial costs were great, but, more impressive, the results were the richest. The expedition represented the best-organized team work and also the highest executive efficiency. More important for the general public, the achievements successfully confirmed the truth that scientific archaeology not only promotes verifiable knowledge, but also provides an assured means to find buried treasures and give them legal protection.

The eleventh season lasted ninety-seven days (March 10-June 15, 1935). Liang had seven assistants from the Archaeological Section. In addition, Ts'inghua University sent a graduate student, Hsia Nai, to Anyang to learn field archaeology, before sending him to England.

The field work of the second excavation at the Hsi-pei-kang cemetery site covered about eight thousand square meters. Four huge tombs of the western section were completely cleared, and 411 small burials in the eastern were opened. The depth of the huge tombs is between twelve and thirteen meters. It was definitely established that

the smaller burials were sacrificial in nature; many of these sacrificial tombs contained merely skulls or headless skeletons, which provide, of course, definite evidence of human sacrifices. In excavating the huge tombs, it gradually became clear that these tombs had been ransacked more than once in the past, so before the clearance reached the bottom, everybody in the field was already aware that no intact hidden treasure could be expected. Nevertheless, discoveries made in nooks and corners, which had escaped the attention of the earlier plunderers, were already astonishing. Especially precious were those findings of delicate impressions left by perishable materials like bamboo, wood fibers, and so on, which only trained archaeologists could trace. More substantial artifacts like marble carvings and many bronze articles of unusual size, as well as delicate and fine jade work and so forth, though not *in situ*, were frequently recovered in the refilled earth of the earlier robbed tunnels.

The excavation of this season attracted a number of eminent visitors. Among them, Professor Paul Pelliot, accompanied by Director Fu Ssŭ-nien, was guest of honor at Hou-chia-chuang for a special visit (see Fig. 7).

7 Fu Ssŭ-nien, Paul Pelliot, and Liang Ssŭ-yung at one of the Hou-chia-chuang tombs

The work was continued for another season (autumn 1935), at Hsi-pei-kang, on an even larger scale than that of the second season. The workmen engaged reached five hundred per day, the largest number ever employed in the history of Chinese field archaeology up to that time. The excavated area covered 9,600 square meters. More huge tombs in the western sections were opened; altogether there are seven regular tombs in the western section besides an unfinished huge pit (see Fig. 8). In addition, nearly eight hundred small burials in the eastern section were cleared. At the close of this season's work, the results once more indicated that all the huge tombs, like those opened in the first two seasons, had more than once been plundered. The earliest sacking started probably as early as the Chou dynasty; at least, it took place before the Eastern Han period, since a tomb of Eastern Han was discovered on the top of the refilled plundered tomb. As in the previous seasons, artifacts discovered were nevertheless rich, and in many cases unexpected. So, in addition to a great deal of detailed knowledge of the structure of the gigantic tombs and the engineering skill of the Yin-Shang dynasty, the exposure of the material culture of this dynasty constituted a real revelation.

8 Seven big tombs and one pit in the western section of Hou-chia-chuang (see legend for Fig. 9)

侯家庄西区7座大墓和1个坑（图例见图9）

Professor Kao Ch'ü-hsün summarized the three seasons' diggings at the Hsi-pei-kang of Hou-chia-chuang in the following terms: [\[81\]](#)

During the three seasons of the excavations of the cemetery site at Hsi-pei-kang, north of Hou-chia-chuang, 1,267 tombs were opened. Of these opened tombs, ...1,232 tombs are of the Yin-Shang dynasty. [Kao later pointed out that some of

the small tombs might belong to a later age, although they culturally pertained to the Shang dynasty.] These Yin-Shang tombs are distributed underground in a very orderly fashion; but no mounds or other conspicuous marks above the ground surface are visible or could have existed! ...

Of the 1,232 Yin-Shang tombs, 10 are large-scale big underground structures, one of which is obviously an unfinished tomb—without any passage like the other nine. ... All the rest—1,221 in exact number—of the opened burials are small graves but evidently related to the 10 big tombs in one way or another.

Of the 10 large tombs, 7 are located in the western section of Hsi-pei- kang cemetery, 3 in the eastern section...They are all N.S. oriented with the northern passage inclining towards the east a few degrees. In the case of the minor burials—the 1,221 small tombs, only 104 of them are found in the western section, while all the others, 1,117 in number, are all located in the eastern section of the cemetery. ...[See Fig. 9]

Single burial 单葬	Horse pit 马坑	T'ang tomb 唐墓
Multiple burial 复葬	Animal pit 兽坑	Modern burial 现代墓
Head and body burial 首体全葬	Elephant pit 象坑	Disturbed burial 扰乱过的墓葬
Headless burial 无首葬	Chariot pit 车坑	Robbed burial 被盗过的墓葬
Headless burial with knives and axes 埋有刀斧的无首葬	Utensil pit 用品坑	Unexcavated burial 未挖掘过的墓葬
Head burial 无体有首葬	Han tomb 汉墓	Pot burial 瓮棺葬

9 Eastern section of Hsi-peï-kang, the cemetery site of Hou-chia-chuang
侯家庄西北岗东区墓地

Liang's idea, after the third season's excavation of the Hou-chia-chuang cemetery, was to pause for a short period to examine the amazing new discoveries and unusual finds, so that there might be sufficient deliberation for further planning to continue the excavation. But, alas! Who could predict that this promising enterprise should

suddenly be ended by the Japanese invasion of 1937!

It is certainly important and necessary to give a general account of the scientific contributions from these excavations to our knowledge of ancient Chinese culture and the early history of China. In my Preface to Volume 2 of the Hou-chia-chuang series, I have pointed out the more salient features in the following remarks:

I should mention in this short Preface the more important contributions from these excavations to our knowledge of the history of Ancient China. It is obviously impossible to itemize these contributions in any numerical order. If I should arrange the following features in an order, it could only represent the sequence of our gradual recognition of the historical value of these various features, which are:

1. The planking method of earth pounding (*pan-chu*) as the main technical skill of the civil engineer in the Yin-Shang dynasty; neither bricks nor stones were used as building materials.
2. The building of the huge tomb (Esp. HPKM 1004) as an illustration of the burial custom of the privileged class and of the large-scale control of man power of the dead man's heir.
3. Definite evidence of the practice of human sacrifice.
4. Artifacts, which have survived many sackings, serve as material evidence of the stage of economic development and artistic achievement attained by ancient China in the later part of the second millennium B.C.
5. Various examples of stone carving from the big tombs, although moderate in size, are amazing in the sense that they were totally unknown previously.
6. The numerous specimens of weapons and ritual vessels provide a starting point for a scientific study of metallurgical craftsmanship in Yin-Shang China.

[82]

I also mentioned, in this Preface, that the knowledge and importance of some of the features listed above were germinated in the group mind of the field team, long before the cemetery site was first discovered. But these hypotheses did not develop into assured knowledge until they were confirmed by the Hsi-pei-kang excavations.

I would like to expound these items with some concrete illustrations.

Perhaps the best starting point is to outline the main features of

one of the huge tombs excavated in the western section of the cemetery site, where seven of these gigantic, complete tomb structures were successively opened in these seasons. Four of these in the eastern part of this section and two in the western part show definite structural sequence in the crosscutting of the passage corridors attached to each tomb. The one in the middle-west portion, HPKM 1003, together with an unfinished pit in this section, shows no structural relationship with any of the other six tombs.

HPKM 1004, which is located in the eastern part of the western section of the cemetery, may be taken here as a sample to illustrate the size and general structure of the royal tombs discovered in Houchia-chuang. The detailed report of the excavation of this huge tomb was published in the third series of *Archaeologia Sinica*, based on the original manuscripts of Liang Ssŭ-yung, edited and supplemented by Professor Kao Ch'ü-hsün.^[83]

Let us first see the essential features of the tomb's structure.

Location, Size and Structure HPKM 1004 is located on the eastern portion of the western section of the cemetery; its exact location is northwest of HPKM 1001; its eastern passage corridor cuts the northern corridor of HPKM 1001, while its southern passage corridor is cut by the northern passage corridor of HPKM 1002. These two crosscutting definitely indicate that HPKM 1004 was built after HPKM 1001, and before HPKM 1002.

As for the size, the various midline measurements are shown in the following table:

At the Main Center	22.5m
At the 2 Areas	18.5m
HPKM measurements	18.5m
HPKM	15.0m
Depth of central pit (at the center)	2.00-2.20m
Width of southern corridor	3.40m
Width of northern corridor	4.10m
Width of eastern corridor	5.10m
Width of western corridor	4.40m

The central pit alone, according to the measurements above, contains nearly two thousand cubic meters of compact soil, which had to be dug out in the course of clearing. It was soon found, when the excavation was in progress, that all the huge tombs had been sacked more than once, before modern tomb robbers intruded. The past sackings were so thorough that at least the earliest plunderers clearly reached the wooden chamber and took away all the buried treasures they could find; however, they did not care for the buried goods in the corridors. Those stored in the passage corridors were stolen later, some of them perhaps only recently. For modern archaeological purposes, cleaning up the refilled huge tombs proved to be a burdensome business, but not entirely unrewarding. In the first place, the tomb structure is itself an important study and, second, refilled tombs frequently included precious artifacts that the earlier tomb robbers were too ignorant to appreciate. It is true also that, as a general rule, no tomb robbers, past or present, are in the mood to do a 100 percent clean job; so there are always nooks and corners that have been neglected. The Hou-chia-chuang excavations have once more proved this generalization.

In the case of HPKM 1004, the outline of structure of the central pit at the cross-section is nearly square, but somewhat longer in the north-south direction than in the dimension from east to west. So, as the pit goes down, the dimension of the pit gradually shrinks in size, and at the bottom, which appeared at the depth of 12.00-12.20 meters from the surface, the size shrinks to 15.20m. $\times$ 16.30m.; thus the whole huge pit, when drawn on scale, looks like a Chinese square peck for measuring rice and wheat. At the bottom of this deep-sunken pit is a wooden chamber. The wooden chamber of tomb HPKM 1004 was still preserved sufficiently for a reconstruction of the original. Leading to the wooden chamber at the bottom of the central pit are the four sloping passage corridors from the four directions; some of these are stepped, others merely sloping. The one from the south, which measures 31.40m. long from the upper end near the surface soil

down to the southern entrance at the central pit at the bottom, is the longest of the four, while the other three passages to the east, west, and north are all less than half the distance of the southern corridor; they are naturally also more steep.

The Wooden Chamber The floors of the wooden chambers, some of which still leave visible traces, are clearly composed of long wooden beams, 20-30cm. in dimension; and the side walls are nearly three meters high. Whether these chambers were also roofed by timbers is however not very clear. But there is no question that these chambers must have been roofed. And, also, there must have been an entrance door facing the south, which passed directly into the southern passage corridor. Evidence also shows that inside the wooden chamber, the walls might have been elaborately decorated by painting, carving, or inlaying, or even stucco, presumably as extravagant as the inside of a palace. As the side walls of the central pit have been found usually smooth and well plastered, while the wooden chamber is much smaller than the bottom size of the hollowed pit, there obviously existed a distance between the wall of the pit and the wall of the wooden chamber, which was filled in by layers of pounded earth.

Professor Kao Ch'ü-hsün illustrates the wooden chamber of HPKM 1004 as reconstructed in Figure 10. The measured dimensions at the bottom of the pit are 13.20m. $\times$ 10.00m.; the reconstructed wooden chamber at the bottom occupies the maximum dimension of 9.00m. $\times$ 8.50m. only, including all the side chamber, so there is an average of more than one meter's distance between the wall of the central pit and the wall of the wooden chamber. The empty space that separated the wooden chamber from the pit wall, before the tomb was closed up, had to be filled in by pounding the soil up to the top of the roof, layer after layer, with the exception of the southern entrance. There is scarcely any doubt that this pisé work definitely took place long before the final closure of the tomb. There is also reason to believe that this part of filling-in engineering might have been the final phase of the construction of the tomb, a finishing touch after the completion of the building of the wooden chamber. When the filling-in was

completed, the regular burial, that is, the conveyance of the royal coffin into the wooden chamber, may have taken place, although the means are still uncertain. The method of transportation for the dead body might have been a specially constructed carriage, or an ox-drawn cart.

10 The floor of the wooden chamber of HPKM 1004
HPKM1004大墓木椁图

There seems to be no question that once the dead body was placed within the wooden chamber, a sacrificial ceremony started. The ritual procedure may have taken a long time; it must have been a time-consuming business, judging by the extraordinary number of burial treasures and the total number of human sacrifices. Also,

according to pre-Ch'in tradition, the custom of three years' mourning by the heir started in the Yin-Shang dynasty, although many historians may still be skeptical on this point.

Early Plunderings In opening HPKM 1004, the archaeologists observed that long before modern treasure hunters cast their eyes on this group of royal tombs, they were plundered in early periods more than once—in the case of HPKM 1004, definitely twice. In the previous tomb-robbings, diggings were evidently carried out in a systematic manner; traces of the early diggings reach down to 12 meters deep, much lower than the present water level. The plunderers obviously knew the exact location where the buried treasures were hidden underneath, as they drilled their tunnels almost exactly on the top of the wooden chamber—slightly deviating northward in the case of HPKM 1004. So the first sacking—if we take HPKM 1004 as instance—scooped out nearly 90 percent of the buried treasures, leaving what they believed to be only trifles.

The refilled robbing tunnels are in a way also interesting for a modern archaeologist to trace. By careful examination of the traces of the previous plunderings and the refilled caves one can learn the technique of the robbers' procedure. More important, one might also acquire some information by which to judge approximately when the plunderings occurred. In the case of tomb HPKM 1004, the drilling by the early plunderers for some reason ran a little toward the north; as a consequence, a small part near the southern wall of the pit was left untouched. The result was that the two magnificent bronze tetrapods were left buried there till our field team reopened the tomb in 1934 (see Fig. 11).

11 Two of the big bronzes *in situ*, HPKM 1004
HPKM1004大墓中在原处发现的两个方形大鼎

Offerings and Human Sacrifices From the refilled tunnels in all the big tombs in both the western and eastern sections, many important artifacts have been recovered; but as they were not found *in situ*, it is impossible to say whether they originally belonged to the tomb where they were found. Fortunately, as mentioned above, there are nooks and corners which early plunderers overlooked, and in these intact and usually out of the way places, occasionally some lucky finds, like the two huge bronze tetrapods in HPKM 1004, were occasionally found *in situ*.

The original report on HPKM 1004 describes the exact location of these two bronze tetrapods in the southern side of the central pit of this tomb near the entrance of the southern passage corridor at a depth from the modern surface of 8.1 meters, a little less than 2 meters above the roof of the wooden chamber. They constitute the fourth intact layer of depository furniture found in this untouched portion. Below this layer, our archaeologists discovered a bundle of 360 bronze spearheads at the depth of 9.60-9.85m. (see Fig. 12); the second layer of deposit below was bronze helmets, which according to later accounting were as many as 141, and mixed with the helmets in

the deposit were also spearheads and halberts. The bottom layer, that is, the first layer, was located near the bottom of the pit at almost 12m. below the modern surface. In this layer were found articles originally made of perishable materials, which had almost completely disappeared at the time of discovery. Still our field archaeologists were able to trace out four individual artifacts; they apparently were parts of a carriage, judging by the decorative trace left on the soil, in which the pigments and the copper rust had left deeply impressed marks in the soil.

12 A large number of spearheads discovered *in situ*, HPKM 1004

HPKM1004大墓中在原处发现的大量矛头

Finds as given above are comparatively rare; still they occur here and there in almost every big tomb in both sections. And in the case of the small sacrificial tombs, there were many which remained intact when our field team started systematic excavation.

Among the minor tombs, located mainly in the eastern section of the HPKM cemetery, 439 were undisturbed by early grave robbers, and 419 were partly destroyed; all the rest had been completely destroyed by tomb thieves. Of this total number of small tombs only 104 were located in the western section; the majority of them, 1,117

in number, were found in the eastern section.

Among the opened small tombs—1,046 in number—643 can be classified according to their contents and other features, namely:^[84]

~~Typical~~ **Human Bones**

- 13a. Single complete skeleton
- 57b. Multiple complete skeletons
- 52c. Skull and skeletal part separated
- 200d. Skulls only
- 192 Post-cranial skeleton only
- 9 f. Infants in urns

~~Typical~~ **Animals**

- 20a. Horse burials
- 2 b. Elephant burials
- ? c. Other animals (including birds)

~~Typical~~ **Miscellaneous**

- 2 a. Carriage
- 1 b. Vessels

A casual examination of the above list is sufficient to show that these minor burials are in fact the pits for sacrificial offerings. Among the human burials alone, the over four hundred which have been exposed in which the dead bodies were definitely mutilated before burial (the c., d., and e. subtypes according to the above classification), certainly proves the existence of the practice of human sacrifice in the Yin-Shang dynasty. It may be justifiably deduced, as our archaeologists have done, that all the small tombs are sacrificial tombs.

One of the most incontestable confirmations of this barbarous custom was found in the very bottom of the deep sunken pit, far below the floor of the wooden chamber in HPKM 1001, where no less than nine under floor sacrificial human pits had remained intact for our archaeologists to clear in 1935. The wooden ground floor was sufficiently well preserved to indicate that early plunderings did not reach deeper than this floor. When they discovered the nine burial pits

underneath the floor, located in the center and four corners, the field archaeologists concluded that these were the skeletons of the guards placed there to protect the dead master against subterranean evil spirits. Even more interesting to an archaeologist is that all the nine pits indicate: (1) a definite position—one at the center, two at each of four corners of the wooden chamber floor, (2) the bodies were all contracted, either prone or on the side, (3) each was accompanied by a dog skeleton, and (4) each burial had a halbert weapon—the *ko*—a standard Chinese weapon. Most noticeable is the fact that while the halberts uncovered in all the four corner pits were all made of bronze, the central pit alone contained a stone halbert.^[85]

Even more astonishing were the disclosures that in all the large tombs, both in the central pit above the level of the wooden chambers and in the passage corridors, the mutilated skeletons and skulls were found in groups, layer after layer, repeated in the accumulated strata of the pounded earth that filled up the central pit as well as the various passages. It is almost impossible to make an account of the number of victims slaughtered for each of the royal tombs, as all the tombs were sacked more than once before our team started the clearing; many of skeletal remains of the victims must have been already destroyed.

Important Finds Among the various and abundant artifacts recovered from the Hou-chia-chuang cemetery site, the group that commanded the most attention and was considered unique and unexpected was a series of stone carvings of both realistic and mythical types, such as turtles, frogs, human figures, and tiger-headed, eagle-headed, and double-faced monsters. Most of these relatively large stone carvings were excavated from HPKM 1001, but unfortunately only from the refilled sacked pockets, so that it was impossible to say exactly what their positions had been *in situ* in the original tomb. It is even difficult to judge whether these artistic stone artifacts were originally buried in these big tombs where they were uncovered, as there is reason to believe that these sacked areas were refilled from mixed dumps of soils from a number of graves plundered

at the same time. In the special reports on these tombs, a number of instances show that fragments of one article, which had been broken into several pieces, had been deposited in the refills of several different tombs.^[86]

While the finds from the refilling of HPKM 1001 exhibit a long list of stone sculptures, the most interesting example to professional archaeologists is the one found in the filling-in deposit of the plundering tunnels from HPKM 1004. This is a fragment of a human figure in the kneeling-sitting posture, exactly resembling the formal posture of a modern Japanese sitting at home on the *tatami* (see Fig. 13).

I personally made a special study of this particular figure years later and found out that the posture represented by this stone figure was historically known as *seiza* in the Japanese language; but the original Chinese term for it is *cheng-tso*, meaning "correct seating," especially on Chinese ceremonial occasions, as during the emperor's reception of an official audience. Ancient China kept this "correct seating" posture up to the end of the Han dynasty, while the Japanese *seiza* can be traced only to the middle of the fourteenth century A.D. through the Korean influence.

Another group of important artifacts is a series of beautifully impressed traces left on the soil in brilliant red and other colors, sometimes inlaid by colored stone and shells; these are from articles made of perishable materials like fabrics of hemp and silk in wooden and bamboo frames, especially lacquered wooden utensils, and so on. These articles were probably painted in brilliant mineral pigments that were better preserved in the buried soil than the major substance of the original articles. The field men referred to these "traces" as "decorated clay." In HPKM 1001, findings of decorated clay were very extensive; they also appeared in other big tombs. Our field men cut off these clay lumps with great care and packed them in specially made boxes sent to headquarters for study. Some of the designs left on the impressed clay remain clear and vivid; they have provided a rich source of materials for investigating the development of decorative art of this period.

In this connection, mention should also be made about an intact group, discovered in the western corridor of HPKM 1217, the original traces of a drum and a musical stone *in situ* (see Figs. 56 and 57).^[87] The decayed and disintegrated drum still kept its original shape as well as the marks of snake skin as the drum head; the musical stone (*ch'in*) was well preserved, although somewhat imperfectly made.

The bronze vessels and weapons, which appeared abundantly, were on the whole much better preserved and were originally

certainly better made. If we remember that all the finds made during our excavations were only the relatively few lucky survivals of past systematic and thorough-going plunderings, we can imagine how extravagant these elaborate burials must have been, not to mention the enormous amount of human labor commandeered to build these excessively huge mausoleums.

伍．王墓群的发现及系统发掘

在古代，有钱有势的人举行厚葬的习俗无疑在世界各地都是一样的。人们相信人死后会到另一个世界以一种与生前几无二致的方式继续生活，厚葬的习俗就是建立在这种思想基础上的。虽然这种做法会因主导某一地区的社会风俗及道德规范的不同，发展成不同的形式，但其基本思想却是一致的：人们一直渴望并相信人死后还继续存在。

至于埋葬死者的观念始于何时，似乎尚无考古学家能给出确切的回答。但可以肯定，在新石器时代，埋葬尸体及将随葬品与死者一同埋葬陪伴死者到另一个世界的习俗已很普遍了。

史前史的研究也证明了，在人类开始使用金属和等级制、奴隶制发展起来以后，厚葬习俗便兴起了。当然，在不同时代的不同地区，社会和政治组织所处的阶段也不相同，但这种基本思想却一直存在：向灵魂或亡灵或不论以何种形式存在的死者供奉享乐品和必需品，是后人的义务。

就中国来说，本书第三章中已谈过安特生发现的新石器时代的墓葬。巴尔姆格伦在关于甘肃瓮棺葬的专论中，对甘肃史前墓中发现的随葬彩陶容器已予以详细描述。^[75]这些彩陶，无论是发掘的或收购的，都从考古学方面提供了最早的证据，证明新石器时代的中国人与世界上其他地区新石器时代的人类一样，相信人的存在是二元的。尔后的调查也充分证明了新石器时代中国人的二元论信仰。河南、山西、甘肃的新石器时代遗址，经过科学发掘后，也显示出，遗址中既有居住区，还有一个单独的墓藏区。^[76]这些新石器遗址出土的随葬品主要有陶器、动物骨骼和石制用具。就质与量而言，墓与墓之间差别很大。这种差别是否代表财富上或权力上或二者兼而有之的差距尚不可知。但这种差别在史前时期的中国就已存在，这一点很重要。随着时间的推移，差别的程度逐渐扩大，到青铜时代，宫殿式的大型豪华陵墓已开始营建。

早在中国先秦时，厚葬之风就受到谴责，许多哲学家特别是墨家和道家对此进行猛烈抨击和嘲弄。墨子和庄子反对厚葬的言论非常著名。但这种传统被儒家称之为“礼”而保存下来。“礼”被某些人解释为“仪式”，被另一些人说成是“礼节”。但这个“礼”字的本义比“仪式”或“礼节”广泛得多。它是盛行于上古中国的举止和风俗的道德规范，后被儒家

奉为圣典。一般认为，作为道德规范的“礼”始于周公，他是周朝创建者周武王之弟，儒家学派的偶像，传统儒学中崇拜的圣人之一。

在前九次安阳发掘中，无论从哪一方面讲，小屯的墓葬都不能认为是“厚葬”，尽管在一些未被盗墓者掘过的墓中发现了精致的青铜器，尤其是觚形器和爵形器。1933年第八次发掘时，发掘团在殷墟附近的后岗进行进一步挖掘时首次发现大墓。梁思永在此地发现了仰韶、龙山和殷商文化相叠压的堆积。^[77]第一个后岗大墓被掘开后，发现此墓几乎已被盗掘一空。然而，这一工作也首次证明，通过系统的调查可以找到大墓，甚至王陵。1931年以后，安阳田野考古工作者对他们常遇到的“夯土”的结构与外观都很熟悉了。后岗大墓揭开后证实，在营建大墓时也使用了“夯土”工程技术，这自然就提供了一个指示线索。因此，安阳考古队通过艰苦工作和积累的经验，找到了在附近地区探索殷商墓遗址的钥匙。

同时，尽管中央政府颁布了《古物保存法》，但盗宝之风仍未消戢。在安阳，虽然中央研究院的发掘由于当地政府的保护顺利地进行着，但非法猎宝和盗墓也是防不胜防。猎宝之风东西方皆有，无关法律和宗教。只要哪里埋有珍宝，猎宝者就会像淘金者一样闻风而至。

早在北宋时，安阳就以古代青铜器闻名。^[78]科学发掘一开始，立即吸引了一些外国报纸的关注。《伦敦图画新闻》大篇幅地刊载了安阳的发掘情况，立即引起了世界范围内的广泛关注。^[79]这种宣传的负面影响之一就是激励了私人挖宝，这股风气甚至很快蔓延到在中国的传教士中。非法的猎宝活动遍布华北各地。在安阳，每当我们的正式发掘一结束，非法的猎宝者立即活跃起来。侯家庄王陵正是由于这种猎宝活动首次为人所知的。这一发现的细节资料当然已完全失落。每个到过东京根津艺术博物馆的人，都会对三个高分别为71.2厘米、72.1厘米、73.2厘米的器形奇特的盃印象深刻。尽管水野清一在他的殷墟青铜器编目^[80]中没有提到它们，但所有人都说这是安阳出土的器物。安阳流传着这样一个故事：

大约早在1933年，侯家庄附近由私人挖掘出了大量青铜器和其他珍品。众人皆知的是，有三件形制不明、体积很大的青铜器随即在古玩市场上被售出，主要挖掘者也因此一夜暴富。虽不知确切情况，但分赃者当然不像赃主那样守口如瓶。因而，发不义之财的消息不胫而走，不仅附近村庄妇孺皆知，而且安阳市里也纷纷传说。中研院的一些工作人员

在很短时间内就了解到不少关于这次“幸运发掘”的情况。考察队中的年轻考古学家立即忙碌起来，自然也把这一消息向发掘的负责人作了汇报。时值1934年10月，梁思永领导的第十次安阳发掘正待开始。

第十次发掘的最初计划原是同前三次一样，想继续寻找殷商时期的建筑基础，并对洹河河谷一带进行进一步考察。当梁思永听到近来青铜时代墓葬被盗的事，并得知墓葬的大概位置靠近侯家庄，他便立即采取措施，调集手下的人员，集中掌握的一切力量，以查清是否真有墓地可供发掘。这确实是一个重大决定！

在这次发掘中，协助梁的是五位富有经验的年轻考古学家：石璋如、刘耀、祁延霁、胡福林和尹焕章。这几位在田野技术上经过良好的训练，对寻找墓地的确切地点满怀热情。他们成功地找到了墓地的位置，并选择在侯家庄西北一处微凸的土岗（本地人称“西北岗”）上开始了试掘，揭开了许多座大墓。这一令人欣喜的发现促使梁集中一切可利用的人力财力对这一特殊遗址进行全方位的考察。从10月3日至12月30日近三个月的时间里，发掘面积达3000多平方米。一条乡村公路把遗址分成了相距百余米的两部分，路西为西区，路东为东区。后来证明，发掘出的墓葬的地下分布刚好与此二分法吻合。

侯家庄墓地第一次发掘结束时，所获成果比预期的更使人兴奋。重要的发现包括：(1) 4座大墓全分布在西区，63座小墓全在东区；(2) 埋葬的躯体呈多种不同姿势（俯身、仰面、屈肢、仅有头骨等）；(3) 小墓中出土了许多保存完好的青铜器；(4) 大墓中出土的刻纹石器，有的高达36厘米；(5) 还有大量的玉饰品、花骨和白陶等。总的来说，这些器物较小屯出土的更精致，保存得也更完好；但很显然，它们是与有字甲骨同时代的，是殷商文化的一部分。虽然第十次发掘临近结束时才揭开部分西区大墓，但发掘者们几乎已经可以断定这些是统治殷商王朝的最有权势的王室的墓葬。

在制定侯家庄西北岗的第二次（即安阳第十一次）田野发掘计划时，梁思永表现了非凡的远见卓识和对实践细节的掌握能力。在侯家庄的田野工作上，我全力支持他的计划，但这也带来了一些经济困难。开支预算总数达两到三万银圆，这大大超过了拨给研究所的常规经费的限额。这时，我既负责考古组的工作，又代理傅斯年的所长职务。然而，幸运的是，这时担任中研院总干事的是丁文江博士。丁是个知识渊博的人，过去就一直对田野考古表现了极大的热忱，现在他有能力采取实际办法帮助实现梁的卓越计划。丁及时地建议邀请国立中央博物院参加这

项事业。双方达成的协定是：博物院分担侯家庄田野发掘的部分经费，出土的器物待我们研究结束后，由博物院永久保存。当时的博物院得到了一笔英“庚款”基金，正在首都兴建一座大楼。

回头来看，1935年春的第十一次安阳发掘是我们田野工作的高潮。虽然经费开支大，但重要的是收获丰富。这次发掘代表了组织最完善的团队工作和最高效的执行力。对一般公众来说，更重要的是，这些成就有力地证实了一个道理：科学发掘不仅能进一步对知识进行验证，而且能提供一个寻找埋葬的珍品的可靠方法，并给以法律保护。

第十一次发掘持续了97天（1935年3月10日至6月15日）。梁有七位来自考古组的助手。另外，清华大学还派了一名研究生夏鼐在去英国留学前到安阳见习田野考古。

西北岗墓地的第二次发掘面积约达8000平方米。西区4座大墓全部清理出来了，东区有411座小墓被掘开。大墓深12至13米不等。可以肯定的是，小墓是埋葬牺牲用的；不少小墓中只有头骨或无头躯干，这显然为“人性”提供了确凿证据。在大墓的发掘过程中，我们逐渐明确，这些墓过去不止一次被盗，所以还没清理到墓底，我们就知道不用指望找到完整的珍品了。然而，我们在隐蔽的角落里发掘出的以前盗墓者没注意的遗物，就很令人震惊了。特别珍贵的是那些易腐烂的竹、木纤维等留下的精细痕迹，只有受过训练的考古学家才能描绘出它的轮廓。更为实在的遗物，如大理石雕、大型青铜器和精致的玉器等，虽不是在原处发现的，也常常在被盗后墓道的填土中发现。

这次发掘吸引了不少著名学者来访，其中包括由傅斯年所长陪同来侯家庄特访的尊贵客人伯希和教授（图7）。

西北岗的发掘又进行了一次（1935年秋），规模比第二次还大。每天雇用500名工人，这是到那时为止中国田野考古史上雇人最多的一次。发掘面积达9600平方米。在西区有更多的大墓被掘开；除一个未建成的大坑外，共发掘7座正规的大墓（图8）。另外，东区共清理了近800座小墓。这次发掘的工作结束时，其结果再次表明，与前两次揭开的墓一样，这些大墓不止一次被盗。最早的盗墓可能早至周朝时，起码在东汉以前，因在回填的被盗墓的顶端发现了一座东汉墓。不过，也正如前几次发掘一样，发现的遗物还是颇为丰富的，还有不少出乎意料的发现。所以，除了关于巨型陵墓的构造和殷商工程技术的大量详细知识外，这个朝代的物质文化的出土乃是真正的新发现。

高去寻教授用下面的话总结了侯家庄西北岗的三次发掘工作：[81]

在侯家庄北西北岗王陵的三次发掘中，揭开1267座墓.....在这些揭开的墓中.....有1232个为殷商时期的墓[高后来指出一些小墓可能属于稍晚时期，虽然它们在文化上是属于商]，这些殷商墓有秩序地埋在地下，但地面上看不到土丘或其他明显的标志，或者这样的标志从来没有存在过！.....

在1232个殷商墓中，有10个的地下建筑结构规模宏大，而这10个之中有1个明显是未建成的，因为墓中没有任何像前9个那样的墓道.....其余的1221个小墓明显是以这种或那种方式与大墓有联系。

10个大墓中，7个在西北岗王陵的西区，3个在东区.....它们都是南北向的，北部带一个向东倾斜了几度的通道.....至于1221个小墓，在西区发现的仅104个，其余1117个都在东区.....(图9)

梁的计划是在侯家庄王陵的三次发掘后，田野发掘暂停一段时间，来研究一下这些惊人的新发现和不寻常的出土物，以便能从容考虑下一步发掘计划的制定。但是谁曾料到，这项颇有希望的事业却突然被1937年日本的侵略终结了！

这些发掘对我们认识古代中国的文化和早期中国历史作出了重要的科学贡献，对此作一总括性说明当然是重要的，也是必要的。在《侯家庄报告集》第二本的序中，我曾对这一发掘中最显著的几个特点作了以下说明：

序文中应该介绍的为侯家庄发掘所得对于中国上古史的几点重要贡献。这似乎是不能用数目字估计的一件事；以下排列的顺序只能代表我们对于这一工作成绩各方面的认识之先后而已。.....可以概括地列举如下：

1. 版筑在殷商建筑中所占的地位。
2. 由一个“陵墓”的经营(如本报告所描写的HPKM1001)所看出的殷商时代的埋葬制度及对于人工组织的力量。
3. 杀人殉葬的真实性与它的规模。
4. 物质文化之发展阶段及统治阶级之享受程度。
5. 石雕的发现及装饰艺术的成就。
6. 青铜业的代表产品。[82]

我在序言中还写道，对以上所列特征及其重要性的认识早在王陵被首次发现前就被我们的田野工作者们认识到了，但直到西北岗被发掘，这些假说才成为确定的知识。

现在我想用一些切实的例证来详细阐述这些特征。

也许最好是先在这几次在王陵西区先后揭开的七座完整大墓中选取某一座，概述一下其主要特征。西区东部的四座与西部的两座，每个墓的墓道相互交叉关系，明确地显示了它们之间的建造顺序。HPKM1003在西区中部，它与一个未建成的墓坑在一起，和其他六座墓间未显示出任何结构上的联系。

西区墓葬东部的HPKM1004可作一个例子来说明侯家庄发现的王陵的规模及一般结构。关于这一大墓发掘的详细报告已发表在《中国考古报告集之三》上，是高去寻教授根据梁思永的原稿编辑增补的。^[83]

让我们先看看此墓结构的基本特征。

位置、规模和构造 HPKM1004位于墓地西区东部，确切位置在HPKM1001的西北，它的东墓道穿过HPKM1001的北墓道；它的南墓道则被HPKM1002的北墓道贯穿。这种相互交叉的关系明显表明HPKM1004的建造晚于HPKM1001，早于HPKM1002。

其规模及中线的量度值见下表：

墓室

~~182.62~~平方米

~~34.06~~米 南北

~~10.80~~米 东西

~~墓室深度 2.20~~米)

~~南墓道的中线~~

~~北墓道的中线~~

~~东墓道的中线~~

~~西墓道的中线~~

根据上面的测量，仅墓坑内就有近2000立方米的实土需在清理时挖出。发掘过程中，很快发现所有大墓在现代盗墓者闯入之前就已不止一次遭到盗掘。过去的盗掘是如此彻底，很明显最早的盗掘者就已进入木椁，并掠走了他们能找到的一切随葬珍品，但他们没有把墓道里的随葬品放在心上。墓道中的随葬品被盗较晚，有些可能是最近才被盗的。出于现代考古学的目的，清理回填的大墓确实是件艰苦的工作，但并不是一无所获。第一，研究墓的结构本身就很重要。第二，盗坑回填土中常有一些珍品，只是较早的无知盗墓者并未认识其价值。事实上，一般说来，无论现在还是过去的盗墓者，都没有心情去做彻底的清理工作，所

以常有一些偏僻的角落被忽略。侯家庄的发掘再次证明了这一通则。

HPKM1004墓坑的横剖面近似方形，只是南北比东西略长。随着墓室深度的增加，墓坑逐渐收缩，在地表向下深12.00至12.20米的底部，其尺寸收缩到15.20米×16.30米。若按比例绘出图，整个大坑看起来像中国人用来量米和麦的方斗。深陷的墓坑底部有一木椁。HPKM1004的木椁保存完好，可以复原。四条倾斜的墓道从四个不同方向通到墓室底部的木椁。这四条墓道有的有台阶，有的仅是斜坡。南墓道长31.40米，由地面直达墓室底部的南口，是四条墓道中最长的。东、西、北三条墓道都不足南墓道的一半长，自然都比南墓道更陡。

木椁 木椁的地板仍有部分可见的痕迹，明显是由直径约20—30厘米的长木材构成。四壁约3米高。木椁的顶端是否也用木料覆盖并不十分清楚，但毫无疑问木椁原来一定有顶，而且一定还有一面朝南开的直通南墓道的门。有证据表明，木椁的内壁曾经用彩绘、雕刻或镶嵌、甚至粉刷等工艺精心装饰，可能与宫殿的内壁一样华丽。墓室的四壁一般较光滑，而且涂有灰泥，而木椁比墓室底部的尺寸小得多，显然，墓室壁与木椁壁之间有一段距离，之间由层层夯土填实。

高去寻教授曾绘制了一幅HPKM1004木椁的复原图（图10）。墓室底面为13.20米×10.00米。复原的木椁底部最大面积只有9.00米×8.50米（包括木椁的各边），因此，墓室壁与木椁壁之间有平均1米多宽的间距。在封墓之前，除木椁的南门外，整个空间要用层层土夯实直至木椁的顶端。无疑夯土一定是在墓封闭很久之前就开筑的。同时，也有理由确信这一部分填充工程可能是造墓的最后阶段，也是木椁竣工后的最后一道工序。填土结束后，按照葬例应该会王棺运进木椁，虽然具体方法还不肯定。运送死者遗体的可能是特制的马车或牛车。

将遗体安放进木椁后，杀牲仪式遂即开始，这一点似无疑问。仪式可能会持续很长一段时间。从惊人的随葬品数量和“人性”的总数来判断，这一定是件非常耗时的作业。此外，根据先秦的传说，后嗣服丧三年的习俗始于殷商朝代，尽管不少史学家可能对此仍有所怀疑。

早期盗掘 在HPKM1004墓打开时，考古学家发现早在现代挖宝者把目光投向这群王墓很久之前，这些墓在早期就已不止一次被盗掘——HPKM1004肯定两次被盗。早期的盗墓，其挖掘很明显是系统地进行的。早期盗掘的痕迹达12米深，比现在的水平线低得多。盗墓者清楚地知道埋葬珍品的确切位置，他们把盗坑几乎正好挖在木椁的顶端——在

HPKM1004中挖的盗坑稍偏北。所以第一次盗掘时——以HPKM1004为例，随葬珍品就有近90%被掠走，剩下的只是他们认为没有价值的东西。

对现代考古学家来说，探寻回填的盗坑在某种意义上也是有趣的。认真考察早期盗掘的痕迹和回填的盗坑，可以了解盗墓者的盗掘技术；更重要的是，可获得一些资料，判断盗掘发生的大致时间。就HPKM1004而言，盗掘者由于某些原因挖的盗坑稍偏北，故靠墓坑南壁有一小块地方未被扰动。结果是两件大型青铜方鼎仍埋于土中，直到1934年我们考古队重开此墓时才发现（图11）。

祭品和“人牲” 在东、西区所有大墓被回填的墓道中，我们发现了不少重要遗物。但因它们不是在原处被发现的，所以不能肯定它们原来是否属于被发现时所在的这座墓。所幸的是，如上所述，在一些早期盗掘者忽视的偏僻处和未被扰动的边远地方，偶尔仍有像HPKM1004中的两件青铜方鼎一样的遗物在原处被发现。

据HPKM1004原始报告描述，这两件青铜鼎的准确位置是在此墓墓室南侧，靠近南墓道的入口处，距现在地面8.1米，比木椁顶端高出近2米。这两件青铜方鼎处于这块未扰动过的包含有随葬品的土层内的第四层。在其下一层，我们的考古学家在9.60—9.85米深处发现一捆青铜矛头，共360只（图12）；此层下的第二层内出土了青铜盔，据后来统计有141个，并混有矛头和戟。底层，即第一层，位于距现在地面近12米深处。这一层中发现了原先由易朽材料制成的物品，在发掘时几乎已完全消失了。但我们的田野考古工作者仍清理出四件遗物。从留在土里的花纹痕迹——颜料和铜锈在土上留下的深深的印记——来判断，它们显然是一辆马车的零件。

像这样的发现物还是较稀少，不过不管在东区还是西区，几乎每座大墓掘开都会有发现。至于小的埋“牺牲”的墓，当我们考古队开始有组织发掘时，许多还未曾动过。

主要分布在西北岗墓地东区的小墓中有439个未被早期盗墓者染指，419个被部分破坏，其余的全被盗墓者损毁。全部小墓中仅有104座在西区，绝大多数——1117座在东区。

在揭开的1046座小墓中，643座可以据其内容及其他特征分类如下：^[84]

葬人骨

- 13d. 单具完整骨架
- 57b. 多具完整骨架
- 52c. 身首异处的头骨和躯干
- 20d. 仅头骨
- 19e. 无头骨架
- 9 f. 瓮罐葬幼儿

数字动物

- 20a. 马葬
- 2 b. 象葬
- ? c. 其他动物（包括鸟）

数字杂类

- 2 a. 马车
- 1 b. 容器

粗略查看以上所列项目便足以看出，这些小墓实际上是牺牲坑。仅在埋葬死者的墓穴中，就有400多座已掘开的坟墓中的死者葬前肯定已被砍头（上列分类的I类c、d、e项）。这确定地证明了早在殷商王朝已存在“人牲”的习俗。或可展开合理推论——我们的考古学家也是这样做的，这些小墓都是牺牲墓。

1935年我们在清理HPKM1001时，在距木椁地板之下很深的地方，即深陷的墓坑底部，发现了多达九个未被扰动的人牲坑，这是这一残暴习俗的铁证之一。木地板保存得很好，这足以说明早期的盗掘者没有触及地板以下。田野考古学家发现地板下的九个坑分布在中间和四角，因此推断，这些都是卫士的骨架，他们在这里守卫着死去的主人，防止他被地下的鬼怪侵扰。在考古学者看来，更有趣的是这九个坑都表现出以下特征：(1) 特定的位置——一个坑位于木椁地板下的中央，四角上分别各有两个坑；(2) 所有躯干都是屈体的，或俯身，或侧身；(3) 每具躯干旁都有一具狗骨架；(4) 每个坑里各有一只戈——标准的中国武器。最值得注意的是，四角的坑里发现的都是青铜戈，唯独中央坑中的是石戈。^[85]

更加使人惊异的发现是，在所有大墓的木椁上面的墓室内和墓道中，都有一组组砍掉头的骨架和头骨埋葬在层层积压的夯土中。这样的夯土层填充着墓室和墓道。要弄清每座王陵中被屠杀的受害者数目几乎是不可能的。因为在我们清理前，这些墓已不止一次遭盗掘，不少牺牲

者的骨架已被毁坏。

重要发现物 侯家庄墓葬区出土了大量各式各样的遗物，其中有一组造型奇特、出人意料，最受人关注。这是一组既有写实成分，又有神话色彩的石刻，包括龟、蛙、人像、虎头、鹰头和两面兽等。较大的石刻多出自HPKM1001，但遗憾的是，它们都出自盗坑的填土中，所以不可能准确判断它们在墓中的原位置。甚至这些精巧的石刻最初是否葬于发掘出的大墓中，也难以判断。因为有理由相信，许多墓是在同一时间内被盗，各墓的土混在一起，又回填于墓中。这些墓的专题报告中有许多实例表明，一件物品的碎片可存积在几个不同墓的回填土中。^[86]

虽然HPKM1001中出土了大量石刻，但对职业考古学者来说，最有趣的一例是从HPKM1004的盗坑回填土中发现的一个跪坐着的人像残部，酷似现代日本人坐在家中“榻榻米”上的标准姿势（图13）。

几年后，我亲自对这尊特殊的人像进行了专门研究，发现这具石人残体的姿势在日语中历史上被称为“正座”，它原先在汉语中被称为“正坐”，意为“正确的坐姿”，尤其是指在中国的礼仪场合，如帝王接见官员时，采用的坐姿。“正坐”姿势从中国古代一直持续到汉末，而日本的“正座”则仅能追溯到公元14世纪中期，当时是受了朝鲜的影响。

另一组重要的遗物是一系列印在土上呈鲜红及其他颜色的压痕，有的还嵌有色石子 and 贝壳。原物品由易腐的材料制成，麻、丝等织物镶嵌在竹、木，特别是漆过的木器上。它们大概是用鲜艳的矿物颜料彩绘而成，所以在墓葬土里颜料比原器物的主体物质保存得更好。田野工作者把这些痕迹称“花土”。HPKM1001中，花土的分布很广，其他大墓中也有发现。田野工作人员小心地切下这些土块，并将其装在特制的木箱里运回所里研究。一些印在土上的图案仍清晰、鲜艳，为研究这一时期装饰艺术的发展提供了丰富的原始资料。

在此，还应提一下未被触动过的一面鼓和一块石磬，它们是在其原位置——HPKM1217的西墓道中发现的（图56、57）。^[87]腐朽分解了的鼓原形仍在，蛇皮鼓面的痕迹也保留着原来的样子。石磬虽然制作得不太完美，但保存完好。

总的说来，大量出土的青铜容器和武器保存得更好，当然原初的制造也更精致。如果我们还记得这些出土物只是过去有组织的、彻底的盗掘后留下的少数幸存物，我们便可想象这些精美的墓葬曾经是多么奢华，更不论为营建这些巨型陵墓曾强征了多少人力。

6. Last Three Seasons of Field Work

in Hsiao-t'un before World War II

The Japanese invasion of China in the summer of 1937 suspended the excavations which had been planned in 1928 by trained archaeologists under the able leadership of Director Fu Ssŭ-nien of the Institute of History and Philology, Academia Sinica, and which had continued thereafter for nine years with only occasional interruptions. This Japanese invasion was the prelude to the worldwide conflict known as World War II. Western historians are still in the habit of dating the outbreak of World War II from Hitler's challenge to Western Europe, neglecting altogether the early phase of this global warfare in the Far Eastern theater. As a matter of historical truth, it seems almost impossible to divide this tragic story.

Since the Anyang excavation was a scientific enterprise undertaken by the Academia Sinica under the aegis of the National Government in Nanking, it was forced to discontinue active field work in Anyang after the Japanese invaded north China.

Before this happened in 1937, the Anyang expedition had worked for another three seasons following Liang Ssŭ-yung's decision to stop the field operation at the Hsi-pei-kang royal cemetery of Hou-chia-chuang in the winter of 1935. The field work of these three seasons, known respectively as the thirteenth, fourteenth, and fifteenth seasons of the Anyang expedition, was concentrated at the Hsiao-t'un site, carrying out in a systematic manner the carpet-rolling method of tracing the building foundations in the last capital of the Yin-Shang dynasty. The schedules of the field operations and the varying composition of the working staffs are tabulated on the following page.

In carrying out this method of digging during the last three seasons, there were naturally places to which special efforts were more intensively applied, namely where pounded earth was found to

be more extensive and where past plunderings were comparatively rare, relative to the finds of the past nine seasons. So the field labor of these three seasons was almost all concentrated in Subareas B and C. Each of these two subareas was again, by surveying instruments, redivided into a number of parts of the same size, 40m. × 40m. with a surface area of 1,600 square meters. In the map, these parts were further divided into sections; each section measured 100 square meters (10m. × 10m.), which constituted the smallest unit of the more detailed surveying area, all of which were given a serial number in a definite order, such as C126, etc., which means Section 126 in Subarea C.

~~Excavation Activities~~

~~1970-1971~~ 1970-1971 127 houses exca-vated; 127 caves and caches; 181 burials.

~~1972-1973~~ 1972-1973 without border, but with pillar stones. Water ditches

~~1974-1975~~ 1974-1975 foundations. H127 discovered.

~~1976-1977~~ 1976-1977 exca-vating an area of 3590m.2; 26 foun-dations; 122

~~1978-1979~~ 1978-1979 ditches, 132 burials; underground ditches.

~~1980-1981~~ 1980-1981

Four others

~~1982-1983~~ 1982-1983 exca-vating 3,700m.2; foun-dations units 20, caves

~~1984-1985~~ 1984-1985 220; under-ground ditches 120m. long, gates located with

~~1986-1987~~ 1986-1987 sacrifices in kneeling position, many artifacts.

Four others

Also beginning with the thirteenth season, serial numbers were given to the underground pits and burial sites, with the English capital letter "H" (*hui-k'eng*, "pits") to signify the former and "M" (*mu*, "burials") for the latter, such as H127, or M164.

Our main purpose during the last three seasons of field operation was to complete the excavation of the architectural foundations built during the period of the oracle bone inscriptions. The detailed procedures, however, naturally varied in accordance with the progress

of the excavations and the underground conditions, which differed from place to place. For instance, the technique and appearance of the "pounded earth" were found to be by no means uniform. Some sections had been pounded merely for the purpose of leveling up a depressed area, others for building independent walls; the most common remains were those designed as foundations of surface buildings. For wall building, planning would be needed before starting to pound the earth. In foundation building, there evidently was some sort of architectural "blueprint" to follow, for the ground first had to be leveled by filling in any underground pits or caches wherever they might occur, and also by scraping down to the level all raised areas. Ever since the field party had discovered the main function of the pisé technique during the fourth season, the technology of earth-pounding had been studied with great care. The field workers were all aware of the fact that some pisé areas might be several meters deep, whereas others were so thin that only one layer of stamped earth measuring less than 20cm. in thickness remained on the surface. Further, they concluded that this technology was developed probably only after the Shang dynasty moved the capital to Anyang. In the course of field operations, they discovered that the pisé layer, no matter how deep it might be, was frequently underlaid by other architectural features—subterranean dwellings, cache pits, and channeled water ditches, or by burials and other prehistoric remains. Such subterranean constructions, according to Professor Shih Chang-ju, were part of the early Shang dynasty culture; they were built before King P'an Keng moved the capital here.

Let us examine some of these pre-Yin architectural features which were found under the pounded earth area (see also more extended discussion in chap. 10).

● Underground Dwellings and Cache Pits for Storage Purposes

In the last three seasons of our expeditions to Anyang before World War II, a larger area was excavated than in all the diggings of the previous nine seasons. The total area uncovered amounted to more than twelve thousand square meters, while the area dug in the first

nine seasons had been just a little over eight thousand square meters. If we compare the number of underground cache-pits or dwellings, the total number discovered in the first nine seasons was only 123, but in the last three seasons 479 of these underground structures were cleared. Seemingly of even greater importance were the disclosures of a regular system of water-ditches, strengthened by wooden piles on both banks of the channel, definitely built in the pre-pisé period of the Shang dynasty. These ditch-channels were no doubt designed when subterranean pits and semiunderground dwellings were the general habitations of the population.

These cache-pits and subterranean dwellings, according to Professor Shih Chang-ju, were divisible into several classes of which the main categories are as follows:

Round or Oval *Tou*-Pits (Fig. 14) These subterranean holes were sometimes paired like joined double rooms. Some of the pits were very shallow, not more than 1 meter deep below the modern surface. But the deeper pits might go down from 7 to 10 meters and even deeper. The latter pits usually had vertical rows of foothold niches on the side walls, either opposite each other or on the same side. Professor Shih divided this group into six subtypes. The first two subtypes with flat bottoms or irregular bases were all shallow, their diameter being about 1½ meters, usually found above the pisé foundation. But the more deeply cut pits—usually more than 3 meters in depth—were in most cases built below the pisé and therefore antedated the stamped earth period. Shih redivided the deeper *tou*-pits into four subtypes, according to the arrangement of the foothold niches. These pits were usually designed for storage purposes. And, according to Professor Shih, most of these *tou* storage pits uncovered during our diggings were located on the western side of the Hsiao-t'un site.

14 Tou-pits 竈

Rectangular or Square *Chiao*-Cells (Fig. 15) The depth of these underground structures varied from 1.10 meters to more than 10 meters; and for ascent and descent there were foothold niches cut in the walls as in the previous group. Similarly, most of the deep *chiao*-cells were built earlier than the period of pounded earth, but the shallower ones were evidently, constructed later. The majority of these *chiao*-cells were like the round pits, deep and evidently also

used for storage purposes as they were comparatively narrow—the total area of the surface at the base being seldom larger than 4 square meters.

15 Chiao-cellar (see legend for Fig. 14) 窖 (凡例参见图14)

16 Hsüeh-pits (see legend for Fig. 14) 穴 (凡例参见图14)

The Hsüeh-Pits (Fig. 16) This group consisted of a number of large, but usually shallow, subterranean pit dwellings. Many of these underground dwellings still retained a flight of steps, either along the pit walls or at the center. The floors were often flat, and in some cases divided into two parts. The ground plan of the entire dwelling might

be round, oval, or rectangular (see discussion on pp. 320-327). Most of the pits had a floor size larger than 10 square meters, the size of the largest might exceed 30 square meters. The average underground depth was between 2 and 3 meters but in one rare instance (7:H23) it went down to almost 6 meters with a stairway of seventeen steps.

Professor Shih remarked that this group of underground pit dwellings had been found, in the majority of cases, underneath the foundations built by the pounded earth method. This obviously indicated that they were the earlier habitations of the local peoples. Further, Shih remarked that judging by the average depth of these *hsüeh*-pits, which was only about 2 meters, the walls of these dwellings must have extended above the ground surface and consequently the roofs would have been well above ground.

Semiunderground Dwellings Finally Shih also added another group of what he called "semisubterranean dwellings," of which the underground portions were less than 1 meter deep, and round, oval, square, or rectangular in cross-section. The diameter of this group of structures, if round-shaped, was usually more than 3 meters. If rectangular or square, the floor areas varied between 20 and 30 square meters. A peculiarity of these semisubterranean dwellings was the fact that postholes were usually found on the margin of the bases of these underground pits, indicating that wooden pillars were provided for wall-building and supporting the roof of the house above the land surface.

The fact that many of these four groups of underground structures were located under the *pisé* foundations led Shih to conclude in a special article that as noted above the majority were remains left here by the earlier inhabitants before King P'an Keng moved the Shang capital to this locality.^[88] There were, however, exceptions; in the course of continued excavations, many deep-sunken pits and cellars were found to be contemporaneous with the *pisé* foundations; these pits or cellars were built either for storage or, as I interpreted them in an early article, for sacrificial purposes.^[89] Very few subterranean dwellings *per se* were found after the introduction of the *pisé*. It seems

quite clear that most of the living quarters were built above the ground surface once this place became the capital of the Empire. Except for sacrificial burials, it is almost certain that no temples or palaces were ever built underground after King P'an Keng developed the city into a capital.

In the final three seasons, field excavations on a large scale systematically exposed the extensive architectural foundations of the altars, temples, palaces, workshops, and dwelling houses all over the areas northeast of Hsiao-t'un village, which were reported in *PREA*^[90]. Chapter 10 will cover all these discoveries and discuss possible reconstructions, since they constitute one of the major archaeological contributions to our knowledge of Shang history.

Certain other important field observations should first, however, be related. What I have in mind is the definite establishment of the cultural sequences of the underground deposits at Hsiao-t'un, determined through the accumulated evidence gathered by the field workers throughout the expeditions from 1928 through 1937, culminating in the final seasons. These established archaeological sequences can be noted briefly in the following order:

1. The most basic depository remains indicated that the earliest inhabitants of the Hsiao-t'un site were the prehistoric folk who lived in subterranean dwellings and who had already developed the Lungshan or Black Pottery Culture.

2. Succeeding the Lungshan Culture were a large series of underground pits, cellars, and subterranean dwellings of the early Shang period before this place was chosen as the capital of the kingdom in King P'an Keng's period.

3. The period of Yin-Shang with Anyang as capital was the time when the pisé method of construction was introduced and extensive surface buildings became abundant.

4. After the downfall of the Yin-Shang dynasty, the remains were mainly burials.

● Significant Discoveries in the Thirteenth, Fourteenth, and Fifteenth Seasons of the Anyang Expeditions

The number of findings and unexpected discoveries in the last three seasons at Hsiao-t'un exceeded the expectations of every experienced participant in the field work, including all the old-timers among the diggers. Let me itemize the more important groups of these findings made in the final phase of the Anyang expedition from the summer season of 1936 to the end of June of 1937. Of these groups, I shall choose those which were not only in themselves significant, but which also provided new data for the solution of some older historical problems:

Group A. Important and unexpected discoveries in the last three seasons

1. Chariot burials
2. Underground deposit of archives of inscribed oracle bone documents (H127)

Group B. Problems solved by the accumulation of observations and material evidence

1. Human sacrifice
2. Fauna and flora
3. Ceramic collections
4. Evolutionary stages of the subterranean pits and dwellings
5. Orientations and sizes of foundations of surface buildings

Group A lists finds made by chance whereas those listed under Group B were the result of planned scientific recording and gradual accumulations of collected data. In this chapter, I shall go into some detail about the surprise findings, namely Group A. The items in the second category will be for the most part discussed later, but let me first make brief mention of their chief characteristics, the methods of their collection, and the circumstances of their discoveries.

I have listed "Human sacrifice" as number one in Group B for a special reason. Chapter 5 above refers to evidence that this barbarian practice existed all over the Old and New World in the Bronze Age.

The account in that chapter concerning human sacrifice could be taken to imply that this practice was confined to sacrificial rituals connected with funerals. As a matter of fact this was what the field archaeologists believed at the beginning. But evidence unearthed in the last three seasons at Hsiao-t'un definitely proved that human sacrifices were also customary for other purposes: they were made in connection with such activities as laying building foundations, and the annual worship of various spirits, whether abstract, such as river gods, or concrete idols. This deserves some description: for example, such instances were found in tracing the foundations in Subarea B7.

Only the left side of the Subarea B7 foundation was traced out; the right side had already been submerged by the Huan River, which bounded the Hsiao-t'un farm on the east. The part of the pounded foundation that was traced out measured no less than forty meters in the east-west direction and over thirty meters north-south. Within this portion of the foundation in section B7 were discovered a series of sacrificial pits, arranged apparently in some order, on the southern side of the pounded earth. Each of these pits was given an individual name-symbol according to Shih's report, as follows:

~~Sacrificial~~ pits

~~M1230~~

~~M1229~~, 2 sheep

~~M1060~~

~~M106~~gs

~~M1043~~s, 1 sheep

~~M104~~gs

~~M105~~s, 3 sheep

~~M1040~~

~~M1068~~eling man, facing north

Summarizing the above list, Shih said that altogether ten oxen^[91], six sheep, twenty dogs, and one human being were found in this row of sacrificial pits. Even more surprising was evidence disclosed near the door of the building where Shih found more pits, which he

described as sacrificial pits connected with "earth-breaking rituals" when the erection of the front gate or door was to take place. According to Shih's account, three more human beings were sacrificed and buried here. These additional pits were located on the right, left, and at the center where the foundations for the doorposts were to be laid. Each of these three sacrificial victims was found in a special burial and in a kneeling posture, accompanied in every case by a halbert. A fourth victim was found further south, right in front of the gate. This front guard, so to speak, was equipped with both a shield and a spear; he was also buried in a kneeling posture, facing north.

Professor Chang Ping-chüan, in an article based upon oracle bone records, classified the sacrificial offerings recorded in these inscriptions according to the kind of victims and the number used on each occasion.^[92] Each of these accounts is related to the sacrificial offering to a particular ancestral spirit, or other idol, like a river god, mountain spirit and so on. Chang found in these accounts that the victims offered might be ox, sheep, pig, dog, human being, deer, elephant, tortoise, and even rhinoceros. He found out also that the ox, sheep, pig, and dog were evidently domesticated and perhaps some of them were specially reserved for this particular purpose. As for human beings, Chang cited a special record to show that at least some of the human victims were captives. Even more interesting as recorded in these inscriptions is the number of victims employed, which varied considerably. Chang collated in his article the number of oxen cited as being offered as sacrifices with the number of citations as follows:

Number of Victims Recorded in Oracle Bone Inscriptions

用兽数中记录次数

不定数 (不确定)

23

23

37

6

53

2

8
9
20
15
20
30
22
50
600
200
1,000

The number of sheep, dogs, and pigs employed for sacrificial purposes also varied a great deal but none of these victims exceeded one hundred in a single offering. As for tortoises, deer, and elephants or rhinoceroses, all were comparatively rare. In the case of human victims, however, according to Chang, there is at least one record that gives the number as three hundred, and another records the number as one thousand, but generally the number varies like the list of oxen above. Whether the isolated instances of three hundred and one thousand human victims could be interpreted in any other way remains a problem that can be solved only by new data.

The other four items of field data under category B are all of fundamental archaeological significance, as each of them—fauna and flora, ceramic collections, various stages of underground construction, and different orientations of surface buildings—has provided basic materials which illustrate concretely the ways of life during the initial historical period in the last quarter of the second millennium B.C., when Chinese civilization was still in the making.

Special monographs and articles devoted to studies of fauna and of ceramic materials from this site were issued many years ago; let me mention some of the results briefly here.

In a special monograph on mammalian remains, Pierre Teilhard

de Chardin and C. C. Young identified no less than twenty-four species from the mammalian collections made by the various Anyang expeditions in the early period, which had been sent to the Cenozoic Laboratory for special investigations.^[93] The twenty-four species identified by Teilhard and Young are divisible into almost twenty genera: namely, *Canis* (dog), *Ursus* (bear), *Meles* (badger), *Felis* (tiger), *Catacea* (whale), *Epimys* (rat), *Rhizomys* (bamboo rats), *Lepus* (hare), *Tapirus* (tapir), *Equus* (horse), *Sus* (pig), *Hydropotes* (water deer), *Pseudaxis* (Sika deer), *Elaphurus* (David deer), *Ovis* (goat), *Capra* (domesticated goat), *Bos* (ox), *Bubalus* (water buffalo), *Elephas* (elephant), *Macacus* (monkey).

One of the most interesting conclusions drawn by these two eminent paleontologists was that "the Anyang citizens [of the Yin-Shang period] were industrious commercial and agricultural people, working to the bone extensively for economic purposes, and that in addition, they regarded the hunting of big game as a royal achievement. These conditions explain why the faunistical remains recovered from the ruins of the city are so abundant, so various, and so heterogeneous."

The two authors also recognized three distinct groups among the examined mammals: (1) the wild indigenous group, (2) the domesticated local group, and (3) the foreign imported groups. The raccoon-dog, the bear, the badger, the tiger, the panther, the common rat, the bamboo rat, the hare, the water deer, and the Sika deer are examples of the indigenous wild animals. For the domesticated group, the authors named the dog, the sheep, and the goat; the *Elaphurus* (deer), the *Bos* (ox), the water buffalo, and the *Macacus* (monkey) were also included in this group.

For the definitely foreign, imported group, only a small list is given, which includes the whale, the elephant, the tapir, and a small bear. Regarding this last group, the authors had this to say:

Bones of whale could easily be collected anywhere along the closest seashore. Elephant and Tapir, on the contrary, seem to have been imported alive from the south. An extensive trade between Anyang and southern China is proven by the

discovery in the ruins of the city of ingots of tin and also of an enormous quantity of *Lamprotula* shells. This thick *Unicnid* (used for its mother-of-pearl) has become rare ever since the Upper Pleistocene in N. China. It was therefore probably brought to Anyang from the Yangtze valley. ... [p. 56]

The authors discussed with great erudition the history of mammalian fauna in north China and, at the end, drew the further conclusion that the water-buffalo was possibly domesticated in China in early prehistoric times, as the ancestral type of buffaloes was traceable to the Pleistocene Age. At any rate, buffaloes were found to be as abundant as oxen in the later excavations at Anyang. Whether they were offered in sacrificial rites is, however, not yet definitely determined.

New data resulting from investigations in subsequent seasons have added to the list of mammals found in Anyang. Especially interesting is the bone of a peacock, which was evidently an immigrant from the south. It should also be noted that horses were found in great number in later excavations.

Our attempt to study the flora was, unavoidably, a miserable failure. We had made a collection of wood charcoal from the excavations, amounting to thousands of test tubes. This precious collection, if it had been duly investigated by authorities like Father Teilhard, might have provided the fundamental data for our knowledge of Yin-Shang botany in the neighborhood of Anyang and would certainly have given us some ideas about the climatic environment of this period. But these data disappeared and were irrecoverably lost to science during the war.

We were, however, more fortunate with our ceramic collections, which I myself took great pains to register, classify, and catalogue, and finally brought together into a corpus. My monograph on Anyang pottery was published in 1956 and includes the entire corpus of Yin-hsü pottery.^[94] Although I will go into more detail on the technological and decorative aspects of these ceramics in chapters 11 and 12, here I would like to briefly mention some of the main characteristics of this collection.

The total number of registered pot-sherds was nearly a quarter of a million. Of this enormous amount, nearly 80 percent were collected during the last three seasons at Hsiao-t'un when, through accumulated experience, all members of the field staff were familiar with the up-to-date criteria of classification and registration. Mr. Wang Hsiang, who had been from the very beginning of the Anyang excavation assigned to the special task of pottery collection, was able, before his departure for wartime service, to give a full report containing a classified list of the total collection in the field. The field team, after returning from the thrilling experience of excavating the royal tombs at Hou-chia-chuang and enriched by the great quantity of precious white potteries they had found there in the royal cemetery, had gained a deeper insight into the craftsmanship and technology of the ceramic industry of the Yin-Shang era. It may be said that all the members of the field staff had a full knowledge of the typical Yin-Shang ceramics, divisible into the following four classes by their outside appearance alone:

~~Class 1~~ **Black** pottery, nearly 90% of the total collection

~~Class 2~~ **Red** pottery, about 6.86% of the total collection

~~Class 3~~ **White** pottery, about 0.27% of the total collection

~~Class 4~~ **Hard** wares, about 1.73% of the total collection

In addition to these four typical Yin-Shang products, there were also a fifth and a sixth group: black pottery and painted pottery. Although the white pottery of Yin-Shang period, which has long been considered typical of the ceramic products of this epoch, was highly valued by collectors, from a purely technological viewpoint, however, the hard wares, many of which were covered with a thin layer of primitive glaze, were really a great discovery, totally, unknown before. When this was first announced in the newspapers, the veteran British Sinologue and antiquarian, Professor Perceval Yetts, immediately wrote to me and announced it to the Royal Asiatic Society in London. Our archaeological collection included several nearly complete specimens of both the white pottery and the glazed hard wares. Many of the archaeologists of this institute have always

cherished the idea that these specimens are even more valuable than the more spectacular field collection of bronzes, including the huge tetrapods from the royal tombs.

Leaving Group B, subgroups 4 and 5 for later chapters, I shall devote the remaining portion of this chapter to some descriptions of what I consider the two major unexpected discoveries of Group A, all made in the last three seasons of the Anyang excavation. Let me relate them in order.

Chariot Burials Paleographers knew long ago that wheeled vehicles had existed in the Shang dynasty. During the Anyang excavations, decorative pieces made of bronze and apparently intended for some parts of chariots were found frequently in early diggings at Hsiao-t'un, and disassembled carts had been discovered in the royal tombs at Hou-chia-chuang more than once. All these findings were important indications of the existence of wheeled vehicles during the Shang dynasty, but they could hardly serve for any systematic reconstruction of the original model of this important means of transportation. It was not until the thirteenth season, and on the thirteenth day of April in 1936, that Professor Kao Ch'ü-hsün, in charge of clearing Subarea C in Hsiao-t'un, first discovered underneath a layer of pounded earth a distinct boundary line marked by traces of brilliant red lacquer. This led to the discovery of M20. This particular subsection was known as C74; here the boundary line was found at about 0.80-1.00m. below the existing surface. When the surface pisé layer was scraped away, an elongated pit 2.90m. × 1.80m. appeared. This was the famous chariot pit, M20, of Hsiao-t'un, in which some complete chariots with four horses had been buried and were found almost intact (Fig. 17).

17 M20, the chariot pit of Hsiao-t'un 小屯的车马葬坑M20

18 Distribution and locations of the chariot pits 车马葬坑位置分布图

M20 of Hsiao-t'un, discovered at C74, proved to be only one of the five chariot burials in this section: the other four were located respectively at C72, C73, and C120 as Figure 18 shows. These five chariot burials were found very close to one another and apparently in some kind of order, which led Shih to recognize in later studies that they were sacrificial burials offered for a definite purpose. But the other four pits had been disturbed either by later intrusion or by subsequent construction. Only M20 remained more or less intact. Still, when it was opened, it was found that the overlying pounded earth and the underground moisture had damaged the skeletal remains of both animals and men, and that such perishable materials as wooden frames and leather bindings had already decayed to such a degree that only traces of outlines could be perceived. The metallic gadgets and stone pieces and some bones had survived the centuries intact. Nevertheless it was possible for the field men to get approximately accurate records by means of photographing and sketching *in situ*. To this day, M20 remains one of the few assemblages of the earliest field data on which could be based a study of the history of the "wheeled?" vehicle in ancient China.

I have put a question mark following the term "wheeled," because actually when this pit, M20, was opened, there were found four

horses, three human bodies, and traces of chariots but not the slightest indication of a wheel. The field records, fortunately, were taken and kept in good order, and after years of continuous studies, a number of archaeologists and antiquarians concluded that M20 contained two-wheeled chariots from which the wheels had been taken and probably buried somewhere else, analogous to the custom of burying the human head and body separately.

Still the painstaking excavation of M20 helped to preserve together the essential parts of the main structure of the chariot body which could serve as basic data for later reconstruction. In this pit, the field workers found the following in order: (1) three human skeletons; (2) four horse skeletons; (3) decorated pieces for horse heads and bodies; (4) bronze devices from the chariot body: bronze terminals for both the shaft and axles; (5) weapons: three sets of halberts, small swords, and arrowheads; (6) bells for horses; (7) whips; (8) traces of wooden frames and leather bindings of shafts and axles; (9) yokes and crossbars; and (10) a stone *pi*-disc and other miscellany. The remains and artifacts recovered from M20 were studied by half a dozen specialists during the war and long after. But it was not until 1970 that Professor Shih Chang-ju was able to publish his reconstruction, based on his continuous study of these original data, which, with his permission, I reproduce in this summary.^[95]

I have no intention of going into details about Professor Shih's reconstruction of this important vehicle and its significance in the study of the history of early Chinese culture. I am aware of recent discoveries, similar in nature to M20 of Hsiao-t'un. Whether detailed comparisons will confirm Shih's reconstruction is an interesting speculation. Be that as it may, the excavation and research of M20 constitute a historical landmark signaling the beginning of the study of the "wheeled vehicle" in ancient China.

Shih's reconstruction (Fig. 19) shows one of the chariots buried in M20, with a single shaft and a bow-shaped crosspiece suspended from it near its front end. Attached to the crosspiece on either side were found the two forked bronze yokes for the two horses harnessed on

the right and left of the shaft-tree. The pieces that decorated the terminals of the axle, the shaft, and the yokes were cast in bronze. These bronzes, although all dismantled when found, were apparently in their correct positions relative to the original structure of a chariot drawn by two horses. It is of course important to note that although wheels were not found, the axle was definitely buried together with the under-carriage. This would mean that the axle did not turn with the wheels but was constructed as an integral unit of the under-carriage.

Further interesting evidence is supplied by the contemporary pictographs for wheeled vehicle. Of the fourteen sample specimens of this character in the oracle bone inscriptions, *ch'ê* (车), given in Professor Li Hsiao-ting's Dictionary,^[96] eleven varieties are presented (Fig. 20). It is possible that the form of the pictograph character for wheeled vehicle was undergoing rapid changes, parallel with the progress of the actual structural designs in this period. Shih holds that there are at least two different types of wheeled chariots which can be reconstructed on the archaeological evidence collected from Hsiao-t'un.

19 Reconstruction of chariot and head of horse 车辆和马头的复原图

20 Oracle bone characters for "chariot" 甲骨文中的“车”字

Underground Deposit of Archives (H127) The crowning achievement and, popularly considered, the greatest success of fifteen seasons' excavations in Anyang under the auspices of Academia Sinica

was the discovery of H127, an underground storage pit at Hsiao-t'un filled with thousands of inscribed tortoise shells. This discovery was made on June 12, 1936, the day when the season's work was to have closed according to the original schedule. It was in the thirteenth season, which had followed three successful expeditions to excavate the royal tombs at Hou-chia-chuang. In the middle of June, the Anyang summer is hot and the noon heat is sometimes unbearable, so the usual schedule is to stop the field work in summer. The following is a translation of the account of what happened on that day:

According to the pre-arranged schedule, June 12 was to be the last day of this season. But, at 4 P.M. on June 12, numerous tortoise shells suddenly appeared in H127. When we ended the day at 5:30 P.M., the digging party had cleared in one hour and a half only half a cubic meter of closely packed tortoise shells which, according to a rough counting, already amounted to no less than 3,760 fragments of tortoise shells. Indeed, this is a respectable number, in view of past experience! Naturally we postponed the work for one more day, anticipating that the extra time would be sufficient for the completion and clearance of the contents of this amazing archive! But, indeed, facts are stranger than fiction. The actual pleasure of discovery far exceeded our anticipations! The contents of H127 were, unlike the other underground deposits, found to be by no means mixed and disorderly; on the contrary they had been accumulated in an orderly fashion, so it became obvious that a new method of excavation and recording was needed. ...^[97]

Very fortunately the archaeologist in charge of H127 was Mr. Wang Hsiang, who, in addition to his long experience with the Anyang diggings, was also one of the most ingenious field workers. Wang spent the whole extra day extended to him cutting the hidden documents loose from the burying soil. When the sun declined again the next day the whole day's labor had apparently only succeeded in scratching the surface of the hidden treasure. It became immediately clear that trying to take out the oracle bones piece by piece was not the right procedure. Unanimously all the archaeologists in the field agreed to scoop out the whole mass in one big lump.

Once decided, the new method was immediately closely followed. The labor of cutting loose the complete mass of those hidden documents from the soil took four days and four nights, all the

members of the field staff working continuously without a moment's interruption. Meanwhile the news was communicated to the Nanking headquarters; and I, as chief of the Archaeological Section, immediately went to Anyang to conduct the final operation to the finish.

As there was no modern equipment in Anyang to handle such a heavy weight, how to move this hidden archive mass, which weighed over three tons, became the next difficult problem for the field workers. The huge mass was packed in heavy wooden planks and fastened firmly by iron straps. But to lift one single box weighing over three tons proved to be extremely difficult by local methods, not to mention moving it to the railway station although the distance was only a few miles. At that time, there was no modern road to speak of, nor any motor transportation.

Nevertheless the combined ingenuity of our field archaeologists and the local diggers finally solved the problem of transportation, still mainly by means of local tools plus a great deal of human labor. The heavy box was finally transported to the railway station on July 4. It took another eight days before this mass of buried documents from H127 was finally safely delivered to the headquarters of the Institute of History and Philology in Nanking for more detailed studies and investigations; the day of arrival was July 12, 1936.

Hu Hou-hsüan, assistant to Tung Tso-pin, was given the task of disassembling the mass of inscribed tortoise shells, which were closely stuck to one another after their three millennia of underground deposit. After many months of hard labor, Hu pointed out what he called the ten "Characteristics of the H127 Inscribed Oracle Bones," as follows:^[98]

1. Most of the records are datable to the times of King P'an Keng and King Wu Ting, especially the latter. Hu inferred that this archive must have been closed and stored away in Wu Ting's time.

2. Quite a number of the tortoise shells still retain the original writing in vermilion, indicating definitely that oracle bone inscriptions

were first written by brush, and only later incised.

3. Many inscriptions are filled with vermilion or black pigments in the incised marks.

4. Oracle crack signs, signifying luck or evil, are often trimmed artificially.

5. Carapaces of tortoises are frequently bisected for divinatory purposes; these fragments, when they are complete, are usually punctuated with a perforation at the end of the piece.

6. The sources of the tortoises are frequently noted on a selected portion of the tortoise shell.

7. Shells of a number of extra large tortoises, probably imported from the south, occur among this accumulated mass.

8. The total number of inscribed pieces in the mass is 17,096; of this enormous number of inscribed oracle bones only 8 fragments are from ox scapula, all the others (17,088) are from tortoise shells.

9. The burying of these documents, Hu inferred, was intentional.

10. Hu further figured that, in previous diggings, only four shells from Ta-lien-k'eng in the third season, and nine tortoise shells from Hou-chia-chuang in the ninth season, had been recovered. But, this time, from H127 alone, over three hundred inscribed tortoise shells were restorable! It was indeed an unprecedented achievement.^[99]

Tung Tso-pin, in the prefatory note to the second volume on Anyang inscriptions, had this to say: "Truly this event [the H127 discovery] should be written with large characters and deserves particular notice! It is indeed a miracle among achievements, taking all the fifteen seasons' work into consideration."^[100] Tung further quoted Shih's following passage from the article cited above:

The field number for the pit is H127 [at C113]...the upper and surface layer is a huge but shallow cavity [H117]: underneath pit H117 was found...H127. The uppermost part of H127 pit appeared 1.70 meters below the modern surface; which showed signs of having been somewhat intruded, but not obviously. The diameter of H127 at the upper opening is 1.80m., the depth of the pit is six

meters from the surface. ... The upper deposit was filled with greyish soil, the bottom layer was greenish soil, and between these two layers were the accumulated inscribed oracle bones and shells, ...which constitute the middle layer with a thickness of 1.60 meters. A human skeleton was also found accompanying these documented antiquities...^[101]

Shih's account was written five years after the discovery, when the Institute of History and Philology had moved its headquarters to Kunming, Yunnan province, during the Japanese invasion; the exact date of Shih's article is March 1940. It was a time, in the middle of Japan's invasion of China, when the whole nation was engaged in a life and death struggle. Shih was able to put on record this memorable event not only as an eye-witness but also as the man in charge of the field operations. So even Tung Tso-pin had to rely upon this information for his detailed studies.

If I conclude this chapter with this account, it is understandable. When Director Fu Ssŭ-nien originated the idea of taking Anyang as the first site to test the theory and methods of modern archaeology, he was mainly inspired by the well-known fact that in this region, the earliest written Chinese records had already been found. In other words, the main purpose of Fu's decision was to find out whether inscribed oracle bones still existed in the soil. And, indeed, the H127 shell-archive was discovered in the summer of 1936 after more than eight years of persistent labor guided by means of scientific method; it crowned an enterprise based on reasoning and on accumulated field experience! It was not luck that gave us the findings of H127. They were definitely the fruit of planned and accumulated scientific labor.

From a purely archaeological viewpoint, the discovery of the H127 archive was only one among a number of amazing achievements in the various Anyang expeditions which I have briefly described. In fact, the thirteenth, the fourteenth, and the fifteenth expeditions resulted in a large number of accumulated field records as well as material discoveries and field data of the highest value by any scientific standard, and these have provided the basic materials for the understanding of the true nature of the Anyang culture up to the present time!

Still, H127 stands out conspicuously as one of the climaxes which seems to have given us a kind of spiritual satisfaction beyond all others! So, speaking not just from a purely scientific viewpoint but with the memory of our elation, I consider it a fitting and proper subject to close this chapter on the field operations in the last three seasons.

陆：二战前小屯的最后三次田野发掘

1937年夏，日本的侵略打断了安阳发掘的计划。这一计划是在历史语言研究所所长傅斯年有力领导下，由受过训练的考古学家们在1928年制定的，除间或的中断外，共持续了九年。日本侵华是第二次世界大战这一世界性冲突的序幕。西方历史学家仍习惯于把希特勒进攻西欧的日子当作二战爆发的开始，完全忽视了这次全球性战争在远东舞台上的早期一幕。就历史事实而言，这段悲剧性的历史是不可割裂开来看的。

安阳发掘是在南京国民政府支持下由中央研究院承担的一项科学事业，因此，日本入侵华北后，活跃的安阳田野工作就不得不停止了。

1937年日本入侵华北前，安阳发掘在1935年冬梁思永决定暂停侯家庄西北岗王陵的发掘后，又进行了三次。它们分别称为安阳发掘的第十三、十四、十五次，集中在小屯遗址，运用了一套系统的“卷地毯”的方法，探寻殷商王朝最后一个都城的建筑基础。田野工作日程表与工作人员的组成及其变换可以参见下页的表。

在采用这种方法进行最后三次发掘时，我们自然偏重那些与前九次的遗迹有联系的地方，即夯土较多、过去又很少被盗的地方。因而这三次田野工作几乎全集中于B区和C区。这两区又用测量仪器分为若干同样大小，即面积为1600平方米（40米×40米）的工作单位。在地图上，每个单位又分为面积为100平方米（10米×10米）的探方。探方是需仔细考察的地段中的最小单位，全都按特定顺序用连续数字编号，如C126，意为C区的第126号探方。

发掘人员

1936年4月至27个窖穴，181个墓葬。无轮廓但有柱石的基址。基址旁有水沟；发现H 127。

祁延霏

高去寻

尹焕章

潘 愨

1936年7月发掘面积3590平方米；26个基址；122个窖穴；132个墓葬。发现下沟。

尹焕章

另有四人

1937年1月1日发掘面积3700平方米：基址20个；窖穴220个；地下沟120条；还有跪葬人牲的门，许多遗物。

潘 愨

另有四人

从第十三次发掘开始，窖穴和墓葬也用序号标出，英文大写字母H（灰坑）表示前者，M（墓）表示后者，如H127或M164。

最后三次田野发掘主要目的是完成与甲骨文同时的建筑基址的考查，但具体程序自然依发掘的进展和地下各处的情况而有所不同。这些情况在每个地方都不相同。例如，夯土的技术与外观就没发现有相同的。有的夯土是为了填平低洼地方，有的是为了建筑独立的墙壁，最常见的是用作地面建筑物的基础。以筑墙而论，打夯土前就需拟好计划。为建筑物打基础的时候定然要按照一种建筑“蓝图”来展开，因为首先要平整地面，凡是有坑或穴的地方都要填上，高的地方要铲平。自田野队在第四次发掘时发现了夯土技术的主要作用后，就对它进行了认真研究。田野工作者都知道，有的地方夯土深达几米，而有的地方则很浅，地面上只留有一层不到20厘米厚的压过的土。他们进一步推论，这种技术或许是在商朝迁都到安阳后才发展起来的。在发掘过程中还发现，无论夯土层厚度如何，它下面常常有其他建筑遗迹——地下居所、窖穴、水沟，或有墓葬及其他史前遗迹。石璋如教授认为，这些地下建筑是商朝早期文化的一部分，它们建于盘庚迁都到这里之前。

让我们看一看在夯土层下发现的殷以前的一些建筑遗迹（详见第10章）。

● 地下居所和供贮藏用的窖穴

第二次世界大战前我们在安阳的最后三次发掘的面积，比前九次发掘的面积总和还要大。这三次发掘的总面积达12000平方米，而前九次总的发掘面积仅为8000多平方米。比较地下住所和窖穴的数目，前九次发掘的总数仅为123个，而最后三次清理的这类建筑有479个。更重要的是，发现了规则的地下排水沟体系，水沟的两壁用木桩加固。这必定是建于商代夯土时期以前。毫无疑问，水沟是居民普遍居住在地下窖穴和半地下住所时设计的。

据石璋如教授的研究，这些地下窖穴和住所可主要分以下几类：

圆形或椭圆形的窆（图14） 这些地下洞穴有时是像两个相连的房间一样成对出现。有些窆很浅，距现今地表不到1米，有的向下达7至10米，乃至更深。这种深窆的壁上常挖有供脚蹬的竖排脚窝；它们有的是相对排列的，有的则位于同一侧。石教授把这种窆又分为六类，前两类为平底或底部不规则，较浅，直径约为1.5米，这些窆常在夯筑基址的上面。但较深的窆常达3米多深，大多数是在夯筑之下，故它应先于夯土时期。石根据脚窝的排列方式把较深的窆再分为四类，这些窆多是为贮藏东西而设计的。据石教授说，这贮藏用的窆大部分是在小屯遗址西边发掘到的。

长方形或正方形的窖（图15） 这类地下建筑的深度从1.10米到10多米不等。像上一组一样，窖壁上有供上下用的脚窝。同样，大多数深窖建筑要早于夯土时期。但较浅的窖明显是后来建的。大多数窖也像窆那样深，显然也是用于贮藏的，因为它们都较窄，底部面积少有超过4平方米的。

穴形坑（图16） 这类地下建筑包括一些宽而浅的地下居所。这种地下居所多数仍保留着一段台阶；有的台阶靠着居所墙壁，有的位于穴室中间。居所地面多是平的，有的分为两部分。整个地面呈现出圆形、椭圆形或长方形（参看本书第320-327页讨论）。大多数穴室地面的面积有10多平方米，最大的可能超过30平方米。其深度一般在地下2至3米之间，但在罕见的一例中（7: H23），这种坑几乎向下深至6米，并有一段17级的台阶。

石教授说，这类地下居所绝大多数是在夯土基础下发现的。这显然表明它们是早期当地人的住所。石教授还认为，从两米的平均深度判断，墙必定会高出地面，所以屋顶也会完全位于地面之上。

半地下居所 最后石璋如还补充了另外一组，他称之为“半地下居所”。这些半地下居所的地下部分不到1米深，横截面为圆形、椭圆形、方形或长方形。其中，圆形的直径一般为3米多，方形或长方形的居住面积在20至30平方米之间。这些半地下居室有一个特点，居所底部边缘常有柱洞，这表明曾经有木桩用来筑墙和支撑地面上的房顶。

根据这四组地下建筑多数位于夯土基础之下的事实，石璋如在一篇专论中发表了如前所述的结论：大多数地下建筑遗址是盘庚迁都到此之前的早期居民留下的。^[88]但也有例外，在继续发掘的过程中发现许多深

陷的坑和窖与夯土基础是同时期的。这些坑和窖或为贮藏而建，或像我在早先的一篇文章中所说的那样，为埋葬牺牲而建。^[89]事实上，几乎没有发现在夯筑技术应用后建造的地下居所。此地成为都城后，大部分居所就盖在地面上了，这一点似乎已十分清楚了。几乎可以肯定，盘庚在此定都后，除埋葬牺牲外，没有建过地下的宗庙和宫殿。

最后三次有组织的大规模田野发掘，在小屯的东北揭露出大量祭坛、宗庙、宫殿、作坊和住宅的建筑基础，这已在《中国考古学报》^[90]上发表了。本书第十章将论及所有这些发现物，并介绍其复原的可能，它们将成为借以认识商史的主要考古贡献之一。

然而，应该首先谈谈其他重要的田野发现。我一直在思考，通过研究田野工作者1928年到1937年，尤其是在最后几次考察中积累的证据，确立小屯地下堆积的文化顺序。已确立的考古学的顺序可扼要摘录如下：

1. 最下层的堆积遗迹表明，小屯遗址最早的居民是住在地下居所、并已创造了龙山或黑陶文化的史前人。
2. 继龙山文化之后的是数目众多的地下坑、窖和地下居所，它们属于盘庚迁都到此以前的商代早期。
3. 以安阳作为都城的殷商时期，夯土建筑方法已被采用，地面建筑广泛发展。
4. 商灭亡后的遗迹主要是墓葬。

• 十三、十四、十五次安阳发掘的重大发现

小屯最后三次发掘的出土物数量和未预料到的发现，超出了包括所有老手在内的每个有田野工作经验的参加者的预料。我将逐条列出从1936年夏到1937年6月底安阳发掘最后阶段所获得的几组较重要的发现物。我选取的类别不仅本身有价值，而且可以为解答一些老的历史问题提供新的资料。

A组 最后三次中重要而又未预料到的发现：

1. 车马葬
2. 刻字甲骨的地下档案库（H127）

B组 由观察和物证的积累而解决的问题：

1. 人牲
2. 动植物
3. 陶器收集
4. 地下坑穴和居所的演进阶段
5. 地面建筑基址的朝向和规模

A组所列的是偶然获得的发现物，而B组的是有计划的科学记录和逐步搜集积累资料所得的结果。在本章里，我将深入论述出人意料的A组发现物。B组中的大部分项目将在以后讨论，但我要先扼要地提一下它们的主要特征、搜集方法和发现的环境。

我把“人牲”列为B组的第一项有其特殊原因。此前第五章中曾论及这种野蛮的习俗遍及青铜时代的新旧大陆。那一章关于“人牲”的叙述可用以说明，这种习俗仅限于与丧葬有关的牺牲仪式。实际上，这是田野考古工作者一开始的看法。但最后三次在小屯出土的证据确定地表明“人牲”这一习俗还有其他目的：它与建筑的奠基或每年祭祀各种神灵有关。这类神灵可能是抽象的，如河神；也可能是具体的偶像。这一点值得一叙：例如，在探寻B7区的基址时就发现了这类情况。

B7基址仅发现了左边部分，右边部分已被从东面围绕小屯农田的洹河淹没。已发现的部分夯筑基址东西长度不少于40米，南北超过30米。在B7夯筑基址仅存部分中发现一系列牺牲坑，很明显地表示它们是按一定规则排列在夯筑基址南边的。在石璋如的报告中，每个坑用一符号表示，见下表：

牺牲物代号

Ⅲ22牛

Ⅲ22狗、两只羊

Ⅲ9牛

Ⅲ10条狗

Ⅲ狗、一只羊

Ⅲ狗

Ⅲ狗、三只羊

Ⅲ牛

Ⅲ16面北跪着的人

石根据上表总结道，在这排牺牲坑中，共发现十一头牛^[91]、六只羊、二十条狗和一个人。更使人惊异的是，石璋如在建筑物门边发现了另外的坑，他认为这些牺牲坑和架起前门时的“破土仪式”有关。根据石的记录，还有三个人献祭并葬于此地。这些坑在基址的左、右与中央，即要放门柱础石的地方。三个人牲分别见于这三个坑中，呈跪姿，旁边各放一戈。再向南，在门的正前方发现第四个人牲。可以说他是守门的卫士，手持矛和盾，同样呈跪姿被埋葬，朝向北面。

张秉权教授在根据甲骨记录写成的一篇文章中，把甲骨文中记载的牺牲供奉条目，按每次活动用的牺牲品的种类和数量分类。^[92]每一条目都与一个特定的祖先或其他偶像，如河神、山神的祭祀有关。张在记录中发现，用以祭祀的牺牲可能有牛、羊、猪、狗、人、鹿、象、龟，甚至还有犀牛。他还认识到，牛、羊、猪、狗明显是驯养的，也许有一些还是专为这种目的而饲养的。至于人牲，张引用了一条特殊的记录证明，至少部分人牲是俘虏。更有趣的是，甲骨文中记载的使用牺牲品的数量差别很大。张在文中核对了甲骨文中记录的用作牺牲的牛的数量及各自被提及的次数，结果如下：

为牺牲用的羊、狗和猪的数目也有很大变化，但是这些牺牲品没有一种在单次祭祀中的数目过百的。龟、鹿、象或犀牛则较为罕见。至于人牲的数量，据张秉权教授说，至少有一次记录了300人，另一次记录了1000人，但通常这个数字像上面所列的牛的数目一样是变化的。300和1000个人牲的孤例是否能用其他任何理由来说明，仍是一个有待新资料来解决的问题。

B组中的其余四项田野资料都具有根本性的考古意义，因为动植物、陶器收集、地下建筑的不同阶段、地上建筑的朝向，每一项都为具体说明公元前第二个千年最后二百五十年这段最初历史时期中人们的生活方式，提供了基本的材料，当时中国文明仍在成形期。

研究这个遗址出土的动物和陶器资料的专著和论文多年前已发表。在这里我简要地介绍一些研究成果。

最初几次安阳发掘收集到的哺乳动物遗骸被送往新生代实验室进行专门研究。德日进和杨钟健在研究哺乳动物遗骨的专著中鉴定出了其中24种。^[93]这24种动物大致可归为二十个属：狗、熊、獾、虎、鲸、

鼠、竹鼠、兔、獾、马、猪、獐、鹿（梅花鹿）、四不像（麋鹿）、殷羊（羊）、羊（驯养山羊）、牛、圣水牛、象和猴。

这两位杰出的古生物学家得出的最有趣的一个结论是：（殷商时期的）安阳人是勤劳的商人和农人，他们为了经济目的奋力工作。另外，他们把捕获大型猎物视为皇室的成就。这可以解释为什么从殷墟发现的各类动物的遗骸数量如此庞大，种类如此多样。

两位作者在研究的哺乳动物中也分出了三个明显的类别：（1）本地野生动物，（2）本地驯养的动物；（3）外地引进的动物。狸、熊、獾、虎、豹、鼠、竹鼠、兔、獐、鹿是本地野生动物的代表。关于驯养的，作者指出有狗、羊、殷羊，还包括四不像、牛、圣水牛和猴。

明显是外地引进来的动物，作者罗列的不多，其中包括鲸、象、獾和一只小熊。关于这一类，作者有如下描述：

鲸骨在附近海岸到处都可很容易地采集到，而象和獾看来是从南方引入的活物。安阳和中国南方之间贸易频繁已为殷墟发现的锡锭和大量的蚌壳所证实。这种厚实的珠蚌（用作母贝）在华北地区自上更新世以来即已罕见，因而它可能是从长江流域带到安阳来的……（第56页）

两位作者旁征博引，讨论了华北哺乳动物群的历史，结尾时进一步推断，圣水牛可能是中国史前早期驯养的，因圣水牛的祖先可以上溯到更新纪。不管怎样，安阳最后三次发掘发现的圣水牛的数量与牛一样多，但它们是否用作牺牲仪式中的祭品还不能确定。

后几次发掘研究所得的新资料也加入了安阳的动物名单。尤为有趣的是孔雀骨，很明显这是从南方引进的。还需注意的是，在最后几次发掘中发现了许多马的遗骸。

我们研究植物群的计划无奈地遭遇了不幸的失败。在发掘中我们收集的木炭达几千试管。这批珍贵的收集，如果能得到德日进神甫那样权威的专家的及时研究，可为我们了解殷商时代安阳附近的植物提供根本性的资料，当然也会使我们对这一时期的气候环境有一些认识。但这些资料在战争期间丢失了，对科学来说这是无可挽回的损失。

然而，我们的陶器收集比较幸运，我费了很大工夫对它们进行登记、分类和编目，最后整理成集。我的关于安阳陶器的专论在1956年发表，其中囊括了整个殷墟陶器群。^[94]虽然在第十一、十二章我会更详细地论述这些陶器的技术和纹饰，但在这里我想简要谈谈这些陶器的几个主要特征。

登记的陶片总数近25万片。在这么大的数目中，几乎80%是最后三次发掘在小屯出土的。有了经验的积累，田野工作的全体队员都熟悉了最新的分类和记录标准。安阳发掘一开始，王湘先生就被委以收集陶制品的专门任务，他在离开这一工作去参加抗日战争之前，已完成了一份包括田野收集的全部陶器分类表的详细报告。田野考古队在经历了令人兴奋的侯家庄王陵发掘，见识了在那里发现的大量珍贵白陶后，对殷商时期的制陶技术和工艺有了更深刻的认识。可以说，全体考古队员关于典型殷商陶器已有足够的知识。这些陶器仅从外观来看可以分成以下四类：

I类灰陶，占总数的近90%

II类红陶，约占总数的6.86%

III类黑陶，约占总数的0.27%

IV类白陶，约占总数的1.73%

除上述四类典型的殷商陶器制品外，还有第五类黑陶和第六类彩陶。虽然，一直以来被认为是殷商时期典型陶器的白陶曾得到收藏者的极高评价，但从纯技术观点出发，真正的重大发现是从前完全不为人知晓的硬陶。这种陶器的表面大多覆有一层薄薄的原始釉。这一消息首次在报纸上公开发表时，经验丰富的英国汉学家和古物学家叶慈教授就立刻给我写了一封信，并把此事通报给伦敦的皇家亚洲文会。我们的考古收集中有几件近于完整的白陶器皿和上釉硬陶标本。研究所的许多考古工作者认为，这些标本比在田野收集到更壮观的青铜器，包括王陵出土的巨大青铜方鼎，更有价值。

B组的四、五两项将留待后面的章节专门叙述。在本章余下的部分中，我想谈谈A组下面两个出人意料的重要发现，它们都是最后三次安阳发掘中出土的。下面我来依次介绍。

车马葬 古文字研究者早就知道商代已有带轮的车。在安阳发掘期间，明显用作战车部件的青铜装饰碎片在小屯发掘早期时有发现，而在侯家庄王陵发掘中也多次发现已散架的马车。所有这些都是商代存在带轮车的重要迹象，但要对这种重要的交通工具的原型进行任何系统的复原，依靠它们几乎是不可能的。直到第十三次发掘时，1936年4月13日，在小屯负责清理C区的高去寻教授才第一次发现一层夯土下有鲜红漆痕标示的清晰界线。这导致了M20的发现。这部分以C74著称，这条界线就是在这里距现今地面0.80—1.00米处发现的。当地表夯土层被挖开后，

出现了一个2.90米×1.80米的长方形坑。这就是小屯著名的M20车马葬坑，坑中埋有完整的马车和四匹马，几乎从未被扰动过（图17）。

C74内发现的M20被证明仅是此区五个车马葬坑中的一个，另外四个坑分别位于如图18所示的C72、C73、C120内。这五个车马坑距离相近，明显是按某种顺序埋入的，由此石璋如在后来的研究中认识到，它们是供有特殊目的的祭祀使用的牺牲埋葬。另外四个坑或被后来的盗墓者干扰过，或被后期的建筑破坏，仅M20保存较完好。不过，当它被揭开时，仍旧发现上层的夯土和地下的潮湿已损坏了人和动物的骨骸，而像木架、皮带这些不耐久的材料则已经腐烂，只能辨别出其轮廓的痕迹。金属零件、石块和一些骨头完好地保存了许多个世纪。然而，田野队员仍有可能通过就地素描和照相的方法进行较确切的记录。直到现在，M20仍是为数不多的可据以研究古代中国“带轮（？）”车辆历史最早的田野资料之一。

我在“带轮”两个字后加上问号，是因为M20揭开时，虽已发现四匹马、三个人的残骸和车辆的残迹，但丝毫没有轮子的迹象。幸好田野记录得到了妥善保存。继续研究了几年后，许多考古学者和古物学家推论出，M20中含有双轮马车，但轮已被卸下，大概葬在别处，这与身首异处埋葬的习俗类似。

然而，依靠对M20的辛劳发掘，车身主体结构的关键部件全都得以保存，可作为后来复原的基本资料。在这个坑中，田野工作者依次发现了：(1) 三具人骨架；(2) 四具马骨架；(3) 马头、马身上的装饰品碎片；(4) 车身上的青铜装置：车辕和车轴的青铜制末端；(5) 武器：三套戈、削和箭头；(6) 马铃；(7) 鞭；(8) 车辕和车轴上木架和皮带的痕迹；(9) 轭和衡；(10) 一块石璧和其他杂物。在抗战期间及战后很长一段时间，有五六位专家对M20出土的遗迹和遗物做了研究，但直到1970年，石璋如教授基于对原始资料的不断研究，才出版了他的复原著作。经允许，我在此简要介绍。^[95]

我不打算详叙关于石璋如教授对车辆的复原以及它在中国早期文化史研究中的意义。我意识到，近期有些发现在性质上与小屯M20相似。详细的比较能否证实石教授的复原，思考这一问题很有意思。不论如何，M20的发掘和研究是一个历史的里程碑，标志着古代中国“有轮车”研究的开始。

石的复原图（图19）中展现了M20中埋葬的一辆车，包括一个车辕

和一个在靠近其前端的地方悬吊的弓形车衡。车衡两边有叉状青铜轭，供在车辕的左右两侧套马匹之用。车轴、车辕和轭末端的装饰物是青铜铸造的。虽然这些青铜车器发现时已全部散架，但它们明显仍处在两匹马拉的车的原结构的相应位置。需要注意的是，虽未发现车轮，但车轴肯定是和车座埋在一起的。这表明车轴不随车轮转，而是作为车座的一个内部单位。

更有趣的证据是由同时代轮车的象形字提供的。在甲骨文中14个“车”字。李孝定教授的字典^[96]中列出了11个车字的字样（图20）。车的象形字字形可能一直经历着快速的变化，这与此间车的实际结构的设计发展同步。石认为，根据小屯收集的考古证据，至少可以复原出两种不同的轮车。

地下档案库（H127） 一般认为，中央研究院主持的前后十五次安阳发掘取得的最高成就和最大成果是H127的发现。在小屯发现的这个地下贮藏坑里堆积着数以千计的刻字龟甲。H127是在1936年6月12日发现的。根据既定的日程，要在这天结束这次发掘工作。这是第十三次发掘，紧接在三次成功探索发掘侯家庄王陵之后。6月中旬安阳的夏季炎热，有时中午酷暑难当，所以一般安排是夏季停止田野工作。下面是6月12日发生的情况的记载：

本来预定的计划，是6月12日结束。但12日的下午4时，在H127坑中发现了许多龟版。我们是5时半收工的，在一个半钟头的时间内，不过半立方米的土中，出了3760块龟版，在量上说也很可观了。单为这一个坑，展限了一日工作，预于次日，竭竟日之力把它肃清，谁知事实遮没了我们的想象，愉慰超过了我们的希冀。坑中包含的埋葬物，并不是像平常那样的简单，遗物的排列，并不是像平常那样的乱杂，不能以普通的方法，来处理这特殊的现象……^[97]

非常幸运的是，负责H127发掘的是王湘先生。他不仅有长期从事安阳发掘的经验，还是位最有独创性的田野工作者。王用多出来的这一天来挖取埋在土中的龟版。第二天太阳下山时，一天的工作也只取出了埋藏珍品的皮毛。他很快意识到，试图一块块取出卜骨的方法行不通。全体田野考古工作者一致认为应把它整块挖出来。

一经决定，就立即采用新的方法。全体队员一刻不停地工作，用了四昼夜的时间，将这一整块埋藏资料挖出来了。同时这一消息也报告给了南京的研究所。我作为考古组的负责人，即刻奔赴安阳指导最后阶段的操作。

因为当时安阳没有处理这么重的物品的现代设备，所以田野工作者

面临的第二个难题就是如何把这三吨多重的埋藏档案块运走。这个大土块被装在厚木板做成的箱子里，又用铁条牢牢加固。但要用当地的办法移动一个重三吨多的木箱都极为困难，更不用说把它运到火车站了，虽然车站就在几英里开外。那时根本没有现代的公路，也没有用动力牵引的运输工具。

然而，依靠我们田野考古工作者与当地发掘工人的集体智慧，最后还是用本地工具加大量人力的方式解决了搬运的问题。那只沉重的大木箱于7月4日被运到了火车站。又经过了8天时间，出自H127的这件埋藏档案的土块才安全运到了南京历史语言研究所所址，供更细致的研究和调查之用。它抵达的日期是1936年7月12日。

这些刻字龟壳在地下堆积了三千年以后互相紧密地粘在一起，董作宾的助手胡厚宣承担了剥离它们的任务。经过几个月的辛勤劳动，胡厚宣指出他所谓的“H127字甲的特点”有以下十个：[\[98\]](#)

1. 此坑甲骨文的时代多可追溯到盘庚和武丁时期，尤以后者居多。胡推断这坑甲骨可能是武丁时贮藏后封闭的。

2. 很大一部分字甲仍保留原来用朱色书写的痕迹，这明显地表明甲骨文是先用毛笔写成，然后才刻字。

3. 刻纹中涂朱或涂墨的情况很多。

4. 表示吉或凶的龟甲卜兆，常有人工修整的痕迹。

5. 为了占卜，龟背甲常由中间锯开成两部分。龟甲断片在完好时常在一头打孔以备贯穿。

6. 龟的来源常记录在龟甲特定的部位。

7. 此坑中有不少特大龟甲，大概是从南方进来的。

8. 此坑共出土有字甲骨17,096片，其中仅有8块是牛肩胛骨，其余17,088片都是龟甲。

9. 胡推断这些甲骨档案是有意识窖藏的。

10. 胡还进一步指出，第三次发掘时在“大连坑”中仅出土4版龟甲，第九次发掘从侯家庄出土9版龟甲。但这次仅从H127内就可复原三百多版！这的确是前所未有的成就。[\[99\]](#)

董作宾在《殷虚文字乙编·序》中这样说：“这真是应该大书特书的

一件事，也是十五次发掘殷墟一个破记录的奇迹。”^[100]董在文中引用了石璋如的一段话：

窖的田野号数，叫做H127 [位于C113]上层.....是一个大而浅的灰土坑 [H117]，在H117下发现了.....H127。[H117] 曾破坏了H127坑东边的一部分。..... [H127] 上口距地面一公尺四寸，H127的口径约一公尺八寸，深距地面约六公尺.....窖内的堆积，.....上层为灰土，下层绿灰土，中间一层是堆积灰土与龟甲，.....所占的空间高约一公尺六寸。还发现一个人骨架伴着这些古代档案.....^[101]

石的文章是H127发现五年后写的，当时正值日本侵略中国期间，历史语言研究所已把所址搬到了云南省昆明。石写文章的确切时间是1940年3月，正是日本侵略中国的中期，中华民族正进行生死搏斗。石能把这件难忘的事写出来，不仅因为他是个见证者，而且因为他还是负责此次田野工作的人。所以，董作宾在他的细致研究中也要依靠这个材料。

以这段叙述来结束这一章，是可以理解的。当傅斯年所长选择安阳为第一个遗址，以此检验现代考古学的理论和方法时，他主要是被在该地区已经发现最早的汉字书面记录这一广为人知的事实所鼓舞。换句话说，傅作出这个决定的主要目的是要确认有字甲骨是否仍存在于地下。果然，在科学方法的指导下，经过八年多坚持不懈的工作之后，于1936年夏季发现了H127龟甲档案库。它把这项建立在推理和田野经验积累上的事业推向了顶峰！H127的发现并非侥幸，这定然是有计划的长期科学工作的结果。

单从考古学上看，H127档案库的发现仅是安阳多次发掘获得的众多惊人成就之一。前面我已将这些成就简要地介绍过了。实际上，最后三次探索获得了大量田野记录、物质发现和田野资料，无论用哪种科学标准衡量，这些都可算是体现了最高的价值。而且，它们为今天了解安阳文化的真实性质提供了基本材料。

然而，H127作为一个发掘中的高潮卓然而立，似乎给了我们一种无可超越的精神满足！所以，不仅从单纯科学的观点来看，同时伴随着我们欢欣鼓舞的回忆，我认为以此来结束关于最后三次田野发掘的这一章，是再合适不过的了。

7. Wartime Efforts

to Continue the Anyang Research

By the summer of 1937, it became inevitable that the Japanese militarists, encouraged by their political and military successes since the Meiji era, would continue their expansion and their aggressive policy toward China until...they had swallowed the whole territory of Southeastern and Eastern Asia. Although the revolutionary government established in Nanking by the followers of Dr. Sun Yat-sen was militarily still far inferior to the Japanese army and navy, and therefore unable to engage the Japanese on a large scale, the policy makers of the Nanking government nevertheless decided to resist the Japanese invasion, and adopted the tactics of a small-scale but long-drawn-out war of resistance.

The eight-year resistance war is now recognized as an important initial phase of World War II with which modern historians are at least not totally unacquainted. This chapter will give a general outline of what happened in this period to the important archaeological collections from the fifteen expeditions of field work in Anyang, considered by many to represent one of the most distinguished scientific achievements sponsored by the Nationalist Government in Nanking.

When the elder statesmen of the Nationalists had originated the idea of establishing a national research academy, they had laid emphasis first of all upon physical and natural sciences; so the physics, chemistry, engineering, geology, and meteorology institutes were the first five to be established in Nanking and Shanghai. The Institute of History and Philology was inaugurated later, chiefly through the efforts of its founder, Fu Ssŭ-nien, as already described in chapter 4.

Less than ten years after the establishment of the Nanking government, the Japanese invasion of China actually started,

following the failure of repeated negotiations. The policy of long resistance, announced in Nanking, was unanimously supported by the whole nation.

Despite the chaos of wartime, the policy of scientific education was still maintained though it naturally suffered reduction and many changes. Active research could not be promoted. Still, in spite of all difficulties, the government gave full consideration to individual and collective efforts in this direction.

First of all, while engaged in military mobilization, the government still managed to assign a certain amount of transport to move national treasures and scientific equipment to inland China, mainly to the west and southwest but also to the northwest—Szechwan, Yünnan, Kwangsi provinces, and so on, via the Yangtze River, the Lunghai Railway, and public highways in various regions.

The main portion of the collections and the library, of the Institute of History and Philology were, through the energy and historical insight of a few leaders, for the most part successfully transported to several destinations: Chungking, Kunming, and finally Li-chuang, a town in the western part of Szechwan province, on the southern bank of the Yangtze River. Before it settled at Li-chuang, the institute first migrated to Kunming and stayed in or near that capital city of Yünnan province for more than a year (1938-1940). Needless to say, in the course of moving these national treasures, which included scientific records and equipment, there were overwhelming difficulties to overcome and inevitable losses suffered due to chaotic wartime conditions despite the efforts of the organization and of its individual members who were carrying out their assigned duties as best they could. All these difficulties and losses have been recorded in one way or another, either privately or in official documents.

A serious loss I should not omit to mention was the dispersal of our talented younger archaeologists, trained by more than half a dozen years in the field. Some time in November 1937, when almost all the members of the Archaeological Section of the Institute of History and Philology were gathered at Ch'angsha in a wayside inn,

each member declared what he would like to do during the war. The result of this gathering was that some left the institute for war work, and some went to wander around; but the majority, including all the senior members, decided to follow the migration of the institute wherever it might lead, according to the drift of the time.

When the institute first settled in Kunming in the early part of the war, the members were actually able to resume some research work. During the latter part of the Kunming days, the headquarters of the institute was moved from the city to a nearby suburban village, known as Lung-ch'üen Cheng, where most of the archaeological collections and the books were actually set out on shelves. The three senior archaeologists took the lead in working on the Anyang finds: Liang Ssü-yung was engaged in a preliminary survey of the Hou-chia-chuang digging records; Tung Tso-pin devoted himself to the continued study of the oracle bone inscriptions, assisted by Hu Hou-hsüan; I myself undertook a detailed study of the shapes and decorations of the Anyang ceramics and examined all the types of specimens with the able assistance of Dr. Wu Gin-ding, who returned from London to join us and was appointed a curator of the National Central Museum, of which I was still in charge during wartime. At the same time, the human skeletal materials were handed to Dr. Woo Ting-liang, chief of the Anthropological Section of the institute. Dr. Woo, as a well-trained biometrician, was regarded as the specialist best qualified to handle the precious collection of skeletal materials from the Anyang excavations. The major portion of these materials had also been taken to Yünnan for further study.

Research on the Hsiao-t'un and Hou-chia-chuang archaeological collections continued for about a year and a half—from September 1938 to June 1940, when the institute had to move again. During this period there was a great deal of concentrated labor on the Anyang materials, and a firm basis was laid for the official publication of these scientific records. These academic achievements, although not directly related to actual warfare, were indicative of the kind of scientific accomplishment that trained individuals were capable of attaining

even in a time of national crisis. I should therefore like to give a brief account of the kinds of research carried out in the days when the headquarters of the institute was located at Lung-ch'üen Cheng.

Tung Tso-pin, assisted by Hu Hou-hsüan, continued his research on the inscriptions of the oracle bone records. The staff members under Tung's direction kept on making ink-squeezes of the inscribed shells from H127, despite interruptions for lack of supplies, especially the thin paper necessary for ink-squeezing, a difficulty that was bound to happen in wartime. Such difficulties were always overcome, however, so the progress of the rubbing was never stopped for long. Hu Hou-hsüan was also assigned to continue the registration of the specimens and to keep a catalogue specially designed for this collection. Tung Tso-pin occupied himself with a more arduous task, namely, tackling the highly technical problem of reconstructing the Yin-Shang calendar system on the basis of the inscribed records. Tung's interest in this particular research was first inspired, as mentioned before, by the Ta-lien-k'eng discovery of the four more or less complete inscribed plastra. During his careful investigation of these pieces, he conceived the idea of expanding the investigation to embrace the whole problem of the Yin-Shang calendar.

Liang Ssü-yung, who enjoyed normal health in the first two years of wartime when the institute was in Kunming, completed in this time his first draft of the reports on the royal tombs which he had excavated in 1934-1935 at Hsi-pei-kang of Hou-chia-chuang. This enormous labor was almost finished before the institute received the new order to move again to Li-chuang in western Szechwan in 1940. The manuscripts of these important drafts consisted of a number of chapters, the main parts of which were handwritten by the author himself and were deposited with the Archaeological Section. On the basis of Liang's manuscripts Professor Kao Ch'ü-hsün edited, annotated, and amended with many plates and figures the various reports on HPKM 1001, 1002, 1003, 1004, and 1217 published in Taiwan in the Hou-chia-chuang series of the *Archaeologia Sinica* volumes long after Liang's death on April 2, 1954.^[102]

Liang's manuscripts preserved in the Archaeological Section were composed of the following important items:

Number of MSS. Reports of Liang's MSS

~~HP~~PKM 1001

~~HP~~PKM 1002

~~HP~~PKM 1003

~~HP~~PKM 1004

HPKM 1129

~~HP~~PKM 1500

~~HP~~PKM 1550

~~Small~~ tombs (collective)

~~Small~~ tombs (individual)

Location

Discovery

Excavations

This brilliant archaeologist's handwritten draft reports on the royal tombs of Hou-chia-chuang are among the treasures preserved by the Archaeological Section. Without these drafts, which not only provided the basic data but also set a model for scientific reporting in the Chinese language, it would have been impossible for Professor Kao Ch'ü-hsün to carry out the gigantic task of describing the royal tombs at Hsi-pei-kang of Hou-chia-chuang.

Liang's original draft manuscripts also include a list of projected chapter headings, as follows:

Chapter I. Geography, Location, and General Environment of the Hsi-pei-kang Cemetery

Chapter II. The Story of Its Discovery

Chapter III. Excavations

Chapter IV. Cultural Deposits of the Hsi-pei-kang of Hou-chia-chuang and the Position of the Yin Tombs in the Stratified Deposit

Chapter V. Large Tombs: A General Description

Chapter VI. Individual Large Tombs, (1)-(10): HPKM 1001, 1002, 1003, 1004, 1129, 1217, 1400, 1500, 1443, 1550

Chapter VII. General Description of Small Tombs

Chapter VIII. Individual Description of Small Tombs

Chapter IX. Artifacts: Classified Descriptions (not written)

1. Bronzes and Other Metals

2. Stones and Jades, etc.

3. Bones, Ivories, and Tortoise Shells

4. Shells

5. Potteries

6. Traces of Ritual Tools (no MSS)

Chapter X. Analysis of Decorative Potteries (no MSS)

Chapter XI. Human Bones (no MSS)

Chapter XII. Animal Bones (including Birds, no MSS)

Chapter XIII. Later Tombs (no MSS)

Chapter XIV. Analysis of Small Tombs (no MSS)

Chapter XV. Position of Yin Tombs in the Stratifications: A Tabular Analysis (8 pages)

Chapter XVI. Registered List of Excavated Objects (no MSS)

So far, Professor Kao Ch'ü-hsün has been able to complete the editorial work on Liang's written materials through those classified above under chapter VI.

Liang's research on the later chapters which he originally designed was tragically cut short. When he first arrived at Li-chuang,

he had immediately started on chapter IX and pursued in minute detail his research on the bronzes and stone carvings discovered from the royal tombs. Unfortunately, he contracted tuberculosis in Lichuang, and a sudden attack of pneumonia harmed his health almost beyond recovery and compelled him to stay in his sickbed most of the time. Naturally he could not do any writing according to his original schedule.

The investigation of the ceramic materials under my guidance was pursued on an analytic basis; namely, to study and examine the different aspects of the whole problem one after another. In the Kunming days, I first, with the expert assistance of Dr. Wu Gin-ding, worked on a general examination of the various sample specimens that we had been able to bring with us and made a careful survey of their textures, outside appearances, and decorative compositions. We started with the help of *A Dictionary of Color* by Aloys John Maerz^[103] to reclassify the various outside appearances of all the individual specimens and also experimented on the absorption power of different types of specimens classified on the basis of the color scale: gray, red, black, white, and the hard and glazed wares.

The absorption tests were carried out with only a specific gravity balance (August Sauter, Ebingen), which could give the weight accurate to 1/2,000th of a gram. With the balance to measure weight, and with steamed, clean water, I was able to measure the absorption power of twenty-two black pottery sherds, twenty-two gray sherds, twenty white sherds, and twenty pieces of the hard ware, including some with glaze. The result of these various tests showed that while the differences among the gray, the black, and the white wares were noticeable, the variation in the amount of water-absorbing power between the above three groups and the hard ware was sharply different. Of all the hard ware specimens tested, almost every piece showed less than 1.00 percent in the test, while the specimens of the other three groups gave an average absorption power between 15.50 and 21.50 percent.

It should be mentioned, however, that in these various series of

tests we were unable to measure the true specific gravity, so only apparent specific gravity was measured and used in the calculation. These provisional data, nevertheless, gave me a relatively firm basis for my further investigations of the ceramic materials.

I also made further attempts to carry out more chemical analyses, a work that had been started in Nanking with the cooperation of the Institute of Geology, where there was a chemical laboratory well equipped for analytic purposes. But in wartime Kunming, owing to the lack of certain chemicals, the Institute of Geology was unable to help us even on a small scale in this project, and we had to give up the idea of investigating the clay composition of the Anyang pottery on a chemical basis.

Kunming was a new environment to practically all the members of our institute, for none among us was a native Yünnanese, and the general mode of life in this southwestern province was almost completely different from both north China and the Yangtze Valley from which most of us came. Thus a new opportunity was offered to those of us whose observations and studies had been for years channeled and disciplined in the anthropological and archaeological fields. The attention of the archaeologists was first attracted by the discovery that, in building a new house in Lung-ch'üen Cheng where our temporary headquarters was located, the people still made use of sundried bricks, and of planked earth-pounding for laying foundations and building up walls. The method of earth-pounding seemed to be simpler than that still in common practice in north China at that time, but the use of sundried bricks rather thrilled those of us born in the Yangtze and the Yellow River regions, where kiln-firing of bricks had long ago replaced the sundried process. Shih Chang-ju realized the opportunity of deepening our archaeological understanding by examining the indigenous industry and art still current in Kunming; he studied the native ceramics, the irrigation system on the farms, and also the bronze industry—all of which were worthy ethnological research topics in themselves. But, since our collective interests were concentrated on the Anyang materials, naturally such side research

was also promoted for a better understanding of the archaeological data gathered in the Anyang excavations. Let me give one practical instance.

The irrigation system in the vicinity of Kunming city was well developed. The remarkable fact was that in most of the irrigation canals the banks were strengthened by wooden piles—an observation that immediately reminded the Anyang archaeologists of their findings in the underground ditches discovered in Hsiao-t'un, which were arranged similarly in a network fashion of interrelated channels and also strengthened on both banks apparently by wooden piles.

While in Lung-ch'üen Cheng, some of us actually built temporary living quarters in the village. In watching the erection of these new buildings, many of us observed with both surprised amusement and historical interest how much attention the native architect paid to the accustomed rituals, offering a sacrifice when the soil was first "broken" to lay the foundation, when the first pillar was to be erected, and so forth. The most important ritual seemed to be reserved for the day when the main beam of the roof was to be set and the whole building was completed. On such occasions, celebrations took place marked by killing a cock and a goat and the performance of rituals appropriate for these great events. All the laborers were to be entertained with meat and drink on the day when the new building was completed.

These observations and a number of others, familiar to ethnographers and anthropologists in general, proved especially helpful to the archaeologists who had excavated in north China where certain ancient practices had been replaced by new technology long ago, but were still surviving in southwestern China in the thirties and forties of the present century. So during the two years' sojourn in Yünnan in the early wartime, our archaeologists exploited to the utmost the opportunity to collect materials on these ancient survivals to promote our understanding of the Anyang collections.

When we moved to Li-chuang, Szechwan, in 1940, we were again in a different environment, but not altogether as new to us as the natural and social conditions in Kunming. It took half a year for the

institute to complete the mass migration from the southwestern province of Yünnan to Li-chuang on an upper reach of the Yangtze River, at a time when means of transportation were extremely limited and oil was as precious as diamonds. By the time the members of the institute were resettled in Li-chuang, it was near the end of 1940. Beginning with the year 1941, the research work of the institute once more returned to normal.

The new headquarters of the institute were located in a hilly place, where an old family with the surname of Chang possessed extensive farmland. The Changs, over the generations, had built a number of large houses, including a special theatre. When the war started, the old family's fortunes had already declined and the household was divided into a number of subfamilies. The institute succeeded in negotiating with the elders in charge of the family property to use their empty houses for a nominal rent. These houses constituted an isolated hamlet in a hilly region. At the foot of this hilly region, the Yangtze River flows down from I-pin to Lu-chou, where the mighty river is joined by another large stream. There were daily sailings of a small steamer between I-pin and Lu-chou, both of which were well-known prosperous district cities in the western part of Szechwan province. Li-chuang was at that time under the jurisdiction of Nan-ch'i district, the administrative city of which was located just a little distance below Li-chuang, on the northern bank of the Yangtze.

For more than four years during World War II, Li-chuang was a considerable center of learning. The Institute of Social Sciences of Academia Sinica, the Tungchi University from Shanghai, the National Central Museum, and the Society for the Study of Chinese Architecture also found their asylum here. Eminent scholars, both foreign and Chinese, like the British biochemist Joseph Needham, and the logician Professor Chin Yüeh-lin, paid visits to Li-chuang; some of them came quite frequently. Thus, in spite of war fever all over China, Li-chuang was one of the few places in free China where scholars could meet and discuss academic problems. Joseph Needham, for instance, gave a talk at Li-chuang, discussing the historic reasons why science did not

develop in China as it had in Europe.

This general atmosphere was at least congenial to the specialists who had some highly technical research topics to pursue, and there were quite a number of such professional men gathered at Li-chuang in the latter part of the Chinese Resistance War against Japanese Militarism. A large number of them worked in the Institute of History and Philology. The research done in this period by members of the Archaeological Section and their contributions to the study of the Yin-Shang collection from Anyang deserve special mention.

The best-known and the most distinguished achievement was the completion and publication of *Yin-li-p'u* by Tung Tso-pin, whose handwritten manuscripts were lithographed at Li-chuang in 1945, and published the same year.

Director Fu Ssŭ-nien, writing an introductory note (dated February 15, 1945) for this monumental wartime publication, made the following main points regarding Tung's important contributions:

1. Tung's synthesizing power was the main source of the fruitful results in this publication. In the study of oracle bone inscriptions, many eminent scholars have participated. There have been, however, only four pre-eminent stages, each marked by the distinguished contribution of an authority, which have brought scholarship a step forward in this progressive journey. And all these scholarly works have been synthetic in nature. These four milestone works are: (1) Wang Kuo-wei's "Yin-pu-tz'ŭ-chung so-chien hsien-kung hsien-wang k'ao"; (2) Tung Tso-pin's "Chia-ku-wen tuan-tai yen-chiu li"; (3) Kuo Mo-jo's *Pu-tz'ŭ tung-ch'uan*; and (4) Tung Tso-pin's *Yin-li-p'u*.^[104] Of the four monumental contributions, Tung was the author of two. What above all distinguished his contributions from other writings was the fact that he had at his command the newly discovered archaeological materials to provide a new basis for his research.

2. Tung Tso-pin, according to Fu, was the first Chinese scholar to make extensive use of a new technique in his study of the calendar system by checking it with modern astronomer's records of eclipses of

the moon and sun. This checking no doubt helped him to make better use of the related data found in the oracle bone inscriptions.

3. Finally, Fu paid special tribute to Tung's ability to clarify the difficult problem of the total period sequence of the ruling Shang dynasty which had been, owing to many different traditions and confused opinions, in a chaotic state. Fu believed that Tung in this new work had reduced this difficult historical and technical problem to order and had actually solved it.

Fu's laudatory Preface placed *Yin-li-p'u* on an extraordinary level among learned publications. He added finally: "Anyone who wants to pass critical comments on these learned volumes must, first of all, besides carefully reading this publication, qualify himself with both a competent knowledge of the ancient scripts of the Yin-Shang dynasty, and an expert acquaintance with the technology of calendar calculations, ancient and modern."

As a matter of historical truth, Fu's prediction made thirty years ago, has, in the course of these ensuing decades, proved to be almost prophetic in every word. Since the Japanese surrender, there has been almost complete neglect of this important publication in academic circles. It seems to me that this neglect is, however, mainly due to a change of interest on the part of the present generation rather than to a lack of talented successors. It is true that there were a number of questions raised, and comments made, and discussions hotly debated immediately after the publication of *Yin-li-p'u*; but even then, none of these notes or discussions touched the more essential contents of *Yin-li-p'u* as a whole, as Fu had foretold in his Preface. The problem that received the most attention was that of determining the actual ruling period of the Shang and Yin-Shang dynasty; and in particular, the exact year of conquest of Yin-Shang by the succeeding Chou dynasty. This highly technical and important historical problem did arouse some hot debate and passionate discussion which, however, stopped with no decisive conclusion. Before we go further in evaluating Tung's monumental contribution, let me first briefly give the important points set forth in the *Yin-li-p'u*. The following notes are based mainly

on certain of Tung's own statements found scattered here and there in the book.

First, Tung said in his own Preface that the plan for this book started in 1934 and it was completed in 1943; the working time required was, then, nearly ten years, mainly during wartime, in both Kunming and Li-chuang. It took another two years to put the drafts into manuscript form for lithographic printing.

Second, the author's interest in the study of the Yin calendar went further back than the first planning of this book. He said that as early as 1930 he had made notes on "Calendric Data in the Oracle Bone Records," and in 1934 he wrote an article on "Some Important Problems of the Yin Calendar."^[105] By this time he had already been attracted by this group of important written materials, which obviously had chronological significance. He said: "At that time I knew very little about the astronomical basis needed for a general understanding of the calculation of any old calendar system. When in 1935, I compiled the inscribed records of oracle bones of the fifth period according to my own standard of periodization, I discovered the chronological order of the five basic types of sacrificial offering to early kings and ancestors in the era of King Ti I and also that of King Ti Hsin." In these records the year, the month, and the day when the sacrifices were to be made are sometimes registered together; the day of occurrence is usually given by one of the permuted two symbols—characters used in the sexagenary cycle, similar to the ancient Babylonian system. The twin-symbols for the sixty names in the Chinese sexagesimal system are derived from what are commonly known in China as the heavenly stems (*t'ien-kan*) and the earthly branches (*ti-chih*), the former composed of ten characters (Chia, I, Ping, Ting, Wu, Chi, Keng, Hsin, Jen, Kuei), and the latter, twelve characters (Tzŭ, Ch'ou, Yin, Mao, Ch'en, Ssŭ, Wu, Wei, Shen, Yu, Hsü, Hai). By permutating the ten characters of the heavenly stems and the twelve characters of the earthly branches, sixty combined twin-symbols are produced and were used by the ancient Chinese to register the day, at least as early as the time of the oracle bone

inscriptions and probably much earlier. It is now well known that almost every complete oracle record includes one of the sexagesimal twin-characters, such as Chia-tzŭ—which only means the name of a particular day when the recorded event took place or occurred. When the deciphered characters in the oracle bone inscriptions became better understood through the accumulated efforts of paleographers, it also became absolutely clear that such was the general way of recording any divinatory event.

When Tung found, in the course of his continued study of newly discovered oracle bone inscriptions, some could be grouped within a definite period and assigned to a definite king, and bore, in addition, the name of the day occurring together with a definite month, occasionally also with the year, given in a definite number—these discoveries, Tung said, heightened sky-high his enthusiasm to study the Yin calendar system and helped him to concentrate his academic efforts on this promising research project. He started by writing to ask a number of astronomers to tutor him about the basic astrological and astronomical ideas on which past calendar systems had depended for their calculations. Professor Kao P'ing-tsŭ, a well-known authority on the development of Chinese calendars, soon became Tung's intimate friend. These two scholars worked cooperatively to attack the various problems arising from the abundance of calendrical data discovered in the oracle records. All this happened before the Japanese invasion.

Once he had determined to go into the details of this difficult task of investigating of the Yin calendar system, Tung pursued the work for ten years with a steadfastness and concentrated energy that astonished all his friends. He began the work in the Kunming days when he asked Mr. Kao Ch'ü-hsün to assist him in the laborious calculations involved. At the suggestion of his astronomer friends, he made use of Josephus Justus Scaliger's table of day-counting by starting with January 1 of 4713 B.C. as the zero day, and followed it by continuous numerals to number the days which succeed each other indefinitely. It is well known that Scaliger's counting is based on the Gregorian calendar, so Tung, following the terminology of Professor Chu Wen-hsin, named

the serial numbers of day-counting as the "Julian day number" (Jü-lüeh-chou-jih).^[106] These serial numbers constituted the fundamental basis of Tung's other calculations, which resulted, by checking with the sexagesimal days found in the oracle records, in the final compilations of the thirty-five calendar tables published in *Yin-li-p'u*.

These thirty-five tables are, according to Tung's original scheme, divided into ten subdivisions, namely:

I. Annual Calendar Table (*Nien-li-p'u*)

II. Calendar Tables of Sacrificial Offerings (*Ssŭ-p'u*)

III. Tables of Recorded Eclipses of the Moon and Sun (*Chiao-shih-p'u*)

IV. Tables of Recorded Solstices (*Jih-chih-p'u*)

V. Tables of Recorded Leap Years (*Jun-p'u*)

VI. Tables of Recorded First Days of a Month (*Shuo-p'u*)

VII. Tables of Recorded Decades (*Hsün-p'u*)

VIII. Tables of Recorded Months (*Yüeh-p'u*)

IX. Tables of Recorded Days (*Jih-p'u*)

X. Tables of Recorded Nights (*Hsi-p'u*)

A number of the ten subdivisions, because of the abundant amount of new inscribed data, were again divided into a number of sections; for instance, in subdivision II, the author found it necessary to treat the accumulated data in three sections: (A) on the records relating to King Tsu Chia, (B) another group relating to King Ti I, and (C) a third group relating to King Ti Hsin—all amply illustrated by hand copies of the original ink-squeezed records.

Tung, in his first edition of *Yin-li-p'u*, said that of the thirty-five calendar tables published in his book, he considered subtables III-4, III-6, IV-2, VI-1, and IX-3 as the most important. On these five groups of tabulated data, one could build a firm foundation for the calculation of dating the ruling period of the Shang dynasty and the

various epochs of the ruling kings.

In his early article^[107] Tung had divided the oracle bone periods into five successive eras, namely:

Period 1:

(a) from King P'an KENG to King Hsiao I

(b) King Wu TING's reign

Period 2: King Tsu KENG and King Tsu CHIA

Period 3: King Lin HSIN and King K'ang TING

Period 4: King Wu I and King Wen-wu TING (also known as T'ai TING)

Period 5: King Ti I, King Ti HSIN

The durations of the various rulers from King P'an KENG onward are given in *Yin-li-p'u* (Vol. 1, p. 8), as follows:

~~P'398 KENG~~ B.C.(?)

28 years^[108]

~~P'370 Hsiao I~~ B.C.

~~H'340 Tsu KENG~~ B.C.

~~T'339 Tsu CHIA~~ B.C.

~~T'330 Lin HSIN~~ B.C.

~~T'327 K'ang TING~~ B.C.

~~H'314 Wen-wu TING~~ B.C.

~~H'294 Ti I~~ B.C.

~~H'225 Ti HSIN~~ B.C.

~~H'232 Wu I~~ B.C.

~~T'209~~ B.C.

~~617 HSIN~~ B.C.

The total number of years amounts to 287, from which 14 years should be subtracted for the time when King P'an Keng was still ruling in the old capital; that is, King P'an Keng made his decision to move the capital to Yin in the fourteenth year of his reign and actually accomplished it in the fifteenth year; so the total duration of the Yin-Shang period is 273 years according to Tung's estimate.

What Tung Tso-pin had done was to equate and fix the sexagesimal days found in the oracle bone inscriptions to the exact day numbers of Scaliger's Julian calendar days. For instance, Tung was able to fix through a series of complicated calculations, and conclude definitely that the first day of the first month in the fifteenth year of King P'an Keng's reign, according to the Yin calendar, corresponds with January 14, 1384 B.C., in terms of the Julian calendar; and the numeral of that Julian day in the estimate of Scaliger is: 1215931.^[109] Tung also identified the sexagesimal day symbol for that day as Chia-shen. These two calculated reference points provided the basis for the computations of all the other tables. Tung's attempt to link the amazing amount of oracle bone materials with modern dating by means of scientific methodology, and the pains-taking efforts he put into it, represented an important phase of Chinese intellectual modernization at its best during the war period.

The classified data from the oracle bone inscriptions in Tung's *Yin-li-p'u*, have, besides their basic contributions to chronology, also provided abundant source materials for other historical investigations. Tables under subdivision II, for instance, which gathered and classified records of sacrificial offerings to ancestors and other spirits on certain days, not only give the reader a bird's-eye-view of deep-rooted superstitions—"belief in the ghost," as Ssŭ-ma Ch'ien put it more than two thousand years ago—but also revealed the nature of the performance of these ceremonial rituals. The five most important types of ceremonial rituals in ancestor worship as set forth in *Yin-li-p'u* are: (1) Yung; (2) I; (3) Chi; (4) Kuan; (5) Hsieh.

Tung's studies concerning the various rituals practiced in the Yin-Shang period were a laborious program. In *Yin-li-p'u* he concluded that the sacrificial rituals in the early days were multifarious, but that in King Tsu Chia's time they were reformed and reduced to an indispensable minimum. Only the five essential types were preserved in chronological order. It would have taken nearly a year's time, according to Tung's calculation, to complete a cycle of the various types of worship. That is the reason, he concluded, that during the

reigns of the last two Kings (Ti I, Ti Hsin), a *nien* (year) was also recorded as ssŭ (sacrifices to the dead). It is amazing to realize that it took a whole year to perform all the ritualistic offerings to the various ancestors even after Tsu Chia's reform!

As is well known, the names of the ruling sovereigns in the Shang dynasty each included one of the ten symbols of the heavenly stems. And in terms of the Yin calendar, as mentioned above, every day was named by a twin-symbol in the sexagenarian order, each of which also included one of the heavenly stem terms. A traditional and annual court event was devoted to making offerings to an individual ancestor whose name in terms of heavenly stems corresponded with the day's heavenly stem: for instance, on the day Chia-tzŭ all those past sovereigns whose names had a "Chia" stem—such as T'ai Chia, Hsiao Chia, Ho-t'an Chia, Wo Chia, Yang Chia, Tsu Chia—were to receive offerings from the ruling king. It is clear that every dead sovereign on the ancestral roll was to receive some kind of offering every ten days at least. Besides, there were times when all the ancestors were to be worshiped in a united service which was known in oracle bone terminology as "Ho-chi." This festival was evidently a heavily ritualistic occasion; its nature, however, still remains to be clarified.

As *Yin-li-p'u* is packed with data from the original written records, Tung's classified groups, important as they are, could be intelligible only to a few specialists. The data relating to the two well-known war expeditions—Wu Ting's battle in the northwest and Ti Hsin's expedition to fight the Tung I (eastern barbarian) are of great historical importance. They have been only briefly mentioned in past records, and may, one hopes, be better studied by more competent scholars in the future. There are other classified data which also deserve more attention, but I believe I have given a sufficient account of the wartime work of this paleographer.

Meanwhile, I myself pursued my investigation of the Anyang ceramic collection. Although like Liang, I also suffered some personal misfortunes in both Kunming and Li-chuang, I could still keep on working when there was time. I say this, because I had other

administrative duties to attend to and half a dozen trained persons to take care of as chief of the Archaeological Section, and also as director of the National Central Museum. In these capacities, I organized and sent several small research expeditions to Ta-li, to Cheng-tu, and one as far as Tunhuang in the northwest. I myself even participated in some digging parties. All these of course took time. I was not as fortunate as Tung Tso-pin in being able to concentrate all my energy and time on the study of the precious Anyang collections.

My interest in the Anyang collections was naturally manifold. But there is one principle which I have always observed, namely, to give my colleagues the first opportunity to study the field data in which they have a special interest. I have found in my past experience that this is a fundamental principle for leaders of scientific research to follow, if such cooperative works are to be successfully accomplished at all. Judging from my personal experience, there are always problems and collected data for one to handle and get busy with, no matter how many participants are in the party.

After our move to Li-chuang, I once more involved myself with the huge mass of Anyang ceramics of which I had with me specimens of all the important types and a complete set of field records. In this new headquarters, I determined to complete a corpus for the total ceramic collection.

My own interest in doing this was by no means accidental. As early as 1924, when I happened to read, in J. G. Andersson's "Early Chinese Culture," his preliminary report on his excavation of Yangshao Ts'un, the first prehistoric site in north China, I was deeply impressed by his emphasis on the discovery of the *li*-tripod and *ting*-tripod in the course of his digging there. I was also familiar with H. Frankfort's studies in early pottery of the Near East.^[110] So when I settled in Li-chuang, with all the field records on hand and sample specimens ready for detailed examination, I decided to work on the shapes first, as other technical studies were almost impossible to carry on in the Li-chuang community, learned as it might be.

In the library of the institute and my own limited supply of books,

I could find only a copy of Sir W. M. Flinders Petrie's *Prehistoric Egypt* corpus for my reference. My aim was to complete a corpus of the ceramics collected from our digging in Hsiao-t'un and Hou-chia-chuang, and naturally Petrie's book became important for me. As I found Petrie's principles of classification, however, rather inadequate for my purpose, I started discussing with my colleagues of the Archaeological Section what principles I should follow in the corpus arrangement. This discussion took a long time and, with Tung Tso-pin's oracle bone inscriptions, constituted one of the main topics of our professional talks in the Li-chuang days.

Meanwhile, I decided, with the technical assistance of Mr. P'an Ch'üeh and Li Lien-ch'un, to draw figures of all the sample specimens on a uniform scale and also to photograph all the complete specimens available. It took quite a long time—several years—for P'an and Li to complete all the drawings on a uniform scale (one-quarter the size of the original), each specimen portrayed half in cross-section, the other half according to its external shape. It also took several years to complete the photographic work.

Comparative studies of the shapes of the various sample specimens also led me to investigate the methods of pottery manufacture and of course to speculate on the nature of the clay, and to undertake some serious study of the outside decoration. Though all these problems appeared to me important in themselves, my principal focus of attention did not deviate from study of the evolution of every individual type specimen that possessed a complete shape, whether original or restored.

The related shapes fell into a few groups, among which the tripods attracted my personal interest first and foremost. There was a historical reason for this as I recollected that, in the excavation of the first prehistoric Black Pottery site at Ch'êng-tzŭ-yai, many subtypes of tripods had been found, in contrast to the limited type-forms—*li*-tripod and *ting*-tripod—discovered by J. G. Andersson at Yangshao Ts'un. Among the Anyang ceramics, the field team had been long accustomed to encountering various subtypes of the *li*-tripods. They

were so numerous that in fifteen seasons' time the accumulated potsherds classified as from *li*-tripods though varying in both size and shape amounted to several ten thousands, making this largest of all the groups.

In these comparative studies, I was finally led to formulate two fundamental ideas regarding the corpus arrangement.

First, I decided to include all the Yin-Shang and pre-Yin-Shang potteries excavated in both Hsiao-t'un and Hou-chia-chuang. This decision was important and for a definite reason. When I studied the field records in detail and examined the contents and history of the underground deposits in all the subterranean caches, pits, and caves, I soon found out that Hsiao-t'un was populated in prehistoric times by the Lungshan Culture. Consequently it became obvious to me that, with the exception of the post-Yin burials, practically all the potsherds and complete pots found from our diggings would have been produced in one or another of three subperiods: (1) prehistoric, (2) early Shang, and (3) Yin-Shang. The last of these three subperiods was of course the most important because it represented the period which we study. At the same time, it was clear to me that it would be impossible to divide these subperiods since they were all continuous and stratigraphically impossible to differentiate, so the best solution was to analyze the collection as a whole.

Second, I decided to give up the fundamental idea of following the Egyptologist's framework of corpus-making, namely, the simple procedure of beginning with the most open (and shallow) and advancing to the most closed. A set of new rules for arranging the pottery shapes was devised and found not only workable but also suitable for the Anyang ceramics, of which more than one thousand restorable complete specimens were on hand. These rules or principles were as follows:

A. To divide the pottery group into ten classes, including one for the covers.

B. To make use of the morphological features of the lowest part of

each complete pot as the standard for class-division, namely: (1) round-bottom; (2) flat-base; (3) ring-foot; (4) tripods; (5) tetrapods; (6-9) reserved for new types; and (10) covers. Within each class, I still followed Petrie's practice of arranging the most open and shallow pots first and specimens with tall bodies and small openings at the end.

These class-divisions when put on printed sheets (16 leaves) showed a natural sequence that amazed all the members of the Archaeological Section. Liang Ssŭ-yung, lying in his sickbed at Li-chuang, was the first to congratulate me for completing this task, with which he was as satisfied as I myself.

This corpus was published in my study of *Pottery of the Yin and pre-Yin Period* in 1956.^[111]

Before the unconditional surrender of Japan in 1945, I also found time to write a few articles with the Anyang data as basic materials. The one on pre-Yin cultural deposits that I contributed to *Hsiieh-shu hui-k'an*, a wartime publication of Academia Sinica issued in Szechwan, had provided the basic reference data for all the stratigraphical discussions of the underground cultural sequences of the Waste of Yin Site.^[112] This article was published in 1944, very near the end of China's resistance war.

柒·战时继续安阳研究

至1937年夏，由于受到明治时期以来本国政治和军事胜利的鼓动，日本军国主义者继续对中国实行扩张和侵略政策已不可避免，直至其将东南亚和东亚全部吞并。虽然孙中山的追随者在南京建立的革命政府在军事实力上与日本的陆军和海军相比还差得很远，无法与日本大规模交战，但南京政府的决策者还是决定抵抗日本侵略，并采用了小规模持久战的战术。

现在，八年抗战已被公认为是第二次世界大战的一个重要的开始阶段，对于二战，现代史学家起码不会完全陌生。本章将对影响安阳十五次田野发掘所得重要考古材料命运的事件作一概述。许多人认为，这些材料代表了南京国民政府扶持的成就最卓著的一项科学工作。

国民党的元老们最初设想建立一个国家研究机构时，首先把重点放在了自然科学上。因此，物理、化学、工程、地质和气象研究所是在南京和上海最先建立的五个研究所。历史语言研究所是后来建立的，主要是由于创建者傅斯年的努力，这在第四章已谈过了。

南京政府成立不到十年，日本侵略中国实际上就开始了，接着是谈判屡遭失败。南京政府宣布的长期抗战政策得到了全国的支持。

尽管战时时局混乱，但实行科学教育这个政策仍坚持着，当然这也遭遇了缩减和许多变化。科研活动不能全面开展。然而，尽管面临这些困难，政府仍充分重视个人和集体在这方面的努力。

首先，政府一方面进行军事动员，另一方面也设法动用一定的运输力量把国家珍品和科学设备，经长江、陇海铁路和各地公路运往中国内地，主要运往西部和西南的四川、云南、广西等省，也有运往西北的。

由于几个领导人的努力和历史远见，绝大部分安阳发掘品和史语所的藏书都成功运抵指定地点：重庆、昆明和最后的四川西部长江南岸的小镇李庄。在李庄落脚前，研究所先在云南省会昆明市及郊区停留了一年多（1938—1940）。在搬运这些包括科学记录和设备的国家珍品的过程中，由于战时时局混乱，虽然负责运输的组织和负有运送责任的个体成员已竭尽所能，途中仍要克服巨大的困难，承受无法避免的损失。所有这些困难和损失已通过各种或个人或官方的方式记录下来了。

我无法避而不谈的一大损失是经过了七八年田野训练的十多个年轻有为的青年考古工作者的离散。1937年11月的一天，几乎史语所考古组的全体成员都聚集在长沙路旁的一个小客店里，每人都说了自己在战时的打算。此次聚会的结果是，一些人离开研究所参加了抗战工作，一些人到别处去看看；但多数人，包括所有高年资的成员，决定无论研究所随时局转移到哪里，他们都会追随。

战争初期，研究所在昆明安顿下来后，恢复了一些研究工作。在昆明的后期，研究所所址从城里搬到近郊一个叫龙泉镇的地方。在那儿，大部分考古收集物和图书实际上都在架子上归置好了。三位资深的考古学者领导着安阳发现物的研究：梁思永初步审核侯家庄的发掘记录；董作宾在胡厚宣的协助下继续潜心研究甲骨文；我则对安阳陶器的形制和纹饰进行详细研究，并在吴金鼎博士的有力协助下，对全部典型标本进行了审查。吴博士从伦敦回国加入了我们的研究工作，又被任命为国立中央博物院的专门委员。抗战时，我仍是该院的负责人。与此同时，人骨材料也交给研究所人类学组的负责人吴定良博士。吴是受过良好训练的生物统计学家，是公认的最有资格研究安阳发掘收集的珍贵人骨资料的专家。这些材料大部分也带到了云南作进一步研究。

对小屯和侯家庄的考古收集物的研究从1938年9月至1940年6月，延续了约一年半的时间，研究所又要迁移了。这一时期，安阳的资料得到了大量集中的研究，这为正式出版这些科学记录奠定了坚实基础。这些学术成就虽与实际战争无直接关系，但这显示了即使在民族危机之时受过训练的个人也能取得这样的科学成就。所以我想扼要地谈谈研究所在龙泉镇时我们从事的各项研究工作。

董作宾在胡厚宣的协助下继续研究甲骨文。同事们在董的指导下墨拓了H127出土的有字龟甲，尽管因供应缺乏时有中断，特别是墨拓需要的宣纸，但战时这样的困难是不可避免的。无论如何，这些困难最终都被克服了，所以墨拓的工作中断时间不长。胡厚宣还负责对这些出土的甲骨进行登记，并按照专门设计的格式进行编目。董作宾埋头于更艰巨的工作，即根据甲骨文的记载整理复原殷商历法制度的深奥问题。过去说过，董对这项研究产生兴趣是因为“大连坑”中四版近于完整的刻字龟甲的发现。他在细心研究这些甲骨片的过程中，萌生了一个念头，要扩展这项研究，将整个殷商历法的问题包含在内。

战争头两年研究所在昆明时，梁思永的身体还很健康。此时他完成了1934—1935年侯家庄西北岗王陵发掘报告的初稿。1940年，当他将

要完成这一项浩大的工程时，研究所又接到了搬迁到四川省西部李庄的新通知。这些重要的初稿由许多章组成，主要部分是作者亲手写的，存放在考古组。后来高去寻教授在梁的手稿的基础上，编辑、注释并用许多图版和插图辑补关于HPKM1001、HPKM1002、HPKM1003、HPKM1004、HPKM1217各墓的报告，以《中国考古报告集·之三·侯家庄》为系列在台湾出版——这距梁思永1954年4月2日病逝已经很久了。

[102]

保存在考古组的梁的手稿由下列重要部分组成：

梁思永手稿目录

HPKM1001

HPKM1002

HPKM1003

HPKM1004

HPKM1129

HPKM1217

HPKM1400

HPKM1443

HPKM1500

HPKM1550

(集体) 小墓

(单) 未写小墓

位置

发现

发掘

这位天才考古学家关于侯家庄王陵的报告手稿是保存在考古组的珍品之一。这些手稿不仅提供了基本资料，而且为用汉语写作科学报告树立了榜样，如果没有这些手稿，高去寻教授就不可能完成编辑侯家庄西北岗王陵报告的艰巨任务。

梁的手稿还包括一个初步拟定的分章目录：

第一章 西北岗墓地之地理情况、位置和一般环境

第二章 发现记事

第三章 发掘

第四章 侯家庄西北岗的文化层和殷墓在地层堆积中的位置

第五章 大墓：总述

第六章 大墓分述，(1)—(10)：HPKM1001、HPKM1002、HPKM1003、HPKM1004、HPKM1129、HPKM1217、HPKM1400、HPKM1500、HPKM1443、HPKM1550

第七章 小墓：总述

第八章 小墓分述

第九章 遗物：分类叙述（未写）

1．青铜和其他金属

2．石与玉等

3．骨、象牙和龟壳

4．蚌、贝类

5．陶器

6．礼器的探索（无手稿）

第十章 装饰陶器的分析（无手稿）

第十一章 人骨（无手稿）

第十二章 动物骨头（包括鸟骨，无手稿）

第十三章 晚期墓（无手稿）

第十四章 小墓分析（无手稿）

第十五章 殷墓在地层中的位置：列表分析（8页）

第十六章 出土物登记表（无手稿）

到目前为止，高去寻教授已能根据梁手稿中第六章以下的分类完成辑补工作。

梁原计划的后几章的研究不幸中断。他到李庄之初就立即着手写第九章，并细致研究王陵出土的青铜器和石刻。不幸的是，他在李庄得了肺结核，一次突发的肺炎损害了他的健康，他自此再难痊愈，大部分时间都不得不卧病在床，自然也不能按原拟定的进度撰写任何材料了。

我指导的陶器研究是根据分析原则进行的，即对一个问题不同方面进行逐一研究探索。在昆明，在吴金鼎的专业协助下，我首先对带来的各种标本的样品进行了全面考察，并仔细研究它们的质地、外观和纹饰构图。参照梅尔兹的《颜色辞典》^[103]，我们对全部单个标本的不同外观进行了重新分类，并对按色度表分类的典型标本，即灰陶、红陶、

黑陶、白陶、硬陶和釉陶的吸水力进行了试验。

吸水试验仅依靠一个可精确到1/2000克的比重天平（埃宾根生产，品牌：奥古斯特·索特）进行。有了可以称重的天平和洁净的蒸馏水，就可以测出22块黑陶片、22块灰陶片、20块白陶片和20块硬陶片（其中包括一些釉陶片）的吸水率。各种试验的结果表明，灰陶、黑陶和白陶之间的差别是可见的，但上述三种陶和硬陶之间的吸水能力的差别尤为显著。所有硬陶标本中，几乎每片都显示吸水率不到1.00%，但其他三种陶的吸水率平均都在15.50%与20.50%之间。

但需要指出，在各种试验中不能量出真正的比重，只能量出外显的比重并用于测算。不过，这些临时数据也为进一步研究陶器奠定了相对可靠的基础。

我也试图进行进一步的化学分析。我在南京就曾与地质调查所合作开始搞这项工作。地质所里有一个装备良好的化学实验室。但处于战时的昆明，由于某些化学品的缺乏，地质调查所在这个项目中连小规模的帮助也不能提供。因此，我们只好放弃了借助化学分析研究安阳陶器陶土成分的计划。

对我们研究所的全体成员来说，昆明实在是一个新环境。我们当中没有一个云南人，这里的一般生活习惯和华北及长江流域几乎完全不同，而我们当中大部分人来自这两个地区。这为我们当中那些在人类学和考古学领域里受过多年观察和研究训练的人提供了新的机会。考古学者首先被一种发现吸引了。在我们临时所址所在地龙泉镇上，人们在修建新房时，仍用土坯砌墙和夯土垫地基。夯筑的方法似乎比那时华北仍广泛使用的方法更简单，但用土坯砌墙使我们这些来自黄河、长江流域的人惊奇不已，在那些地方用窑烧砖的方法早就代替了太阳晒干法。石璋如意识到，加深对昆明仍流行的本地手工技艺的考古学理解，这是一个好机会。他考察了本地的陶器、农田灌溉系统和青铜业，所有这些都是值得探讨的民族学课题。但因我们的共同兴趣集中在安阳的材料上，这种观察自然也是出于更好地理解安阳发掘中收集的考古资料发起的。我举一例说明。

昆明市附近灌溉系统建设得很好，它的非凡之处在于，许多灌渠两边都用木桩加固。这立刻使安阳的考古学者们回忆起在小屯发现的地下沟遗迹：这些地下沟也是用类似的方式以网状联结，显然也用了木桩加固两壁。

在龙泉镇时，我们当中一些人在村里盖了临时住所。我们又惊又喜且充满历史兴趣地观察到，土建筑师们在盖新房的时候非常注重传统仪式。当“破土”奠基或立第一根柱子这样的时刻，要祭献一只牺牲。最隆重的仪式似是在主梁上顶和整个建筑落成那天进行，在这样的时刻，往往以杀一只公鸡或一只羊和举行相应的仪式表示庆祝。在整个建筑完工之日，要用酒肉招待所有参加建房的劳动者。

这些观察到的资料和其他许多资料，是普通民族学者和人类学者所熟悉的，对在华北搞过考古发掘的考古学者也是非常有益的。在华北，古代某些老方法早已被新技术所取代，但这些老方法在20世纪的三四十年代仍存在于中国的西南部。所以在抗战初期旅居云南的两年里，我们的考古工作者利用一切机会收集这些古代遗留的资料，以提高我们对安阳发现的认识。

1940年迁到四川李庄，我们又处于另一个新的环境中，但这里的自然和社会条件都不像昆明那样是全新的了。用了半年的时间，研究所才完成从云南到长江上游李庄的搬迁任务；当时交通工具缺乏，汽油像珠宝一样昂贵。研究所人员在李庄再度安定下来时已是1940年底了。次年初，研究所的工作又转向正规。

研究所的新所址设在山区，那里居住着一户古老的、田产颇广的张姓家族。张家上几代建了不少大房子，还有一个戏楼。战争初期，这个家族已衰落并分了家。研究所与这家管房产的长者商妥，使用他们的空房，付给微薄的房租。这些房子在山区里形成了一个独立的村庄。山区脚下，长江从宜宾而下流向泸州，在泸州有另一条大河汇入长江。每天都有小汽轮航行于宜宾与泸州之间。两地皆为四川西部有名的繁华城市。当时，李庄归南溪县管辖，县政府设在距李庄下游不远的长江北岸。

在第二次世界大战期间，有四年多的时间里，李庄曾是一个重要的学术中心。中央研究院社会科学研究所、上海同济大学、国立中央博物院、中国营造学社也都在此找到了避难所。中外闻名的学者，像英国的生物化学家李约瑟和逻辑学教授金岳霖，都到李庄访问过。有些学者的到访还很频繁。尽管战火烧遍了中国大地，但李庄是中国学者可以相聚讨论学术的少数自由地之一。例如，李约瑟就曾在李庄作过讲演，谈论科学在中国为什么没有像在欧洲那样发展的历史原因。

对那些探讨高深问题的专家来说，这里的总体环境至少是相宜的。

在反抗日本军国主义的抗战后期，相当一批这样的专业人员聚集到李庄。他们中不少人在历史语言研究所工作。这期间考古组成员从事的研究工作以及他们对安阳殷商收集物研究的贡献，值得着重介绍一下。

最知名、最突出的成就是董作宾《殷历谱》的脱稿与出版。这部巨著于1945年在李庄以手写本石印问世，并于同年出版。

1945年2月15日，傅斯年所长为这部里程碑式的战时出版物写了序言，指出了董作宾的主要贡献：

1. 这部著作的丰硕成果主要源于董作宾的综合能力。许多杰出学者参与了甲骨文的研究。然而，成绩卓著的阶段只有四个，每一阶段以一位贡献卓著的权威专家为代表，正是他们的研究推动了甲骨文的学术研究的发展。实际上，这方面的学术著作本质上都是综合性的。这四部里程碑式的著作是：王国维的《殷卜辞中所见先公先王考》、董作宾的《甲骨文断代研究例》、郭沫若的《卜辞通纂》和董作宾的《殷历谱》。^[104]四部巨著中，董是其中两部的作者。他的贡献与其他著作的主要区别在于，他掌握的新考古资料为他的研究奠定了新的基础。

2. 用傅斯年的话说，董作宾是第一个在历法研究中广泛应用新技术、并用现代天文学关于日月食的记录对其加以检验的中国学者。无疑这种检验有助于他更好地应用甲骨文中发现的有关资料。

3. 最后，傅斯年特别称赞了董作宾澄清商朝统治时期的继位顺序这个难题的能力。由于有一些不同的传说和不一致的看法，这个问题一直处于混沌之中。傅相信董作宾在这本新著中已把这个历史的和技术的难题理出了头绪，并已实际解决了这个难题。

傅斯年充满褒奖的序言把《殷历谱》在学术著作中提到了异常的高度。最后他又说：“必评论此书之全，则有先决之条件：其人必通习甲骨如彦堂，其人必默识历法如彦堂，必下几年工夫。”

诚如历史事实所证明的那样，傅斯年三十年前的预言，在后来的岁月中几乎全都应验了。自从日本投降后，学术界几乎完全忽略了这部巨著。可是我认为，这种忽略主要因为当今一代在这方面兴趣的改变，而不是缺乏有才能的后继者。诚然，《殷历谱》出版后立即引起了许多疑问、评论以及热烈的讨论。但即使在那时，总的来看，评论和讨论都未触及《殷历谱》作为一个整体的基本内容，正如傅在序言中曾预言的那样。最引人注目的问题是确定商和殷商的实际统治年数，尤其是周灭商

的确切年代。这个既高深又重大的历史问题的确引发了激烈争论和热烈讨论，但到最后也没有明确的结论。在我们进一步评估董的重大贡献之前，先简单谈谈《殷历谱》中提出的几个要点。下面几点主要根据董在书中的某些论述归纳。

第一，董在自序中说，此书于1934年开始动笔，1943年完成，几乎用了十年时间，主要是在战时的昆明和李庄写的。又花两年时间将初稿修改整理成手抄稿以供石印出版。

第二，作者研究殷历法的兴趣，还要早于最初计划写这本书。他说，早在1930年他就对《甲骨记录中的历法资料》作了评注。1934年，他写了《殷历中几个重要问题》^[105]一文。这时他已被这些明显具有年代意义的重要文字资料所吸引。他说：“民国十九年九月，余作《甲骨文中所见之殷历》，及二十三年五月余作《殷历中几个重要问题》时，对于天文历法之知识犹极浅薄。二十四年辑录第五期卜辞，得帝乙、帝辛时五种祀典之统系。”这些记录有时会同时记录举行祭祀的年、月、日。举行祭祀的日子用同古巴比伦制度相似的六十干支表中的一个二字名词表示。这六十个用作名词的双合符号源于中国人普遍熟知的天干地支，前一个天干有十个字（甲、乙、丙、丁、戊、己、庚、辛、壬、癸），后一个地支有十二个字（子、丑、寅、卯、辰、巳、午、未、申、酉、戌、亥）。十天干与十二地支排列组合产生了六十个双合符号，被中国古人用来记日，这种方法早在甲骨文时期就已存在，甚至会更早。大家知道，几乎每一完整的甲骨卜辞都含有六十个干支符号之一，如“甲子”。这表示所记录的事件举行或发生的那一天的名字。通过古文字学家考释的积累，甲骨文已变得比较容易理解，同时，大家也已十分清楚以上就是记录占卜事件的一般方法。

在继续研究新发现的甲骨文的过程中，董发现，某些刻辞可归于某特定时期，列于某帝王名下。另外，有些甲骨上除了有事件发生的日期外，还有确切的月份，有时还有以特定数字表示的年份。董说，这些发现大大提高了他研究殷历法的热情，并激励他致力这一大有前途的学术研究。于是，他开始写信给许多天文学家请教关于过去历法计算所依赖的天文学和占星学的基本知识。研究中同历法发展的著名学者高平子教授与董很快成为了亲密的朋友。这两位学者合作研究，解决了在研究甲骨文中丰富的历法资料时发现的各种问题。所有这一切都发生在日本侵略中国之前。

在决定深入研究殷历法这个难题的各个细节后，董先生即以惊人的

坚强意志集中精力从事这项工作达十年之久。他在昆明时就开始了这项工作，并请高去寻先生协助进行相关的复杂计算。他采纳了天文学家的建议，使用了约瑟法斯·加斯特斯·斯卡利格的以公元前4713年1月1日为零日开始计算的计日表，以连续的数字表示接连不断、无尽延续的日期。大家知道，斯卡利格的计算是以格里高利历法为依据的，因而，董作宾沿用朱文鑫教授的术语，将这套计日的数字系命名为“儒略周日”^[106]。这些连续的数字成为董的各种计算的基础：董通过对甲骨记录中的六十干支表示的日期的查验，最后编成了发表在《殷历谱》上的35个历法表。

据董的最初计划，这35个表分十部分：

- I．年历谱
- II．祀谱
- III．交食谱
- IV．日至谱
- V．闰谱
- VI．朔谱
- VII．旬谱
- VIII．月谱
- IX．日谱
- X．夕谱

因为新发现的甲骨资料繁多，所以许多部分又分为若干组。例如，作者发现有必要把第二部分积累的材料分为祖甲、帝乙和帝辛三项。所有这些都由原墨拓的手抄本充分展示。

在《殷历谱》的第一版中，董指出，书中的35个历法表中，其中III-4、III-6、IV-2、VI-1和IX-3最重要。依这五组列表数据，可为计算商王朝统治时间及各王在位年代奠定牢固基础。

董在早期的文章中^[107]把甲骨时代分为相续的五期：

一期：

- (a) 盘庚到小乙
- (b) 武丁

二期：祖庚、祖甲

三期：廩辛、康丁

四期：武乙、文武丁(太丁)

五期：帝乙、帝辛

《殷历谱》第一卷第8页给出了从盘庚起各王在位时间：

~~盘庚~~前1398—前1371年(?)

28年^[108]

~~小辛~~前1370—前1350年

~~小乙~~前1349—前1340年

~~武乙~~前1339—前1281年

~~祖庚~~前1280—前1274年

~~祖甲~~前1273—前1241年

~~康丁~~前1240—前1235年

~~武丁~~前1234—前1227年

~~武乙~~前1226—前1223年

~~武丁~~前1222—前1210年

~~武丁~~前1209—前1175年

~~武丁~~前1174—前1112年

从总年数287年中减去盘庚在原来都城统治的14年——盘庚在位第十四^①年决定迁都于殷，实际完成于在位的第十五^②年。所以，据董作宾的计算，殷商共统治了273年。

董作宾所做的就是把甲骨文中六十干支的天数与斯卡利格的“儒略周日”中的日数相对照，并在后者中确定下来。例如，董通过一系列复杂计算，推定盘庚在位的第十五年的1月1日，即为儒略历法的公元前1384年1月14日，相当于斯卡利格的计算中儒略日数的1215931。^[109]董还识别出这天是六十干支中的甲申。这两个参照点为所有其他表的计算奠定了基础。董试图用科学方法把数量惊人的甲骨材料和现代日期联系起来，为此他下了很大工夫，这突出地体现了抗战时期中国思想现代化的一个重要阶段。

董在《殷历谱》中归类的甲骨文资料，不仅为确立年表作出了根本性的贡献，还为其他历史研究提供了丰富的原始资料。例如，历法表第

二部分收集并分类的在特定日期给祖先和其他神灵供奉牺牲的各种记录，不仅使读者对这种根深蒂固的迷信（正如司马迁在两千多年前所说的“信鬼”）有了一个大略的了解，而且揭露了举行这些祭祀仪式的本质。《殷历谱》指出，祭祀祖先有五种最重要的仪式，即𠂔、翌、祭、

𠂔、𠂔。

董关于殷商时期上述各种仪式活动的研究是项艰巨工作。在《殷历谱》中，他推断，初期的牺牲祭祀是多种多样的。祖甲时进行了改革，使祭祀减少到一个不可缺的最小量。年代表的顺序中仅保留了五种必要的仪式。董还计算出完成各种祭祀的周期约为一年。因而，他得出结论，这就是在最后两个国王（帝乙、帝辛）在位时“年”又被记作“祀”的原因。让人惊讶的是，即使在祖甲改革后，完成一轮对祖先的祭祀还要花一整年的时间！

大家知道，商代每个王的名字中都含有天干中的一个字。在殷历法的记日中，如上所述，每天用六十干支中的一个双合词命名，也含天干中的一个字。祭祀那些名字与当天记日的天干相符的祖先是每年都要进行的传统宫廷大事。例如，在甲子这天，所有名字中含有“甲”字的先公先王，像太甲、小甲、河亶甲、沃甲、阳甲、祖甲，都要受在位王的供奉。十分清楚，祖先名册上的每个死去的王至少每十天就会接受一次在位帝王的祭祀。另外，有时还会举行一次联合的仪式来拜祭所有的先王，这在甲骨文中称为“合祭”。合祭当然是一个非常隆重的节日，但它的性质还有待探讨。

《殷历谱》汇集的材料源于原始的写本，因此，尽管董的分类很重要，却仅能被少数专家理解。两次著名征伐的资料，即武丁在西北方的征战和帝辛讨伐东夷的战事，具有重大的历史意义。在过去的记载中，对此只简单提及；期望将来有更多有能力的学者来进一步研究。当然此书还有值得特别注意的其他分类资料，但我想对这位古文字学家在战争期间的研究工作已叙述得不少了。

与此同时，我对安阳收集的陶器进行了研究。与梁思永一样，在昆明和李庄我也遭受了一些个人的不幸，但一有时间我就坚持研究。我之所以这样讲，是因为我另有行政工作要做，作为考古组的领导，还要带五六个受过训练的考古人员，而且我还是中央博物院的筹备主任。处在这种职位上，我组织并派遣了一些小型考察队赴大理、成都，甚至远至西北敦煌。有时我也参加考古队的一些发掘。所有这些都要花费时间。

我不如董作宾那样幸运，能集中全部精力和时间从事珍贵的安阳收集品的研究。

我对安阳收集品的兴趣自然是多方面的。但我始终遵循一个原则，就是给同事们优先研究他们特别感兴趣的田野资料的机会。从过去的经验中，我发现这是领导科学研究工作必须奉行的基本原则；只有遵循这样的原则，合作工作才能顺利地完成。我还体会到，无论队里有多少参加者，总得有人去处理某些问题和整理资料。

到李庄后，我又一次投身于安阳出土的大量陶器的研究中。我当时有所有重要的典型标本和整套田野记录。在这个新所址里，我决定完成一本陶器收集品的汇集。

我在这方面的兴趣绝不是偶然的。早在1924年，我在读安特生的《中华远古之文化》——关于华北第一个史前遗址仰韶村的初步发掘报告——时，他对在仰韶村发掘的鬲和鼎的重视给我留下了非常深刻的印象。我也非常熟悉法兰克复关于近东远古陶器的研究。^[110]因此，在李庄安定下来后，有了所有的全部田野记录和可供详细审核的标本样品，我决定先研究陶器的器形，因为尽管当时的李庄学术氛围浓厚，但要进行其他技术性的研究几乎是不可能的。

在研究所图书馆和我自己有限的书籍中，仅能找到彼特里的一本《史前埃及》作为参考资料。我打算写一本关于在小屯和侯家庄发掘出土的陶器的著作，自然彼特里的书对我非常重要。但我发现彼特里的分类原则并不适于我的目的，于是我和考古组的同事一起商讨全书的组织应遵循什么原则。这个讨论持续了很长时间，并与董作宾的甲骨文一起成为当时我们在李庄谈到的关于工作的主要话题之一。

这时，有了潘懿和李连春的技术支持，我决定用统一的比例为所有标本绘图，并为所有完整的标本拍照。这项工作花了好几年的时间。潘李二人以原件的四分之一的统一比例完成了全部标本的绘图，每件标本图的一半为剖面图，一半为外形图。拍照工作也用了几年时间才得以完成。

对各种标本样品外形的比较研究，又引发我去研究陶器的制作方法，当然还去探讨了制陶粘土的特性，并认真考察了陶器的表面纹饰。这些问题在我看来本身也很重要，但我的焦点仍然是研究具有完整器形的——无论原本就是完整的，还是修复的——各典型标本的演进。

相关的形制可分几组，最先同时也是最使我感兴趣的就是三足器。这有其历史原因。我回想起在第一个史前黑陶遗址城子崖的发掘中，出土了多种类型的三足器，这与安特生在仰韶村仅发现鬲和鼎两种类型的三足器形成了鲜明对照。在安阳陶器中，田野队一直以来也常遇到各式各样的鬲型三足器。它们数量众多，十五次发掘出土的大小形状各异的鬲的碎片总数达几万片，是各类中最多的。

通过这些比较研究，最后我确立了组织全部陶器的两个基本思想。

第一，我决定把在小屯和侯家庄发掘的所有殷商及前殷商的陶器都包括在内。这一决定是重要的，也是有一定原因的。我详细研究了田野记录，又细查了所有地下窖穴、坑中堆积的包含物及其历史，很快发现在龙山文化之前的史前时期小屯已有人居住。因此，我清楚地认识到，除殷商以后的埋葬外，实际上我们发掘时出土的全部陶片和完整的容器，只可能是以下三个时期之一制造的：(1)史前时期；(2)早商期；(3)殷商时期。当然，最后一个时期最重要；它代表了研究的时期。同时，我清楚地知道，把这些时期分割开是不可能的，因为它们是连续发展的，在地层上也无法细分，所以最好的解决办法是把全部收集品作为一个整体进行分析。

第二，我决心放弃参考埃及古物学者文集编写架构的基本思想，即从最敞口的（和浅的）一直推展到最小口的这种简单程序。我设计了安排陶器器形的一套新方法，并发现这方法不仅可操作，而且适合于手下一千多件可复原的安阳陶器的完整标本。这种方法（或原则）如下：

A．分陶器为十类，器盖单列一类；

B．以每件完整容器底部的形状特征为分类标准，即：(1)圜底，(2)平底，(3)圈足，(4)三足，(5)四足，(6—9)为新类型保留的型号；(10)器盖。在每类中，我仍按彼特里的安排法把口最大的、最浅的放在前边，把身高口小的放到最后。

这样的陶器分类一经绘成16张图纸印出后，就清楚地显示出自然顺序，使考古组的全体成员惊奇不已。在李庄患病卧床的梁思永首先祝贺我完成了这项任务，他和我一样高兴。

这部图集于1956年发表在我的《殷墟器物·陶器》中。^[111]

1945年日本无条件投降前，我还抽时间以安阳资料为依据写了几篇文章。一篇是关于先殷文化的堆积，投给《学术汇刊》，这是中央研究

院战时在四川出版发行的一个学术刊物。这篇文章为从地层角度讨论殷墟地下文化顺序提供了基本的参考资料。[\[112\]](#)这篇文章于1944年发表，此时中国的抗日战争已接近尾声。

8. Postwar Academic Working Conditions

and Studies of the Anyang Finds

The immediate result of the unconditional surrender of the Japanese was naturally a general feeling of relief among the hard-pressed Chinese. But politically, it was by no means a simple change. It brought forth all sorts of social and international problems that the government found extremely difficult to handle.

So far as our Anyang collections were concerned, we were able to transport them quietly from Szechwan back to our headquarters in Nanking, which the Japanese had turned into an exhibition room during their military occupation. The National Central Museum building, which was not completed when the war started, had been occupied by the invading army as their Nanking command center. Returning to Nanking after the Japanese surrender we found the capital altogether a different city.

Nearly all those who had worked in Li-chuang during the war, but none of those who had left the institute earlier, returned to the institute at Nanking. Postwar conditions changed rapidly in the next few years, and the personnel of the Institute of History and Philology suffered many changes. Tung Tso-pin received an invitation to visit Chicago; I myself was commissioned to oversee postwar conditions in many places in China and Japan. But I was one of those who decided at last to concentrate my efforts on the investigation of the Anyang collections which, on the whole, still remained in a more or less well-preserved state. Other colleagues made their decisions according to their personal needs.

It was at this time that I initiated a series of programs for the detailed investigation of ancient Chinese bronzes, with the Anyang collection naturally as my starting point. In order to lose no time, I gave up all outside engagements, including the directorship of the

National Central Museum, which I had held for almost ten years.^[113]

Liang Ssŭ-yung, who had never recovered his health since the beginning of the Li-chuang days, did not return to Nanking after the war; he requested a leave of absence so that he could return to Peiping for a number of reasons. The climate is drier there and was considered by friends to suit him better. Also, the fact that he had spent his childhood and adolescence in Peiping and Tientsin led them to favor his recuperation in Peiping.

In Nanking with the departure of Tung Tso-pin for the United States and Liang Ssŭ-yung for Peiping, only I among the seniors remained, and I made up my mind to continue working on the Anyang collection. I had the good fortune to be assisted by a number of junior workers, including Shih Chang-ju, Kao Ch'ü-hsün, and Hsia Nai, who had joined the institute during wartime when the headquarters was still located at Li-chuang.

I was able to edit and publish the *Chinese Journal of Archaeology* and issue further numbers of the Anyang Series of Archaeologia Sinica. Three numbers of the Journal were edited, two of which were actually published in Nanking. The first number of the ink-squeezes of oracle bone inscriptions were compiled once more and sent again for publication.^[114]

Postwar Nanking, immediately after the Japanese surrender, was busily occupied with all sorts of restoration and reconstruction. Both the Institute of History and Philology and the National Central Museum were repaired and brought back more or less to their prewar condition, becoming in the course of time suitable for carrying on research work. From the collections that we had not taken west during wartime we were able to recover much of the fauna and abundant potsherds as well as a number of other duplicates. The "painted earth blocks" collected from the Hou-chia-chuang royal tombs were still well preserved; the Japanese archaeologists had treasured and made detailed studies of them. When I was in Kyoto during my first postwar visit to Japan, Professor Sueji Umehara presented me with a colored print of these "painted earth blocks."

My research work on Anyang had continued in Nanking less than two years. ... In the winter of 1948 I was commissioned by the director of the Institute of History and Philology to assist Mr. Hsü Shen-yü, an old scholar renowned for his versatile knowledge of Chinese antiquities and Chinese bibliography, who had been appointed by the government to transport the Palace Museum treasures to Taiwan for safety. Director Fu asked me to act as Hsü's associate and to take special charge of moving the collections of the Institute of History and Philology to Taiwan for the same purpose. A navy transport was assigned. My senior, Hsü Shen-yü, saw me off and told me he would follow with the other boats, a promise which, however, he never fulfilled although a number of other treasure-carrying boats followed.

When we first arrived at Taiwan in the winter of 1948-1949, the institute was installed in a place known as Yang-mei Cheng, about half way between Taipei and Hsin-chu. With the help of the provincial government, the institute was loaned some storage buildings near the railway station at Yang-mei. There the Institute of History and Philology established a temporary headquarters and its members and staff found living quarters rented from the local inhabitants. Here those who followed the new migration of the institute worked for five years (1949-1954).

Meanwhile, Fu Ssü-nien received a new appointment to the important post of president of Taiwan University, which he fully reorganized. Unfortunately President Fu, who was also still taking care of the Institute of History and Philology, passed away while attending a meeting of the Taiwan Provincial Assembly. This occurred in December 1950, about a year and a half after his appointment. In his capacity as president of the university, he had engaged a number of research fellows of the "Academia Sinica" to take up teaching positions left vacant by the departure of the Japanese faculty. Through his initiative, I was engaged to take up the post of chairman of the Department of Archaeology and Anthropology in the School of Arts of his university. This new job seemed rather congenial to me, for more

reasons than one. I was of course glad to assist my old colleague and, besides, there was the fact that the Department of Anthropology had in the Japanese days been headed by Professor Uturigawa Menozo, who had been trained in the Peabody Museum at Harvard University. When he organized the department in Taiwan, he had followed closely the Harvard model familiar to me. In fact he had studied under Professor Roland B. Dixon, the same professor who had directed my Ph.D. thesis on "The Formation of the Chinese People."

So for a number of years, I spent much of my time in organizing the department, while Tung Tso-pin succeeded as director of the Institute of History and Philology. For the first few years in Taiwan, I actually carried on my Anyang investigations in the department's building at the university. ... [T]he university progressed slowly but steadily under the new president, Ch'ien Ssŭ-liang, who succeeded Fu Ssŭ-nien after his death. Many of the research fellows of the Institute of History and Philology, at the invitation of the university, taught in several departments in the School of Arts—Chinese, History, Anthropology, Archaeology, Paleography, and so on. So the academic standard of the university was commensurate with the average level of achievement of the research institute. Nearly all the articles in the first number of the *Journal of Literature, History, and Philosophy* issued by the School of Arts of "N.T.U." were contributed by faculty members working in the Institute of History and Philology.

In 1954, owing to economic pressure, Tung Tso-pin decided to give up the directorship of the institute and to accept an invitation from Hong Kong University. He left for Hong Kong without finding a successor and without, in fact, resigning. After Tung Tso-pin's sudden departure, the president of the "National Academy," Dr. Chu Chia-hua, sent some friends to negotiate with me about succeeding Tung. It was a difficult and also a delicate situation, difficult since there was only a limited budget for "Academia Sinica," and delicate because Tung had departed without resigning the post.

Whatever the difficulties Tung's successor had to face, I myself had to look at the problem from my own angle, namely the absolute

necessity of completing the Anyang report as soon as possible; and I had the temerity to believe that I was the only man to carry it out. So I mustered my courage to take up the challenge without any assurance of help from anybody. I accepted the task mainly because I felt it was my academic duty "to fight to the finish" in the completion of a piece of scientific work developed under my guidance.

Soon it became clear that Tung's departure for Hong Kong had been mainly for personal reasons. As far as the Institute of History and Philology was concerned, Tung had been gaining all the support that was available. Dr. Hu Shih, who was residing in New York City at that time, had been the first man to extend a helping hand and, as early as 1951, he had already approached the Rockefeller Foundation for some assistance in erecting a building to house the precious Anyang collection and the library collection of this institute, the only research unit which had up to that time migrated to the island of Taiwan. Dr. Hu succeeded after some delay in gaining the support of the Rockefeller Foundation, which promised to give some financial assistance on condition that the China Foundation would do the same. Dr. Hu proceeded to negotiate with the officials of the China Foundation and accomplished his end in due time. By the time of Tung's sudden departure for Hong Kong, the storehouse built by funds from the two foundations had already been completed in Nankang and the headquarters had actually moved to the new building. As the new headquarters, it was to become the seat of three different functions: storage, research, and administration.

My appointment became effective in August 1955. On my initiative the "Academia Sinica" invited Professors Shen Kang-po, Li Tsung-t'ung, Liu Ch'ung-hung, and Yao Ts'ung-wu to be corresponding fellows of the academy; all were teaching in the history department of the Taiwan University. In reorganizing the research work of the institute, I also made a number of changes. Since Ch'en Yin-ko had been unable to come to Taiwan, and the plan for an Institute of Ethnology had matured, I requested Mr. Ch'en P'an to take up temporarily the position of acting chief of the History Section, and

Ruey Yih-fu to be chief of the Anthropological Section, while Dr. Chao Yüan-ren was persuaded to direct the Philological Section as usual.

The new headquarters at Nankang was a quiet place, suitable for the pursuit of academic work. Those who had been working near the noisy railroad station at Yang-mei for years found in the new headquarters a much more peaceful and congenial atmosphere.

Living quarters had been built for those who resided in Yang-mei; but a number of the senior members, who had teaching jobs at "N.T.U." and had enjoyed the privilege of staying in the university living quarters, consequently kept on living there.

My assumption of the directorship of the Institute of History and Philology was soon followed by a number of events that directly or indirectly contributed to the advancement of our research work. The China Foundation, the Rockefeller Foundation, [and] the Harvard-Yenching Institute...have, in the course of time, all contributed funds to the institute to help its research program. A quite unexpected event was Dr. Hu Shih's decision to return to Taipei from his long sojourn in New York City. He was soon elected and appointed to succeed Dr. Chu Chia-hua as president of "Academia Sinica," a post which he accepted against the advice of a number of his most intimate friends residing in New York.

Dr. Hu's appointment, whatever its political significance, was a fortunate choice in the eyes of those working in the Institute of History and Philology, of which he had been a corresponding member ever since its establishment.

As the essential reason that I accepted the directorship of the institute was to complete the report on the Anyang materials, I had to do the best I could to reapportion the collective labor among the available research members who were qualified and competent in this field. One of the great problems was of course Tung's departure and his subsequent gradual loss of interest in any project of theoretical importance. While in Hong Kong he spent his time in the compilation of a reconstructed historical calendar of ancient China, making use of

all available data, regardless of the nature of their sources. His energy seemed to have declined and his synthetic power to have ceased to be creative. After he returned from his Hong Kong sojourn in 1958, Tung requested that the institute add one more research unit—to be devoted to the study of paleography with oracle bone inscriptions as the main source material—a request immediately granted by "Academia Sinica" in November 1958.

But Tung's health deteriorated rapidly and on November 23, 1963, this talented researcher, pioneer of the Anyang field work, passed away in the University Hospital of Taita; he was later buried right in front of the Nankang compound.

While Tung was still living, the senior members of the institute had agreed on the division of labor on the final report of the Anyang collection. Since his death, the program has been strictly followed at Nankang. Let me give a summary of the general division and a brief account of the progress of this work as well as of the publications.

The collective work was divided among members of the Archaeological Section as follows: Tung Tso-pin, Ch'ü Wan-li, Chang Ping-ch'üan, and Li Hsiao-ting were to study oracle bone inscriptions. Shih Chang-ju was to review the Hsiao-t'un field notes; he was to have a number of junior assistants to help summarize the field data of the Hsiao-t'un excavations. Kao Ch'ü-hsün was to take up the editing of Liang Ssü-yung's manuscripts on the Hou-chia-chuang royal cemetery and put them into final form. Li Chi was to serve as editor-in-chief of *Archaeologia Sinica* and to supervise both the research and publications of the final report, in addition to his own research.

Mr. Young Hsi-mei of the Anthropological Section was persuaded to take up the investigation of the human skeletal material which had remained without expert examination ever since Woo Ting-liang had given up the work. This collection had again migrated thousands of miles from Szechwan...to Taiwan after Woo's departure.

The oracle bone collection of the institute naturally remained the one group that more than any other attracted public notice. Let me

first give an account of the publications of the ink-squeezes and other related publications. In the early days, before the war started, it had already been agreed by the director and the editor of *Archaeologia Sinica* to publish, in one volume, rubbings of all the registered fragments with inscriptions found in the first nine seasons. Notes, decipherments, and interpretations would follow. The main idea was to publish registered new data as soon as possible so that paleographers everywhere might be able to make use of them.

This basic idea was however interrupted by the Japanese invasion, which made printing of the first volume impossible. So the first volume of rubbings was not published until 1948, when Tung Tso-pin was in Chicago where he wrote an introductory note.^[115] This volume contains only the rubbings of the inscribed oracle bones found in the first nine expeditions, which constitute, as mentioned before, only a minor portion of the institute's total collection.

Tung was naturally eager to follow it by publishing all the rest of the rubbings that had been completed before the war terminated. But postwar conditions in Nanking and Shanghai deteriorated so rapidly that publication was not as easy as one might have imagined. Only after another five years, by which time the institute had migrated to Taiwan, could this next group of ink-squeezes of the oracle bone inscriptions be issued.^[116]

To publish the ink-squeezes of the inscribed oracle bones was only the first stage of the original plan. It was to be followed by a volume of annotations to accompany each of the ink-squeeze publications. While the migratory upheavals scattered the various experts widely, still, among those who came to Taiwan there were a number of paleographers who wanted to continue work along this line. I was fortunate enough to convince Professor Ch'ü Wan-li to take up the work of annotating Volume 1 of the ink-squeeze publications, which he completed and published in 1961.^[117]

Long before Chang Ping-ch'üan succeeded to the post of chief of the oracle bone inscription unit, I convinced him without much difficulty to undertake the systematic work of piecing together the

fragments of the broken pieces of oracle bones in our collection. By this time the pioneer paleographers had already developed two distinct criteria for this kind of highly specialized research. The first was to follow the anatomical guide, for if investigators are lucky enough to handle original specimens, it is comparatively easy to recognize to which part of the tortoise shell the inscribed fragment belongs anatomically unless it is too tiny. The second criterion was the one worked out long ago by Professor Wang Kuo-wei, that is, to decipher correctly the contents of the inscriptions. Since Chang Ping-ch'üan had at his command all the original specimens from Hsiao-t'un, he could naturally pursue the piecing together almost routinely. From 1954 Chang worked on the project for more than ten years. The institute also decided to publish a third series in *Archaeologia Sinica*^[118], to print the restored shells. The following volumes have already been published:

Archaeologia Sinica, Philological Series, Fasc. 3

P1937(i)

P1959(i)

P1932(ii)

P1965(i)

P1957(i)

P1970(ii)

[349]

So, up to the present time, 349 restored shells have been reconstructed; these more or less complete tortoise shells with inscriptions constitute, at present, the majority of documents available which were originally, for some reason or other, written together on the same plate. These restored documents certainly provide the most reliable source materials for researching a number of important historical problems, much more valuable than information extracted or entirely based upon inscriptions of fragmentary oracle bones. It is true that among inscribed records on the same plate there may be a number of independent queries and answers that may or may not be

related to each other. Still the very fact that these records are found on the same plate indicates at least the order of occurrence of such events—a sort of time relation of various queries made.

Chang Ping-ch'üan, in one of his articles, mentioned that by studying the records on these specimens which he had pieced together he had discovered the important custom of making a single query a number of times—sometimes as many as ten times.^[119] If the query, for example, was about the forecast of the weather in a certain month and the answer was "rain," the same event might be recorded ten times. Anyone who studied weather conditions using fragmentary records as his source materials would probably conclude that these records constituted definite evidence that it rained ten times in a certain month in the Yin-Shang period, but Chang's discovery indicates that he would have been very much misguided. We know that a number of scholars in the past did attempt to study climatic conditions on the basis of the oracle bone records before these specimens were restored. Chang has himself written an article on "Agriculture and Climate," in which, of course, he paid considerable attention to the repeated records of the same event.^[120]

A great deal more may be said about the work of restoration, but the above reference is sufficient to show the importance of this somewhat time-consuming task, whose results will benefit future epigraphists.

Before I stop this narrative about publications concerning oracle bone studies, I must mention one more book, published in 1965, which is widely used and much appreciated: Li Hsiao-ting's *Chia-ku wen-tzŭ chi-shih*. This dictionary of oracle bone characters in the style of the *Shuo-wen* dictionary was one of the few publications of the institute which soon had to be reprinted by popular demand. In compiling it, Li made a systematic effort to include all the studies and decipherments of every individual character. The book therefore provides the source materials for any scholar who would like to get acquainted with the views of past masters, besides serving as a handbook to introduce the uninitiated to the earliest Chinese writing

discovered so far.

The project to publish the royal tombs excavated at Hou-chia-chuang under the leadership of Liang Ssŭ-yung was placed in the hands of Professor Kao Ch'ü-hsün as soon as we had settled at Nankang. Although Liang's original manuscripts had already examined and presented the principal tomb contents, they were not illustrated. What Kao had to do was in fact more laborious than was at first thought. He had to proceed in accordance with the following steps: (1) to go carefully over Liang's manuscript as well as the original field notes; (2) to check all the field photographs and take pictures of every individual find from the different tombs; (3) to draw accurate figures of all the finds to demonstrate both (a) tomb structure and structures of important finds, and (b) the relative position of every individual tomb in the group; (4) to describe the structure of every tomb and the important finds from it in concise and technical terms; (5) to check the registered field numbers of all tomb contents against field records, and also against Liang's manuscripts and the sketches made in the field; and (6) to pay attention to records of early plunderings and diggings and illustrate the amount of damage done to the original tombs through such early plunderings as well as through recent pilferages.

Kao was one of those who had been privileged to follow Liang in the field and had learned from him the technology of his field operations. He had also learned to respect the master and worked on his manuscripts with dedication. He has been able to annotate and illustrate the manuscripts in a truly professional way; HPKM 1001 was published in 1962 in two volumes: one being text, the other composed of 270 plates, with an extra appending volume of colored plates printed specially in Japan to present the extraordinary records of Yin-Shang painted designs preserved in the "colored clay blocks," which Professor Umehara had worked out and printed in Japan during wartime.

Since we came to Taiwan, Professor Umehara has paid the Institute of History and Philology frequent visits, and thus become

better acquainted not only with the Anyang finds, but also with the archaeologists of the Archaeological Section personally. His devotion to and genuine interest in the study of Anyang artifacts really touched most of us; so when the HPKM 1001 report was ready for publication, I approached Professor Umehara for some help to have the "colored clay" illustrations printed in Japan and issued together with the two volumes which had already taken Kao Ch'ü-hsün many years to complete. This request was soon complied with. I mention this cooperation between the learned men of China and Japan just to show how in academic work cooperation can find expression in a number of ways.

The Hou-chia-chuang series of publications is still going on. Up to 1973, reports on HPKM 1002, 1003, 1004, and 1217 have all been published. Kao has practically completed the reports of all the other huge tombs: these are to be issued like the first five volumes already in print. Only the necessary illustrations in plates and figures remain to be done and, also, the necessary publication funds to be found. It is expected that Professor Kao will be able to complete this work in due time.^[121]

The task of reporting Hsiao-t'un differs from the Hou-chia-chuang series in two important respects: in the first place, the diggings at Hsiao-t'un, in twelve seasons which lasted nine years (1928-1937), underwent a great many changes—changes in command and personalities, in fundamental ideas, and in methodology. Consequently the field records are more mixed in nature than the Hou-chia-chuang field data, which were collected under one leader and are therefore of a much more uniform standard. The field records, the field photographs, and the field sketches of Hsiao-t'un differed as seasons changed and as needs arose. When Shih Chang-ju took charge of the Hsiao-t'un field report after the Archaeological Section settled in Nankang, he found the task initially much more arduous than reporting the royal cemetery of Hsi-pei-kang at Hou-chia-chuang.

In the second respect the Hsiao-t'un data, being concerned mainly with dwelling sites, are much more complicated in nature; they are

composed of all sorts of materials requiring architectural, social, political, religious, ornamental, etc., interpretation. The purpose and significance of some finds are revealed in the materials themselves; others have to be deduced from the mutual relationship among the discovered art-objects. Thus the deposits found in those underground caves and caches may have been formed for purposes quite different from each other, while in the case of tomb finds, the archaeologists are at least sure of what the buried goods were meant for.

Still, when Shih took up the work he also had certain advantages, including his own field experience and his wartime efforts in various related investigations. One of the most useful of these preliminary works, initiated during the Kunming days, was the project to piece together all the detailed sketch maps surveyed and drawn in the twelve seasons, and match all of them on one sheet of drawing paper, thus integrating them into one complete map to show the location of every trenching, underground pit, dwelling cave, burial, foundation unit—all the structural remains ever disclosed during the excavations. This consolidated map was designed on a scale of one to five hundred, a scale large enough for the smallest structural remains to find a place. It was intended to serve as a sort of index-map, and also a historical atlas of the Hsiao-t'un diggings from 1928 to 1937.

This elaborate project was accomplished by collective efforts in the space of a year. All the field men who were in Kunming provided the data, but the man in charge of this task was Shih Chang-ju; the actual map was made by P'an Ch'üeh who, in the field, had also done much surveying in addition to other duties. This huge atlas was completed in color, to indicate different types of underground structures, such as dwelling foundations, altars, pits or burials, and so on.

It should be noted in this connection that all the surveying work done in the field, from the fourth season on, started from a point about fifty meters southwest of Hsiao-t'un village, where a block of reinforced concrete was buried to mark a permanent reference point.

This atlas guide was occasionally referred to in Li-chuang days.

By the time the Archaeological Section settled in Nankang, the line drawings made more than a decade earlier had already become faint, and the color pigments had decayed. So we decided to repair and redraw the map.

It was repaired by P'an Ch'üeh, who had originally drawn it in Kunming, and now copied it again on the same scale. This guidance map served hereafter, as before, many different research programs. It served as a geographical guide for all reports concerning Hsiao-t'un excavations and was particularly useful for Shih's final report; in addition, for example, my own final report on the pottery could not have been completed without frequent reference to this map, for, in my description of different types of ceramics and their distributions as well as their depository sequences, I had to take into consideration their locations.

Shih Chang-ju's first work after settling at Nankang was a report on the architectural remains of Hsiao-t'un, published in 1959.^[122] This important publication was the result of nearly twenty-two years' hard labor; the work clarified the confused data about pounded earth, the "pisé" method of building, accumulated in nine years of field operation. Turning to the principal contents of this monographic report, I shall in the following account use the term "pisé" as a technical term for all the structural remains of pounded earth discovered and described in Shih's account.

In this report Shih divided the architectural remains found at Hsiao-t'un into three geographical groups, designated *Chia*, *I*, *Ping* (which I intend to render in the first three letters of the Greek alphabet: α , β , γ), and located on the site as the northern group, the main group, and the southwestern group (Fig. 21). The *alpha* group was found mainly in the northern portion of the farmland, right beside the bend of the Huan River, corresponding to Subareas E and D of the early seasons' excavations. Within this area of nine thousand square meters (N.S. 100m. $\times$ E.W. 90m.), nearly fifteen units of pisé foundations were traced. Most of these pisé foundation units are rectangular in shape (Fig. 22). The larger ones apparently were

oriented E.W., while the smaller units may have been oriented southward. It is difficult to say whether these units were related to one another in any way.

21 Pisé foundation units recovered from Hsiao-t'un 小屯发现的夯筑遗址的平面图

22 The fifteen pisé foundations of *alpha* area α 区的15个夯筑遗址

23 Reconstruction of *beta* area (fine broken lines indicate traced boundaries of pounded earth; heavy broken lines indicate reconstructed boundaries of pounded earth)

β 地区复原图（细虚线表示描绘的夯土边界，粗虚线表示复原的夯土边界）

The *beta* group (β), which seems to have been the main portion of the Yin-Shang architectural remains recovered by our excavations, is located directly south of the *alpha* group, corresponding closely to our

Subareas B and C. Shih estimated the size of this area as it still survived during the time of our excavation to be nearly two hundred meters from north to south, and more than one hundred meters in the E.W. dimension. But as the Huan River had eroded much of the eastern bank (Fig. 23) and destroyed an extensive part of the pisé foundations of this portion, it is impossible to say how far eastward the pisé area may originally have reached. Judging by general observation, Shih characterized the peculiarities of the pisé remains here as (1) all large-sized foundation units oriented southward; (2) some foundation surfaces covered by white lime powder; (3) indications of regular arrangements with terrace (nearly square) of purely yellow earth on the north (β 1), and remnants of three relatively large-sized foundations apparently in front of the altar, that is, south of the terrace. These three pisé units (β 7-9) of large size may have been the foundations of some large halls which were attached to five gates. The arrangement of these rooms was probably somewhat symmetrical but unfortunately this portion of the foundation is located right beside the present Huan River bank, so it had been more than half eroded away and submerged by flood long ago. Two-thirds of the twenty-one units of pisé foundations recovered in this portion still preserve the pillar foundation stones in order, which of course helped greatly in Shih's attempt to reconstruct these remains. The most essential feature in this group is the fact that all the twenty-one units of pisé remains were apparently linked in one way or another; they seem to have originally constituted a planned and unified building.

Since the Huan River cuts into the farm here most intrusively, it is quite possible that in the past, for some reason or other, this part of the Waste of Yin may have suffered some kind of catastrophe, natural or human, which damaged the foundations of the main buildings in particular, so that in later times the Huan River was easily able to undermine them.

The *gamma* group is comparatively small in size, and located at the southwestern corner of the *beta* group. Shih described this group of pisé remains in the following terms.

1. The area occupied by the *gamma* group measures (N.S. 50m. × E.W. 35m.), a little less than 2,000 square meters (1,750 m.²).

2. Fifteen units of pisé remains were found, apparently related to one another; the orientation is southward.

3. There is one large square pisé foundation, surrounded by other smaller squares.

4. Pillar foundations are not well preserved.

5. Burials discovered in and near this area were found in regular arrangements; human burials on the left side according to southern orientation, beasts on the right side. The burials included cremated remains.

As to the date of construction of the pisé buildings, Shih's main conclusion is that this new method of building was introduced in the reign of King Wu Ting and followed afterwards. Shih's report gives an estimate of the approximate construction periods of the three groups of architectural remains.

I shall have occasion to refer to Shih's reconstruction in some detail later.

Following this important publication, Shih has in recent years brought forth three more volumes in the Hsiao-t'un series of *Archaeologia Sinica*: two more volumes on the burials of the northern section (*alpha* group) and one on the main section (*beta* group).^[123] These reports include detailed descriptions about burials both natural and sacrificial, of both human beings and beasts. I am confident that in the course of time he will be able to complete his Hsiao-t'un report, as he is still working on it actively in spite of his advanced age.

Finally I wish to mention briefly another series of research under my direct guidance. Through the generosity of the Harvard-Yenching Institute, the Archaeological Section has received substantial help in financing a laboratory for the study of our bronze collection from Anyang. I was able to secure the services of Wan Chia-pao, trained and graduated in the School of Engineering, "N.T.U.," and with

experience in industrial molding of plastics. A man full of curiosity, he became interested in the technology of Anyang bronzes after examining our collection of molds as well as the bronzes in Nankang. He joined the Archaeological Section in 1962 to cooperate with me in investigating the various problems from both a technical and a historical viewpoint.

Many clay molds in our collection could be easily identified as the negatives for the bronze *ku*-beaker, so we started with detailed studies of examples of this particular type of bronze, which is represented by more specimens than most other bronzes from the Anyang excavations. The results of these cooperative studies were published in the new series of *Archaeologia Sinica*; up to 1972 five volumes of this new series have been published. They are respectively: New Series no. 1, *Studies of the Bronze Ku-Beaker*, 1964; no. 2, *Studies of the Bronze Chüeh-Cup*, 1966; no. 3, *Studies of the Bronze Chia-Vessel*, 1968; no. 4, *Studies of the Bronze Ting-Cauldron*, 1970; no. 5, *Studies of Fifty-three Ritual Bronzes*, 1972.^[124] These five volumes in the new series cover all the ritual bronzes excavated by our archaeologists in the fifteen seasons in Hsiao-t'un and Hou-chia-chuang. In these studies Wan studied the detailed processes of casting by means of piece-molds and, testing the process in the laboratory, succeeded in producing duplicate bronzes exactly like the original. My main task was to study, all the other aspects of the bronzes—shape, ornament, function, inscriptions, and so on. The completion of this series still leaves two groups of bronze artifacts untouched, namely, the weapons and the decorative pieces, mainly from chariots. I have written in my early investigations several times on both the halbert *ko* and the spearhead *mao* and am convinced that the spearhead probably was imported into China together with chariots and at the same time. As for the chariot, it is a topic which has already been covered by Mr. Shih for Anyang and also by several non-Chinese scholars on a comparative basis. So there is little left for me to add.

Up to now, the mid-seventies, we have not done all we should. I feel particularly sad at the loss of my charcoal collection, which would

be particularly valuable now in view of recent developments in scientific analysis for acquiring new archaeological data. The skeletal materials, to which I have paid so much attention in collecting and studying, are still fruitless. Let me hope that in addition to our hard work over the long years to date miracles may yet happen.

捌．战后的学术工作及安阳发现物的研究

日本无条件投降的直接结果是，中国人民普遍感到从重压下获得了解救。但在政治上这绝不是一个简单的变化，它带来了种种政府极难处理的社会和国际问题。

至于安阳的出土物，我们已经从四川悄然运回在日本军事占领期间被辟成展室的南京所址。战争初期尚未竣工的国立中央博物院大楼，也曾为侵略军占据，成为他们在南京的指挥中心。日本投降后我们返回了南京，发现这个都城完全成了陌生的城市。

除早期离开研究所的人外，战争期间那些在李庄工作过的人，几乎都回到了南京的所里。战后几年形势变化很快，历史语言研究所的人员也经历了不少变换。董作宾应邀赴芝加哥访问。我本人也被任命在中国和日本的一些地方视察战后的形势。但我是最后决定集中精力研究安阳出土物的人之一。总的来说，它们仍算是保存完好。其他同事都依个人的需要作出了决定。

此时，我正着手拟定一系列详细研究古代中国青铜器的计划，当然安阳出土物是我研究的起点。为了不浪费时间，我拒绝了外部所有的聘用，包括我任职十多年^[113]的国立中央博物院筹备主任的职务。

梁思永到李庄不久就染病了，后来一直未恢复健康，战后他也没回南京。由于各种原因，他请了假回北平。北方的气候较干燥，朋友们认为更适合他。他童年和青少年都是在北平和天津度过的，因此朋友们也赞成他回北平养病。

董作宾赴美国，梁思永回北平，在南京的高年资成员中只有我了，于是我决心继续研究安阳出土物。幸运的是，有多位年轻人协助我工作，包括石璋如、高去寻和战时在李庄加入研究所的夏鼐。

我得以编辑出版《中国考古学报》，并继续出版《中国考古报告集》的安阳系列。《中国考古学报》出版了三期，其中两期在南京出版。甲骨文拓本的第一辑再次汇编成册重新出版。^[114]

日本投降后，南京百废待兴。历史语言研究所和国立中央博物院经

过整修，大致恢复到了战前的状况，适于进行一些研究工作。我们从战时未携带到西部的收集品中找到了很多动物骨骼和丰富的陶片，以及不少其他复品。从侯家庄王陵收集的“花土块”仍保存完好。日本考古学家珍藏并详细研究了这些收集物。战后我第一次访问日本京都时，梅原末治教授赠给我一套这些“花土块”的彩色图片。

安阳出土物的研究持续了不到两年。1948年冬，我受历史语言研究所所长的委托协助徐森玉先生。他是一位著名的具有古物和文献目录学多方面知识的老学者。政府令他负责把故宫的珍品运往台湾妥藏。出于同样的目的，傅斯年所长让我做徐的副手，负责把历史语言研究所的收集物运到台湾。为此给我们派了海军舰船运输。徐森玉前辈送我先走，并告诉我他与其他船只随后走。然而，这个许诺他终未实现，虽然好几艘运载珍品的船只都接着来了。

1948年与1949年之交的冬天，我们首次抵达台湾，研究所安置在台北和新竹之间的杨梅镇。在省政府的支持下，研究所借用了靠近杨梅车站的几间仓库。历史语言研究所在这里建了临时所址，所里的研究人员和职员也向当地居民租赁了住处。随研究所迁来的人员在这里工作了五年（1949—1954）。

这时，傅斯年接受任命，担任台湾大学校长要职，并对台大进行了全面改组。不幸的是，仍为历史语言研究所负责人的傅校长，在参加台湾省议会的一次会议时与世长辞了。这发生在1950年12月，大约在他被任命为校长一年半后。他任校长期间，聘用了不少史语所的研究员，填补日本教员离开后的空缺。由于他的推荐，我受聘担任台湾大学文学院考古人类学系主任。由于种种原因，这项新工作对我好像很合适，我当然也很愿意协助我的老同事工作。另外，在日本人占领时，人类学系负责人是移川子之藏教授，他在哈佛大学皮博迪博物馆受过训练。他在台湾大学筹建此系时，完全遵循了我熟悉的哈佛模式。实际上，他曾师从狄克森教授，而狄刚好也是指导我的博士论文《中国民族的形成》的老师。

我花去好几年的时间组建这个系。与此同时，董作宾接任历史语言研究所的所长。在台湾的头几年，我在台大考古人类学系的大楼里继续研究安阳收集物。傅斯年离世后，在新校长钱思亮的领导下，大学稳健地发展着。历史语言研究所的许多研究员接受大学聘请，在文学院的几个系教授中文、历史、人类学、考古学、古文字学等课程。所以，台大的学术标准与该研究所是同一水平的。台湾大学文学院出版的《文史哲

学报》的第一期的论文，几乎都是在历史语言研究所工作的教员提供的。

1954年，由于经济压力，董作宾决定离开研究所所长岗位，接受香港大学的邀请。他去香港时，没有找后继人，事实上也未辞职。董作宾突然离去后，研究院的院长朱家骅派一些朋友与我协商关于继任董的职务问题。情况既困难又微妙：困难的是因为研究院经费拮据，微妙的是董离开时并未辞职。

不管董的后继者面临什么样的困难，我必须从个人的角度来考虑这个问题，即尽快完成安阳的报告。我不揣冒昧地认为，我是唯一能完成它的人。于是在无任何人保证协助的情况下，我鼓起勇气接受了挑战。我接受这个任务主要是认为这是我的学术责任——为完成曾在我指导下发展起来的一项科学事业“战斗到底”。

不久事情就清楚了，董离台赴港主要是由于个人原因。在历史语言研究所，董作宾一直得到了全力的支持。住在纽约的胡适博士首先伸出援助之手。早在1951年，为了替这个当时搬到台湾的唯一研究所建一座保管安阳收集珍品的库房和图书馆，他就与洛克菲勒基金会主动联系。经过一段时间，他成功得到了洛氏基金会的支持，对方答应给予一些经济援助，条件是中华教育文化基金会也要这样做。于是，胡适又与中华教育文化基金会的官员商谈，并及时达到了目的。董作宾突然去香港时，用两个基金会援助的资金在南港修建的贮藏楼已经落成，实际上所址已搬至新楼。新楼成为执行贮藏、研究和管理三套职能的所在地。

1955年8月，我被正式任命。在我的发起下，研究院邀请沈刚伯、李宗侗、刘崇紘、姚从吾教授为研究所的通信研究员，他们都在台湾大学历史系任教。在重组研究所的研究工作时，我也作了一些变动。因为陈寅恪没有来台湾，而建立民族学研究所的计划已经成熟，所以我就请陈槃暂任历史组的代理主任，芮逸夫为人类学组主任，并说服赵元任照旧负责领导语言组。

南港的新所址是一处僻静的地方，适于搞学术研究。在喧闹的杨梅镇火车站附近工作过几年的人，都认为新所址环境幽静适宜。

同时，为原住在杨梅镇的人建了住宅区。但一些在台湾大学任教又有条件住在学校生活区的高年资研究员，仍住在那里。

我任历史语言研究所所长后，许多直接或间接有利于研究工作进展

的事件接踵而来。中华教育文化基金会、洛克菲勒基金会、哈佛燕京学社等，都先后向研究所捐赠经费以资助研究项目。尤其出乎预料的是，胡适决定离开他长期居住的纽约回台北。他不顾在纽约的不少密友的劝阻接受了接替朱家骅为研究院院长的任命。

胡的任职，不管它有什么政治意义，在历史语言研究所工作的人看来，这是最好的选择。从史语所建所以来，他就一直是所里的通信研究员。

如前所述，我接受研究所所长职务的主要原因是为完成安阳发掘的报告。因此，我必须尽量对我们所有在这一学科中合格的、有能力的研究人员进行重新分工。最大的问题当然是董作宾的离去和此后他对任何有理论价值的科研项目兴趣的逐渐丧失。在香港，他利用一切能到手的资料，花时间去重建中国古代历法，而不管资料来源的性质。这时他的精力似已衰退，综合能力也差了。1958年他从香港回到研究所，尔后提出了在所内增设一个以甲骨文为主要资料专门研究古文字的机构，这一申请于11月在“中央研究院”立即得到了批准。

但董的健康状况急剧恶化。1963年11月23日，这位天才的研究者、安阳田野工作的开拓者，在台湾大学医院逝世，后被安葬于南港大院的正前方。

董作宾在世时，研究所的高年资成员已同意分工整理安阳发掘报告的定稿。他去世后，南港研究所仍严格执行这一计划。下面我简单叙述一下大体分工、工作的进展及出版情况。

考古组成员的具体分工是：董作宾、屈万里、张秉权和李孝定研究甲骨文。石璋如审核小屯田野记录，还有一批年轻的助手协助他总结小屯发掘的田野资料。高去寻负责编纂梁思永关于侯家庄王陵的初稿，并最终定稿。李济除个人的研究外，还任《中国考古报告集》的总编辑，并管理整体的研究并审核最后报告定稿的出版。

人类学组的杨希枚先生接受建议担负起了研究人骨资料的工作。自吴定良放弃此项工作后，这些资料还未进行专门审查。吴离开后，这些收集物从四川辗转迁徙，运到台湾。

研究所的甲骨藏品自然仍是最吸引公众注意的。我先介绍一下拓片的出版和其他有关出版物。研究初期，战前，研究所所长和《中国考古报告集》的总编辑已商定出版一卷在前九次发掘中出土的所有登记的有

字甲骨的拓本，随后出版考证和释文。主要是想尽快地将已编号的新资料公诸于世，以便各地的古文字学家能充分利用。

但这一基本计划被日本侵略打断，第一卷未能出版。因此，这卷拓本的出版直到1948年才实现。当时董作宾在芝加哥，为它写了序言。

[115]如前所述，这卷仅包括前九次发掘中出土的有字甲骨的拓片，只是研究所收藏总数的一小部分。

董作宾自然急于在《甲编》之后继续出版战争结束前已完成的其余拓片。但战后南京、上海等地形势恶化得如此迅速，出版并不是想象的那么容易。又过了五年，到研究所迁至台湾时，甲骨文拓本的乙编才出齐。[116]

出版有字甲骨拓本仅是原计划的第一步，随后还应为每一卷拓片出版一部相应的考释。迁移的动乱使许多专家分散各处，但到台湾的一些古文字学者中不少人仍主张按原计划搞下去。幸运的是，我说服了屈万里教授承担《甲编》的考释工作。1961年，这卷考释完成并出版。[117]

在张秉权继任甲骨文研究室领导人之前很久，我未费多少力气便说服他从事甲骨缀合的系统工作。到这时，古文字研究者的先驱已发展出两种不同的标准进行这种非常专门的研究。其一是遵循解剖学的指导。如研究者有幸处理原标本，从解剖学的角度很容易识别有字碎片是属于龟壳的哪一部分，除非小到无法辨认。第二种标准是很早以前王国维教授设计出的，即确切地考释文字内容。张秉权自掌握了小屯出土的全部原标本后，自然按照常规进行缀合工作。从1954年开始，他一直进行了十余年。研究所决定出版《中国考古报告集·之三》[118]，刊载缀合的龟甲。下面几卷已出版：

中国考古报告集·之三

(第二本丙编)

上辑59年)

中辑52年)

中辑60年)

下辑53年)

下辑62年)

总徵

到现在已缀合了349版。这些相对完整的龟甲目前占到了我们所有的材料的大多数，这些材料出于某种原因原本就是写在同一块龟版上的。这些复原的记载，为研究许多重要的历史问题提供了更加可靠的原始资料，这比完全依靠甲骨碎片上的刻字直接或间接得出的信息要有价值得多。实际上，同一版有字甲骨上可能有不少独立的卜问和答案，它们或互相联系，或互不相关。但它们记于同一版上的事实至少表明了这些事件发生的顺序，即各条卜问之间的时间关系。

张秉权在一篇文章中提到，通过研究缀合的甲骨，他发现多次卜问一事文例，有时多达十次。^[119]例如，卜问某一月天气的预测，验辞是“雨”；这同一件事可能记录十次。利用断片记述为资料研究天气变化的人，很可能会推断这是殷商时期某月降了十次雨的确凿证据。但张的发现说明他们可能被误导了。大家知道，甲骨缀合前，就有许多学者试图根据甲骨记录的资料研究天气情况。张亲自写了《殷代的农业和气象》一文，文中他对同一件事的反复记述给予了很大关注。^[120]

关于缀合工作还有许多问题可讲，但上面的情况足以说明这一耗费时间的工作之重要，它的成果将惠及未来的古文字学者。

在结束关于甲骨文研究的出版物介绍前，我还必须谈谈1965年出版的另一著作。这就是已广泛应用并深受欢迎的李孝定的《甲骨文字集释》。这部《说文》式的甲骨文字典在研究所出版物中是为数不多的几本应大众需求很快再版的书之一。在这本书的编纂中，李做了系统性的工作，对每个字所有的研究和考释都被包括在内。因此，这本书除作为手册向未入门者介绍迄今已发现的最早的中国文字外，还为欲了解过去各家观点的某些学者提供了原始资料。

我们在南港一安定下来，就把出版梁思永领导下的侯家庄王陵发掘报告的任务交给了高去寻教授。梁的原稿虽已审核且介绍了墓内主要内容，但未有插图说明。高要做的工作实际上比最初设想的费劲许多。他必须要依照下列程序：(1)认真阅读梁的手稿和原始田野记录；(2)核对所有田野发掘的照片，并给不同墓中的每一发现物照相；(3)绘制全部出土物的精确图，以说明：(a)墓的结构和重要出土物的各部分；(b)每座墓在墓葬群中的相对位置；(4)用简明的术语描述每座墓的结构及其重要出土物；(5)把每座墓在野外发掘时的出土物田野登记号与田野记录、梁的原稿和田野草图相对照；(6)留意早期盗掘的记录并用图说明这些墓由于经过早期和近期的盗掘而遭到损坏的情况。

高是曾经有幸在田野跟随梁并向他学习田野操作技术的人之一。他懂得尊重老师，并投身于他的手稿研究，能以真正专业的方式对初稿进行注解和说明。HPKM1001的报告于1962年分两本出版：一本为正文，一本是270个图版，还有一个彩版附卷——此卷是专门在日本印刷的，介绍了保存在“花土块”中的殷商时期不同寻常的彩绘设计，这是在战时由梅原末治教授研究并在日本出版的。

自从我们到台湾后，梅原末治教授常来历史语言研究所访问，这不仅使他更加了解安阳出土物，而且也认识了考古组的考古工作者。他对研究安阳遗物的热心及浓厚兴趣使我们中的不少人深受感动。所以当HPKM1001的报告准备出版时，我向梅原末治教授提出了协助在日本印刷“花土”图版的要求，与高去寻用多年时间完成的两本书一同出版。他很快就同意了。我谈中日两国学者间的这项合作，正是为了说明在学术研究中，合作精神可以怎样通过多种方式表达。

侯家庄这个报告集系列仍在出版中。截止到1973年，HPKM1002、HPKM1003、HPKM1004、HPKM1217才全部出版。实际上高已完成了所有其他大墓的报告。这些与前五本已经付印的报告一样也将出版，但书中的图版和插图尚待完成，出版所需资金也要筹措。高去寻教授有望能够如期完成这项任务。^[121]

整理小屯报告集系列的任务与侯家庄系列有两个重要方面的不同：第一，小屯进行了九年十二次发掘，经历了不少变化，从指挥、人员到根本思想和方法。因此，其田野记录比在一个人领导下整理的、标准相当一致的侯家庄田野资料性质更加驳杂。小屯的田野记录、田野照片和田野草图因发掘次数变化和需要增长而不同。考古组定居南港后，石璋如负责小屯田野报告，他一开始就发现此任务比整理侯家庄西北岗王陵的任务要艰巨得多。

第二，关于小屯（主要是住所）的资料，性质更加复杂。它由各种材料组成，需从建筑、社会、政治、宗教和装饰等多方面去解释。一些出土物的用途和意义从资料本身就能看出来，而另一些必须从出土艺术品间的相互关系去推测。因此，在地下窖穴中发现的堆积的形成可能是出于不同的目的，而墓中出土物，考古学者起码能确定它的用途。

然而，石璋如承担这项任务，还是具有一定的有利条件，这包括他个人的田野经验和战时从事各种相关的研究。在昆明开始的这些初步研究中，最有用的是绘制小屯遗址发掘平面示意图，即把十二次发掘中测

量及绘制的全部详细的草图拼到一块，再绘在一张纸上，使之成为一张完整的地图。图上标出每条沟、地下坑、居住穴、墓葬和基址的位置，凡发掘到的遗迹，都在图中标出。此图用1:500的比例绘制，这足以标出最小的遗迹。它可以用作一种索引图，也可作为1928年到1937年小屯发掘的历史地图。

由于大家共同的努力，这项精细的工程在一年内完成了。在昆明的所有田野工作人员都提供了资料，而负责这项工作的是石璋如。实际绘图的是潘懋，他在田野时除其他任务外，也做了不少测绘工作。这幅巨图完成后用颜色标明各种地下建筑，如居住基址、祭坛、坑或墓葬等等。

在这点上应说明的是，从第四次发掘开始，在田野所进行的测量工作，都以小屯村西南约50米处埋的一块钢筋混凝土为永久性坐标。

这个指示图在李庄时常被参考。考古组到南港后，图上十多年前的画线已模糊不清，图又褪色了。所以，我们决定修整、重绘此图。

原来在昆明绘制的图现在由潘懋修整并以同样的比例重制。之后，这指示图与从前一样，被用于许多不同研究项目。它成为所有关于小屯发掘报告的地理指南，对石璋如的最后报告尤其有用。此外，我撰写的关于陶器的最后报告，若不经常参考此图，也断然不能完成。因为在叙述不同类型的陶器及其分布和层位时，必须考虑它们的位置。

到南港后，石璋如的首要任务是撰写关于小屯建筑遗址的报告。这一报告于1959年出版。^[122]这部重要的著作是他近22年艰苦劳动的结晶。这本著作理清了在九年田野工作中积累的关于夯土、建筑物的夯筑方法的混乱资料。说到这本专题性报告的主要内容，我在下面的叙述中将以“夯筑”这个专业术语指代石璋如的记叙中发现和描述的所有夯土建筑遗迹。

石璋如在报告中把在小屯发现的建筑遗址从位置上分三组，用甲、乙、丙表示（在英文中，我打算用希腊字母中的前三个 α 、 β 、 γ 表示），按分布定为北组、主组和西南组（图21）。 α 组主要在农田北部发现，位于洹河湾附近，与最初几次发掘的E区和D区相当。在这9000平方米的范围内（南北100米×东西90米），发现了15个夯筑基址，其中大部分为长方形（图22）。较大的夯筑基址显然为东西向，小的可能朝南。很难说这些基址是否以某种方式互相联系着。

β 组似是我们发掘的殷商建筑遗迹的主要部分，位于 α 组正南，与B、C区相当吻合。石璋如估计，在我们发掘时此区仍残存的面积为南北近200米，东西为100多米。但洹河严重侵蚀西岸（图23），损坏了这部分的大片夯筑基址，因此，说不准原夯筑基址向东延伸了多远。石璋如通过大体观察判断，总结了这一组的夯筑遗迹的特点：(1)所有大的基址都朝南；(2)一些基址表层覆盖了白灰面；(3)北边的纯黄土平台 β_1 ，近方形，是个祭台，其南面为三个较大基址的残迹，显示出有规律的布局。这三个大型夯筑基址（ $\beta_7—9$ ）可能是几座有五个门的大厅的基础。这些房间的安排可能近似对称，但遗憾的是，这部分基址恰好位于现在的洹河岸边，所以它的大部分已被河水侵蚀而且早已被河水淹没。在这一组发现的21座夯筑基址中，有三分之二仍保存着排列规则的柱础石，当然这些给石璋如复原遗迹的尝试很大帮助。这一组最基本的特征是：21个夯筑基址残迹显然是以某种方式联系着的，它们似是原来有计划建造的统一整体。

因洹河严重侵蚀这里的农田，所以很可能过去由于种种原因，殷墟这部分地区遭到了自然或人为的灾祸，主要建筑物的基础遭到的破坏尤甚，以至后来洹河水能易于侵蚀它们。

γ 组范围较小，位于 β 组西南。关于这组的夯筑遗迹，石璋如是这样描述的：

1. γ 组的面积（南北50米×东西35米）近2000平方米（1750平方米）。
2. 发现了15个夯筑基址，看来它们彼此之间有联系；面朝南。
3. 在一个大的方形夯筑基址周围有一些小的方形夯筑基址。
4. 柱础保存得不好。
5. 这组内及附近发现的埋葬排列整齐：左边葬人，方位朝南；右边葬兽。埋葬中有火焚的遗物。

关于夯筑建筑物的时代，石璋如的主要结论是，这种新的建筑技术在武丁时引入，后来沿用。石璋如的报告对这三组建筑遗迹的建造时代作了一个约略的估计。

后面还会有机会详谈石的复原工作。

继这一重要出版物后，近几年石璋如又写了另外三卷著作在《中国

考古报告集》小屯系列中结集出版。其中两卷关于北组墓葬（ α 组），一卷关于主组（ β 组）。^[123]这些报告所详细描述的同时既有正规墓葬又有献祭墓葬，后者包括人牲和动物牺牲。我相信不久的将来他就能完成小屯的报告，尽管年事已高，但他仍在积极地从事这项工作。

最后我简单谈谈由我直接指导的另一系列研究。考古组在筹建研究安阳青铜器的实验室时，得到了哈佛燕京学社的慷慨资助。我还得到了万家保的协助。他受训且毕业于台湾大学工学院，而且有工业制模的经验。这个充满好奇心的人，在南港看了我们收集的铸范和青铜器后，对安阳青铜技术产生了兴趣。1962年，他到考古组与我合作，从技术和历史的角度研究各种问题。

我们收集的许多陶范很容易识别出是青铜觚的外范。所以我们从详细研究这一特殊型的青铜器样本开始，它比其他安阳出土的青铜器有更多的标本。合作研究的结果在《中国考古报告集新编》上发表。到1972年，新编共出版了五本，分别是：第一本，《青铜觚形器之研究》，1964年；第二本，《青铜爵形器之研究》，1966年；第三本，《青铜斝形器之研究》，1968年；第四本，《青铜鼎形器之研究》，1970年；第五本，《伍拾叁件青铜容器之研究》，1972年。^[124]这五本包含我们在小屯和侯家庄十五次发掘中出土的全部青铜礼器。在研究中，万家保利用修复的模型全面研究了铸造程序，并通过在实验室里试验制作过程，成功地制出与原样完全相同的复制品。我的主要任务是研究青铜器的其余方面——器形、纹饰、功能和铭文等。这一系列专题完成后还留下两组青铜制品未触及，即武器和兵马车上的装饰品。在我早期研究中已不止一次写过关于戈和矛的报告，我相信矛大概是和兵马车同时传入中国的。关于兵马车，这是石关于安阳叙述过的一个题目，而且几个外国学者也在比较的基础上讨论过。因此，我要说的就很少了。

直到现在——七十年代中期，我们还未完成应完成的全部任务。木炭收集的遗失让我尤为痛心。从用科学分析方法获得新考古资料的最近发展来看，那批木炭十分有价值。我一直非常注意收集和研究人骨资料，但仍没有什么成果。我相信，有了我们这么多年辛勤的工作，奇迹总有一天会出现。

9. Prehistoric Remains

and Traditional Accounts of Ancient China

The remaining chapters of this book will give a brief summary of the various special studies of the Anyang finds up to the present time. It may be useful here to start with some account of Chinese prehistory as it has been discovered mainly in the last sixty years or so. To refer briefly to the earliest human traces, *Sinanthropus Pekinensis* and *Lantienensis*, certain scholars still persist in tracing the origin of the Mongoloid race of *Homo sapiens* to Peking Man. This theory is based principally on the morphological characteristics, especially the shovel-shaped incisors, which are shared by the majority of the present-day Mongoloid people and also by Peking Man in Chou-k'ou-tien, who lived nearly a million years ago and whose teeth have been studied by experts. It does not matter whether these fossil finds constitute a new genus, a subgenus, or a species; these solid physical characteristics seem to have impressed the anthropologists most deeply. And recent discoveries of Hominidae in many places in southern and southwestern China, fragmentary as they are, on the whole tend to confirm the idea that the Mongoloid branch of modern humanity has been evolved in Eastern Asia. Personally the author is not yet convinced that the evidence gathered so far has proved the case. Determining these origins is not only in itself a problem of great magnitude but is definitely related to the formation of the Chinese people, whose racial history undoubtedly bears the most intimate relation to the early history of the migration of the Mongoloid race as a whole.

As far as Chinese civilization is concerned, recent investigations have revealed that its early foundations do not appear much earlier than the neolithic age culture, whose remains have been found to spread all over China. It is true that pre-dating neolithic times, mesolithic relics and also paleolithic sites have been occasionally

found; but their cultural relationship to Chinese history is still obscure. So it is perhaps more profitable to examine the historical background of the Yin-Shang civilization beginning with neolithic culture.

If we confine our efforts first to the region of the Huan River valley, archaeological diggings there have revealed ancient remains from mesolithic times onward successively, in seemingly close progression. But since the discoveries of those remains have been made in a reverse sequence—historic, neolithic, mesolithic—there is a possibility that even earlier remains may yet be discovered in this region in the future.

For our present purpose, however, even the mesolithic remains discovered a few years ago on the upper course of the Huan River seem to be only remotely related to historical events. There is hardly any doubt that as soon as agriculture began, Chinese cultural development made a leap forward. Whether the domestication of animals and plants in China was due to foreign contact or was an autonomous development is still a moot point. By the time of the Yangshao Culture, agriculture was no longer in a primitive stage. It is quite definite that by then millet of several varieties was the common staple food in the Yellow River valley; and rice may have been occasionally cultivated. Some have suggested that even kaoliang and soya beans were common in Yangshao times. This is by no means impossible. The list of domesticated animals, besides dogs and pigs, consisted of cattle, chickens, and sheep, and possibly also horses. Bone-made tools and pottery constituted the main handicrafts. Ceramic industry was already highly developed and the products are divisible into at least two classes: those for ordinary use and those made probably for decorative or religious purposes only. The latter class was what has been described as "Painted Pottery." This class of pottery has been widely collected and, in a number of cases, intensively studied. The author, as a young archaeologist, had the good fortune to do his first digging at a painted pottery site known as Hsi-yin Ts'un, as already described. One thing impressed me deeply

when I studied specimens of the painted ceramics: it immediately occurred to me that the painting must have been done with a pen-brush, not much different from what every Chinese schoolboy learns to use when he starts writing characters. It was particularly noticeable that the ends of the various strokes on the Hsi-yin painted pottery still retained the hairline ink-traces of the brush. Though this observation was made in 1926 when I was preparing a report for the Ts'inghua Research Institute and the Freer Gallery of Art, it was not mentioned in the report, which was limited to the description of artifacts only.

[125]

Dr. G. D. Wu, in his *Prehistoric Pottery in China*, pointed out that incision as a technique of pottery decoration was first found in the Black Pottery Culture, which he discovered at Ch'êng-tzŭ-yai in Shantung.^[126] In the earlier prehistoric sites when painted pottery was the fashion, incised pottery did not seem to have existed although technically speaking it should be easier to mark soft clay by incision than by painting. Nevertheless, archaeological research has established that as far as the surface decoration of Chinese prehistoric potteries are concerned the technique of painting appeared earlier than that of incision. While painting dominated the Yangshao pottery and constituted its most conspicuous feature, in the case of the Lungshan Culture, commonly known as the Black Pottery Culture, cultural elements other than ceramic decoration seem to have been more important, for instance, scapulimancy. But the fact that incision gradually took the place of painting as a technique of ceramic decoration seems to be more significant than was at first thought. We shall come back to this point for more detailed discussion in the latter part of this chapter.

In terms of scientific archaeology, Lungshan seems to be the last phase of China's prehistoric culture. The Anyang field archaeologists in fact found a stratum of Black Pottery Culture just below the Yin-Shang remains, although it is still a matter of interpretation whether the time span between these two stratified cultures was long or short.

According to traditional accounts, however, before the Shang

dynasty there was only the Hsia dynasty, but, preceding it, were the early legendary rulers who made all the cultural contributions to the formative stage of early Chinese civilization. When modern archaeologists testify to the existence of several different paleolithic and neolithic cultures in north China as well as other Chinese areas, is it possible to correlate some of these early traditions with these new archaeological finds?

Let us turn to some of the traditional accounts about the predynastic legendary figures to whom past historians attributed the origin of the more important elements of Chinese culture. Among these legendary figures there are at least four who deserve brief mention here:

1. Huang-ti (the Yellow Emperor), according to tradition, fought two famous battles at Pan-ch'üan and Cho-lu, one located to the northwest of Peking, in Chahar^[127], and the other near Pao-ting in Hopei, in order to unify his kingdom. His territory was estimated by Ssü-ma Ch'ien to have extended toward the sea in the east, the Yangtze River in the south, and on the west as far as modern Kansu. In the north he drove away the barbarian Hun-chu, presumably one of the ancestral tribes of the Hsiung-nu of the Han dynasty. He is traditionally important not only because he heads the list of emperors in the *Shih-chi* account, but also because up to the present the Chinese people have considered themselves to be the descendants of the Yellow Emperor.

2. To Huang-ti's first wife, Lei-chu, the invention of sericulture is usually attributed.

3. Ch'i, the ancestor of the royal house of the Chou, served as an agricultural specialist in the court of Emperor Shun, one of two emperors in the Chinese golden age. He has been traditionally considered the man who first taught the Chinese people how to plough the soil and cultivate grain and hemp. His descendants are supposed to have founded the famous Chou dynasty.

4. The Great Yü, the founder of the Hsia dynasty, has been

regarded as the first Chinese hydraulic engineer; he is supposed to have succeeded in bringing under control the Yellow River and also other rivers in ancient Chinese territory.

In connection with the legends, it is remarkable to note that modern archaeology has confirmed that both sericulture and agriculture were carried on in north China far back in the neolithic age. As for prehistoric hydraulic engineering, it was closely related to the development of agriculture and the need for farmland as domesticated plants promoted the growth of population. If we accept the tradition that the cradle of agriculture is near southern Shensi, as assumed by some modern archaeologists, then agriculture must have spread first toward the east along the lower course of the Yellow River. So the reclamation of land flooded by the lower course of the Yellow River no doubt needed a great deal of engineering skill. That at this stage there should have emerged a giant figure of Great Yü's stature would be no surprise.

Yü, according to legendary accounts and also according to Ssŭ-ma Ch'ien, was not only a great engineer but also the founder of dynastic China. His accession to the royal throne and the way he passed the royal power to his own son almost constituted a revolution. It is interesting to note how Mencius defended him during the period of the Warring States:

Wan Chang asked Mencius, saying, "People say, 'When the disposal of the kingdom came to Yü, his virtue was inferior to that of Yao and Shun, and he transmitted not to the worthiest but to his son.' Was it so?" Mencius replied, "No, it was not so. When Heaven gave the kingdom to the worthiest, it was given to the worthiest. When Heaven gave it to the son of the preceding sovereign, it was given to him. ..." [\[128\]](#)

Then Mencius proceeded to give the details of the events, whatever their source, to prove his points. Although it is evident that the true story, from a modern viewpoint, can never be recovered unless there are still hidden documents not yet discovered by archaeologists, the existence of the Hsia dynasty as a historical fact was recognized by both Mencius and Confucius.

In the traditional edition of the *Book of Documents (Shu-ching)*, there are about half a dozen chapters classified as "Hsia-Book"; but, after later critical examination, it has been proved definitely that the majority of these so-called Hsia documents were later forgeries with the possible exception of "Yü-kung," which was transmitted by Fu Shen in early Western Han. Even this chapter was considered to be a later Chou compilation, but that it was a pre-Han text seems to be beyond question. While this chapter gives a great many details about the hydraulic works of the Great Yü, it teaches us nothing about the founding of the Hsia dynasty, not to mention the subsequent dynastic history. So during the May 4th Movement, when there was a great revival of study of ancient Chinese history, the more liberal school denied the existence of Yü and the Hsia dynasty altogether. At that time even a well-known moderate scholar like Dr. Hu Shih agreed that the whole period of the Shang (Yin) should be probably assigned to prehistory. All this happened of course before modern archaeological field work was started.

Ssŭ-ma Ch'ien's chapter on the Hsia, though brief, agreed on the whole with what Mencius said. On the other hand, according to the genuine texts of the *Bamboo Annals* as edited by Wang Kuo-wei,^[129] the dynasty lasted 471 years. Further, contrary to the common traditional account, when Yü's successor Ch'i ascended his father's throne, he was interfered with by Yi, to whom the Great Yü was said to have intended to pass the throne and who, Mencius said, had been presented to Heaven by the Great Yü originally. According to the *Bamboo Annals*, however, King Ch'i finally punished Yi with the death penalty. This anecdote contradicts directly the saying of Mencius and the record of Ssŭ-ma Ch'ien. Traditional historians in the past paid scant attention to these particular items of the *Bamboo Annals*, which in later editions were omitted altogether.

The *Bamboo Annals*, like the *Shih-chi* of Ssŭ-ma Ch'ien, listed the ruling sovereigns of the Hsia and recorded briefly the disturbances and revolutions that took place while the dynasty ruled. The last of the kings of the Hsia dynasty was the notorious Chieh, who has been

ranked with Tsou, the last ruler of the Yin dynasty, in both cruelty and maladministration, from the time of Confucius. Historians have usually equally regarded these two rulers to be among the worst sovereigns who ever ascended the throne. In their extreme cruelties, their love of luxury, women, and wine, their fondness for listening to the small talk of small men, and their dislike of righteous ministers, they were exactly the same. That is why, according to the teaching of the Confucian school, their dynasties fell to more worthy rulers, like the founders of the Shang and Chou dynasties.

At this juncture, a crucial point of this chapter is reached. The gist of the problem to be faced is how to draw the line of demarcation between prehistory and history—a subject which, since the discovery of the oracle bone inscriptions at the end of the nineteenth century, has been hotly debated. More than seventy years' accumulation of scholarly labors has at least clarified certain paleographic and historical aspects. The most important of these has been to establish the ancestral roll of the house of Shang considerably earlier than T'ang, the founder of the dynasty; it is, however, still not quite definite whether the name of the founder of the house, namely the traditional Ch'i, can be identified in the oracle bone scripts, although some scholars have made such an effort.

Wang Kuo-wei in two essays has tried to trace the migrations of the royal house of Shang—eight times from Ch'i to T'ang and five removals of the capitals after the dynasty was established.^[130] Wang even identified the capital sites on the basis of classical materials and historical references. All this has been done since the oracle bone inscriptions were first made known to the learned world by Liu T'ieh-yün and Lo Chên-yü.

It was no doubt a step forward in the history of Chinese archaeology. But it is obvious that some of the problems could not be solved even on this basis. As for determining the line of demarcation between prehistory and history, this involves a fundamental knowledge of modern archaeology.

Even at the present time, this problem still remains in a debatable

stage for a number of reasons:

1. Inscriptions on oracle bones are by no means primitive, so there was undoubtedly a long history before this stage of development was reached.

2. The records cannot all be read; the contents of some are still obscure.

3. The readable oracle records confirm a great deal of traditional history, which compels a number of scholars to reconsider the traditional accounts.

Let us therefore turn to a significant traditional account of Shang history, a long quotation from the chapter entitled "Pwan-Kang [P'an Keng]" in the *Book of Documents*:

Pwan-Kang wished to remove to Yin, but the people would not go to dwell there. He therefore appealed to all the discontented, and made the following protestations.

He said, "Our king came, and fixed on this settlement. He did so from a deep concern for our people, and not because he would have them all die, where they can not now help each other to preserve their lives. I have examined the matter by divination, and obtained the reply—"This is no place for us.' When the former kings had any business, they reverently obeyed the commands of Heaven. In a case like this especially they did not indulge a constant repose,—they did not abide ever in the same city. Up to this time, the capital has been in five regions. If we do not now follow the practice of the ancients, we shall be refusing to acknowledge that Heaven is making an end of our dynasty here. ..." [131]

The above quotations, composed probably near the end of the second millennium B.C., constitute some of the few sections in the *Book of Documents* which have been considered genuine after the most critical examination of such an annotator as Yen Jo-chü. Modern researchers who have gone into more detail concerning the textual content, its grammar, and vocabulary, have, on the whole, confirmed Yen's opinions. But even so, these documents would hardly be taken to be contemporaneous with King P'an Keng. The author's colleague, Ch'ü Wan-li, and a few others are inclined to consider that the text of these particular documents of P'an Keng date from the latter part of the Yin or even as late as the early part of the Western Chou dynasty.

The chapter on P'an Keng is usually divided into three sections, only the last of which deals with what happened after the removal of the capital. The first two sections were persuasions or warnings issued by King P'an Keng to the general public, who were unwilling to follow his commands and created trouble and even disobedience.

P'an Keng made it abundantly clear that the old capital was no longer inhabitable, and without removal the people could no longer make a living. The definite reasons why the old capital had to be abandoned for living purposes were, however, not given in the text; the record simply indicated that "they cannot help each other to preserve their lives."

Legge's nineteenth-century English translation, while comprehensible to most English-speaking readers, was hardly adequate for an exact translation of authentic documents handed down from ancient China over three thousand years. So, like most Chinese commentators of the seventeenth and eighteenth centuries, he decided for the sake of clarity to insert words of his own. For instance, in the first sentence of section I of the passage, "Pwan-Kang [P'an Keng] wished to remove to Yin," the words "wished to" were added by the translator in order to make the document readable and logical. The Chinese original as transcribed even in the modern version does not include "wished to" in any expressed form. But as most annotators agree that the first section deals with P'an Keng's attempt to persuade the public, who were discontented and unwilling to move the capital to Yin, it is only fair to Legge to say that in adding "wished to," words not found in the original text, he was doing so on the basis of Chinese commentary.

Such an addition is understandable. There are many obscure passages and vocabularies, including mistranscriptions, which Chinese scholars have worked over for many hundred years without reaching any definite conclusions, yet Legge has had the courage to render them into readable English. It was certainly a daring attempt but it does not mean that he solved all the paleographic problems that have confused and puzzled Chinese scholars from the Han dynasty down to

the present.

It may be useful to quote what James Legge, during the time of his translation, considered the main contents of this important document to be. He wrote:

The whole Book centres round the removal of the capital from the north of the Ho to Yin on the south of it. The emperor saw that the removal was necessary, but he was met by the unwillingness of the people and the opposition of the great families. The first Part relates how he endeavoured to justify the measure. It contains two addresses, to the people and to those in high places respectively, designed to secure their cordial cooperation. The second Part brings before us the removal in progress. They have crossed the river, but there continues to be dissatisfaction, which the emperor endeavours to remove by a long and earnest vindication of his policy.

The third Part opens with the removal accomplished. The new city has been founded, and the plan of it laid out. The emperor makes a third appeal to the people and chiefs to forget all their heart-burnings and cooperate with him in building up in the new capital a great destiny for the dynasty.^[132]

The above summary shows the shortcomings in geographical knowledge that Legge shared with contemporary Chinese classicists. For instance, they were unable to locate Yin in a modern district; and they were ignorant of whether the locality was north or south of Ho (the Yellow River).

However, there were certain historical facts which the translator was able to make clear to Western readers. These are important for a number of reasons, because they not only are based on a legendary account other than the *Book of Documents*, but also are of great modern archaeological value.

More than eighty years later, Professor Bernhard Karlgren published his "Glosses on the *Book of Documents*."^[133] These glosses covered merely the up-to-date research results in Chinese phonology and other branches of paleography which the author, as one of the foremost linguists studying the Chinese language, had thoroughly researched from his own point of view. But, like his predecessor, he did not touch on certain fundamental problems related to the important classics as a whole. For instance, how early might these

classical documents be? How many were later forgeries mixed with pre-Ch'in texts? It is understandable that Karlgren did not wish to bring up subjects that might arouse historical debates. Still, in the text of P'an Keng, the main theme was concerned with the fact that he wanted to move from an old capital to a new capital known as Yin. This gives rise to at least three problems of geographical importance.

1. Where was the old capital from which P'an Keng wished to move and where was the new capital located?

2. The text mentions: "Up to this time, the capital has been in five locations," and the names of these "five capitals" were identified by serious classicists. Are their locations identifiable?

3. A further geographical problem is presented by the statement that P'an Keng "arose, and crossed the river with the people, moving them to the new capital"; the document does not indicate the direction. It has usually been taken for granted that the "river" crossed was the Yellow River; perhaps so, but in what direction? It could have been crossed from either side to the other, since the locations of these two capital cities are uncertain.

Commentators in the past have devoted a great deal of time to these questions. One of the most notable scholars who participated in this discussion was Professor Wang Kuo-wei. After the discovery of the oracle bone inscriptions, he was able to clarify both the terms "Yin" and "Shang" according to ancient usage and, as mentioned previously, he successfully re-established the ancestral roll of the ruling dynasty far further back than the founder of the dynasty. But there is an important gap in the documents discovered from Anyang—namely, the earliest written materials seem to be limited to the period of King Wu Ting. As there were three kings in the new capital—including P'an Keng—earlier than Wu Ting's time, the question is why, if it was an old practice to keep records on oracle bones, should the inscribed oracles have started long after P'an Keng's time at the new capital?

Recent research carried on in Nankang and other places has taken a new approach to the old problem, namely, by studying the evolution

of the method of scapulimancy—the firing marks, the shapes of drilled cavities and of the carvings left by the diviners. It is a well-known fact that scapulimancy was already practiced in the time of the Lungshan Culture—the late neolithic age of north China—and bones used for this purpose were discovered at Ch'êng-tzŭ-yai by the author himself. But, for decades, the older generation of archaeologists have confined their attention to written documents, neglecting almost entirely the method of scapulimancy itself. Only a few years ago, one of the oldest assistants in the Oracle Section of the institute, Mr. Liu Yüan-lin, who has ink-rubbed the oracle bone inscriptions for nearly twenty years, began to propose a systematic study of this group of neglected data. Already several points are obvious:

1. The method of firing changed greatly in the course of time.
2. The method of carving and drilling cavities varied considerably.
3. Scapula were apparently used earlier than tortoise shells even at Hsiao-t'un.

Mr. Liu in his preliminary study^[134] has been able to demonstrate all the above points and, further, he has been able to link certain types of drilled cavities of oracle bones with those first discovered at Ch'êng-tzŭ-yai which were made by a similar method of drilling, before the application of fire. Liu has been able to find one scapula with a definitely early type of carved cavities and also inscribed with one character. This character, strange to say, is readable as "P'an," inscribed with two vertical strokes and linked by two horizontal bars in between (like the letter H in the English alphabet with an extra horizontal bar); it is exactly the oracle bone character for the first word of P'an Keng's name.

Where this research will lead, it is difficult to say; the recent discovery of an early Shang site at Chêng-chou, which has been identified by some authorities as Ao or Hsiao, with its center located at Erh-li-kang, has provided rich comparative materials. But among the relics recovered from the Chêng-chou site inscribed oracle bones

are comparatively scarce; so far only three pieces are said to have been discovered. Nobody seems to have made a comparative study of these pieces from a technological viewpoint.

Recent archaeological discoveries, which have been extensive, have frequently referred to sites as those of early Shang capitals, especially when large areas of pounded earth were discovered in southern and western Honan, Shantung, and southern Hopei; in all these regions it is said that more than ten localities could be dated to the time of the Shang dynasty. But with the exception of those in Chêng-chou and a few sites near Yen-shih like Erh-li-t'ou in western Honan, none has been much studied. So the exact locations of the five capitals of early Shang remain for the most part still unidentified. Even the identification of the sites in Chêng-chou as Ao or Hsiao, seems to be somewhat inconclusive. If this identification were to be accepted, the obscure passages in P'an Keng, such as "this settlement" and "crossed the river with the people," would also become clear, and the reason which impelled King P'an Keng to move the capital could also be conjectured. One would suppose that it was the overflowing Yellow River, which invaded Chêng-chou and its neighborhood almost every year, that would have induced P'an Keng to choose another place as the center of administration.

It seems probable that soon Chinese archaeologists will be able to clarify such geographical questions and other problems related to the ethnology of ancient China which led to the stage of Yin-Shang civilization. But there still remain certain problems related to legendary history.

Traditional history gives great weight to the "three dynasties" (San-tai), which start with the Hsia dynasty and include the Shang and Chou. Modern archaeology has confirmed both Shang and Chou as historic facts. According to tradition, the Hsia, which started the hereditary monarchy, was also the first of the trio in the ancient golden age to create a dynasty. Up to the present time, however, archaeology has still been unable to identify definitely its locality.

From the writings of Ssŭ-ma Ch'ien, the *Bamboo Annals*, and the

Book of Documents, the list of kings of the Hsia dynasty is almost entirely known, although only the last and the first kings are invested with rich biographic accounts. About the other rulers very little is told.

Nearly half a century ago, when modern archaeological knowledge was first attracting the attention of Chinese historians, there was an attempt to identify the Yangshao Culture, discovered by J. G. Andersson, with the traditional Hsia dynasty. The discussion was induced by the author's announcement of a piece of painted pottery discovered at Hsiao-t'un. In a 1931 article on the relationship between Hsiao-t'un and Yangshao, Professor Hsü Chung-shu went into detail about the locations of the Hsia dynasty as given in past records and recognized that the distribution of the newly discovered Painted Pottery Culture corresponded with what had been traditionally considered the center of the Hsia dynasty.^[135] According to Hsü, the *I-chou-shu* recorded that the ancient capital of the Great Yü, founder of the Hsia dynasty, was near the River I and the River Lo, both well known near modern Loyang.

When I took a reconnaissance trip in southern Shansi for archaeological purposes in 1926, I passed through a district known as Hsia Hsien, exactly the same name as the "Hsia" dynasty. There I discovered not only the painted pottery site of Hsi-yin Ts'un, but also a group of tombs known by local tradition as those of the kings of Hsia. While the excavation of the painted pottery site followed one year later, there has been no opportunity since for me to revisit Hsia Hsien to have another look at those tombs. I mention these facts here in the belief that they may offer some archaeological possibilities for future investigation of the problems concerning this important period.

In sum, it seems to me that although a historical basis for the tradition of the Hsia dynasty has not been verified substantially as in the case of the Shang dynasty, yet to negate its existence would be premature. There are several reasons for this.

In the first place, although many sections of the *Book of Documents*, especially those attributed to what Karlgren called P-k'ung

(i.e., Pseudo-k'ung), the so-called *Ku-wen* documents, have been proved to be post-Han fabrications, there still remain the chapter of "Yü-kung" and a few others that may have been based on some historical events of the Hsia dynasty. More tangible evidence than the traditional accounts has been proposed in the recent attempts by Professor Hsü Chung-shu and others to identify the Yangshao Culture with the Hsia dynasty. While these are still deficient in documentary proofs, they nevertheless suggest possibilities that may help in the solution of other problems of the ancient history of China.

It has been mentioned quite frequently in early reports that, among the thousands of literary documents discovered from the Anyang excavations, occasionally there have appeared inscriptions written in black ink—on bones, and even on pottery and stone. In other words, we have found in the Waste of Yin remains of brush writings just like those found on the wooden or bamboo slips in the Han dynasty.

Ink-writing on wood and bamboo and on paper can be preserved for a long time in suitable conditions, especially when the climate is dry, as in a desert. But ink-writings on other substances—like stone or bone or ivory—do not last long. Most of the surviving specimens of ink-writing on bone, even those which still keep the characters clear, show serious fading of the ink. This is an important consideration, and reminds us how fortunate the archaeologists were to find the oracle bone records which were legible mainly because the bones and tortoise shells were incised. If they had been merely inscribed with an ink-brush without incision, it would be quite uncertain whether these records could have survived in the soil in such great abundance.

Our discovery of documents written in black ink on bone, stone, and even pottery immediately suggested to the field archaeologists that possibly we could find, if we were lucky, other documents unrelated to scapulimancy in ink-writings on other such substances. But in this direction, our field workers were not as successful as in the case of oracle bone hunting.

This failure, however, does not mean that documents of the ink-

writing type did not exist. They may be hidden elsewhere, or they may have entirely disintegrated or been destroyed. Whatever the possibilities, the problem remains that the Chinese written characters which appear in the oracle bone writings of the Yin-Shang period must have had a long previous evolution. It seems to me that to account for this long background, there is a possible new approach.

Both archaeologists and paleographers are reported to have paid a great deal of attention to the discovery, at the painted pottery site of Pan-p'o, of what are claimed to be primitive symbolic characters incised on the rims of pot-sherds in a number of cases. Some, it is said, could be identified as primitive Chinese characters, among which are symbols for numerals incised almost like the oracle bone records. It is noteworthy that both the archaeologists and the paleographers limited their attention to incised marks even on the painted pottery.

A re-reading of Professor Hsü's article on the relationship between Hsiao-t'un and Yangshao (see note 11, above) inspired me with the idea that if ink-writing survived in Yin-Shang, it may ultimately have dated back to the time of painted pottery. The fundamental ideas that germinated in my mind are these:

1. Obviously, the pieces of painted pottery were all painted; this has been taken for granted in the past half century. But how were they painted? A careful examination would show that the artist who painted the pottery must have used a sort of brush—somewhat like a Chinese pen for writing Chinese characters.

2. The artists who painted pottery were also able to draw or paint other figures, such as animals, fish, and birds, as already demonstrated by specimens from Pan-p'o and Miao-ti-kou and other sites.

3. The discovery of oracle bones bearing characters written in ink definitely shows that the art of writing by a brush-pen was current in the Yin-Shang dynasty.

4. Even more interesting is the fact that quite a number of the incised characters of the oracle bone records show evidence that the incised lines may have originated from copying the outlines of painted

strokes: the examples in Figure 24 are sufficient to prove the case.

The early epigraphists considered these differences to be accidental variations; the examples in Figure 24 seem to indicate that the changing shapes were necessitated by a change of technique. Writing with a brush and ink, whether black or red, it is simply a matter of individual style whether to render the individual strokes fine or "fat"; but once the characters were to be incised on bones or other substances, the cutting edge of the fine tool would naturally make the fat stroke much more difficult or almost impossible, with the result that all the strokes would be cut in fine lines. Thus in order to copy characters developed with fat strokes, such as the vertical strokes of *shan* (mountain) and the lower part of *wang* (king), the masters of the new technique found it necessary either to trace with fine lines the outlines of the fat strokes, or, in other cases, just to substitute the fine incised line for the various strokes developed originally by the brush.

现代汉字	古代汉字(笔)	甲骨卜辞(刻辞)
丙		
丁		
山		
土		
王		
火		
天		
戈		

24 Some Chinese characters, ancient and modern. Characters, from top to bottom, signify "Ping" (third *t'ien-kan*); "Ting" (fourth *t'ien-kan*); "mountain"; "soil"; "king"; "fire"; "heaven"; and "halbert."

古代、现代的汉字和甲骨文，自上而下分别为：丙（天干之三）、丁（天干之四）、山、土、王、火、天和戈。

If there is anything in this idea, it may account for the early evolution of Chinese writing preceding the incised oracle bone records. It could also explain why there existed some brush-written documents in Yin times; and why from the reigns of the first three ruling kings of Yin, no incised records are preserved. Most important of all, it would account for the changes of shapes of certain characters. Still it could not explain adequately how it happens that, up to the present, earlier brush-written documents have never been found! Maybe they were written on more perishable materials—wooden slips, shells, or even stones. Ink characters written on these, unlike the incised ones, could be easily rubbed off, or the materials themselves may have disappeared altogether!

What has puzzled paleographers for almost half a century is the fact, already mentioned, that though "Yin" was presumably built as a capital at the time of P'an Keng, no written inscriptions earlier than Wu Ting's time have been found there. So far there seems to have been no successful attempt to explain this.

But if we accept the theory that early Chinese records were brush-written, the above puzzle may also be solved. It is possible that incising inscriptions as an official method was adopted only in Wu Ting's time. Before this period, probably the major portion of written records were in ink-writings made by means of the ink-brush. Since we have been able to recover examples of such documents from the Waste of Yin and since painted pottery was commonly found in the pre-Yin-Shang period, this hypothesis may be said to have a substantial basis.

玖．史前遗物和有关古代中国的传说

本书的后几章将对迄今为止关于安阳出土物的各种专门研究作个简要叙述。从中国史前的一些资料（主要是近六十年左右发现的）开始谈起可能是有益的。先简单提一下最早的人类遗迹北京猿人和蓝田猿人，一些学者仍坚持将蒙古人种的缘起追溯至北京人。这种理论主要根据形态特征，尤其是箕形门齿；现在绝大部分蒙古人种都具有这种牙齿。经专家研究，生活在约一百万年前的周口店北京人也有这种牙齿。不管这些化石是否构成一个新属、一个亚属或一个类，这些实在的体质特征似乎给人类学家留下了深刻的印象。近年在中国南部和西南部的许多地方发现的荷谟形科化石，尽管并不完整，但总的来说它证实了现代人类的蒙古人种这一支曾在东亚进化的观点。笔者个人仍不相信迄今为止积累的材料已确证了这一事实。确定这些化石的来源本身就极其重要，而且肯定还关系到中国人的形成。中国人的种族历史无疑与整个蒙古人种迁徙的早期历史有非常密切的关系。

近年的研究表明，中国文明的早期根基并不比已发现的散布于中国各地的新石器文化早多少。早于新石器时代的中石器时期和旧石器时代的遗址确实偶有发现，但它们与中国历史在文化上的关系仍不清楚。所以，从新石器时代文化开始考查殷商文明的历史背景也许更有成效。

我们首先把着眼点放在洹河流域一带，考古发掘在那里发现了从中石器时代起似是连续发展的古代遗迹。那些遗迹是按相反的顺序发现的——历史时期、新石器时代、中石器时代，所以将来还有可能在这里发现更早的遗迹。

然而，按我们目前的看法，即便是几年前在洹河上游地区发现的中石器时代的遗迹，与历史事件似乎也只有很疏远的关系。无可置疑的是，一旦进入农业时代，中国文化就出现了一个跳跃式的发展。中国的动物驯养与植物栽培是由于外部的影响还是自身的发展，仍是悬而未决的问题。到仰韶文化时期农业已不再处于初级阶段。十分确定的是，那时在黄河流域一带几种粟已是普遍的主食，稻米也偶有种植。有些人甚至认为仰韶时期高粱、大豆也普遍食用，这也不是不可能。驯养动物除狗和猪外，还有牛、鸡、羊，可能还有马。骨器和陶器是主要的手工业品。制陶业已高度发展，其产品至少可分两类：日常生活用具和有可能专用于装饰或宗教的器具。后一类即所谓的“彩陶”。这类陶器被广泛收

集，并有大量的深入研究。前面说过，笔者当年作为一个年轻的考古工作者，曾有机会在一个名为西阴村的彩陶遗址进行首次发掘。在研究彩陶标本时，我印象最深的是：我立即想到彩色是用毛笔绘上的，这种笔与每个中国孩子学习写字时使用的笔没有多大区别。尤为显眼的是，西阴村彩陶上各种笔画末端仍保留着毛笔细毛的墨迹。虽然，这是在1926年观察到的，彼时我正在为清华研究院和弗利尔艺术馆准备一份报告，但该报告仅限于手工制品的介绍，并未提及此事。^[125]

吴金鼎在《中国史前陶器》一书中指出，刻纹作为陶器的纹饰技术第一次发现于山东城子崖的黑陶文化中。^[126]在较早的彩陶盛行的史前遗址中，似乎没有刻纹的陶器，虽从技术上讲，在软泥上刻划要比彩绘容易。然而考古研究已证实，就中国史前陶器的表面纹饰而言，彩绘技术较刻划出现为早。彩绘在仰韶陶器中占主导地位，且构成了其最显著的特征，但就通常以黑陶文化著称的龙山文化来说，似乎有着比陶器纹饰更重要的文化因素，如骨卜。但陶器刻划作为一种纹饰技术逐渐代替彩绘这一事实，似乎比最初想来更有意义。在本章的后一部分，我会更详细论述这个问题。

从科学考古学的观点看，龙山似是中国史前文化的最后阶段。安阳考古的田野工作者实际上就在紧靠殷商遗物下面发现了黑陶文化层，但这两个文化层相距的时间是长还是短，仍有待说明。

据传统文献记载，商朝前仅有个夏朝。但在夏之前，是传说中对早期中国文明的形成作出文化贡献的早期统治者。既然现代考古工作者证实了几个不同的旧石器时代和新石器时代文化在华北及其他地区存在，那么，在早期的传说与这些考古发现间可能建立联系吗？

让我们看看有关王朝建立以前的传说人物的传统记载。过去的史家把中国文化中一些最重要成分的起源都归功于这些人物。在这些传说人物中，至少有四个人要在这里简单谈一下。

1. 黄帝。据传说，他为了统一疆土曾在阪泉和涿鹿打了两次著名的战役。此二地一在北京西北的察哈尔^[127]，一在河北省的保定一带。司马迁推测黄帝的领土东临大海，南迄长江，西至现在的甘肃。在北方，他赶走了荤粥，后者可能是汉朝时期的匈奴的祖先部落之一。黄帝是传说中的重要人物，这不仅是因他在《史记》中居于“五帝”之首；更重要的是，直到现在，中国人都认为自己是黄帝的子孙。

2. 黄帝的第一个妻子，嫫祖，通常人们将养蚕的发明归功于她。

3. 周王室的祖先弃，在中国黄金时代的两帝之一舜的朝中专司农事。传说他是第一个教中国人耕种土地、栽培谷物和大麻的人。人们认为他的后裔建立了著名的周朝。

4. 夏朝的创建者大禹被视为中国第一个水利工程师。传说他成功地治理了古代中国的黄河与其他河流。

关于这些传说，值得注意的是，现代考古学已证实：养蚕和农业早在新石器时代就已在华北地区发展。而史前水利工程与农业发展密切相关，培育作物的耕地需要又促进了人口的增长。如果我们接受农业起源于陕西省南部这一传统观点——正如一些现代考古学家所假设的，那么农业必定首先沿黄河下游一带向东发展。所以，抢救黄河下游被洪水淹没的土地无疑需要大量工程技术。在这个阶段出现一个伟人大禹的形象就不足为奇了。

根据传说和司马迁的记载，禹不仅是个伟大的工程师，也是中国王朝历史的开创者。他的即位和传位于子的做法几乎酿成了一场革命。看看战国时孟子怎样为他辩护是很有趣的：

万章问曰：“人有言，‘至于禹而德衰，不传于贤，而传于子。’有诸？”

孟子曰：“否，不然也；天与贤，则与贤；天与子，则与子。……”^[128]

接着，孟子详述三帝传位的细节以证明自己的观点，不顾其材料源于何处。尽管，很显然，从现代观点看，除非还有埋藏在地下未被考古学家发现的资料，否则真实情况永远也弄不清楚，但夏朝的存在已被孔子和孟子认作是历史事实。

《书经》的传统版本中约有六章为《夏书》。但经后来考证，可以确证，除西汉初伏生传的《禹贡》外，所谓《夏书》中的大部分记载很有可能都是后世的伪造。甚至这一篇也被认为是东周时编纂的，不过它属汉以前这一点似是无疑。这一篇对大禹治水予以极详细的叙述，但丝毫未谈及夏朝的建立，遑论后来王朝的历史。所以在五四运动期间古代中国历史研究复兴时，自由派完全否认禹和夏朝的存在。当时甚至像胡适那样著名的稳健学者也同意整个殷商时期应属史前。当然这些都发生在现代田野考古工作开始以前。

司马迁关于夏朝的记述，虽简略，但大体上与孟子说的一样。另外，根据王国维编的《古本竹书纪年辑校》^[129]，夏朝历471年。此外，与一般传统记载相反，当禹的继承人启即王位时，益起而反对。据说禹欲将王位传给益，孟子也说大禹原来曾“荐益于天”。按《竹书纪年》记

载，启最后处死了益。这与孟子的话和司马迁的记载相矛盾。过去的历史学家不注意《竹书纪年》中的这些细节，后来的今本则完全把这些略去了。

与司马迁的《史记》一样，《竹书纪年》罗列了夏朝的统治君王，并扼要记述了夏王朝发生的动乱和革命。夏朝的末世君王是臭名昭著的桀。从孔子开始，他就与商朝最后一个统治者纣以残酷和暴政并称于世。历史学家通常把此二人看作是所有登上王位的统治者中最坏的。在残忍冷血、穷奢极欲、迷恋酒色、听信小人谗言、排斥忠良等方面，二人简直不相上下。儒家学派认为，这就是他们的王朝为什么会落到像商周的开国国君这样更贤明的君主手中。

现在，该谈谈这一章的关键了。问题的要点是如何划分史前和历史之间的界线。从19世纪末甲骨文发现以来围绕这一问题就进行了激烈的争论。七十多年学者研究成果的积累，至少澄清了某些古文字和历史学方面的问题。其中最重要的成果就是，确立了比商朝开国君主汤早得多的王室祖先世系；不过，商的始祖——传说中的契——的名字在甲骨文中能否确定现在仍没有十分把握，虽然一些学者作过这方面的努力。

王国维曾在两篇文章中试图探讨商王室的迁徙，即从契到汤之间的八迁及汤建国以后的都城五迁^[130]。王甚至还根据经史材料考证出了都城的所在。这些工作都是在刘铁云和罗振玉首次把甲骨文介绍给学术界后开展的。

这无疑是在中国考古史上的一大进步。但很显然，在此基础上一些问题仍未能得到解决。确定史前与历史二者间的界线，要有现代考古学的基本知识。

甚至到现在，由于以下种种原因，对这个问题仍有争论：

1. 甲骨文字决不是一种原始文字，因此毫无疑问它在发展到这一阶段之前已有很长一段历史。
2. 甲骨文字不能全部辨认，一些内容仍模糊不清。
3. 可识的甲骨记述证实了大量历史传说，这促使不少学者重新考虑传统记述。

那么，让我们看一段有关商朝历史的重要传统记载，这段较长的记述引自《书经·盘庚》。

盘庚〔欲〕迁于殷，民不适有居，率吁众戚出矢言，曰我王来，既爰宅于兹，重我民，无尽刘。不能胥匡以生，卜稽曰，其如台？先王有服，恪谨天命，兹犹不常宁。不常厥邑，于今五邦。今不承千古，罔知天之断命……[131]

上面的引文，约写于公元前2000年，经阎若璩等注释者严格考证后，被认定为《书经》中为数不多的真实篇目。现代学者较全面研究了原文的内容、语法和词汇后，总体上确证了阎的结论。即便如此，这些材料也很难视为写于盘庚同时代。笔者的同事屈万里和其他几个人倾向认为《盘庚篇》的原文写于殷商后期或晚至西周早期。

《盘庚》通常分为三篇，仅下篇论及迁都后发生的事。上、中篇是盘庚对那些不遵从他的命令、制造障碍、甚至违抗命令的普通大众的劝说或警告。

盘庚讲得很清楚，旧都已不适于居住，不迁徙人民就无法生存下去。然而，为了生存而必须放弃旧都的具体原因，原文中没有提及，只简单说“不能胥匡以生”。

理雅各的19世纪的英译本，尽管多数的英文读者能理解，但很难看作是对于三千多年前古代中国传下来的真实材料作出的确切翻译。同大多数17和18世纪的中国的注疏者一样，为了使意思更清楚他会插入自己的话。例如，上篇第一句“盘庚〔欲〕迁于殷”中，“欲”是译者为使原文易懂又有逻辑性而加的。中文的原本甚至现代的版本中，都没有任何表达“欲”这个意思的字眼儿出现。但由于大多数注释者认为，上篇是叙述盘庚试图劝说那些对迁都于殷不满的公众，所以在叙述中加入原文中没有的“欲”的含义对理雅各来说是合理的，他这样做也是基于中文的注释。

增加这层含义可以理解。全篇有不少难解的段落词汇，还有误勘，中国学者研究了几百年也没有任何确切的结论；然而理雅各有勇气把它译成易懂的英文，这当然是大胆的尝试，但也不是说他解决了从汉朝到现在一直困扰中国学者的所有古文字问题。

此处或可引用理雅各在翻译时对这段重要文献主要内容的思考。他写道：

全书围绕从河之北迁都到河之南殷这一问题展开。王认为迁都是必要的，但他面临着民众的不情愿及大族的反对。上篇记叙了他如何为自己的措施申述。其中包括两段讲话，分别面向普通民众和居高位者，旨在得到他们的积极配合。中篇展现了迁都的过程，人们虽渡过了河，但仍心怀不满。盘庚通过长篇诚挚的讲

话竭力为他的迁都政策辩护，以消除这种情绪。

下篇开篇，迁都已完成，新城建立，规划确立。王对民众和首领们作了第三次动员，请他们摒弃一切个人的不满，齐心协力在新都上建立起一个伟大的王朝。^[132]

从上面的叙述可以看出，理雅各和他同时代的中国经学家一样缺乏地理知识。例如，他们无法确定殷在当下所属的区域，也不清楚它位于河（黄河）南面还是北面。

但是，译者可以向西方读者说明一些历史事实。这些事实的重要性在于，它们不像《书经》一样仅仅依据传说记载，而是具有极大的现代考古学价值。

八十多年后，高本汉教授出版了他的《书经注释》^[133]。这些注释仅包括了这位研究汉语的顶级语言学家从个人视角全面研究汉语音韵学及古文字学其他分支的最新研究成果。然而，与他的前辈一样，他没触到与这些重要典籍整体相关的某些基本问题。例如，这些典籍最早可至何时？有多少后来的伪作与先秦的文本混杂在一起？高本汉不想提及可能引发历史争论的问题，是可以理解的。不过，《盘庚》一文的主题是盘庚想从旧都迁到以“殷”为名的新都。这至少提出了三个重要的地理问题：

1. 盘庚的旧都和欲迁至的新都分别位于何处？

2. 文中说“于今五邦”，研究古籍的学者认真考证了这五个都城的名称，其具体位置确定了吗？

3. 盘庚“惟涉河以民迁”这句进一步提出了一个地理问题：原文没有指明迁移的方向。人们不假思索地认为他们渡过的就是黄河；或许是，但是从哪个方向渡的河呢？因为两座都城的位置都不确定，所以从任意一侧渡河都是有可能的。

过去的注疏者在这些问题上花费了不少时间。王国维教授就是参与探讨这类问题的著名学者之一。甲骨文发现后，他根据古代的用法辨析了“殷”字和“商”字；而且，如前所述，他还成功地重建了商朝建立很久以前的王室系谱。然而，安阳发现的资料中存在一个重大的断档——最早的甲骨文资料似乎限于武丁时期。迁入新都后，早于武丁的商王包括盘庚在内有三个，因此问题在于：既然在甲骨上保存记录是一个古老的传统，为什么契刻卜骨在盘庚迁到新都后很长时间才开始？

南港和其他地方又另辟新路来研究这一老问题，即研究卜骨整治方法——占卜者留下的灼痕及钻、挖的凹窝的形状——的演变。众所周知，骨卜在龙山文化时期，即华北新石器时代的晚期，已使用，笔者自己就在城子崖发现过这种占卜用的骨头。但几十年来，老一代考古学家的注意力都局限于卜辞上，几乎完全忽略了卜骨的制作方法本身。直到几年前，研究所甲骨室的一位老资格的助理员、墨拓甲骨近二十年的刘渊临先生才提出了系统研究这套被忽视的资料的建议。现已得出几点明确的结论：

1. 灼法随着时间推移发生了巨大变化。
2. 钻挖凹窝的方法千差万别。
3. 即使在小屯，肩胛骨的使用也明显比龟壳更早。

刘先生在其初期的研究^[134]中已能证明以上各点。此外，他还能将卜骨的钻窝的某些类型与城子崖首次发现的通过类似的打钻的方法（在用火灼以前）形成的钻窝联系起来。刘发现，在一块肩胛骨上面有早期的挖窝，并刻有一字。这个字说来也奇怪，可看作是“盘”字，两竖道中间刻着两道横线——像英文字母中的H再加一横道，与甲骨文中“盘庚”名字中的第一个字一模一样。

这类研究将会得出什么结论，还很难说。最近郑州发现的一处以二里岗为中心的早商遗址，据一些权威人士考证，是隰或囂的遗址，这为对比研究提供了丰富的材料。但此地出土的文物中有字甲骨极少，迄今据说仅发现三片。似乎也没有人从技术层面对这些甲骨进行比较研究。

最近大面积的考古发现也不时证明某些遗址就是早商都城，特别是那些在河南西部和南部、河北南部和山东发现的大面积的夯土遗址。据说位于这些地区的遗址有十多处可以追溯到商朝。但除位于郑州和像河南西部偃师附近的二里头之类的遗址外，其他并未进行多少研究。所以早商的五个都城的确切地点还有待确定。就连郑州遗址是否是隰或囂，也还没有定论。若这种结论能成立，那么《盘庚》中难解之处如“既爰宅于兹”和“惟涉河以民迁”也就清楚了，而且迫使盘庚迁都的原因也可推测出，即可能是黄河泛滥。洪水几乎每年都要淹没郑州及其附近土地，于是盘庚不得不另选一处作为行政中心。

看来中国考古学者很快就会弄清这些地理问题和其他有关殷商文明之前的古代中国的人种学问题，但有关传说的历史，仍存在一些问题。

传统历史非常重视从夏开始包括商、周的“三代”。现代考古学已证明了商、周的历史真实性。传说最早实行世袭君主制的夏属三代之首，是萌芽于远古黄金时代的王朝。但直到现在，考古学仍不能明确指出夏王朝的位置。

从司马迁的著作、《竹书纪年》和《书经》看，夏代各王的名字几乎悉数为人知晓，但仅开国君王和末代君王有较多生平记载，其他统治者几乎没有记载。

约半个世纪前现代考古学知识开始引起中国史学家的注意时，曾有人试图考证安特生发现的仰韶文化和传说的夏朝之间的关系。笔者在小屯发现的一片彩陶公布后引起了讨论。徐中舒教授在1931年发表的关于小屯与仰韶的关系的文章中，在过去记载的基础上详细研究了夏朝的区域，认为新发现的彩陶文化的分布与传说的夏朝的中心地区相一致。

[135]徐认为，《逸周书》记载了夏朝创建者大禹的都城靠近伊河和洛河。这两条著名的河流位于现在的洛阳附近。

1926年我在山西南部一路进行考古勘察，途经一个与夏朝同名的县城——夏县。在那里我不仅发现了西阴村彩陶遗址，而且也发现当地传说中的夏后氏陵。一年后彩陶遗址发掘时，我没有机会重访夏县去看这组墓群。我在此简要提及，是因为它们可能为将来探讨这一重要时期的相关问题提供一些考古线索。

总之，我认为关于夏朝的传说的历史根据虽然还没像商朝一样得到充分证实，但否定它的存在还为时过早。其原因有多个。

首先，虽然《书经》中的许多部分，特别是那些高本汉所说的“伪孔”——所谓的《古文尚书》，已证明是汉朝之后伪造的，但《禹贡》及少数其他篇仍有可能是基于夏朝的一些历史事件。徐中舒教授等在近来的研究中提出了比传统记载更确凿的证据，他们考证仰韶文化即为夏朝。虽然证据仍然不足，但他们的推测可能有助于解决中国古代史上的其他问题。

早期的一些报告中常提到，安阳出土的成千上万的文字资料中，有时会发现在骨头上甚至在陶器和石头上有用墨写的字。也就是说，我们在殷墟发现了毛笔书写的遗迹，和汉朝书写在木简或竹简上的字一样。

笔墨在木、竹和纸上书写的字在适宜的条件下可以保存很长时间，特别是在气候干燥的条件下，比如在沙漠中。但墨写在其他材料——如

石、骨和象牙等上面的，保存的时间不会长。大部分保留下来的写在骨头上的字，即使笔迹清楚，也已严重褪色。这一点很重要，它提醒我们，考古工作者能发现甲骨记载是多么幸运，这些字还可辨认主要是因为它们刻在龟壳和骨头上。若仅用毛笔书写而没有刻，这些文字记录能否这样大量保留在土里流传下来，就很难说了。

骨、石甚至陶器上文字记载的发现，直接向田野考古工作者暗示了，如果走运的话，有可能会发现用墨写在其他材料上与骨卜无关的文字记载。但我们田野考古工作者在这方面还没有获得像探寻甲骨那样的成功。

但这并不意味着墨写形式的记载不存在。它们也许埋藏在其他地方，或者已经全部腐烂或者被毁了。无论存在何种可能，问题仍在于，在殷商时期卜骨刻字出现以前，汉字必定已经历了长期的演进。我认为重视这个长期的背景过程，就可能有新的路子。

从发掘报告中得知，考古学家和古文字学家都对半坡彩陶遗址发现的不少陶片边缘上号称原始汉字的原始文字符号给予了极大关注。据说，有一些可确定为原始汉字，其中还有几个很像刻在卜骨上的数字符号。而值得注意的是，即使是研究彩陶，考古学者和古文字学家也还是把注意力局限在刻划符号上。

重读徐教授关于小屯和仰韶之间关系的文章（见前文注释11），使我灵感突现，既然墨写的字存在于殷商时期，那么它还可能远溯到彩陶时期。我心中萌生了以下几点基本思想：

1. 很明显，彩陶片都是绘的，这在过去半个世纪中已被认为是理所当然的，但它是怎样绘成的呢？仔细考察表明，给彩陶绘彩的画师必定使用了类似书写汉字的毛笔的画笔。

2. 给陶器绘彩的画师也可能绘别的形象，如走兽、鱼和鸟等，这已被半坡、庙底沟及其他地方出土的标本所证明。

3. 墨写卜骨的发现，明确表示殷商时期毛笔书写的艺术已流行。

4. 更有趣的是，相当多卜骨上的刻字都证明，刻划的线条可能最源于描摹彩绘笔划的轮廓。图24的例子就足以说明这点。

早期的金石学者认为造成这些字形差异的原因只是偶然的。而图24的例子似表明，字形的变化是技术革新带来的必然结果。用毛笔和墨写的字，不论红黑，不论笔道粗细，只是个人风格问题；一旦将字刻在骨

头或其他材料上，要用精巧的工具尖锐的刃刻出肥笔，自然非常困难，几乎不可能，其结果是所有刻出的笔划都是细线。为了刻画肥笔，如“山”的竖划及王字的底部，掌握新技术的工匠发现需要用细线先勾出肥笔的轮廓，或直接用细笔代替原来用毛笔写成的肥笔。

如若说这一想法还有些价值的话，那就是，它或可以说明契刻甲骨文字以前，汉字的早期的演进情况，也能解释殷商时期为什么存在毛笔字，以及为什么在殷的前三个王统治时期，没有刻字记录保存下来。最重要的是，它可说明一些字形变化的原因。然而，这仍无法充分解释为什么迄今为止尚未发现较早的毛笔书写文字。可能它们写在易腐坏的物质上，比如木简、贝壳，甚至石头上。这些材料上的墨写字，不同于刻字，易被磨损，或与材料本身一起消失了！

困扰古文字学家几乎半个世纪之久的问题在前面已谈过：尽管殷大概是在盘庚时就建为都城，但此处尚未发现比武丁时期更早的文字。到现在为止，这一问题似乎还没有得到满意的解释。

如果接受早期的汉字记载是用毛笔写的理论，上面的迷惑也可迎刃而解。可能契刻文字的方法只到武丁时期才被采用为官方的记录方式。在此之前，或许绝大部分文字记载是用毛笔写成的墨字。既然我们在殷墟发现了这种文字记载的样例，并普遍认同彩陶存在于殷商时期之前，因此这一假说可以说具有可靠的根据。

10. Architecture

Structural Remains and Suggested Reconstructions of Surface Buildings

Although some of the structural remains found at Anyang—the "royal tombs" of Hou-chia-chuang and the pisé foundation units of Hsiao-t'un—have been described in previous chapters according to the order of their discovery, no attempt has been made to discuss this group of data as a whole. Here, in order to give the reader a general idea of what a Chinese capital might have been like in the last quarter of the second millennium B.C., I would like to bring together and analyze these various discoveries, scattered through a period of nearly a decade.

Pisé, a basic foundation and wall-building technique, was not an architectural invention of the Yin-Shang period. Recent archaeological excavations on the mainland have shown that construction by earth-pounding existed long before the Shang dynasty moved its capital to Anyang. It was found to have been used both in the Shang sites at Chêng-chou and in earlier sites in western Honan and elsewhere.

The structural remains exposed at the Hsiao-t'un site can easily be grouped into two main divisions: the underground structures and the surface buildings. The underground structures are again divisible into a number of minor categories, some for dwellings, some for storage, and others for burying sacrificial victims or for regular burials. Ditches and water-storage ponds were also found. All these, no doubt, were planned and probably administered by some responsible unit of the government.

Let us examine the underground group first.

● Underground Structures

Shih Chang-ju divides the underground structures into two sub-

divisions, one group for dwelling purposes, the other for storage. According to him, underground dwellings disclosed by excavation are much less numerous than pits for storage purposes. Most of the examples of subterranean habitats which have survived are comparatively large and shallow; the depth is usually smaller in dimension than the horizontal cross-section. The extant underground houses usually include stepped passages for ascending and descending. In this connection, it is interesting that in the common vocabulary of the Shang and Chou period, as noted by some specialists, the everyday term for "come and go" is "ascend and descend." The usage of this particular term is no doubt closely connected with the habit of living in underground habitations.

Shih Chang-ju in his 1955 paper describes no less than six of these underground dwelling caves, half of which were overlaid by one or more layers of pounded earth.^[136] It is obvious that when a later pisé foundation was laid, if subterranean pits, whether for dwelling or storage, were in the way, they had to be wiped out or filled in before the surface buildings could be erected. Several questions immediately arose when these striking stratifications were first noticed: (1) Were these underground habitats built in the Yin-Shang time? (2) If they were, what is the evidence? (3) If they were not, when were they built?

These questions could only be satisfactorily answered by a detailed examination of the dwelling remains. There are various types of surviving examples, indicating that there was by no means a uniform style for the underground dwellings. The following examples are those given by Professor Shih.

Type I, Circular A good example for this type is H134, located under-neath *beta* 12 on its western margin. The upper entrance began to appear at 1.14m. below the present surface, overlaid by nearly 5cm. of pounded earth. Steps were found along the circular wall; the diameters of the upper entrance were between 2.00 and 2.27m. The depth of this cave was only 2 meters, with a flat bottom. The flight of the ascending and descending passage consisted of seven steps

unequal in height and terminated at its lower part in a slope. Potsherds, animal bones and copper rust accumulated on the floor were the principal contents of this cave; near the middle of the floor lay a boulder, relatively large in size (40cm. $\times$ 20cm.), which had apparently served as a pillar base (Fig. 25a).

Another example of this type given by Shih was 7:H23 located underneath *beta* 7, which though classified as circular looks somewhat irregular at the entrance. The upper entrance seemed to be regular, only 7 meters in diameter, but the internal structure was quite complicated. The uppermost entrance began to appear at 40cm. below the present pisé foundation, but the cave itself reached a depth of 5.85m. with seventeen steps in between. The flight of steps was built in the middle of the cave, thus dividing the interior into two parts. The western portion was much shallower, only 4.70m. in depth, while the eastern portion was 1 meter deeper. One piece of inscribed oracle bone was found in the cave, which according to our paleographers belonged to the fourth period (Fig. 25b).

Type II, Oval Examples of this type were also located in the *beta* area. Shih gives H213 as the first instance of this type. The uppermost part appeared at the depth of 58cm. below the modern surface; it was overlaid by the pisé unit, *beta* 18. The underground cave itself measured 7.02m. in length by a width of 2.28m.; from top to bottom it measured a little over 2 meters (2.02-2.32m.). The northern portion was narrower and also shallower; traces of a stepped passage started at the north, and, as it sloped down along the western side, it measured 80cm. wide. As it descended to the depth of 1.50m., there appeared a sort of wall from the bottom that partitioned the southern part of the cave from the northern part. The floor of the southern part was smooth and could be entered only by first descending to the northern portion, then turning to the south along the smooth separating wall (Fig. 25c).

The cave was filled with pounded earth, obviously preparatory to laying the *beta* 18 unit foundation.

The second example given by Shih to illustrate the oval-shaped

underground dwelling cave is H156, the most spacious dwelling cave which has survived. This underground cave measured 12.40m. $\times$ 3.80m. in cross dimensions, whereas the depth of the cave reached a dimension of only 2.25m. Its upper entrance began to appear at the depth of 1 meter below the present surface. Like the others, it was overlaid by pounded earth which constituted the foundation unit of *beta* 11. This particular cave had two flights of stepped slopes for ascending and descending, reaching all along the western wall; the southern flight descended from south to north and the northern flight descended from north to south, both of these meeting at the bottom in the middle of the western side. The southern flight was composed of nine steps, and the northern of ten steps (Fig. 25d).

A third example given by Shih is H21 which measured 7.30m. $\times$ 2.30m. in cross diameter. It was discovered underneath *beta* 5 within the area of B133. The cave began to appear at a depth of 1.30m., partly under *beta* 5. The depth of the cave was only 2.30m., but it was divided by a stepped passage in the middle which ran from south to north about 60cm. wide and the last step was located at 1.80m. from the entrance. Since many bronze fragments and pieces of molds for bronze-casting were discovered in this cave, it may very possibly have been used as a bronze-casting workshop (Fig. 25e).

Type III, Rectangular There is only one illustration of an example of this type, located in the *gamma* area. The exact location was on the northern side of *gamma* 1, which was itself a huge unit of pounded earth. According to Shih's account (see note 1, above), this dwelling cave had already been partly destroyed by a Yin tomb (M334) and further disturbed by a modern well. The entrance cave appeared at 37cm. below the present surface. It measured 4.05m. $\times$ 3.05m. in cross dimensions, and in depth 3.55m., with a flat smooth floor surface. Its flight of steps started at the eastern end of the southern wall and ran down to its western end, and then turned northward along the western wall, but stopped in the middle of this wall without again turning. The whole flight measured 3.60m. with eleven steps, six along the southern wall and five along the western wall. Although

a number of these steps were partly damaged by later burial and well-digging, enough remnants were preserved at the time of discovery for a study of the original structure (Fig. 25f).

e H21

f H304

Each of the above six examples of spacious underground dwelling caves provides one kind of evidence or another indicating that they were used in the Yin-Shang period. But some of them were abandoned when the surface buildings with pisé foundations were planned. The important question is, when did this revolution take place? At the time when King P'an Keng first moved his capital here or later? It is also abundantly clear that in the Yin-Shang period, that is, after King P'an Keng made this place a capital, underground caves and pits were still extensively used at least for storage purposes—for examples, H127, H251, E16, which stored thousands of inscribed tortoise shells. Might this indicate that some of the underground dwelling caves may

still have been inhabited in the Yin-Shang era? This problem needs further study.

Turning to underground caves or pits which were definitely and exclusively devoted to storage purposes, there are more than six hundred of these recorded. Some of them may have been survivals of the Black Pottery Culture when Hsiao-t'un was still inhabited by the Lungshan folk. During the wartime the author, in a paper discussing such remains, mentioned H131, H93, and H340 as three examples from Hsiao-t'un that definitely preserved cultural remains of the Black Pottery people.^[137] Each of these three underground pits was covered by later pits containing Yin-Shang cultural deposits. Here we are more concerned of course with the culture of the Shang and Yin-Shang periods, so examples in this category have to be chosen from those in which the artifacts indicate some serial development of dynastic Shang. Those immediately beneath the pisé foundation may be taken as prime examples, as many of them were filled in just when the surface building on a large scale was planned.

In a 1970 paper Shih Chang-ju provided further examples of reconstructions.^[138] The general rule he observed in these reconstructive efforts was this: "The heavier the structure, the thicker the foundation." It can be definitely shown that the pounded earth at Hsiao-t'un varied considerably in thickness—from 20cm. to 600cm. in different localities; and, in fact, each unit of these pisé foundations, while not exactly uniform in its horizontal dimensions, actually showed a great variation in the thickness of the pounded earth.

Shih described one pisé unit of particular interest: namely, *beta* 21, which is located right on *beta* 20. The surface of the larger unit, *beta* 20, is nearly 1 meter below the modern surface. Shih calculated that its eastern side had been eroded away and disappeared long ago. The original size of the foundation surface of *beta* 20, he estimated, must have been nearly 80 meters (E.W.), and its width (N.S.), according to what has survived on the western portion, over 15 meters (Fig. 26).

26 Possible original plan of beta 20 and beta 21
 $\beta 20$ 和 $\beta 21$ 的原位置推测

On this elongated platform, there seem to have been built two square buildings, one of which, the foundation of *beta* 21, was still

preserved at the time of excavation. For reasons given by Shih, the superstructure for which this particular foundation was designed must have been a heavy and probably a tall unit intended for storage. The pisé foundation of *beta* 21 itself measures 3 meters thick, deep down into the earth; and its composition, according to Shih's description, was the most compact and hardest to break in the experience of the most muscular diggers in the labor gang. Shih inferred, from this unique quality alone, that it could be reasonably deduced that the foundation must have supported an extraordinarily heavy and complicated superstructure on the surface. Before we go into the architectural nature of the superstructure, it is interesting to examine to some extent what underlay this unit of pisé foundation, in which structural remains were still preserved.

Shih describes no less than four deep-sunken storage pits underneath *beta* 21, which measures approximately 7 meters on each side with an area of nearly 50 square meters. Within the bounds of this area, our archaeologists disclosed H361, H462, H463, and H443—the first three rectangular, and the last one more or less circular. Each of these storage pits had an upper entrance under the pisé foundation (*β* 21) and was more than 2.50 meters in depth. There is no question about the depository nature of these pits, since they were all comparatively small-sized and deep, with their entrances far below the surface. The contents of the pits were composed mainly of potsherds of the Yin-Shang period, articles of bone, and fragments of piece-molds for bronze-casting. Almost every pit contained among the ceramic fragments some remains of typical *li*-tripods of the Yin-Shang era.

Summarizing the description of these underground depository pits, Shih says:

These underground deep-sunken pits bear no direct relationship with the strongly built pisé unit. Their existence here serves as evidence indicating that before this place was chosen for foundation building, it was already pitted with storage units. Although their contents as disclosed in the excavation were not the original storage, they represented typical trash of the middle Yin-Shang era. Among the pot-sherds one can easily identify the *li*-tripod, the *tou*-dish, the *yü*-

basin, the *hu*-pot and the *p'an*-pot all typical potteries of this period, and in H361, even piece moulds have made their appearance. Taking into consideration the pisé building foundation of *beta* 20 as a whole, I should say that this part of the *beta* area, was built comparatively late.^[139]

The underground pits beneath β 21 show evidence that they were probably used till a later Yin-Shang period.

● Reconstruction of Surface Buildings

Shih Chang-ju has published four important papers on his studies of the architectural remains of the Hsiao-t'un site, besides his monumental work in *Archaeologia Sinica* (1959).^[140] These papers are: (1) "One Example of Restored Yin Surface Building" (1954);^[141] (2) "Architectural Remains of the Yin Period" (1955) (see note 1, above); (3) "Hung-t'u [Earth pounding], Pan-chu [Pisé], and Building in General" (1969);^[142] and (4) "Further Example of the Reconstruction of Architectures of the Shang Dynasty" (1970) (see note 3, above). The first two papers were published before the monographic report, the third and the fourth were written later. In the first two papers, the author details the bases of reconstructions, which are of some interest to the general reader. For instance, in the second paper he states that the restoration is based on the foundation units built of pounded earth and the boulders, found resting on the surfaces of the various units which were obviously used to support the columns, pillars, or rails. The superstructures, however, had all vanished, so Shih had to depend for these on other resources, namely (1) the pictorial characters in the oracle bone scripts related to houses; (2) classic records like *Ta-tai-li* and *K'ao-kung-chi*^[143]; and (3) survivals of simple structural forms and methods still current in Yünnan and Szechwan where Shih had the opportunity to see them during wartime.

On the above bases Shih had been able to reconstruct several buildings which, with his permission, the author is reproducing in this chapter to illustrate the types of houses that might have been built during the time when the Yin-Shang kings were ruling in the capital. Let us follow the reconstructions of Shih according to the geographical distribution of the pisé units given in chapter 6.

27 Reconstruction of *alpha* 4

α 4的复原图

Those on the north (*alpha* area) were discovered earliest in accordance with the archaeological calendar of the institute. It has been noted that in this area fifteen pisé units were uncovered. Of these fifteen units *alpha* 11 is the largest, *alpha* 4 next in size. Shih, for various reasons, chose *alpha* 4 for his experiment in reconstruction. The result is shown in Figure 27.

Shih summarized the general features of *alpha* area building in a recent paper in these terms:

Although the fifteen pisé units in their distribution appear loose and

unorganized [see Fig. 22] they are still separable into two sections: the northern and southern. The southern section is composed of five units (*alpha* 11-15), while the northern section is composed of ten units (*alpha* 1-10). The majority of those in the southern section—three units—are large-sized, while in the northern section, the pisé units are in most cases small-sized and center on *alpha* 4, *alpha* 6. Whether they were linked with each other, it is still difficult to say. But *alpha* 4 provides us a complete base, and also all the pillar boulders in their original positions so I have chosen it for an experimental restoration. As this is a rectangular-shaped unit, the starting point of my reconstruction is that the roof follows this shape likewise, and that we have here the prototype of the typical rectangular house so common in China. Like the modern Chinese house, it is to be constructed with a ridgepole along the middle supporting two roof slopes to facilitate the flow of rain water. As for the materials of the roof, sufficient evidence was recovered to show that it was composed of a mixture of grass, thatch, rushes, bamboo and wooden-splits strengthened by some plaster. The art of plastering seems to have been highly developed in the Yin-Shang time, as the good appearance of many deep-sunken pits testify. Shell-lime was definitely used also for building purposes. I should add that in the case of pisé *alpha* 4 there was found a row of boulders along the middle of the foundation unit, arranged just like those found along the borders. This row of boulders along the middle evidently served the purpose of supporting the ridgepole.^[144]

The above statement is not an exact translation of *alpha* 4 of Shih's text, but since the author has had the privilege of talking with Shih almost weekly, he has tried to note Shih's most recent ideas in addition to presenting his written opinions.

One might say that the reconstructed house of *alpha* 4 is almost the kind of farm village house still to be found in modern China in an old-fashioned village. Compared with the underground dwelling caves, however, it was undoubtedly an improvement. But this type of surface building, according to recent archaeological discoveries, was already in existence in the neolithic period as the finds in Pan-p'o and Miao-ti-kou, where both round and rectangular huts were found and restored, may testify. So the thatched rectangular surface building not only agrees with traditional accounts, but also is confirmable by neolithic discoveries (Fig. 28).

28 House #301 of Miao-ti-kou, a vertical cross-section 庙底沟301号屋断面图

One may perhaps feel disappointed from this example that the capital of a kingdom with an extensive territory should have left behind no more impressive ruins in architecture. But let us see what Shih has accomplished in his further restoration of a far more imposing complex situated in the *beta* area.

As pointed out before, the *beta* area is located south of the *alpha* area and its eastern side follows the brink of the Huan River which, as mentioned several times in early chapters, has eroded much of the pisé foundations during the past more than three thousand years. Shih's estimate is that the eroded area of *beta* is at least half of the original foundation area, maybe as large as two-thirds.

The existing remaining portion of the pisé foundation of β 20 measured 31 meters from the western end to the very brink of the river and 15 meters from north to south. On the border of this surviving area were found groups of small boulders—sixty-one in number—the arrangements of which appeared quite distinct from those serving as bases for pillars. Shih interprets them as foundation stones for the short columns of some balustrades, especially those found along the edges of *beta* 20; there are seven of these stones on the northern border edge, nine on the southern border edge, and four on the western border edge. On both the south and north, the

balustrade pillars were evidently arranged regularly about 2.50 meters apart. On the western side, the arrangement is somewhat different. The four stones here are found in two pairs, separated by a distance of 8 meters.

Another group of boulders, found mainly south of the marginal area of the pisé foundation of β 20, are what Shih has named "door foundation stones"; Shih gives the boulders the following classifications and lists the numbers in each category thus:

1. Southwestern door: 2 boulders
2. Southern door (no. 1): 8 boulders
3. Southern door (no. 2): 9 boulders
4. Southern door (no. 3): 22 boulders

Shih noted further that these door foundation stones were buried at an average depth of 0.70m. beneath the soil surface, shallower by about 15cm. than the foundation stones of the railings of the balustrades on the south and north of the pisé unit β 20.

Shih's reconstruction of the whole area of this pisé unit (β 20) measures more than 80 meters long (E.W.) and more than 15 meters wide (N.S.), so the oblong-shaped size of this large unit of pounded earth covers at least 1,200 square meters with a firm foundation more than 2 meters deep sunken in the soil. And on top of it, if we are to be guided by the distribution of the regularly arranged boulders, this big unit seems to have been an open platform fenced by railings that may have constituted balustrades on both the north and the south. On this huge platform, there are reasons to believe that a pair of storied buildings were constructed as shown in the complete reconstruction published by Shih Chang-ju in 1970 (see note 3, above), one of the latest efforts of this aging archaeologist.

Of the two storied buildings reconstructed on the platform β 20, the one of which material evidence survives is what has been referred to as β 21, an extra pisé unit built on top of β 20, with a foundation as hard and solid as rock, as has been mentioned previously. This unit

measures about 7 meters on each side and is oriented almost to the magnetic north, just like the more or less square terraced platform on the northernmost side of the *beta* area, namely, the Huang-t'u-t'ai (β 1) (see Fig. 23). It is Shih's belief that on this square foundation of the hard pisé unit, there must have been a heavy structure, as the boulders found on the top of β 21 *in situ* show apparently two parallel rows (each with five stones) on the external margin, while for the inner square, according to Shih's reconstruction, only one boulder stone at each corner was originally laid, some of which were mislocated due to later disturbance and burials. Working from these arrangements of the pillar base stones, Shih experimented to arrive at a possible restoration of the originals, for which he tried various plans. At his fourth attempt, he felt satisfied. In 1970, after a long period of experimental restoration, he settled on a two storied construction which he published in the article cited in note 3. Shih believes that there were a pair of these storied buildings, standing symmetrically on the platform of β 20. As restored, they look very much like a pair of drum and bell towers of the sort built everywhere since the Han dynasty (Fig. 29).

29 Reconstruction of surface building on *beta* 20

Shih assumes that these restored buildings functioned as watch towers and also probably to house guards, for the following reasons:

1. These two buildings were the southernmost buildings of the β area, and since their orientation was toward the south, they occupied the frontal, entrance position.

2. Along the south front of β 20, there are remains indicating the original existence of seven flights of stairs, the longest and main one being in the middle, flanked by three minor staircases on each side. This presents a magnificent frontage and reminds the reader not only of the drum and bell towers in historical times, but even of a prototype of the altar for the most sacred worship dedicated to the supreme deity: Heaven or T'ien. We shall come back to this subject in a later chapter.

3. Finally, Shih said the door of the second story of this storied building opened toward the north, for the reason that all the main buildings are located on the north as the restored sketch of the geographical distributions of the β area shows. But the door of the first floor opened eastward so that the guards might watch the entrance directly.

I must say that I am inclined to agree with most of Shih's opinions, especially the parts dealing with the reconstruction based mainly on the distribution of the pillar-supporting boulders. However, as to some of the interpretations which Professor Shih has taken so many pains to make plain, I still entertain some different opinions, particularly as to his interpretation of the post-pisé sacrificial burials, which he believes to have been all closely related to different stages of the surface construction—foundation laying, pillar erection, gate or door building, completion of the structures, and so on. No doubt some of the sacrificial burials are related to these architectural works but one has to keep in mind, as Ssŭ-ma Ch'ien wrote nearly two thousand years ago, that the Yin-Shang people were noted for their belief in ghosts, and the oracle bone records are full of evidences of sacrifices

both to ancestors and to other spirits. If the reconstructed section of the surface building was a temple or an altar, it would have been a matter of religious duty for the kings to make sacrificial offerings there at regular intervals.

When we examine the restored surface buildings as a whole, the foundation units in the *beta* area definitely give the imposing appearance of an ancestral temple, especially, the square altars, the northernmost of which, composed of clean yellow soil (*huang-t'u*), was discovered by the author personally in the fourth season. This platform, so to speak, was impressive and distinguished from the very beginning by its appearance. As its soil composition was pure yellow, the workmen as well as the archaeologist in charge called it in the field "Huang-t'u-t'ai." Its dimensions were 11.30m. (N.S.) $\times$ 11.80m. (E.W.). No boulders were found on the top surface. The southern, eastern, and western sides were all bounded by pounded earth somewhat different in color.

The top of the pure yellow earth appeared about 30 centimeters below the present surface; this soil distinguished by its yellow color measured nearly 1 meter deep. So, taking Huang-t'u-t'ai as an independent unit, its total dimensions were 11.30m. $\times$ 11.80m. $\times$ 1.00m.

This unique platform or altar was not only damaged by later burials of the Sui-T'ang period, but before it was built this very spot was occupied by many underground caves, mainly for depository purposes.

Although along the northern side of the *beta* area there exists no pisé foundation, it was here that the well-known "Ta-lien-k'eng" was located, where we found a large number of oracle bones and the unique piece of painted pottery.

To return to the Huang-t'u-t'ai itself, what surprised the field archaeologists in the beginning was not only its soil composition but also the orientation of this nearly square altar exactly to the magnetic south.^[145] In later excavations we uncovered a large part of the *beta*

area and traced out most of the building units; at the southern end of the surface buildings were found to be also oriented toward the south but not necessarily in the magnetic direction—their position seemed to be guided simply by the sun. This difference made the yellow earth platform appear even more unique.

In conclusion, the evidence indicated that all the buildings of the *beta* area were intended for a sacred purpose. To perform rituals to Heaven and other spirits, and to offer sacrifices to various ancestors, were the most sacred duties of the reigning sovereigns. The excavated architectural remains, when reconstructed, seemed to be suited for this supreme duty.

It is regrettable that nothing more on this subject can be said on the basis of our field records. These proposed reconstructions, fragmentary though they be, may nevertheless serve as a starting point for other discussions.

拾·建筑：建筑遗迹和地上建筑物复原之设想

虽然安阳发现的一些建筑遗迹，如侯家庄的王陵和小屯的夯筑基址等，在前几章中按它们发现的先后已经介绍过了，但还没有将它们作为一个整体加以讨论。在此，为了让读者了解在公元前第二个千年的最后250年中国首都的大体景象，我要将过去近十年各种相关的零散发现集中起来进行分析。

夯筑，一种基址和筑墙技术，并不是殷商时期的发明。大陆近期考古发掘证明，夯土建筑在商朝迁都到安阳前就存在已久。它见于郑州的商代遗址、河南西部及其他地方更早的遗址中。

小屯发现的建筑遗迹可分两大部分：地下建筑和地上建筑。地下建筑遗迹又可分为住所、窖穴、祭祀坑和正规的墓葬等类。沟渠和蓄水池亦有发现。毫无疑问，所有这些都是有计划建造的，并且可能是由政府的某个部门负责管理。

让我们首先介绍地下建筑群。

● 地下建筑

石璋如把地下建筑分为两组：一组是居住用的，另一组为存储用。据石先生言，发掘呈露出的地下居所比贮藏窖少得多。大部分残留下来的地下住室都较大而浅，其深度一般小于宽度，多有供上下的台阶。关于这一点，一些专家注意到一个有趣的现象，商周时期常用词汇中表示“来”和“去”的日常用语是“上”和“下”。这一特定词语的用法无疑与当时人们居住在地下居室这一习惯有密切联系。

石璋如1955年的论文中介绍了至少六个地下住所，其中半数上面覆盖着一层或多层夯土。^[136]显而易见的是，如果要在原有的地下窖穴——无论是用于居住或者存贮的——上再次垒筑夯土，这些窖穴必须清理或填实，地面建筑才能开始动工。在第一次看到这些惊人的夯土层时，我立即产生几个问题：(1) 这些地下居所是殷商时期建的吗？(2) 如果是，证据呢？(3) 若不是，它们又建于何时呢？

这些问题只能通过仔细研究住所遗迹，才能得到圆满回答。留存下来的各种类型的实例表明，地下住所有许多式样。石教授列举了以下实例。

类型一，圆形 H134是一个极好的例子。它位于 β 12基址下的西端。其上口距现地面1.14米，上面叠压着约5厘米厚的夯土层。沿着圆坑壁而下有台阶。此坑的上口直径在2—2.27米之间，深仅2米，底部平坦。供上下用的通道由七级不同高度的台阶组成，最下面一级连着一个斜坡。坑底的主要堆积物为陶片、动物骸骨和铜渣。居住层约当中心的位置有一块较大的石头（占地约为40厘米×20厘米），很明显，这是曾经的柱础（图25a）。

石先生举的另一例子是7：H23，它位于 β 7基址之下，此坑虽归为圆形类型但上口看起来并不太规整。上口似乎较整齐，直径仅7米，但内部结构复杂。此坑上口见于现有夯筑基址下40厘米处，本身深度达5.85米，坑内有一段17级的阶梯。阶梯建在居住穴中间，将居室一分为二。西部较浅，只有4.7米深，而东部比西部深1米。在穴内发现一块字骨，经古文字学家鉴定属于第四期（图25b）。

类型二，椭圆形 这一类型的几个实例也位于 β 区。石先生首先举的是H213的例子。此坑上口距现在的地面58厘米，上面叠压着 β 18基址的夯土层。居住穴长7.02米，宽2.28米，深2米多一点（2.02—2.32米）。坑北部较窄浅。一段阶梯式通道的痕迹始于北部，沿西墙向下，宽80厘米。阶梯下到距坑口1.50米处时，与立在坑底的一条土坎相接；此土坎把居住穴分为南北两部分。南部地面平坦。要进入南部必须先下到北部，再沿隔坎转入南部（图25c）。

居住穴内填满夯土，很明显是为建 β 18基址作准备。

石用以说明椭圆形穴的第二个例子是H156，它是现存的最宽敞的地下居住穴，其横断面尺寸为12.40米×3.80米，深仅2.25米。坑口距现在的地面1米。像其他居住穴一样，其上叠压着 β 11夯土基址。这个地下居住穴有两段沿西墙供上下用的阶梯。南部的阶梯从南向北而下，北边的则从北向南而下，两条阶梯在坑底西墙中间会合。南部的阶梯有9级，北部的有10级（图25d）。

石举的第三个例子是H21，其横断面尺寸为7.30米×2.30米。它是在 β 5基址下发现的，位于B133探方内。H21部分在 β 5基址下，口深1.30米，坑本身深度仅为2.30米。此坑被一南北向的宽约60厘米的阶梯从中

间分开，最底部的一级台阶在坑口下1.80米处。穴中发现许多青铜器碎片和铜范，所以，这里很可能是一处青铜铸造作坊（图25e）。

类型三，长方形 这一类型的例子只有一个，它位于 γ 区基址北部，确切地说，在 $\gamma 1$ 的北部。 $\gamma 1$ 本身就是个较大的夯土基址。据石先生所述（见上文注释1），居住穴已被一般墓（M334）部分损毁，又再次被一现代水井扰动。居住穴的上口位于现在地面下37厘米深处，穴长4.05米，宽3.05米，深3.55米，地面面平坦光滑。坑内的台阶由南墙东头开始，沿南墙向西，下到此墙的西头再折向北，沿西墙而下到此墙中部止。此阶梯通长3.60米，有11级，其中沿南墙的6级，沿西墙的5级。尽管一些台阶被后来的墓葬和水井部分损毁，但在我们发掘时，保留下来的残余部分亦足以供研究其原初结构之用（图25f）。

以上六个宽敞的地下窖穴，每个都提供了这样或那样的证据，说明它们在殷商时期曾被使用过。但其中一部分在建造有夯筑基址的地上建筑时被弃用了。重要的是，这种变更开始于何时？是在盘庚迁都于此地时吗？还是更晚一些？十分清楚的是，殷商时期，即盘庚迁都于此后，至少地下窖穴作贮藏之用仍非常常见，H127、H251、E16中就藏有数千块有字龟甲。但这是否表明还有一部分地下住所在殷商时期仍有人居住呢？这个问题还需进一步研究。

下面谈谈专为贮藏用的窖穴。据发掘记录，这类窖穴有600多个。其中一些可能是龙山黑陶文化时期在小屯居住的人们留下来的遗迹。抗战期间，笔者在一篇探讨这种遗物的文章中，曾以H131、H93和H340为确凿例证论及小屯出土的黑陶文化遗物。^[137]这三个地下坑穴都为后来的包含殷商堆积物的坑穴所覆盖。这里我们当然更关注商的和殷商时期的文化，所以必须从那些表明商朝连续发展的遗物中选取实例加以分析。为此，我们举了那些直接压在夯筑基址下的坑作为首选的例子，它们当中有许多坑正是在准备大规模建造地面建筑时被填的。

石璋如在1970年的一篇论文中进一步提供了复原的实例。^[138]在复原时，他观察到一个普遍的规律是：建筑物越重，基址越厚。这一点在小屯各处的夯土厚度不一——从20厘米到600厘米——这一事实中得到了充分说明。而且，每一块夯筑基址不仅水平尺寸不尽相同，实际厚度也呈现出了极大的差异。

石描绘了一处特别有意思的夯筑基址，即建在 $\beta 20$ 基址右边的 $\beta 21$ 基址。较大的 $\beta 20$ 基址在现代地面下约1米处。石推算它的东边因被侵蚀早

已消失。石估计， $\beta 20$ 基址表面的最初尺寸，东西长约80米，据西部残存的部分来推测南北宽超过15米（图26）。

在这个长条形的台基上，似曾建有两个方形的建筑物，其中之一的是 $\beta 21$ 基址在发掘时仍存在。石先生推论，建在这一基址上的上层建筑一定很沉很高，应该是作仓储用。 $\beta 21$ 基址的厚度有3米，深夯在土内。据石的叙述，它非常致密坚固，体力最好的发掘工人也难以打破它。石先生指出，仅从这一特征就可推知，它支撑的地面建筑必定高大且结构复杂。在我们研究这一地上建筑的建筑特征之前，了解这一夯筑基址下仍然保留着的一些建筑遗迹的情况是很有意义的。

石先生描述了 $\beta 21$ 基址下面的四个深凹的贮藏坑。 $\beta 21$ 基址各边约长7米，面积近50平方米。在这个范围内发现了H361、H462、H463和H443四个坑，前三个为长方形，后一个近似圆形。坑的上口都在 $\beta 21$ 基址之下，坑深超过2.50米。坑深而口小，坑口又在地面下较深处，无疑说明了它们供贮藏用的性质。坑内的遗物，主要是殷商时期的陶片、骨器和铸铜器的型范的碎片。几乎每个坑里都有殷商时期的典型三足礼器鬲的残片与陶片一并出土。

对这几个贮藏坑，石先生作了扼要说明，他说：

以上四个深凹的窖窖与夯筑基址的本身没有直接的关系，但它们的存在可证明，在没有建筑基址之前，这个地带也是窖窖密布之区。虽然其中的堆积物已不是最初的那些，但它们代表了殷商中期的典型物品。从陶片中，可轻易辨认出有鬲、豆、孟、壶、盆等，这些都是这一时期的典型器物。H361中甚至还出现了铜范。如果将 $\beta 20$ 基址作为一个整体来考虑，我认为这部分基址建造的时期较晚。

[139]

有证据表明， $\beta 21$ 基址下面的窖穴直到殷商后期或仍在使用的。

● 地上建筑复原

石璋如除了发表在《中国考古报告集》上的巨著（1959）外^[140]，还写了四篇关于小屯建筑遗址的重要论文。即：(1) 《殷代地上建筑复原之一例》（1954）^[141]；(2) 《小屯殷代的建筑遗迹》（1955，参见上文注释1）；(3) 《殷代的夯土、版筑与一般建筑》（1969）^[142]；(4) 《殷代地上建筑复原的第二例》（1970，参见上文注释3）。前两篇是在1959年的专著报告之前发表的，后两篇是后来写的。在前两篇文章中，作者详述了读者普遍关心的复原的基础。例如，他在第二篇文章中

说，复原是根据夯筑基址和残留在各基址上的砾石进行的，后者显然曾被用来支撑廊柱、柱或栏杆等。但是，基址的上层建筑已全部消失，所以石先生不得不依靠其他资料，即：(1) 甲骨文中有关房子的象形字；(2) 《大戴礼记》和《考工记》^[143]等文献记载；(3) 作者于抗战时亲自看到仍流行于云南、四川等地的普通房屋的外形和建筑方法。

根据上述各种资料，他复原了几个建筑物。经他同意，笔者把复原后房子的样式图附上，以再现或属殷商帝王在这座都城统治时期建造的房屋。让我们依据本书第六章介绍的夯筑基址的分布，看看石先生的复原。

据研究所的考古日历，在北组（ α 区）的建筑是发现最早的。记录显示，这个地区共发现15座夯筑基址，其中 $\alpha 11$ 基址最大， $\alpha 4$ 次之。由于种种原因，石先生选择 $\alpha 4$ 基址进行复原试验，结果如图27所示。

在最近发表的一篇论文中，石概述了 α 区建筑的一般特征。他说：

虽然15座基址的分布呈松散无组织状态〔图22〕，但仍可分为南、北两部分。南部有5座（ $\alpha 11-15$ ），北部有10座（ $\alpha 1-10$ ）。南部的大部分——有三座——面积较大，而北部的大多面积较小，且以 $\alpha 4$ 和 $\alpha 6$ 为中心。它们彼此之间是否有联系还很难说。 $\alpha 4$ 保存完好，所有的柱础石还在原来的位置上，因此，我选择它作试验性的复原。这是一个长方形的基址，我的第一个想法就是，屋顶的形状也该类似基址，而在中国目前还普遍存在这种长方形房屋的原型。现在中国的房子一样， $\alpha 4$ 应是沿中间的屋脊而建，屋脊支撑起两个斜坡的房顶，便于雨水流下。发掘出的证据已足以证明，建筑房顶的材料是用杂草、茅草、灯芯草、竹子或木片等以胶泥加固形成的。看来，殷商时期抹泥技术已有高度发展，许多深窖的精美外观就可证明这一点。贝壳烧的石灰肯定也已在建筑上使用。我要补充的是，在 $\alpha 4$ 基址中部有一排砾石，其排列法与此基址边缘发现的砾石相似，很明显这是为支撑屋脊的。^[144]

上面的话不是石的原文，但因笔者几乎每星期都有机会和石先生交谈，所以我除了叙述石先生写下的观点外，还加上了他最新的观点作为补充。

人们可能会说， $\alpha 4$ 基址上复原的房屋与现代中国的老式农村里仍可看到的那种房子几乎一样。但是，与地下居住穴比较，它无疑是个进步。据最近的考古发掘证明，这类地上建筑在新石器时代就已存在，半坡和庙底沟的遗存中圆形和长方形茅屋的发现和复原即可为证。所以，用茅草盖顶的长方形房子不仅与传统文献记载一致，而且也被新石器时代的考古发掘所证实（图28）。

上面的复原例子也许会让人们感到失望，偌大一个王国的都城里，

竟然没有留下更让人印象深刻的建筑遗迹。下面让我们看看石璋如复原的位于 β 区内一组更加壮观的建筑群。

如前所述， β 区位于 α 区的南面，它的东边沿洹河边缘。前几章里已多次提到，在过去的三千多年里，洹河冲蚀了大部分的夯筑台基。石估计 β 区的至少有一半，甚至三分之二的基址都已被冲蚀。

$\beta 20$ 基址夯筑台残存部分从其西端到洹河岸边共31米，南北长15米。在残存的基址边上发现了几组砾石——共61块，其排列大不同于房屋柱子的础石。石璋如认为这是一些矮栏杆柱的柱础石，尤其是在 $\beta 20$ 边缘发现的那些。北边边缘有7块，南边有9块，西边有4块。南北两排栏杆柱明显是以2.5米的间距整齐排列。西边的排列有些不同，4块础石分为两对，其间相距8米。

另一组砾石在 $\beta 20$ 的夯筑基址南边缘之外，石称之为“门础石”。石璋如把这些础石分成几类，并罗列了每一类的数量，如下：

1. 西南门：2块
2. 南门（1号）：8块
3. 南门（2号）：9块
4. 南门（3号）：22块

石还进一步注意到，这些门础石一般埋进土里0.7米，比 $\beta 20$ 基址南北边的栏杆础石约浅15厘米。

石璋如复原的 $\beta 20$ 的夯筑基址东西长80多米，南北宽15米多，因此，这块长方形的夯筑基址的面积至少为1200平方米，其坚固的基础深入地下2米多。如果从它上部的砾石有规律的排列情况看，这像是一个无顶的大平台，南北两边用栏杆构成的栅栏围着。完全有理由相信，在这个大平台上曾建有一对楼房，正如石璋如于1970年（参见上文注释3）发表的完整复原图中显示的那样。这部作品是这位高龄的考古学家的最新力作之一。

在 $\beta 20$ 平台上复原的两个楼房，从残存的资料看其中一个属 $\beta 21$ ，它是建在 $\beta 20$ 上的另一个基址，前面说过，它坚如岩石，边长约7米，几乎正对磁北方向，就像 β 区最北端的近方形平台——黄土台（ $\beta 1$ ）一样（图23）。石认为，在这个坚固的夯土方形台基上，曾经一定有个特别大的建筑物，因为 $\beta 21$ 基址顶部边缘处明显有两排平行的砾石，每排各

有5块石头。据石先生复原，此方形基址内部每个角上原本只有一块砾石，有些是由于后来的墓葬和其他扰乱挪动了位置。依据这些柱础石的排列，石先生试着尽可能地复原其整个建筑的原形，为此他进行了多次尝试，直到第四次他才满意。1970年，经过长期的试验性复原，他确定了这是个两层的楼房建筑——他将这一成果发表在注释3援引的论文中。石认为，这里曾有两座这样的楼房，对称地建在 β 20平台上。复原后，它很像汉代以来各处可见的钟鼓楼（图29）。

石推断，这两栋复原建筑是当瞭望塔用的，也可能是门卫室，理由如下：

1. 这两座楼是建在 β 区的最南部，并且坐北朝南，所以它们处在该区正前方的入口处；

2. 在 β 20基址南侧，残存的遗迹表明原有七座台阶，最长的主阶梯居中，两侧各有三段较短的。台基前呈现的宽广空地，不仅让人联想到历史上的钟鼓楼，更让人想到祭祀至高无上的天神这一神圣仪式的祭坛原形。我们在后面的章节中还会回到这个话题上来。

3. 最后，石璋如认为，这座楼第二层的门朝北开，理由是所有的主要建筑物都在北面，如 β 区复原建筑分布图所示。但第一层的门是朝东开的，便于守卫者直接监视入口处。

必须声明，我和石先生的看法大部分一致，特别是根据柱础石分布进行复原这部分。然而，对于石先生煞费苦心作出的一些解释，我还存有不同意见，尤其是对夯筑后的牺牲埋葬的看法。他认为，这与地面建筑的不同阶段如奠基、支件、安门及落成等有密切关系。毫无疑问，有些牺牲埋葬和建筑工事相关，但不应忘记，正如近两千年前司马迁所说，殷商人以好鬼鬼神闻名，而且甲骨文中有很多用牺牲品祭祀祖先和鬼神的记载。如果复原的那座地上建筑是一座庙或一座祭坛，则每隔一定时间在那里进行祭祀是帝王的宗教职责。

如果把复原的地上建筑物作为一个整体考虑， β 区的夯筑基址无疑展现了一座祖庙的庄严外观，特别是最北部的纯黄土夯打成的方形祭坛。这是笔者在第四次发掘时亲自发现的。可以说，只要看一眼这个平台，都会过目不忘，印象非凡。因为它的筑土是纯黄色的，所以工地上的发掘工人及负责此处发掘工作的考古工作者都叫它“黄土台”。其南北长11.30米，东西长11.80米。台基的表面未发现砾石。南、东和西边缘被颜色略有不同的夯土包围着。

黄土台的顶部低于现在地表约30厘米，厚约1米，土质呈显著的纯黄色。黄土台作为一个独立的单元，其体积为11.30米×11.80米×1.00米。

这个独特的平台或祭台不仅被后来的隋唐时期的墓葬破坏，而且在它建造以前，下面就有很多地下穴，其中大部分是贮物用的。

虽然沿β区的北边没有夯筑基址，但著名的“大连坑”就位于这里，也就是我们发现大量卜骨和唯一一片彩陶的地方。

再回过来说黄土台本身，它在发掘之初即令田野考古工作者大为吃惊，不仅是由于它的土色，还因这个近正方形的祭台是磁南向的。^[145]后来，我们发掘了β区的大部分地区，并探寻出了许多建筑遗迹，发现南端地上建筑群也是南向的，但不一定是磁南——它们的位置似乎是仅靠太阳来测定的。这一区别更显示出黄土台的与众不同。

综上所述，证据表明，β区的所有建筑物都是以祭祀为目的设计的。祭祀天和神灵，以及供奉祖先，是君主最神圣的义务。发掘出来的建筑遗迹，复原后看似非常契合这一至高无上的义务。

遗憾的是，根据我们的田野考古记录，关于这个问题没有更多可说的了。这些推测出的复原建筑，虽不完整，但也可以作为讨论其他问题的起点。

11. The Economy

Agriculture and Artifacts

● Agriculture and Other Natural Resources of the Yin-Shang Dynasty

When King P'an Keng moved the capital to Yin, the district of modern Anyang, from Ao (or Hsiao), presumably an earlier Shang capital discovered near modern Chêng-chou, there seems to be no question that most of the populace over whom this dynasty ruled were already farmers accustomed to cultivation of the soil for thousands of years. So, naturally, agriculture was the fundamental resource for the wealth of the kingdom. Several important papers, dealing with the development of agriculture and based chiefly on the oracle bone records, have been published since the Anyang excavation. The authors of these papers are all well-known paleographers specializing in the study of these early Chinese scripts. The following three papers may be cited as examples to show successive stages of improvement in understanding Yin-Shang agriculture with the advancement of paleographic research and increased knowledge of the science of agriculture.

Stage 1 can be represented by Woo Ch'i-ch'ang's paper published in 1937 in the *festschrift* volume honoring the well-known chief editor of the Commercial Press, Mr. Chang Chü-sheng, on his seventieth birthday.^[146] The paper is full of opinionated interpretations of the day, and is incapable of standing a more severe test.

Stage 2 is represented by a significant paper written by Mr. Hu Hou-hsüan, who was originally an assistant to Tung Tso-pin. Just after the Sino-Japanese War^[147], in 1945, he joined Cheeloo University, which had moved during the wartime to Ch'eng-tu and had invited the well-known historian Ku Chieh-kang to take charge of the Department of Chinese Studies. Hu, unable to bear the hardship which the

members of Academia Sinica suffered during the wartime days in Kunming, gave up his work at the institute. After he moved to Ch'eng-tu he made use of his first-hand knowledge of the excavated oracle bone inscriptions, which he had copied and studied during his apprenticeship under Tung Tso-pin, to write an important paper on agricultural problems.^[148] This paper marked the beginning of some real understanding and unprejudiced interpretations of the genuine oracle bone records from the Waste of Yin.

More recently, in what can be considered Stage 3, agriculture of the Yin-Shang period has been studied from several different angles, especially as prehistoric remains have provided abundant comparative materials. Mr. Chang Ping-ch'üan's paper on agriculture and climate, published in 1970 in *festschrift* dedicated to Dr. Wang Shih-chieh, ex-president of "Academia Sinica," can be considered representative of the present stage.^[149]

It is still difficult to make a definite statement about the approximate size of the territory of the Yin-Shang kingdom. But since modern Anyang was the last capital of this ruling dynasty, it can be considered as the definite locus to start with. Whether the dynasty actually stayed there 273 years may remain debatable, but that the locality and its adjacent region (Yin, namely Anyang) served as an important cultural and political center of the kingdom for nearly three hundred years seems to be almost certain.

If we take a look at the Anyang district in modern times, what kind of environment do we find? To examine its agricultural products first: those of us who have worked in the field there for a number of years naturally know that wheat and cotton are the two main cultivated farm crops. But the most important cultivated plant is still millet, which remains the staple food of north China, although rice and wheat are also considered food for general consumption. In Honan province, while wheat is generally raised on the farms, rice is not. Potatoes and Indian corn, which are comparatively rare, are also cultivated by farmers of this region.

Of the above-mentioned agricultural products, everybody knows

that cotton, potatoes, and Indian corn were imported to China in later historical times, within the last millennium. Among those that can be traced to the Yin-Shang period are wheat, rice, and millet. As far as food plants are concerned, millet (*hsiao-mi*) has been discovered in quantity in neolithic sites where specialists have identified two distinct varieties, *Panicum milliaceum* and *Setarise italica*. In Chinese terminology there are also several different terms, the connotations of which, however, cannot be defined on a scientific basis. For instances, the term *shu* is generally translated as "glutinous panicked millet," or simply as "varieties of millet," while the term *chi* is translated as "panicked millet." Among the northern Chinese, *shu*-millet has provided the daily food of the agricultural community up to the middle of the twentieth century.

Wheat and rice were evidently generally cultivated in the Yin-Shang period and all the evidence indicates that both were among the common crops although it is not known to what degree they were consumed by the people at large. Some specialists would perhaps insist on raising some technical problems concerning both the cultivation of rice and the spread of wheat. This is hardly the place to go into details, but in so far as they relate to the economic foundations of the kingdom of this period, a few lines may be devoted to the nature of these problems.

One frequent inquiry concerns the water supply of the Anyang region and its immediate neighborhood. At present, Anyang does not grow rice because there is not a sufficient supply of water. Was the water supply more abundant three thousand years ago? The answer, in the opinion of many archaeologists, is "Yes," for two reasons. There is much evidence indicating that the climate of Anyang in the time of Yin-Shang was wetter and warmer, because not only did elephants and rhinoceroses exist in the neighborhood, but also quantitative analyses of the Anyang fauna by Dr. C. C. Young show that buffaloes were among the most numerous domesticated animals, almost equal in number to domesticated pigs.^[150] A more direct evidence, although somewhat inferential in nature, is of primary importance. This relates

to the lower course of the Yellow River, which, according to the historic geographers, took a northern course and flowed into the sea at the Gulf of Pohai near Ta-ku. According to the research work of the classicist Hu Wei, the Yellow River followed this course to the sea until 602 B.C., which is the fifth year of Chou Ting Wang.^[151] In the opinion of this well-known scholar, whose *Yü-kung chuei-chih* has been considered a model of Ching scholarship for nearly three centuries, the lower reaches of the Yellow River followed this northern course over one thousand years from the time of the Great Yü to the fifth year of Chou Ting Wang. Since 602 B.C. historical documents have recorded major changes in the lower course of the Yellow River five more times. They occurred:

~~A.D. 1056~~ The second year of the usurper Wang Mang

~~A.D. 1056~~ The first year of Chia-yu of the Sung dynasty

~~A.D. 1941~~ The first year of the Ching Chang-tsung

~~A.D. 1289~~ The twenty-sixth year of Kublai Khan

5. The third year of Hsiao-tsung of the Ming dynasty

A.D. 1502^[152]

The author has cited these various changes of the lower course of the Yellow River—they are all well known from historical records—just to show that the research of Hu Wei, made before accurate modern geographic knowledge, may not be far from what did really take place.

Among the Anyang fauna, what surprised the field archaeologists most was a huge piece of the whale's scapula, measuring more than one meter in its upper margin, and also a number of vertebra from this same sea monster. These finds obviously indicate that three thousand years ago Anyang must at least have had some easy means of communication with the seacoast. They also lend support to the conjectural route of the lower course of the Yellow River as reconstructed by Hu Wei for the period before 602 B.C. These geographic reconstructions also seem to have received support from most map makers of historical atlases such as the *Herrmann Atlas*

published by the Harvard-Yenching Institute in 1935.

Before entering into a more detailed discussion of agriculture of the Yin period as revealed in oracle bone records, I would like to say something about the economic resources of the Yin-Shang kingdom in general, especially the natural environment and the climatic conditions of north China during this period at least three millennia ago.

Climate and Natural Environment of the Yin-Shang Period

According to both modern geological research and the studies of the oracle bone records, there are at least two different opinions about the climate of Anyang three millennia ago. One school of opinion is that the weather of Anyang in the Yin-Shang time was about the same as the present day. This opinion was sponsored especially by the leading paleographer Tung Tso-pin, who reviewed all the oracle bone materials to support his thesis.^[153] Tung's own pupil, Hu Hou-hsüan, thought differently. He hypothesizes that the Anyang of three thousand years ago was warmer and wetter.^[154] In addition to data from the oracle bone records, he cites other archaeological evidence such as the presence of rhinoceroses and so on. On the whole, Hu Hou-hsüan's opinion is quite defensible although a number of scholars still follow Tung Tso-pin. At any rate one set of evidence that has not received much attention is the quantitative analysis of the Anyang fauna by C. C. Young and his colleagues.^[155] As already noted, Young found to his great surprise that among the fauna of Anyang, buffalo was one of the three animals that have left more skeletons than other groups. According to his estimate, buffalo bones numbered more than one thousand, at least three times as many as ox bones. These unique finds could point to the fact that the weather of Anyang was quite suitable to buffalo life, namely, much damper than at present.

These occurrences, together with the fact that the Yellow River was at this time taking a course that could provide plenty of water, seem to indicate that Anyang and its neighborhood did not lack a water supply. This does not necessarily mean that, as Hu Hou-hsüan argued, the climate at that time was wetter and warmer. But

geologists have provided some evidence to show that the north China coast was probably frequently flooded during the Pleistocene and the early part of Holocene, mainly by the lower course of the Yellow River which was not yet well channeled. The result of this was, of course, that all of southern Hopei, northern Shantung, and eastern Honan, that is, the general area east of the Taihang Mountains, was filled with great numbers of lakes and pools and small rivers directly or indirectly related to the Yellow River. The geologists have developed a theory that, since the main sources of the water of the Yellow River were from the melting of glaciers in the Himalayan Mountains which had accumulated during the Pleistocene Age, summer flooding was an almost annual event regardless of whether or not there was rain, even in historical times. This may have been the case in northern China ever since the end of the Pleistocene. If this geological interpretation is accepted, the fact that big herds of buffaloes were kept by the Yin-Shang people is adequately explained. Here we probably can go a step further by a discussion of rice as a domesticated plant in this region.

It should be recalled that, in the early days of oracle bone studies, even the most eminent paleographers such as Lo Chên-yü and Wang Kuo-wei were unable to decipher in the oracle bone texts the character *tao*, which means rice. It was not until 1934 that the brilliant T'ang Lan, who followed the suggestion of a number of some others, first gave a coherent interpretation of this character in the oracle bone record.^[156] T'ang Lan's decipherment was accepted by a number of others, except for Ch'en Meng-chia who thought that *tao* represented some other kind of grain quite different from rice.

Recent archaeology has more than once identified the cultivation of rice in ancient times all along the Yangtze River from Chekiang to Hupei, and, of course, traces of rice were also found in the fabrics of the Yangshao pot-sherds which the archaeologists recognized as the earliest indications of rice cultivation in north China. As far as the Anyang region is concerned, however, no such detailed examination has been undertaken. But since 1934, paleographers have given the closest attention to the newly recognized character *tao*, which appears

quite frequently in the oracle bones. The Japanese paleographer Kunio Shima took great pains to classify the data from the oracle bone records and published his classification in 1967.^[157] According to his estimate, there were 111 items about the crop year for the plant *shu* (glutinous millet), and, according to his statistical count, at least 19 entries of the crop year for rice. But there seems to have been no record for "wheat." These comparative figures must be judged with the understanding that millet had not only a longer history of cultivation, but also a wider distribution than rice, whose origin is not yet clear to modern archaeology. Rice was first cultivated in south China as shown by recent archaeological discoveries, while wheat was presumably a foreign import. Thus, even in the provinces of Hopei, Shantung, and Honan, the domain of the Yin-Shang dynasty, where rice was grown it must have been more limited in geographical area than millet, glutinous or not. But when we find in the oracle bone records that the crop yield for rice was nearly one-fifth as much as recorded for the crop yield of millet, it seems to indicate that with regard to wheat and rice the Yin-Shang people must have exerted greater efforts in promoting the latter, a relatively more recently cultivated grain from the Yangtze region.

It is possible that the early ancestors of the Shang were in intimate contact with the native inhabitants of the Yangtze area where rice was first cultivated. This theory may be further supported by the fact that the predynastic Shang people were apparently intimately related to folk of the Lungshan Culture. In our excavation of Anyang, we found that the underground ditches were among the most remarkable of the underground structures that have puzzled archaeologists for several generations. Parallels for these structures have recently been found in an earlier site at Chêng-chou. Our careful workers have never put forth any systematic interpretation of these ditches found in Anyang. It seems to the author now that, since rice cultivation in Yin-Shang times has been established on the basis of various studies, we have a safe basis for identifying the network of underground ditches as traces of irrigation canals developed in the Yin-Shang dynasty. This interpretation would harmonize with the

geographical distribution of the various rivers and ponds in this area. Furthermore, the ditches found in Anyang were probably the work of early Shang people in this area before King P'an Keng moved there (Fig. 30).

30 Underground ditches discovered at Hsiao-t'un, probably for irrigation purposes

If we take rice cultivation as one of the main progressive steps in the agricultural development of this area during this dynasty, it provides a link between the early ancestors of the Yin-Shang people and the inhabitants of southeastern China, especially of the Huai River and the Yangtze River areas. This important link, as we shall see later, will also help us interpret a number of other archaeological features found in Anyang and hitherto not made clear. One of these, for instance, is glazed pottery, which originally appeared in the Anyang ceramic collection as altogether unique and strange in regard to both its technique and its shape. Recent archaeology, however, has made it quite clear that the earliest glazed pottery was probably related to the Ts'ing-lien-kang Culture located to the southeast in the northern part of Kiangsu.

Another instance is the problem of sericulture. Although silk itself as found on the remains of Anyang bronzes and other articles has not yet received scientific examination, the term silkworm does appear in one of the oracle bone records and was given some kind of sacrifice, mulberry trees seem to have been well cultivated, and recently definite traces of silk were found by archaeologists at the site Ch'ien-shan-yang on the Yangtze River. So, taking together all the fragmentary evidence of the findings of sericultural remains, it is possible that although the earliest appearance of silk is datable to the Yangshao age, it is nevertheless more reasonable to deduce that it was a part of early Yangtze culture. From a place like Ch'ien-shan-yang, silk may have been transported together with rice and glazed pottery northward during early protohistorical times and developed a step further in the Yin-Shang period.

Before we turn our attention from agricultural resources, something must be said about wheat, which was evidently also one of the main grain products in the Yin-Shang period. Certain paleographers long ago concluded that wheat was an imported crop; their reasoning, however, was mainly epigraphical. The earliest character for "wheat" (麦) found in the oracle bone records was also

deciphered as meaning "coming" (来); from this they deduced that this double meaning for the same character must be due to the fact that wheat in north China was a crop that came from other places. This deduction seems to the author to be far-fetched and hardly conclusive. Still, no archaeological evidence has been found either to support or to refute this deduction.

At any rate, the fact that wheat was first cultivated in Mesopotamia as early as the third millennium B.C. or possibly even earlier seems to be an established fact. If the wheat in north China mentioned in the oracle bone records had been imported from the west or other quarters, it would not be surprising. According to Professor Chang Ping-ch'üan's study, wheat was cultivated in China at least before its earliest record on the oracle bones.^[158] Whether wheat was as commonly cultivated as millet, it is difficult to say. Judging by the mention of these various grains in the agricultural rituals, including those praying for rain, for crops, for harvest, and a number of others, wheat no doubt constituted one of the important crops of the time.

To sum up, as a result of various research works of scholars of the last fifty years, we have a very substantial account of the agricultural resources of the Yin-Shang dynasty. There is hardly any question that the grain for the common folk was millet, which could be used for wine-making and for staple food. Both wheat and rice were probably the food of the more privileged classes.

Chang Ping-ch'üan has, in his study, estimated the distribution of agricultural land in this period by identifying the various geographical names mentioned in the oracle bone records in connection with agricultural produce. According to his estimates, it spread to the north as far as southern Shansi, to the west to the eastern border of Shensi, to the east as far as Lintze in Shantung, to the south covering the land of both Kiangsu and Anhui; but the northeast border he could not define. This farming territory may be said to have covered the major portion of what later historians have called the central plain, which no doubt constituted also the heartland of the Yin-Shang kingdom.

It has always been a great historical problem whether the people of the Shang dynasty were 100 percent sedentary. Many have thought that some of the Yin-Shang folk remained pastoral or even in the hunting stage. Judging by the fact that sheep and oxen were so frequently used for sacrificial offerings, part of the Yin-Shang people were still nomads who lived in the steppes within the territorial limit of the kingdom.

Let us speculate further on natural resources. Archaeological finds bear strong witness to the high craftsmanship attained by fishermen and hunters of the Yin-Shang time. The Shang people seem to have been fond of making amulets by carving small fish on stones, shells, and bones. Also, the deer was found to be one of the three most numerous of the Anyang fauna. This, together with the hunting records in the oracle bones, is sufficient to show that the pursuit of wild animals was at least one of the royal sports. So we have sufficient reason to believe that near and around Anyang, perhaps in the west near the foot of the Taihang Range, there were heavy forests plentifully, inhabited by wild animals and that along the lower course of the Yellow River there were numerous lakes and streams teeming with fish.

● Handicrafts, Industry, and Trade

Although the crafts of the Yin-Shang era will be discussed in another context in the following chapter on decorative arts, a bird's-eye view here will enhance our understanding of the economic basis of this civilization. Our knowledge of these matters was greatly increased by the artifacts discovered during the archaeological excavations at Anyang. In view of their abundance, it seems easier for general understanding to divide these artifacts on the basis of their material. Consequently, the author has found it convenient to classify them into the following major groups: (1) lithic industry, including all the artifacts made of stone whether for ornament or for actual use; (2) clay industry, including all ceramics; (3) bone industry; (4) bronze industry; (5) other important industries, including textiles, architectural engineering, transportation, and so on. It is necessary to

realize that certain artifacts discovered at Anyang cannot be classified in any of these groups, for instance, the perforated cowrie shells which were probably imported. But, on the whole, the industries classified above cover the most essential aspects of the material civilization of this period. The following briefly summarizes the main results of the investigations regarding each of the four major industries.

Lithic Industry Of all man-made tools, those of stone probably have the oldest tradition, at least as far as archaeologists can testify. In the twentieth century, of course, stone is still used for a variety of purposes. In the case of the Anyang finds, the author has paid special attention to this lithic group, for a very simple reason. During the May 4th Movement many of the new historians thought that Yin-Shang was still in the Stone Age. So, when in 1928 the Academia Sinica started excavating this historical site, Tung Tso-pin particularly noticed, besides the inscribed oracle bones, a number of stone objects,^[159] and in 1952 the author made a systematic study of all the edged stone tools collected from Anyang—about 444 specimens.^[160] This number is insignificant compared with the number of bronze tools from the same site, indicating that such tools served only limited purposes and that most of them were probably survivals of an earlier culture. But the fact must be recognized that the Yin-Shang people in the Bronze Age were still using stone tools, especially stone axes and stone knives as my studies have shown.

Products of the lithic industry found at Anyang are generally classifiable into the following categories: (1) weapons, (2) tools, (3) decorative pieces, and (4) ritual objects. Of the four groups, most of the stone weapons, especially arrowheads, had already been replaced by bronze, so whatever stone arrowheads we collected from Anyang were with a few exceptions survivals of an earlier age. But stone tools were much used at that time. Edged tools such as axes, knives, shovels and digging tools, and so on, were evidently still in common use in the Yin-Shang period as testified by hundreds of specimens found in the excavation. At the same time, stone receptacles such as bowls, dishes, mortars, and other artifacts such as hammer stones, grinding

stones, and so on, were commonly found in the Waste of Yin. Among the decorative pieces we found a most unique development in the stone industry: a series of sculptures. Some of these were for architectural attachment, including several marble figures of owls and tiger-headed monsters. There were also comparatively small carvings of birds, pigs, and turtles. Some of the larger sculptures have a vertical trough on the back indicating that they were originally fitted into angular protrusions, presumably from the wall of a house. Besides decorative pieces, there was also a group of stone objects that were used probably only on ceremonial occasions, such as the well-known *pi*-discs and *tsung*-square tubes. In later periods these ritual objects were mostly made of jade, but in the Yin-Shang time very few were actually made of this precious stone. In this connection, it may also be mentioned that a number of Shang halbert blades were made of precious stones with the appearance of jade but, when the substance was carefully examined, very few proved to be genuine jade in the technical sense. They were either onyx, opal, or chalcedony, or other stones of similar quality. Occasionally true jade was found, but only very rarely.

If we grade these lithic objects according to their method of preparation, we find that the Yin-Shang artifacts range from the most crude and primitive way of attacking stone to the most refined and technologically advanced stage of preparatory work. For instance, stone boulders were used to support pillars for building purposes without any preliminary trimming or flaking. Stone weapons such as arrowheads were made by pressure flaking or even simple chipping. For larger tools like hammers, axes, or shovels, the method of preparation depended on the nature of the stone. In the case of soft material, simple chipping or trimming were sufficient, but for hard materials, the general methods used were either hammering or pecking. For the more precious stones with great hardness, polishing was usually employed at least for finishing. The technology of stone-polishing, as judged by the objects we found in Anyang, is divisible into several grades. In the case of genuine jade, the finished article certainly required a very high skill, but most of the "precious stones"

which appeared in Anyang were highly polished whether they were jades or not.

Clay Industry The main features in this category are divisible into three groups: (1) clay figures, (2) pottery, and (3) miscellaneous articles. The clay figures found were relatively few, but of great importance. Two of these clay figures have attracted a great deal of attention from the learned world because they were fully clad, and they evidently represented prisoners as their hands are bound (see Figs. 36-37 and further description in chap. 12). It is curious that in our fifteen seasons of excavations such figures were never found in great number.

Pottery constituted the bulk of the clay work of this period.^[161] In chapter 6 I have already given a brief account of the main groups that made up this important collection, but here I would like to go into more detail about the significant characteristics of this industry. The typical Yin-Shang ceramics were divisible into the following five classes:

~~Class 1~~ **Gray pottery**, nearly 90% of the total collection

~~Class 2~~ **Red pottery**, about 6.86% of the total collection

~~White~~ **White pottery**, about 0.27% of the total collection

~~Class 4~~ **Gray wares**, about 1.73% of the total collection

~~Black~~ **Black pottery**, about 1.07% of the total collection

The number of pot-sherds classified as "black ware" amounted to 2,655, much more than Class 3, the white pottery. In addition to these there was one piece of painted pottery.

Some characteristics of the major pottery group, namely Class 1, the gray wares, deserve special notice. As mentioned above they constitute nearly 90 percent of the quarter million sherds registered and catalogued in the fifteen seasons of field work. This majority group is, however, not uniform in nature. Although most of the pieces were corded, the cord marks were by no means evenly distributed on the surfaces, and they varied not only in their impressions but also in

their structures. Firing of the work was also not even; some of the light gray wares appeared to be fired quite uniformly, but others not.

The term *gray* is given to this group mainly because for years it was the common field terminology with which every digger was familiar. When the collection was assembled on various occasions for more careful analysis and comparison, it was soon discovered that the gray wares not only varied considerably in texture, hardness, and outside decoration, but the specimens were also different in the depth of their color tone, which I finally differentiated into four grades: (1) light gray, (2) normal gray, (3) deep gray, and (4) dark gray. What is remarkable about these four grades of gray color is that the deeper the tone, the more it varied in the appearances of a single ware, while the light gray was a much more uniform color evenly distributed over the whole body of a complete article, no matter how complicated the shape might be. Wu Gin-ding, who had devoted much time to the study of the prehistoric pottery of north China, considered that the light gray wares represented a subsequent advance in technology. They were probably a development made at Hsiao-t'un in the Yin-Shang time.

The other groups seem to be much more uniform in their appearance, but they also are not quite homogeneous. The white wares, for example, which have attracted more attention than any of the other groups, are obviously of two different shades: some are snow white, others are tinged with a yellowish color. This ware has been analyzed a number of times both in Japan and in China and its chemical composition shows amazing similarities to kaolin clay, which is normally used to manufacture modern porcelain. One characteristic that marks the white pottery of Anyang is that these wares are usually elaborately decorated, very much like the bronzes of the same locality. But typologically most of the white wares belong to a special kind of *tou-dish* group—the high pedestal dish. There are also tripods and ring-footed wares made of white pottery; apparently most of them are decorated like bronzes. It should be noted, however, that besides these decorated white wares, there is another group of white sherds which

appear softer and are left plain. These plain and soft pot-sherds are important in the study of Anyang ceramics for tracing the origin of the white vase to its ultimate sources, as they seem to be more primitive in shape and design as well as in clay mixture.

Besides the white wares, something must be said of the extraordinary group of glazed hard wares. Most of the glazed wares were jar like bottles, each with a band of incised decoration. The cover was large and bowl-like, covering the entire shoulder.

As already stated in the author's monographic study of pottery the complete corpus is divided into the ten following classes: (1) round bottomed; (2) flat-based; (3) ring-footed; (4) tripods; (5) tetrapods; (6-9) reserved for new types; (10) covers. This corpus has served a useful purpose, especially when the shapes of other vessels, such as bronzes or stoneware or pottery of different localities and ages are brought together for comparative purposes. The Anyang corpus has served as a standard for such comparative investigations.

The third group—miscellaneous—includes a great number of minor articles of clay, such as marble clay rings, net-sinkers, spindle-whorls, and other objects of unknown use.

Bone Industry Bone tools may be as old, traditionally speaking, as stone implements. We know definitely that in Chou-k'ou-tien, Peking Man used bone extensively for scraping, digging, and so on. In the Yin-Shang time, this industry reached a very high stage of development, almost as refined as the stone industry. In the course of the Anyang excavations, many of the storage pits were found to be half-filled with raw materials of bone, collected evidently for workshop purposes. In the archaeological collection of Anyang, it is possible to subdivide this industry into two subgroups. First and foremost I should mention the scapula bones collected for divinatory purposes. In this period, bones used for divination seem to have been limited to the scapula of oxen and to tortoise shells. These must have been collected by special agents and also prepared by specialists with the required amount of technical knowledge and skill. It can almost be safely assumed that those who participated in this type of work must

have belonged to a privileged class.

There are also other works of bone that required a considerable amount of training. First of all, we should mention bone arrowheads, which show a variety of shapes. Most of the arrowheads were used for hunting. Remains of bone arrowheads are quite abundant in the Anyang collection. For ordinary use, there were such tools as pins, awls, scrapers, and so on.

Two articles will receive further attention in the following chapter. One of these is the *ssŭ* (spatula), which appeared in the Anyang collection in several shapes. Antiquarians have usually considered that this group of implements was intended for food purposes, but exactly how they were used remains to be investigated. The other article is the hairpin. The Shang ladies seem to have been particularly fond of elaborate hair dressing, ornamented mainly by bone or jade hairpins with carved tops. In times of abundance, some hairpins were carved of ivory and precious stones, but those that have survived are comparatively rare.

Bronze Industry Bronzes excavated from Anyang are divisible into four groups: ritual bronzes, weapons, tools, and miniature objects specially made for the dead. Of these, the ritual bronzes and weapons have from an early period attracted the most attention from the archaeologists. Very few ordinary tools, such as knives, cutting implements, axes, and so on, have survived. What amazed the field archaeologists were those miniature objects that were apparently made to accompany the dead who could not afford anything better for their burial. Perhaps we should add a fifth group, which consisted of the decorative pieces that may have been parts of, or belonged to, a composite instrument such as a chariot or other means of transportation, or wooden furniture. The various bronzes recovered from Anyang total a great number; they have been recently studied jointly by the author and Mr. Wan Chia-pao, each investigating a specific group of problems. As Wan had had some metallurgical and engineering training, he went into the problem of casting and tried a series of casting experiments to discover the production methods of

Shang bronzes according to the materials collected by the field workers. The author, on the other hand, was specially engaged in the investigation of the various shapes of the different bronzes and their evolution, as well as the method of decoration and the motifs. As a result of continuous labor by both for a number of years, five volumes on ritual bronzes have already been published in a new series of *Archaeologia Sinica*, each devoted to a specific group of these ritual bronzes.^[162]

Some of the results from these studies are of general interest and deserve summary here. First of all, technically speaking, the authors have proved both by actual finds and by experiment that the Shang bronze workers cast the bronzes by means of the piece-mold method. In Anyang, the field archaeologists collected several thousand fragments of these molds. These included a few fragments that could be pieced together and their original shape restored. With these findings as a basis, the Institute of History and Philology, with a special fund from the Harvard-Yenching Institute, built a small laboratory to experiment on the technique of the Anyang bronzes. The experiment started with the making of piece-molds based on the Shang prototypes, which were actually the negatives of a model to be cast. The clay molds were imprinted on the model and then baked somewhat like pottery. When these piece-molds were assembled together, the inner face of the assemblage would serve as a negative of the outside appearance of the bronze article to be cast. The technical details are much more intricate than can be described here; those who are interested can be referred to the original article in the new series of *Archaeologia Sinica*.^[163] The second stage of the experiment involved studying how to pour liquid bronze into the assembled molds; the detailed description of the procedures has been given in both English and Chinese in the original report. It is sufficient to say that the bronze articles cast by means of this process bear the special marks of the Shang articles. This proves that this experiment has accomplished its original purpose, to determine that Shang ritual bronzes were all cast by the piece-mold method. The laboratory experiment has so far been limited to the study of ritual bronzes. Since

the other groups have not been subjected to experiment in the laboratory, it is still too early to say whether the weapons, tools, and other bronze articles were all cast by the piece-mold method. We must not omit to mention the important proof we are able to provide that the *cire-perdu* method never existed in Shang times as far as our experiments could show. This statement is important because many students before our time have thought that such a method did exist in that period.

The shapes of various bronze articles collected from Anyang excavations indicate quite diverse origins. Many of these were doubtless indigenous and their origins could be traced to prehistoric times, such as the halbert group among the weapons and the *ku* (beakers) among the ritual bronzes as well as some of the bronze knives among the tools. At the same time, quite a number of the objects of this group originated through outside contact and some in fact could definitely be identified with foreign origins, for example, the spearhead among the weapons and socketed axes among the tools.

The author has devoted a great deal of attention to the evolution of the ritual bronzes represented in the Anyang collections. The origins and evolutionary changes of the *ku* and the *chüeh*, the two ritual bronze vessels most commonly found in the tombs of the Yin-Shang dynasty, have been definitely traced and show the most genuine native Chinese development. Other specifically indigenous Chinese types include the tripod and tetrapod *ting*, the *hsien* (tripod steamer) and also the *chia* (tripod vessel), all of which also occur frequently among the bronze objects found in the various Yin-Shang tombs. Still other types of bronze ritual vessels are the *lei*-urn, the *hu*-pot, the *kuei*-bowl, the *pien*-jug, the *chih*-goblet, the *yu*-flask, and so on. For those whose shapes have been traced, all indications are that they were evolved from the neolithic type of pottery vessels in north China. The same cannot be said about the various tools and weapons. In the case of tools, the socketed celts or axes, for instance, can hardly find a Chinese ancestral origin, so these have been taken as definite evidence of Western influence on China in the Bronze Age, long before

the Anyang period. Recent investigations by the members of the Institute of History and Philology lead one to believe that the appearance of certain types of tools and weapons and probably the wheeled carriages resulted from external contact. But the fact remains impressive that practically all the ritual bronzes have shown a completely indigenous character. So there remains the important question, as far as the bronze culture as a whole is concerned, whether the weapons and tools were developed before the ritual vessels or vice versa.

Other Industries In addition to the four Shang-Yin industries mentioned above, one should note that there are others which are perhaps equally important, but because of the paucity of archaeological remains our understanding of them is quite limited. Nevertheless, something should be said about them here. First of all, there is no doubt that a wood industry existed in view of the high development of cutting implements such as hatchets, axes, celts, and so on. Some of the wood carving was probably even of high artistic value. Shih Chang-ju found at Hsiao-t'un evidence of a wooden lacquered *tou* that had almost completely disintegrated. Many of the remains in the huge Hou-chia-chuang tombs strongly reminded us of disintegrated parts of elaborate wooden furniture. The horse chariots, of course, whose bronze elements were found in such great number, must have been made of wood. Above all, the houses whether underground or on the surface, could hardly have been made without some use of timber. Unfortunately, details of these are all lost to us.

In addition to the wood industry, textiles should be mentioned. Remains of woven cloth probably originally used for wrapping have occasionally been found on bronzes and other materials. So far, no detailed examination has been done. It is possible that the fibers were silk. Shang people perhaps made use of fur and hemp as well as silk for clothing, but the archaeologists have not been able to find any tools related to the weaving industry, except the spinning whorls.

拾壹．经济：农业和制造业

● 殷商王朝的农业和其他自然资源

盘庚从现郑州附近发现的可能为较早商都的囂（或囂）迁都至今安阳的殷时，这个王朝统治下的大多数臣民极有可能已是耕种了数千年土地的农民。因而，农业自然是这个王朝财富的主要来源。自安阳发掘以来，已发表了数篇主要依据甲骨刻辞写的关于农业发展的重要文章，其作者都是专门研究这种早期汉字的著名古文字学家。下面三篇文章可作为例子来说明，随着古文字研究的进展和农业科学知识的积累，我们对殷商农业的认识是如何逐次增进的。

吴其昌在1937年纪念商务印书馆著名总编辑张菊生先生七十寿辰的专集上发表的论文代表了第一个阶段。^[146]这篇文章充满了当时固执己见的解释，也经不住严格的检验。

第二阶段以胡厚宣的一篇重要论文为代表。胡原为董作宾的助手，1945年抗日战争^[147]结束后，他到了齐鲁大学。这所学校战时迁到成都，并邀著名史学家顾颉刚负责国学研究所。胡不堪忍受中央研究院成员在战时昆明所过的艰苦生活，辞去了研究所的工作。到成都后，他利用为董做见习生时摹写和研究出土甲骨刻辞获得的第一手资料，写了一篇关于殷代农业的重要文章。^[148]这篇论文标志着客观地理解及无偏见地解释殷墟出土的原片甲骨刻辞的开始。

最近，也可称为第三个阶段，主要是由于史前遗物提供了丰富的比较资料，殷商时期的农业得到了多角度的研究。张秉权在1970年出版的纪念前院长王世杰的专集上发表了关于殷代农业与气象的文章，成为这一阶段的代表作。^[149]

要确切说出殷商王朝领土的大致范围仍很困难。但既然现代安阳是这个王朝最后的首都，我们可以把它作为一个确定的地点开始研究。殷商王朝在此地是否统治了273年仍有争论，但这里及其邻近地区（殷，即安阳）在大约300年的时间里是王国重要的文化和政治中心，这一点已确定。

我们看看现代安阳地区，这环境是什么样的呢？先看它的农产品。我们这些多年在此进行田野工作的人自然知道小麦和棉花是这里主要种

植的两种农作物，但最重要的作物仍是小米，这也仍是华北的主食，虽然稻米和小麦也是日常食物。河南省普遍种植小麦，稻米却并不普遍。这个地区的农民也种土豆和玉米，但较少。

大家知道，上面提到的农作物中，棉花、土豆和玉米都是较晚的历史时期，在最近的一千年内从外国引进的。可追溯到殷商时期的农作物有小麦、稻米和小米。其中在新石器时代遗址中发现了大量小米，经专家鉴定属两种不同的品种：*Panicum milliaceum*和*Setarise italica*。在汉语中对小米也有不同的称呼，但这些涵义不是根据科学下的定义。如“黍”一般译为“圆锥花序的牯小米”或简称“变种小米”；而“稷”被译为“圆锥花序小米”。在华北，直到20世纪中期黍米仍是农民每天的食物。

显然，殷商时期小麦和稻米已普遍种植。所有证据都表明，小麦、稻米是常见的作物，虽然尚不知民众对其消费程度如何。一些专家可能要提出关于稻的培育和小麦传播的技术问题，这不是我们在这里要详加论述的。但由于关系到当时的经济基础，就这些问题的实质，可以简要说几句。

一个常常被问到的问题是安阳及其附近地区的供水量。现在，安阳地区不种水稻，是因没有充足的水量。那么，三千年前供水量会更充足吗？许多考古学者认为，答案是肯定的。原因有两个。不少资料表明殷商时期安阳的气候更加潮湿温暖，这附近不仅有象、犀牛存在，而且，杨钟健博士对安阳动物群的数量分析也表明，在大量驯养的动物中，水牛与猪的数量不相上下。^[150]有一个更直接的证据，虽带有推论性质，但却十分重要，即关于黄河下游的流向问题。根据历史地理学者的说法，黄河的下游取道北面并在靠近大沽的渤海湾入海。据经学家胡渭研究，在公元前602年（即周定王五年）之前，黄河一直是从这个方向入海的。^[151]这位著名学者认为，从大禹时期到周定王五年间的一千多年里，黄河下游一直沿北面的河道流淌。他的《禹贡锥指》被认为是近三百年来清朝学术的楷模。从公元前602年以来，历史文献记载黄河下游有五次大的改道，分别发生在：

公元~~前~~1122年

公元~~前~~1122年

公元~~前~~1122年

公元~~前~~1122年十六年

5. 明孝宗三年

作者引证的黄河下游的这几次改道，在历史记载上是很有名的；它表明，胡渭在有精确的现代地理知识可依据前所作的研究，离实际情况可能并不太远。

在安阳发掘的动物骨骼中，让田野考古工作者最为惊奇的是一大块鲸肩胛骨，它的上缘长1米多，同时发现了这只海兽的若干椎骨。这些发现物清楚表明，三千年以前安阳至少已有某种与海滨地区相往来的便利方式。这些也为胡渭复原的公元前602年以前黄河下游河道提供了证据。这种地理的复原似乎也获得了大多数历史地图集绘制者的认同，例如1935年哈佛燕京学社出版的《中国历史地图集》。

在对甲骨记录中披露的殷代农业进行更详细讨论之前，我想先概述一下殷商王国的经济资源，特别是三千多年前这一时期华北的自然环境和气候条件。

殷商时代的气候和自然环境 据现代地质学和甲骨文的研究，关于三千年前安阳的气候至少有两种不同的看法。一种认为，殷商时安阳的气候与现在大致一样。这一意见以杰出的古文字学家董作宾为倡导者，他查阅了甲骨文中所有的资料来支持这种看法。^[153]董的学生胡厚宣有不同看法，他推测三千年前安阳的气候较现在温暖湿润。^[154]除卜辞的记述外，他还引证了其他考古资料，如犀牛的存在等。总之，虽有一些人同意董的看法，但胡厚宣的论述是相当有说服力的。无论怎么说，杨钟健及其同事对安阳动物群的数量分析^[155]的这套证据，没有引起人们太多注意。如上所述，杨惊奇地发现，安阳动物群中，水牛是留下骨架最多的三种动物之一。据他估算，水牛骨有1000余块，至少相当于黄牛骨的3倍。这些特殊发现充分证明安阳的气候适于水牛生长的事实，就是说比现在潮湿得多。

这些情况，以及此时黄河的流向可提供充足水源的事实，似能证明安阳及其附近地区不缺乏水的供应。但这并不一定就表示，像胡厚宣所主张的那样，那时安阳的气候更加潮湿温暖。但地质学家提供的一些证据表明，在更新世和全新世早期华北沿海地区，主要是黄河下游尚未很好地开凿水道的地方，可能常遭水灾。这就使河北南部、山东北部、河南东部，即太行山以东广大地区，布满了许多与黄河直接或间接相连的湖泊和小河。地质学家持有一种理论，黄河水主要来源于喜马拉雅山在

更新世时堆积起来的冰川的溶化，因此，无论降雨与否，几乎每年夏季黄河都会泛滥，进入历史时期后也是如此。这可能是从更新世结束以来中国北方的情况。如果接受地质学家这种解释，那么殷人驯养大群水牛也就有了足够的理由。此时我们可以对这一地区种植稻米作进一步探讨了。

大家应该记得，在甲骨文研究初期，即使像罗振玉和王国维那样杰出的古文字学家也未能破译甲骨文中的“稻”字。直到1934年，才华横溢的唐兰在综合多人的研究成果后才首次给甲骨文中这个汉字一个合理的解读。^[156]唐兰的考释被许多人接受，只有陈梦家例外，他认为此“稻”字代表与稻米完全不同的另一种谷物。

现代考古学多次证明，古代在长江流域，从浙江到湖北，都有水稻种植。稻的遗迹也在仰韶文化的陶片上发现，考古学者认为这是最早的华北种稻的标志。至于安阳地区，尚未进行过这样详细的考查。但自1934年以来，古文字研究者对甲骨文中常出现的新辨认出的“稻”字给予了密切关注。日本古文字学者岛邦男花费了很大力气将甲骨文中的资料加以分类，并于1967年出版了他的专著。^[157]据他统计，有111条卜辞记载了“黍年”，至少19条记载“稻年”，但似乎没有关于“小麦”的记载。在依据这些对比数据作出判断的同时还应该认识到，小米有更长的种植历史，其分布也比水稻要广。现代考古学还不清楚稻米的起源。新近的考古发现显示，水稻可能首先在中国南方种植，而小麦可能是外来的。因而，即使在殷商统治下的河北、山东和河南这些省份，水稻的种植面积也比小米（无论粘小米还是非粘小米）小。然而在甲骨文中发现的稻米产量几乎为小米的五分之一的记录，似乎表明，殷商人必定曾大力倡导过水稻——这种相对较晚才从长江流域引入的谷物——的种植。

商朝的远祖可能与首先种稻的长江流域土著居民有密切交往。商人在建立自己的王朝之前显然曾与龙山文化居民有密切联系，这进一步证实了上面的假说。在安阳发掘时，地下水渠是我们发现的最引人注目的地下结构之一，这一发现困惑了好几代考古学人。与这种地下建筑类似的结构最近在郑州附近一处更早的遗址中也发现了。我们谨慎的田野工作者从未对安阳发现的地下水沟给出过任何系统的解释。笔者现在认为，既然殷商的水稻种植基于各种研究已得到证实，那么我们可以认为这种地下沟网是殷商灌溉渠的遗迹。这种解释也与该地区各种河流、湖泊的地理分布相吻合。另外，安阳发现的沟似是盘庚迁都到此之前早商居民开挖的（图30）。

如果我们把水稻种植作为这时期该地区农业发展中的一大进步，那么它显示了殷商人的远祖与中国东南部——尤其是淮河、长江流域——的居民之间存在联系。这一重要联系稍后还会谈到，它将有助于我们理解许多在安阳发现的、但至今仍还令人迷惑的其他考古现象，如釉陶即是其中之一。这种陶器最早出现在安阳陶器群中，其制造技术和器形完全是独特而新奇的。但是最近的考古发现已清楚表明，最早的釉陶大概与位于安阳东南、江苏北部的青莲岗文化有关。

另一例是养蚕。虽然在安阳的青铜器和其他手工制品遗迹上发现的“丝”字本身还未接受过科学的检验，但“蚕”字确在一片甲骨刻辞中出现，并受到了某种献祭，而且殷商人似已掌握了栽种桑树的方法，最近考古工作者还在长江流域的钱山漾遗址发现了确定的丝的遗迹。若把所有关于桑蚕文化遗物的零星发现的证据汇总到一起，可以看出，虽然蚕丝的最早出现可能追溯到仰韶时代，但我们更有理由推断它是早期长江文化的一部分。在遥远的原史时期，蚕丝有可能从钱山漾这样的地方随稻米和釉陶一起运送到北方，并在殷商时期得到了进一步发展。

在我们结束农业资源的讨论前，还要说一说小麦。显然它也是殷商的一种主要谷物。很早前古文字学者论断小麦是引进的，这主要是依据金石研究得出的。最早甲骨文中的“麦”字也被释为“来”；他们推论，一字双义正是因为华北的小麦是从其他地方引进的。笔者认为这一推论过于牵强，难以成立，也没有考古学上的证据支持或反驳这一推论。

无论如何，几乎可以确定：在公元前三千年或更早以前，小麦首先在美索不达米亚种植。若甲骨文中记载的华北的小麦是从西方或其他地方引进的，这也不奇怪。据张秉权教授研究，小麦在中国种植，再晚也在最早的甲骨记录之前。^[158]小麦的种植是否像小米那样普遍，这很难说。根据在祈雨、祈谷、祈年等农事祭祀中提及的各种谷物判断，小麦无疑是当时主要农作物之一。

总之，学者们近五十年来研究成果，为我们详实地说明了殷商时期的农业资源。毫无疑问，一般平民以小米为主食并用它来酿酒，而小麦和稻米似为特权阶级享用。

张秉权根据甲骨记录中提到的与农产有关的各种地名推测了农田的分布。据他推测，农田分布北至山西南部，西迄陕西东部，东至山东的临淄，南及苏皖地区，但其东北边界在哪里未能确定。这大片的良田沃土可以说遍及后代史学家称为中原的大部分地区，无疑这也是殷商王朝

的心脏地带。

商代人是否百分之百地过定居生活，一直是个重要的历史问题。不少人认为部分殷商居民仍过着放牧生活，甚至处于游猎阶段。羊和牛作牺牲屡见不鲜，据此可判断部分殷商人仍是王朝统治下的草原牧民。

不妨再推测一下当时的自然资源。考古发现有力地证明殷商渔民和猎人有着高超的手工技艺。商代人似乎很喜欢在石、蚌、骨上雕刻小鱼做成护身符。鹿也是安阳数量最多的三种动物之一。这连同甲骨卜辞中的田猎记述足以说明，逐捕野兽是一项王室运动。因此我们有充足的理由相信，安阳及附近地区，也许西至太行山麓，曾有大量野生动物栖息的茂密森林，黄河下游一带也有不少产鱼的湖和溪。

● 手工艺、制造业和贸易

殷商的工艺技术将在下一章装饰艺术中论及，但在这里作一个概述，可增进我们对殷商文明经济基础的了解。安阳考古发掘期间出土的手工制品大大加深了我们在这方面的认识。由于出土的手工制品异常丰富，按一般的理解，将它们按材质分类较容易。所以，笔者认为分以下几组为宜：(1) 石业，包括所有的石制品，既有装饰品，也有实用器物；(2) 陶业，包括所有陶器；(3) 制骨业；(4) 青铜业；(5) 其他重要产业，包括纺织、建筑工程、交通运输等。还需注意到，安阳出土的某些手工制品不能归入上面任何一组，例如，可能是从外地输入的穿孔贝。但总的来说，上面的几组产业已囊括这一时期物质文明最基本的方面。下面分别简要归纳这四大产业的主要研究成果。

石业 在所有人造工具中，石器有着最古老的传统，至少据考古学家证实如此。当然在20世纪，石头仍有各种用途。在安阳的出土物中，笔者由于一个简单原因特别注意到了石制品。不少五四时期的新史学家认为殷商仍处于石器时代。所以，1928年中央研究院开始发掘这处历史遗址时，除有字甲骨外，董作宾还特别注意到了石器。^[159] 1952年，笔者对过去在安阳收集的全部有刃石器作了系统研究，约涉及444件标本。^[160]这个数目与同一遗址出土的青铜工具的数量相比微不足道，这说明石制工具用途有限，且多数可能是早期文化的遗留物。然而，必须承认，正如笔者研究所示，处于青铜时代的殷商人仍使用石器，尤其是石斧、石刀。

安阳出土的石制品大体可分为：(1) 武器；(2) 工具；(3) 装饰物件；(4) 祭祀用品。在这四组中，大部分石制武器，特别是箭头，已被

青铜器代替，所以在安阳收集的石箭头，除少数外，都是更早时期的遗留物。但那时石制工具仍广为应用。有刃工具，如斧、刀、铲和挖掘工具等，显然仍在普遍使用，这已被出土的数以百计的标本所证实。同时，碗、碟、臼之类的石制容器和砸石、磨盘等其他石制品在殷墟也常发现。在装饰品中，我们发现了石制品中最奇特的一类，雕刻品系列。其中一些是建筑上的附加物，包括几个大理石猫头鹰和虎头怪兽像，也有较小的雕刻物，如鸟、猪和龟。一些大的雕刻物背部有长条形凹槽，表明它们原来可能与房屋墙上的角形隆起物相契合。除装饰物件外，还有一组大概仅在祭祀场合使用的石器，即大家熟悉的璧和琮。后来这些物件大都以玉为质料，但在殷商，几乎没有器物是用这种贵重石头制成的。在这方面值得一提的是，商代有些戈的援部似乎是由外观像玉的贵重石头制成的，但仔细研究发现，从成分上看它们并不是真正的玉。它们不是缟玛瑙、蛋白石，就是玉髓或其他质地相似的石头。真正的玉也偶有发现，但极少。

如果我们根据制作方法将其分等，就会发现，殷商石制品既有直接用敲击的这种最粗糙的原始方法制成的，也有靠最精细、技术最先进的工艺制成的。例如，砾石用作柱础之前就未经修整和打磨。制造箭头之类的石制武器用的是压或打下落片的方法。至于砸、斧、铲之类的大型工具，其制作方法则取决于石料的自然性状。对于质地软的材料，简单地敲下小片修理一下即可；对硬的材料，一般采用砸击或凿的方法。对较珍贵又坚硬的石料，至少最后一道工序会用磨光法。磨光工艺，从安阳出土物看，可分不同等级。真正的玉的制成品当然需要很高的技术，但安阳出土的大部分“美石”，不管是否是真玉，都被精细地打磨过。

陶业 这一类依其主要特征可分三组：(1) 陶人像；(2) 陶器；(3) 杂类。陶人像发现较少，但很重要。其中有两个曾引起学术界极大关注，因为他们都穿衣服，并且双手被绑，显然是囚犯（见图36和37及第12章的进一步叙述）。奇怪的是，在十五次发掘中，这种人像一直很少发现。

陶器是这一时期主要的陶土制品。^[161]第六章中我已对收集物中主要的几类作了简要介绍，但在这里我要更详细地探究这一产业的重要特征。殷商时典型陶器可分为下列五类：

第占彙集陶数的90%

第占彙集陶数的6.86%

第占类集陶数的0.27%

第四类集陶数的1.73%

第五类集陶数的1.07%

被归为“黑陶”的陶片总数达2655片，比第三类白陶要多很多。此外，还有一片彩陶。

最主要的一类，即第一类灰陶，有一些特征值得特别注意。正如上面所说，它们占到十五次田野发掘期间登记和编录的25万片陶片的90%。然而，这一组灰陶性质大多也不尽相同。虽大部分陶片有绳纹，但并不是均匀地分布在表面，压痕和结构也有变化。火候也不均匀，有些浅灰陶片看来烧得一致，但其他都不是。

将这组称为“灰陶”，主要因为这是多年来发掘者都熟悉的通行的田野术语。如果把各次发掘的出土物集中到一起作更详细的分析比较，就会立刻发现这些灰陶不仅质地、硬度、表面纹饰不同，色调也深浅不一。最后，我将它们分为四等：(1) 浅灰色；(2) 标准灰色；(3) 深灰色；(4) 暗灰色。最值得注意的是，色调越深的，同一陶器上的陶色越不一致，浅灰色的陶器就算器形再复杂，整个器表颜色仍是均匀的。吴金鼎下了很大工夫研究华北的史前陶器，他认为浅灰陶反映了技术的进步。这大概是殷商时代小屯制陶业的一大发展。

其他组的陶器表面看来很一致，但也并非完全纯一。例如，比其他组更使人注目的白陶就有两种明显不同的色度，雪白和稍发黄。在中国和日本对这种陶器作过多次分析，显示其化学成分与制作现代瓷器的高岭土惊人地相似。安阳白陶的一大特征是，这些陶器有精致的纹饰，这与同一地点出土的青铜器极为相似。从器形学上来说，大多数白陶属特殊的豆形器——高座盘，也有三足和圈足的，很明显大多都像青铜器一样带有纹饰。应注意的还有一些硬度低而无装饰的白陶片。在安阳陶器研究中，这些素面的软陶片对于探寻这种白色器皿最早的起源非常重要，因为它们无论在器形、图案，还是在泥土混合方面，似乎都更原始。

除了白陶，还要说说另一组不寻常的上釉硬陶。这一类大多数是甗形器，器上有一刻纹装饰带。盖大，呈碗形，盖至肩部。

前面讲过，笔者在《殷墟器物》一书中将陶器分为十类：(1) 圈

底；(2) 平底；(3) 圈足；(4) 三足；(5) 四足；(6—9) 为新的类型保留的型号；(10) 盖。这个分类很有实用意义，特别是把其他容器的器形，如青铜器、石制容器或不同地区不同时期的陶器放在一起比较时，它可为这种比较研究提供一个标准。

第三组杂器包括大量的小器物，像大理石纹的陶环、陶网坠、纺轮和其他用途不明的器物。

制骨业 按传统说法，骨器与石器一样古老。我们可以肯定，周口店的北京人已使用骨器进行刮削、挖掘等。殷商时期，这一产业已进入高度发展阶段，几乎与石业一样精密。安阳发掘中，发现不少贮藏坑中有一半填的是未加工的骨料，很明显这是为制骨作坊收集的。安阳出土的考古收集物中，骨器又可复分为两组。我先谈一谈占卜用的肩胛骨。在这个时期，占卜用的骨几乎仅限于牛肩胛骨和龟壳。这些应是由专门机构收集，并由具有相当技术知识和技能的专门人员整治。完全可以这样假设，参与这项工作的人必定属于特权阶层。

还有一些骨制品，其制作也需要经过一定的训练。首先应提到的是不同形状的骨箭头，它们多数用于打猎。安阳收集物中这种遗物很丰富。日常使用的骨器有针、锥、削等。

下一章中将继续关注两件器物。一种是𠂔（刮刀），在安阳收集的𠂔有几种不同形状。古物家通常认为这类是食具，但究竟是如何使用的仍需进一步研究。另一种是筭，商代妇女似乎尤其喜欢精美发式，多饰以顶端雕花的骨筭或玉筭。在丰足的年头，有些筭是用象牙和宝石雕刻而成的，但保存下来的相对稀少。

青铜业 安阳发掘的青铜器可分四组：礼器、武器、工具和供奉死者的小件器物。其中礼器和武器一开始就最受考古工作者关注。日常使用的刀、切割器、斧等工具保存下来的极少。使田野考古者颇感惊奇的是那些小型器物，它们显然是给那些无力置办更好葬器的死者陪葬用的。也许应增加一个第五组，即装饰片组，这些装饰片可能是双轮马车或其他交通工具或木制家具等组合物的一部分或附件。安阳发现的青铜器数量极多，最近笔者和万家保先生共同研究了这些青铜器，每人研究特定的一组问题。因为万家保具有冶金学和工程学方面的知识，所以他研究铸造问题。他根据田野工作者收集的资料，进行了一系列的铸造实验，来探究商代青铜器的生产方法。笔者则专门研究不同青铜器的器形及其演变、纹饰方法和纹饰母题。我们二人持续研究多年，出了五本关于青铜

礼器的专著，每部研究一类器物，已在《中国考古报告集新编》上发表。^[162]

这些研究的某些结果具有普遍意义，应该在此谈一谈。首先在技术上，笔者通过实物和实验证实，商代工人用块范法铸造青铜器。安阳田野考古工作者收集到几千片陶范，其中一些经拼合能复原。以此为基础，历史语言研究所用哈佛燕京学社资助的一笔专款，建了一个研究安阳青铜铸造技术的小型实验室。实验从模仿商代青铜器原型制作块范开始，事实上是用范来铸造一个模型的反面。将泥范印在模型上，然后像陶器一样焙烧。块范组合在一起后，组合的内面即是要铸造的青铜器外表的反面。技术细节比这里讲的复杂得多，对此感兴趣者可参看《中国考古报告集新编》上的原文。^[163]实验的第二步是探讨怎样将熔化的液态青铜浇铸在组合陶范内。此过程的详细情况已在原报告中用中英文分别介绍。只需要说用这种方法铸造的青铜器具有商代器物的独特标志就够了。这表明，实验达到了最初的目的，确定了商代青铜礼器都是用块范法铸造的。实验迄今为止只限于青铜礼器。因为其他类器物未做实验，所以武器、工具和其他青铜器物是否都用块范法铸造还不能肯定。必须提及的一点是，据实验所示，我们能提供火蜡法在商代不存在的重要证据。这一说明也很重要，因在这之前许多学者认为这种方法的确存在于这一时期。

安阳出土的各种青铜器物的器形显示了不同的起源。其中许多无疑是土生土长的，其来源可上溯到史前时期，如武器中的戈、青铜礼器中的觚和工具中的刀等。同时，也有相当数量的物品起源于与外部的交往，事实上已可以确定有一些起源于国外，如武器中的矛和工具中的鍙斧等。

笔者对安阳收集的青铜礼器的演变给予了极大关注。在殷商墓中最常见的爵和觚这两种容器的起源和演变已探明，这展现了最真实的中国本土器物的发展。其他明显为中国本地的三足和四足器物——包括鼎、鬲、甗等，也都常在各殷商墓中出土的青铜器物中发现。其他青铜礼器还包括壘、壶、簋、觥、觶和卣等。对于这些已探明器形的礼器，所有迹象都表明，它们是从华北新石器时代的陶器器形演变而来的。但对各种工具和武器却不能这样说。工具中，如鍬和锛，几乎不能在中国找到祖型，因而曾被当作在安阳时期前西方影响中国青铜时代的确凿证据。史语所成员的最新研究成果使人们相信，某些工具、武器，可能还有双轮车的出现，是与外界交往的结果。但令人印象深刻的是，事实上所有

青铜礼器显示了地道的本土特征。所以存在的一个重要问题是，就青铜文化的整体来说，武器和工具的发展究竟是在礼器之前还是之后。

其他产业 除上面介绍的四种殷商产业外，还应注意，还有其他产业可能同样重要，但因考古遗物太少，所以对它们的了解非常有限。然而，在此必须谈谈它们的情况。首先，由于砍伐工具，如短柄斧、斧、锛等的高度发展，一定会存在木器业，甚至可能有一些颇具艺术价值的木雕。石璋如在小屯发现了一个几乎完全腐朽了的木质漆豆的痕迹。侯家庄大墓中的许多遗物使我们联想到精致的木制器具的腐朽部分。在发掘中发现了大量双轮马车上的青铜零件，可以肯定马车是木制的。最重要的是，无论地面上或地下的房屋，如果没有木料的话，几乎不能营建。遗憾的是其详情已完全不可知了。

除木器业外，还应提一提纺织业。原来可能用于包裹的织布遗物，在青铜器和其他质料的器物上偶有发现。但到目前为止，尚未得到详细研究。纤维可能是丝质的。除了丝之外，商代人可能还用毛和麻做衣服，但考古学者除了纺轮外，未发现任何与纺织业有关的工具。

12. Decorative Art

of the Yin-Shang Dynasty

More than twenty years ago, in 1953, I prepared a paper for the Eighth Pacific Science Congress held in Manila on "Diverse Backgrounds of the Decorative Art of the Yin Dynasty."^[164] In it, I made use of the Anyang material only to a limited extent as I had not yet started my intensive research on bronzes and other works of art such as the sculptures discovered from Hou-chia-chuang. Nevertheless, several important ideas which I had already developed were presented in this paper.

Two works of art discovered at Anyang were immediately suggestive: a human torso in marble decorated with designs which resembled tattoo marks, and a bone handle carved with *t'ao-t'ieh* masks, ranged vertically one above another. In these two objects I found evidence of the ancient practice of tattooing and of the existence of totemism. Another group of artifacts convinced me that an extensive and advanced wood-carving art must have existed in ancient China. The wooden prototypes must have been fully decorated if, as I concluded, the bronzes were copied from them. The field archaeologists did find vestiges of numerous wooden vessels such as the *tou* and of wooden drums, but these were totally disintegrated. Of the bronze vessels, all those of square- and rectangular-bodied type are usually fully decorated while the vessels with round or oval shape are not. My assumption at that time was that the square-bodied vessels copied their shapes from the wooden prototypes and the round-bodied inherited their form from the ceramics.

With this paper as a starting point, I have continued for nearly twenty years my research on the Anyang materials with special attention to the bronzes. Most of the important results have been published in a new series of *Archaeologia Sinica* in five volumes

which cover all the ritual bronzes found in Hsiao-t'un and Hou-chia-chuang. Up to the present, most of the preliminary ideas first set forth in the 1953 paper seem still to hold good. In this chapter, I will endeavor to cover the important aspects of the art work found in the Anyang collection. As in the previous chapter, the materials will be discussed in four groups: pottery, bone, stone sculpture, and bronze.

● Pottery

The pottery excavated from Anyang has been carefully recorded and studied and the results were published in 1956.^[165] I found as a result of my research that very few of the major groups, namely, the gray pottery, are decorated, and these are either open-mouthed basins or covered jars. On the outer surface of the decorated vessels are incised circumferential zigzag lines, single or double (Fig. 31). But on most of the gray pottery the surface has been treated by beating, or marked by either coarse or fine strings or networks, or by simple incised horizontal lines. Whether these markings are regarded as primitive beginnings of decoration depends upon one's point of view. Dr. G. D. Wu, one of the earliest students of China's prehistory, considered them to be simply traces of manufacturing. The incised belt of zigzag lines was, however, a definite artistic attempt that seems to have been inherited from the Lungshan Culture.

The white pottery found at Anyang presents an altogether different case. Pottery in this group is divisible into three subdivisions: soft; semi-soft; and hard and highly polished. With the exception of the highly polished subgroup, examples of the other two subgroups are all luxuriously covered by incised patterns (Fig. 32). These patterns seem to be copied from bronze with, however, one exception, namely the *tou*-dish, a form of ritual vessel that has no bronze counterpart in the Yin-Shang time. The outside of the *tou* is also decorated somewhat differently from the other patterns of white pottery. The designs are mainly square spirals arranged in a checkered pattern. I am of the opinion that white pottery of this carved subgroup was a later development. I have reason to believe that the Shang people valued white pottery much higher than the bronzes, a theme

that I fully expanded in my paper on the "Evolution of the White Pottery of the Yin Dynasty" published in 1957.[\[166\]](#)

31 Incised gray pottery
帶刻紋的灰陶器皿

32 Carved designs of white pottery 白陶上刻划的图案

The so-called glazed group of pottery has very simple ornamentation; almost without exception, every jar has near its shoulder a band composed of simple wavy lines or short slanted strokes between circumferential lines. Occasionally, there are even designs that cover the whole body in a checkered pattern (Fig. 33). The surface treatment of the red pottery is almost the same as that of

the gray, with string impressions. To close the discussion of pottery decoration, I would like to mention certain other fired clay objects we have found. Among these are some specimens very similar in shape to a shovel, with a handle on the back whose top is molded in the shape of an animal head, a dog, or a horned beast. These may be tools of some kind, but, if so, their function is unknown (Fig. 34). Two clay figurines almost completely dressed in long gowns that concealed their lower limbs constituted another puzzling find. Both are evidently prisoners, and each has his hands fettered, one in front and one in back. Both also have their necks banded by some kind of shackles and their heads shaved clean (Figs. 35). This pair of human figures appeared very early in our diggings, and from a disturbed area. Nothing similar was ever found afterwards.

● Carved Bone

Of the several subgroups of carved bone, the most numerous are hairpins. In Hou-chia-chuang the field archaeologists once discovered a tomb in which nearly one hundred hairpins were found at the top of the head of a female skeleton, indicating how elaborately the Shang ladies dressed their hair. The ornamental tops of the pins have attracted special attention. They are carved into different shapes, divisible, according to my preliminary study, into eight main groups. [167] In the early period the tops of the hairpins were comparatively simple and were carved in a flat shape expanding into a flat piece of platform. At the other extreme are those carved into elaborate animal or bird shapes (Fig. 36). These shapes were further changed into geometric shapes of various patterns.

36 Hairpins with bird-shaped heads 鸟头笄

Next in number to the hairpins are the ssŭ, a spatula used in food handling, found in great abundance in both Hou-chia-chuang and Hsiao-t'un. One subgroup of ssŭ was comparatively long and slender, usually made from the rib bones of oxen. The whole instrument was usually somewhat curved, following the original shape of the material. The handle bore a decorative carving, but the functional part was flat and rounded at the end. Another subgroup was stouter and shorter, with the same width at both ends but somewhat slenderer in the middle. These spatulas were usually made from the leg bones of oxen. If we divide these tools according to their actual length, we find the surprising result that very few measure the same. But on the whole, it

is possible to subdivide the *ssŭ* into three categories. Those made of ribs constitute the longest, usually the least decorated or trimmed, measuring somewhat over 40cm. long. The middle group, usually less than 30cm. long, had an angular handle at one end and a carved spade at the other. The average length of this subdivision was usually shorter than that of the first group and the handle was usually considerably carved. The third group was the shortest and also the broadest, but also included some spoon-shaped articles made of foot bones. This group seems usually to have been made of the leg bones of oxen; the handle was angular while the other end was often sharpened at the edges. The handle of the *ssŭ* was usually decorated with incised animals, either realistic or mythical, such as dragons (Fig. 37), *t'ao-t'ieh* heads, and birds (Fig. 38).

Other bone objects are flat plates (Fig. 39) or tubes (Fig. 40), ocarinas (Fig. 41), and handles (Fig. 42). The carvings of the ocarina almost duplicate those found on an ocarina made of white pottery.

● Stone Sculpture

J. G. Andersson, as early as 1923, claimed that he had found a carved animal figure from the prehistoric remains of Sha-kuo-t'un on the Liao-tung peninsula, which he had discovered that year.^[168] This seems to have been not only the first mention but also the earliest example of stone carving in China.

The stone carvings turned up in the course of the Anyang excavations were an unexpected and exciting discovery.

It was in the third season of the expedition to Anyang that the field archaeologists came upon the fragments of a stone-carved human torso. In the field excavations, these fragments had appeared merely as fragments; when they were brought to Peking in the fall of 1929, the archaeologists on further study discovered that some of the fragments could be pieced together. One restored piece was found to be the lower part of a human figure in a squatting posture, but unfortunately the more important upper half was not recovered. The recovered part weighs more than 15.4kg. (Figs. 43, 44). How do we account for this carved torso discovered at Hsiao-t'un? According to Ssŭ-ma Ch'ien's account, in the early Chou dynasty the natives of Kiangsu still practiced tattooing. So it is possible that the coastal people of north China in Shantung might have kept up the same habit. If this could be assumed, it is quite probable that among the subjects the Yin-Shang dynasty ruled there were still tattooing people, which naturally would provide another example of decorative art for this period.^[169]

43 Stone torso from Hsiao-t'un: front view
小屯出土的石雕人体残像（正面）

44 Stone torso from Hsiao-t'un: side views
小屯出土的石雕人体残像（侧面）

This remarkable discovery, which immediately attracted world-wide attention, marked the beginning of our knowledge of the art of stone carving in the late Shang dynasty. Following this discovery, a

series of other artistic stone sculptures appeared, mostly in animal forms—turtles, tigers (Fig. 45), and so on.

45 Carved stone tigers 石刻虎形

It was not until the thirteenth season^[170], when we started excavating at Hou-chia-chuang, that more complete specimens began to appear. Here in these royal tombs, the sculptures were somewhat different. Most were in the shape of mythical animals, half beast, half human: a tiger-headed monster with a human body (see Plate 5); or a double-faced monster with an elephantine nose (Figs. 46) or the *t'ao-tieh* mask (Fig. 47). The majority were carved in the round, but some only in high or low relief. Unfortunately, as most of these were not found *in situ* but were excavated from the debris in the plundered tunnels, it is not possible to know in exactly what part of the tombs they originally lay. Among them, there was one small group of broken fragments, which, when pieced together, proved to be a portion of the body of another human figure (see Fig. 13 and discussion in chap. 5), well dressed, again without a head, but fortunately his costume remained quite visible.

46 Double-faced monster with elephantine nose: top, lateral and frontal views 象鼻
双面怪兽：顶部、侧面、正面

47 The so-called *t'ao-t'ieh* mask carved in stone
石刻饕餮面形

This figure was in a kneeling-sitting posture almost exactly the same as that of a modern Japanese sitting on the *tatami* floor at home. This discovery soon aroused intense interest. Comparing this figure with the torso discovered at Hsiao-t'un in the third season, the author discovered for the first time that the Japanese *seiza* was actually the regular sitting posture among the Chinese as early as the Yin-Shang dynasty. To judge by the costume, this figure may have represented the well-dressed Yin-Shang ruling class.

The robe has two sleeves, an open front, and a waist band. There

are pennants below the knee which might represent a skirt. The borders of the robe are embroidered with geometric designs. Whether this figure is a male or a female, it is difficult to say. At any rate, this represents the earliest well-dressed human figure of China based on archaeological remains; the only regret is, of course, that the head was not recovered. These two stone figures—this one and the squatting figure from Hsiao-t'un—have attracted special interest because they happen to be human.

Another stone figure recovered from the Hou-chia-chuang royal tombs, although miniature in size, represents a complete figure in silhouette. Cut from a flat piece of hard stone, it depicts a figure in squatting posture with the hand curved underneath the chin. The lateral view of the human body is complete, the eye is wide open in a horizontal position, and there seems to be no trace of the epicanthus fold that so conspicuously marked the bronze mask (see Plate 21). The ear, the nose, the mouth, and the chin are all in good proportion, but there is no foot. The top of the head is elaborately dressed; whether it represents a hairdo or a fashionable headdress cannot be definitely said (see the bottom of Plate 8).

Paired with the Hou-chia-chuang miniature figure is a carved human figure in jade from Hsiao-t'un, which the artist decorated with positive lines in relief, representing the head of a human figure. The eye, the ear, the lower jaw and the prominent chin, the flattened nose, and so on, are all rendered by positive and graceful lines. On the top of the forehead, there is a distinct horizontal band, surrounding the roots of the hair, and from it a cockerel crest rises straight upward at first and then bends backward above the occipital region. Here, again, it is difficult to say whether it represents a hairdo or an elaborate headdress of the Yin-Shang fashion (Fig. 48).

48 Carved human figure in jade 玉刻人头形

Stone carvings of this period cover a very wide range of animal figures, including both the real and the mythical. The raw materials also cover a great range, from semiprecious stones like serpentine to common marble. In certain cases, we noticed definite differences of style among the stone carvings. Although most of these were found in fragmentary condition and scattered so that it is impossible to determine the exact positions that they originally occupied, the variations of style and workmanship in the finished products are important archaeological features that need further investigation. Nearly every one of the larger stone animals has a deep, vertical trough cut in its back, like the torso first discovered at Hsiao-t'un. For instance, this vertical back trough was found not only on the tiger-headed monster, but also on the marble owl (see Plate 4). It seems obvious that these vertical channels were cut to fit into a projection, perhaps on a wall.

● Bronze

The bronze objects collected from the Anyang excavation are classified in the following categories: (1) ritual bronzes, (2) weapons and tools, (3) functional or decorative metal work for use on chariots, or other wooden structures, and so on, and (4) the *ming-ch'i* group made purely to accompany the dead.

In our own collections, the total number of the ritual bronzes, the most abundant group, was 171, including a number of incomplete pieces. Within this class, the *ku*-beaker and the *chüeh*-cup are not only the most numerous specimens—forty *ku* and thirty-nine *chüeh*—they are also typical of the bronzes of the Yin-Shang period as they seem to have disappeared rather early in the Chou dynasty.

Among the other ritual bronzes, the *chia*-vessel, although fewer in number than the two just mentioned, appeared at least sixteen times in Anyang, whereas the *ting*, in both the tripod and tetrapod forms, appeared altogether twenty-three times. There are also fifty or so other types, of which the most important are the *ts'un*-vessel, the *fang-i* casket, the *p'an*-plate, the *yü*-basin, the *chih*-goblet, the *hu*-pot, the *kuei*-bowl, the *hsien*-steamer, the *yu*-flask, and in addition there is a

bird-shaped *ts'un* and another horn-shaped vessel.

Although most of these bronzes are ornamented, some of them heavily, there are also exceptions. For instance, some of the *ku*-beakers are undecorated. The decorated *ku* can be divided into three subgroups: (1) those with the middle section ornamented only, (2) those with both the middle and lower sections decorated, and (3) those which are fully decorated. The same holds true for the *chüeh*-cups, except that there are more plain ones. Of the thirty-nine *chüeh*, twelve are without any elaborate ornament. Of the other twenty-seven, sixteen are ornamented by a single horizontal band, while the other eleven specimens show more complicated designs.

The main decorative band in both the *ku* (Fig. 49) and the *chüeh* (Fig. 50) groups is composed of a centrally divided animal mask. The most typical of such designs is found on the middle section of the *ku*. The decorative band surrounding the *chüeh* is sometimes interrupted by the cup's handle. This handle usually straddles vertically so that it just interrupts the decorative field.

49 Animal masks found on *ku*-beaker

觚上的动物纹饰

50 Animal masks found on *chiieh-cup*
爵上的动物纹饰

The methods employed for executing the ornamental designs on the various bronzes have been very carefully studied by Wan Chia-pao on the basis of laboratory experiments. He has concluded that, in the technique of casting, five methods of mold preparation can be distinguished, each of which gives rise to a different result in the ornamental designs. These five methods are: (1) simple incised mold design, (2) composite model-mold design, (3) engraving and appliqué on model, (4) relief on model, and (5) deep incision in the mold.^[171]

As to the contents of the décor, we may consider the middle section of the *ku*-beaker as an instance and examine its decorative design. Of the thirty-five examples of *ku* from both Hou-chia-chuang and Hsiao-t'un, thirty-four have a pair of animal masks arranged diametrically opposite each other on the same horizontal belt surrounding the waist of the vessel. Whatever discrepancies there are will be found in the filling-in with what the Chinese antiquarians call *yün-lei-wen*, namely, the square and circular spirals.

The ornamentation of the *ting*-cauldron seems to be more complicated than that of the first two groups. Typologically, the twenty-three *ting* specimens are obviously subdivisible into three types. I have named the first group *li-ting*; these are the lightest in weight and only three specimens were found. The middle group includes most of the specimens, eighteen, whose average weight is 3845.2gms. The largest are the two giant rectangular specimens—the *lu-ting* (see Plate 9) and the *niu-ting* (see Plate 10), weighing 60,400 and 110,400gms. respectively. The *lu-ting*, whose decorations I would like to describe in some detail, resembles a rectangular wooden box

with a flat bottom and four side walls flaring slightly outward. There are two standing lugs at the narrower sides on the rim of the body for lifting. The four legs are cylindrical in shape and hollow; their unsealed tops are holes in the four corners of the interior. The external surfaces of the walls, the lugs, and the legs are covered with luxuriously well-designed ornament, most probably symbolizing ideas of profound social and historical significance. The center of each of the four external walls is decorated with a complete deer head with a pair of prominent horns rendered in high relief and a sectional flange occupying the middle line. The antlers on the upper portion of the deer's head have prongs branching upward and ears underneath. The face seen in front view is most compactly and very realistically composed with a vertical flange as the nose line. Between the horns a pair of dragons confronts each other in lower relief. The upper two-thirds of the deer head is flanked on each side by a pair of composite birds also rendered in high relief.

● Origin and Some Characteristics of Decorative Art

The main characteristics of this decorative art was partly inherited from prehistoric times and partly developed in the Yin-Shang period. Many of the spirals that later developed extensively into the *yün-lei-wen* originated in the painted pottery and black pottery times. As far as the definite geometric patterns are concerned, I have compiled in Figure 51 a comparison to illustrate this point. Even the biological figures such as fish, human faces, and some plants or horned animals may trace their origin to the period of Pan-p'o and other painted pottery sites. There is another element of which I have made a special study—the bow-string lines which were first developed in the Lungshan Culture and which the bronze makers of the Yin-Shang period seem to have copied extensively, especially in their making of the plain *chüeh* and *ku* and even the *ting*-tripod. As for the more elaborate designs of the Shang dynasty, particularly as shown in the bronze vessels, some traits which set them apart from the work of contemporary artists in the Mediterranean are: the special concept of symmetry—for instance, the confronting pairs of animals or snakes;

the decoration of a vessel with a horizontal belt usually divided into a number of partitions; and the piling up of these horizontal bands vertically to total as many as seven or eight belts in some cases.

拾贰·殷商的装饰艺术

二十多年前的1953年，我为在马尼拉举行的第八届太平洋科学会议准备了一篇文章，题为《殷代装饰艺术的诸种背景》。^[164]在这篇文章中，我并未充分利用安阳材料，因当时我尚未对青铜器和其他艺术品，如侯家庄发现的雕刻品，进行细致的研究。然而，这篇论文中我提出了几个已形成的重要观点。

两件从安阳发现的艺术品具有直接的暗示性：一尊刻着类似文身印记图案的大理石残像；一把雕刻着从上至下排列的饕餮面的骨柄。在这两件艺术品中，我找到了古代文身习俗和图腾制存在的证据。另一组手工制品使我相信，木雕艺术在古代中国发展得很普遍，并达到非常先进的水平。如果青铜器，如我所推论的那样，是模仿木制品的，那么木制品原本一定是满身纹饰的。田野考古工作者确实发现了一些木制豆型器皿和木鼓的遗痕，但它们已全腐朽了。青铜器中，方形和长方形体的器物常常通体布有纹饰，圆形或椭圆形体的则不是。当时我推测，方形体铜器是仿木制品的，圆形体铜器是从陶器演变来的。

以这篇文章为起点，我一直研究安阳资料近二十年，尤其重视青铜器的研究。大部分重要成果已发表在五卷《中国考古报告集新编》上，包括小屯和侯家庄出土的全部青铜礼器。现在看来，1953年的文章中首次提出的不少初步观点仍然成立。这一章中，我将尽力囊括安阳发掘品中艺术品的重要方面。与前一章一样，材料会分四组来讨论：陶器、骨器、石雕和青铜器。

● 陶器

安阳出土的陶器得到了详细记录和全面研究，成果于1956年发表。^[165]研究结果发现，其中主要的灰陶罕有纹饰，并且，带花纹的不是大口簋，就是带盖的罐。有花纹的容器的外表面绕刻着单线或双线的锯齿形线条（图31）。但大多数灰陶器表面经过拍打，或印上粗细各异的绳纹、方格纹，或简单地刻上水平线纹。这些花纹是否为装饰的原始开端，取决于个人的看法。最早研究中国史前史的吴金鼎认为它们只是制作留下的痕迹。然而，锯齿形刻纹带则肯定是一种艺术创作，似是从龙山文化演变而来。

安阳发现的白陶代表了一种截然不同的情况。白陶可分为三组：质

软的、质较硬的和质硬磨光的。除质硬磨光的这组外，其他两组器表都刻满了繁复的图案（图32）。这些图案似以青铜器为范本，但有一例外，即豆形器，殷商时期还没有类似的青铜礼器。白陶豆的外表也有纹饰，但图案与其他白陶有些不同。其设计主要是以棋盘格排列的方角云雷纹图案。我认为这种刻纹白陶是后来发展出的。有理由相信，商代人视白陶比青铜器要珍贵许多。这在我1957年发表的《殷墟白陶发展之程序》一文中已有详细阐述。^[166]

所谓的釉陶装饰简单，在每个罐靠近肩部处几乎无一例外都有一圈简单的波浪纹或一圈夹在阴线纹中的平行斜线纹。偶尔也有通身装饰棋盘形图案的（图33）。红陶表面的处理几乎与灰陶相同，以绳纹压印。在关于陶器装饰讨论的最后，我再谈谈已发现的其他一些烧制的陶器。其中有的形状像铲子，后部有柄，柄端铸成狗头或某种角兽的形状。这可能是一种工具，但即使是工具，其用途仍不清楚（图34）。另一使人不解的发现是两个穿着几乎完全遮住下肢的长袍的陶人俑。这两个陶人俑显然是囚犯，双手都戴着手铐，一人双手在前，另一人双手背后。两人颈带着枷锁，剃光了头（图35）。这两个人俑在发掘早期即发现，出自一个被扰动过的地区。之后再也没有发现过类似的遗物。

● 骨雕

在几组骨雕中，数量最多是笄。侯家庄田野考古工作者曾发现一座墓，在墓中一女性骨架的头顶发现了近百支笄，这说明商代妇女是何等精心装饰她们的头发。装饰性的笄首特别引人注目，它们被雕刻成不同形状。据我初步研究，这些笄首可分八式。^[167]早期笄首样式较简单，呈扁平形。另一个极端是雕刻着精美鸟兽图案的笄（图36）。这些形状又进一步演变成各种几何式样。

总数次于笄的是一种叫“柶”的食具，在小屯和侯家庄都有大量发现。其中有一种柶较瘦长，常由牛肋骨制成。整个器身随着材料的原形有点弯曲。柄上有雕刻的装饰，有实际功用的部分扁平、末端呈圆形。另一式形体粗短，两头同宽，中间稍窄，常用牛腿骨制成。若以实际长度给这些柶分类，会发现一个惊人的结果：它们的长短极少一致。然而，柶总的可分三类：由肋骨制的最长，约40厘米，最少装饰和修整；中等长度的一类长约30厘米，一端有一角形柄，另一端雕刻呈铲形，这类平均长度比前一类短，而且柄上常有大量雕刻；第三类最短也最宽，

包括一些脚部的骨头制成的匙形物品，这类一般是用牛腿骨制成的，柄呈角状，另一端边缘常被磨成为刃。柄一般刻有动物纹，有现实的，也有神话的，如龙（图37）、饕餮头和鸟（图38）。

其他骨器有扁平的骨版（图39）、骨管（图40）、骨埴（图41）和器柄（图42）。骨埴上的雕刻与一个白陶埴上所见的几乎完全一样。

● 石雕

早在1923年，安特生就宣布于辽东半岛的沙锅屯史前遗址中发现了动物石雕像。^[168]这大约是在中国第一次提到石雕，也是迄今发现的最早一例。

安阳发掘出土的石雕，既出人预料，又令人鼓舞。

在安阳的第三次发掘中，田野考古者偶然发现一块石刻人像的碎片。在田野发掘中，碎片就仅仅是碎片；1929年，碎片被运回北京进一步研究，考古工作者发现一些是可以拼合的。有一件复原后为一个蹲坐人像的下部，但遗憾的是，更重要的上半部未发现。复原部分重量超过15.4公斤（图43、44）。我们怎样解释在小屯发现的这一雕刻的人体残像呢？据司马迁记载，周朝初年江苏一带的土著人仍有文身的习俗。因此在华北地区山东沿海一带的居民可能也保留着同一习俗。若这个假设能成立，则很有可能殷商统治下仍有人文身，这自然为这时期的装饰艺术又提供了一个范例。^[169]

这一惊人发现，立刻引起了全世界的关注。它标志着我们对商代后期石刻艺术了解的开始。随着这一发现，又有一系列其他艺术性石刻出土，其中大部分为龟、虎（图45）等动物形状。

直到第十三次^[170]开始侯家庄发掘时，较完整的标本才开始出现。这些王陵中的雕刻有些不同，大部分是半人半兽的神话动物形象，如人身虎头（图版5）、象鼻双面兽（图46）或饕餮面具（图47）。绝大部分为圆雕，也有些仅是深浅不一的浮雕。遗憾的是，大部分不是在原处，而是在盗坑的碎片堆里发现的，因而不知其在墓中确切的原位置。其中，有一部分碎石块拼合成为另一人像身体的一部分（见第5章的介绍和图13）。该人像无头着衣，幸运的是，服饰仍清晰可见。

这个人的跪坐姿势几乎与现在日本人坐在家里“榻榻米”上的姿势一

样。这一发现很快引起了人们强烈的兴趣。将此人像与第三次发掘时在小屯出土的人体残像相比，笔者首次发现，日本人的“正坐”，实际上早在殷商时就是中国人的一种端正坐姿。从服饰看，这个人可能代表了衣着考究的殷商统治阶层。

长袍有两条袖，前开口，系腰带。过膝的旒形垂条可能是裙。长袍边上绣着几何形图案。此人是男或女尚辨不清。不管怎样，这代表了根据考古遗物所见的最早的衣着考究的中国人。当然，美中不足的是，没有发现头部。这两个石人雕像——这一具和小屯发现的蹲坐的那具，由于是人像的缘故尤其受人关注。

在侯家庄王陵发现的另一石人，体型虽小，但为一人全身的轮廓。它是用一块扁平硬石凿成，为一个蹲坐的人，手弯于下巴之下。从侧面看，人体完整，大眼向前平视，没有青铜面具（图版21）上那样明显的内眦褶皱。耳、鼻、口与下巴比例匀称，无脚。头顶装饰精致，这究竟代表一种发式还是时髦的头饰，还不能肯定（图版8底部）。

可与侯家庄石人媲美的是小屯出土的玉雕人像，匠师用浮雕的阳线表现人像的头部。眼、耳、下颚、突出的下巴及扁平的鼻子等，都是凸起的优雅的线条勾画。前额上有一条明显的水平带状装饰，绕着发根，头顶上有一鸡冠形饰物前端竖直向上，后向后弯曲到后脑上方。同样，也很难说这是一种发式，还是殷商时流行的别致的头部装饰（图48）。

这一时期的石刻涉及多种动物形象，有真实的，也有神话中的。未加工的石料也有许多种，从较珍贵的蛇纹岩到普通的大理石。在一些实例中，我们看到明显不同的石刻风格。这些石雕出土时大都已破碎且分散各处，已不可能确定它们的原位置，但不同的成品风格和工艺技术等主要考古特征还需进一步研究。例如，几乎每件大型石雕动物背上都有一个深的直槽，就像小屯首次发现的那个石刻人体残像一样。这种直槽不仅虎头兽上有，而且大理石雕的猫头鹰上也有。显然，凿这样的竖槽是为了嵌入可能位于墙壁上的突起部位。

● 青铜器

安阳发掘出土的青铜器可分为以下几类：(1) 青铜礼器；(2) 武器和工具；(3) 双轮马车或其他木制器具上面的功能性或装饰性的金属制品；(4) 纯粹为死者陪葬的明器。

在我们的收集集中，青铜礼器的量最多，共有171件，包括许多不完整的碎片。礼器中觚和爵不仅数量最多——觚40件，爵39件，而且是殷商青铜器的代表性器物，因为在周朝初年它们似乎就消失了。

在其他的青铜礼器中，斚虽在数目上比上面提到的两种少，但在安阳发掘中至少出现16次，三足和四足的鼎一同出现也有23次。另外还有约50种其他器物，其中最重要的是尊、方彝、盘、盂、觥、壶、簋、甗、卣，还有一具鸟形尊和一个角形器皿。

虽然这些器物中的大部分有纹饰，部分还装饰繁复，但也有例外。例如，有的觚就无纹饰。有纹饰的觚可分三类：(1) 仅中间部分有纹饰；(2) 中间与下部有纹饰；(3) 满身有花纹。爵除了素面的外也是如此，39件中有12件无纹饰，16件仅饰以一条横带，11件有较复杂的图案。

觚和爵上的主要装饰带由一个中间分开的动物面具组成（图49、50）。这种图案中最具代表性的出现在觚的中间部位，而围绕爵的装饰带有时被把手断开。通常器把刚好纵向跨过这条带，因此正好将装饰部分切断。

万家保在实验室中认真研究了在各种青铜器上施以装饰图案所采用的方法。他的结论是，在铸造技术中，陶范有五种不同的制法，一种制法对应一种装饰图案。这五种方法是：(1) 刻划范；(2) 模范合作；(3) 堆雕模；(4) 浮雕模；(5) 深刻模。^[171]

关于纹饰的内容，可以觚中间部分为例，对装饰图案进行考察。侯家庄和小屯出土的35件觚中，34件上有一对动物面具，在环绕器物腰部的一条横带上对称、相背排列。横带其余部位的空白处形状不一，但都填以古物学家所谓的云雷纹——圆弧形和方折形相结合的一种花纹。

鼎的纹饰似乎较觚、爵两组更复杂。从类型学上看，23件鼎的标本明显分三类。我把第一类称鬲鼎，其重量最轻，只发现3件。大多数标本为第二类，有18件，平均重量为3845.2克。最大的是两尊长方形的——鹿鼎（图版9）和牛鼎（图版10），其重量分别为6.04公斤和11.04公斤（图11）。鹿鼎的纹饰我要作详细介绍：其形似长方形木箱子，平底，四壁略向外倾斜；两窄边的口沿处有两供提举的立耳；四足形似圆柱而中空；未封闭的足顶即是器底内部四角的洞。器外壁、耳和足的外表面上均以华丽图案装饰，很可能代表了深刻的社会和历史意义。四面外壁的中心分饰以一完整的鹿头和一对突出的高浮雕鹿角，在鹿头中线

上有一分段的扉梭。位于鹿头上半部的鹿角向上分叉，两耳在其下。鹿脸正面紧凑、写实，鼻子由一垂直扉梭构成。两角之间有一对相对的浅浮雕龙。鹿头上三分之二处，两侧有一对高浮雕的复合鸟。

● 纹饰艺术的起源及部分特征

纹饰艺术的主要特征部分是继承史前时期的，部分是在殷商时期发展出的。后来在云雷纹中大量可见的螺线形纹饰，多起源于彩陶和黑陶时期。几何形图案我集中绘制在图51中加以比较说明。即使像鱼、人面、某些植物或有角动物等生物图形，其起源都可追溯至半坡和其他彩陶遗址时期。我还专门研究过另一种图案——弦纹。弦纹最早形成于龙山文化时期，在殷商时期似为青铜器铸造者广泛摹拟，尤其是在素面的爵、觚，甚至三足鼎上。商代较华丽的图案，特别是青铜器上的，区别于同时期地中海艺术品的特征有：特殊的对称概念，例如，相对的一对兽或蛇；通常被分割成几段的环绕器皿的水平纹饰带；以及自下而上堆叠的横纹带——这种横带有时会堆叠至七八条之多。

13. Genealogy, Chên-jên

and Some Aspects of Kinship

The genealogical chart reproduced in Figure 52 is translated from Tung Tso-pin's 1952 compilation, with some omissions of attached details.^[172] It is divided into four parts: Early Ancestors, Late Ancestors, Early Kings, and Late Kings; the first two parts belong to the predynastic ancestors and the latter two to the dynastic period. If we count from the founder of the house, we find a list of fourteen names on the predynastic ancestral roll. The great T'ien I, the founder of the dynasty, belongs to the fifteenth generation. Although ancient accounts do not always agree, the succession is clearly given in Ssŭ-ma Ch'ien's biographical account beginning with T'ien I. It is extraordinary that when the oracle bone records were discovered near the end of the nineteenth century, after having been buried deep in the soil over three millennia and totally unknown to the scholarly world, they proved that he was amazingly accurate so far as the list of the ancestors and kings of the Shang dynasty is concerned. Not that there is absolutely no difference between the oracle records and the early historian writing over two thousand years ago, but whatever difference there is seems insignificant in view of the major confirmations not only of the actual names of most ancestors and kings, but also of the order of their succession. Reference has already been made more than once to this important historical confirmation; I am repeating this point here for another purpose.

A number of scholars in the past have pointed out a unique and significant fact regarding the names of the kings of the Shang dynasty. Beginning with the predynastic ancestor Shang Chia Wei, the first of the Late Ancestors, each of the descendants who ascended the throne bears a name related to what is known in Chinese as the ten celestial stems (see earlier discussion in chap. 7), consisting of Chia, I, Ping, Ting, Wu, Chi, Keng, Hsin, Jen, and Kuei. This feature which

characterized the nomenclature of Shang kings has recently received a great deal of academic attention. One theory is that since the Yin-Shang calendar had early adopted the sexagenarian system of recording days, the royal house of Shang perhaps had the habit of naming the newly born baby for his birthday of which the first character would be one of the celestial stem characters. Another theory, which seems to prevail today, is that it was the day of death that was used as a posthumous title of the sovereign, the reason being that as far as available historical records go no living being seems to have borne a name with a celestial stem in the Yin-Shang days. The second theory is definitely based on a more compelling reason, namely, that the custom of giving a posthumous honorific title continued to the last days of the Chinese Empire. There are of course other theories that we shall consider later.

殷代王室世系圖

52 Genealogical table of the royal house of the Shang dynasty (Tung Tso-pin's 1952 reconstructions)

商代王室世系圖 (董作賓《甲骨學五十年》中的董氏手制圖)

This genealogical tree also reveals some other social practices of great significance. From the founder T'ien I down to the last ruler, there were eighteen generations during which thirty kings succeeded each other and ruled the kingdom. So, in many generations brothers succeeded each other; as shown in the tree, in nine generations out of

the eighteen, the throne passed from brother to brother. It is also remarkable that it is usually the youngest brother who passed his throne to his own son. Yet it is important to note that in the last four generations, none of the ruling kings seems to have had a brother. Whether this corresponded with historical facts or not is open to question. And if not, why this change?

One of the most distinguished classicists, Wang Kuo-wei, advanced the theory that the founders of the Chou dynasty achieved a great political and social revolution in two respects.^[173] One of these was the establishment of primogeniture and the abolition of fraternal succession to the throne, in order to avoid one of the obvious sources of family troubles. The institution of primogeniture, in Wang's opinion, also helped to stabilize the political system of ancient China by reducing to a certain order the confused social conditions created by clan and family troubles. The second achievement was the differentiation of social status according to that of the baby's mother's rank, depending on whether she was the first wife or a concubine. This social stratification led to a further classification of the family structure. Wang Kuo-wei's comments on these various changes, unlike his epigraphical contributions, have not received universal support. Professor Ch'en Yin-k'o, for example, one of Wang's most intimate friends, entertained a different opinion, and for good historical reasons.^[174] Ch'en believed that the institution of primogeniture had probably already started in the latter part of the Yin-Shang period, and, as to the different social status of those born to the first wife and to the concubines, he was somewhat dubious about its ultimate social significance.

Professor Ch'en's view leads the reader to re-examine the genealogical table of the Yin-Shang dynasty, especially the last five kings: King Keng Ting, the twenty-sixth ruler of the dynasty, inherited his throne from his elder brother Lin Hsin (twenty-fifth ruler), but from that time onward for five generations or four successive rulers, to the last king of the dynasty, Ti Hsin, the throne was always passed from father to son, according to both Ssŭ-ma Ch'ien and other sources.

To trace the actual passage, when King Keng Ting died, Wu I succeeded as the twenty-seventh ruler of the dynasty; when Wu I died, T'ai Ting succeeded as the twenty-eighth ruler; when T'ai Ting died, Ti I succeeded as the twenty-ninth ruler; and finally when Ti I died, Ti Hsin succeeded as the thirtieth ruler of the dynasty—all were father-son successions.

Naturally, the interesting question is: did the last four kings of the Yin-Shang dynasty have only one male descendant, or did a change of rule of succession take place in the time of King Keng Ting? Historical documents, however, do tell us that, as far as King Ti I (twenty-ninth ruler) is concerned, he had at least two sons. Ssŭ-ma Ch'ien definitely states that Ti Hsin was not the eldest son of Ti I, but since he was born to the first wife, he had the prior right as the crown prince. That is the reason why Wei-tze, though an elder son of the king and possessing talent and virtue, was disqualified to succeed his father. In other words, the mother's high status was evidently, in the later days of throne succession, a prerequisite. This rule obviously could not have existed in the early days. If it had, in a number of early generations brothers born of different mothers could not have succeeded one another.

Whatever opinions later historians may express about those rules of succession, scholars have to face some of the distinguishing characteristics of the Shang royal family. First, they each adopted one of the celestial stems as a posthumous title. Second, in the early part of the dynasty, probably following a native custom, they passed their royal throne to either a brother or a son, but not to a daughter. Third, whoever had been chosen to the throne was to be worshipped in the ancestral hall, including a wife or wives whose sons had later ascended the throne. As to the fortunes of the other children born to the sovereigns, history has given us no hint whether they were allowed special titles or political privileges. Ssŭ-ma Ch'ien has said that the brothers of the last king of the Shang dynasty who were born to the concubines of Ti I, although they were highly respected because of their personal virtues, did not seem to have any political title,

though some of them were older than the last king.

This leads to the question of whether anything like the institution of feudalism was established in the Shang dynasty. It would be strange if the members of the royal family enjoyed no special political privilege at the time.

Professor Ting Shan was one of the most learned epigraphists who had in his early days not only received a basic training in the ancient classics but also was just of an age to have benefited by the new ideas which flooded China in the May 4th Movement. He joined the Institute of History and Philology when it was first organized, and stayed in the institute for a few years before leaving for a teaching position. He continued his epigraphical studies, however, without much interruption. After the war he stayed on the mainland continuing his academic work and became specially interested in the social institutions of the Yin-Shang time. Two of his studies constituted very important contributions to an understanding of the social organization of the period.^[175] In the first essay, Ting was able to identify each of more than two hundred of these clans with a definite name, and in the following essay, he went further by trying to trace the exact location of most of the identified clans. According to Ting, each clan had a definite territory and clans were distinguishable by definite totemic symbols. He cited the ancient Manchurian custom of offering sacrifice to Heaven by Nurharchi himself with a pine pole more than thirty feet long representing the symbolic Heaven. Professor Ting considered the pole to be the survival of the ancient totemic symbol. To what extent this is accepted as true depends on the reader's own historical background. But there are at least two points which Ting Shan's essays seem to have made clear. First, there is no question that clan organization, which in Chinese is called *shih-ts'u*, existed extensively in the Yin-Shang period and must have had a totemic attachment, and, second, those clans were politically under the control of the royal house, but they also had their private farms to cultivate. It is possible that some of the powerful clans later evolved into feudalistic states. The records clearly indicate that while it was

the king's duty to keep the various clans safe and peaceful, the clans, large or small, also had the duty on the other hand to pay toll or tribute and to send draft soldiers for the defense of the dynasty. The Shang dynasty presumably monopolized the secret of bronze-casting and was able to produce the most effective weapons through this power, while the various feudal clans in northeastern China, including present Shantung, Hopei, a part of Honan and Shansi, and the northern part of Kiangsu and Anhui, were under her tutelage. In addition to this powerful material weapon, there was another power with which the royal house of Shang seemed to exercise great influence, namely the expert manipulation of the art of scapulimancy together with the ability to keep written records.

It is difficult to say how early the art of scapulimancy started. But the fact that it was associated with the earliest written records could not have been merely accidental. One must admit that in whatever ways the professional experts manipulated scapulimancy, there was always an element of mystery associated with it. Whether this element of mystery was intentionally deceitful or not, when it became generally accepted and commanded the common belief of the masses, it became itself a power. To understand the practice of Shang politics it is important to acquire some knowledge of the psychological background of those men in charge of divination who, as the records show, actually played a very significant part in decisions of importance regarding such matters as war-making and the removal of the capital.

One of the greatest contributions by Tung Tso-pin in his early study of the oracle bones—and one of the most important contributions he made in his life's research in paleography—was his discovery of what he named "diviners." It was important in many respects but here let us take up its relation to practical politics.

The original Chinese term for diviner was *chên-jên*. Tung first discovered the existence of this important office and its group of officers when he studied the first four more or less complete tortoise shells discovered in the well-known pit, the Ta-lien-k'eng, in 1929, in

the third season of Anyang digging. This discovery not only led Tung gradually to a concentrated interest in oracle bone inscriptions from the paleographic angle, but also widened his historical interest in the detailed contents of these records. By means of studying the inscriptions alone, he eventually succeeded in periodizing the records into at least five periods (see also discussion on p. 248):

1. The Wu Ting epoch, including the period from King P'an Keng (19) to Wu Ting (22).

2. The Tsu Chia (24) period, probably including the reign of King Tsu Keng (23).

3. The Lin Hsin epoch, including King Lin Hsin (25) and King Keng Ting (26).

4. The Wu I (27) period, including also T'ai Ting (28).

5. The last period, including the last two kings: Ti I (29) and Ti Hsin (30).

Tung in his 1955 publication on oracle bone records recorded that there were twenty-five *chên-jên* in the first period, eighteen in the second period, thirteen in the third period, seventeen in the fourth period, and four in the last period.^[176] Tung Tso-pin noticed with particular attention that in the last two reigns, Ti I and Ti Hsin both took the unusual step of performing the divinations personally. It seemed to indicate that these two monarchs could not trust anyone else to carry out this sacred duty of obtaining readings of divine order which bore such a close relationship to the exercise of royal power. The exact duties of this *chên-jên* might here be looked into.

Here something should be said of the technical procedures of scapulimancy or plastromancy. It is now well known that in prehistoric times the inhabitants of north China, especially the black pottery people, had already acquired a superstitious belief in scapulimancy. They would pick up the scapula of deer, cows, sheep, or other herbivorous animals and drill a series of cavities on one face of the scapula, then scorch that face to cause a crack to appear on the

other side. It is of course an interesting question whether all these technical procedures were done by one trained person alone and whether the ability to read the significance of the crack was a technician's business or a sacred profession. These same questions would apply to the historical time of the Shang dynasty when scapulimancy had already developed to a more precise stage and the materials used included tortoise shells. In the traditional accounts recorded in Chou dynasty writings, tortoises were already given a special position in the animal kingdom as possessing the ability to foretell human events. We know at present that the plastron of the tortoise was used for divination in place of the scapula, perhaps because it presented a bigger flat surface and was therefore capable of more frequent usage for divination purposes. But whether interpreting the cracks was the business of a technician or a witch doctor (or, if we want to be more respectful, a sort of religious person) is still a puzzle. We are aware of the fact that there were many special monographs devoted to their arts as late as the Han dynasty. Tung Tso-pin's discovery of the *chên-jên* does not seem to help solve this problem. In the first place one cannot be sure what the exact duty of such a person was except perhaps that he was in charge of reading the crack signs. But did he pass judgment on the crack's significance, and have the final say whether it was auspicious or not? According to circumstantial evidence, the *chên-jên* was probably the man to do this and was not the man who performed the technical duties preliminary to the application of heat to the cavity. If this assumption is accepted, then the *chên-jên* would certainly be an important political counselor who would be in a position to help the king decide state events of both political and religious importance. It is noteworthy in this connection that in Wu Ting's time, one of the most prosperous periods, there were at least twenty-five *chên-jên* whose names are known, but in later period there were far fewer.

The matters that were decided by the oracle and recorded on the bones can be grouped into the following categories: (1) sacrifices, (2) war, (3) hunting, (4) royal trips, (5) fortune of the coming ten days, (6) fortune of the day and of the night, (7) weather, (8) harvest of the

coming years, (9) disease, (10) life and death, (11) birth, (12) dreams, (13) construction, and (14) others. Lo Chên-yü, on the basis of his own collection, recognized that among the readable records which he rendered into modern Chinese the first category, consultation about sacrifices, was the most numerous.^[177] There are 538 items on his list. On the other hand, the number concerned with military expeditions was quite limited. Those comparative figures are interesting but by no means conclusive. They do signify that as far as consultations on the oracle bones are concerned, sacrificial performances to ancestors counted first and foremost, at least in Wu Ting's time. Whether his successor actually obeyed this rule or not may be open to question.

Lo's groups are by no means complete, but they may be taken as representative of the major events of great importance about which the king had to consult the oracle bones for final decision. Tung Tso-pin believed that in addition to the *chên-jên*, there was an official who recorded all the events and was probably responsible for the writing, and he called these officials the historians of the court. What is not clear, however, is the procedure by which the final decision was made. We do not know definitely whether it was the *chên-jên* who, by reading the oracle bone signs, told the king the results of the cracks, or whether the king could read the symbols himself. But according to the practice of scapulimancy, the crack signs were presumably definite symbols that could foretell whatever might happen in the particular event about which the divination was made. The real problem is: was the *chên-jên* as a professional man and trained expert in reading the crack signs in the position to have the last word about their ultimate meaning in consultation with the king? Whether the king agreed with him or not was of course another matter. It was perhaps by no means accidental that the last two kings of the Yin-Shang dynasty, notorious for their misrule, consulted the oracle bones personally most of the time. Judging by what happened in their time, one is inclined to believe that each king consulted the oracle bones personally for one reason—so that he might be able to make his own decisions.

Another important question concerning the kinship and social

organization of the royal house of the Yin-Shang dynasty is the ultimate origin of this house. There is of course quite a coherent account according to traditional documents about the genealogy and descendency of this dynasty. The oracle bone records have confirmed the major points of this historical account as has already been noted. There is, however, one basic point which only a few scholars seem to have paid much attention to. This concerns the sudden appearance of a calendar system in the Yin-Shang period and the related posthumous names of the kings of the royal family and their immediate ancestors. In the oracle bone records, the sexagenarian system was already used and seems to have been inherited from an earlier tradition (see earlier discussion in chap. 7). Epigraphists claim that they have found regular tables for the sexagenarian system of sixty names of double characters, each name combining one character from the celestial stems and another from the earthly branches. This system brings to mind the history of the early Babylonian sexagenarian system.

Turning to the ancestral roll of the royal house of the Shang dynasty, the king who first made use of the stem and branch terms was Wang Hai, whose name appeared frequently in the oracle bone records. In 1913, Lo Chên-yü first noticed this name, to which no scholar of ancient Chinese history had previously paid much attention. [178] Lo brought this discovery to the attention of Wang Kuo-wei, whose subsequent investigation of Wang Hai contributed substantially not only to the study of oracle bones but especially to clarifying the lineage of the predynastic ancestral figures. Wang Kuo-wei coordinated much scattered information which earlier scholars had been unable to understand, as will be discussed in more detail in the following chapter. [179]

While Wang Kuo-wei's contributions were much appreciated by early scholars, there is one aspect of the queries raised by these new data which very few people carried further. From a purely paleographic viewpoint, one finds that these twenty-two stem and branch terms are found at the very end of Hsü Shen's *Shuo-wen* dictionary; and what surprises a great number of paleographers most

is that, ever since Chu Chün-shen's time (nineteenth century), paleographers have found Hsü Shen's original interpretation of these twenty-two characters inconsistent with his own basic idea. As for the reason why these twenty-two characters were grouped into two categories, there seems no philological basis. Recently, Professor Chang Ping-ch'üan, who has made a systematic inquiry in this investigation, concludes with the remark that this body of characters did not originally constitute a consistent system.^[180] None of them seems to keep the original primitive meaning and practically every character is used in a borrowed sense. Before archaeological excavation started at Hsiao-t'un, some Japanese scholars had labored a great deal on the Yin-Shang sexagenarian dating system. Professor Shinjô Shinzô, whose contribution is probably well known to a number of Western scholars, is one of those who contributed most. He was one of the earliest scholars who tried to compare the Hindu, the Babylonian, and the Chinese dating systems. In China, Kuo Mo-jo was the first to propose a definite link of these three systems scattered in China, India, and Babylonia.^[181]

It may take a long time to go a step further. But from the Chinese angle, there seems to be one point that can be clarified. It concerns Wang Hai, the first among the predynastic ancestors of the Shang to make use of the stem branch (*kan-chih*) term as a personal name. Since the publication by Prof. Wang Kuo-wei, Wang Hai has been identified in scattered materials. He presumably lived in King Hsieh's time (1996-1980 B.C.) in the Hsia dynasty, about two centuries before the Babylonian King Hammurabi. According to the *Bamboo Annals*, he was supposed to have been the man who domesticated bulls, and this contribution to their welfare was well remembered among the ordinary people. However, the fact that he was given the word Hai, the last of the branch characters, as his personal name never seems to have aroused any curiosity among historians. But if we take the sexagenarian cycle as a whole, this query is obviously important since, according to historical accounts, after his time his descendants down to the founding of the Shang dynasty all assumed stem characters as their names. Was he the man who originated the sexagenarian system

of dating? Or did he in a moment of inspiration adopt a Western system of names? ^[182]

In addition to the initiation of the new system of nomenclature by Wang Hai, we also read in the oracle bone records that enormously heavy sacrifices were offered to the founder of the new system. Very frequently thirty or forty oxen were killed and sometimes as many as three hundred were offered on one sacrificial occasion to this Wang Hai. While the story that he was the man who domesticated wild bulls remains to be authenticated, the heavy tribute paid by his descendants in these offerings could not have taken place without a reason. From the time of Wang Hai onward to the last king of the dynasty, this unique system of naming each generation in power by a celestial stem name was used consistently. This is certainly historically significant. But what makes it extraordinary is that this system was never followed afterwards. A number of theories have been created to interpret this particular feature of the Yin-Shang dynasty, but since we know the historical facts of the Yin-Shang dynasty so little and its social organization even less, none of the theories seems to be sufficiently comprehensive.

Social anthropologists, basing their study on relationship terms, claim to have discovered that while there are indeed definite terms for *father*, *mother*, *elder brother*, *grandfather*, and *grandmother* in the oracle bone inscriptions, there are no such terms as *uncle*, *aunt*, *nephew*, *niece*, or *younger brother*. From these discoveries they have deduced a great number of interesting theories. One of these is that while the royal family does have a family name, which according to Ssŭ-ma Ch'ien is Tzu, the royal Tzu family could pass the throne either to the younger brothers or to the second generation, usually to the ruler's own son. Modern ethnologists who have given some consideration to the above facts would like to interpret the royal family tree in a new light. They argue that since in the oracle bone vocabulary the younger generation would call all members of the older male generation *father*, the heir to the throne, if he was of the younger generation, would not necessarily be the son of the ruler. He might be any of the sons of the ruler's

sisters or brothers, since all of them called him *father* whether he actually was or not. The author, however, does agree with some of the theoreticians that totemism played an important role in regulating social functions, and there may have been complicated rules governing exogamy and endogamy. But our paleographic research has not yet reached the stage to read oracle bone characters maturely. There are so many characters whose meanings are obscure. We know in fact very little about family, clan, or totemism of this period. There is no question that very soon there might be fruitful research along this line.

拾叁·谱系、贞人和亲族关系

图52的世系表录自董作宾1952年的著作，译成英文时省去了某些细节。^[172]此表分四部分：远祖先公、近祖先公、先王前期和先王后期。前两部分为商朝建立前的祖先，后两部分属王朝时期。从王族的创建者算起，王朝前的祖先共有14名。伟大的天乙——商朝的建立者，属第十五代。尽管古代的记载不尽相同，但在司马迁的传记式记载中，从天乙开始的继任者都有清楚交代。令人称奇的是，在地下埋藏了三千多年且完全不为学术界所知的甲骨文在19世纪末被发现后，证实了司马迁所记载的商代先公先王的名单惊人地准确。当然，并不是说甲骨记录与两千多年前早期史学家的记载之间毫无差别，只是，即使存在某些出入，也都显得无关紧要了，因为不仅是大多数先公先王的名字，而且连继位顺序几乎都得到了确证。这一重要的历史依据在本书中已数次提及，我在此重叙却是另有目的。

过去不少学者曾就商王的名字指出过一个具有独特意义的事实。从商王朝前的祖先上甲微（近祖先公第一名）起，每一个王位继任者都有一个与十天干——甲、乙、丙、丁、戊、己、庚、辛、壬、癸——有关的名字（参看本书第7章的有关论述）。商王命名法的这一特征近来引起了学者们的极大注意。一种看法是，自从殷商历法开始采用六十干支记日后，商王室大概有以生日那天的干支中的天干为新生儿命名的习惯。另一种当下更流行的意见认为，是以去世当天的天干为君王的谥号，理由是从殷商时代的历史记载看，似乎当时在世者名字中并无天干。显然后一种意见依据的理由更令人信服，因为给死去的人封谥号的传统一直延续到帝国时代结束。当然还有其他的见解将会在后面介绍。

这个世系表还揭示了一些意义重大的社会风俗。从天乙建商到最后—任统治者，共有18代30位王先后统治这个王国。所以，有不少王是兄终弟及，如表所示，18代中有9代是兄传弟。最年幼的兄弟把王位传给自己的儿子这一点也非常醒目。然而，应注意到，最后四代王似乎都无兄弟，这是否与历史事实相符尚无定论。倘若不符，又为什么会有这种变化呢？

王国维是研究古代经典最杰出的学者之一，他提出的理论是，周朝的建立者在两方面完成了巨大的政治与社会改革。^[173]—一是长子继位制的确立和兄终弟及制的废除，这消除了家族纠纷的一大根源。王国维

认为，长子继位制的确立有助于平息由家族和家庭纠纷造成的社会混乱状态，稳定古代中国的政治制度。二是婴儿随母亲的身份不同社会地位也不同，这取决于它是第一位妻子还是妾所生。这种社会分层导致家庭结构进一步细化。王国维对于上述变革的结论，不像他在古文字学上的贡献，并未得到普遍的支持。例如，他的一位挚友陈寅恪教授就持不同意见，并有充足的历史依据。^[174]陈认为殷商后期已开始实行长子继位制。至于第一位妻子和妾生的孩子社会地位的差异，他对其最终的社会意义也有些怀疑。

陈教授的意见引导读者再考查殷商王朝世系表，特别是最后五位王：商朝第26位王康丁，继承了他兄长廪辛（第25位王）的王位，但据司马迁及其他史书记载，从此开始向后五代或四位继位者，直到最后一任王帝辛，王位一直是父传子。追溯其经过是，康丁死后武乙即位，为商朝第27位王；武乙死后，太丁继位为第28位王；太丁死后，帝乙继位为第29位王；帝乙死后，帝辛继位为第30位王——都是父子相承。

令人好奇的问题自然是：殷商最后四王是否都只有一个男性继承人？还是在康丁时王位继承制发生了变化？史载帝乙（第29位王）至少有两个儿子。司马迁明确记载帝辛不是帝乙的长子，但因他是第一个妻子所生，所以有当王储的优先权。这就是微子虽是长子又德才兼备却不能继承王位的原因。换句话说，生母的地位高，在后期是王位继承制的先决条件。这个制度在早期显然不可能存在，若存在，早期数代的王位就不会由异母兄弟继承了。

无论后代的史学家对继位制还会有什么见解，学者们必须正视商王室某些明显的特征。第一，他们每人都用天干中的一个字为谥号。第二，商代早期可能根据当地习俗，把王位传给兄弟或儿子，但不传给女儿。第三，无论谁继承王位，都在宗庙里享受祭祀，包括他的有儿子继承王位的妻子，可能是一个或多个。至于王的其他儿子的命运如何，是否允许他们有特殊的封号或政治特权，没有历史记载。据司马迁记载，商朝帝乙的妾生的儿子，尽管德行很好受人尊重，但似乎没有任何政治封号，虽然他们中有的比最后一个王年龄还大。

这就提出一个问题，商朝是否已有类似封建制的制度。封建制度下若王室家族成员不享有特殊的政治权力，会显得很奇怪。

丁山教授是位博学的金石学家，他不仅自幼接受古代典籍的基本训练，而且正值青年时又得益于席卷中国的五四运动新思想的影响。史语

所成立时，他就加入了，工作了几年后离开去任教。但他从未间断对古文字的研究。战后，他留在大陆继续学术工作，并对殷商的社会制度特别感兴趣。他的两篇论著对理解殷商社会组织作出了非常重要的贡献。^[175]在第一篇论著中，丁考证出了200多个氏族的名字。在第二篇论著中，他进一步尝试追溯大多数已确定名字的氏族的确切所在地。丁认为，每一氏族都有确定的领地，也有各自特定的图腾。他引用努尔哈赤以象征天的一根30多英尺长的松柱祭天这一古代满人习俗为例，认为柱子是由古代图腾遗留下来的。对该解释的接受程度取决于读者自身的历史背景。但至少有两点在丁山的论著中似乎已得到澄清。一是所谓的氏族在殷商时就已广泛存在，而且必定有了各自的图腾。其二是这些氏族在政治上受王室管辖，但有自己的耕地，一些强大的氏族有可能后来逐渐演变成为封建王国。记载清楚表明，保护各个氏族的安全与和平是王的责任，而氏族无论大小，都有纳税或进贡及派送士兵护卫王朝的义务。商王室可能垄断了青铜铸造技术的秘密，并通过这种垄断权制造出最有效的武器。中国东北，包括今天的山东、河北、河南和山西的部分地区，及江苏、安徽北部的各封建氏族，都在它的保护范围内。除这种有力的青铜武器外，商王室还有一种权力可以发挥强大的影响，即对骨卜技术的熟练掌握和保留书写记录的能力。

很难确切说出骨卜术始于何时。但它与最早的书写记录有联系的事实，说明其产生不是偶然的。必须承认，专业人员无论用什么方法操作骨卜术，总会有与之相联系的神秘因素。不管这神秘因素是否有意欺骗，当它为大众接受并要求大众共同信仰的时候，其本身就成为一种力量。因此，要了解商代政治情况，了解那些实际负责占卜的人的心理是重要的。如卜辞所示，这些人在关于战争和迁都等重大事件的决策中扮演了异常重要的角色。

董作宾在甲骨文早期研究中最大的贡献之一，也是他一生古文字研究最主要的成就之一，是他所谓的“贞人”的发现。其重要性是多方面的，但在这里我要谈的是它与现实政治的直接关系。

古语称占卜者为“贞人”。董作宾在研究1929年安阳第三次发掘中著名的“大连坑”出土的“大龟四版”时，第一次发现占卜机构及其官员的存在。这一发现使董作宾逐渐专注于从古文字的角度研究甲骨文，并扩大了他在研究卜辞的详细内容时的历史兴趣。他仅凭借对卜辞的研究最终成功将这些甲骨文分为五期（另见249页的讨论）：

1. 武丁时期，包括从盘庚（19）到武丁（22）的时期；

2. 祖甲（24）时期，大概包括了祖庚（23）在位的时期；
3. 廪辛时期，包括廪辛（25）和康丁（26）；
4. 武乙（27）时期，也包括太丁（28）；
5. 最后期，包括最后两个王，帝乙（29）和帝辛（30）。

董在1955年发表的关于甲骨文的著作中称，第一期有25个贞人，第二期有18个，第三期有13个，第四期有17个，第五期有4个。^[176]董作宾特别注意到，最后两个王帝乙和帝辛都亲自参加贞卜，这一举动非同寻常。这似乎表明，这两位王不信任其他任何人来执行这种神圣职责——接受与行使王权密切相关的神谕。由此可以看出贞人的具体职责。

在此需要说说使用肩胛骨或龟甲占卜的技术程序。众所周知，史前华北的居民，尤其是黑陶文化的人，已有用肩胛骨占卜的迷信观念。他们常用鹿、牛、羊或其他食草动物的肩胛骨，在其表面钻许多凹窝，然后在这一面烧灼使另一面呈现裂纹。全部技术程序是否仅由一个受过专门训练的人操作？解读裂纹意义的是技术人员还是神职人员？这当然是很有趣的问题。同样的问题亦适用于商朝历史时期，这时骨卜已发展到一个更精细的阶段，占卜材料也已包括了龟壳。据周朝的古籍记载，动物王国中的乌龟已被赋予特殊地位，人们认为它拥有预言人类事务的能力。现在我们知道，用龟腹甲代替肩胛骨占卜，可能因它有一个较大的平面有利于常作占卜之用。但解释龟的裂兆是技师的事还是专职巫师（或可尊称为神职人员）的事，仍是一个谜。我们知道直至汉代还有不少有关占卜技术的专著。董作宾发现了贞人，似乎对解决这个问题没有帮助。首先，我们不知道这类人除负责读兆纹外的具体任务是什么。他们是宣判兆纹意义的人吗？他们对吉凶有最后发言权吗？从旁证看，贞人大概是负责这类事务的人，而不是负责加热凹窝前的技术事务的人。若这个假定能成立，贞人当然是个重要的政治顾问，其职务是帮助王决定政治和宗教方面的重大国事。在这一方面值得注意的是，在最繁荣的武丁时期，至少有25个有名字的贞人，但后来就远没有这么多。

通过占卜决定并记录在卜骨上的事件可分为以下几类：(1) 献祭；(2) 战争；(3) 田猎；(4) 王的出游；(5) 卜旬；(6) 卜夕；(7) 气象；(8) 收成；(9) 疾病；(10) 生死；(11) 生育；(12) 梦幻；(13) 建筑；(14) 其他。罗振玉根据自己收集的甲骨，辨认出所有得以考释的条目中第一类问祭祀的数量最多。^[177]在他的编目中共有538条。另外，有关征伐的条目极少。这些比较数字很有趣，但绝不是结论性的。当然它们确实表

明，就甲骨卜辞中的问事而论，对祖先的献祭仪式最为重要，至少在武丁时是如此。他的继承人是否遵循这个规定，还可进行讨论。

罗振玉的分类并不完善，但可代表王通过问卜最后决定的主要大事。董作宾相信，除贞人外，还有一位记录所有事件并负责书写的官员，他将这类人称为宫廷史官。但不清楚最后决定是如何作出的。我们不知道是贞人将甲骨兆纹的结果转告给王，还是王亲自视兆以判吉凶。根据肩胛骨占卜的规则，兆纹应该是用来预言被卜问之事可能结果的标志。问题的实质是，贞人作为受过训练能判读兆坼的专业人员，在与王共视兆坼时对兆判吉凶有最后发言权吗？当然，国王是否认同是另一回事。因而，殷商最后两个以苛政闻名的王在大多数情况下亲自问卜绝不是偶然的。根据他们当政时发生的事判断，人们更愿意相信这两个王亲自问卜的唯一理由是：他们可以依自己的意志作决定。

关于殷商王室的亲族关系及社会组织的另一重要问题是王室的最早起源。当然古籍上对商朝的世系和后世有连贯的记述；如前所述，甲骨刻辞证实了历史记载的主要方面。但有一基本问题，似乎只有几个学者注意到，即殷商历法制度的突然出现，以及与此相关的王及其近祖的谥号的出现。甲骨刻辞中已出现了六十干支，并有可能是从更早的传统中继承下来的（见第7章）。古文字学者称，发现了用六十个干支双合字（每一双合字含一天干字，一地支字）组成的干支表，这使人们想起古巴比伦六十进位制的历史。

再谈商王室的祖先名册。首先用干支字命名的是王亥，他的名字在甲骨卜辞中屡次出现。1913年罗振玉第一个注意到这个名字，此前研究古代中国历史的学者都没有注意到。^[178]罗振玉的发现引起了王国维的关注，王国维后来的研究，不仅对甲骨学，而且对厘清商王朝建立前先祖的世系作出了重大的贡献。他整理了许多从前学者们未能理解的散乱资料，这将在下一章详细论及。^[179]

王国维的贡献获得了早期学者的赞许，但由这批新资料衍生出的有一类问题却罕有人作进一步的探讨。单纯从古文字学的观点看，人们发现许慎《说文》的最后部分中有这22个干支字。使不少学者吃惊的是，自19世纪的朱骏声以来，古文字学家发现许慎对这22个字的原有注释与他自己的基本思想是矛盾的。至于将这些字分为两组的原因，似乎没有语言学的基础。最近张秉权教授对这一研究予以系统的考察，得出结论：这些字原本并不构成一个连贯的体系。^[180]这些字无一保持了本义，实际上用的都是借义。小屯考古发掘前，一些日本学者花费了不少

精力研究殷商六十干支的记日制度。新城新造教授是对此作出最多贡献者之一，他的贡献大概西方不少学者都知道。他是最早试图比较印度、巴比伦和中国的记日制度的学者之一。在中国，郭沫若首先在中国、印度、巴比伦三种记日制度间建立了确定的联系。^[181]

再迈进一步可能要花费很长时期。但从中国的角度看，似乎有一点可以澄清。王亥是商朝建立前先祖中第一个使用干支字命名的。自从王国维教授的文章发表后，王亥已被人们从散乱的材料中识别出来。他大概生活于夏王桀时（公元前1996—前1980年），比巴比伦国王汉谟拉比约早200年。据《竹书纪年》推测，他驯养了牛，这一造福民生的贡献为普通民众所牢记。但用地支中最后一个字为他命名似乎从未引起过历史学家的兴趣。如果我们把六十干支作为一整体，这一问题显然很重要。史载自王亥以后直到商朝建立，他的后代都用天干命名。他是六十干支记日法的创始人吗？还是他因一时受到启发，采用了一套西方的命名法？^[182]

除从王亥开始的有系统的新命名制外，我们在甲骨卜辞中还读到，为这位新制度的创建者举办的献牲祭祀极其隆重：祭祀王亥时一次常用三四十头牛，有时多达300头。尽管他驯养野牛的故事仍有待证实，但他的后裔在祭祀他时给以丰盛的贡物不可能没有原因。从王亥起到商朝最后一个王，用天干给王命名这种独一无二的制度一直未变。这当然有历史意义。奇怪的是这个制度以后再没继续下去。解释这一特征的说法很多，但因对殷商历史事实了解太少，对其社会组织知道得更少，所以几乎没有一种是全面的。

社会人类学家根据他们对亲属称谓的研究，声称他们在甲骨文中发现，父、母、兄、祖父、祖母已有确定的称谓，但没有叔、婶、侄儿、侄女和弟的称谓。据此，他们推演出了不少有趣的论说。其中之一是王室确有姓氏，据司马迁记载姓“子”，子姓王室可以把王位传给弟弟或下一代，下一代继任者一般是王的儿子。现代民族学者考虑到上述事实，以一种新观点解释王室世系。他们认为，因为在甲骨文中年轻一代称老一代男性成员为父，所以继位者若为年轻一代的，则他不一定是统治者的儿子，他可能是统治者姐妹兄弟的儿子中的任何一人，因为他们都称王为父，不管王实际上是不是他的父亲。虽然笔者确实同意一些理论家的看法，认为图腾制在调整社会方面中发挥了重要作用，而且可能存在管理族内婚及族外婚的复杂制度。但我们的古文字学研究还未达到可以熟练通读甲骨文的阶段，还有许多我们不明意义的字。实际上，我们对

这个时期的家庭、氏族或图腾几乎没有了解。毋庸置疑，这方面不久将会有丰富的研究成果问世。

14. Worship of Ancestors

and Other Spirits

One Chinese custom that has always impressed foreigners is ancestor worship, a custom which originated thousands of years before Confucius yet gained special distinction through his teaching. In the Anyang excavations, the most astonishing discoveries aside from the oracle bones were found mainly from the royal tombs.

In the tomb area the field party discovered that in the Yin-Shang dynasty an enormous amount of human labor was spent on building gigantic tombs to bury the royal dead; royal fortunes were also buried; and, what is most amazing, a great number of human beings were sacrificed in each of these tombs. These elaborate burials were no doubt the results of a long historical evolution. Field archaeologists have found that as early as the early neolithic age a dead body was buried accompanied by useful articles which indicated both the dead man's rank and his fortune.

As has been mentioned in the preceding chapter, when the oracle bones first became known to the learned world and long before field archaeology had started, Lo Chên-yü, one of the pioneers in the study of these ancient scripts, first called to the attention of Wang Kuo-wei that in these new, strange records, he had discovered a strange name, Wang Hai, that is, King Hai. This name, previously unknown to Chinese historians, seemed to appear in the oracle bone records very often and Wang Kuo-wei made a concentrated study of this problem. [183] Wang succeeded in identifying Wang Hai's name in a number of books which ordinary historians had usually considered occult, such as the *Shan Hai Ching*, the *Bamboo Annals* and Ch'ü Yuan's *T'ien Wen*. In regular histories like the *Shih Chi* and *Han Shu*, his name was usually miswritten. The *Shih Chi* gives his name as Cheng and the *Han Shu* gives still another name. Wang Kuo-wei succeeded in clarifying all

these points and identifying these names as Wang Hai. Since Professor Wang's introductory work, Wang Hai has been recognized as the father of Shang Chia Wei, the earliest of the later ancestors of the house of Shang, whose name was also made clear from Wang Kuo-wei's research. From Shang Chia Wei to the founder of the royal Shang dynasty, Ch'êng Tang or T'ien I, there are five more names on the ancestral roll: Pao Ting, Pao I, Pao Ping, Chu Jen, and Chu Kuei. When the later kings performed their rituals and offered sacrifice to the ancestor on more important occasions, Shang Chia Wei was usually named as the first person on the roll, a custom which continued to the last king of the dynasty.

Tung Tso-pin devoted a large portion of his *Yin-li-p'u* to the records concerning the various rituals followed in performing sacrificial offerings to the ancestors. He divided them into at least five main types, as already discussed in chapter 7. Before we go into these five types, there are some general characteristics shared in common by all the rituals.

Since each ancestor had a posthumous title which included a celestial stem, it was the custom of the Yin-Shang royal house to offer a special sacrifice to the ancestor with the posthumous title Chia on the Chia day, I on the I day, and so forth. As there are six Chia days in a sexagenarian cycle, offerings to six ancestors with the Chia posthumous titles can be made in the same cycle. Tung Tso-pin verified that this was true in Ti I's and Ti Hsin's period at least. Lo Chên-yü and Wang Kuo-wei had both noticed half a century ago that sacrificial offerings to ancestors were made on the day when the celestial stem corresponded with the king's name. Some scholars have found exceptions, but the exceptions are so few that they cannot disprove the rule.

Another general characteristic is that oracles had to be consulted before the ritual took place, sometimes even two or three days before the event. If the ritual included the sacrifice of livestock, sometimes the oracles were consulted regarding the requisite number. In the reign of the last two kings, the five main types of rituals known as

Yung, I, Chi, Kuan, and Hsieh sacrifices were performed on regular dates and in a definite sequence. The Yung sacrifice was accompanied by the beating of drums, while in the I sacrifice, feather dancing was necessary. It is not definitely known what kind of feather was used, but some idea of the Yin-Shang drum was obtained from the ruins of Yin. In the Chi sacrifice, according to the interpretation of our paleographer, meats were regularly offered, and in the Kuan sacrifice, grains constituted the main offering while the Hsieh sacrifice combined various elements.

Tung Tso-pin, in his *Yin-li-p'u*, was able to compile the recorded rituals in the reigns of Kings Tsu Chia, Ti I, and Ti Hsin on a chronological basis and to tabulate these data in chronological order. He showed that in the reigns of the last two kings, for instance, it took about 360 days to complete the offerings to the individual ancestors. The rules which they had to obey seem to have been the following.

The Yung ritual and the I ritual as well as the other three could not be performed on the same day even for the same ancestor. There was, however, a definite difference among the five types in their sequence. The cycles of the first two rituals, Yung and I, had to be completed separately in two different seasons, even if the sacrifices were offered to different individual ancestors; in other words, it took 110 days to complete the Yung rituals for the ancestor and another 110 days to complete the cycle of the I ritual; while the other three rituals, Chi, Kuan, and Hsieh, which could be overlapped, might together take only 130 days. These five ritual systems would, then, altogether consume 350 days or nearly a calendar year. In addition, there was an introductory 10-day period during which the complete ancestral roll of individual ancestors to be worshipped was reviewed in the ancestral hall.

In the oracle bone inscriptions, the character *ssŭ* was used sometimes for *year* rather than *nien*, which according to Tung Tso-pin did not occur until the time of Ti I and Ti Hsin. It was during the reign of these two kings that the rituals of ancestor worship individually and collectively took nearly a calendar year to complete a cycle. If we

trace back all the individual ritual systems step by step to the earlier period, we find a great deal of change. The greatest change according to Tung Tso-pin occurred in the reign of Tsu Chia. Before Tsu Chia's era, the ritualistic performance was much more irregular and a great many other spirits besides ancestors were also given sacrificial offerings. But before we go into these details, the reader should have some idea about the five main types of rituals.

Here we must pay due acknowledgment to the great contribution of Tung Tso-pin, who has done more in interpreting these than any other scholar. When Lo Chên-yü first deciphered the oracle bone inscriptions, he merely recognized that certain terms indicated ritualistic offerings without having the least idea what these rituals were. Tung was not only one of the first scholars who definitely differentiated the nature and contents of the various ritual performances; he took the further step of putting these originally confused records into the orderly sequence in which they took place. In the case of the three kings mentioned above, namely Tsu Chia, Ti I, and Ti Hsin, the records are comparatively well preserved. Tung was able to gather the related records together and to chronicle the various events which took place during their reigns.

Let us take one example for illustration. This occurred in the first year of Ti I's era. The Yung sacrifice, starting in the fourth month, was first offered to the earliest ancestor Shang Chia (namely, Shang Chia Wei, the son of Wang Hai), on the day Chia Hsü; it was then followed by a similar sacrifice to T'ai Chia on the day Chia Wu, which was, in turn, followed by a sacrifice to Hsiao Chia on the day Chia Ch'en. These latter two both occurred in the fifth month. Then, in the sixth month, Yung was offered to Chien Chia (Ho T'an Chia) on the day Chia Tzŭ, Chiang Chia (Wo Chia) on the day Chia Hsü, Hu Chia (Yang Chia) on the day Chia Shen. Then in the seventh month, there was one more Yung sacrifice offered to Tsu Chia. So, in this year, it took almost four months to complete the subcycle of the Yung sacrifice offered to the various ancestors whose posthumous titles bore the Chia name. To recapitulate, in Ti I's time, there were seven ancestors with

Chia as posthumous titles who were offered the Yung sacrifice on the Chia days. The Yung sacrifice was followed in time by the I sacrifice. These same ancestors were given the I sacrifice in the eighth, ninth, tenth, and eleventh months. Then in the twelfth month, the other three sacrifices—Chi, Kuan, and Hsieh—were given in the same period, although not on the same day. These lasted from the twelfth month to the third month of the second year of the king's reign.

The instances cited above concern only the ancestors with the posthumous name Chia. Other ancestors with different *kan-chih* posthumous names would receive their respective sacrificial offerings on the intervening days whose celestial stem corresponded with their posthumous titles. In fact there was almost always some kind of sacrificial ritual that had to be performed every day of the year. It brings to mind the old Chinese custom which still continued in the early days of the Republic that every day a joss-stick had to be burned before the ancestral tablet. In the case of Shang worship, however, a sacrifice was offered to the individual ancestor, while in the custom surviving among the people in modern times the burning of the joss-stick was offered to the ancestors collectively. Tung Tso-pin has also definitely established a *ssü* as a year in the time of Ti I for the simple reason that a complete cycle of the five fundamental sacrificial offerings at that time actually took a year to complete as described above.

The ritual performance of the various sacrificial offerings included some important details that must be mentioned. One of these is music. The Yung sacrifice as the initial ceremony of the annual ancestral worship was, according to the interpretation of Tung Tso-pin, dominated by drum music regarding which, very unfortunately we have, of course, no data to supplement our conception of this important sacrificial event. But in the excavation of HPKM 1217, the remains of a complete drum with the original frame on which it was hung was discovered in one of the tomb passages, accompanied by musical stones. It is possible that the drum used in the Yung sacrifice may have resembled the one excavated at HPKM 1217 (Figs. 53).

Tung Tso-pin also observed that in all these five rituals, whatever the difference in the offering of the actual sacrifice might be, wine was always used on every occasion. In the case of the Yung sacrifice, we know that at least two elements were definitely present, namely, music and wine. In addition to the musical stones, other musical instruments such as the ocarina, pan-pipes, or even some kind of stringed instrument may have been used. But it is impossible to say whether the entire ceremony of the Yung sacrifice was accompanied by music. It is, however, important to note that this sacrifice initiated the annual cycle of rituals of worship to the whole series of individual ancestors.

53 Reconstruction of drum found in HPKM 1217: lateral and top views

HPKM1217 出土的鼓的复原图：鼓身、上部

Tung concluded that feather dancing was the essential feature of the I sacrifice, accompanied also by wine offering. Judging by what survived in the Chou dynasty, it may be inferred that the number of dancers varied according to the rank of the spirits—the higher the rank, the greater the number. As to what kind of feathers might have been used, nothing is known. But archaeologists have found the bones of the peacock at Anyang. Might it be possible that peacock feathers were used?

The third and fourth rituals, the Chi and Kuan sacrifices, definitely involved offerings of food. In the Chi ritual meat was offered. Although what meat is not certain, it may have included mutton, beef, pork, or even dog meat. The Kuan sacrifice was a sort of thanksgiving; the offering consisted of grains—millets or perhaps even wheat and rice. In the study of Shang bronze implements and

ceramics, it has been noticed that most of the bronze vessels and some of the ceramics were made for sacrificial offerings. Meat and grains would have been offered in such receptacles as the *ting* and *chia*-tripods, the *kuei*-vessels, etc. As for wine containers, these are numerous, such as the *ku*, *chüeh*, *chih*, and so forth. All these bronzes and some of the potteries may have been used in the Chi and Kuan sacrificial rituals.

The exact nature of the last of the five sacrificial rituals, the Hsieh sacrifice, is still difficult to determine. Possibly it was something like the celebration of the traditional New Year's Day before the Republic, that is, it combined the essential elements of the other four sacrificial rituals, namely, the offering of meat and grains accompanied by music and dance on a grand scale to all the ancestors on the ancestral roll.

As pointed out above, the schedule of sacrificial offerings to individual ancestors was first standardized in King Tsu Chia's time. The detailed procedure and the other details were strictly followed by Ti I and Ti Hsin. While this schedule included the essential rituals developed in the latter period of the Yin-Shang dynasty, there were other aspects to the spiritual lives of the people as well as of the royal house. For instance, the records include sacrifices to a number of other spirits such as those of the five directions—east, west, south, north, and central—and of some rivers and probably also some mountains, as well as a number of other spirits. What has attracted the particular attention of students of comparative religion is the use of the term *ti*, which has been taken by some to have meant a supreme spirit, but the interpretation of this term still remains debatable.

There were also certain refinements of the sacrificial ceremonies such as *liao*, to put the offerings in fire, *chen*, to put the offerings in water, and *mai*, to bury the offerings alive.

The oracle bone records, according to Kunio Shima, included one hundred items of sacrificial offerings to Wang Hai.^[184] The rulers of the dynasty would pray to his spirit with sometimes as many as three hundred oxen. In this particular case, most sacrifices were done by the *liao* process. Only rarely were the Yung sacrifice and the I sacrifice

offered to the founder of this house. It is remarkable to note that although Wang Hai was the father of Shang Chia Wei, he was not included in the list of the regular rituals, especially in the time of Ti I and Ti Hsin. The list was almost always headed by Shang Chia Wei.

Wine offering also deserves some mention. Wine offering was formerly interpreted as a special service to the ancestors, but now it is generally agreed that wine accompanied almost all the sacrifices, including the special ones.

Besides *liao*, *chen*, and *mai* sacrificial usages, there were a number of others that are mentioned in oracle bone records but not understood by paleographers. The case of human sacrifice, mentioned several times before, should not be omitted here. If we cannot give any details, it is because it is difficult to say whether such sacrifices were made regularly or only occasionally, for instance, in wartime. But the number of human sacrifices uncovered in the royal tombs seems to indicate that it was a regular practice. However, whether the victims were captives or slaves, or just subordinates, or all three categories is impossible to say. The author is strongly inclined to believe that it was a custom introduced through contact with the early Sumerians from whom early China probably also learned the wheeled carriage, some aspects of the technology of casting bronze, and something of astrological sciences.

拾肆．祖先及神灵崇拜

中国习俗中一直以来使外国人印象最深的是祖先崇拜。它的起源比万世先师孔子更早几千年。在安阳发掘中，除卜骨外，最令人惊异的发现主要是在王陵中。

田野考古队发现，殷商时为埋葬王室死者营建巨墓耗费了大量人力，陪葬的还有王室财宝。然而，最使人触目惊心的是，每座墓中还有许多人作为牺牲殉葬。这种精心设计的埋葬无疑是长期演变的结果。田野考古者发现，早在新石器时代早期，埋葬死者时就有实用器具随葬，这些随葬品显示了死者的地位和财富。

如前章所述，在学术界首次知晓甲骨直至田野考古开始之间这段很长的时间里，甲骨文研究的先行者罗振玉在这些新奇记录中发现了一个奇特的名字王亥，即国王亥。这也引起了王国维的注意。以前的中国历史学家所不知道的这个名字，似乎在甲骨卜辞中常常出现，而王国维对这个问题作了专门研究。^[183]王国维从一般史学家认为玄奥的《山海经》、《竹书纪年》和屈原的《天问》等书中辨认出了王亥的名字。

《史记》与《汉书》之类的正史通常把王亥的名字写错了，《史记》中写成“振”，而《汉书》又写成另一个名字。王国维澄清了这些疑点，并证实这些名字实为王亥。正是由于王教授开端性的研究，才得知王亥是商室最早的近祖先公上甲微的父亲，王国维的研究也弄清了上甲微的名字。从上甲微到商王朝建立者成汤（天乙），先公表上还有报丁、报乙、报丙、主壬和主癸。当后代的王在重要场合祭祀祖先时，上甲微常列在第一名，这一习俗一直延续到商朝最后一个王。

在《殷历谱》中，董作宾用大量篇幅论述了各种祭祀祖先的仪式，他把这些分为五种主要形式，如第7章所述。在我们研究这五种形式前，先谈一下祭祀共有的一般特征。

每个祖先死后的谥号中都有天干中一个字，因此商王对祖先举行祭祀供奉牺牲，谥号带甲字的在甲日，带乙字的在乙日，以此类推，这是王室的习俗。因在六十干支中有六个甲日，一个周期就可以给六位带甲字的祖先祭祀一次。董作宾证实，起码在帝乙、帝辛时如此。罗振玉和王国维在半个世纪前就注意到给祖先祭祀那天的天干字与国王名字相一致。一些学者也发现了例外，但这种例外太少，不足推翻这条规则。

另一特征是祭祀仪式举行前必须占卜，有时甚至在前两三天进行。若献祭牲畜，有时还需卜问用牲数。在最后两王时，名为𠄎、翌、祭、

𠄎、𠄎的五种祭祀按一定顺序在固定的日子举行。伴随“𠄎”祭的是击鼓，“翌”祭时则要有羽毛舞。使用什么羽毛尚未确知，但关于鼓的一些概况已在殷墟中获得。在“祭”的仪式中，据古文字学家解释，一般

供奉肉。“**𠄎**”祭供奉谷物。“**𠄎**”祭则融合了各种元素。

董作宾在《殷历谱》中汇编了祖甲、帝乙、帝辛时的祭祀仪式，并把这些资料依年代表列表。例如，他告诉我们在最后两个王时，约用360天完成对每个祖先的祭祀。他们似乎遵循下列原则。

𠄎、翌和其他三种仪式，即使是对同一祖先，也不能在同一天举行。这五种祭祀的顺序有区别。即使是祭祀不同的祖先，前两种仪式，𠄎、翌，也必须在两个不同祀季分别完成。换句话说，完成一轮对祖先的“𠄎”祭要用110天，完成一轮“翌”祭需要再用110天，而剩下的祭、

𠄎、𠄎三种仪式可交叠进行，共用130天。完成五种仪式共用350天或约一历法年。另外，有10天的准备期，把全部接受祭祀的祖先的名册供奉在宗庙内。

甲骨文中的年有时用“祀”代表，而不用“年”字。董作宾认为直到帝乙、帝辛时才开始用“年”字。正是在这时，单独和共同祭祀祖先大约要用一历法年才能完成一轮。若我们一步步追溯到早期所有对单个祖先的祭祀制度，就会发现其间发生了很大变化。据董作宾研究，最大的变化发生在祖甲时期。祖甲以前，祭祀的形式并不规则，除祖先外还要向不少鬼神供奉牺牲品。但在我们详细谈论这些之前，读者应对五种主要祭祀形式有一个大概的了解。

在此我们应当感谢董作宾的重大贡献，他对解读这些祭祀所做的比其他任何学者都多。罗振玉首次破译甲骨文时，仅认出某些字表示献祭习俗，但并不知道是什么样的习俗。董不仅是第一个明确区分各种祭祀的性质和内容的学者，而且进一步把这些原本混杂的记述按它们发生的时间依次整理。关于上面提到的祖甲、帝乙、帝辛，记载保存得相对完好。董能够把相关的卜辞汇集起来，并将这几个统治时期发生的各类事件按年代整编。

让我们举一例加以说明。发生在帝乙第一年四月的第一次𠄎祭，在甲戌这天祭祀上甲（上甲微，即王亥之子）。接下来甲午日为太甲举行

类似的祭祀，接着在甲辰日给小甲供奉牺牲，甲午、甲辰的祭祀都在五月。六月给戊甲（河亶甲）在甲子日举行丕祭，甲戌日祭羌甲（沃甲），甲申日祭虎甲（阳甲）。七月再次给祖甲举行丕祭。所以，这一年几乎用了四个月才完成给谥号中带“甲”字的各祖先的一轮丕祭。概括地说，在帝乙时有七个祖先的名字带甲字，在天干为甲的那天给他们进行丕祭。丕之后是翌，在八、九、十、十一月给这些祖先进行翌祭。接

着在十二月，另外三种献祭——祭、**賁**、**𩇑**，虽不在同一天却在同一时期进行，即从十二月延续至次年三月。

上例仅涉及其谥号带“甲”字的祖先。谥号中带有其他干支的祖先，在与他们谥号中天干相符的日子，接受各种献祭。实际上一年中几乎每天都会举行某种祭祀仪式。这令人想起民国初年仍存在的一项中国古老习俗：每天在祖先牌位前要烧一炷香。商朝的祖先崇拜中，献祭是供奉给一个祖先的，而现代留存在老百姓中的习俗是给所有祖先共烧一炷香。董作宾也明确指出，帝乙时“祀”作为“年”的简单原因是，如上所述，那时完成一轮五种主要祭祀的时间恰好是一年。

举行各种献祭仪式时有一些重要细节必须提及。其中之一是音乐。丕是每年祭拜祖先开始的仪式，据董作宾的解释，它以鼓声为主。遗憾的是，当然，我们没有资料可以丰富对这一重要献祭事件的构想。但发掘1217号大墓时，于墓道中发现一鼓架及架上挂着的一只完整的鼓的遗迹。一同出土的还有石磬。丕祭用的鼓可能与1217号墓中出土的那只相似（图53）。董作宾还注意到，在这五种仪式中，无论供奉的牺牲品有什么不同，酒都是不可或缺的。就丕祭来说，我们知道至少要有两种元素，即音乐和酒。除石磬外，可能还有埙、笙或某种弦乐器。目前还不能肯定是否丕祭全过程都有音乐伴奏。然而，重要的是，应注意到丕祭是一年一轮对各位祖先祭拜的开始。

董推论羽毛舞是翌祭的主要特征，也有酒供奉。据在周朝还保留的遗俗可推断，舞者的人数依神灵的地位而变化，地位高者，舞者越多。至于用什么羽毛，一无所知。但考古学家在安阳发现了孔雀骨。那有可能用的是孔雀毛吗？

第三、四种仪式，祭和**賁**肯定要献祭食物。祭要供奉肉，虽不能确定用什么肉，但有可能包括羊、牛、猪甚至狗肉。**賁**祭是一种感恩的表示，供奉有小米，也许还有小麦和稻米。在商代陶器和青铜器具的

研究中，发现大部分青铜器皿和一些陶器是为献祭制作的，供奉的肉和谷物就盛在鼎、鬯、簋这类器皿中。盛酒器更是数不胜数，觚、爵、觶

等等，不一而足。所有这些青铜器具和一些陶器或都曾用在祭和**賁**的仪式中。

𩚑

五种仪式中最后一种**𩚑**的确切性质仍难以确定。它可能类似民国前传统的庆新年，会把其他四种仪式的必要元素综合到一起，用肉和谷物伴着音乐舞蹈，以隆重的仪式向所有祖先献祭。

如上所述，给每个祖先祭祀的日程表在祖甲时才开始标准化。帝乙、帝辛严格遵循这一顺序及其他细节。祭祀安排表中还包括殷商后期发展出的主要仪式。这一时期，民众和王室还有其他信仰。例如，甲骨文中还记载向不少其他的神灵供奉牺牲，诸如东、西、南、北、中五方神、河神，可能还有山神和一些其他的神。特别引起比较宗教学学者注意的是甲骨文中的“帝”字，一些人把“帝”理解为至高无上的神，但对此字的解释仍有争议。

賁

也有某些更具体的祭祀仪式：如“**賁**”需要把祭品放入火中；“**沈**”祭需把供奉投进水里；“**瘞**”需埋葬供奉的活物。

据岛邦男书中记载，甲骨刻辞中给王亥的牺牲供奉有100项。^[184]商朝的统治者有时用多达300头牛的牺牲品向王亥的灵魂祈祷。向王亥献

賁

祭大部分牺牲是采用**賁**祭，很少通过彡和翌祭向这位王室创建者献祭。值得注意的是，尽管王亥是上甲微的父亲，但他未被列于周祭的祭祀表上，尤其是在帝乙、帝辛时期。祭祀表上第一名几乎都是上甲微。

还应提一提祭祀用酒。酒以前被解释为是对祖先的一种特殊供奉，但现在普遍认为，所有祭礼仪式，包括特殊仪式，都有酒。

賁

除**賁**、**沈**和**瘞**这几种献祭外，甲骨文中还提到一些其他形式，但古文字学家不清楚它们的含义。前面多次提到的人牲，在此不应忽略。我们给不出更多的细节，是因为不清楚这类牺牲是定期的还是偶然的，比如，在战争时期。在王陵中发现人牲的数目似乎表明这是经常性的。但这些牺牲者是俘虏还是奴隶，或是一些下等人，抑或是三种人都有，无法确定。笔者倾向于相信这是在与早期苏美尔人的接触中学来的习俗。从他们那里古代中国人可能还了解到有轮的马车、某些青铜器铸造

技术和占星学知识。

15. Notes on the Physical Anthropology

of the Yin-Shang Population

The skeletal materials collected from fifteen seasons of Anyang excavations amount to several thousands, most of which are definitely from the Yin-Shang period. The Institute of History and Philology created a special section and invited a biometrician, Dr. Woo Ting-liang, trained in the biometric laboratory of Dr. Karl Pearson in London, to take charge of the scientific investigation of this valuable collection. But the Japanese invasion and the war not only interrupted the program, but actually so disheartened Dr. Woo that he gave up the job when the war terminated. At the same time, the materials were greatly depleted. In the institute's migration from Nanking to Yünnan, to Szechwan, and to Taiwan, it was only because of the determined efforts of a few individuals in charge of transportation during these long treks that certain portions of this collection were finally brought to Taiwan.

Professor Young Hsi-mei, a trained biologist who had helped Woo Ting-liang in the biometric work during wartime, and was one of the few who came to Taiwan, was persuaded to take up the study of this collection. Here the author wishes to summarize some of his main reports.^[185]

The collection brought here consists mainly of skulls of which there are 398 from Hou-chia-chuang; practically all of these came from what are called sacrificial pits—pits where only skulls were buried and no skeletons. The Institute of History and Philology has a complete record of the history of these pits and of their excavation. Most of these sacrificial pits contain ten skulls each (Fig. 54); a few contain only seven or eight or even as few as six. There are, however, exceptions which contain more than ten, and in one pit more than thirty-three skulls were buried (Fig. 55). In addition to these skull pits,

the archaeologists found headless skeletons also buried in groups of ten. Sometimes the head and skeleton were found together, but had already been cut apart.

54 Sacrificial pit with ten skulls found in Hou-chia-chuang 侯家庄埋有10具头骨的殉葬坑

Professor Young has made cranial measurements of each of the 369 skulls in our collection. He compared the standard deviations of the various measurements, especially the cranial index, head length, and head breadth, with those of other peoples, namely, the Ainus, Bavarians, Parisians, Naqadas, and English. He found that the standard deviations of the various values of the Hou-chia-chuang skulls are greater than any of the five groups of people with whose skulls he compared. In other words, whether compared with Englishmen, or Frenchmen in Paris, or Germans in Bavaria or the Ainus in Japan or the Naqadas, the Anyang collection evidences a more heterogeneous group. This is true even if we limit the comparison to the 319 skulls of the male sex.

Young's study includes a very interesting morphological analysis. He has been able to divide the Hou-chia-chuang skulls into five subgroups. Subgroup 1 (Fig. 56) is the Classic Mongoloid type. This subgroup usually is mesocephalic with broad cheek bones, depressed nasal bones, sloping frontal head; the faces look almost flat in profile. The skull top is almost flat. The bizygomatic width is probably wider than any other group. These Classic Mongoloids are found among typical representatives among Buriats and Chuckchis.

56 Classic Mongoloid type of human skull found in Hou-chia-chuang 侯家庄出土的
古典的类蒙古人种的头骨

Subgroup 2 among these Hou-chia-chuang skulls (Fig. 57) is named by Young the Oceanic Negroid type. This group has a longer head with a cephalic index of 75. The nasal root is depressed, but at

the lower end it rises up. The occipital bone looks like a gable roof. In this respect it closely resembles the Papuans or Melanesians.

57 Oceanic Negroid type of human skull found in Hou-chia-chuang 侯家庄出土的太平洋类黑人种的头骨

Subgroup 3 (Fig. 58), which Young called Caucasoid, is a very small group. Young gives only two examples. A typical specimen of this group has a narrow head and a narrow face with a cephalic index of 73.58. The cheek bone is very small but with well-developed nasal bones. The skull has been compared with the skull of an Englishman born in America. They are so similar that it is difficult to differentiate them.

58 Caucasoid type of human skull found in Hou-chia-chuang 侯家庄出土的类高加索人种的头骨

Subgroup 4 (Fig. 59) is known as the Eskimoid type. Like Subgroup 1, it possesses a broadly developed cheek bone and wide face. Unlike Subgroup 1, the Eskimoid type possesses a higher head. Its cephalic index is 76.35. The top of the skull from front to back has a keel-like ridge. The nasal bone is pinched angular and the lower jaw has an everted mandibular angle.

There is another group about whose morphological character Professor Young feels uncertain. The only thing that impresses him is that in every measurement these skulls are comparatively smaller than those of any other groups that he has been able to classify (Fig. 60).

59 Eskimoid type of human skull found in Hou-chia-chuang 侯家庄出土的类爱斯基摩人种的头骨

60 Representative of group of small skulls, unidentified 出土处未明的小型头骨组的个例

In the above divisions, Young has been able to assign 30 to Subgroup 1, 34 to Subgroup 2, only 2 to Subgroup 3, 50 to Subgroup 4 and 38 to Subgroup 5.

Here we might make some interesting comparisons among the measurements of these five groups. The author would like to take the bizygomatic breadth first, because this is the one characteristic that differentiates the Mongoloid people from other races. Let us see some of the comparisons:

141.8mm.
134.5mm.
131.5mm.

So, it is quite clear that in both anthropometrical measurements and morphological characteristics, the Anyang crania, or should I say the Hou-chia-chuang crania, although limited in number, indicate a mixed character that is no doubt the result of a mixed race. There are, however, one or two points that we should clarify first. The primary question is, since this is a collection from the sacrificial pits, do any of the skulls or any of the subgroups represent the Yin-Shang people as a whole? This is probably one of the most difficult problems to answer because all the archaeologists are aware of the fact, attested both by the oracle bone records and by the archaeological diggings, that the victims whose heads were cut off and presented as sacrificial offerings either in the royal tombs or in other places were probably enemies who had either invaded the territory or offended the royal property. Tung Tso-pin devoted two sections of his *Yin-li-p'u* to the war records of the Yin-Shang period. During the reign of Wu Ting, who conducted a series of military expeditions against the invasion of enemies in the Ordos region, chiefly from northern Shansi and Shensi, the names of the enemies were definitely given as Kung Fang, T'u Fang, and Hsia Chih (Fig. 61). Wu Ting spent three years in this northwestern war (from the twenty-ninth to the thirty-second year of his reign) near the end of the thirteenth century B.C. In those three years, he first conquered Hsia Chih, which took him ten months, and then T'u Fang, which took him a much longer time, more than two years. Kung Fang was the furthest to the northwest. The oracle bones record that in the seventh and eighth months of the thirtieth year of Wu Ting, he conscripted successively almost ten times in two months, each time as many as three thousand men. The maximum may reach five thousand. Tung Tso-pin later compared all the records relating to this war^[186] and came to the conclusion that Kung Fang was another name for Kuei Fang, which was mentioned both in the *Book of Changes* and the *Book of Odes*; the *Bamboo Annals*, of course, also mentioned this

important event. My colleague Tung was of the opinion that the exact location of Kung Fang was near the northwestern corner of the Ordos region, near where the earliest paleolithic finds were found. This location may also indicate that it was on the usual route of migration for central Asiatic nomads from the earliest times. So, it would not be surprising to find skulls of European type mixed with those of Buriats and Eskimos in these hordes. There were, of course, battles on other fronts, such as King Ti Hsin's expedition to Tung I, which have also been abundantly recorded in the oracle bones. All these seem to serve as an adequate basis for an interpretation of the heterogeneous character of the various crania found in the sacrificial pits. They do not help us, however, to solve the question: What was the physical anthropology of the Yin-Shang people who ruled this territory for several hundred years? If we compare the various specimens in the subgroups that Mr. Young has studied, it seems definite that even among the Mongoloids there are three subgroups, namely, Subgroup 1 and Subgroups 4 and 5.

61 Three enemies from the Ordos region and eastern Mongolia
来自河套地区与蒙古东部的三股敌人

Years ago, Professor Davidson Black of the Peking Union Medical College, after a preliminary study of the prehistoric population whose remains were collected by Andersson and his associates, concluded that the neolithic people of north China were in no way essentially

different from modern Chinese.^[187] Black was a pioneer in this field and the number of specimens at his disposal were relatively few. His conclusion, though based on solid facts, was nevertheless only preliminary.

Now almost half a century after Black's time, although we have gathered a great deal of new data, none of them have been thoroughly studied by a competent authority like Davidson Black. The war of course was the main reason for this tragic fact, and at present, when the problem of the Yin-Shang population is studied, we are almost in a worse situation than Davidson Black. We can depend upon neither the skulls from the sacrificial pits nor the fragmentary skeletons for a reasonable deduction.

We are confronted with data that seem to be contradictory to what Davidson Black found, unless we dismiss these various subgroups such as the Classic Mongoloid, the Eskimoid, and the Oceanic Negroid as having nothing to do with the composition of the north China population.

As a matter of historic truth, we have, of course, a very good reason to consider these crania as invaders.

In 1932, *Biometrika* published a preliminary classification of Asiatic races based on cranial measurements, in which twenty-six series of anthropometric material were used for comparison.^[188] No less than eighteen of these series are studies of skulls of the Oriental or Mongoloid people. The authors of this paper, T. L. Woo and Morant, divided these Orientals into three subgroups, namely, the Northern Mongolians; the Chinese and Japanese; and other Orientals including such people as Tibetans, Javanese, Dayaks, Tagals, and so on. This tripartite division was mainly based on what they called the "Coefficient of Racial Likeness." According to Woo and Morant, the average value of bizygomatic breadth for the six series of Northern Mongols range from 139.8mm. to 144.0mm.; for the five series of Chinese and Japanese, the range is from 132-134.7mm.; and for the seven series of the other Orientals the range is from 131.0mm. to 134.7mm. The average of the same measurements for the five Indian

series, studied in the same paper, fall down to the maximum-minimum range of 127.8 to 124.3mm., respectively. The sharp contrast of the same measurement as shown above appears not only between the Orientals and the non-Orientals, but also among the three subgroups of Orientals which are even more striking. The excessively large value of the average facial width constituted without doubt a truly characteristic physical feature of the Mongoloid people. But, to quote Woo and Morant, "They are mainly located at present in outer Mongolia and southern Siberia with the center of distribution in the neighbourhood of Lake Baikal, Mount Altai and the city of Urga or north of the Gobi desert."

Morant and Woo's paper clarified the status of Subgroup 1, which Young Hsi-mei called the Classical Mongoloid. The Eskimoid group, which has always been much more mixed than Subgroup 1, may be more related to the aborigines of northwestern Siberia. Physical anthropologists have occasionally found traces of kinky hair in an anthropometric survey of the Chinese population, indicating the survival of some Papuans or Melanesians; but these are relatively very rare indeed. As for the fifth group and the so-called Caucasoid, it is still difficult to say how many of their genes could be definitely shown in the modern Chinese.

But on the whole, one is justified in saying the following. From the very beginning, the north China plain was a meeting place of many different ethnic stocks and it is partly from the mixture of these groups that the early Chinese population was formed, although we must not forget that the dominant group among these stocks was indubitably the Mongoloid group. The investigations and analyses by Professor Young are helpful to the extent that they definitely explain a certain percentage of the historical facts recorded both in archaeology and in the oracle bone records.

拾伍．关于殷商人的体质人类学评述

在安阳十五次发掘中收集的人骨总数达几千具，其中大部分很明显是殷商时期的。历史语言研究所特设一研究组，聘请在伦敦卡尔·皮尔逊生物测量学实验室受过训练的吴定良博士负责对这批重要材料进行科学研究。日本侵华战争不仅中断了这项计划，而且使吴定良灰心至战后也不再从事这项工作了。同时，这批资料也损失惨重。研究所从南京迁至云南，又去四川，再到台湾。长途的迁徙仅依靠少数几位运输负责人的坚持努力，最终这批材料被运到台湾。

杨希枚教授是一位受过训练的生物学家，在战时他曾帮助吴定良进行生物测量工作，也是到台湾的少数人之一。他被说服来主持这批人骨材料的研究工作。在此，笔者拟概述他的主要报告。^[185]

这里谈的这批材料主要是从侯家庄墓区出土的398个头骨，实际上这些全部出自殉葬坑——坑中只埋头骨而无体骨。历史语言研究所保存有这批殉葬坑的完整发掘记录。大多数殉葬坑埋有10具头骨（图54），少数埋7具、8具，或少至6具。但也有例外，有的坑中超过10具，甚至一坑中多达33具（图55）。此外，考古学者发现还有10具一组无头骨架合葬的情况，有时还发现头骨虽与体骨在一起，但已身首分离。

杨教授对我们收集的369个头骨逐个进行了测量，并就每种测量的标准差，特别是头指数、头的长宽度数值，与其他民族，即阿依努人、巴伐利亚人、巴黎人、纳夸达人及英国人的标准差进行了比较。他发现侯家庄头骨各项标准差比上述五个对照组的都大。换句话说，无论与英国人、巴黎的法国人、巴伐利亚的德国人，还是与日本的阿依努人或与纳夸达人相比，安阳的材料都被证明为异种性程度更高。尽管我们只用了319具男性头骨作比较，情况也是如此。

杨的研究还包括了很有趣的形态学分析。他把侯家庄的头骨分为五组。第一组（图56）是古典的类蒙古人种。这组一般是中头型，颧骨宽，鼻骨低，前额倾斜；从侧面看脸几乎是平的。头盖骨顶几乎也是平的。颧骨间距可能比其他任何一组都宽。这种古典的类蒙古人的头骨能在布里亚特人和楚克奇人的典型代表中找到。

杨把侯家庄头骨中的第二组（图57）命名为太平洋类黑人种类型。这组的头骨较长，头指数为75。鼻根低平，鼻骨下端上翘。枕骨形似人

字形屋顶。这一特征与巴布亚人和美拉尼西亚人极为相似。

第三组（图58）杨称为类高加索人种，这组为数极少。杨只举了两例。这组典型特征是窄颅狭面，头指数为73.58。颧骨很小，但鼻骨发达。这与一具在美国出生的英国人的头骨相比是如此相似，很难将两者区分开来。

第四组（图59）是类爱斯基摩人种类型。与第一组相似的是，它有宽大而发达的颧骨和宽的脸；不同的是，这类人种头颅较高。头指数为76.35。颅顶端从前到后呈龙骨形隆起。鼻骨呈挤紧的锐角形，具有外翻的下颌角。

另有一组的形态特点，杨教授未确定。他对这组仅有的印象是，这些头骨的每项测量值都比他区分出的其他组的测量值小（图60）。

在上述的分组中，杨教授将30具头骨划归第一组，34具归第二组，2具归第三组，50具归第四组，38具归第五组。

在此我们可对这五组的测量值作些有趣的比较。笔者首先选取两颧间宽，因为这是区别类蒙古人种与其他人种的一项特征。请看下面的比较：

14第18毫米

13第52毫米

13第50毫米

13第48毫米

13第32毫米

所以很清楚，安阳头骨，或称侯家庄头骨，虽数量有限，但在人类测量学测量值和形态特征两方面都表现出混合的特征，这无疑是混合人种的结果。然而，首先我们必须澄清几点。首要的问题是，由于材料出自殉葬坑，那么究竟哪些头骨或哪些组头骨代表的是整个殷商民族呢？这也许是最难回答的一个问题，因为无论在王陵里或其他地方发现的那些被砍头并充作殉葬的牺牲者，可能是入侵殷商朝领土或触犯王权的敌人，这是所有考古工作者都知晓的，并已为甲骨卜辞记录和考古发掘所证实。董作宾在《殷历谱》中用了两章专列出殷商时期的战争记录。武丁统治时期曾发起一系列远征，以抗击主要从山西和陕西北部入侵的河

套地区的敌人，即  方、土方和下旨（图61）。公元前13世纪末，

武丁用了三年时间（武丁二十九年到三十二年）打西北的战争。在这三年中，他先用了10个月时间征服了下旨，然后又用长达两年多的时间征

服了土方。方处西北边陲。据甲骨文记载，在武丁三十年的七、八月，武丁几乎连续出兵10次，每次达3000人，最多时有5000人之多。

之后，董作宾比较了与这次战争有关的全部记录^[186]，认为方是《易经》、《诗经》记载的“鬼方”的另一名称；当然，《竹书纪年》也

记载了这一重要事件。我的同事董作宾还指出，方准确的地理位置靠近河套地区的西北角，靠近最早的旧石器时代遗物的出土地。遗物在这里出土也说明，这曾是早期中亚游牧部落迁徙的必经之地。所以，在这些牧民中发现与布略特人和爱斯基摩人混杂在一起的欧洲人类型的头骨就不足为奇了。当然其他阵线上的战事，如帝辛远征东夷，在卜辞中也有大量记载。所有这些，都为解释祭祀坑中出土的各种头骨的异种系统特征提供了足够的根据。不过，这还无助于我们解决这一问题：统治这片领土数百年之久的殷商民族究竟属怎样的体质类型？比较杨先生研究过的几组标本，似可确定的是，即便在类蒙古人种中也另有三个分组，即第一、四、五组。

多年前北京协和医学院的步达生教授，在初步研究了安特生和他的助手收集的史前人类遗骸后，得出这样的结论：新石器时代华北居民和现代中国人无重大差异。^[187]步达生是进行这方面研究的一位先驱，但他掌握的标本数量极少，所以他的结论虽依据可靠的事实，但仅是初步的。

现在距步达生的时代已有半个世纪了，虽然我们已收集了大量新资料，但还没有像步达生那样有能力的专家去作充分的研究。当然战争是造成这一不幸的主要原因。而现在，正当研究殷商人的问题之际，我们的处境几乎比步达生更糟。我们既不能依靠祭祀坑的头骨，也不能依靠残破的体骨来作合理的推论。

除非我们不考虑古典的类蒙古人种、类爱斯基摩人种、太平洋类黑人种这几组，认为他们与中国华北人群的组成毫无关系，否则，我们就要处理与步达生的发现相矛盾的材料。

根据史实，我们当然有充分理由认为这些头骨是入侵者的。

1932年《生物测量》杂志发表了一篇根据头骨测量对亚洲人种进行初步分类的论文，文章对26组人体测量资料进行了比较。^[188]当中至少

有18组是东方或类蒙古人种的头骨。作者吴定良和莫兰特将这些东方人种分三类，即北方蒙古人、汉人和日本人、以及包括藏人、爪哇人、达雅克人和他加禄人等在内的其他东方人。这个三分法主要是根据作者所谓的“种族相似性系数”划分的。据吴、莫的测量，六个北方蒙古组的颧间宽平均值的变化范围在139.8毫米到144.0毫米之间，汉人和日本人的五个组在132—134.7毫米之间，其余东方民族七组介于131.0毫米到134.7毫米间。同一论文中研究了五个印度组，同样方法测量出的平均值最大至127.8毫米，最小124.3毫米。这一项目测量值的鲜明对比不仅见于东方人与非东方人之间，而且也存在于同属东方人的三个亚族群中，后者甚至更为明显。过大的平均面宽无疑构成了蒙古人种一个真正特有的体质特征。但吴定良和莫兰特指出：“如今他们主要分布在外蒙古和南西伯利亚，以贝加尔湖区、阿尔泰山和乌兰巴托（库伦城）为中心，位于戈壁沙漠以北。”

吴定良和莫兰特的文章澄清了第一组的地位，它被杨希枚称作古典的类蒙古人种。比第一组更为混杂的类爱斯基摩人种，可能与西伯利亚西北部的土著居民关系更密切。体质人类学者在一次中国人的人体测量调查中还偶尔发现卷曲头发的痕迹，表现出巴布亚人和美拉尼西亚人的残迹。但这确实比较少见。至于第五组和所谓的类高加索人种，很难说他们的基因有多少能明确地反映在现代中国人身上。

但总的说来，我们有理由作出以下论断。最初，华北平原是许多不同种族汇集的地方，原始的中国人就是部分地由这些群族融合形成的，虽然我们应当记住，在他们中间占优势的无疑是蒙古人种。杨教授的研究和分析，有助于确切地解释考古发掘和甲骨卜辞中反映的某些历史事实。

- [12] *History of the Ch'ing Dynasty*, vol. 7, p. 5, 967.
- [12] 《清史稿》，[卷四六八]，第5967页。
- [13] Liu T'ieh-yün's diary accounts concerning purchases and other dealings with the inscribed oracle bones were published in *K'ao-ku she-k'an*, no. 5, Shanghai, 1936.
- [13] 刘铁云日记〔《抱残守阙斋日记》〕中有关甲骨文的购买和其他交易的记载，载《考古学社社刊》，第五期，上海，1936。
- [14] Ch'en Meng-chia, *Yin-hsü pu-tz'u tsung-shu* (Summary of Oracle Bone Inscriptions) (Peking: Science Press, 1956). From another entry for the same year in Liu T'ieh-yün's diary, Ch'en Meng-chia drew several other conclusions. The entry (dated the twenty-eighth day of the tenth month) reads: "This morning...the son of Wang I-yung came. ... He told me that his father bought oracle bones twice; for the first lot, he paid 200 taels; for the second lot, 100 taels. The largest piece is not larger than two inches [Chinese] in dimension. ..."
- [14] Ch'en Meng-chia drew the following conclusions from this entry: "Liu T'ieh-yün did not have the opportunity to see Wang's original collection of tortoise shells, because Wang obviously kept it secret as most collectors usually do. ... Liu believed that in the year *Keng Tzu* [1900], Wang I-yung purchased two lots,

without mentioning any complete shell in his collection. As Wang kept his treasured collection a secret, there were all sorts of rumors about these hidden treasures."

It is clear that of Ch'en Meng-chia's four conclusions only the one stated in the text above, which is based on the direct statement of Liu's diary, can be considered correct, if the diary itself is authentic. The other inferences sound fanciful, probably imaginary conclusions from Ch'en Meng-chia's productive mind. To say that Wang I-yung kept the discovery a secret is a charge without any substantial foundation. Liu T'ieh-yün in his own Preface to the lithographic reproduction of ink-squeezes, *T'ieh-yün tsang-kuei*, published in 1903, had the following to say: "In the year *Keng Tzu* [1900], Dealer Fan brought to the capital over one hundred pieces [of the inscribed oracle bones], which caught the eye of Wang Wen Min Kung [post-mortem honorific title of Wang I-yung] who was excited with joy and paid the dealer a heavy price. ..." In this statement, written by Liu himself, one certainly cannot find any evidence that Wang I-yung kept his purchase a secret.

陈梦家，《殷虚卜辞综述》，北京：科学出版社，1956。陈氏从同年刘铁云日记的另一条目中得出了另外几条结论。条目（十月二十八）写道：“今早王端士〔王懿荣之子〕

来……端士云，文敏〔王懿荣〕计买两次，第一次二百金，第二次一百余金……极大者不过二寸径而已……”

陈梦家从这一条中得出以下结论：“刘氏似并未看到他的甲骨，当时王氏对此秘藏并不轻以示人……刘氏只相信王氏庚子年买了两批，并无全甲说……因为王氏收藏甲骨很严密，外界有许多无稽之谈。”

很清楚，陈的四点结论只有上面引用的这条是根据刘氏的日记得出的，可征为信，如果日记本身是真的话。其他的推论听起来天马行空，像是陈氏的活跃头脑中想象出的。对王氏秘藏甲骨的指责没有任何有力根据。刘铁云在拓本版的《铁云藏龟》的自序中（1903）中就写道：“庚子岁有范姓客挟百余片走京师，福山王文敏公见之狂喜，以厚价留之。”从刘本人写的文字来看，没有任何证据说明王对购买甲骨一事保密。

- [28] Sun I-jang's *Ch'i-wen chü-li* (Examples of Oracle Bone Inscriptions), published in 1917, is divided into ten sections and two volumes. Vol. 1, covering the first eight sections, consists of 84 pages. Vol. 2 contains only two sections; section 9, on *wen-tzu*, consists of 92 pages, while only a little over 3 pages are devoted to section 10 on miscellaneous examples.
- [28] 孙诒让的《契文举例》出版于1917年，全书分2卷10章。上卷1—8章，计84页；下卷仅9—10章；第9章“文字”占92页，第10章仅3页许，举了各种例证。
- [29] According to Tung Tso-pin, *Ming yüan* was reprinted by the Ch'ian Ch'ing T'ang Book Company, Shanghai.
- [29] 据董作宾称，《名原》一书后由上海千顷堂书局再版。
- [30] Tung's source was Lo's Preface to his well-known publication, *Yin-hsü shu-ch'i ch'ien-pien* (Earlier Supplement to the Oracle Inscriptions of "Deserted Yin"), which will be discussed below.
- [30] 董作宾的资料来源于罗振玉的名著《殷虚书契前编》的自序。下面还会谈到这本书。
- [31] The first edition of *Yin-hsü shu-ch'i ch'ien-pien* contains a seal, which can be translated, "See, what Chang, Tu, Yang, Hsü did not see, characters."
- [31] 《殷虚书契前编》第一版中有一方钤记，其大意为：“见张、杜、扬、许未见之字。”

- [32] 秦始皇三十四年为公元前213年，为统一六国后八年。——编者注
- [32] 秦始皇三十四年为公元前213年，为统一六国后八年。——编者注
- [33] 根据董作宾《甲骨文表》，罗振玉原文为“余说”，而非“余论”。
- [33] 根据董作宾《甲骨文表》，罗振玉原文为“余说”，而非“余论”。
- [34] Lo Chên-yü's debt to Sun I-jang thus seems to be an established fact, although Lo never made a public acknowledgment of this debt. In the early Republican era, some scholars were definitely of the opinion that Lo Chên-yü's main works, such as *Yin-hsü shu-ch'i k'ao-shih* (Interpretation of the Oracle Inscriptions at "Deserted Yin"), were actually authored by Wang Kuo-wei. The early history of the MSS of *Ch'i-wen chü-li* remains obscure up to the present time.
- [34] 罗振玉之受孙诒让的好处，看来乃属事实，虽罗从未公开承认。民国初年，一些学者断言罗振玉的《殷虚书契考释》等主要著作实乃王国维之作。关于《契文举例》一书手稿初期的真相，至今仍是一个谜。
- [35] Lo's Preface lists his contributions to antiquarian studies, while Wang Kuo-wei in the Postscript concludes that the main contribution of the Ch'ing dynasty to Chinese learning is in the field of paleography. The founder of this important branch of learning is Ku Yen-wu, and Lo Chên-yü's *Yin-hsü shu-ch'i k'ao-shih* is the climax.
- [35] 罗振玉的自序中历数了他本人对古物研究的贡献。王国维在后记中说，清朝在国学方面的主要贡献是在古文字研究方面；这门重要学科的奠基人是顾炎武，而罗振玉的《殷虚书契考释》则为顶点。
- [36] Actual count amounts to 571.
- [36] 实际应为571个。
- [37] Lo prefaces section 6 of his work with these remarks: "In this section records are limited to those readable and complete entries; incomplete and unreadable entries are not included."
- [37] 罗振玉在这本书第六章的开始时说：“本章收录的卜辞条目仅限于可读且完整者，不包括不完整、无法判读者。”
- [38] Wang Kuo-wei, "Yin-pu-tz'u-chung so-chien hsien-kung hsien-wang hsü k'ao" (Notes on the Royal Ancestors of the Shang as Appear in Oracle Bone Records), *Hsüeh-shu ts'ung-shu* (Collected Historical Researches), 1917; reprinted in Wang's *Kuan-t'ang chi-lin* (Collected Essays), vol. 9. Wang compared his genealogical tree with the following three documents: "Annals of the Yin Dynasty" and "Generation Table of the Three Dynasties" in Ssu-ma Ch'ien's *Shih-chi* and "Tables of Men, Ancient and Modern" in Pan Ku's *Ch'ien han shu*.

- [38] 王国维：《殷卜辞中所见先公先王续考》，《学术丛编》，1917年，再版于《观堂集林》，第9卷。王国维将他的世系表与下列三种文献作了比较：司马迁《史记》中的《殷本纪》、《三代世表》和班固《汉书》中的《古今人表》。

- [44] The school system for modern education was officially adopted after the Boxer Movement. The author attended the first primary school established in his native district Chung-hsiang, Hupei, at the age of just over ten, when the old examination system was already abolished.
- [44] 义和团运动以后，官方正式采用了近代的学校教育制度。笔者10岁时就读于家乡湖北钟祥县立一小，当时旧的考试制度已经废除。
- [45] For a complete biography of this remarkable man, see Hu Shih, *Ting-wen-chiang te chuan-chi* (Biography of Ting Wen-chiang). (The name should be translated as Ting Wen-chiang, but V. K. Ting is Ting's own spelling.) Hu's work was published by "Academia Sinica" in 1956. V. K. Ting died in 1936.
- [45] 关于这位名人的一生，可参看胡适的《丁文江的传记》（丁的英文名应拼作 Ting Wen-chiang，但丁自己写作 V. K. Ting）。“中央研究院”1956年版。丁氏于1936年逝世。
- [46] Thomas Huxley's essays on exposition on "Evolution," which in the late nineteenth and early twentieth centuries aroused so much academic controversy in Western Europe, especially in London, were first translated into old-style Chinese by Yen Fu in 1896 and printed in 1899, under the title *Tien*

Yen Lun. The book proved to be an immediate success and was considered a masterpiece of Chinese literature.

- [46] 托马斯·赫胥黎阐述“进化”的文章，19世纪末20世纪初在西欧，特别是在伦敦引起了激烈的学术界争论。严复于1896年首次以文言文将此书翻译过来，冠以《天演论》的名称于1899年出版。此书立即获得极大成功，并被视为一部中国文学名作。
- [47] It is regrettable that I have not been able to find a biography of A. W. Grabau, who played such an important role in introducing Western science to China. He was strongly against Weng Wen-hao's acceptance of an official appointment, first as chief secretary to the Administrative Yüan. He told everybody his frank opinion that there were any talented men who could render useful service as secretary to the Administrative Yüan, but nobody so well qualified to direct the Geological Survey after V. K. Ting. His words were almost prophetic.
- [47] 遗憾的是，我一直未能找到葛利普的传记，这个人在向中国介绍西方科学方面起了重要作用。他强烈反对翁文灏接受官方任命的职务，首先是担任行政院秘书长。他逢人便率直地说，有许多能人可以做行政院秘书长的工作，但在丁文江之后再也没有人能像翁文灏那样胜任地质调查所所长一职了。他的话不幸言中。

- [60] Cited here as *BIHP*. The first number was published in Canton in October 1928 and contained eight main articles, with a Foreword by Director Fu Ssu-nien, who eloquently expounded the reasons for the creation of the institute. The bulletin was designed as a quarterly publication, with four issues each year constituting a volume. This publication has been continued uninterruptedly for forty-six years, the current numbers being vols. 46 and 47.

- [60] 这里引用的是《史语所集刊》，其第一本于1928年10月在广州出版，刊载了八篇论文和傅斯年所写的前言，他有力地论述了创办史语所的理由。本刊为季刊，每年刊出四分为一本，已连续出刊46年，现为第46本和第47本。
- [61] Tung and the party arrived at Anyang on October 7; he started digging on the thirteenth of this month. The actual digging time, according to Tung's own account, was eighteen days, October 13-30.
- [61] 董作宾和考古队于10月7日抵达安阳，13日开始发掘。据董自述，发掘时间从13日至30日，共18天。
- [62] Cited here as *PREA*. These reports were planned exclusively, as the title indicates, for the publication of the field work carried on in Anyang, including studies of the field materials. The first issue was published in 1929, in Peiping. Only four numbers were issued; no. 4 was given to the public in 1933 in Shanghai, when the headquarters of the Institute of History and Philology was on the move to the capital, Nanking. This report was later continued under different names: as *Field Reports in Archaeology* and finally, as *Chinese Journal of Archaeology*.
- [62] 引自《安阳发掘报告》。顾名思义，《安阳发掘报告》有计划地刊载所有与安阳田野发掘及其材料研究相关的成果。1929年第一期在北平出版，共只发行了四期。第四期于1933年在上海出版，当时史语所所址正向当时的首都南京搬迁。这个刊物后来先后以《田野考古报告》和《中国考古学报》的名称刊行。
- [63] Concerning the Hsin-cheng bronzes, there were a great many reports in Chinese newspapers at the time; a good summary of this important find is Carl Whiting Bishop, "The Hsin-cheng Bronzes," *China Journal of Science and Arts*, no. 3, 1925.
- [63] 当时中国报刊上有不少关于新郑青铜器的报道。毕士博所写的《新郑铜器》一文（载《中国科学艺术杂志》，第3期，1925）对此重要发现作了一个很好的总结。
- [64] There is a complete file, I understand, of all the official correspondence between Mr. Bishop and me in the Freer Gallery of Art, Washington, D.C., which interested readers may examine by special request.
- [64] 据我所知，毕士博与我之间的全部公事信件完整保存在华盛顿特区弗利尔艺术馆的专门档案里，有兴趣的读者可以专函索阅。
- [65] Li Chi, *Hsi-yin-ts'un shih-ch'ien ti i-ts'un* (Prehistorical Remains at Hsi-yin Ts'un) (Ts'inghua Research Institute, 1925); English translation, *New Stone Age Pottery from the Prehistoric Site at Hsi-yin Ts'un, Shansi, China* (Memoirs of the American Anthropological Association, no. 37, 1930). Liang Ssu-yung, who was studying in America at that time, returned to China and worked on the ceramic collection from this prehistoric site; Liang later wrote his master's thesis on

these materials.

- [67] The total number of Sui (A.D. 581-617) and T'ang (618-906) tombs excavated at Hsiao-t'un is 148. Three of these tombs contained square tombstones or bricks with biographical notes of the buried person either inscribed or handwritten in red or black ink. All of these were dated in the Sui dynasty—one in the seventh year of K'ai Huang (A.D. 587); the second in the third year of Jen Shou (A.D. 603); and the third also dated in the K'ai Huang era (A.D. 581-600), but the numeral for the year was already smeared in the tomb and therefore unreadable. Altogether, the contents of these 148 tombs excavated at Hsiao-t'un in twelve seasons (1928-1937)—namely, tomb figures, porcelainous wares and porcelains, occasional tombstones, and other finds in metal—serve to indicate that the burials took place in the Sui or, in some cases, the ensuing T'ang dynasty.
- [67] 小屯发掘出的隋（公元581—618年）、唐（公元618—906年）墓总数为148座。其中三座有方形石制或砖制墓志铭，或刻或用红笔或墨笔书写。全部墓志铭上都注明为隋朝年代——开皇七年（公元587年）、仁寿三年（公元603年），另一块注有开皇（公元581—600年）字样，但年份已漫漶无存，无法辨认。总之，从小屯12次发掘（1928—1937）出土的148座墓中的俑像、瓷器、偶见的墓碑以及其他金属遗物判断，墓葬时代为隋朝，或之后的唐朝。
- [68] The official permit was given almost five years after the Antiquities Protection Law was passed by the Legislative Yüan, mainly because the curio dealers exporting Chinese antiquities exercised considerable political influence.
- [68] 发给正式的许可发掘证是在立法院通过《古物保存法》大约五年之后，这主要是由于出口古玩的古董商人施加政治影响之故。

- [169] This topic has recently been rediscussed by a number of scholars interested in this particular aspect of Chinese culture. Mrs. John Fairbank is highly skeptical of the view that the carved mark represents tattooing, but, as she has not had the opportunity to examine the original specimen, she is not definite. My colleague Wan Chia-pao, on the other hand, entertains a different opinion. He believes that these marks represent neither tattooing nor a dress, but were carved on the torso sheerly as a matter of ornamentation, just as the Yin artist had done on the stone tigers and elephant.
- [169] 近来，一些对中国文化这一方面感兴趣的学者又就这一问题展开了讨论。费正清夫人（费慰梅）对雕刻印记代表文身的意见表示极大怀疑，不过由于她没见到原标本，她也未有定论。我的同事万家保则持另一种意见，他认为这既不是文身，也不是衣服，而是刻在雕像上的一种装饰，就像殷代艺人刻在石虎、石象上的一样。

“博雅双语名家名作”出版说明

1840年鸦片战争以降，在深重的民族危机面前，中华民族精英“放眼世界”，向世界寻求古老中国走向现代、走向世界的灵丹妙药，涌现出一大批中国主题的经典著述。我们今天阅读这些中文著述的时候，仍然深为字里行间所蕴藏的缜密的考据、深刻的学理、世界的视野和济世的情怀所感动，但往往会忽略：这些著述最初是用英文写就，我们耳熟能详的中文文本是原初英文文本的译本，这些英文作品在海外学术界和文化界同样享有崇高的声誉。

比如，林语堂的*My Country and My People*（《吾国与吾民》）以幽默风趣的笔调和睿智流畅的语言，将中国人的道德精神、生活情趣和中国社会文化的方方面面娓娓道来，在美国引起巨大反响——林语堂也以其中国主题系列作品赢得世界文坛的尊重，并获得诺贝尔文学奖的提名。再比如，梁思成在抗战的烽火中写就的英文版《图像中国建筑史》文稿（*A Pictorial History of Chinese Architecture*），经其挚友费慰梅女士（Wilma C. Fairbank）等人多年的奔走和努力，于1984年由麻省理工学院出版社（MIT Press）出版，并获得美国出版联合会颁发的“专业暨学术书籍金奖”。又比如，1939年，费孝通在伦敦政治经济学院的博士论文以*Peasant Life in China A Field Study of Country Life in the Yangtze Valley*为名在英国劳特利奇书局（Routledge）出版，后以《江村经济》作为中译本书名——《江村经济》使得靠桑蚕为生的“开弦弓村”获得了世界性的声誉，成为国际社会学界研究中国农村的首选之地。

此外，一些中国主题的经典人文社科作品经海外汉学家和中国学者的如椽译笔，在英语世界也深受读者喜爱。比如，艾恺（Guy S. Alitto）将他1980年用中文访问梁漱溟的《这个世界会好吗——梁漱溟晚年口述》一书译成英文（*Has Man a Future? Dialogues with the Last Confucian*），备受海内外读者关注；此类作品还有徐中约英译的梁启超著作《清代学术概论》（*Intellectual Trends in the Ch'ing Period*）、狄百瑞（W. T. de Bary）英译的黄宗羲著作《明夷待访录》（*Waiting for the Dawn: A Plan for the Prince*），等等。

有鉴于此，外语教学与研究出版社推出“博雅双语名家名作”系列。

博雅，乃是该系列的出版立意。博雅教育（Liberal Education）早在古希腊时代就得以提倡，旨在培养具有广博知识和优雅气质的人，提高人文素质，培养健康人格，中国儒家六艺“礼、乐、射、御、书、

数”亦有此功用。

双语，乃是该系列的出版形式。英汉双语对照的形式，既同时满足了英语学习者和汉语学习者通过阅读中国主题博雅读物提高英语和汉语能力的需求，又以中英双语思维、构架和写作的形式予后世学人以启迪——维特根斯坦有云：“语言的边界，乃是世界的边界”，诚哉斯言。

名家，乃是该系列的作者群体。涵盖文学、史学、哲学、政治学、经济学、考古学、人类学、建筑学等领域，皆海内外名家一时之选。

名作，乃是该系列的入选标准。系列中的各部作品都是经过时间的积淀、市场的检验和读者的鉴别而呈现的经典，正如卡尔维诺对“经典”的定义：经典并非你正在读的书，而是你正在重读的书。

胡适在《新思潮的意义》（1919年12月1日，《新青年》第7卷第1号）一文中提出了“研究问题、输入学理、整理国故、再造文明”的范式。秉着“记载人类文明、沟通世界文化”的出版理念，我们推出“博雅双语名家名作”系列，既希望能够在中国人创作的和以中国为主题的博雅英文文献领域“整理国故”，亦希望在和平发展、改革开放的新时代为“再造文明”、为“向世界说明中国”略尽绵薄之力。

外语教学与研究出版社
人文社科出版分社

选编说明

外语教学与研究出版社推出“博雅双语名家名作”系列丛书，其中涉及陶行知英文文稿的选编及著作翻译工作。经由北京大学陈洪捷教授，出版社联系到我，希望我来作本书的编者。

一开始我还感到这样做意义不大。待与出版社深入沟通，了解到出版意图之后，尤其是在看到列入出版计划的各位作者的著作目录后，觉得丛书应该收录陶行知的著作。于是，虽然工作繁忙，还是坦然接受了这一任务，并决定放弃2011年的春节休息，集中时间完成这一任务。

接受这个任务还有一个重要原因，陶行知的英文原作虽然大都有中文翻译——其中主要是1990年左右本人参与编辑《陶行知全集》时翻译的，但是受到当时时间紧迫、对陶行知了解与认识的局限、对陶行知语言风格的不熟悉以及当时社会环境的影响，不少地方在日后校阅时就感到不满意，甚至发现明显的差错。当时我就一边阅读，一边在原书上作出标示和修改。这次有了这样一个出版契机，觉得是一次完善陶行知英文著作译文的难得机会。所以这次根据自己对陶行知30年的研究，参考了能收集到的陶行知英文著作的各种译文，对每一处文字都尽力做到既在文意上忠于原文，又在文字风格上尽可能接近作者；并且在专业词语表达上尽可能遵守专业的规范，有中文引文的部分尽可能与原引文一致。

本次选译工作得到香港教育学院何荣汉博士的大力支持，他为本书提供了《中国在转变中》、《中国的道德和宗教教育》、《中国乡村教育运动之一斑》、《祁氏汉语字典的新贡献》、《创造的教育》、《小先生与识字运动》等从耶鲁大学神学院图书馆档案室以及其他渠道搜集到的英文原文，这些英文文稿之前未在中国大陆公开出版过。通过本书将陶行知的这些英文原稿呈现给读者，既有利于它们的保留与传播，也有助于更全面准确地理解陶行知。

何博士还提供了发表于*Education Review*上署名为W. T. Tao的“Life is Education”的英文文稿，但该文注明Translated by H. H. L，据推断该文英文并非陶行知所写，且其中将“生活即教育”表述为“Life is Education”，与陶行知常用的表述“Life as Education”差异较大，文中多处翻译不准确，所以本书未选入。另有其他若干篇也因类似原因未选入本书。

由于陶行知生前没有将自己的英文著述集中出版过，这次所要做的

工作之一就是选择篇目。依据原文价值、可读性，以及与现今社会的相关性，对陶行知全部英文著述进行整理、选编。所选附录为陶行知英译的历代故事、寓言和诗词以及他自己创作的中英文对照的诗歌，由于他当时所选版本不同，一些诗名与诗文内容与现在通行版本不尽一致，在此保留陶行知原来选定的版本。

选定篇目之后，确定书名又需要反复琢磨，为此提出十余个备选的名称。通过与出版社多次沟通，最终选择了《为生活而教育》。它反映了陶行知生活教育理论的主旨，也是所选文章的中心内容，更重要的是它包含着与现实生活中每一个人都密切相关的教育哲理，对时下遍及全社会的带有过强功利性的教育理念偏差能起到警醒和矫正作用。

从本书所确定的主题“为生活而教育”出发，人们大可不必“为陶行知而陶行知”。本书所提供的是于公众生活更加幸福有所裨益的资源，若能对读者人生选择有所启示，便发挥了它的作用，也符合陶行知精神。

CHINA IN TRANSITION¹

New China is the product of two civilizations—the Oriental and the Occidental. The union of these two forces has given color and shape to the present status of China, and it will determine and mold her future destiny and possibilities. It has not been long since Mr. Kipling² wrote, “O the East is East, and the West is West, and never the twain shall meet/Till earth and sky stand presently at God's great Judgment seat.” Today Mr. Kipling will be surprised to know that the East and the West have indeed found a meeting place in China.

In certain fields of activity, the meeting of the two civilizations takes the form of volcanic explosion or formidable conflict. It results in the supremacy of the one over the other or in the substitution of the one for the other. It involves both victory and submission. In other fields, it assumes the form of a union. Sometimes it is like the union of oxygen and hydrogen, sudden and jarring. At other times it may be compared with caress, courtship, or matrimonial contract. The process is essentially careful selection, adaptation, compromise, or reconciliation. It works like yeast, gradual but effective. The product is sweet and delightful.

Since the day of direct contact, the two civilizations have never ceased to conflict and unite. They react upon one another, and each is thereby modified by the other. As a result, life begins to have a richer content and much more variety. A cross-section of Chinese present-day life will perhaps reveal a lateral surface of the main characteristics of many centuries. In China we find nearly every city is surrounded by a medieval wall: there we find the great desire for a new life, hostile to the restrictive and pedantic scheme of scholasticism, which is the heart of the Renaissance; there we find the strong tendency to observe, compare, and criticize spiritual faith, which is the soul of the Reformation; there we find the starting tide of the eighteenth century industrial revolution, and there we cannot fail to find the outburst of nationalism and national consciousness, which characterizes the nineteenth and twentieth centuries. It is a surprise to a great many of

us when we find an inland farmer, sitting in a modern railway train, smoking a bamboo pipe with a fire made from a piece of flint and iron, inquiring, with an attitude of curiosity, about the woman suffrage movement in America, or talking enthusiastically about a boycott against foreign goods, in order to satisfy his patriotic conviction. So it is not quite true that "China is the European Middle Ages made visible," as Prof. Ross³ has led us to believe. Much more than that: the present day China is the European Middle Ages, Renaissance, Reformation, the seventeenth century, eighteenth century, nineteenth century and twentieth century made visible. There we find a dynamic picture of the transition and mingling of centuries of civilization. If we like, we may call it a spectrum of civilization, through which civilizations of different continents and centuries are brought to sharp, vivid, and beautiful contrasts.

This phenomenon reveals itself in every branch of life—in the home, in the school, in the church, in society, and in the state—but it may be best illustrated in the changes of ideals.

The Chinese old ideals of life are essentially of the Roman type. We come pretty near to the understanding of the Chinese old ideals if we just think of them in the terms of the Roman. The Chinese and the Romans seem to have reached independently the same conclusions in regard to life ideals. Their conception of life looks for a golden age in the past, and therefore it is conservative; it conceives society as an ordered institution, and therefore it is static; it emphasizes the rule of authority, and therefore it demands obedience. On the other hand, modern civilization which has its main flow from ancient Greece, has its Utopia in the future; it has a dynamic conception of society, and it encourages freedom and liberty. As a consequence of the mingling of the two civilizations, we find that in the present day Chinese world of ideals there exist, side by side, conservatism and radicalism, order and progress, authority and freedom.

Doubtless there are many persons who hold to either extreme, and battle furiously against each other. It must also be admitted that there is a pendulum of tremendous force swinging back and forth between the two extremes. These conditions we take as a matter of

course, which cannot be avoided in a stage of transition.

However, there is a very fortunate fact to be mentioned, i.e., the group between the two extremes has become more and more numerous, and has become more and more powerful. This group of men recognizes the value of both the old and the new. Whatever is good must be preserved and assimilated, and whatever is not good must be cast away, no matter whether it comes from the old or the new. To them, the past is the foundation of the present and the future, while the future must be the goal of the past and the present; to them, no progress is possible without order, while order exists only for the insurance of progress; to them, authority is the guardian of freedom, and freedom is the end to which authority is a means. In a word, they find that there is a right place for every one of the apparently conflicting ideals—a right place for German efficiency as well as for American liberty. It is this group of men who have effectively overthrown the extreme conservatives and have constantly checked the wild fanaticism of the radicals; it is this group of men who are leading New China out of this critical stage of transition and are now nursing her for a great future. Blessed are those whose loyalty, wisdom, and courage the nation can rely upon to stand the test of the day.

中国在转变中

新中国是东方文明与西方文明双重文明的产物。这两种力量的融合赋予了中国现状的色和形，并将决定且陶铸她未来的命运和前景。吉卜林先生不久前写道：“啊，东方是东方，西方是西方，非到天地立在上帝裁判席前那一刻它们不会见面。”如今，会让吉卜林先生意外的是，东方与西方确实在中国交会了。

在某些活动领域，这两种文明的交会形同火山爆发或是令人畏惧的战争，从而导致一方的霸权压倒另一方，或是一方取代另一方。其中既有胜利，也有屈从与妥协。而在其他的领域，则采取了融合的形式。有时像是氢和氧的结合，事起突然而且令人惊奇。有时则堪比爱抚、求爱或是订立婚约。其必经的过程是精挑细选、彼此适应、相互妥协或调解，就像酵母，渐进却很有效，其结果是甜美且令人愉快的。

从两种文明直接对话起，就从未停止过冲突与融合。它们相互作用并改变着对方。最终，生活变得更丰富，更具多样性。当今中国人生活的一个横断面或许显示出多个世纪中国文化主要特征的一个侧面。在中国，我们发现几乎每一座城市都被中世纪的“城墙”所包围：人们渴望新生活，敌视经院哲学的束缚和墨守成规的范式，这些正是文艺复兴的核心；在这里我们看到了观察、对比和批评精神信仰的强烈趋势，这些正是宗教改革的灵魂；在这里我们看到18世纪工业革命的大潮涌动，随处可见民族主义的爆发和国民意识的觉醒，这些正是19世纪和20世纪的时代特征。当我们看到一个内地农民坐在现代的火车车厢里，一面用火刀火石点着旱烟，一面好奇地打听着美国的女权运动，或是满腔热情地谈论着抵制洋货以表达其爱国信仰时，大多数人会感到惊讶。因此，罗斯教授要我们相信“中国是看得见的中世纪欧洲”这一点真的难以苟同。毋宁说：中世纪的欧洲、文艺复兴、宗教改革以及17世纪、18世纪、19世纪、20世纪的迹象在今天的中国都能看得见。我们看到的是一幅数世纪文明转变与相互融合的动态画面。如果乐意，我们可称之为文明的光谱——各大洲和多个世纪的文明在其中呈现出显著、鲜明、悦人的差异。

这种现象体现在生活的各个方面——在家庭、在学校、在教堂、在社会以及在国家中，但是或许最显著的变化还是观念的改变。

中国人传统的生活观念本质上是罗马型的。如果我们按照罗马人的生活方式去设想中国人的传统观念就不难理解了。中国人和罗马人似乎在生活观念方面分别得出了相同的结论：他们觅求过去经历的黄金时

代，因此显得保守；他们认为社会是一个有秩序的机构，因此相对静止；他们强调权威统治，因此要求顺从。另一方面，主流源自古代希腊的现代文明对未来怀有其乌托邦理想；它具有有一种社会理想的原动力，并且鼓励自由和解放。作为两种文明融合的产物，在当今华人的精神世界中，保守主义与激进主义、秩序与进步、权威与自由并存。

毫无疑问，许多人在上述两种对立观念中持其一端，进而相互间激烈战斗。同样也绝不可否认有一股巨大的力量像钟摆一样在两个极端之间摇摆不定。我们将这种情况视之为理所当然，在转型的时期是不可避免的。

然而，有一个非常令人庆幸的事实值得一提，即处在两个极端之间的群体人数愈来愈多，且愈来愈强大。这个群体认为新旧两种观念均有其价值。无论观念新旧，应当取其精华，弃其糟粕。对于他们而言，过去是现在和未来的基石，而未来则是过去和现在的目标；对他们而言，没有秩序就不可能进步，而秩序仅仅是作为进步的保障而存在；对他们而言，权力是自由守护者，是实现自由的一个手段，自由才是最终目标。一言以蔽之，他们认识到明显冲突着的每一种观念都有其正确的地方，比如德国的效率有其正确的地方，美国的自由也有其正确的地方。正是这个两极之间的人群有力地推翻了极端的保守，同时不断阻止着激进的狂暴盲动；正是这群人引领新中国走出危急的转变时期，正呵护着她迈向光明的未来。祝愿这群值得民族信赖的忠诚、智慧、勇敢之士们经受住今天的考验。

MORAL AND RELIGIOUS INSTRUCTION IN CHINA¹

The problem of moral and religious instruction is an old one; it is as old as human society. It was the Greek genius that first embodied it in a philosophical presentation: "Can virtue be taught?" asked Socrates. To this Protagoras answered that it could be taught, while Socrates held to the reverse position; but at last both confused themselves with self-contradictions and left the whole matter in the cloud. However, to a modern educator this is no longer a puzzle. The chief problem of the modern educator is not "Can virtue be taught?" but "How can it be taught?" It is the purpose of this paper to present some ideas as to how morality and religion are taught in China, and how they may be better taught in the light of modern pedagogy.

A Practice of Religious and Moral Instruction in China

Roughly speaking, there are at present two systems of schools in China: government schools and missionary schools.

1. Government Schools

In the curriculum of government schools we find moral instruction given in the lower primary schools up through the intermediate schools, but not any that I know of beyond this. The lower primary, called the "citizens schools," cover four years; the higher primary, three years; and the intermediate, four years.

In the lower and higher primary schools, two kinds of moral subjects are taught. They are, first, personal conduct, and second, classical study.

With reference to moral instruction, the Ministerial Ordinance of January 8, 1916² prescribed its aims and methods quite in detail. Under the head of personal conduct, the subjects taught are: filial piety, brotherhood, loyalty, trustworthiness, love, righteous courage, politeness, industry, and cleanliness. To these the duties towards society and the state are gradually added from time to time. From the Ordinance we notice that attention is called to the

practical aspects of these subjects. They are urged to be taught with a purpose of fostering the ideal of progress and the spirit of patriotism.

The moral instruction for girls in elementary schools consists of good words and deeds which are proper for girls to study. Besides, rituals are practiced. Emphasis put on chastity, modesty, and above all, self-independence, which is a new word in the history of Chinese feminine education.

The teaching of personal conduct covers two hours a week from the lower primary up through the higher primary, and one hour a week in the intermediate school.³

Now we come to classical studies. Somebody will maintain that the study of the classics belongs to religious instruction, on the ground that it is the study of Confucian doctrines. But in the last analysis the Confucian doctrines are purely a system of ethics—a system of human relationships, which is more or less universally adopted in China. This system of ethics is not denominational, because we find, as we shall see later, this very thing taught in nearly all missionary schools.

In the lower primary, the study of classics consists of *Mencius*, which covers four years. *Analects* takes its place in the higher primary. These courses, as described in the Ministerial Ordinance, are given with the purpose of showing the right way—principles of the sages—and of promoting the spirit of patriotism. It is very interesting to observe that the Ordinance tries to make a distinction between the “right principles of the sages” and “personal conduct.” This is most likely due to the existence of two tendencies, i.e., the tendency to preserve classical virtues and the modern tendency to emphasize the practical.

The study of the classics begins at the third year of the lower primary and is carried on up through the higher primary. Throughout, the weekly amount of time devoted to this study is three hours. In the intermediate school advanced studies in classics are continued; as it is mixed up with literature and other subjects, I am not able to assign to it a definite amount of time for each week.

Combining the amount of time spent in the instruction in personal conduct and in classical studies we find that the time devoted to moral

instruction is two hours per week in the first two years, and five hours a week from the third year on up through the seventh year, and one hour or more per week in the intermediate school.

Comparison with Foreign Systems: One way of realizing the Greek Motto "Know Thyself" is through comparison with others. In the light of the educational practice in other countries we shall come to know better our own. Let us now take a bird's eye view of the moral and religious instruction in England, Germany, the United States, and France, and see in what position China stands.

At the outset I wish to say that which is taught in England is commonly called religion and not morality. Scripture is a term which is used in the curriculum. In the English regular primary schools or Board schools, undenominational religion or Bible study forms part of the curriculum⁴. Besides, we find sectarian teachings taught in schools belonging to the Church of England, the Roman Catholic Church, and the Wesleyan Church. These church schools are, equally with the Board schools, supported and controlled by the state. The only difference between them is that the Board schools depend upon local rates, while denominational schools depend upon charity, for further funds. In fact, the influence of the latter type seems to be much greater than that of the Board schools. It is reported that thirty-one out of forty-four training colleges of teachers belong to Established Church.

As to time allotment for special instruction in Scripture, it is usually two and a half hours a week throughout the Board and grammar schools. This, however, cannot be taken as the typical example because it is very hard to find a curriculum which really represents the English system. Besides the regular instruction in the Scripture there are church services. In all public schools the chapel service is that of the Church of England.

As in England, it is religion that is taught in the German schools⁵. In Germany we find two kinds of elementary schools, each covering eight years, and five kinds of secondary schools, three of which cover nine years. It is very interesting to notice that almost every public school in Germany is denominational, i.e., either Protestant, Catholic, Jewish, or Mixed. The local control of the school

is largely in the hands of the local clergy, so that although all schools are public, the hold of the mother church upon them is still firm. The teachers are also distinctly religious. They receive religious instruction in the normal schools from three to four hours a week for three years. Each school has its teachers of the favored faith, and text books on religious instruction are prepared by them. In districts which are sparsely populated, children of different faiths receive secular instruction together. These are called Mixed schools. In such a school when students of the same faith reach the number of ten or fifteen, they can demand a teacher belonging to their own denomination.

In Germany it is found that in all kinds of elementary schools, religious instruction occupies four hours a week, and in the secondary schools, three hours a week in the first year, beyond which two hours a week throughout.

The situation in both Germany and England is unique. Very little similarity exists between these two systems and ours. One is distinctly religious and the other is distinctly moral or ethical. As far as time allotments are concerned, Table I shows that the Chinese system is stronger, at least, in elementary schools. Further, the Chinese system is continuous; i.e., the elementary school leads into the secondary school, while in both Germany and England the secondary curriculum meets half way with the elementary.

Opposed to the religious character of the Anglo-German type of public education, the public primary schools and high schools in the United States are secular and undenominational.⁶ Thirty states of the Union prohibit support to denominational schools.⁷ Twelve states have constitutional provisions against sectarian text books and sectarian control over public schools. Mississippi is the only state stipulating in her constitution that the Bible shall not be excluded from her public schools, and only nine states have statutory provision for this cause. The laws of Massachusetts, Pennsylvania and that of North Dakota permit only ten minutes' daily reading of Bible without comment.

As to moral instruction, twenty-one states have made legal provision for it. But the prevailing type of American public school is

without any formal instruction in religion or morality. The former is taken care of by the church, while the latter is given in connection with other subjects.

Table I representing the number of hours per week devoted to religious or moral instruction in the elementary and secondary schools in England, Germany, France, the United States and China.

This table is constructed from the materials furnished in Paul Monroe's *Secondary Education*, pp.80, 85, 97, 98, 109-110, A.C.Perry's *Outline of School Administration*, pp.15, 42, 379 and the *Chinese Government Educational Bulletin*.

As in the United States, the French public primary schools are secular; but unlike the former, they lay great stress upon formal moral instruction.⁸ Only lay teachers are allowed to teach in the public schools. As a result in Catholic France, there arise the sectarian private schools, but again, unlike those in the United States, these schools are subjected to state inspection on matters relating to morality, laws, and the constitution, but receive no support from the State. The secondary schools in France are also secular. However, the ministers are allowed to attend, outside of the usual classroom hour, for the purpose of giving religious instruction to those who desire it.

Now, both in France and the United States we find some features similar to the Chinese system. As in the United States, the Chinese course of study is continuous, i.e., the elementary curriculum leads to the secondary curriculum without any break or overlapping. As in both the United States and France, the governmental schools are essentially secular and are free from religious restriction. Although it is alleged that the worship of Confucius is conducted in the school, from its very nature such a worship is but a tribute of honor and love paid to a national sage, and is not very different from the celebration of Washington's or Lincoln's birthday. The non-sectarian nature of the Confucian ethics is further proved by the fact that even in missionary schools, these doctrines are invariably taught. Thus we can readily see that whether Confucianism ought to be taught in its original form in the elementary schools or not must be looked upon as pedagogical rather than a religious question. Admitting that this point of view is

the true fact, then of the two countries compared the Chinese system is more like the French, because as in French and not in the United States, the prevailing tendency is a formal instruction in morality.

2. Religious and Moral Instruction in Missionary Schools in China

In the treatment of this topic, attempt is made to divide it into three parts, namely: (I) Primary Schools, (II) Secondary Schools, (III) Colleges. A statement must be made to the effect that the conclusions reached in the following discussion are incidentally drawn from past personal impressions, but are mainly based on the information contained in the curricula and catalogues of different missionary institutions and are thus not free from the shortcomings which are inherent in such a study. Further, a few of the curricula which have been studied, such as the Central China Educational Union, Soochow University, and Hangchow University curricula, are not quite up to date. The readers must beware of possible improvements in these institutions since their dates of publication and make due discount accordingly.

①**Missionary Primary Schools**⁹ Two curricula out of five, the Standard Course of Study of the Union Educational Movement in the province of Chili, and the Central China Educational Union Curriculum, are selected to represent the central tendency of religious and moral instruction in missionary primary schools.

Table II: Comparison of time allotment for moral and religious instruction in Missionary Elementary Curricula with that of the Diocese of Pittsburgh, chosen as a representative curriculum in American denominational elementary education, and with the Chinese Government Elementary Curriculum.

表2 将中国的教会小学与作为美国教派小学教育代表的匹兹堡主教教区，以及中国公办小学课程表在道德与宗教教育时间分配上作比较。

Chr. stands for Christian literature other than Bible; B, Bible; C, Classics; P, Personal Conduct; m, Memory Work; and T, Total No. of hours. Chr. 代表基督教文而非《圣经》，B 代表《圣经》，C 代表经书，P 代表修身，m 代表背诵课，T 代表总学时。

Both the Chili and the Central China Curricula cover eight years. Although the Chili Curriculum does not specify a definite amount of time given to moral instruction in some grades, yet from that in the fifth, sixth and seventh grades we are pretty safe in saying that it is quite the same as the Central China Curriculum.

The chief fact about these curricula is the existence of a dualistic feature, i.e., Christian religion and Confucian ethics are taught at the same time to the same children and not infrequently by the same teachers.

The second fact is the amount of moral and religious instruction loaded upon the child. In the Chili Curriculum we notice that during the first two years religious and moral instruction occupies ten hours a

week. From the third year on we have eight hours a week throughout, except in the fourth year, which alone devotes only seven hours. By comparison we can readily see how much more time is allotted for moral and religious instruction than in either the curriculum of the Chinese Government schools or that of the Diocese of Pittsburgh, which may be taken as representative of sectarian primary schools in the United States.

The third fact is the drudgery of memory work. In the Chili Curriculum we notice that the work of memorizing the Bible and the Chinese Classics is carried up through the sixth year. The Central China Curriculum does not specify memory work after the third year, but during the first three years when motor activity is most needed, the child is also subjected to the formal memorization of *Analects*. The work of memory is not in itself bad; if learning is of great use, we must know how to retain it. In the matter of morality and religion, it is the concepts gained from experience, and not precept ground from books, that most need to be retained and developed. The former will be taken care of by experience itself, while the latter will eventually be lost in spite of the process of formal memorization. However, we must not be too harsh in our criticisms. We will all know what may be the result when new wine is put into the old bottle. As the missionaries get into contact with our traditional methods, their untrained teachers and educators are apt to fall into the temptation to copy and imitate.

⑥ **Secondary Schools**¹⁰ Under moral and religious instruction in the missionary secondary schools only college preparatory schools are presented here for discussion. These institutions usually have a course for four years. Among the leading university preparatories, Soochow and Foochow rank highest in the amount of time allotment, three hours a week being devoted to religious instruction. Next come Hangchow, Nanking, West China Union, Shanghai Baptist, St. John's, which have two hours per week for religious instruction. Boone University Preparatory is most liberal; it spends only one hour a week in such a course. Compared with the denominational Academy of St. Olaf University in America, most of the missionary university preparatories, except Soochow and Foochow, are a little lighter in

time allotment.

In the preparatory schools of Boone, Nanking, Foochow, West China Union, and St.John's, the provision for the study of Chinese ethics is absent at least in name. In some of these institutions the Classics are studied as literature. The preparatory schools of Soochow, Hangchow, and Shanghai Baptist, still continue the dualistic feature, as can be readily seen from Table III.

Table III: Time allotments for religious and moral instruction in missionary secondary schools compared. Figures represent the number of hours per week through the year.

©**Missionary Colleges**¹¹ In such institutions as West China Union University, Canton Christian College, St.John's University, and the University of Nanking, other allied subjects of religion have been introduced to replace the instruction in creeds and beliefs of a

particular denomination. Although they are closely connected with religion, yet such courses as the philosophy of theism, comparative religion, science and philosophy of religion, religion and the nation, history of the social influences of the Church, and education in religion and morals are not what we ordinarily call religious instruction. They are essentially the philosophical, sociological, and pedagogical studies. Therefore the colleges which have gradually substituted these vitalized subjects naturally form a more liberal group by themselves. This group includes West China Union University, Canton Christian College, St. John's University, University of Nanking and Shanghai Baptist College. A study of the catalogues of these institutions through a number of years points to the conclusion that they seem to have a tendency to follow the course along which the American nonsectarian private universities have evolved from the original sectarian institutions.

The conservative group consists of Hangchow University and Soochow University. In these institutions no attempt has been made to introduce subjects other than the traditional curriculum of religious instruction. The subjects taught are usually *The Gospels*, *Acts*, *The Prophets*, and so on, but not beyond the two Testaments. However, in order to be fair, it must be stated again that the catalogues of these two institutions accessible to this paper were published in 1912 and possible improvements since that date are very conceivable. Nevertheless, so far as the conditions in 1912 are concerned, the authenticity of data justifies this classification. In subject matter, even the very conservative denominational universities, Georgetown and St. Olaf in the United States, are more liberal than they are. Soochow averages higher even in time allotment for religious instruction than St. Olaf, if not higher than Georgetown.

Table IV: Comparison of the subject matter of and time allotments for moral and religious instruction in Missionary Colleges.

Name of Institution	Freshman Year		Sophomore Year		Junior Year		Senior Year	
	Subject	Hrs.	Subject	Hrs.	Subject	Hrs.	Subject	Hrs.

Georgetown Uni. in U.S.	Evidences and Lectures	2	Evidences and Lectures	2	Evidences and Lectures	2	Evidences Ethics	2 5
St. Olaf Uni. in U.S.	Old and New Testaments	2	Church History	2	Bible	2	Evidences	2

The dates of the publication of the college catalogues used in the construction of this table are as follows: West China Union University, 1915-1916; Canton Christian College, 1915; St. John's University, 1914-1915; University of Nanking, 1915-1916; Shanghai Baptist College, 1916; Boone University, 1915-1916; Foochow College, 1915; Hangchow College, 1912; Soochow University, 1912; St. Olaf University, 1915-1916.

The only institutions left unclassified are Foochow Uni. and Boone University. No information has been obtained in regard to the nature of the subject matter of religious instruction in Foochow Uni. With respect to the amount of time devoted to religious instruction, Boone University is one of the liberal type, but in the matter of subjects taught it can hardly be classified as such.

We can still trace the dualistic tendency of teaching Christian religion and Confucian ethics in the curriculum of Hangchow University. Here we find side by side with the instruction in religion three hours a week devoted to the study of Classics as ethics. This feature is by no means peculiar to Hangchow, and may be found in other colleges.

B Theories of Education in Morals and Religion

1. The Psychological Basis for Moral and Religious Education

Both religious and moral education are governed by the same laws of psychological life and have the same psychological basis. At the very beginning of human life we inherit a number of well-defined tendencies to act in a certain situation and toward a certain direction. These well-defined tendencies constitute what we call the original nature of man. And all the forces that act upon it after conception are considered environmental forces. Prof. Thorndike¹² maintains that character—what a man is and does—is a result of the continuous interaction between the original tendencies and environmental forces. This starts our theory of Situation-Response-connection. This means that there is a spontaneous connection between a specific original tendency and a specific situation. For instance, in the situation of the presence of a bowl of rice and I am hungry, my original response toward the rice is to take and eat it. Now suppose one of the elements changes, say I am not hungry, then my attitude toward the rice will be different because of the change in the situation.

Character is simply the accumulated habitual connection formed in a similar manner. The problem of moral and religious education is thus the formation of the desired connections between a certain situation and a certain original tendency or group of tendencies in response. The worth or value of any one original tendency lies in its functioning in the situation; in the realm of morality and religion it depends on how the tendency works out in the social environment. As the social environment advances in civilization, some of man's original tendencies, such as the sexual impulse, which are universal and essential to human life, and yet if allowed their own development is

not suitable to present social conditions, need to be modified; other original tendencies, such as anger instincts, etc., are for most of the time even harmful to the individual and to society, and need to be discouraged; finally, we have all sorts of beneficial instincts, such as the instinct of gregariousness, cooperativeness, etc., which need to be strengthened and enriched. Thus the duty of the school towards the student's character formation is to modify, redirect, discourage, strengthen, enrich, and develop the respective instincts so that the possessor can adapt himself to the social environment in a harmonious and progressive manner.

Now, in order to perform this task intelligently, three laws need to be recognized.¹³

First, we have the law of readiness. When the child's attitude is one of readiness to act, if it has the opportunity to do so it gets satisfaction. On the other hand, when the child is not ready to act, if it is compelled to act, or when it is ready to act but is not allowed to, in both cases the child is dissatisfied or annoyed. Therefore one fundamental principle of educational method is to appeal to the interest of the taught. This doctrine of interest is especially important when we come to the matter of religion or inner belief. Any outside compulsion against the child's mind set will surely cause repulsive reactions.

Next, we come to the law of use and disuse. When a modifiable connection is made between a situation and a response, that connection's strength, other things being equal, is increased, and, when it is not made, decreased. Take smoking, for instance; the moment our lips touch a cigar a connection is made. The more often we smoke the stronger will be the connection between us and the cigar, until finally the bond becomes so strong that it can hardly be broken. On the other hand, the method of breaking any bad habit is to make no more connections.

Finally comes the law of effect. When a modifiable connection between a situation and a response is made and is accompanied or followed by satisfaction, that connection's strength is increased, and when the connection is accompanied or followed by an annoyingness

it is decreased. This is the most important law for moral education. It is but the temporary and immediate satisfaction which a vice gives to a man's original nature that makes a man its slave. With the law of effect, we can attach a satisfying state of affairs to those connections which are good for society and the individual and attach annoyingness to those which are undesirable. This will be the most effective means for moral improvement. However, the three laws are correlative. Apart from the law of readiness, men may invent all sorts of emulations and punishment against the mind set and "interest in the process" of the child, which is the most condemnable thing in school practice.

2. The Sociological Basis

The operation of the psychological laws will be made clearer as we go along in the discussion of the sociological basis. Character, after all, can only be formed by active participation in social life. The child does not know what is meant by honesty, cleanliness, or faith unless he has some experience to begin with. We do not know how to swim by simply learning some movements on land. If we want to succeed in swimming, we have to learn it in the water. So it is the case with conduct. If we want to know how to behave well in society we have to participate in it, to participate in it in order to acquire the meanings of the virtues, to participate in it in order to acquire judgment so that we may know how to act in a new situation through the experience of the past. In a word, the school, the whole school should be a miniature society where moral and spiritual ideals must be at work, and where the child can share in the important phases of social life.¹⁴ Inasmuch as we spend most of our time in teaching virtues and beliefs according to books and words and rarely provide such active participation in social life, we must admit that the present methods are far from being adequate. When a six-year-old child begins to study *Mencius* or Paul he may appear to understand something, but in fact it is but skin deep. Suin Tze, in criticizing formal instruction, says: "The common people's education comes into the ears and goes out through the mouth, and therefore it is only four inches deep—the distance between the ears and the mouth."¹⁵ We may safely say that ideas about morality do not guarantee the conduct we desire, and any

instruction based on this ideo-motor theory¹⁶ will surely find disappointment. One reason why we find little or no conflict existing between the instruction in Christian religion and Confucian ethics in missionary schools is because the formal instruction in both religion and morality without actual participation is without much effect on conduct.

Furthermore, the child whose character we try to build up is a developing being. He grows in society. His experience is in a state of "continuous reconstruction." His interest and attitude change from time to time. According to Baldwin¹⁷ the child first distinguishes external things from his bodily self, then it differentiates the external things into persons and inanimate objects, and at the third stage it attempts to perform and imitate the former's actions. Through imitation the child comes to know and feel himself in the mind of others, and thus furnishes the opportunity for others to influence his own action.

In the exertion of such an influence we must also recognize the four stages of the development of conduct.¹⁸ First, we have the stage of instinctive behavior, at which the child's conduct is modified only by the influence of pains and pleasures. [...] is the stage at which the operation of the instinctive impulses is modified by the influence of rewards and punishments, administered more or less systematically by the social environment. Third, we come to the stage where conduct is controlled in the main by the anticipation of social praise and blame. Finally, there is the highest stage of moral development, at which conduct is regulated by an ideal that enables a man to act in a way that seems to him right regardless of the praise or blame of his immediate social environment. This fourth stage suggests to me "the Good Shepherd."¹⁹ It reads: "I am the good shepherd... and I lay down my life for the sheep.... Therefore does my Father love me because I lay down my life, that I might take it again." Up to this place nothing sounds very extraordinary, but watch that which follows: "No man takes it from me, but I lay it down of myself. I have power to lay it down and I have power to take it again." It is such high moral power that we must take as our final goal of development. Those who take

the responsibility of shaping the child's conduct must keep in mind the progression from the first to this highest stage. They must administer their influences and adapt materials in such a way as to enable the child to progress continuously onward and upward until this last stage is reached, when conduct sometime is the only language intelligible to the child.

3.The Pragmatic Basis²⁰

Closely connected with the sociological theory of moral and religious education there is the pragmatic aspect of the question. According to this point of view, there is a unity between knowledge and conduct, in learning and doing. As knowledge is the concept and guidance of conduct, so conduct is knowledge personified. Knowledge apart from conduct is empty knowledge, while conduct apart from knowledge is blind action. The two are one and the one cannot be gained without going through the other. Accordingly, all the courses in the curriculum and all classrooms and administrative methods must have the end of character formation in view, just because all knowledge is related to conduct. So all subject matter and methods as a result of accumulative effects must be able to contribute their share in the creation of a wholesome personality. Take the study of history, for instance. The study of history is the study of social causation and effect in the light of past experience, so that the present conduct can be adjusted and future conduct guided. Inasmuch as it has to do with human relations, the teaching of history involves moral ends, and inasmuch as it relates to the adaptation to a spiritual ideal it is religious. Similar things can be said on other subjects. Therefore if right materials are used and proper methods applied all the school subjects in totality will and must culminate in the collective effect of character formation. The attempt to provide certain subjects for the training of the mind and other subjects for the training of good behavior is at the bottom wrong in principle, because it is based on the separation of knowledge from conduct. The systems of moral and religious instruction in both the governmental schools and the missionary schools are not free from this criticism. The only remedy is to change the methods and materials of instruction and

administration, so that the moral and religious elements can be incorporated into the whole school system. The methods applied should be guided by psychological laws, the materials used should be directed toward social needs and the process of incorporation should be pragmatic.

...But in all cases, the psychological nature of the child must be recognized; social significance must be attached and opportunity for actual participation must be provided. The child, according to its stage of development, must be led to get into contact with all sorts of social needs—the poor, the sick, and the suffering....In a word, he must be put in the social hot-bed of love, service, and sacrifice, and educated to love, to serve, and to sacrifice on his own initiative.

中国的道德与宗教教育

道德与宗教教育是一个老生常谈的话题，它与人类社会同样久远。古希腊哲学家苏格拉底首先从哲学角度提出：“美德可以教吗？”对于这个问题，普罗泰戈拉认为可以教，而苏格拉底则持否定态度，但是最终观点本身的自相矛盾迷惑了他们自己，导致这个问题依然是疑云一片。然而，对现代的教育者来说，这不再是一个难题。现代教育者面对的主要问题不是“美德可以教吗？”而是“美德如何教？”本文旨在就中国如何开展道德与宗教教育、如何运用现代教育学的理论和方法更好地传授道德与宗教提出一些想法。

① 中国道德与宗教教育的实践

大体说来，目前中国有两类学校：公办学校与教会学校。

1. 公办学校 在公办学校的课程设置中，从初级小学到初级中学都开设道德修养课，再往上就我所知则不开此类课了。初级小学即所谓的“国民小学”，学制四年；高级小学学制三年，初级中学学制四年。

初级小学与高级小学开设两类道德课程：一是修身，二是读经。

关于道德教育，1916年1月8日，教育部公布《国民学校令实施细则》颇为详细地记述了它的目标与方法。在修身下开列的内容有：孝弟、忠信、亲爱、义勇、恭敬、勤俭、整洁诸德，择其切近易行者授之，渐及于对社会、对国家之责任。我们注意到，这个《细则》很注重实践环节，以激发进取之心，养成爱国爱群之精神。

对小学女生的道德教育包括那些适合她们学习的嘉言懿行。此外，也很重视女生礼仪教育。在教育中强调贞淑之德、谦逊和最重要的自立之道，其中“自立”在中国女性教育史中是一个新名词。

修身在初小和高小是一周两个课时，在初中是一周一个课时。

对于读经这门课，有人认为读经属于宗教教育，因为其实质是在研读儒家教义。但追根溯源，儒家教义乃是一个纯粹的道德伦理体系——个人伦理体系，这一点几乎被中国人广为接受。这个道德伦理体系不是宗派的，因为我们发现，几乎各类教会学校都讲授这些内容，后文中还将涉及。

在初小四年中，主要诵读《孟子》；高小则读《论语》。教育部公布的《国民学校令实施细则》指出读经要旨，在遵照教育纲要，使儿童熏陶于圣贤之正理，兼以振发人民爱国之精神。有趣的是，《细则》试图区分“圣贤之正理”与“修身”，这极有可能是保存传统美德与强调实践

的现代趋势两者共存的结果。

读经始于初小三年级，直至高小。这期间每周用在读经上的时间是三个课时。在初级中学，对读经有更高的要求，由于此时它与文学及其他课程混合在一起，不能明确地给出它每周占用的课时。

将修身与读经的时间加在一起，我们发现头两年花在道德教育上的时间是每周两课时，第三年起至第七年是每周五课时，在初中是每周一个课时或多一点。

与外国体制相比较：实现希腊箴言“人必自知”的路径是通过与其他人比较。从与其他国家的教育实践的比较中，我们能更好地认识本国的教育实践。现在让我们宏观审视英国、德国、美国和法国的道德与宗教教育，从而看看中国在其中的位置。

首先我想说明的是，英国对此类课程常见的叫法是宗教而非道德，在课程表中使用“圣经”一词。在英国一般的小学或寄宿学校，非派系宗教或《圣经》的学习是课程的一部分。此外，我们发现，在隶属于英格兰教堂、天主教堂和卫斯理教堂的学校，宗派主义的宗教也列入教学。与寄宿学校一样，这些教会学校受国家支持与控制。它们之间的唯一区别是，寄宿学校依赖当地税收，而教派学校还获得慈善团体的资助。事实上，后者的影响力远远超过寄宿学校。据说全国44所师范学院中有31所属于圣公会。

在寄宿学校和文法学校中，《圣经》这种特殊教育所分配的课时通常是一周两个半小时。然而，这不能作为典型代表，因为很难找到一个能真正代表英国体制的课程设置。除了将《圣经》作为一般的课程内容外，还有教会的事工。所有公立中小学都提供与英格兰圣公会一致的礼拜服务。

与英国相同，德国学校也开设宗教课程。我们发现在德国有两种类型的小学，每种小学学制均为八年；另有五类中学，其中三类为九年。十分有趣的是，几乎每所德国公立学校都是属于不同宗教派别的，比如新教、天主教、犹太教或者兼而有之。学校的控制权大部分归属于当地神职人员，所以尽管学校都是公办，教堂对它们的控制却依然稳固。教师显然也是信奉宗教的，他们在师范学校接受为期三年每周三到四个小时的宗教教育。每所学校都有信仰它所支持的教派的老师，宗教课的教材由他们编写。在居民稀疏的街区，不同宗教信仰的学生在一起接受世俗教育。这些学校被称为混读学校。在这样的学校里，有相同信仰的学生达到10人至15人时，他们有权要求有一个与他们信仰相同的老师。

在德国的各种小学中，每周有四个学时的宗教教育。在中学，第一

年是每周三个学时，随后是每周两个小时。

英国和德国的情况都很独特，这两种体制与我们的体制之间几乎没有相似性。一个明显是宗教性质的，而另一个则明显是道德伦理性的。就时间分配而言，由表1可见中国的体制更具有刚性，至少在小学是如此。此外，中国的体制具有连续性。也就是说，小学与中学教育衔接紧密，而在德国和英国，中学阶段的课程与小学阶段有一定重叠。

表1显示英国、德国、法国、美国与中国的中小学每周在宗教与道德教育上花费的时间。

本表材料源自保罗·孟禄的《中学教育》第80、85、97、98、109—110页，A.C.佩里的《学校管理概览》第15、42、379页以及中国政府《教育公报》。

Name of Country 国名	Type of Schools 学校类型	Subject Matter 课程	Approximate Age 大约年龄																
			6,7	8	9	10	11	12	13	14	15	16	17	18	19				
			School Year 学年																
			1	2	3	4	5	6	7	8	9	10	11	12	13				
England 英国	Elementary 小学	Scriptures 《圣经》	2.5	2.5	2.5	2.5	2.5	2.5	2.5	2.5									
	Secondary 中学	Scriptures 《圣经》						2.5	2.5	2.5	2.5	2.5	2.5	2.5

	Secondary 中学	Religion 宗教					3	2	2	2	2	2	2	2	2	2			
The United States 美国	Elementary 小学	Not Formal Inst. 非形式化教育	0	0	0	0	0	0	0	0									
	Secondary 中学	Not Formal Inst. 非形式化教育									0	0	0	0					
France 法国	Elementary 小学	Moral 道德	2.5	2.5	2.5	2.5	2.5	2.5	1	1	1								
	Secondary 中学	Moral 道德	In	F. 法语	G. 地理	H. 历史		0	0	0	0								
China 中国	Elementary 小学	Per. Cond. & Classics 修身与读经	2	2	5	5	5	5	5										
	Secondary 中学	Ethics and Classics 伦理与读经								1	1	1	1						

In the first three years of the French secondary school, Moral Instruction is given in connection with French Language (F), Geography (G), and History (H). Per. Cond. stands for Personal Conduct. 注：法国的中学教育前三年，道德教育通过结合法语、地理和历史课程来传授。Per. Cond.代表修身。

与英德的宗教特色相反，美国的公立小学和中学教育是世俗的和非宗教派系的。30个州禁止支持宗教派系的学校，12个州以宪法条文反对宗派主义的教科书和宗派主义者对公立学校的控制。密西西比州是唯一

在其宪法中规定不可将《圣经》从公立学校课程中取消的州，只有九个州为此制定法令条文。马萨诸塞州、宾夕法尼亚州和北达科他州的法律规定每日只允许有10分钟的时间不加评述地阅读《圣经》。

21个州为道德教育制定了法律，但是美国大部分的公立学校没有形式化的宗教或者道德教育课程。前者由教堂负责，而后者则通过结合其他相关课程传授。

与美国相似，法国公立小学也是世俗的，但是与美国不同的是，它们极为重视形式化的道德教育。只有世俗的、非神职的教师才有资格在公立学校执教。因此，在天主教盛行的法国兴起了各个宗派的私立学校。但是与美国学校不同的是，这些学校要接受国家在道德、法律与宪法等方面的督察，却不享受国家的资助。法国的中学也是世俗的。然而，在通常的教学时间之外，允许牧师向希望获得宗教教育的学生传教。

现在，从法、美两国教育体制中，我们发现一些特征与中国很相似。和美国一样，中国的课程教育也是连贯的，即小学课程与中学课程自然衔接，没有任何中断或重叠。和美、法两国一样，中国公立学校本质上均为世俗教育，不受宗教条规制约。虽然学校宣称尊孔，但实质上，这只是一种对本国先贤的尊敬与爱戴，与美国人庆祝华盛顿或者林肯的生日并无多大差异。即使在教会学校，也会原原本本地传授儒家伦理，从这一点可进一步证明它的非宗派性。因此，我们不难看出，儒家学说是否应该以其本来面目在小学传授必须被视为教育问题而非宗教问题。如若承认这个观点是事实，那么在与之相比较的两个国家中，中国的体制更像法国，因为在法国而非美国，普遍的趋势是提倡形式化的道德教育。

2. 中国教会学校的宗教与道德教育 在阐述这个问题时，试图将其分为三个部分，即（一）小学，（二）中学，（三）大学。必须首先声明，在接下来的讨论中得出的结论是基于过去偶然的个人印象，但主要建立在不同教会机构的课程和目录的基础上，因此这种研究固有的缺陷是难以避免的。再者，作为研究对象的一些课程，例如华中教育协会、东吴大学和之江大学的课程，并不是最新的。读者须根据此出版日期之后这些机构可能的改进作出合理的估计。

（1）教会小学 在五份课程表中选择两份作为教会小学的宗教与道德教育主流趋势的代表，即直隶省的联合教育运动组织的标准课程和华中教育协会的课程表。

直隶和华中的课程表均为八年。虽然直隶的课程表并没有详细给出

某些年级的道德教育的具体课时，但是，从五、六、七年级的情况来看，我们可以非常肯定地说，其具体课时与华中的完全一样。

最重要的一点是这些课程存在双重的特征。也就是说，基督教与儒家伦理经常是同时由相同的老师向相同的学生传授。

第二点是学生承受的道德与宗教教育的课时负担。在直隶的课程表中，我们注意到，在头两年，宗教与道德修养课程为每周十学时。从第三年起，除第四年中每周七个学时外，其余都是每周八学时。通过比较，可以很清楚地看到，直隶和华中比无论是中国的公立学校，还是被视为美国教派小学代表的匹兹堡主教教区，都安排了更多的时间在宗教与道德教育上。

第三点即是死记硬背之辛苦。在直隶省的课程表中，我们注意到背诵《圣经》与中国经书的任务一直持续到六年级。华中的课程表在三年级之后就没有了指定的背诵任务，但是在头三年，正是学生们最需要肌动活动的时候，却也需要正式地背诵《论语》。背诵本身并无坏处，如果所学内容大有用处，我们必须知道如何保有所学知识。就道德与宗教而言，最需要保有并进一步拓展的是那些源于亲身体验的知识，而非基于书本的准则。亲身体验习得的知识会自然得以保存，而书本上的内容，即便经过了正规的背诵，最终也会被遗忘。然而，在提出批评时，我们也不可过于严苛。众所周知，旧瓶装新酒的后果是什么。当传教士们使用我们传统的教学法时，他们当中未经过正规培训的老师更容易依赖于模仿和生搬硬套。

(2)教会中学 关于教会中学的道德与宗教教育，我们在此仅就大学预科进行讨论。这些学校一般开设四年课程。在顶尖的大学预科中，东吴大学和榕城格致书院时间分配最多，一周三个学时用于宗教教育。其次是之江大学、金陵大学、华西协和大学、沪江大学和圣约翰大学，这些大学的预科学校每周两个小时用于宗教教育。文华大学预科最宽松，一周仅一个学时。同美国教派学院圣奥拉夫大学相比，除东吴大学与榕城格致书院外，绝大多数教会大学的预科学校在道德与宗教教育方面的时间安排上都相对较少。

在文华大学、金陵大学、榕城格致书院、华西协和大学和圣约翰大学的预科学校里，至少在名义上没有开设与中国伦理道德相关的课程。在这些学校当中，有的将经书作为文学进行教授。东吴大学、之江大学和沪江大学的预科学校依然带有二元特征，详见表3。

(3)教会大学 在华西协和大学、岭南学校、圣约翰大学以及金陵大学，一些与宗教密切相关的学科取代了对某一特殊宗派信条的传授，诸

如有神论哲学、比较宗教学、宗教中的科学与哲学、宗教与国家、教会社会影响史，以及宗教和道德教育等学科，但它们并非我们通常所称的宗教教育，本质上是哲学、社会学和教育学层面的研究。因此，正逐渐替代为这些重要课程的学院，也在自然而然地形成一个更加充满活力、自由的团体。这一团体包括华西协和大学、岭南学校、圣约翰大学、金陵大学以及沪江大学。一项多年关于这些大学课程目录的研究显示，它们似乎在步美国的后尘，即教会大学由原有的教派大学渐渐发展成为非教派私立大学。

保守的一组包括之江大学和东吴大学。这些大学无意于引进任何传统宗教课程以外的课程。他们所教授的课程常常是新约全书中的《福音书》、《使徒行传》以及旧约全书的《先知书》等等，但并不超出新旧约全书的范围。然而，为公正起见，有必要再次声明的是，本文中所引用的这两所大学的课程目录出版于1912年，而很有可能随时间推移已有所改进。尽管如此，就1912年的情况而言，资料的真实性足以证实这样的分类。在课程设置方面，即使是极其保守的宗派教会大学，如美国的乔治敦大学、圣奥拉夫大学，也要比上述两所大学更自由。东吴大学安排宗教教育的平均时间即使不比乔治敦大学更多，也要比圣奥拉夫大学多。

表4：教会大学道德与宗教教育在课程设置和时间分配上的比较。

学校名称	大学一年级		大学二年级		大学三年级		大学四年级	
	课程	课时	课程	课时	课程	课时	课程	课时
华西协和大学	比较宗教学	1	科学与宗教	1	宗教与国家	1		
岭南学校	基督伦理学	1	神论哲学	1	基督教见证	1		
圣约翰大学	圣保罗的生活	1	基督教见证	1	比较宗教学	1	圣约翰与道德	1
金陵大学	基督的生活	2.5	旧约全书史	2.5	教会的社会影响	2.5	道德与宗教教育	2.5
沪江大学	旧约全书史	2	基督的生活	2	道德与基督教	2	比较宗教学与基督教的发展	2
文华大学	使徒行传	1	圣保罗神学	1	早期先知	2	希伯来历史和基督生活	2
榕城格致学院		2		2		2		2
之江大学	摩西五书读经	2	旧约全书读经	2	基督的生活	2	使徒书	2
		3		3	读经	3	读经	3
东吴大学	福音书	2	使徒行传	3	先知书	2	圣歌	2
美国乔治敦大学	见证和讲座	2	见证和讲座	2	见证和讲座	2	见证伦理	2 5
美国圣奥拉夫大学	新旧约全书	2	教会史	2	《圣经》	2	见证	2

注：本表使用的大学课程目录出版日期分别为：华西协和大学，1915—1916；岭南学校，1915；圣约翰大学，1914—1915；金陵大学，1915—1916；沪江大学，1916；文华大学，1915—1916；榕城格致书院，1915；之江大学，1912；东吴大学，1912；圣奥拉夫大学，1915—1916。

未做分类的教会大学只有榕城格致书院和文华大学。现在尚未获得任何关于榕城格致书院的宗教教育课程种类的信息。就用于宗教教育上的时间而言，文华大学属于自由的一类，但从所授课程的内容来看则很难说是如此。

从之江大学的课程上，我们仍能看出它同时教授基督教和儒家伦理的二元趋势。我们发现在之江大学，除宗教教育之外，每周还有三个学时用于作为伦理教学的读经上。这个做法绝非之江大学所独有，或许其他高校也是如此。

② 关于道德和宗教的教育理论

1. 道德与宗教教育的心理学基础 宗教和道德教育都遵从共同的心理生活规律，具有相同的心理学基础。在人生的最初阶段，我们继承了很多界定清晰的倾向，在特定情境下有特定行为，并具有明确的方向。这些明确的倾向构成了我们所说的人的原始本性。胚胎形成后对其产生作用的各种力量都被认为是外界环境的力量。桑代克教授主张，人的本质——即人是什么，人在做什么——是人类本性和外部环境不断相互影响的结果。这种观点开创了刺激情境（S）与反应（R）间的联结学说。这意味着，特定的本性遇到特定的环境刺激就会发生自发的联系。例如，当我饿的时候，面前有一碗饭，我本能的反应便是端起来吃掉它。现在，假设其中某个因素改变了，比方说我不饿了，那我对这碗饭的态度也会有所不同，因为情境已经有了变化。

人的品性也只不过是相似的方式积累起的惯性的联系。因此，道德和宗教教育的问题就在于在特定情境与特定本能反应之间形成我们所希望的联系。任何一种本能的价值就在于它在特定情境下有发生反应的功能。在道德与宗教领域，则取决于在特定社会环境下本能如何发生作用。随着社会文明程度的提高，在人们生活中普遍而又最本质的某些本能，比如性冲动，若任其自然发展，是与当前的社会环境不协调的，因而必须加以掩饰；再比如其他本能，比如愤怒等，绝大多数时候对于个人和社会来说甚至是有害的，需要加以劝阻。最后，我们有各种各样有益的本能，诸如乐群、合作的本能等，这些本能需要予以加强和充实。因此，学校对于学生品格的形成肩负的责任就是改进、改变、劝阻、加强、丰富与发展他们的各种本能，使学生以一种和谐、上进的方式适应社会环境。

现在，为了机智地履行这个任务，必须认识到联结学习理论的三条规律。

第一，我们来认识准备律。当孩子的态度是准备好了一个行动（传导），并有机会那样做时，他就会感到满足。相反，孩子没有作好准备而被强制行动，或者已作好准备却不被允许行动，都会引起孩子不满或烦恼。因此教育方法的一个基本原则就是激起被教育者的兴趣。当我们涉及到宗教或者内心信仰时，兴趣原则尤其重要。任何外界对孩子内心

的强制都会引起令孩子厌烦的对抗性反应。

其次，我们来认识应用律和失用律。当在刺激与反应之间已经建立起某种可改变的联系时，在其他条件不变的情况下，若加以应用这种联系的强度会因之增长；反之，若久不应用则会消退。以吸烟为例，当我们的嘴唇碰到香烟，一种联系便建立起来。我们越是频繁地吸烟，我们和香烟的这种联系就会越牢固，直到最终这个联结变得坚不可摧。另一方面，改变任何一个坏习惯的方法便是不再建立任何联系。

第三，我们来认识效果律。当在刺激与反应之间已经建立起某种可改变的联系，且随之而来的是满意度时，那么这种联结就会增强；反之，如果伴随或紧接着的是一种使人感到厌烦的感觉，这种联结就会减弱。在道德教育中这是最重要的规律。正是恶习给人的本性所带来的短暂和当时的满足使他受其奴役不得解脱。我们可以

应用效果律，在对社会和个人有利的事情与愉悦的感觉之间建立起联结，让恶习与厌烦的体验间建立联结，这是提高道德修养最有效的途径。然而，这三条规律是互相关联的。离开了准备律，人们可能发明多种违逆儿童心境和“过程中的兴趣”的竞赛和惩罚，这是在学校实践中最应当谴责的事情。

2. 社会学基础 随着我们对社会学基础讨论的不断深入，心理规律的作用将更加明晰。毕竟，性格是通过积极参与社会生活而塑造的。小孩子不知道什么叫诚实，什么叫卫生，什么叫信仰，除非他开始经历这些。仅仅在陆地上学会了几个动作，我们仍旧不知道如何游泳。如果我们想学会游泳，就必须在水中练习。品性的养成也是如此。如果我们想知道如何在社会上表现良好的话，就必须参与到社会生活中去，参与其中以获知美德的意义，参与其中以获得判断力，以便通过已有的经验知道在一个全新的环境下应当怎样去做。简言之，学校应犹如一个小社会，道德和理想都应起作用，这里是孩子们共同参与社会生活的重要阶段。鉴于我们花费大部分时间依照书本和言辞向孩子们传授美德和信仰，而很少给他们提供积极参与社会活动的机会，我们不得不承认目前的教学法有很多不足之处。当一个六岁小孩开始学习《孟子》或圣保罗时，他看似明白了一些知识，实则只是皮毛而已。荀子在批判形式化教育时说：“小人之学也，入乎耳，出乎口；口耳之间，则四寸耳。”我们可以放心大胆地说，关于道德准则的想法不能确保落实于行为实践，而且任何以意动理论为基础的教育其结果必然令人失望。在教会学校中，基督教教育和儒家伦理教育很少或者几乎没有冲突的原因在于，没有真正参与实践的宗教与伦理道德形式化教育对于行为并没有太大的影响。

而且，我们试图塑造的小孩子的品格一直处于发展中。他在社会中成长，因而他的阅历在“不断地重构”，他的兴趣、爱好和对待问题的态度也在时刻发生变化。根据鲍德温的观点，孩子最先把外部事物和躯体的自己分辨开来，随后他能够从外界事物中识别出人类和无生命的事物，第三个阶段是试图表演和模仿前者的行为。通过模仿，孩子开始通过他人的思维了解并感知自己，因此为别人影响自己的行为提供了机会。

在这样的影响下，我们也必须认识到行为发展的四个阶段。首先，是本能行为阶段。在这个阶段，小孩子的行为只因疼痛和喜悦的影响而变化。[其次是自我照应阶段，] 本能的冲动会因奖罚而改变，会或多或少受到社会秩序的约束。²¹ 第三阶段，行为主要取决于自我对社会赞扬与指责的预期。最后即是道德发展的最高阶段，理想支配行为，人们以意识中认为正确的方式行事，而不顾及周边社会环境中的赞扬与指责。第四个阶段使我联想到“好牧人”耶稣基督的称号）。[《圣经》] 道：我是好牧人……好牧人为羊（信徒）舍命……我父爱我，因我将命舍去，好再取回来。”此处并无特别，且继续向下看吧：“没有人夺我的命去，是我自己舍的。我有权柄舍了，也有权柄取回来。”我们必须把如此高尚的道德力量当成发展的最终目标。那些肩负塑造孩子品行责任的人们必须对从第一个阶段到最高阶段的发展变化烂熟于心。行为有时对孩子来说是唯一明白易懂的语言，因此他们就必须以身作则，调整教材，通过“身教”使孩子不断地进步，直至达到最高的阶段。

3. 实用主义基础 与道德和宗教教育的社会学理论紧密相联系的是实效方面的问题。根据这个观点，在学与做当中知与行是合一的。知识是行为的概念和准则，行为则是知识的化身。脱离行为的知识是空洞的，而无知之行则是盲目盲动。知行是合一的，舍其一则两者皆不可得。相应地，因为所有的知识都与行为有关，列入课程表中的所有课程、所有教学管理方法都必须着眼于品性的最终形成。因此所有的科目与教育方法都是累积影响的组成部分，它们都必须对健康个性的形成作出贡献。以历史研究为例，历史研究即是对过往事件的社会因果关系的研究，即以史为鉴，对现下的行为起校正作用，对未来的行为具有指导作用。鉴于它与人际关系相关，历史教学涉及到道德目标；因为它与适应精神层面的理想有关，所以带有宗教色彩。相似的结论也可适用于其他学科。因此，如果学校能够采用合适的材料和恰当的方法，所有的课程从整体上必将能够对品质形成起到最大的综合效果。试图分别开设专门的课程以净化心灵或培养良好的行为的做法，从原则上讲，是大错特

错的，因为它建立在知与行分割的基础之上。公立学校与教会学校的道德与宗教课程体系都难免受此诟病。唯一的“良药”即是改进教学和管理方法及教材，以使道德和宗教的元素融入整个学校教育系统。采用的方法应当以心理规律为指导，选用的教材应当着眼于社会需求，两者的融合过程应当是注重实效的。

……但是，在所有情况下，必须承认儿童的心理特性，必须重视社会意义，必须提供实际参与的机会。必须根据儿童发展各个阶段的特点，引导他们接触社会，了解各种社会需要——贫穷、疾患以及磨难。……一言以蔽之，必须将他们置于博爱、服务、牺牲的社会温床中，教育他们自发地去献出爱心、参与社会服务、自我牺牲。

EDUCATION IN CHINA 1924¹

A Introduction

China has been in the process of modernizing her education during the last two decades, but no greater progress has ever been made in any time of the period than in the last five or six years. Prior to 1919, roughly speaking, education in China was on a crossroads of foreign examples. At one time, she had to model after the Japanese system; at another, the German system; and at still another, the American system. The imported systems of education from foreign countries, however fruitful they might be on their own soils, could not blossom well when thus transplanted. It was not until very recently that an awakened realization began to set in in the minds of educators and people in general that they must thoroughly study and examine their own needs and problems before they can adequately work out a system of education which will be truly Chinese and of real service to China. But in order to understand fully the effects of this realization and of its subsequent deliberations and solutions as set down in the following pages, it will be well here to indicate the forces that have brought about this great change.

Perhaps the most profound influence is undoubtedly the so-called Chinese Renaissance. The Renaissance began in 1917 as a "Literary Evolution" when Dr. Hu Shih and his followers declared that the old classical language had outlived its usefulness and that *Pai-hua*, or the spoken language, should be its legitimate heir. The "Literary Revolution" met with astonishing success. In spite of strong opposition on the part of the conservative scholars, the younger generation received it with overwhelming enthusiasm. This rediscovery of a living language for the Chinese has enabled China to produce new literature fitted for the new age, has revolutionized elementary school reading materials as well as methods of teaching them, and has made it possible for the mass education movement to go on with its program of eliminating illiteracy in the country.

But the influence of the Renaissance is more than this. It is a

movement through which all the traditional values, including the educational, are judged from a new standpoint and with a new standard. Tradition is often thrown overboard, authority is cast aside, and old beliefs are being undermined. In the words of Dr. Hu, this "systematization of the national heritage is a revival or rebirth of that spirit of criticism and research which animated the works of the Han Hsueh scholars of the last three centuries."² As has been said before, China in the former years followed her neighbors rather blindly. At first, she sacrificed everything old for the new. But now and only gradually, she has begun to realize that the old is not necessarily bad and the new is not necessarily good. Her reaction to new theories and practices is no longer imitative adoption, but question, examination, experimentation, and selection. This undoubtedly is a wholesome attitude, and the logical outcome of this attitude in the field of education is the creation of a new system which is best fitted for the need of New China by assimilating what is best in the old as well as in the new, in itself and from outside.

B Administration of Education

1. Administrative Units

① **Central Administration** The administration of education in China is highly centralized in theory but decentralized in practice. At the head of the educational system, there is the Ministry of Education which legally is the final authority over all the educational matters of the country. It has three bureaus, namely (1) the Bureau of General Education, (2) the Bureau of Higher Education, and (3) the Bureau of Social Education. The more important officers of the Ministry are the minister, the vice minister, three councilors, three directors of the Bureaus, four secretaries, and sixteen national inspectors of education. Important actions of the Ministry are generally brought to the consideration of the Ministry conferences, which are attended by the councilors, directors, secretaries and others who may be requested by the Ministry to be present from time to time. Such conferences are presided over by the minister. He is a member of the Cabinet and he chooses his subordinates subject to the approval of the Cabinet. Owing to the political instability of the country in recent years, the position

of the Ministership changes hands frequently, sometimes as many as five times in a year. But the vice minister usually holds a longer time and the councilors, directors, and the secretariat remain in office for a still longer term. It is to them that the continual functioning of the Ministry is largely due.

However, in spite of the fact that the activities of the Ministry have often been restricted and held back by the frequent changes of its head, it still enjoys much of its old prestige. With the coming of a united country and the appointment of a right person at its head, the Ministry may still become a driving force in the advancement of education in the years to come, although it is likely that local initiative will be more encouraged and the Ministry's former bureaucratic influence will be curtailed.

⑥ **Provincial Administration** In the provinces, there are now three existing forms of educational administration, namely the bureau form, the department form, and the commission form. The province of Kwangtung has tried a fourth plan under the name of the Committee of Education, but it is now abandoned. In those provinces in the Southwest, the bureau of education has generally been adopted. Thus in Yunnan, Kweichow, and Hunan, the bureau form of education exists. The director of the bureau is appointed by the governor of Yunnan and Kweichow, but is elected in Hunan by the Provincial Assembly. The department form of education is found in the provinces of Kwangsi and Szechwan and is legally vested with less power than the bureau form of education. The rest of the provinces all have the commission form of educational administration at the head of which is the commissioner of education. He is appointed by the president of the Republic upon the recommendation of the minister of education, and is under the direct control of the Ministry. But in directing the educational affairs of the province and in supervising his subordinates in the management of local education, the commissioner of education is required to work under the governor of the province, being thus doubly responsible both to the minister and to the governor. As a consequence, the power of the commissioner varies with the different provinces, depending upon the will of the provincial governor. As he is

farther away from the Ministry and nearer to the governor, there is every temptation for him to follow the dictates of the governor rather than his superior at Peking.

The commission of education has two or three departments for carrying out the main groups of educational affairs. Besides, there are generally from four to six inspectors of education for each province.

©**Local Administration** The local administration is divided into two units, the county unit and the school district. Below the province there is the county. There are two systems of county school administration. First, we have the Bureau for the Promotion of Education, whose function is to assist the magistrate in the educational administration and in supervising the school work of the self-governing district. The bureau has a superintendent and a few assistants. But besides the superintendent, there is under the magistrate an educational secretary and also a county inspector who is independent of the superintendent. These three men hardly agree with one another. This triangular administration of county education has proved very troublesome. It is now being gradually replaced by the new creation of the County Board of Education.

The County Board of Education was inaugurated in 1922. It attempts to unify the county school administration. Under this system, the inspectors are brought under the direction of the superintendent, who is appointed by the provincial commission of education upon the recommendation of the magistrate of the county. There is another attempt in this new scheme, that is, the granting of more powers to special cities for the independent management of their schools and making the county government take charge of the village education only. This principle, however, has not been vigorously applied, although the seeds have been widely sown.

The lowest unit of local administration is the school district. The county is divided into several school districts, each of which has a delegate of school affairs, sometimes with an assistant. The school districts in China are not vested with sufficient power to cope with their responsibility. It is most loosely and inefficiently organized. The province of Shansi alone has the best organization of the local

unit. Every village in the county and every street in the city has responsible persons to take charge of the educational welfare and they are given much power to perform their duties. Reorganization of the lowest unit, therefore, is one of the most urgent problems today.

2. Inspection and Supervision

In China, there are three grades of inspection. Namely the national, the provincial, and the county inspection.

According to the regulations of 1913, the whole country is to be divided into eight inspectional districts. Each district has two national inspectors. The regular school inspection generally begins in the latter part of August and ends in the first part of June. The inspection covers all phases of general and social education. Special inspection may be made by the special order of the minister. When the inspectors are not on their inspection tours, they are required to be present in the Ministry to attend to other duties that may be assigned to them. During the last few years, all these regulations appear in letters only, the national inspection of education being almost entirely absent.

The provincial inspectors of education are appointed by the commissioner of education. There are four inspectors for the smaller provinces and five or six for the larger ones. Below the province there are county school inspectors. Under the old system, they act as agents for the county magistrates for the school affairs. But with the adoption of the system of the Board of Education, the county inspectors are put under the direction of the county superintendent of education. The county inspectors visit the schools under their charge from once to three times a year.

The functions of the inspectors of education are enumerated in the educational code. There are seven duties for the national and provincial inspectors, and thirteen duties for the county inspectors. But in actual practice, the inspectors are simply visitors, reporters, and, worst of all, faultfinders. Most of them do not realize that their mission is to give inspiration, encouragement, and a helping hand to the principals and teachers in service. In recent years, there has been a tendency to protest against this negative inspection and to advocate in its place a system of constructive supervision. The province of Kiangsu

has set up a noble example in this respect. Beginning with last year, the commissioner of education has invited experts from the National Southeastern University and other institutions to serve as supervisors of special subjects. Thus the supervision of vocational education, science teaching, physical training, and normal education was instituted. This year, the supervision of social sciences and national language has been introduced. It has thus opened in China a new era in school supervision and inspection.

3. Educational Finance

Roughly speaking, there are three grades of schools supported by three respective sources of funds. The higher education is mainly supported by the national funds, the secondary education by the provincial funds, and the elementary education by the county or local funds. There are exceptions, but in general, this statement holds true.

As the national revenue comes from the customs duties, salt tax, stamp tax, tobacco and liquor licenses, profit from telegraphs, railways, and postal service, land tax and the like, the national funds for national education are drawn from the complex of these sources. With the exception of a few institutions such as Tsing Hua College, the University of Communications, the Wuchang Normal University, which derive their respective support from special sources, others get their shares from the general appropriation. The national institutions located outside of Peking secure their appropriations from the national funds put under the custody of the provincial treasury. According to the budget of 1919, the only one accurately constructed, the appropriation for the national education of \$5,028,836 was really less than one per cent of the total government appropriation for the year.

Although there are professional schools and colleges conducted by the provincial governments, the province is still mainly concerned with secondary education. There is a tendency for each province to maintain a full college, but so far very few provinces have succeeded in their realization. The main sources from which we draw funds for provincial schools are the surtaxes, especially the surtax on land. Kiangsu and Chekiang are now levying special taxes on tobacco

for the specified use of provincial education. Two years ago, the province of Szechwan tried to devote its almost two million dollars of pork tax to education but without much result. The tax on transfer of deeds and ownership adopted in Honan yields an annual income of \$1,000,000 for provincial support. In the face of financial distress, a number of new solutions have been proposed. They are still at the stage of trial and error. In order to give some idea of the extent of provincial support of education, we may mention as representatives of the extremes that Kiangsu is spending \$2,800,000, Chekiang \$1,500,000 and Kiangsi, only \$600,000 annually.

As a general rule, the county supports the elementary education by surtaxes on land, miscellaneous assessments, rent and interests from the academic properties handed down from the old dynasties. The Shansi system of supporting schools is, so far, the best that has been evolved in this country. In the cities, stores and houses are graded and assessed according to their standing for the support of the city elementary schools. In the villages, a land tax is levied according to its quality for the support of the village education.

On account of the political unrest and irregular expenses for military purposes, the schoolmen are confronted with the uncertainty of educational funds. The provinces that have been seriously short of funds are Kwangtung, Fukien, Kiangsi, Szechwan, Anhwei and Hunan. The provinces that are better off are Fengtien, Yunnan, Shansi, Shensi, Shantung, and Honan. But, in general, the teachers in China are serving the country at the greatest personal sacrifice.

The problems with which we are now chiefly concerned are: (1) How to insure regularity of payment of the educational fund by legal protection and economic devices, so that those who are in educational service can be free from financial anxieties and give their whole-hearted devotion to the educational cause; (2) how to reorganize the tax system so that the burden as well as opportunity for education can be equalized; (3) how to stimulate educational activities through a proper system of distribution and subsidies without curtailing local initiative; and (4) how to economize the use of the present fund so that the maximum of educational results can be achieved at the

minimum cost.

C The New System of Schools

1.The System

“China has had at least four systems of schools within the last twenty years.”The newest one was adopted in 1922, as a result of three years' deliberation initiated by the Seventh Conference of the National Federation of the Provincial Education Associations in 1919. There is no space for us to discuss the historical development of the system. The issues that have been evolved in its make-up will be touched upon in connection with the discussions of the grades and types of schools which follow. Since 1922, committees have been organized and kept busy drawing up new courses of study in order to cover this skeleton with flesh. This year has witnessed the completion of all the new courses of study except a small part in vocational education. They were voted upon and approved by the Tenth Conference of the National Federation of the Provincial Education Associations and were submitted to the Ministry of Education for promulgation.

On the next page is a diagrammatical representation of the new system of schools adopted by the Twenty-Third Ordinance of the Ministry of Education. It will be noted that the left column in the diagram represents the standard ages at which students should enter the different grades. In practice, however, these are to be determined according to intelligence, record, and other considerations.

2.The Divisions of Schools

①**Pre-School and Kindergarten Education** Kindergarten education has been given a place in the new system and admits children under six years of age. The practice schools of the normal schools, especially the normal schools for women, usually have kindergartens attached to them. There are also kindergartens conducted by private persons and by the missions. But the total number of kindergartens is yet very small. As kindergarten training gives the children an opportunity for active self-expression and also for interaction between the child and the teacher, it is very necessary to have first the adequate institutions for the training of kindergarten teachers. The resolution for more

trained kindergarteners passed in January, 1924, by the Kiangsu Conference of Educational Administrators is an indication of the need felt. The Hunan Education Association has also this year advocated the establishment of more kindergartens in cities and towns. The Kiangsu Compulsory Education Association has even recommended the adoption of kindergarten methods in the lowest grade in the elementary schools. Another very encouraging and more significant fact is the experiment on kindergarten education conducted by Professor H.C. Chen of the National Southeastern University. Impressed by the fact that the subject matter and methods used in the kindergarten are borrowed from foreign countries and some of them may not be suitable for the Chinese children, he and his staff began in the fall of 1923 to experiment on the self-made toys, Chinese Mother-Goose stories, and other materials. He is also trying to make the kindergarten a training center for mothers as well as a center for the education of young children. The Chinese National Association for the Advancement of Education and Professor Chen have agreed to cooperate in including in his plan an experiment on the least possible cost of conducting the kindergarten education so that it could be duplicated in the largest number of communities.

⑥ **Elementary Education** According to the new system, attendance at the elementary school is limited to six years, but it may be extended to another year in order to suit local needs. The elementary school is to be divided into the lower primary and higher primary grades. The former consists of four years and may be established separately.

The courses of study drawn up by the Committee of Eighteen for elementary schools are as follows:

Subjects 科目		Percentage of Time Devoted to Each Subject 每一科目所占时间的百分比	
		In Lower Primary Grades 初小各年级	In Higher Primary Grades 高小各年级
National Language 国语	Conversation 语言	30%	6%
	Reading 读文		12%
	Composition 作文		8%
	Penmanship 写字		4%
Arithmetic 算术		10%	
Social Sciences 社会科学	Hygiene 卫生	20%	4%
	Citizenship 公民		4%
	History 历史		6%
	Geography 地理		6%
Nature Study 自然		12%	8%
Gardening 园艺			4%
Industrial Arts 工用艺术		7%	
Imagery Arts 形象艺术		5%	
Music 音乐		6%	
Physical Education 体育		10%	

It is further recommended that there should be at least 1,080 minutes per week for the first two years, 1,260 minutes per week for the third and fourth years and 1,440 minutes for the two higher primary grades. The number of minutes are to be distributed into suitable periods for the six days' work. In village schools the subjects may be combined and simplified, but the time allotted to national language and arithmetic should by no means be reduced.

According to the new system, compulsory education is temporarily limited to four years. If local circumstances are favorable,

the period may be extended. The school age for compulsory education is left to the determination of different provinces and special districts in accordance with their local situations.

Compulsory education has been contemplated by the central authority ever since the Tsing Dynasty. It was not until 1920 that the Ministry of Education mapped out the definite steps for the enforcement of the same in different communities at specific times. The specifications are as follows:

1921, provincial capitals and open ports

1922, county seats and cities

1923, towns above five hundred families

1924, towns containing above three hundred families

1925 and 1926, towns containing above two hundred families

1927, villages containing above one hundred families

1928, villages containing below one hundred families

On account of the political disturbances in recent years, the above program has rarely been vigorously enforced. The province of Shansi alone, however, stands out most prominently in its achievements. The Shansi program has seven steps to be completed in seven half-years, from 1918 to 1921. Although complete success has yet to be achieved, the latest return of statistics shows that more than seventy-two per cent of the children at school age are now in schools. Illiterate adults below twenty-five years of age are also required to attend continuation schools to study common Chinese, arithmetic, and things which a citizen ought to know.

Another phase in connection with elementary education which may be mentioned here is the village school movement. As more than eighty per cent of the total population live in villages, it is of the greatest importance that village education should receive our closest attention. Recently, the Back-to-the-Country Movement has gathered much strength. The Chinese National Association for the Advancement of Education has created a special committee on rural education. The Tenth Conference of the National Federation of the Provincial Education Associations, which met in Kaifeng last October, has also devoted much deliberation to this important matter. The Kiangsu

Compulsory Education Association, which met in Wusih in August, spent three days in drawing up seven practical suggestions for the development of the village schools. Beginnings of special investigations of typical village schools in typical communities have been conducted by the Kiangsu Compulsory Education Association and the Chinese National Association for the Advancement of Education. The reports, fragmentary as they are, have already stirred up great interest in and enthusiasm for the village education. As the average village generally cannot support an expensive education, the Chinese National Association for the Advancement of Education has selected a few village schools where the principals have shown ability in new village leadership to conduct experiments on the best possible village education with the lowest possible cost. It is hoped that in the course of a few years standards for village education can be developed for a nationwide adoption.

The language problem has practically been settled after China has struggled through centuries against the diversity of dialects throughout the country. Dr. Hu Suh's Literary Revolution has exerted the most profound influence on the elementary schools. The vernacular language, or the "living language," is now welcomed by most of the elementary schools. The Fengtien authorities, however, have shown some reaction against the use of the vernacular language. Kwangtung is still hesitating to adopt this change. But in the long run, the living vernacular language is destined to prevail in all the elementary schools.

© **Secondary Education** In regard to secondary education, the new system has the following to say: "Attendance at the middle school is limited to six years, which are to be divided into two periods of three years each, the junior middle school and the senior middle school. The junior middle school offers general education, but it may give various vocational subjects according to local needs. The senior middle school is divided into the general, the agricultural, the technical, the commercial, and the normal course. These courses may be given independently or severally in one school at a time."

In the secondary schools, the credit system is adopted. A credit is

defined as one hour of class work plus preparation. Subjects with no preparation will have a proportionate reduction in credits. The junior middle school requires the satisfactory completion of 180 credits for graduation, of which 164 credits are for required work. The required courses of study for the junior middle school as drawn up by the Committee of Twelve are as follows:

Subjects 学科		Credits 学分
Social Sciences 社会科	Citizenship 公民	6
	History 历史	8
	Geography 地理	8
Language and Literature 言文科	National Language 国语	32
	Foreign Language 外国语	36
Mathematics 算学科		30
Nature Study 自然科		16

Subjects 学科		Credits 学分
Arts 艺术科	Drawing 图画	12
	Manual Arts 手工	
	Music 音乐	
Physical Education 体育科	Physiology and Hygiene 生理卫生	4
	Physical Exercise 体育	12
Total 合计		164

The courses of study drawn up for the senior middle school by the Committee of Nine are composed of three years of study, namely: (1) General study required of all students should account for about forty-three per cent of the credits; (2) studies required of students who take the course of the special group vary with the course of the group; (3) pure elective studies should not exceed twenty per cent of the credits. The vocational courses of study for the senior middle school

have not been published yet. The liberal courses of study are of two groups, namely, that of the Arts and Social Sciences group and that of the Mathematics and Natural Sciences group. These two courses of study are as follows:

A. Courses of Study for the Arts and Social Sciences Group 文学和社会科学组

		Subjects 科目	Credits 学分
I. General Requirements 公共必修科目		1. National Language 国语 2. Foreign Language 外国语 3. Philosophy of Life 人生哲学 4. Social Problems 社会问题 5. History of Civilization 文明史 6. General Principles of Science 科学概论 7. Physical Education 体育	16 16 4 6 6 6 10

III. Pure Electives 纯粹选修科目			30
Total 合计			150

Secondary education, as pointed out by Dr. Paul Monroe after his

general survey of Chinese education in 1921, is the weakest spot in the entire Chinese educational system. Since then, two national organizations, the Chinese National Association for the Advancement of Education and the Chinese Federation of Secondary Education, have given much thought to the study of different phases of this grade of education. The attention of the administrators as well as of the secondary school teachers and officers has also been concentrated on this direction. Some of the more important problems and tendencies in regard to present-day Chinese secondary education may be briefly mentioned here.

First, the improvement of science teaching in secondary education occupies now a most important place in the minds of the students of education and also of secondary school officers and teachers. Of all the weak spots in secondary schools, the weakest is the teaching of science. Here science has been taught through lectures and text books with very little opportunity for the students actively to engage themselves in laboratory work. Science study that results in the function of an experimental attitude and in the acquisition of effective control of nature has been greatly neglected. In view of this fact, the Chinese National Association for the Advancement of Education sent an invitation through Dr. Paul Monroe to Professor G. R. Twiss of Ohio State University of America to make a special study of the science teaching in China and make recommendations for improvement. Professor Twiss, after a careful investigation of 187 schools in ten provinces, left with us a most comprehensive report with constructive recommendations, which is now already published under the title *Science and Education*.

It is also very encouraging to mention that the Science Society is undertaking to include the improvement of science teaching as part of its regular work. The Society has among its members nearly all the prominent students of science in this country and will be able to exert great influence in the promotion of science education. Kiangsu province has been selected as a starting point for their investigation and experimentation.

The next subject that has received much attention in recent years

is the teaching of the national language in the secondary schools. This important subject has been previously taught in a very unscientific and uninteresting way. The teachers without training in education and psychology have to rely on the pour-in and word-by-word methods. For the first time, national attention was called to the needed reform in teaching this subject when Dr. Hu Suh read his paper on the "Teaching of Chinese Language and Literature" at the Tsinan Conference of the National Federation of the Provincial Education Associations in 1922. Following Dr. Hu's address, there have been more than thirty articles written on the improvement of teaching Chinese, most of which have been published in the last two years. The discussions are now passing from that of a subjective and empirical nature to an objective and experimental basis. The place of the vernacular language in the secondary schools is different from that in elementary schools. The tendency is to have less and less vernacular language as the students go along and each decrease is made up by the classical language.

The second tendency is the increasing emphasis on school discipline in the secondary schools. Since the May Fourth Movement, there has been much relaxation in school discipline. Many principals and teachers have simply lost control over their students. A reaction, however, has set in during the last two years. On the one hand, there is a tendency towards negative control, prohibiting the students from participating in a number of activities in which they have hitherto taken an active part. On the other hand, the students are encouraged to organize themselves for self-control, naturally under the supervision of the school authority. Many ways have now been tried to substantiate these two tendencies, and there is every reason to believe that the students' conduct will be improved thereby.

The third tendency is a national feeling against the use of foreign languages as a required study in the junior middle schools. Although thirty-six credits have been put down as a requirement for foreign languages, yet in the presence of such vigorous attack, it is questionable whether it can maintain its present number of credits in the future.

The fourth tendency is the increasing emphasis on vocational training in the secondary schools. As shown by the Entrance Examination Statistics of the National University of Peking and the National Southeastern University at Nanking, less than ten per cent of the applicants could be admitted, and this ratio has remained for the last few years without much change. The vocational advocates feel that it is imperative that the preparatory nature of the secondary schools should be greatly reduced. The schools have answered this call by adopting more vocational courses. But just how these courses can suit the students in their work and furnish them with life positions is a question for which a satisfactory answer is yet to be sought.

The fifth tendency is the segregation of sexes in the secondary schools. Some middle schools have tried the co-educational system in recent years, but they are very limited in number. In spite of the fact that there is a favorable attitude toward co-education in institutions of higher learning and in the elementary schools, there is a decidedly strong opposition to co-education in the middle schools. Hunan, in March, and Shantung, in August, this year have actually prohibited the middle schools from becoming co-educational. Kiangsu takes a milder attitude. It authorizes the normal schools for men to take in women students and permits city middle schools to become co-educational on the condition that adequate provisions be made.

④**Higher Education** According to the new system of schools, "the institutions of higher learning may consist of several colleges or of one college. Attendance at the college or university is limited to four to six years." At the top, there is the postgraduate school, which is an institution of research for college and university graduates and students similarly prepared.

The following two tables will give some idea of the extent of higher education in China:

A. Professional Distribution of Colleges 按专业分类的高校数

Kinds of Schools 学校类别	Number of Schools 学校数量
University 综合大学	35
Teachers College 师范学院	8
Agricultural College 农学院	7
Technical College 工学院	13
Commercial College 商学院	8
Medical College 医学院	7
Law College 法学院	<u>33</u>
Total 总计	111

B.Distribution of Colleges according to Support 按经费来源分类的高校数

Source of Support 经费来源	Number of Schools 学校数量
National 国立	30
Provincial 省立	48
Private 私立	29
Mission and Foreign 教会及外国	<u>18</u>
Total 总计	125

A few more universities have been added to the list this year and the more important among them are the Kwangtung Government University and the Northwestern University at Shensi.

As to the modern tendencies of Chinese university education, we may take Chancellor Tsai's statement as an indication of the first tendency in scientific research. He says: "The University is not merely intended to offer ready-made courses for students to attend at fixed hours, but primarily to be an institution for corporate work in scientific research. And by research, I mean not merely the introduction of European culture, but original contribution on the basis of what is already done in the West; nor merely the preservation of our national cultural heritage, but seeking by means of methods of

scientific research to show what that heritage has actually been.”

The second tendency which may be mentioned is the demand for academic freedom, for no scientific thought and research can ever be properly developed if exterior interference is too strong. Government intervention has always been resented and repelled by the high institutions. This year, when the Ministry of Education announced the new University Regulations, it met with severe opposition from the professors of the National University of Peking and it was finally compelled to lay them on the table for a while.

There is also tendency for closer cooperation on the part of the universities and colleges in the country. This last July, when the Chinese National Association for the Advancement of Education met in Nanking, the Chinese Federation of Universities was formally organized dealing with problems of common interest in regard to higher education. It is believed that such an organization, if it functions properly, will certainly raise the general standard of university work.

The fourth tendency is the extension of higher education to women. Most of the Chinese universities have opened their doors to women and have been made co-educational. The Peking Higher Normal College for Women has also been promoted to the university rank.

Finally, there is an abnormal increase of private colleges. In Peking alone, about ten private colleges came into existence this fall. A similar condition can be found in other big cities. The government, however, has refused to recognize those institutions, the purpose of whose existence is questionable.

©**Trade and Vocational Education** Vocational education has been given an important place in the new system of schools. “The curriculum of the elementary schools may include prevocational training... The junior middle school... may carry on various vocational courses... The senior middle school is divided into the general, the agricultural, the technical, the commercial, and the normal courses (domestic science being added later)... The year limit and the standing of the vocational schools may be determined in accordance

with local needs and situations.”

On the basis of these provisions, the Committee on the Courses of Study for Vocational Education has spent three years in drawing up sixteen different courses of study. These are practically completed. Besides the prevocational courses in elementary schools and special vocational courses in colleges, three steps of vocational education have been worked out, namely: (1) vocational courses for graduates of four-year lower primary schools; (2) vocational courses for graduates of six-year elementary schools; and (3) vocational courses for graduates of junior middle schools.

In regard to the distribution of time for practice and nonvocational studies, the Federation of Vocational Schools has made the following recommendations, which have been duly accepted. First, the time allotment for practice should not be less than that for class work which should have eighteen to twenty-four hours a week. Second, the subjects of study in vocational schools should be of three kinds, the vocational, subjects as prerequisites to vocational and the nonvocational. The nonvocational subjects should account for at least twenty per cent of the total time allotment.

Among the important developments of vocational education in recent years, we may mention the following: Szechwan, Kweichow, Kwangsi, Chekiang, and Fukien have promulgated plans for the reconstruction of vocational education according to the new system. Shansi has organized a provincial committee on vocational education and appointed one supervisor for each of the twenty educational districts to take charge of vocational education, compulsory education, and popular education. Yunnan has set aside the tobacco tax for the development of vocational education. Hupeh has ordered all the counties to appropriate twenty per cent of the educational fund for the promotion of vocational training. The One Week Campaign for Vocational Guidance conducted in Shanghai, Nanking, Tsinan, and Wuchang has aroused much interest in this type of education. Lastly, the Ministry of Education has ordered all the girls' middle schools to offer practice opportunities for domestic science. There is also a special fund raised by the National Association

of Vocational Education for the special purpose of promoting vocational education for girls.

D The Training of Teachers

In regard to the training of teachers, the new system of schools has the following provisions: "Attendance at the normal school is limited to six years. The normal school may be composed of only the last two or three years in order to admit the graduates of the junior middle schools....To supply the need of teachers for the lower grades of the primary schools, normal schools or normal institutes, varying in number of years, may be established." It is also provided that institutes for the training of vocational teachers may be opened in any suitable school. For the training of secondary school teachers, there is the normal college at which attendance is limited to four years. "In due time the higher normal schools established according to the old system should raise their standard in order to admit the graduates of the senior middle schools, with an attendance limited to four years; they shall then be known as Teachers Colleges." "To supply the teachers for the junior middle schools, a two-year normal course may be offered. It may be organized in the College of Education of a university, or in the Teachers College, or in the normal school, or in the senior middle school. It admits the graduates of the last two named institutions."

The courses of study for the normal schools are now completed by a special committee. Three sets of courses of study have been worked out.

The first set is for the three-year normal schools, corresponding to the senior middle school. Its general requirements are the same as the senior middle school with the addition of four credits of music, and have a total of sixty-eight credits. The professional requirements consist of Beginners' Psychology, two credits; Educational Psychology, three credits; General Methods, two credits; Methods of Teaching Special Subjects, six credits; Teaching Materials in Elementary Schools, six credits; Educational Statistics and Measurements, three credits; Elementary School Administration, three credits; Principles of Education, three credits; and Practice Teaching, twenty credits, making

a total of forty-eight credits. The elective studies are of two kinds: (1) group electives and (2) pure electives. Group electives aim to meet the needs of three classes of prospective teachers, namely: (1) those with special inclination towards language, literature and social sciences; (2) those with special inclination towards mathematics and natural sciences, and (3) those with special inclination towards arts and physical education. Each group of students shall elect at least twenty credits from group studies. Besides, all students shall elect at least eight credits from the nine educational studies. Pure electives are left for the schools to determine.

The second set of courses of study is drawn for the six-year normal school corresponding to the six-year middle schools. In a general way, the junior middle school feature is preserved in this type of normal school, yet the whole course of study aims at a continuous process rather than at a break in the middle. It is much simpler and is recommended for adoption in the smaller schools, where, as a consequence, there is no group differentiation, and very few electives. Out of three hundred and thirty credits required for graduation, there are three hundred and nineteen credits for required studies and only eleven credits for electives.

The third set of courses of study is drawn for the training of teachers of the four lower grades of the primary schools. It has three forms, namely: the three-year course admits graduates of the six-year primary schools, the two-year course admits graduates from the old higher primary schools, and the one-year course admits graduates from the junior middle schools. All three forms have been very carefully worked out. Since space does not allow full presentation, they are given in tabular forms as follows:

	FORM I: Three-Year Course 第一种形式 三年制课程	FORM II: Two-Year Course 第二种形式 二年制课程	FORM III: One-Year Course 第三种形式 一年制课程
Education 教育学	36 Credits (学分)	24 Credits (学分)	14 Credits (学分)
National Language 国语	36	24	8
Social Sciences 社会科学	26	18	8
Mathematics 数学	25	16	8

Note:The study of Elementary School Material and Methods of Teaching Elementary School Subjects are included under each subject taught.Practice Teaching is given eight credits in Forms I and II, and is incorporated in each subject in Form III.

说明：小学各科教材教法包括在所教的各门课程中。教学实习在第一、二种形式的课程中，各占8学分；在第三种形式中，则和各门课程的教学结合进行。

In the new courses of study for the normal schools, four important changes can be observed.In the first place, there is more flexibility and variety, which enables the normal school principals to adapt their schools to special conditions instead of having one standard course of study as was the case in former times.In the second place, there is more emphasis laid on the professional subjects.The newer developments of education which will make a better teacher are included.In the third place, more time has been given to practice teaching.In the fourth place, great emphasis has been put on teaching materials and methods of teaching subjects.Formerly, the needs of elementary schools had not been adequately felt and met, and most of the normal schools were run on the middle school basis.This emphasis on elementary subjects certainly indicates a new era in normal education.

In actual practice, the higher normal schools have been busy in transforming themselves into teachers colleges. The old normal schools are also taking steps to adopt the six-year course or the three-year course, according to their needs and conditions. Some senior middle schools have also opened new normal courses. Another very important move is found in the increasing emphasis on training the village teachers. Kiangsu has since last year established five village normal schools. The Chinese National Association for the Advancement of Education, the College of Education and College of Agriculture of National Southeastern University, the National Association of Vocational Education, the Kiangsu Compulsory Education Association, and the Kiangsu Commission of Education are cooperating in establishing an experimental normal school for training village teachers. Mr. C. T. Chao, professor of rural education of National Southeastern University and director of village education of the Chinese National Association for the Advancement of Education, has been selected to organize this school.

Students in most of the normal schools enjoy free tuition and board. There are students who are admitted on payment of half fees or whole fees, but these are very few. The regular normal students whose fees have been exempted are required to render service in the elementary schools or the secondary schools, as the case may be. A few years ago, an investigation made in Kiangsu province showed that more than eighty per cent of the normal graduates take up teaching after graduation. This rule of required compulsory service has been rather leniently enforced. The tendency is for a more strict enforcement, as is shown in the resolutions adopted at the Kaifeng Conference of the National Federation of the Provincial Education Associations. Kiangsu province has this year prohibited graduates of the county normal institutes from taking more advanced education before the fulfillment of the compulsory service. Fengtien province has even introduced the plan of withholding the diploma until the term of compulsory service has expired.

With the exception of the normal school graduates, all other elementary school teachers should apply for certification. The

certification of teachers are of two kinds: (1) certification with examination and (2) certification without examination. Those who have studied in the secondary schools for two years or more, or have taught in the elementary schools for one year or more, or have graduated from normal institutes lasting six months or longer, or have a sufficient knowledge of educational principles and have studied the special subjects to be taught which are shown in the articles or essays written by the applicants, are qualified to teach by passing an examination in the subjects of the regular normal schools with due consideration to grade and sex variation. The examination for assistant teachers is much easier. Those who are certified without having to go through the examination on the subject are (1) middle school graduates who have been elementary school teachers for one year or more; (2) graduates of secondary industrial schools who have made good record in their studies; (3) graduates of professional schools whose special studies will qualify them to teach the subjects, and (4) elementary school teachers with three years' teaching experience who have made good record of service certified by the county superintendent of schools.

All the applicants for certification should produce school diplomas, and statements of good conduct by guarantors, and should go through a physical examination.

The certification of teachers in China is under the charge of the Provincial Committee on Certification. The results shall be reported annually by the governor of the province to the Ministry of Education at Peking.

In regard to the recompensation of the teachers in China, a brief survey was once made in the province of Kiangsu. The result is as follows:

Annual Salary of Elementary School Teachers 小学教员年薪

	Higher Primary 高级小学	Lower Primary 初级小学
Maximum 最高额	\$600	\$240
Average 平均额	200	120
Minimum 最低额	70	30

In 1921, another investigation conducted by Mr.Tai, covering six provinces, gives a medium annual salary of \$160.25 Mex.for all elementary school teachers, and a medium annual salary of \$125.10 Mex.for their first year's service.Making sufficient allowance for the very high purchasing power of money in China, we must still consider the present salary paid to the elementary school teachers as very low.The new tendency is for a higher pay on the basis of increase in teaching experience and professional preparation.The immediate problem,however, is how to make the pay more regular.

Besides the tendency for a higher salary, there are attempts at remuneration for encouraging longer service.The importance of the pension system has not yet been fully realized, yet a beginning has been well made.The Chekiang Conference of Educational Administrators has recommended a sabbatical year for elementary school teachers who have served for six years and an annual pension of a quarter of the last year's salary after twenty years of services, or, if made disabled, after ten years of service.It has also recommended a system of special grants from a quarter to the equivalent of the whole salary to be made to the families of the teachers when the latter die.The Kiangsu Commission of Education has this year adopted a temporary system of pension.According to this system, an elementary school teacher shall be given annually one third of his last year's salary, if (1) he is disabled on account of sickness after a continuous tenure of service for eight years, or (2) he is disabled or seriously wounded in performing his official duties, or (3) he retires on account of old age after a continuous tenure of service for twenty years.Besides, one of his children may attend any government school

in the province without paying the fees.

In regard to the tenure of elementary school teachers, very little investigation has been made. The contract of the teachers is, as a rule, on a half-year basis. The data on the tenure of service of teachers in thirteen schools in Kiangsu gathered a few years ago may give some idea of the situation. But it will be a mistake to take this meagre data as representative of the whole country.

Years of Service 服务年限	Percentage of Higher Primary Teachers 高级小学教师百分比 (%)	Percentage of Lower Primary Teachers 初级小学教师百分比 (%)
1	6	26
2	10	12
3	23	20
4	17	18
5	44	24
Total 总计	100	100

The need for teachers is imperative in China. Estimating on the basis of forty million children of school age for the four years' elementary education, we shall need at least one million teachers for the four elementary grades. But according to the latest report we have only 223,279 teachers who are now serving in the lower primary schools. More than three times as many as the present number have to be added in order to enforce a nationwide compulsory education. There are now 43,846 students in the normal schools and normal institutes, and no more than 10,000 teachers can be turned out every year as against the need for 770,000 teachers. The problem is both serious and urgent and will have to be solved only gradually.

E Some Recent Educational Activities and Developments

1. Educational Tests and Measurements

The educational test movement began in China four or five years ago when Professors Liao and Chen of Nanking, and Professors Lew

and Chang of Peking started to give courses on scientific measurements in education and did some original work in the construction of tests. It was not until the coming of Professor William A. McCall of Teachers College, Columbia University, in 1922 that this movement began to start its great momentum. In cooperating with Chinese psychologists at different centers, Professor McCall succeeded in getting twenty tests constructed for the use of elementary and secondary schools. The tests added this year are as follows:

1. Comprehensive English Test

Anderson

2. Geography Test

Young

3. Arithmetic Practice Test

Yui

4. Drawing Test

Yui

5. Intelligence Test

Liu-Bradshaw

6. Self-Survey Comprehensive Test

Terman

7. Lower Primary Non-Verbal Intelligence Test

Chen

8. Higher Primary Non-Verbal Intelligence Test

Chen

9. Chinese Grammar Test for Higher Primary

Chen

10. Composite Mathematics Test

Liao

11. Composite Science Test

Liao

12. Chinese Language and Literature Test

Liao

13. Chinese Grammar Test

Liao

14. History Test

Liao

15. Geography Test

Liao

There are two special features which are worth mentioning of the test movement in China. In the first place, all the tests are scaled according to a new uniform system, the T.B.C.F. system, so as to secure comparability of scores from test to test and thus facilitate the tabulation and interpretation of results, and all the direction books are modeled after one standard design so that the teacher will find it necessary to learn only one procedure. In the second place, all tests are published at one place, that is, the Chinese National Association for the Advancement of Education. This has saved the schoolmen much trouble in locating and securing the tests.

In the fall of 1923, Professor Terman of Yenching University at Peking, and Professor Cha of the Peking Normal University were requested by the Chinese National Association to conduct a cooperative self-survey, using especially designed and self-administering tests. "The purpose of this survey is to acquaint educators with tests, to motivate teachers to make use of self-helps to be published by the Association, and to conduct a national contest among the pupils." This survey, in spite of its shortcomings, has accomplished its original purposes. The final report of its findings, known as the *Efficiency of Chinese Elementary Schools*, by Terman, was published this spring.

2. Medical and Social Welfare of School Children

The health and social welfare of students have received more attention in the elementary schools than in the secondary schools. The better schools, such as the Shian-Shan Children's Home, the Practice Schools of Southeastern University, of Peking Normal College for Men, and of Peking Normal College for Women, and the Tsu Yih School in Hunan, have given much opportunity for children to take active participation in social activities and have given much attention to the physical well-being of the pupils. The report that could be secured on this topic is that of the Practice School of the Peking Normal College for Women. It is a school of 590 pupils. The school physician was

introduced in 1920. Medical inspection is conducted once every semester. Vaccination is a requirement and is done once every year. In extra-curriculum activities, free play and athletics are emphasized. Chinese games as well as foreign games are introduced. Correction exercises are given by physical training, and general knowledge on health is given in a course on hygiene. Attention is also given to ventilation, lighting, seating, etc. School gardening furnishes another opportunity for healthful recreation. Out-of-door activities are encouraged. Excursions are arranged for each class at least once every semester. There are also student self-government, a literary society, class meetings, weekly mass meetings, the cooperative store, the children's club, the children's reading room, the savings society, and tens of other organizations which furnish ample opportunity for the development of the social life of the child.

Perhaps the most important thing that has been done this year is the enormous amount of research conducted by Professor C.H. McCloy under the joint auspices of the National Southeastern University and the Chinese National Association for the Advancement of Education. The following have been completed:

1. A series of studies in anthropometry and physical examination. Some of the results may be enumerated as follows:
 - a. A study of weight for body types has been completed. A new weight card has been prepared in which a new basis of calculating weight has been adopted.
 - b. A study of chest measurements has been made.
 - c. All measurements commonly taken have been intensively studied to determine whether or not they are really diagnostically useful. This has narrowed down the study to a few really important measurements and these have been studied as to how they can contribute to the welfare of the students.
 - d. The chest index as a basis of a test for hereditary stigmata of degeneration has been made and is nearly completed.
 - e. A study has been made of the vital measurements and school grades to see what the relation might be.

f.A new weighting for age-height-weight and athletic performance has been devised.

g.A careful statistical study of medical examination has been made and a new form devised to give results in graphic as well as numerical forms has been worked out.

2.A study has been made of a few athletic events to determine which of the quite similar events should be utilized.This has been done, for example, with three forms of the potato race and the best form has been statistically determined.

3.A careful study has been made of standard tests in athletics.A study of eleven events was made with three hundred primary school boys and a study of eighteen events with three hundred and thirty middle school boys.The best events for each standard test have been statistically determined.

4.A universal scoring table has been devised for over seventy events in track and field athletics.These give an approximately equivalent degree of difficulty for all events when the same point value is attained.

5.Methods have been evolved of determining the Motor Quotient of a boy or a girl in athletic events based on the standard events and the above-mentioned age-height-weight weighting.This is quite accurate.

6.Studies of standard tests in football and basketball have been undertaken and the preliminary steps finished.

Some of the above material has been published, but some has yet to be published.When all ready, it will put physical education and physical examination in China at least ten years in advance.

3.Mass Education—A Movement to Remove Illiteracy

Mass illiteracy presents a unique problem in China.Deducting one hundred and twenty million children who are either below or in the school age, and eighty million who have spent on the average three years in the old schools, there are still about two hundred million, or fifty per cent of the whole population, who have never had any schooling.This is a gigantic problem for the advocates of popular education to solve.The National Y.M.C.A.several years ago started the

new experiment on popular education. At the Second Annual Convention of the National Association for the Advancement of Education held at Tsing Hua College, 1923, the National Association for the Mass Education Movement with Mme S.L.Hsiung as its president was organized, and the movement immediately received nationwide support and backing.

In substance, the so-called mass education utilizes four popular readers based on a vocabulary of about twelve hundred most common Chinese characters. An average illiterate can complete the four readers in four months by spending one hour a day. At the end of four months, he will be able to read newspapers, books, and correspondence based on the vocabulary and to express himself by using the same. As these four readers cost altogether only twelve cents Mex., even the poorest can afford to buy. There are three ways in the teaching of illiterates. First, there is the People's School, which has a teacher who meets his classes regularly at definite periods of time. Second, there is the People's Reading Circle, which takes the home, the store, etc. as a unit, and encourages the literate people in the home or in the store to teach his own associates. Third, there is the People's Question Station where the illiterates may stop and ask questions on any point in the book which he does not understand. These stations are generally under the charge of shopkeepers who are willing to contribute their time to the work. With these means, the readers have been introduced into the homes, stores, factories, schools, churches, monasteries, *yamens*, steamships, prisons, and army camps. Within two years' time, the circulation of these readers has reached the two-million point. These readers are followed by a series of booklets on various branches of knowledge. It will not be long before we see a compulsory popular education in operation in China with its tax on ignorance. Friends of popular education have the ambition to achieve the miracle of eliminating two hundred million of the illiterates in a generation.

4. The Development of Science Instruction

For some time, there has been a growing dissatisfaction at the result of science instruction, especially in the secondary schools. The dissatisfaction was directed not only to the poor equipment, but

largely to the methods employed. In 1922, Dr. Paul Monroe of the International Institute of Education, New York, visited China and his observation confirmed the opinion of many regarding science instruction. Upon his recommendation, the Chinese National Association for the Advancement of Education invited Dr. G. R. Twiss of the Ohio State University to come to China to assist in the improvement of methods of instruction in the science subjects. He made very extensive trips throughout China. Though brief has been his sojourn and limited have been his recommendations, his visit has provided a great stimulus to the science teachers of the country. Another important fact that may be mentioned is the establishment of summer institutes for science teachers in which the teachers of science can pursue, under expert supervision, further studies during the summer months. Such institutes are to be held under the joint auspices of educational and scientific organizations. The first one was held in 1924 in Tsing Hua College, Peking, and the second one will be held in the National Southeastern University at Nanking.

5. The Library Movement

China has had libraries ever since the Chow Dynasty, several centuries before the Christian era. But they were only accessible to the few intellectual aristocrats and could hardly be reached by ordinary students, not to speak of the mass of the people. With the advent of new education, school libraries have gradually come into existence, until this year there are a dozen college libraries with the best modern equipment and quite a number of fairly equipped secondary school libraries in this country. This means more opportunities for the teachers and students to get at the sources of knowledge. In the meantime, the classical libraries in various educational centers, however hesitant they may be, are gradually opening their doors to more advanced readers.

Having realized the needs of modern methods for the management of modern libraries, institutions of higher learning have sent, from time to time, a number of students abroad to study library science. When the Chinese National Association for the Advancement of Education held its First Conference in Tsinan in 1922 there were

already several Chinese librarians with modern training, who immediately set to work to organize a committee on library science under the auspices of the Association. Their aims are to promote more libraries, to have better methods of managing libraries, and to draw more people to use the libraries. In order to carry out these projects more effectively, they put through, at the Second Conference held in Tsing Hua College in 1923, a resolution for organizing local library associations. Thus, in 1924, eight such associations were formed. It was simply natural and spontaneous that when the Third Annual Conference was held at National Southeastern University in July, 1924, they looked forward to organizing a national library association of China to unify the efforts of individuals and institutions interested in this movement. This national organization is to take form in 1925. Thus, the cry for more books and better books, more libraries and better libraries, has become nationwide. Our librarians are losing no time in making their unique contributions. At the same time, the cry for more people to use books and libraries is being answered by promoters of the Mass Education Movement. Miss Wood, one of the best friends of our library movement, and others are kept busy in securing portions of the American Boxer Indemnity Fund for founding model public libraries in this country. The Chinese National Association for the Advancement of Education has requested the American Library Association to send a library expert here to help make a systematic plan for such an undertaking.

F Missionary Education

According to the statement of Dr. Wallace, the associate general secretary of the China Christian Educational Association, it is probable that the total number of students in the Protestant missionary institutions at present is near three hundred thousand. It is still in the direction of increase. The college students have increased in the four years from 1920 to 1924 by seventy-six per cent. Archbishop Ceiso Costantini gives 253,953 as the number of students under the training of the Catholic churches. Thus, out of every hundred students in China, there are eight in the missionary schools.

The outstanding event of the year in regard to the missionary

education has been the organization of the China Association for Christian Higher Education. This Association has appointed a council to act as an interim body, also as the Council of Higher Education of the China Christian Education Association, thus linking up the higher education with other activities of the latter organization. Rev. E. C. Lobenstine, the Council's secretary, is now engaged in making a study of the institutions, particularly with reference to their financial position and the possibilities of coordinating their efforts. The chief purpose of the Council is to enable the Christian institutions of higher learning with their limited resources to make the most effective contribution to the needs of China.

Missionary education, in spite of its good record, has been attacked on three different grounds. First, it is generally attacked on the ground that the Christian institutions are entirely under foreign control. Even qualified Chinese Christians are rarely given opportunity for holding responsible positions. Secondly, it is criticized for teaching religion to young children who are not mature enough to make intelligent decision for themselves. Finally, there is serious suspicion on the part of the Chinese that the missions are organizing a system of Christian education parallel to the Chinese government system which might become in time an irreconcilable group within a larger group.

As a consequence of these facts, we have witnessed two successive attacks on the missionary education in the two National Educational Conferences held in July and October this year. The more conservative Chinese, however, think that, in this transitional stage, missionary education of the more liberal type does have a unique contribution to make by way of supplementing the government education in providing wider educational opportunities for the students and setting up a better example in school discipline. They also believe that missionary education should be more socialized, liberalized, and made more Chinese. Finally, they feel that the missions would be able to make a better contribution, if they should concentrate their efforts and resources on a few institutions of higher learning and not for the establishment of secondary and elementary

schools of poorer grade. They believe that secondary and elementary schools of experimental nature might be opened by the missions as well as by other private agencies, and any attempts to multiply them and build a system out of them are bound to conflict sooner or later with the government system.

G A Few Concluding Remarks

The Chinese schoolmen are working under overwhelming difficulties and adverse conditions. It is generally true that instead of being discouraged under such circumstances, they regard these as opportunities for effort and endeavor. China may be said to be a virgin soil for educational service or as a social vacuum which absorbs any amount of energy that one is willing to put into it. In order to understand Chinese education today, therefore, we must see it in terms of the difficulties that are involved and the effort that has been put into it.

1924年的中国教育

① 引言

中国教育进入现代化进程已近二十年，但只是在最近五六年内才取得较大进展。粗略地说，1919年以前，中国教育还处在模仿他国的十字路口。时而模仿日本制度，时而模仿德国制度，时而又模仿美国制度。这些从外国引进的教育制度，虽然在中国硕果累累，但简单的移植却很难开花结果。直至近期，中国的教育界人士乃至普通民众才开始清醒地意识到：只有透彻地研究和分析中国在教育方面的需要和存在的问题，才能十分有把握地制定出一套符合中国现状并能为中国所用的教育制度。然而，为了充分理解这种认识产生的影响，以及将要在下文中阐述的由此引发的种种设想和解决问题的方法，有必要在此说明引起这种巨变的内在动因。

诚然，被称为“中国的文艺复兴”的新文化运动无疑是影响最深刻的。“中国的文艺复兴”运动始于1917年的“文学革命”。当时，胡适博士及其追随者们提出：文言文已经不再有用，白话文或语体文理所当然地应取而代之。“文学革命”取得了惊人的成功。尽管它遭到一些保守学者的强烈反对，却为年轻一代人所热烈拥护。能够为中国人所用的这种“活语言”的重新发现，催生了新时代新文学的出现，也使小学的阅读材料和教学法得到了彻底的改革，同时使平民教育运动扫除文盲的行动得以继续开展。

但是，“中国的文艺复兴”的影响力不止于此。这是一场以新观点、新标准对包括教育在内的传统价值观念进行重新评价与判断的运动。旧传统常被抛弃，权威被丢在一旁，旧的信仰在不断被削弱。引用胡适博士的话来说，就是：“整理国故是近三百年来赋予汉学家的作品以生命的那种批判与研究精神的复兴和再生。”如前所述，此前中国十分盲目地模仿邻国。最初，为了学习新的，就抛弃了一切旧的。但是现在，中国人已经逐渐认识到，旧的未必一定不好，新的也并非十全十美。对于一切新理论、新方法不再是生搬硬套，而是先存疑、检验、实验，然后才加以选择。毫无疑问，这是一种有益的态度。在教育领域开创了新的教学体系即为此种态度顺理成章的结果。这种新制度汲取了国内外新旧体制中的精华，因此十分适合新中国的需要。

② 教育行政管理

1. 教育行政单位

(1)中央教育行政管理 中国的教育行政管理在理论上是高度集中的，在实际上却是地方分权的。教育系统的最高行政机关是教育部，它在法律上全权主管全国的各项教育工作。教育部下辖三个司：普通教育司、高等教育司、社会教育司。教育部里重要的官员有总长、次长、三名参事、三名司长、四名秘书、十六名全国视学。教育部的重要事情通常都在部务会议上研究，出席部务会议的有参事、司长、秘书以及有时被教育部邀请出席的其他人士。部务会议由总长主持。总长是内阁成员，他的僚属由他挑选，提交内阁批准。由于近几年来国家政局不稳，总长更换频繁，有时一年之内竟达五次之多。但是次长通常的任期比较长，而参事、司长和秘书们的任期更长。教育部的工作能够持续进行，应归功于他们。

不过，尽管其活动经常因总长更换频繁而受到限制甚至停顿，教育部仍然享有很高的威信。随着国家趋于统一，任命一位合适的总长，能使教育部在未来的岁月里，仍然成为促进教育的动力，尽管地方的积极性很可能会受到更多的鼓励，而教育部以前官僚政治的影响会被削弱。

(2)省级教育行政管理 在中国的各省，现存的教育行政机构有三种形式，即教育司、教育科、教育厅。广东省曾试图实行第四种模式，即教育委员会，但现在又废除了。西南各省一般采用教育司的形式，如云南、贵州、湖南。云南、贵州两省的教育司长由省长任命，湖南则由省议会选举产生。广西、四川的省一级教育行政组织称为教育科。在法律上，教育科的权力没有教育司大。其他各省都实行教育厅的体制，其主要负责人称为教育厅长。教育厅长经教育总长推荐，由中华民国总统任命，在教育部直接领导下工作。但是在指导本省教育事务、督促其下级管理当地教育方面，又要受省长领导。所以教育厅长是受到教育总长和省长双重领导的。其结果是，不同的省份教育厅长的权力也就大小不一，这主要取决于省长的意愿。因为教育厅长离教育部远而离省长近，对他来说，执行省长的指令比执行在北京的上级的指令更为实惠。

省教育厅下辖二至三个科室来处理大量的教育事务。此外，每省还有四至六名视学。

(3)地方教育行政管理 地方教育行政分为县和学区两级。省级下面是县，县级教育行政内有两种体系：起先是劝学所，它的功能和职责是在教育管理方面协助县知事或监督自治区域内的学校工作。劝学所有一名所长和几名劝学员。但是，除所长外，在县知事下面还有一名教育秘书以及一名不受劝学所长管辖的县视学。这三人的意见很难统一，事实证明，这种三足鼎立式的县级教育管理体制存在很多问题，如今正逐渐

被新产生的县教育局取代。

县教育局这种体制创立于1922年，它试图统一县级学校行政管理。在这种体制下，县视学由教育局长领导，教育局长经县知事推荐由省教育厅任命。这种新体制还有另一种尝试，即给特别城市以更多的权力，让其独立管理自己的学校，而让县政府只管理乡村教育。这个原则虽已广为人知，但实际上并没有得到强有力的实施。

学区是最低的一级教育行政组织。一个县划分成好几个学区，每个学区有一名管理学校事务的教育委员，有时还附设一名助手。中国并没有授予学区足够的权力以履行它们在教育管理方面的职责，因此它是一个十分松散、效率很低的组织。唯独山西省的地方教育行政组织最好，县里的每一个乡村，城市的每一条街道，都有人负责主管教育福利事业，并且他们都有职有权。所以，改革最基层教育组织是当今所面临的最迫切的任务之一。

2. 视学与督导 在中国，视学分为三级，即国家级、省级、县级。

据1913年颁布的《条例》，全国划分为八个视学区，每区有两名国家级视学。对学校的常规视察时间一般始于每年八月下半月，止于第二年六月上半月。视察内容包括普通教育和社会教育的各个阶段。特别视察则依据教育总长的特别命令进行。视学不外出视察时，则被要求留在教育部里以备执行可能交给他们的其余任务。在过去几年中，这些规定只是一纸空文，全国视察活动几乎完全没有实行。

省视学由省教育厅长任命，较小省份有四名视学，较大的省份则有五六名。省以下设有县视学。根据旧体制，县视学是代表县知事视察学校的。但是采用县教育局的新体制后，县视学划归教育局长领导，每年视察他们所负责的学校一至三次。

视学的职责在教育法规中都有具体的条例规定。国家级视学和省级视学有七条职责，县视学有十三条职责。但是实际上，一些视学仅是参观者、报告者，更有甚者成为吹毛求疵者。他们大都不明白视学的职责是给予在岗的校长及教员以启发、鼓励和帮助。近年来已经出现了抗议消极视学的声音，主张用一种建设性的督导制度来取代。江苏省在这方面树立了很好的榜样。从去年开始，教育厅长邀请国立东南大学和另外几个研究所的数位专家担任专科督导，由此职业教育、自然科学教学、体育训练、师范教育等几方面的监督都得以设立。今年，又引进了社会科学与国语的督导。这就为中国的视学和督导制度开创了一个新时代。

3. 教育财政 简言之，中国三个不同级别的学校的经费来源各不相同。高等教育经费主要靠国家拨款，中等教育经费靠省级政府出资，初

等教育经费则靠县及地方筹资。虽有例外，但这种说法一般是与实情相符的。

国家财政收入来自关税、盐税、印花稅、烟酒专卖证，电报、铁路、邮电等事业的利润，以及土地稅和厘金等，因此国家用于国民教育的经费也是从这些综合来源中提取的。除了清华学校、交通大学、武昌师范大学等少数几所学府有其获取经费的特殊来源外，其他国立学校均需从总的国家拨款中获得其经费份额。校址不在北京的国立学校的经费从各省金库所保管的国家经费中提取。根据1919年预算——唯一准确制定了的预算，政府用于国民教育的拨款为5,028,836元，不到该年政府总支出的百分之一。

虽然各省都有自己办的专科院校，省级政府主要关注的仍然是中等教育。目前各省都有办一所学科齐全的高等院校的趋势，但至今成功的极少。省教育经费主要来自附加稅，尤其是土地附加稅。江苏和浙江正在征收烟草特別稅，专门用于省级教育经费。两年前，四川试图把近200万元生猪稅用于教育，但效果并不明显。河南省采取对契約转让和所有权转让征稅的办法，每年约有100万元的收入可用作教育经费。面对財政困难，人们虽然提出了许多新的教育经费解困办法，但都还处于试验和摸索阶段。为了使人们对各省教育经费的支出有个大致概念，兹列举出几个极端的代表性省份为例：江苏每年280万元，浙江150万元，江西仅60万元。

通常，县级用于初等教育的经费来自土地附加稅、杂捐、租金以及从历代留传下来的校产所得的收益。迄今为止，山西省对学校的资助经费制度是全国范围内最完善的。在城镇，按商店和房屋的区位来划分等级确定征稅金额，稅款用来资助城镇的小学；在乡村，则按照土地质量征土地稅，用以资助乡村教育。

由于政局动荡，军费开支无常，办学人员面临着教育经费不能受到稳定保障的局面。经费已经严重短缺的省份有广东、福建、江西、四川、安徽和湖南；稍好一些的有奉天、云南、山西、陕西、山东和河南。但是，总体上中国的教员是最有牺牲精神的人。

我们现在最关心的是：（1）如何通过法律保障和经济措施来保证教育经费支付的常规化，使从教人员免受经济拮据的困扰，能全身心投入教育；（2）如何调整稅收制度，以求教育负担和受教育的机会均等；（3）如何在不损伤地方积极性的基础上建立一项适当的分配和补贴机制来鼓励教学活动；（4）如何节约使用现有经费，从而能以最小的开支获取最大的教育效果。

③ 新学制

1. 学制 “过去二十年内中国至少换了四种学制。”最新的学制是1922年修订的，它始于全国教育会联合会1919年所召开的第七次会议的提议³，经过三年审议而通过。在此没有篇幅讨论学制的历史演变过程，下面在讨论各级各类学校时将学制形成中的各种问题有所涉及。1922年以来成立的各种新学制课程起草委员会忙于拟定新的课程，旨在为新学制框架填充新鲜教育内容。今年除了职业教育的少部分课程外，各级各类学校的新课程均已制定就绪，并已由全国教育会联合会第十次会议表决批准，然后提交教育部公布。

上图是教育部第二十三号令所采用的新学制图解。需要提请注意的是，图中左行之年龄表示学生入学及升级之标准，但实施时，仍以其智力、成绩或他种因素分别定之。

2. 各级学校

(1) 学前和幼稚园教育 新学制包括了幼稚园教育，幼稚园主要招收六岁以下的儿童。师范学校的实验小学，尤其是女子师范学校的实验小学一般都附设幼稚园，有些私人和教会学校也开办幼稚园，但幼稚园的总数仍相当少。幼稚园的保教给孩子们提供了一个积极自我表达，以及儿童与教员间互动的机会。目前最迫切需要的是有足够多的学校来培养

幼教师资。1924年1月，江苏省教育行政会议通过了一项加强培训幼教师资的决议，表明人们已认识到了这种需求。湖南教育会今年也倡导在城镇创办更多的幼稚园。江苏省义务教育期成会还建议在小学低年级采用幼稚园的教育方法。还有一件令人鼓舞且意义重大的事情是国立东南大学陈鹤琴教授指导幼稚园开展教育实验。幼稚园中所使用的教材和教法都是照搬外国，其中一些也许并不符合中国儿童——有感于这一事实，他带领工作人员在1923年秋季开始尝试自制玩具、中国儿歌和童话以及其他的教材。他还打算使幼稚园不仅成为幼童教育的中心，而且成为母亲培训中心。中华教育改进社和陈教授已达成合作协议，其中包括试点以尽可能少的开支开办幼儿教育，从而使幼稚园教育得到最大范围的推广。

(2)初等教育根据新学制，小学修读期限为六年，但依当地实际情况可延长一年。小学校分为初级小学和高级小学，前者的修业期限为四年，并可单独设立。

由小学十八人委员会起草的小学各科课程如下表：

委员会还建议小学一二年级每周授课时间不得少于1,080分钟，三四年级不得少于1,260分钟，高年级则不得少于1,440分钟。上述课时数按每周六天分成若干节课。乡村小学的课程可以合并和简化，但国语和算术讲授时间绝对不能减少。

根据新学制规定，义务教育暂定为四年。如果当地条件允许，时间可以延长。义务教育的入学年龄由各省区根据各自情况自行规定。

自清朝以来，中央政府就一直打算实施义务教育。直到1920年才由教育部规划出在特定时间内各类地区实施义务教育的明确步骤。其详细规定如下：

- 1921年，省城及通商口岸；
- 1922年，县城及市镇；
- 1923年，五百户以上的村镇；
- 1924年，三百户以上的村镇；
- 1925—1926年，二百户以上的村镇；
- 1927年，一百户以上的村庄；
- 1928年，不足百户的村庄。

由于近年来的政局不稳，上述计划很少得到积极实施，唯独山西一省取得了引人注目的成绩。山西计划从1918年到1921年，用七个半年完成上述七步计划。虽然并不能说取得了圆满的成功，但最近回收的统计数据表明，现在该省已有72%以上的学龄儿童在校就读。此外，还规

定25岁以下的成人文盲须上成人业余补习学校学习常用汉字、算术和公民常识。

值得一提的是，乡村教育运动是与初等教育相关的另一个方面。中国80%以上的人口居住在农村，因此密切关注乡村教育显得特别重要。最近，“回到农村去”的运动已积聚了很大的力量。中华教育改进社已经建立了乡村教育特别委员会。全国教育会联合会今年十月在开封召开的第十次会议，也着重商讨了这一重要问题。江苏义务教育期成会八月在无锡召开的会议花费了三天时间草拟出发展乡村学校的七条切实可行的建议。江苏义务教育期成会和中华教育改进社已开始对具有代表性的地区的典型乡村学校进行专门调查。尽管调查报告尚不全面，但已引起了人们对乡村教育的极大兴趣和很高的热情。鉴于一般的乡村都拿不出太多的钱来兴办教育，中华教育改进社选择了几所校长有建设新乡村领导才能的乡村学校进行实验，以期用最少的钱创办出最好的乡村教育。但愿在今后的几年内，实验所确立的乡村教育标准能够在全国范围内采用。

经过数百年对全国各地方言不同的现象进行斗争，中国实际上已经解决了语言问题。胡适博士的“文学革命”已在初等学校产生了深远的影响。白话，或称之为“活的语言”，现在已受到绝大多数初等学校的欢迎。然而奉天当局却表示反对采用白话文，广东省对于此种改变也仍持犹豫的态度。但是从长远看，生动活泼的白话文终将在所有的初等学校普及。

(3)中等教育 关于中等教育，新学制规定：“中等学校修业为期六年，分为初高两级。初级三年，高级三年。……初级中学施行普通教育，并得视地方需要，兼设各种职业科。高级中学分为普通、农、工、商、师范等科，但得酌量地方情形，单设一科或兼设数科。”

中等学校实行选科制。一个学分就是指上一小时课再加课外预备，无须预备的课程，应酌量折算减少学分。初中毕业要求修满180个学分，其中164个学分为必修的。由十二人委员会起草的初级中学必修课程如上表。

由九人委员会起草的高级中学的课程由三个学年构成，即：（1）所有学生必修的公共课，大约占总学分的43%；（2）专业必修课随各专业而异；（3）纯选修课不得超过学分的20%。高级中学阶段的职业课程尚未公布。普通科课目分为两组，即：文学和社会科学组、数学和自然科学组。这两类所设置的课程如下：

正如孟禄博士于1921年对中国教育作了全面调查之后所指出的那

样，中等教育是整个中国教育体制中最薄弱的一环。自那时以来，中华教育改进社和全国中等教育联合会两个全国性教育团体对这一阶段教育的各个不同层面作了认真思考。行政管理人员、中学校长以及教职员工同样把注意力集中到了这方面。这里不妨扼要地叙述一下当前中国中等教育几个比较重要的问题及发展倾向。

第一，改进中学的理科教学现已提上议事日程，教育学者、中学校长及教员对此都十分重视。理科教学是中学教育中最为薄弱的环节。中学理科教学只是通过课堂及相关教材来传授，学生们很少有机会积极参与实验。理科学习旨在持有实验的态度以及获取有效控制自然的能力，而这些一直被大大地忽视了。有鉴于此，中华教育改进社通过孟禄博士邀请美国俄亥俄州立大学推士教授对中国的理科教学进行专门研究并提出改进的意见。推士教授在对中国10个省的187所学校进行周密细致的调查之后，给我们留下了一份内容极为丰富且附有建设性建议的报告。这份调查报告已经以《中国的科学与教育》为题出版了。

另一件令人鼓舞、值得一提的事是中国科学社正在将改进理科教学提上议事日程。科学社的成员几乎包括了全国科学领域所有优秀的学者，将对促进理科教育发挥巨大的作用。该社已选定江苏省作为调研与实验基地。

第二个近几年来引起人们很大关注的是中等学校的国语教学问题。这门重要的课程先前以极不科学的、枯燥无味的方法教授。教师们由于缺乏教育及心理学的培训，所以不得不依赖灌输式教育和逐字讲授的教学方法。当胡适博士于1922年在济南召开的全国教育会联合会上宣读他的论文《中学的国文教育》时，改革国文教学首次引起人们关注。继胡博士的演讲之后，先后出现三十多篇关于改进中国语文教学的文章，其中大多数于近两年发表。目前，关于这个问题的探讨正在从主观、经验性向客观、实验性转化，白话文在中学和小学所处的地位各不相同，趋势是年级愈高，白话文愈少，随之增加的是古文教学。

第二种趋势，即中学愈来愈强调纪律。自五四运动以来，学校的纪律大为松弛。许多校长和教员简直无法管理学生。然而近两年出现了一种反弹：一方面是对学生加以消极防范，禁止学生参加迄今为止他们一直积极参加的一些活动；另一方面是在学校当局的监督之下，鼓励学生管理自己、自我控制。学校现已尝试各种方法以实现这两种趋势，所以，有充分理由相信，学生的操行将因此而有所改观。

第三种倾向即是基于民族感情反对将外语作为初中必修课。尽管规定必修的外语为36学分，然而，在如此强烈的反对面前，今后是否能继续

保持这么多学分，还是一个问题。

第四种倾向是在中等学校不断加强职业技能培训。正如《国立北京大学、国立东南大学入学考试统计》所显示，能够录取的考生不到10%。这一比率在近几年并没有发生多大变化。职业教育倡导者认为中等学校作为大学预科的性质应该大大削弱。很多学校以增加职业化课程积极回应此类号召。但是，这些课程如何适应学生在工作中的需要并为他们提供终身化的职位，这个问题至今没有找到令人满意的答案。

第五种倾向是中等学校男女分校。近几年有些中学已试行男生女生共同接受教育，但是学校数量十分有限。虽然人们赞成在高等学校和小学实行男女同校，但中学男女同校却遭到极其强烈的反对。今年三月在湖南和今年八月在山东开始实际禁止中学男女同校。江苏采取了比较温和的态度，规定男子师范学校可以招收女生，城市里的中学在作好充分准备的情况下可以男女同校。

(4)高等教育 根据新学制，“高等教育机构可由几个学院构成，也可以是一个独立的学院。修读大学或者学院的时间一般在四至六年。”最高层的是大学院，为大学毕业及具有同等程度者研究之所。

从这两个表中可以看到中国高等教育的一些情况〔见左页及本页〕。

今年这个名单中增加了几所大学，其中较重要的是国立广东大学及陕西的西北大学。

至于中国大学教育的近代发展趋势，第一个即是科学研究的趋势，我们可援引蔡（元培）校长的一段话加以说明。他说：“所谓大学者，非仅为多数学生按时授课，造成一毕业生之资格而已也，实以是为共同研究学术之机关。研究也者，非徒输入欧化，而必于欧化之中为更进之发明；非徒保存国粹，而必以科学方法，揭国粹之真相。”

第二个值得一提的趋势是要求学术自由。如果外部的干涉太多，则任何一种科学思想及研究都不可能顺利发展。政府的干预总是激起高等院校的怨恨和排斥。今年，当教育部公布新的《国立大学条例》时，遭到了国立北京大学教授们的强烈反对，最终不得不将此《条例》暂缓施行。

再就是全国各大学及学院有更加密切的合作趋势。今年七月，为处理有关高等教育中共同利益攸关的问题，中华教育改进社在南京开会时发起正式成立中国大学联合会。可以相信，这样的机构如果正常发挥作用，必定可以提高大学工作的总体水准。

第四个趋势是高等教育向女性开放。绝大多数中国大学已为女性敞

开大门，并实行了男女同校。北京女子高师也已获许可跻身于大学行列。

最后一个趋势是私立学院有了异乎寻常的增长。仅在北京，今年秋天即有大约十所私立学院成立。在其他的大城市，也可见到类似的情况。然而政府拒绝承认那些办学目的可疑的学校。

(5)职业教育 在新学制中，职业教育占有重要地位。“小学课程得[于较高年级酌地方情形，]增置职业准备之教育。……初级中学……[得视地方需要，]兼设各种职业科。……高级中学分为普通、农、工、商及师范科(后来增加家事科)。……职业学校之期限及程度，得酌量各地方实际需要情形定之。”

根据这些规定，职业教育课程委员会花了三年时间编写了16种不同课程的教材，这个工作实际已经完成了。除了小学的职业预备课程和高等院校的专门职业课程外，已拟定三级职业教育的课程，即：(1)为四年制初小毕业生开设的职业课程；(2)为六年制小学毕业生开设的职业课程；(3)为初中毕业生开设的职业课程。

关于实习时间及普通课程的安排，职业学校联合会及时提出了下列建议，并最终被采纳。第一，实习时间的安排不应少于课堂教学的时间，即每周不少于18至24小时。其次，职业学校的课程应分为三类，即职业课、职业基础课及普通课。普通课的学习时数至少应占学习总数的20%。

近年来职业教育的重要发展可列举如下：四川、贵州、广西、浙江以及福建诸省已根据新学制颁布了重建职业教育的计划；山西已成立了一个省级的职业教育委员会，并为20个学区中的每一个学区任命了一位督学，专门负责管理该区域的职业教育、义务教育及平民教育；云南已将烟草税专用于发展职业教育；湖北则令各县调拨教育经费的20%用于发展职业训练。在上海、南京、济南及武昌等地发起了“一周职业指导运动”，唤起了人们对这种教育形式的极大兴趣。最后，教育部已命令所有女中提供家政学的实习机会。中华职业教育社也提供了一笔特别经费，专用于促进女子职业教育。

④ 师资培训

关于师资培训，新学制有以下规定：“师范学校修业年限为六年，得单设后二年或后三年，收受初级中学毕业生。……为补充初级小学师资不足，得酌设相当年期之师范学校或师范讲习科。”新学制还规定，“得于相当学校内酌设职业教员养成科”。中等学校教师由四年制师范学院培养。“依旧制设立之高等师范学校，应于相当时期内提高程度，收受高级

中学毕业生，修业年限四年，称为师范大学校。”“为补充初级中学之不足，得设二年之师范专修科，附设于大学教育科或师范大学校，亦得设于师范学校或高级中学，收受师范学校及高级中学毕业生。”

师范学校的课程已由一个专门委员会制订完毕，已拟定出来的有三组课程。

第一套课程是为三年制师范学校拟定的，与高级中学程度相当。它的普通必修课和高中是一样的，只是增加了4学分的音乐，总共有68学分。专业必修课由以下科目组成：心理学入门2学分，教育心理3学分，普通教学法2学分，各科教学法6学分，小学各科教材研究6学分，教育测验与统计3学分，小学校行政3学分，教育原理3学分，教学实习20学分，总计48学分。选修科目有两类：（1）分组选修，（2）纯粹选修。分组选修的目的是满足三类未来教师的需要，即：（1）对语言、文学及社会科学有特殊爱好者，（2）对数学及自然科学有特殊爱好者，（3）对艺术及体育有特殊爱好者。每组学生将从本组选修课中至少选择20学分的课程。此外，全体学生将从九种教育课程中至少选修8学分。纯粹选修课由各校自行决定。

第二套课程是为相当于六年制中学的六年制师范学校拟定的。一般来说，在这种师范学校中保留了初级中学的特点，然而，整个课程的安排是一个连贯的过程，并没有中途间断。这套课程比较简单，一般适合较小的学校采用。因此，在这种学校里没有分组的差异，而且几乎没有选修课。在毕业时需修读完的330学分中，必修课程为319学分，选修课仅为11学分。

第三套课程是专门为培训初小四个低年级的教员而拟定的。它有三种形式，即：招收六年制小学毕业生的三年制课程，招收旧高小毕业生的二年制课程及招收初中毕业生的一年制课程。所有这三种形式的课程内容都已仔细拟定出来。由于篇幅所限，此处不能一一列举，仅简单列表〔见左页〕。

从师范学校这些新课程中可以看出四个重要变化：第一，更灵活多样。这就使得师范学校的校长能够依据当地特殊的条件办学，而不必像过去那样只能使用唯一的标准课程。第二，更强调专业课程。吸纳新近的教育发展成果用于培养更优秀的教员。第三，安排了更多时间的教学实习。第四，十分重视教材及各科教学法。以前，对于小学的需求未予以充分了解与满足，绝大多数师范学校因袭中学的模式。这种对初等教育各科的强调自然标志着师范教育新纪元的到来。

实际上，高等师范学校正在忙于使自身升级为师范学院。旧的师范

学校也正在根据其自身需要及条件采用六年制或三年制课程。部分高中也开设了新的师范科。另一个很重要的动向是乡村教师的培养正在越来越受到重视。从去年起江苏已创办了五所乡村师范。中华教育改进社、国立东南大学教育学院及农学院、中华职业教育社、江苏义务教育期成会及江苏教育会正在协商创立一所培养乡村教师的实验性师范学校。国立东南大学乡村教育教授、中华教育改进社乡村教育部主任赵叔愚（崇鼎）先生已被推选来组建这所学校。

绝大多数师范学校免除学生食宿学杂费，也有学校招收半费生或全费生，但是数量很少。作为回报，正规渠道录取的免费师范生毕业后必须视情况到小学或中学执教。几年前在江苏省的一项调查表明，80%以上的师范生毕业后都从事教学工作。强制服务的规定执行得相当宽松。在全国教育会联合会开封会议所通过的决议中，显示出要求更严格地执行这一规定的趋势。今年江苏省已禁止县师范科毕业生在服务期满以前继续深造，奉天省甚至推行在强制服务期满后颁发文凭的计划。

除了师范毕业生以外，所有其他小学教员都要申请教师资格证明。教师资格证明有两种：（1）通过考试获取的资格证明；（2）不须考试的资格证明。凡在中学学习过二年或二年以上者，或在小学执教一年或一年以上，或从半年或半年以上师范科毕业，或有足够的教育学知识，学习过所教的学科，并能通过书面文章或论文反映其水平的申请者，通过正规师范学校学科考试，依照不同的等级和性别，即可取得教员资格。助理教员的考试要容易得多。无须通过有关科目考试即可获得资格证明的人员是：（1）有一年或一年以上小学教龄的中学毕业生；（2）学习成绩良好的中等实业学校毕业生；（3）能胜任所习学科教学的专科学校毕业生；（4）有三年小学教龄，由县督学证明其服务成绩优良的小学教员。

凡申请资格证明者，都需提交学校文凭和担保人保证其品行端正的保单，并须通过体检。

在中国，教员资格证明是由省资格审查委员会负责开出。发证情况由省长每年向北京的教育部报告。

至于中国教员的酬劳，江苏省曾作过一次简单的调查，其结果如下[见左页]。

1921年，由邵（爽秋）先生主持的另一次调查，范围涉及六省，其结果是：所有小学教员的年平均薪金为（墨西哥）银洋160.25元，他们第一年服务的平均年薪为银洋125.10元。即使充分考虑到在中国货币有很高的购买力，我们仍然必须承认，现在付给小学教员的薪金是很低

的。新的趋势是：根据教员教学经验及专业知识的增长相应提高薪金。然而，当下的问题是如何更常规化地向教员支付薪金。

除了提高收入外，还试图通过酬金来鼓励长时期从事教学工作的教员。退休金制的重要性尚未为人们充分认识，然而已经有了一个良好的开端。浙江教育行政会议已建议施行一种计划，即为任职六年的小学教师安排一年的学术假；为工作二十年，或工作十年后丧失工作能力的教师每年支付相当于其最后一年年薪四分之一的退休金。此会议还建议实行一种特别补助金制度，一旦教员去世，其家属可获得一笔相当于教员年薪四分之一至百分之百的补助金。今年，江苏教育会已采用了一项临时退休金制度。根据这项制度，一位小学教员只要有下列情况之一者，即可得到相当于他工作最后一年年薪三分之一的退休金：（1）连续任职八年后因疾病不能从事工作，（2）他在履行公职时严重致残或丧失工作能力，（3）连续任职二十年后因年老退休。此外，他的一名子女可到所在省份的任何一所公立学校免费就读。

关于小学教师的任期，几乎还没有做过什么调查。根据规定，教师的聘约通常以半年为期。几年前在江苏省13所学校中收集的有关教员服务期的数据可以说明一些情况〔见左页〕，但是切不可把这些并不充分的数据作为全国的代表性数据。

目前中国急需教师。若按4,000万初小四年学龄儿童就读作为基数估算，我们至少需要为这四个年级配备100万名教师。但根据最近的报告，我们现在仅有在岗初小教员223,279名。为了实施全国范围的义务教育，需要增加超过三倍于现在的师资力量。现在师范学校和师范科共有学生总数为43,846名，即每年只能培养不到10,000名教师，而需求却是770,000名。问题既严重又紧迫，但只能逐步解决。

⑤ 最近的若干教育活动及其发展

1. 教育测验和测量 中国的教育测验运动始于四五年前南京的廖（茂如）、陈（鹤琴）两位教授，北京的刘（廷芳）、张（耀翔）两位教授开设科学化教育测量课程，并在搭建测验平台方面做了些原创性的工作。但是直到1922年哥伦比亚大学师范学院威廉·安德森·麦考尔教授来华，这个运动才展现出强劲的势头。麦考尔教授与中国各个中心机构的心理学家协作，成功地拟定了供中小学使用的20套测验。今年增加的测验如下：

1. 英语综合测验

安德森

2. 地理测验

扬格

3.算术练习测验

俞

4.绘画测验

俞

5.智力测验

刘-布莱德肖

6.自我调查综合测验

推孟

7.初小非语言智力测验

陈

8.高小非语言智力测验

陈

9.高小汉语语法测验

陈

10.数学综合测验

廖

11.科学综合测验

廖

12.国语和文学测验

廖

13.国语语法测验

廖

14.历史测验

廖

15.地理测验

廖

中国关于测验的改进有两个特点值得一提：第一，所有的测验都以统一的新体系（即T. B. C. F.测量编制法⁴）为依据来确定评分等级，由此获得的历次测验得分之间具有可比性，有助于将测验结果列表并加以解释，所有的使用指南都以同一种标准设计为模板，教师只须学习一种操作步骤即可。第二，所有的测验都由中华教育改进社出版，这便省去了学校教员到处寻找测验题的麻烦。

1923年秋，燕京大学推孟教授、北京师范大学查（良钊）教授曾应中华教育改进社的要求，使用特别设计及自我控制的测验进行合作性的

自测。“这种自测的目的是使教育者熟悉各种测验，推动教师们利用中华教育改进社即将出版的各种自助指南，在中小學生中间举行一次全国性竞赛。”尽管这种测量有其缺点，但是实现了它最初的目的。有关情况的最后报告已由推孟教授撰写成《中国初等学校效率》一书，于今年春天出版。

2. 学生的医疗及社会福利 小学学生的健康及社会福利比中学学生的健康福利受到更多的重视。一些较好的学校，如香山慈幼院，以及东南大学、北京男子高等师范学堂、北京女子高等师范学校所办实验学校和湖南楚怡学校等，为儿童提供了许多参加社会活动的机会，并极为关心儿童的身体健康。我们可以从北京女子高等师范学校实验学校得到关于这方面的报告。这所学校有590名学生，1920年开始设置校医，每学期进行一次体格检查，要求学生每年注射一次疫苗。在课外活动时间，强调自由活动及运动，既有中国的运动项目，也有外国的运动项目。体育课上练习矫正体操，卫生课上传授一般的保健常识。学校也注意通风、采光、座位等。学校园艺是学校为学生提供的另一种健康的娱乐方式。此外，学校鼓励户外活动，每学期至少为每个班安排一次短途旅行。学校有学生自治会、文学社、班会、周会、合作商店、儿童俱乐部、儿童阅览室、储蓄社及数十个为丰富儿童的社会生活而提供充裕机会的其他组织。

在国立东南大学及中华教育改进社共同努力下，由查尔斯·哈罗德·麦克洛伊教授指导的大量研究或许可称得上是今年所做的最重要的事情。

下列研究项目已经完成：

1. 对人体测量学及体格检查的一系列研究。若干成果可列举如下：
 - (1) 关于不同体型的体重研究已经完成。采用了新的体重计算基准，据此拟定的新体重卡片已准备完毕。
 - (2) 胸围测定的研究已准备就绪。
 - (3) 对所有通常采用的测定都进行了进一步研究，以确定它们在诊断上是否真正有用。研究的范围压缩到了少数真正重要的测定，并研究了它们如何能对学生的福利有所助益。
 - (4) 胸围指数作为测定退化的遗传特征的基准已在编制并接近完成。
 - (5) 研究各项最重要的测定和学生的年级之间可能存在的关系。
 - (6) 年龄、身高、体重及运动成绩的一种新的测定方法已设计出来。
 - (7) 对体格检查作了精细的统计研究，并制定出一种数、形结合

的研究结果呈现的新方式。

2.对若干运动比赛项目做了研究，以确定与其近似的比赛项目中哪种可以被使用。例如，根据统计，在三种形式的拾土豆竞走中，最佳的方式已经确定。

3.对标准田径测试进行了深入的研究。对300名小学男生参与的11项比赛项目和330名中学男生参与的18个比赛项目进行研究，根据统计数据，确定出每一标准测验的最佳比赛项目。

4.已设计出来一种普遍适用于70余项田径运动比赛项目的记分表。这种记分表可以显示出不同的比赛项目达到同样分值的难度大致相等。

5.根据标准比赛项目及上面提到的年龄、身高、体重的测定标准，制定了确定男女生在运动比赛项目上肌肉运动商数的方法，相当准确。

6.对足球和篮球方面的标准测验进行研究，并已初步完成。

上述研究成果中的若干种已出版，有些还有待出版。当一切完成时，中国的体育教育及体格检查至少前进10年。

3. 平民教育——一场扫除文盲的运动 文盲的大量存在是中国一个独特的问题。除了一亿二千万学龄前及学龄儿童，再减去八千万曾经在旧式学校平均学习过三年的人，中国仍然有两亿人，或者说占全国人口一半的人从未受过任何教育。这是一个有待平民教育的倡导者去解决的巨大的问题。几年前，中华基督教青年会开始平民教育的新实验。1923年中华教育改进社在清华学校举行的第二届年会上，成立了以熊希龄夫人为董事长的中华平民教育促进会，平民教育运动立即得到全国范围的支持与响应。

实际上，所谓平民教育，就是教会使用大约1,200个最常用汉字为基础的四册通俗读本。一个一般的文盲每天花一小时，利用四个月的时间即可学完四册课本。四个月后，他就可以用所学词汇阅览书报、信件，也可利用这些词汇表达自己的想法。这四册课本总共只值银洋一角二分，即使赤贫者也可买得起。教文盲识字的方法有三种：第一是平民学校，由一位教员在固定时间给班上的学生上课；第二是平民读书处，它以家庭、商店以及诸如此类的地方为单位，鼓励家庭或商店里识字的人教他的亲人或同事识字；第三是平民问字处，不识字的人可就课本中他不明白的任何问题到问字处寻求解答。这些问字处一般由志愿于此工作的店主主持。通过这些方式，扫盲课本发到家庭、店铺、工厂、学校、教堂、寺庙、衙门、轮船、监狱及军营。两年内，这些课本已发行200万册。在这些课本发行后，还出版了一系列介绍各科知识的小册子。在中国通过征收愚民捐实行义务平民教育的日子已经为期不远了。

平民教育的朋友有决心在这一代创造消灭两亿文盲的奇迹。

4. 理科教学的发展 一段时期以来，对理科教学成效不满的情绪日渐增长，尤其反映在中等学校的理科教学方面。这种不满不仅仅是针对简陋的设备，更主要是针对所采用的方法。1922年，纽约国际教育研究所保罗·孟禄博士访华，他的观察证实了许多人关于理科教学的意见。在他的推荐下，中华教育改进社邀请了俄亥俄州立大学推士博士来华协助改进理科教学方法。他在中国进行了相当广泛的旅行，虽然逗留时间不长、建议有限，但是他的来访对中国理科教员仍是一个有力的激励。另一个值得一提的重要事件是为理科教师创办了暑期讲习班，理科教师们可以利用暑期，在专家指导下深入地学习研究。这类讲习班须由教育团体与科学团体共同举办。第一期讲习班已于1924年在北京清华学校开办，第二期讲习班将在南京国立东南大学举办。

5. 图书馆运动 远在公元前数世纪的周朝，中国就有了图书馆，但是只有极少数知识贵族方能利用，一般的学生几乎是不可能问津的，更不用说平民百姓了。随着新教育的兴起，学校逐渐创办了图书馆。到今年为止，中国已有12所设备优良、现代化的大学图书馆，以及相当数量设备良好的中等学校图书馆。这意味着教师和学生将有更多的机会探求知识。与此同时，位于各教育中心的古籍图书馆尽管犹豫，仍逐渐向比较高级的读者开放。

一些高等教育机构认识到运用现代管理方式管理图书馆的必要性，已经不断派遣学生们出国学习图书馆学。当1922年中华教育改进社在济南举行第一次年会时，中国已有几位受过现代管理方法培训的图书馆专家了。在中华教育改进社的赞助下，他们立即开始组建图书馆委员会，旨在推动创立更多的图书馆，以更先进的管理方法管理图书馆，吸引更多的人使用图书馆。为了更有效地实现这些计划，在1923年中华教育改进社于清华学校举行的第二次年会上，他们通过了一项组织地方图书馆协会的决议。此后，1924年有八个地方协会成立。当1924年7月第三次年会在国立东南大学举行时，他们自然又期待着成立全国性的中华图书馆协会，以便协调致力于发展与改进图书馆的个人和团体。这个全国性的组织预定于1925年成立。由此，要求提供更多更好图书及图书馆的呼声响彻全国。我们的图书馆专家正在不失时机地作出他们独有的贡献。与此同时，呼吁更多的人读书及使用图书馆的号召正在得到平民教育倡导者们的响应。图书馆运动中最好的朋友之一伍德小姐及其他朋友正四处奔走，力求得到美国庚子赔款基金的一些份额，用来在中国建立示范公共图书馆。中华教育改进社已请求美国图书馆学会派遣一名图书馆专

家来华，帮助为这一事业拟订一份系统的计划。

⑥ 教会教育

据中华基督教教育会副总干事华莱士博士陈述，现在可能有总数近30万的学生在新教教会学校学习，而且这个数字还在增长之中。从1920年到1924年的四年中，大学生增加了76%。科斯坦蒂尼大主教表示，在天主教会学校学习的学生为253,953人。因此，在中国每100名学生中，即有8名是教会学校学生。

中华基督教高等教育会的组建是今年教会教育突出的一件大事。该会任命了一个理事会作为临时机构，该理事会也是中华基督教教育会的高等教育理事会。这样，就把高等教育与中华基督教教育会的其他活动联系起来了。理事会干事洛本斯坦牧师现正从事研究各高校，特别是这些学校的财政状况以及对它们的工作进行协调的可能性。理事会的主要目的是使经费来源有限的基督教高等学校在满足中国需要上作出最有成效的贡献。

尽管教会教育成绩斐然，但仍在三个方面受到了抨击：第一，教会学校完全操纵在外国人手中，即使是有资格的中国基督教徒，也很难有机会在其中担任管理职务。第二，教会向尚未成熟、不能自己做出明智抉择的年幼儿童灌输宗教。最后一点，部分中国人非常怀疑传教机构正在组织一个与政府的教育系统平起平坐的基督教教育系统，担心有朝一日很可能成为大群体内部的一个不能相容的小群体。

基于上述事实，在今年七月和十月举行的两次全国教育会议上，我们目睹了教会教育遭到连续的抨击。然而，比较保守的中国人却认为，在这个过渡阶段，那些比较自由的教会教育的独特贡献在于作为政府举办教育的有益补充，能为学生提供更多的受教育机会，并为学校纪律树立一个较好的榜样。他们也认为教会教育应变得更加社会化、自由化、中国化。最后，他们还感到，如果传教机构将它们的力量和资源集中于少数几个高校，而不是耗费在创立质量较差的中小学上，那么它们将能够作出更大的贡献。他们认为，传教机构以及其他私立机构也许可以开办实验性质的中小学，但大量发展这类学校并由此建立一种体系的尝试迟早要同政府的体制发生冲突。

⑦ 几句结束语

中国的教育工作者正在十分困难的逆境中工作。他们并不因为困难而沮丧，而是把逆境视为努力奋斗的机会。现在中国堪称为一块教育工作的处女地，或者可以叫做一种社会工作的真空，无论注入多少力量都能够被吸收。因此，如果真正要理解当今中国的教育，不仅要看到面对

的困难，更要看到人们为之付出的努力。

CHINA¹

A Introduction

General Survey of the Forces Acting upon Chinese Education

Education as a social institution and process is constantly influenced by the political, social, economic, and physical forces of the environment in which education is carried on. These forces may be favorable or unfavorable to the development of education. They may handicap the orderly working out of educational schemes as well as stimulate further educational activities. In order to secure a better understanding of Chinese education in this year, it is necessary to have before us a picture of the more important forces that have been acting and reacting upon educational thought and practice during the same period.

Politically the year opens with a nationwide dissatisfaction over the election of Tsou Kun to the Presidency on October 10, 1923. It was felt that this election must inevitably breed internal war, although at that time no one could tell when such a war would come. It is the teachers of the land who worry most, because many of them have felt that the example of one election would be powerful enough to nullify the educational effort of ten years. The schoolman cannot but be stimulated to consider how through education the character of future representatives could be trained if representative government is a good thing for this country. Education for citizenship as a movement has here received its great momentum.

Following the election, the leaders of different political parties began to ally themselves in a united front against the Chihli Party. Dr. Sun Yat-sen, Marshals Tuan Chi-shui and Chang Tso-ling, although differing on national policies, are one in their effort against Tsou Kun and Wu Pei-fu. In less than a year's time, we find the Chihli Party and the Anti-Chihli Parties meeting on the battlefield. The expenses involved in military operations on both sides are estimated at not less than twenty million dollars gold. If the loss of civilian property and the harvest is included, no less than seventy-five million dollars gold

have been lost in this present war.

The year begins with a military force of one and one-half million soldiers. The preparation for hostilities on all sides nearly throughout the year has greatly increased the number of soldiers at public expense. The total expenditure for army purposes has been estimated to be about one hundred fifty million dollars gold. This is the burden of militarism on the Chinese people.

Militarism and the present war as its result have affected education in two ways. In the first place, they have drained away enormous resources which might have been turned into the development of education. In the second place, they serve to stimulate the introduction of vocational education into the armies. The educators had constantly in their minds the demobilization of soldiers as one of the fundamental ways of saving the country; but they also believed that many of the soldiers cannot be disbanded without giving them first a vocational training for independent living. Vocational training for the rehabilitation of disabled soldiers is a direct outcome of the present war.

Foreign Affairs

In international relations, there are three phases which need special mention. The treaties hitherto made between foreign countries and China on unequal terms have been attacked this year more ardently than at any time before. These have humiliated the Chinese people and caused the assumption of a superior air on the part of not a few foreigners. A Chinese writer has remarked, "As foreigners love us, we love them in return; but as foreigners despise us, we hate them." These treaties have occasioned the recent development of a strong nationalistic tendency which has even found expression in educational conferences held this year. The present attack on missionary education in China, aside from religious reasons, is partly due to the indirect influence of this nation-wide opposition to unequal treaties, cancellation of which by mutual consent will benefit all parties concerned. It is believed that such a cancellation by mutual consent will not only enable China to occupy a more appropriate place in the family of nations but will make our foreign friends feel much

more at home in China.

The next thing which should be considered is the restoration of diplomatic relationship with Russia. Through the cancellation of all treaties made between Old Russia and the Tsing Dynasty, Russia has won a warm friendship from the Chinese people. This was shown in the honor accorded to Lenin, on January 26, and in the parade for demanding the recognition of Russia. The good feeling entertained by the Chinese toward New Russia is not so much for Russia's Bolshevism as for Russia's stand for international justice and equality, not in words but in action. It is yet too early to forecast the influences of this new friend upon our education. However, one thing we are pretty sure of is that contact with New Russia will make Chinese education less favorable for further realization of imperialism and capitalism.

Cancellation of Boxer Indemnities

The Japanese and British Governments have already adopted a policy of using the indemnities which in their present forms are not acceptable to the Chinese people. The French indemnity is still hanging on the gold franc question. These three sources, if the methods of administration of the fund are changed, will be partly devoted to educational and cultural purposes. The American portion of indemnity, a sum of \$12,545,438.67 gold, was cancelled by the American Congress on May 21, and is to be used for educational and cultural purposes. Dr. Paul Monroe's visit to this country in August resulted in the formation of a foundation called "The China Foundation for the Promotion of Education and Culture," composed of ten Chinese and five Americans, to direct the use of this fund. The Russian portion of indemnity available for educational use amounts to about \$45,000,000 gold and is entrusted to a committee of two Chinese and one Russian for its management. These funds will give stimulation to new educational and cultural activities. Many projects have been proposed. But the promotion of science and village education seems to have received the largest amount of approval.

Public Opinion in China

A word must be said about the influence of public opinion in China before closing the discussion of the action of political forces

upon education. Public opinion is a more important political and social force in this country than we have usually thought. Its influence is latent but continuously present. It acts slowly but very steadily and surely. Political and social movements rise or fall according to whether they are backed up or knocked down by this invisible force. It can be shown that public opinion was one of the most decisive factors in the founding of the Republic, the defeat of the Second Revolution, the downfall of Yuen Shi-kai, the failure of the restoration of the Manchu Monarchy², the fall of the Anfu Party, and the present fall of the Chihli Party. The public opinion of China today stands for an honest and efficient government in internal affairs, and for just and friendly relations in external affairs. Nothing short of these ideals could satisfy the intelligent public opinion of the day. How to make opinion more public and more intelligent is the problem of popular education which has on its program the transformation of two hundred million illiterates into intelligent and responsible citizens in ten years' time!

China, an Agricultural Nation

More than 80 per cent of the Chinese population live in farming villages. An understanding of the conditions of the farmer is therefore necessary to an appreciation of the economic and educational problems involved. The Chinese farmers are contented and conservative people. They have contributed to the stability and persistence of Chinese civilization. In spite of all difficulties they have been very successful in growing food and in maintaining fertility of the soil. Small farms which produce barely enough for the support of their families prevail all over the country. In the absence of any rural credit system the best the farmer can do when in need of financial assistance is to pawn his personal effects. The interest reaches as high a rate as 36 per cent per annum. Other factors which handicap our farmers are many, but the more important are poor transportation facilities, absence of cooperative buying and selling, lack of rudimentary knowledge of the written language which is the key to the many new knowledges needed for the improvement of farming, and the lack of sanitary control which is undermining the health of

the farmers and of their children. These facts call forth the economic and educational attack of the village problem. A village education effective enough to regenerate the social and economic life of the farmers is considered the most important issue of the day. Hand in hand with village education, the conditions of the farmers have stimulated higher agricultural education, which in time will help the farmers in scientific farming.

Industrial Development and the Labor Problem

In spite of this dominant agricultural influence, new industries have gradually and steadily sprung up and are rapidly increasing in extent and influence. There are now more than 100 flour mills and 70 oil mills in operation. Cement is being manufactured in Shanghai and Nanking, and very soon Shantung, Honan, and Manchuria³ will enter this field. We now refine our own sugar and salt, wash with home-made soap, light with home-made matches. More than two hundred cities are now lighted with electricity. There are more than a dozen prosperous companies owned and operated by the Chinese with an aggregate capital of sixty million dollars and a capacity of producing eight million of the fourteen million tons produced by all the modern mines in China. This roughly represents an increase of 400 per cent in the space of thirteen years.⁴ During 1918-1919 the cotton industry in China suddenly rose into prominence; after 1921 it began to decline. The total number of spindles in 1924 was 2,160,406 as against 2,221,486 in 1923.⁵ While Chinese spindles decreased from 64 per cent in 1923 to 56 per cent in 1924, the Japanese spindles in China increased from 25 per cent to 34 per cent in a year's time. However, the number of looms is on the increase; 7,817 were in operation in 1923, while in 1924 the number rose to 9,481. These figures represent pre-war conditions; the present war must have seriously checked the natural growth of industries.

Along with the development of industries there comes the problem of labor and class wars. "Hundreds of labor unions of one description or another have sprung up with Canton as the most active centre. Strikes have kept pace with the growth of labor organization. Though poorly led and at times exploited by would-be

labor leaders, the workers have had a taste of their own strength....The workers are now becoming conscious of their misery, their rights, and their power.”⁶ Especially has the labor of women and children in China been the least protected and worst exploited. Most of the laborers are illiterates.

Such being the industrial conditions that are found in China today, the educators are confronted with problems of bringing the human element into industrialism, cultivating a right attitude toward labor as well as capital, making industries capable of meeting the needs of the nation and the world with a minimum sacrifice of the higher life. Education and legislation must join hands in securing the fullest benefit from industrialism and in reducing to the lowest limit the calamities that have accompanied the introduction of industrialism in the West.

Commercial Development

“In spite of political disturbances, foreign trade has advanced steadily every year during the past twenty years, each succeeding year's return being in advance of its predecessor.”⁷ “The foreign trade of China in 1923 was at HK. Tls.1,676,320,303, which represents an increase of HK. Tls.76,378,720 over the preceding year's total. The value of imports declined by about twenty-two million taels, but exports increased by nearly one hundred million taels.”⁸ Much allowance should be made for price fluctuations. Our tea and silk trade with America has declined, partly owing to our neglect to improve the quality to conform with American standards, and partly due to the severe competition of Japan. These failures have stimulated scientific studies in sericulture and tea manufacturing. The increase in private endowment funds for educational purposes during recent years can be explained partly by the steady increase in commercial prosperity. This year business has been greatly disturbed on account of the war, and has deprived education of much of its potential support from the commercial world. As Mr. Arnold says, “When China has the same per capita foreign trade as Australia in its aggregate, it will amount to about \$60,000,000,000 instead of its present \$1,000,000,000.” A proper system of commercial education hand in

hand with the improvements in agriculture and industry must be relied upon to make China's trade sixty times the present size.

Flood and Famine

Other forces which visit China at intervals of time are flood and famine. The floods that occurred in July and August of this year, notably in Chihli, Hunan, Kiangsi, and in the far South have been a terrible calamity. It is not possible to obtain figures of the total loss. In Kalgan, Hunan, and Fukien alone, the estimates of damages amount to \$45,000,000 gold. According to the report of the International Famine Relief Commission, it would take at least ten million dollars gold in order to relieve the ten million people who have been affected by this disaster. The direct effects of this flood are: first, the call upon all possible financial resources for relief work, leaving practically no room for new educational activities; second, the need for a systematic program of reforestation together with hydraulic engineering works is widely recognized; and the third, the use of the relief fund for preventive work through a system of practical education is insisted upon. The promoters of popular education have also tried to take this opportunity to educate the illiterate refugees during the leisure hours.

The Status of Communications

Education as a general rule follows improvements in communication. The extent of new education corresponds very closely to the extent of railway and steamship communication. Although China is larger in area than the United States, Mexico, and Central America combined, and has four times the population of the United States, she has less than 7,000 miles of railways compared to 265,000 miles in the United States. As a consequence six sevenths of China's population is concentrated in about one third of its territory. Railways will open up nearly 2,000,000 square miles now unsettled and undeveloped. They will assist in a better distribution of the population, in the unification of the country, and in the eradication of brigandage and famine. Railways and good roads are indispensable to the spread of education, for universal education is dependent upon universal communication.

The Chinese Renaissance

Of all the forces that are now acting upon Chinese education, the Chinese Renaissance has exerted the most profound influence. The movement began in 1917 as a "Literary Revolution" when Dr. Hu Suh and Mr. Chan Tu-siu, the leaders of the movement, declared that the classical language had outlived its usefulness and that *Pei hua*, the spoken language, was its legitimate heir. As the *Pei hua* is the most widely spoken language in the country, the culmination of over twenty centuries of linguistic evolution, and the language in which the nation's most favored literatures were produced, the Literary Revolution met with astonishing success. In spite of strong opposition on the part of conservative scholars, the younger generation received it with overwhelming joy. This rediscovery of a living language for Chinese has enabled China to produce new literatures fitted for the new age, revolutionized elementary school reading materials as well as methods of teaching them, and made it possible for the popular education movement to go on with its program of eliminating illiteracy.

The second phase of the Renaissance has to do with higher education. During the later years of the movement scholars have been seeking to apply the modern scientific methods of research to the work of systematizing the old learning of China. In the words of Dr. Hu, this "systematization of the national heritage is a revival or rebirth of that spirit of criticism and research which animated the works of the Han Hsueh scholars of the last three centuries."

But the influence of the Renaissance is wider than this. It is a movement through which "all traditional values are judged from a new standpoint and with new standards. Tradition is often thrown overboard, authority is cast aside, old beliefs are being undermined." This explains why the Renaissance movement is so permeating and far-reaching and its effects are spreading over the whole fabric of national life.

Visits of World Scholars

Since 1918, a number of eminent scholars like John Dewey, Bertrand Russell, Paul Monroe, Von Driesch, Rabindranath Tagore, and others have visited this country. All of them, through their

lectures and contact with our intellectual leaders and students, have exerted much influence upon Chinese thought and life. Special mention should be made of Dr. Dewey's and Dr. Monroe's visits because of their unique significance for the reconstruction of Chinese education. Besides his influence upon advanced students, Dr. Dewey's pragmatic philosophy of education has been one of the guiding principles in the reforms of our elementary education. Since his visit a number of experiments have been conducted in elementary education. His philosophy has stimulated several students of education to work out techniques and methods for its realization. Education as an application instead of acquisition of ideas has been emphasized by Dr. Monroe. His recommendations, resulting from careful investigations in 1921, have aroused serious deliberation on various educational problems and stimulated especially reforms in secondary education and science teaching.

The Critical Attitude of Chinese Schoolmen

So far we have only mentioned the more important forces and the effects which they have exerted upon Chinese education. These are sufficient to show that in China problems are many and perplexing. Solutions are sought in her own past civilization as well as in contemporary examples. Thus China has tried to learn from one country after another, until today she has quite a cosmopolitan group of tutors from which to select. Japan, Germany, America, England, the Philippines, India, and Russia are the more important countries whose educational theories and practices have had influence upon Chinese education. China has in the past followed her teachers rather blindly but as yet no one has succeeded in offering her a satisfactory solution for her problems. Each is helpful to her in some ways but wholesale adoption of any one system has led her astray. At first she sacrificed everything old for the new. Gradually she came to a realization that the old is not necessarily bad and the new is not necessarily good. Thus our schoolmen have become much more critical than in former years. Their reaction now toward new theories and practices is no longer imitative adoption, but questioning, examination, experimentation, and selection. The logical outcome of this attitude

tends to work out an education that is best fitted for the need of New China by assimilating what is best in the old and the new, both at home and in other countries. Experiences in the past and in the outside world must be assimilated before they can contribute to the nation's vitality and well-being. The critical and experimental attitude is creative. It is only with such an attitude that a real Chinese education adapted to Chinese life is possible. Such a creation has begun.

中国

① 引言

影响中国教育各种力量概览 作为一种社会公共机构和社会进程的教育，经常受到所处环境中的政治、社会、经济以及自然力量的影响。对于教育发展而言，这些影响或是有利的，或是无利的。它们既可能阻碍正常地制定教育规划，也可能促进教育活动的进一步发展。为了更好地领会当今中国的教育，有必要对同期内作用和反作用于教育思想与实践的各种比较重要的力量加以描述。

在政治上，这一年以1923年10月10日曹锟被选举为大总统而导致的全国范围的不满情绪为开端。人们认为，这次选举将引发一场内战，虽然没有一个人能够说清楚这场战争何时会来临，但是必定无可避免。最为担忧的莫过于这块土地上的教师，因为他们当中许多人都已经察觉到，一次选举所产生的巨大影响力量，将会使在教育方面十年的努力付诸东流。这就促使教师们不得不考虑，如果代议制政府对于中国有益的话，那么怎样通过教育来培养未来议员的品质。作为一种运动的公民教育也因此获得了巨大的动力。

此次选举之后，不同政治派系的领袖们开始结成反对直系的统一战线。虽然孙逸仙博士、段祺瑞将军和张作霖将军在国策方面有分歧，但是在反对曹锟和吴佩孚方面却保持一致。不到一年，直系和反直系便在战场上交锋了，双方军事费用估计不少于2,000万美元。如果将平民财产和农业收成的损失也计算在内的话，在此次战争中的损失不低于7,500万美元。

在这一年初，军队有150万人。在将近整整一年时间里，各方都在准备全面战争，由公费开支的军队人数大大增加了。军费总额估计约为15,000万美元。这是军国主义压在中国人民身上的沉重负担。

军国主义以及当前由军国主义引发的这场战争在两个方面都影响了教育。首先，军国主义和战争榨干了本来可用于发展教育的巨大资源。其次，它们还刺激了军队中的职业教育。教育工作者们心中常把士兵复员看作基本的救国方略之一，但是他们也认为，如果不给予士兵们能独立谋生的职业培训就把他们遣散是不可行的。对康复中的残废军人进行职业培训乃是当前战争的直接结果。

外交事务 在国际关系上，有三个层面特别值得一提。如今，外国与中国签订的不平等条约遭到空前强烈的抨击。这些条约使中国人民蒙受

耻辱，也导致不少外国人滋生了傲慢态度。一位中国作家曾说：“如果外国人友爱待我们，我们也以友爱待他们；但如果外国人鄙视我们，我们就憎恨他们。”这些条约滋长了强烈的民族主义倾向，甚至在今年举行的历次教育会议中也有表现。目前对中国教会教育的抨击，除了宗教原因之外，也受到全国范围内反对不平等条约的间接影响。双方就废除不平等条约达成一致，将使有关各方受益。人们相信，取消不平等条约不仅能使中国在国际大家庭中取得更为合适的位置，而且将使我们的外国朋友们在中国更能体会到宾至如归的感觉。

第二件应予考虑的事情是恢复与俄国的外交关系。通过取消沙俄与清朝签订的所有条约，俄国赢得了中国人民诚挚的友谊，这表现在1月26日向列宁致敬和要求承认俄国而举行的游行活动中。中国人民对新俄国持有的好感，与其说是由于俄国的布尔什维主义，不如说是由于俄国不是在口头上，而是在行动上维护国际正义与平等的立场。但要预测这位新朋友对我国教育的影响还为时过早。然而，有一点可以肯定，即与新俄国联系将使中国教育不那么有利于帝国主义和资本主义在中国的进一步扩张。

取消庚子赔款 日本政府和英国政府已经采取了一项使用庚款的政策，然而两国政府的这项政策中国人民是不能接受的。法国的庚款仍因金法郎问题悬而未决。如果改变基金的管理方式，这三笔款项将有一部分用于发展教育和文化。美国的那一份庚款，总额为12,545,438.67美元，已于5月21日由美国国会予以取消并计划用于教育和文化。8月孟禄博士访问中国，建立了一个名为“中华教育文化基金会”的机构，由十名中国人和五名美国人共同指导这笔基金的使用。在俄国庚款中，有约达4,500万美元可用于教育，并已委托两名中国人和一名俄国人负责管理。这些款项将会激励发展新的教育和文化活动。许多活动项目已经提出来，不过看来促进科学和乡村教育已经得到最多的支持。

中国舆论 在结束讨论政治因素对教育的影响之前，必须讲一讲中国舆论的影响。舆论作为一种政治和社会力量，在中国，它比我们通常认为的更重要。它的影响是潜在的，但无时不在。它的作用是缓慢的，但是非常稳定和实在。政治运动和社会运动的兴衰起伏由这种无形力量的向背而定。从民国的建立、二次革命的失败、袁世凯的倒台、清朝君主政体复辟的失败、安福系的垮台和这次直系的垮台，都可以看出舆论乃是最终起决定性的因素之一。今天中国的舆论，在对内事务中主张建立一个诚实、高效的政府，在对外事务中主张保持公平与友好，缺少这些理念就不能适应当今明智的舆论要求。怎样使舆论更加公开、更加理性

是普及教育中的一个问题，因此，普及教育设立的计划包括：在十年内将两亿文盲变成有知识、有责任感的公民！

中国，一个农业国 80%以上的中国人居住在依靠耕作为生的农村。因此，了解农民的生存状况，对于理解有关经济和教育的问题很有必要。中国农民是知足的、保守的。他们对中华文明的稳定和延续作出了贡献。尽管困难重重，但是他们在种植粮食和保持土壤肥力方面还是很成功的。收成勉强够养家糊口的小农遍及全国。由于没有任何农村信贷组织，在需要资金时，农民只能典当个人的财产，所付年利竟高达36%。其他不利于中国农民的因素还很多，但其中比较重要的有：糟糕的运输设施，没有合作买卖，缺乏对书面文字的基本认知，而文字乃是获得改良耕作所需要的新知识的钥匙；此外缺乏环境卫生的管理，以致损害着农民及其子女的健康。这些事实促使人们从经济和教育方面着手解决农村问题，发展有效农村教育以改进农民的社会生活及经济生活是当前最重要的问题。在改善农村教育的同时改善农民的生活条件已经促进了高等农业教育的发展，由此科学的农业将指日可待。

工业发展和劳工问题 尽管农业的影响占支配地位，各种新型工业还是逐渐地、稳步地兴起，其范围和影响力正在迅速扩大。现在已有一百多家面粉厂和七十多家榨油厂开工。水泥已在上海和南京投入生产，山东、河南和满洲也将很快投产。我们现在已能精制食糖、食盐，用国产肥皂洗涤，用国产火柴点火，两百多个城市用电照明。有十多个业务兴隆的公司由中国人拥有和经营，资本总额达6,000万元，其矿井生产能力为800万吨，而中国所有现代矿井的生产能力为1,400万吨。这大致相当于在13年内增长了400%。1918年至1919年中国棉纺织工业突然红火，1921年之后开始衰落。比之1923年纱锭总数2,221,486，1924年减少至2,160,406。中国经营的纱锭从1923年（全国总数）的64%降至1924年的56%，而日本在中国的纱锭则在一年中从25%增加到34%。不过，织机的数量却在增加：1923年开工的织机为7,817台，而在1924年开工的织机数已上升至9,481台。上述数字表示的乃是战前的状况，然而当前的战争必定严重地阻碍了工业的自然增长。

在工业发展的同时，随之而来的是劳工和阶级斗争问题。“数以百计的各种工会组织迅速成立了，广州成为最活跃的中心。罢工随着劳工组织的增长而逐步升级。虽然工人们受到那些想当劳工领袖者的拙劣领导，有时甚至受到利用，但他们还是体验到了自身的力量……工人们正逐步意识到自己的苦难、自己的权利，以及自己的力量。”尤其是，中国妇女和儿童的劳动最缺乏保护，且备受剥削。大多数劳动力是文盲。

上述即为中国工业状况的现状，摆在教育工作者面前的问题便是如何将人的因素融入工业主义，以正确的态度对待劳工和资本，以尽量不牺牲较高水平的生活质量的前提下，使工业能够满足民族和世界的需要。教育与立法必须联合起来从工业主义当中获取最充分的利益，将伴随西方工业主义而来的灾难减少到最低限度。

商业发展 “尽管政治上动乱频仍，过去20年中国的外贸还是逐年稳定上升，每年的利润都比上一年有所提高。”1923年的外贸总额是1,676,320,303海关两，比上一年增长76,378,720海关两。进口总值下跌约2,200万两，而出口则增长了将近1亿两”，其中包含物价上涨的因素。我国与美国的茶叶和丝绸贸易已经下降，其中一部分原因是我们忽略了改进质量以符合美国标准，也可部分归因为日本的激烈竞争。这些失败激发起对养蚕和茶叶加工的科学研究。近年来私人对教育事业捐助款项的增加，可以部分地归因于商业的日趋繁荣。今年，商业因战争而大受干扰，教育即丧失了许多本来可能从商界得到的资助。正如阿诺德先生所说，“如按人口平均计算，一旦中国对外贸易总额达到澳大利亚的水平，其总额就会达到大约600亿美元，远远高于现在的10亿美元。”要使中国的贸易60倍于目前的规模，必须依赖于改善农业、工业以及合适的商业教育体制。

水灾和饥荒 不时降临中国的其他因素还有水灾和饥荒。今年七八月在直隶、湖南、江西以及更远的南方发生的水灾确实是一场可怕的灾难。要获得全部损失的数据是件完全不可能的事情。仅就张家口（卡尔干）、湖南和福建而言，损失估计就达45,000,000美元。根据国际救灾委员会的报告，至少需要花费1,000万美元才能救济1,000万受灾的民众。这次水灾的直接后果是：第一，要求动用一切可能的财源来进行救济工作，实际上已经没有从事新的教育活动的财力；第二，一个集再造林计划与水利建设于一体的系统工程公认迫在眉睫；第三，坚持运用救济基金进行系统实用的预防教育工作。普及教育的倡导者们还试图利用空闲时间在难民中开展扫盲。

交通状况 一般说来，与教育改善同步的是交通状况的改善。新的教育体制所能达到之处与火车和轮船所及范围十分一致。尽管中国的领土面积比美国、墨西哥和中美洲的面积总和还要大，且人口是美国的四倍，但与美国的265,000英里的铁路线相比，中国的铁路线却不到7,000英里。结果导致中国人口的七分之六集中在大约三分之一的中国领土上。在2,000,000平方英里现时无人定居、尚未开发的地区铺设铁路，将有助于人口更加合理分布，有助于国家的统一，有助于根除匪患与饥

荒。铁路和良好的公路是教育得以普及的不可或缺的保障，因为普及教育依赖于交通设施的普及。

中国的文艺复兴 在当今影响中国教育的所有力量之中，中国的文艺复兴发挥着最为深刻的影响。这个运动肇始于1917年的“文学革命”，当时运动的领袖胡适博士和陈独秀先生宣称：文言已经过时，白话文将取而代之。由于白话是中国使用最为广泛的口语，是两千多年来语言演进的最高点，用白话文书写的文学作品在全国范围内都最受欢迎，“文学革命”也因此获得了惊人的成功。尽管“文学革命”受到保守学者们的强烈反对，年轻一代却以无法抑制的喜悦心情欢迎这场革命。中国人重新发现一种活的语言，这促使他们创作出许多适应新时代的文学作品，彻底革新小学教材及教学方法，并使扫除文盲的平民教育运动成为可能。

中国的文艺复兴的第二阶段与高等教育有关。在这场运动的后几年里，学者们试图用现代科学研究的方法对国故进行整理。用胡博士的话来说，这次“整理国故是近三百年来赋予汉学家的作品以生命的那种批判与研究精神的复兴和再生”。

但是中国的文艺复兴的影响力远大于此。中国的文艺复兴是一场运动，即“以新的立场和标准重估一切传统的价值，传统常被抛弃，权威被打倒，旧的信仰基础遭到破坏”。这说明为什么中国的文艺复兴运动如此透彻和深远，为什么其影响遍及民族生活的整个结构。

各国学者的来访 自1918年以来，杜威、罗素、孟禄、杜里舒、泰戈尔等一批著名学者曾经访问中国。通过演讲以及与我国知识界领袖和学生们的联系，他们对中国人的思想和生活都产生了很大的影响。特别值得一提的是杜威博士和孟禄博士的来访，正是他们的来访对中国教育的改造具有独特、深远的影响。除了对接受高等教育的学生的影响之外，杜威博士的实用主义教育哲学已经成为我国初等教育改革的指导方针之一。自从他访问我国以来，在初等教育机构中已经进行了若干实验。他的教育哲学激发了一些教育专业的学生运用先进的技能和科学的方法来使之得以实现。孟禄博士强调教育是一种观念的应用而不是观念的获得。基于1921年的深入研究，他提出的建议引发了对各种教育问题的深思，尤其是促进了中等教育和科学教学的改革。

中国教育工作者的批判态度 迄今为止，我们只讲到一些比较重要的因素及其对中国教育产生的影响。这些足以说明中国问题很多而且错综复杂。人们正在从中国以往的文明，以及当今的范例中寻求解决方法。因此，中国试图向一个又一个国家求教，如今，已有一批见多识广的导师可供选择。日本、德国、美国、英国、菲律宾、印度以及俄国的教育理

论和实践对中国的教育产生了十分重要的影响。中国以往曾经十分盲目地追随那些老师们，但是还没有一位老师成功地为中國问题提供满意的解决方法。每一位老师都在某些方面对中国有所帮助，但是全盘照搬任何一种体制都把中国引入歧途。最初，中国抛弃了一切旧的东西，采用了新的东西。逐渐地，中国认识到，旧的东西未必十分坏，新的东西也未必十分好。因此，我国教育工作者变得比以前更有批判意识了。现在他们对于新的理论和实践不再是照抄照搬，而是加以质疑、检验、实验和选择。这种态度所导致的合乎逻辑的后果是通过吸纳古今中外新旧事物中的精华来制定出最适合新中国需要的教育。必须吸取过去的经验和外部世界的经验才能有利于增强民族的活力与安乐的生活。批判性和实验性的态度是具有创造力的。只有抱着这种态度，适合中国人生活的真正的教育制度才有可能得以实现。这种创造已经展开。

CHINA(1938)¹

A Conditions of Rural Life

The Chinese village

It has been estimated that China has a million villages with an average of four hundred persons for every village. The villages differ very widely in their composition and manner of living as may be seen along the Amur², the Yangtze, the Yellow, and the Pearl Rivers, or on the plateaus of the Northwest and the plains of North China. Some of the villages consist of families descended from the same ancestor, have an ancestral hall, and are ruled more or less by the elder of the clan. Others are of a mixed composition. A scholar or a retired official may serve as a liaison between the magistrate and the villagers, and often he has the final word in local affairs. The more progressive villages have a more democratic rule and are administered by elected officers. In many villages a tea-house serves as a center for public opinion. An occasional grocery store supplies salt, vegetable, oil, sugar, paper, gasoline, and other necessities to the villagers. With the exception of a few landlords, most of the villagers live by farming. Commonly speaking, each peasant family has five or six members, and lives on 3.5 acres in the rice region or six acres in the wheat region, scattered in four or five places. Even this little piece of land in most cases does not belong to the farmer entirely or at all. The family is lucky if it has an ox or a donkey to help in the work. It usually has a pig or a sheep, two or three hens, a few trees, and a corner garden. Studies of land utilization by the University of Nanking reported that 15 per cent of the farm net income came from supplementary industries and services. These include weaving, milling, oil pressing, and the native industries of silk, tea, sugar, paper, utensils of wood, bamboo, and straw. Around industrial cities the villagers look for odd jobs in the free seasons. They also engage in peddling fruits, grains, or vegetables.

Population

According to expert estimates 12 per cent of the total population

live in towns of 10,000 or more. It is safe to say that 80 per cent of the 450,000,000 are in the villages. Out of the yearly increase of 4,000,000 people an increase of at least 3,000,000 may be expected in the villages. This surplus population formerly sought its outlet in northeastern emigration into Manchuria, southern emigration into foreign countries, and with the growth of industries into the cities. Since the world depression of 1929 from 200,000 to 250,000 Chinese laborers abroad have been compelled to return to their homeland. There has been an annual peasant emigration of 150,000 to 180,000 toward the provinces north and northeast of the Great Wall, but this has been greatly checked by the Japanese occupation of Manchuria. The slow development of Chinese national industries, handicapped by foreign competition and without any protection by means of tariff, has not been an adequate outlet for the surplus peasant population.

Land problem and land policy
